ANSWERS TO CORRESPONDENTS.

FISH LEGISLATION.

AS we review the work of the last Legislature of the State of New York in altering and amending the laws relating to fish and game, we are more than ever confirmed in our previously expressed opinion that the Commissioners of Fisheries should be consulted in some way before any legislation affecting fishing or the fisheries is perfected. The average legislator knows little and cares nothing about fish or fishing, and it is seldom that a Governor is familiar with these things. The legislator and the Governor pass away in a few years, but the Commissioners of Fisheries remain. They are anglers, every one of them, keen and observing naturalists, and all possess a knowledge of fishculture. Such are the four gentlemen composing the Board of Fish Commissioners of New York. They have acquired a store of knowledge by years of study and experience that ordinary anglers, legislators and governors do not possess.

This subject has just been called to mind by a stupid clause in the game law just passed forbidding the capture or sale of striped bass between the 1st of January and the 20th of May. If this clause, which is inserted in a sentence naming several fresh-water fishes, is intended to mean the striped bass of the Great Lakes and of the Mississippi River, *Roccus* (*Morone*) *chrysops*, the white bass of the regions named which is striped, and the *R. interruptus* of the Mississippi Valley, then we have no comment to make, for the fishes are comparatively rare in Lake Ontario and in our markets. But the striped bass of salt water is in its prime as a table fish in New York city in March and April, during Lent, and comes from North Carolina in quantities of from one to five tons daily. At that time few are caught in New York waters, and the bass is the main dinner fish; shad, mackerel, bluefish, etc., do not become plenty until May, and the question of fish food is an important one.

We confess to ignorance as to what fish is meant in the law, as the scientific name is not given and there are three fishes known as striped bass, the two named and the *R. lineatus*, the bass *par excellence* of salt water. The wording of the law is, after designating the waters in which black bass, muscalonge, etc., may be legally caught: "No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or striped bass weighing less than one-half pound or less than eight inches in length, from end of snout to end of caudal fin, at any time. No person shall expose for sale, or have in his or her possession after the same has been killed, any black bass, Oswego bass, striped bass or muscalonge, save only from the twentieth day of May to the first day of January."

It is a small blunder if only the striped bass of the lakes was intended, but a very large one if it was meant to prevent the sale of *R. lineatus* before the twentieth of May, when it is the main supply of the markets during the Lenten season, and comes mainly from States which do not forbid its capture and export. It is on a par with the blunder which exempted the greater part of Long Island from the trout law, so that a man may go to Suffolk and Queens counties to fish, but is a criminal if he brings his trout home to Brooklyn or New York. It is evident that some intelligent supervision should be held over bills relating to fish and fishing before introduction or after passage, or both, and none seems to us so competent as that of the Commissioners of Fisheries.

THE DEER HOUNDING LAW.

THE last bill signed by the Governor of New York was the Curtis bill forbidding the use of hounds for hunting deer. The measure is now a law. Deer hounders of every degree are admonished to take notice and govern themselves accordingly.

The Adirondack guide may let go his "tail holt," and the kid-gloved "sport" may throw away his club. That style of doe butchery is outlawed. The clubber is relegated to his proper place among candidates for a term in jail.

This is a great step ahead; it is a victory long fought for and hard won. The FOREST AND STREAM takes no little pride in chronicling this successful issue of the deer hounding agitation.

As a matter of course, there will be wailing in camp. The Wall street broker, whose annual custom it has been to hire a gang of guides and a big pack of hounds and water-kill his deer, will not be particularly delighted to lose his gory recreation. The New York city physician, eager to surpass his own infamous record of fifteen deer left to rot in one small lake, will be sorely chagrined to be cheated of his victims. The Albany doctor who labored so strenuously in a bad cause, and tried so hard to defeat the bill for his own selfish and brutal ends, will naturally weep as he reflects that there will be no more swimming fawns for him to overtake and pound to death. Some of the North Woods hotel landlords, who have defended hounding because the hounders brought revenue to their tills, will howl because their business is injured. All these people will make much ado, and will heap maledictions—as they are even now doing—upon the FOREST AND STREAM.

The new law is in the interest of decency and legitimate sportsmanship and of game protection. If properly executed it will be an untold benefit to the Adirondacks and to the State.

Now that the new law is on the statute books, let the game protectors see that it is observed.

THE INTERNATIONAL RACES.

COINCIDENT with the trial trip of the Puritan comes the news of the sailing of the Galatea for New York, and also of the final decision of the New York Y. C. as to courses and as to Galatea's challenge. From the cabled reports Genesta has started under much smaller spars than she has raced with, a change that will by no means improve her as a sea boat when her heavy weight of ballast is considered. Experience tends to show the value of taunt spars for rough water work in boats with heavy lead keels, and in the light of it we must regard Genesta's venture under short sticks as an experiment of doubtful value. Both she and Galatea have not yet shown the form desirable in a champion, and the accounts thus far of the latter are very unfavorable, especially at reaching. The races laid out are sure to include a very large proportion of work off the wind, and in this both Genesta and Galatea have thus far been found wanting, and by no means up to Irex or Marjorie. In the race over the club course reaching is almost sure to predominate, while over the triangular course the chances are small for much real windward work, so that the cutter's main chance is in the final race of twenty miles out and back. The Boston yachtsmen are to be commended for the prompt manner in which they have put through their work, the Puritan being ready in good season to allow time for trial, and in advance of the New York sloop. Another week will see the first of the trial races, and enable us to gauge more correctly the strength of the sloops.

"SPORTING MEN."—Some months ago we called attention to the distinction between the terms "sporting man" and "sportsman," and on several occasions since then the subject has been recalled to our attention by inquiries from correspondents, who were evidently seeking more light that they might instruct their fellows. This is encouraging, since it is highly important that the distinction should be clearly understood. No sportsman cares to be dubbed a sporting man, when the daily papers are constantly chronicling the didoes of that unsavory class. As an example, the *Evening Post* of this city, in calling attention to the hordes of odious characters who are threatening to ruin Coney Island, said the other day: "Another source of offense and discomfort to respectable persons and families going to Coney Island is the crowd of 'sporting men,' otherwise blacklegs and ruffians, who infest the race-courses and overrun the Island on race days. The worst class of professional gamblers, pickpockets, prize-fighters, make the cars unpleasant for decent people, even if they do not infest the beach. The blasphemous, ruffianly crowd of sharpers, gamblers and other varieties of the 'sporting man' which fill the cars going down and coming back from the races is enough to deter respectable people from going to Coney Island at all in the afternoon." The separation of the sportsman from the sporting man is wider than the Atlantic Ocean, and in this year of grace 1885, persons who confound the two classes are away behind the times.

ASSEMBLYMAN HUSTED, the Bald Eagle of Westchester, was not so very much of a prophet when he very confidently asserted a fortnight ago that Governor Hill would veto the deer hounding measure. "It is not hounding that is depleting the deer, it is crust-hunting," said Mr. Husted, and with delightful disregard of logic, he added, "Dogging is not doing any harm; why, when a deer hears a dog three miles off he takes to the water at once. Gen. Curtis and the FOREST AND STREAM are behind the bill, but it will not become a law." As a prophet Mr. Husted had better retire from business.

VIRGINIA WAKING UP.—Twenty-eight indictments have been brought in by a Virginia Grand Jury against individuals who have been illegally taking fish from the James River. A Lynchburg correspondent writes that much interest is taken in these cases, for they will be made a test of the validity of the law. The FOREST AND STREAM has always maintained that the more tests of this sort the better. It is a poor law that cannot stand such tests, and if the statute is found defective, there will be no difficulty in substituting another that cannot be questioned.

DR. FRANKLIN B. HOUGH, who died at his home in Lowville, N. Y., last Thursday, was a man with a decided genius for statistics. He was a voluminous writer on the local history of a number of New York towns; and in 1855 and 1865 was superintendent of the State census. For a number of years Dr. Hough was chief of the forestry division of the Bureau of Agriculture at Washington, and a number of Government reports bear testimony to his industry as a compiler; his library of forestry works is said to be the finest of its kind in this country.

THE EARLIEST AMERICAN RIFLES.—Professor Spencer F. Baird, secretary of the Smithsonian Institution, is seeking to obtain some information about the first manufacture of rifles in this country; and in another column will be found a note of inquiry from him relating to this subject. Possibly the information might be had from some of the historical societies.

A BELIEVER IN FISHCULTURE.—There is one man in New Hampshire who thoroughly believes in the theory and practice of fishculture. He owns a salmon weir in the Penobscot River just below Fort Point, and one day last week he took from the weir more than $100 worth of salmon. Thirty-three of the fish weighed over 400 pounds.

A NEW JERSEY WOMAN was sent to the lunatic asylum last week because she had filled her cabin full of dogs, some seventeen in all, of all breeds and colors and in all stages of starvation. The woman was just crazy enough to believe that the possession of twenty dogs would bring her luck.

CAPT. L. A. BEARDSLEE, commanding the U. S. S. Powhatan, arrived at this port last Monday after an extended cruise on the Spanish Main. The Powhatan will take part in the reception of the Statue of Liberty.

THE MOUNTAINS.

IN the dust and glare of the city's streets,
When the fainting breezes have stopped their play,
And the July sun on the pavement beats,
Then my wandering thoughts to the mountains stray;
Where in trail-threaded forests the glimmering ray
Through the thick boughs doubts of its right to shine,
While the murmuring waterfall croons its lay,
And the free wind sings in the swaying pine.

There are some who delight in the waving field,
As it rustles its promise of scented hay;
But the troubles that gnaw at my heart are healed
When my wandering thoughts to the mountains stray.
There the tingling air in the dawning gray
Pours its glow-giving draughts of ethereal wine;
There the sun's last kiss ends the long, soft day,
And the free wind sings in the swaying pine.

There are some who would dive in the surf's long roll,
And with rocking boats toss the stinging spray;
But a calm, fresh gladness steals on my soul
When my wandering thoughts to the mountains stray.
Through the sage-clad slopes; up the rock-strewn way
I would climb to rest in the secret shrine,
Where the shuddering aspens in whispers pray,
And the free wind sings in the swaying pine.

ENVOY.

Then I'll follow fancy and speed away
When my wandering thoughts to the mountains stray;
There the spirit of nature is all divine,
And the free wind sings in the swaying pine.

H. G. DULOG.

MY FELLOW TRAVELER.

THE first thing I heard when I stepped on board the train bound south was a loud interested voice telling nominally to a few friends, but as a matter of fact to all the voyagers in the car, the story of a life that had embraced, according to the historian, nearly all the events of interest that had taken place in North America since '45.

Knowing the general rule that vast experiences of a thrilling kind are joined with a poor memory and a rich fancy, and knowing that other general rule that a talker fertile in personal detail is a tiresome companion, I buried myself in the scenery that slid past the window, and resolved to make myself so small as to escape attention. Now and then the name of a familiar battle or renowned exploration would reach me above the din of travel, and little by little it was borne in on me that my fellow traveler was a truthful man, for no one would make a boast of the dismal series of defeats and failures in which our narrator had played so great a part.

The President (I got to give him that honorable title because he had held the post of municipal president of a Mexican town) was born in Texas somewhere about 1830. Texas was then a part of Mexico, and the President, therefore, always held himself to be a citizen of Mexico by force of nativity, though his tough six and a half feet of body and his determined face showed that the ancestral blood was northern. Even his Spanish, correct and fluent as it was, had now and then a snarling note which assured one of his Saxon kinship. His military career commenced when Donovan led his borderers into Mexico. The President shared the fortunes of his Mexican brethren. More lucky than some, he escaped the bullets of the wild riflemen; braver than others, he did not run away, but he was captured, and only escaped from this servitude to be engaged in further disasters.

After the Mexican struggle was over came a period of Indian war. A man named Glanton, I think, raised a volunteer company of Indian fighters early in the '50s. Although his profession was military, his genius was commercial. To combine profit and pleasure he entered into a contract with the Governor of Chihuahua, whereby that State bound itself to furnish arms and food, and to pay Glanton fifty dollars for every Indian scalp he should present for record. Whether Glanton gained or lost in this bloody business I don't know, but his example was contagious. Our President was enrolled in a New Mexico company and marched to the field of honor. The company, numbering some eighty-eight rank and file, that is counting officers and all, were camped near Abiqu, not far from one of the branches of the Rio Grande. Scouts brought word that seventy-five Apaches lay resting on Bear Creek, in what is now the Navajo reservation. The rangers started at once, marched with speed and caution, and passed the night without fire and almost speechless, that no whisper might betray their approach to the savages. Before dawn the men were on foot, and just as light was breaking they struck the Apache camp and charged. The charge was successful, that is, the Indians ran away, but they ran in such numbers and stopped so soon that in a moment the rangers were fighting for their lives. An arrow from an Apache war bow flies so fast for the first seventy-five yards as to be invisible, but beyond that distance you catch the glimpse of the feathers, and if you are looking at the right Indian you have time to dodge his shot. The rangers fortunately kept their foes some distance off, but the latter had the advantage of higher ground and a plunging fire. The President, while looking at the wrong Indian, got a glancing arrow wound above the eyebrow and advised a retreat. For sixty miles the stubborn red men hung on the rear of the flying column, and entire safety was not gained until two companies of dragoons joined the rangers.

And now skipping those minor incidents which do not stand out in high relief against the monotony of a soldier's life, we come to the war of the rebellion. The President moved east with Gen. A. S. Johnson to strike a blow for the lost cause. At Val Verde he did help to gain a victory, but he was shot for his pains and soon afterward was chased with his comrades into Texas. Here again some share of barren glory fell to his lot, for he served with Magruder against Banks on the Red River expedition, but it was pathetic to hear him deplore the havoc that the gunboats caused. "Why sir," said he, "we would be going through timber so thick a man couldn't see ahead; where you had a right to be safe, and there would come a fizz and a bang, and then more and more shells, till the very trees would fall and crush our men."

But the rebellion was staggering to its fall, and besides the President had at last got news that his native Mexico had been invaded, so he resigned his position in the Confederate forces, crossed the Rio Grande and joined Cortina. Cortina sent him down in charge of artillery to oppose the landing of the French near the mouth of the river. He opposed the landing ineffectually, and for two years and eight months thereafter was driven from pillar to post by the imperial forces with discouraging frequency, and finally when Juarez made his victorious march after the French withdrew, the President did not share in the triumph, because as he spoke English it was thought necessary to keep him on the border.

War had palled. The President still holds a high commission, it is true: but his chief attention is now given to the arts of peace. His cattle dot many a hill and mesa. His lands stretch far along the border, and by his constant and successful efforts to help his countrymen in general and his neighbors in particular he has nobly earned the title of the Father of the Border.

But all this time we have been speeding southward, till at last we pass the yawning chasm of the Tajode Nochestongo, a valley that looks as if only the forces of eternal nature could have gouged it out. For ten miles the great ditch runs along, over a hundred yards wide on top in places and more than half as deep—a monument of human persistence more striking than the pyramids of Egypt. And so we enter the Valley of Mexico.

Sunday afternoon is the chosen season for the bull fight. This amusement is forbidden in the federal district, but for the convenience of the public the boundary of the district is made to run a few feet outside of the gate of the bull pen at Huizchal.

Looking toward the south you see the white walls of the castle of Chapultepec rising above the fringe of giant cedars. Beyond lies the city, with its numberless church towers, dim in the distance, and far in the misty horizon glitter the snowy tops of the twin volcanoes.

There were four bulls from the cattle farms of Atenco, long noted for their vicious breed. Certainly the bulls had no sign of any other kind of careful breeding. Light in the quarters, wiry and rough, not weighing over eight hundred pounds, they would have taken no prizes at a State fair; but they were as wicked as any beast need be.

Every man that stood in front of one of those creatures depended on his nerve and quickness for his life, and from the minute the first bull stepped into the ring it was clear that there was at least no humbug in the matter. There were two picadors. One of them was very skillful. He would catch the charging bull with his buttoned lance in the neck or shoulder and throw him off far enough to clear the horse nearly every time, but at last the bull would bore in in spite of everything; the leather armor of the horse would be flung off or ripped to shreds and the horns would cut and tear the life out of the poor brute.

A bull in charging does not put his head down and run till he strikes something. He aims at some definite object and when he reaches that object or the spot where it ought to be he throws his head up sharply, sometimes with force enough to carry his forequarters high in the air. Then if he has caught nothing his charge is over, but if he feels resistance he keeps plunging and lifting until something gives way. One horse was caught back of the forelegs. Slowly the bull lifted his victim, at first struggling vainly, then hanging limp till at last the horse was turned clear over on to his rider, while the bull rushed again on the prostrate pair. There were several stirring incidents in the combats. One bull cleared the palings at a single jump but at last was driven back to the sacrifice. Once a daring fellow with the aid of a pole sprang entirely over a bull who was charging at him. Banderillas were put in by a bareback rider and by a man sitting in a chair, though it is fair to say that this last hero got up before the bull reached him.

The final killing was not in every case an artistic success. The torero should put his sword in at one side of the backbone nearly at the point of the withers and reach the heart at a single thrust; then the bull walks off for a moment; drops and dies. In only one instance was this perfectly done. The other bulls needed at least two thrusts and then struggled and staggered for a long time, or else had to be dispatched by a dagger stroke behind the horns.

The exhibition was barbarous, brutal and degrading, and ought to be abolished, but it is only just to add that I was as much interested and excited as the most hardened of the mob.

The hot, clear sky, the glittering dresses of the bull fighters flashing around the ring as they threw their purple cloaks in the face of their angry victim; the savage, rushing charge, the shouts of the crowd, and the brazen ring of the music rising over the hoarse din of applauding thousands sent a tingle through one's veins, which reminds him how near he is to his savage forefathers. The educated conscience in its cooler moments cries shame, but the brutal instinct cheers on the fighters.

All this has very little to do with my traveling companion. Indeed, I will admit that he was but a text to preach away from, though the text has stretched half through the sermon, and I will also say, for fear that our national tendency to look on the comic side of life may have given you a poor idea of the President, that a more interesting, genial and unselfish companion never lightened a weary way.

H. G. DULOG.

THE BITE OF THE GILA MONSTER.

Editor Forest and Stream:

I have heard upon several occasions of death resulting from the bite of a Gila monster, but never had such death come under my personal observation. The last reported case being at Fairbanks, in Cochise county, about sixty miles east of this city. I wrote Dr. Mathews, the physician in the case, for the facts relative to it, and his reply I herewith append. The letter is dated Tombstone, May 10:

"In reply to yours of the 5th inst., I would state that the facts in the case of Col. Yeager are: That on the morning of the 26th ult., Yeager, in a spirit of bravado, I suppose, or perhaps in a false sense of security and confidence in the harmlessness of the reptile, was playing with one of the 'beasts' and attempted to open its mouth, when the thing suddenly closed its jaws on the thumb and forefinger of the left hand, the fangs going entirely through the nail of the thumb and appearing on the front. It required considerable force to compel the reptile to loosen its hold, which it did only when its jays were pried apart. Of course remedial measures were adopted to counteract the effects of the poison by the free administration of stimulants (whisky) internally and the application of ammonia externally. For some time after receiving the bite he complained of much pain in the hand, and there was some swelling and discoloration, though not so much as I should have expected of a venomous wound. After the effect of the stimulant began to be felt, he experienced relief from the severe pain, and was advised to go home and lie down, and started to do so, but only got some fifty or one hundred yards, to J. P. Graham's saloon, which he entered and almost immediately fell to the floor in a state of stupor, and lay in that condition until it was discovered that he was dead.

"Yeager was a drinking man, and had been drinking that morning before the accident occurred, and of course must have taken a considerable quantity afterward, just how much I could not learn definitely, but should judge from statements made to me at least one-half pint and doubtless more. When he appeared at the door of Graham's saloon, that person thought he was under the influence of whisky, and when he fell to the floor said he only thought him drunk, and as he apparently went to sleep, concluded to let him lie until he awakened. As near as I could learn, he must have lain there on the floor some two hours or more before it was discovered that he was dead.

"As I have said, his condition after reaching Graham's was sufficiently similar to the effects of alcoholic stimulation in excess to deceive an inexperienced person. But on investigation I found a marked difference. Instead of the slow, deep, stertorous breathing of one under the influence of alcohol, his respiration was described as a short, quick snore, while some few observed a convulsive movement, though slight in degree.

"At first I was disposed to look on his death as caused by excessive use of alcoholic stimulants at and after the time of the injury. But on hearing all the statements at the inquest held that night, I became convinced that such was not the case, but that death really resulted from the venom of the monster. In this opinion I am supported by our county physician, Dr. G. C. Willis, who was present with me at the inquest. These, I believe, are all the facts in the case. They are at least all that were developed on inquest.

"Hitherto I have been disposed to be skeptical as to the possession of venom by the Gila monster that would cause death in the human subject on being bitten by it. I do not do so now. I would state further that one of the jury, as soon as he had heard of the occurrence had predicted Yeager's death within a few hours, basing his prediction on personal knowledge of a case of the same kind where the man bitten lived but little over one hour.

"Yeager lived three and a half or four hours, although to all intents dead within an hour. H. M. MATTHEWS."

The fate of Col. Yeager will, I think, convince many that the bite of the Gila monster is death. The Indians and Mexicans need no convincing, inasmuch as they unitedly maintain such to be the case; but among the whites there is, and has been, much incredulity on the subject. Col. Yeager was one of thest known citizens of that section of Arizona, having for the past several years been before the public, first as a mining operator and later as defendant in a sensational divorce case. To whisky some may attribute his death, but the statement of Dr. Matthews, one of the most reputable physicians of Tombstone, will go far to convince all fair-minded inquirers. HERBERT BROWN.

TUCSON, Ariz., May 30.

Editor Forest and Stream:

The Gila monster is one of the most curious reptiles, of which Arizona is prolific. It lives in the sandy wastes and along the river bottoms of Arizona, and might be called a dry-land iguana. It is a foot or a foot and a half long, has four legs, and an epidermis of variegated color, and grows to about the size of your arm. The question at issue is whether they are poisonous or not. Many years ago I had the fangs of one examined by scientists, and they were pronounced innocuous. The skin made a beautiful covering for an opera glass.

The Mexicans call it "escupion" (the spitter), from the fact that it ejects saliva when irritated; and the Indians shun it like a rattlesnake, and they know. The Americans make pets of them; and the other day a man named Yager was fooling with one which nipped his finger, and he died in three hours, a frequent occurrence.

The utility of the Gila monster is to turn them loose in a gopher field, when the gophers rapidly disappear. Every man, beast, bird, fish, reptile and insect has its natural destroyer. Now what is the natural enemy of the locust? *Quien sabe?* St. John ate them with honey, and they are not bad food. The Digger Indians eat them roasted without any honey. Fortunately they cannot cross the deserts and get to Arizona. C. D. P.

NOGALES, Mexico, May 30.

[The bite of *Heloderma suspectum* has always been regarded as innocuous by scientific men, though the fact that the reptile is greatly dreaded by Mexicans and Indians has always been known. Recently, however, some experiments made by Dr. Mitchell have shown that the bite is venomous, and thus that the belief of the Indians is well founded. We scarcely think, however, that the case referred to in the two previous communications would, if it stood alone, be very strong evidence against *Heloderma*. As is well known, a man who is habitually intoxicated is not likely to be in any condition to resist poison.]

PHOTOGRAPHING A WOODCOCK ON THE NEST.—Johnstown, N. Y.—*Editor Forest and Stream:* I send you two photographs of a woodcock sitting on her nest, taken very lately by Mr. W. H. Kibbe, an artist here. About May 10, Mr. James Hillabrandt took a ramble with his dog over some of the ground near this village. On like trips previous springs he had noticed that sitting woodcock gave off no scent, so when he accidentally hit a bird and scared her up, stepping through some low brush that his dog had just gone over, he did not blame his dog. A week later, he and his brother thought they would see if they could find the nest without scaring the bird off. They did so, and by silently cutting off some brush got a good view of her. Subsequent observation showed that she was off the nest feeding during the forenoon; but the afternoon found her on, and after three attempts in different positions the cabinet picture was the result. The bill not showing good, they tried the difficult feat of posing her, and actually succeeded in raising her bill with the point of a knife over intervening sticks so that the stereoscopic view was the result. A week later it was found that the eggs were all hatched and she was seen with her brood. Any reader who wishes to procure a copy of the picture can do so by sending Mr. Kibbe twenty-five cents.—M. S. NORTHRUP.

THE BIG WOODPECKER.—*Editor Forest and Stream:* The ivory-billed woodpecker (*Campephilus principalis*) may be found in unfrequented swamps in this part of Arkansas. It is not rare, but is rarely met with. The pileated woodpecker (*Hylotomus pileatus*) is quite abundant, and often seen in all parts of the State, even on the highlands in scrubby oak and pine growth, but is, of course, more common in the low country, in dense forests and damp localities. "A Red-Headed Family" gives a very readable account of the habits and nest of the ivory bill. By the way, "Ivory Bill" is a complimentary designation applied in this State to a very old citizen, or first settler of the country. The local names for the ivory bill most in use here are logcock, woodcock, woodchuck and Indian hen. Also applied indiscriminately to *Hylotomus pileatus*.—YELL (Newport, Ark., June 8).

SUPPOSED HYBRED WOLVES.—A prairie wolf at the Philadelphia Zoological Gardens has given birth to three very peculiar looking whelps. The puppies, for so they seem to be, do not at all resemble the young of the species, and some doubt is confessed as to their parentage on the sire side. It appears that the mother was in the possession of a student, who was using her as a model either in sculpture or painting, and when not occupied with her, kept her chained in a stable. She was as tame as a dog, and was presented to the "Zoo." Since arriving within the inclosure she has given birth to the three youngsters in question, and they all strongly resemble domesticated dog puppies. The pointed nose is wanting, and the erect ear of the wolf is supplanted by a turnover appendage, the bushy tail is growing more slender and curled over. What shape they will assume when grown, time only can tell.—HOMO.

AN ALBINO ROBIN has been taken alive by Sergeant Green in Leverington Cemetery, Philadelphia. The bird was seen among others for several days and the effort to catch it proved successful. An ash sieve, a ball of twine and a plentiful supply of sponge cake were the tools employed. The white robin was curious, unsuspicious and hungry, and hopped directly under the trap, the sergeant jerked the string and he was caught. The bird has pink eyes and is a true albino. Word was telegraphed from Sergeant Green's station to all the district police officers of the important capture and Green has been overwhelmed with congratulations on his prowess.—HOMO.

Game Bag and Gun.

CHEYENNE TO INYAN KARA.—I.

WHEW! but the long, tedious ride was over, the ride across the monotonous divides, across the seldom creeks, through the prairie dog villages which delegated their undignified dignitaries to welcome us with their unmannerly barking, through miles of sage brush and among hundreds of sage hens who vouchsafed us no more attention than if we were so many range cattle; up hill and down, over hard roads and over soft roads and "middling" ones, brakes on and brakes off, sand, mud, rocks and water, nearly three hundred miles of it. We were tired and tired of each other. We started good friends, oftimes mildly quarreled, and were repeatedly reconciled.

Our traveling cuisine was well provided for. We had bought, begged, borrowed or stolen from a "round up," which we met at Fox Creek, a good supply of fresh beef. At Lone Tree we killed several sharp-tailed grouse, at Box Creek some ducks, on Running Water an antelope, and on Hot Creek one of the party was enabled, through a lucky rifle shot, to capture a pair of wild geese. So we were, in addition to our canned goods, bountifully supplied with edibles to keep the wolf from the tent-flaps. We drove very slowly and usually made camp early in the afternoon. Having no strings tied to us, and time being no object, we loitered as best suited our day-to-day notions; and luckily those notions dovetailed harmoniously with the condition of two of our horses, which, when the journey was at an end, resembled the running gear of a long-legged sandpiper, and had developed a supreme indifference to the stimulus of the buckskin.

We reached Jenney's stockade on Little Beaver Creek on our eleventh night out and saw the beginning of the end. One more night and two days would, barring accidents, land us at our destination on Inyan Kara Creek. The last two days were delightful. Traveling through the beautiful valley of Little Beaver, with its numberless springs, its wooded heights and grassy slopes, its beetling crags and cliffs silhouetted against the sky. Slowly we go perforce, hunting and riding all day. The sharp-tailed grouse are plenty and afford good sport.

The last night out we camp at a waterhole on top of the divide between Little Beaver and Inyan Kara, and just on the edge, where a recent prairie and forest fire had commenced to do its devastating work. Whether from carelessness, unavoidable accident, or intentional fiendishness, the result was the same, and thousands of trees were either totally destroyed or their healthy growth retarded, and thousands of acres of grazing land were left bare as a sand dune and deserted by every living animal. The next day's drive was down hill, and by the middle of the afternoon we were in snug quarters where the welcome we received would excuse a thousand times over any deficiencies of accommodation. But there were no deficiencies to be excused. There was a comfortable room for us, a roaring pitch-pine fire, venison and grouse on the table, and milk and butter and jack rabbits, biscuits and spuds fixed up any style you wanted them, fruits done up in tin with colored picture labels, corn from the Oneida Community, tomatoes from Baltimore and beans from Boston. How delighted we were to bombard a picnic of somebody else's arranging. If a non-professional biscuit-slinger has to organize a spread, his appetite retreats in poor order, leaving him to wash dishes on his own empty stomach, and he has to satisfy himself with cold bites between meals, which is powerfully unsatisfactory. If you want to do first-class justice, have a first-class cook other than yourself, and take your time, with no dish washing staring you in the face and looking you out of countenance and appetite.

The morning following our arrival we were prevailed upon to make the descent of Inyan Kara Mountain. Mr. Coltalluk, our host, explained to us that the mountain derived its name from some Indian words which meant several small mountains carrying a large one. We did not for a moment suppose that Mr. Coltalluk knew anything about the derivation of the name, but as it evidently pleased him to impart to us his version of it we let him impart in peace. So far as the actual appearance of the mountain went it was all right. It is a high mountain, or rather a peak, surrounded on all sides by others not quite so high as the central one, which is the prominent landmark for many miles around. There is one opening in the circle through which a team can be driven for a considerable distance, and one can go on horseback to within perhaps a hundred feet of the summit, which can only be reached by hard climbing.

A few days previous to our visit the grass and dead timber in the mountain had been burned and every living thing driven out. Bears and deer and mountain sheep were plenty until seeing their means of subsistence were being destroyed they packed their valises and changed boarding houses. Their old hotel will probably not be repaired and refurnished until late in the coming spring, when, doubtless, a great many of the old patrons will return, as it has always been a well conducted and popular boarding house, with very moderate charges and polite attendance.

The view from the top is "grand," or "extended," or something of that kind. It might on a pinch be called sublime, and no doubt some people would call it so without any provocation whatever. Distant one hundred and fifty miles or thereabouts to the west, the outlines of the Big Horn Mountains could be seen in delicate clearness. Northeast were the Missouri buttes with their near neighbor the Devil's Tower. Sundance and Bear Lodge mountains were directly north, and the Black Hills to the east, and timber everywhere, until you couldn't rest. Cedar and pine timber, fine timber too, all circumferences and all lengths, compatible with profitable handling, and only waiting the enterprising sawmill man to down them and the Government as well. I came near forgetting some other buttes which can be seen from the Big-mountain-carried-by-several smaller-ones. Pumpkin Buttes they are called, if memory plays me not falsely. They are, seems to me, in a westerly direction from Inyan Kara, but whether northerly or southerly, I have forgotten, and am not at present disposed to speculate, so far as they are concerned, on the points of the compass, for this report is nothing if not truthful in all important particulars, and bears in every sentence the marks of the historic hatchet. Truth has blazed a straight line right through it. At our feet, as it were, were some small streams and small hills not large enough to be named yet; but perhaps some day, with the prospective rise in real estate, the hills may assume the propertions of mountains, and each one be labeled Mount So-and-so and So. They are yet in their infancy. This rise is expected with the next spring influx of settlers, and when the new blacksmith's shop and the general store are erected.

We returned to Mr. Coltalluk's in time for supper. Mrs. C., running dinner and supper into one meal, was able to do double justice to her reputation as a broiler, baker, stewer, fryer, and all the other ers appertaining to a good square meal, and we did our part toward showing an appreciation of her efforts in our behalf. It looked as though a cyclone had encountered the table, Marquis of Queensberry rules, and knocked the table out the first round. However, Mr. Table came up smiling when time was called next morning, as much as to say "slightly disfigured but still in the ring."

That evening we discussed the hunting question, which was an important one and the primary reason of our presence in the country. There were numerous localities we had heard favorably spoken of, and in fact any and all of them were reported to be so overrun with game that all one required was a good stout club and a knife. We discussed the matter pretty thoroughly, and it finally resulted in our choosing the Belle Fourche, between Wind River and the Devil's Tower.

It took us the better part of the next day to load our wagons, fix rifles and tent, bake bread, and fuss around repairing mistakes and doing numberless little things. Where there are one or two old hands and lots of tenderfeet, it demands a good deal of time to prepare preparation properly, and a great many knots are tied only to be untied; but all those little annoyances have an end, and the next forenoon, joined by three American citizens of German descent, we pulled out for the Belle Fourche.

There were eight of us. Cæsar's ghost and Great Scott! eight of us! Enough to down every bear and elk and deer and antelope between Missouri Buttes and Bear Lodge Mountain, to say nothing about the canned corn, tomatoes and marmalade. It proved correct what Mrs. Coltalluk said. She affirmed that a pack of hounds and the knowledge that some one was going hunting would make every woman in the settlement a grass widow. Their husbands would surely follow the dogs. The day's ride was very pleasant. We picked up a few grouse, knocking them down first. It was about the 20th of November. The late afternoon began to be chilly as the wind from the northwest started toward the southeast. We reached the 70L ranch, or what remained of it, about a half hour before dark. There the wind cut loose, coming stronger and stronger and displaying its search warrant, which authorized it to hunt for the holes in our old clothes—and, by Boreas! it finds them too, and enlarges them. Even the buttons on one's undershirt are in danger of coming off, but fortunately the honest girl (away back East in the States) who put them in position must have had a presentment that they were intended for service in Wyoming and so put in an extra stitch. We have said "what remained of the 70L ranch." It was either sold or abandoned, and a few days afterward some party or parties, to the subscriber unknown, set fire to the kitchen and bunk house; and all now remaining of them are the big chimney and the open fire place—more open than ever before. The well was also set fire to, but put itself out. The place was occupied by a couple of discontented men, who lodged in what was formerly the "chuck" house. They were dragging out a kind of lonesome existence by eating, sleeping and watching three or four hundred cows which they were herding. They were nearly out of provisions and were glad enough to welcome us and give us hay in exchange for flour and bacon and coffee. They were expecting their boss every day and had been expecting him for many days.

We cooked our supper by the old open fireplace, unrolled our blankets and lay down to sleep on the cold, cold ground. Nothing disturbed the slumbers of the purely American clique, save an occasional growl from the German band, who were three in a bed and probably quarreling about the middle, and the outside majority grabbing clothes—one of the instances where the majority gets left. The thermometer must have touched about twenty below that night, for the Belle Fourche was frozen solid by morning, and we had to cut water holes for ourselves and stock.

We have come a long way together, and perhaps it will now be in order to introduce the members of our outfit. We don't know them very well ourselves, but anyhow there is Tom, who goes to show us the places where the game is so plenty that the hunter is in danger of having an elk or deer or antelope come stealing up behind him and bite him. We at first—the first day only—took small stock in Tom's reports, but gradually the truth dawned upon us that he belonged to the well-populated brotherhood of third or fourth-class hunters, and did most of his hunting with his mouth. He was a good hunter at the table, if nowhere else. His inordinate appetite would make a cook sick and a grocery weep. Tom would never prepare a meal for himself nor for his best friend. He'd die first and starve afterward. It was condescension on his part to even cut wood or fetch water. He did not want to do anything after eating but hunt; and if ever he made any noteworthy success at that, we never detected it, though—to do him justice—he surely brought some game into camp. Another of our party was called Foncab. He was a little sawed-off bit of a fellow, fully aware of the fact, so he put on no unnecessary airs. There was also a big fellow, who had in his younger days been a sailor and had visited every port in the world, at least we have heard him say so many and many a time. Then there was a young man named Curtis, a good fellow and the best hunter in the party; and a cripple whom the rest called Doc.

Of the German band we know little, save that one answered to the name of Hans, another to Fred, and the other to Albert. They were disposed to keep pretty much to themselves at first, but gradually thawed out, and finally grew to be quite sociable when they saw our indifference regarding their movements.

MILLARD.

BEAR CREEK, Wyo.

BROTHER M.'S SUNDAY FOX CHASE.

I WAS residing with Mr. Sam Harper, whose plantation was on the Corni. There were only three or four families in the settlement. Deer, turkey and bear abounded. It was my extreme fondness for hunting that caused me to bury myself in that lonely country. I taught every school day of the week, fire-hunted every favorable night except Sunday, hunted with hounds every Saturday, if it were suitable, for nearly a year, and when the Saturday was unfavorable I would make up the lost time by hunting on Sunday, until an event occurred which effectually cured me. Mrs. Harper was so much opposed to it that she would not permit any game I killed on Sunday to be brought into her house. To deceive Mrs. Harper, when I left after breakfast on Sunday morning I rode away without a gun. My muzzleloader and my rifle were left in my room where she could see them, and feel assured I had not gone hunting. But my friend, George Watson, had loaned me his good rifle, with which he fought a duel with Albert Brest, subsequently a member of Congress, and afterward a brigadier general in the Confederate army. This I kept hid in a hollow tree a mile or more from the house, unknown to any one. On Sunday morning I rode off as if going to see a neighbor, or just to have a ride for exercise. After going some distance I left the public road and proceeded through the woods to where the rifle was hid, and then enjoyed a day's sport in still-hunting all to myself. Many a deer and turkey were killed and taken to a certain place and safely hung up. When I returned in the evening I confided to the old negro stock minder, who lived in a cabin in a remote part of the negro quarters, and afterward he would go and bring the game to his house for the use of his family.

This went on until one Saturday morning I rode over to Mr. Watson's plantation. I took with me my rifle, as we were to have a still-hunt during the day, and continue it with a fire-hunt for wolves as well as deer. We neither killed a turkey, bear nor deer during the day, but that night we killed three deer. The wolves were numerous. We had packed the deer on our mules, and the dripping blood had attracted the wolves, until a larger number than I ever saw before had gathered around us. They ran before, behind and around us, howling like demons let loose from the infernal regions. But all our efforts to get a shot at them proved futile. Not an instant would they stand to shine the eyes and shoot. It was getting to be ominous and fearful. The great pack increased in size every quarter of a mile, and we were about five miles from any house.

"George," said I, "let us get down, tie our mules, build a fire of pine knots and hang up the deer, and shoot some of these devils, or they will tear us from the saddles." We dismounted, hung the deer to a bending tree, so that the wolves would have to leap high to reach them, and built our fire so that we could see a dark shadow when a wolf passed between us and the fire.

The big light from the fire-pan soon enabled us to accomplish our designs. After all was properly arranged we retired with the mules and fire-pan about seventy-five yards from where the deer were suspended, put in the ground two forks on which to rest our rifles, and then lay down with the fire-pan blazing with fat pine at our backs. When the wolves should make a dash for the deer and darken the sights of our rifles, we were to shoot, both at the same instant. We did not wait long before our rifles broke the silence, for the wolves ceased howling as they made a dash for the deer. When the report died away we heard the snapping of teeth and growls, as if in agony of pain, and we were confident of having wounded or killed some of them. The pack ran off, and such howling I never heard. It was pandemonium let loose. Their hunger soon caused them to return, and again our rifles roared with the same result. It was some time before they ventured back, when we shot the third time. After this the pack went off with a mournful howl that gradually decreased until we were satisfied they had left for good. On going up we found five dead great black wolves and one tawny. There were two bullet holes through one, which proved one of us must have killed two with one ball, and that both of us had shot at the same wolf that had the two holes through him. When we got back to Mr. Watson's plantation I went to a noted hollow not half a mile from the house, to kill a buck at sunrise, as it was the last of October and in the midst of the rutting season.

I have recently read in the FOREST AND STREAM of some remarkable accounts of extraordinary shots, and though I had believed what happened to me that morning, was one never known to hunters before; it appeared that the same thing had several times occurred to others.

Day was dawning. I had not to wait long when I saw a small doe coming toward me at a rapid rate, and a tremendous buck not far behind her. My rifle shot a conical ball of forty to the pound. I gave a quick whistle. Instantly she stopped and the buck did the same a few feet behind her. Oh, how large and grand he looked, towering like some great bull among the calves. Both saw me, but did not move,

they seemed to be so astonished. I was cool and deliberate in my aim for the heart—the rifle fired clear and angry—the report on that blessed Sabbath morn echoed far and wide over those pure hills. But shall I tell it? Neither buck nor dove moved. I could not see a quiver of the muscles nor a movement of the eyes. They stood stone still until I had reloaded and was in the act of putting on a cap, which my half-frozen hands did not readily permit, when the doe leaped off followed by the buck.

I knew the run of the deer so well that I felt satisfied I could cross a ridge by running some 300 yards and head them, as they ran down a hollow that led to the creek bottom, and not a quarter of a mile from the house. I ran with all the speed I could and took my stand almost breathless. Not two minutes passed before I discovered a buck approaching me on a slow trot. I let him come in thirty yards, when again I whistled, and as he stopped I fired at his breast, as he was in full front, and he sank to earth without a struggle. Going up to sever his jugular, I found the ball had passed through the entire body coming out near the root of the tail, and lo! there was a hole of a ball passing through him from side to side. I heard no shot that morning, but those I made myself. Was it possible that some one else could have shot this deer so far off I could not hear it, and for him to run that distance with the blood dripping from both sides? I could not believe it. He looked as large as the one I shot at a short time before, and to satisfy myself whether it was the same deer I traced him by the blood to the spot on which he stood, where I first shot and there were two pools of blood, one from each side, the ball not striking the heart, but an inch to one side. Never before had I known or heard of such a thing as a deer to be shot through and through, and for a minute or two show not one symptom of being struck. I have often related it to other hunters, but never found one having the same experience until the same thing I see related in several late numbers of the FOREST AND STREAM. I got Mr. Watson and several negro men to go with me and bring in the buck. At the very moment we got to the yard gate, who should ride up but my old and esteemed friend Parson Moores, the presiding elder of that district.

"O, I've caught you at last," exclaimed the parson. "You have been denying my often-repeated charges and insinuations that you hunted on Sunday, and I have caught you in the very act."

"Caught whom? Have I any gun?" said I in reply. "These negroes have the deer. I and Mr. Watson only accompanied them to see it brought up from where it was killed. They may have shot, or Mr. Watson, or somebody else. You did not see me shoot. Don't make such broad charges, Parson."

"Young man, dare you deny killing that deer on this Sunday morning? I heard, sir, two reports of a rifle as I came over the hills. I said to myself they were made by your rifle the moment I heard them, for I can testify to the crack of your rifle as well as I know the sound of your voice or the features of your face. Many and many a time I have heard you practicing with Orlando Greening. Don't deny it, but come right in here and let me pray to God to forgive your sins."

Parson Moris was one of the early pioneers to that portion of Arkansas. He was the presiding elder of the district, belonging to the Methodist Episcopal denomination. A man of commanding appearance, one that would attract attention in any crowd, plain in his dress, conscientious in the discharge of his duties, fearless as old Andrew Jackson, and resembling him in many respects. Ever ready to assist the sick and distressed, to comfort the afflicted, and to labor for the cause of his Master. He was no respecter of persons, he rebuked the ungodly whether high or low, rich or poor. When he knew his was right he went ahead, regardless of time, place or persons. He was imperious to the extent; he brooked no disputing with him on subjects of religion; he was a terror to evil doers, but he was respected, feared and hated by those whom he rebuked. Punctilious to a fault in all his doings, honest and sincere, he carried everything his own way in ministerial affairs. The younger ministers stood in dread of him. He could not pardon a fault in what he believed were the Christian duties of both members and divines. I had a very high regard for him, for I knew the man, that there was not the least particle of insincerity about him. He had often spoken to me about reports "that I would hunt on Sunday," which I evaded in an equivocal manner, neither positively denying nor admitting. On this occasion I was so fairly caught in the act, that I followed him into the house as meekly as a chastised setter.

Watson, who was a very polite and hospitable gentleman, had all the house servants called in to attend prayers, and after reading the chapter concerning the prodigal son the parson prayed such a prayer as I never heard before. I vowed on my knees I would never again hunt on Sunday. I have kept the vow religiously since to the extent of not going directly to hunt and never killing game on Sunday. But I have broken it in spirit by sometimes, when I was on my plantation, riding around it, and if my pack of hounds followed me, enjoying their cry did they jump a deer or fox.

Where is the old hunter that could refrain from such enjoyment? As to listening, unless he stuffed his ears with cotton or his fingers, he could not avoid hearing.

This brings me to Brother M.'s Sunday fox chase. I witnessed the incident in Texas ten years ago. Old Brother M., a hardshell Baptist preacher, was an inveterate lover of a fox chase, and kept a splendid pack of hounds. He preached every Sunday to a large and respectable congregation; but during the week days, while working his farm, would take a fox hunt if there came a very favorable morn, or he would have a mule-ear rabbit chase or a moonlight night 'coon hunt. There was no better man living. Everybody liked him, and everybody respected his piety and believed him to be as pure and righteous as it was possible for a mortal to be.

On that ever to be remembered Sunday morning brother M. had mounted his grand Kentucky thoroughbred hunter, his wife was riding a mare as fleet as the stallion, and his daughter, about 15, and a son, 12 years old, were equally as well mounted. The family lived about eight miles from the church. It was a lovely morning as one ever sees, and the ground and season were just about the most favorable for a fox chase one could desire.

Unfortunately for the parson, but luckily for those of us who witnessed the finale, three of his best and fleetest hounds had followed him. This was no uncommon occurrence, for they often came with him to church, lay by the side of his horse until preaching was over, and returned with him home. The party did not get a mile from the house before a very large fox sprang into the road from the high prairie grass, and, as the parson said, "The devil was in that fox, and prompted by old Satan he took the middle of the road and never left it." The hounds that were behind the horses sprang forward in full cry. "At first," Brother M. said, "he did not get excited, and was wishing every moment the fox would leave the road and then he should not have minded it all. But that wicked fox did not intend to do so reasonable a thing. He kept straight forward." The high mettled horse reared and plunged and didn't know why his pastor should hold him back; and then his old lady was getting fidgety, and neither the boy nor the girl could hold in. And when the fox and dogs passed over a little hill and got out of sight, he thought he would let Ned out, "just to see what had become of them."

"Come on, old woman, let us gallop to the top of the hill, you will see Bet ahead," she wat his favorite bitch.

The party gained the point, and lo! that Satan-possessed fox was still in the road, and the distance between not lessened by the dogs, with Bet in advance.

"It was more than mortal could stand," as the parson told his congregation, while bemoaning his sins, and confessing his transgressions, "Ned got the bridle between his teeth, I could not hold him down, and he went for that fox with more fire than I ever saw him do before. I just believe old Satan got into him and the other horses, too. It was nip and tuck with us all, the mare tailed Ned and Sal and Jim's horses necked and necked. And my Lord forgive me, I forgot the Sabbath. I forgot everything in the world, wife and children, until I found myself tailing the fox, right here before you all."

But few persons had arrived at the church when the occurrence took place, as it was not time for services to commence. The church stood on a commanding eminence, with an unbroken prairie from there to Parson M.'s farm. It was undulating most of the way, with a small valley begining about half a mile from the church. Across that rose another hill not so high as that on which it stood. The Parson and his family could be discovered coming for more than a mile. On this occasion some of the young men were lounging around the premises, and seeing the race and hearing the cry of the hounds, began whooping, and all those in the house ran out to see what was the matter. Down the opposite hill could be seen the chase, the fox only a few yards ahead of the three dogs following one right behind the other, and the Parson not a hundred yards back, under whip and spur, bending over his coal black stallion; the old lady, with streaming hair and bonnet fallen off and hanging by the string, urging her mare to her utmost speed, not a neck behind the horse, and the boy in advance of the girl, with hat off and waving it cowboy custom. Down the hill they thundered, the cry of the dogs and the yells of the Parson being plainly heard across the valley and half way up the hill, when Bet seized the fox. By the time the three had it stretched the Parson got there, jumped from his horse and had the fox in his hands before he recollected where he was and the day. Dropping it as quickly as if it had been a piece of hot iron, he mounted his horse and slowly rode to the church. Tears were streaming from his eyes, his looks were dejected. He was mortified beyond expression. Bowing to the crowd without saying a word, he tied his horse, all covered with foam, and going into the church, went to the altar, knelt down and prayed the most feeling prayer of his life, bemoaning his sin and begging forgiveness of his people and his Lord. The old woman told some of her friends she could have beat the old man, but she was afraid and held in her mare. Jim whispered it around to all his young friends his horse could have passed dad's and mam's at any time, but he thought of the licking he would get when they returned home, and so he held back. The whole thing was laughable and enjoyable, yet everybody felt sorry for the Parson, the saddest picture of woe and sorrow. It was generally remarked, the sermon that day was the most powerful the old man ever delivered. GEO. D. ALEXANDER.

MINDEN, La.

IN CAROLINA WILDS.

AFTER some years' residence in Florida, it was deemed advisable that we should spend a few months where we could enjoy the taste of water that was somewhat cooler than 65° Fahrenheit, where butter was not eaten with a spoon and vegetables not eaten from tin cans, where milk was not offered in a solidified form, and where we might have a season of retirement from fleas, roaches, red bugs and ticks. By devious and dusty routes we reached Spartanburg, S. C., where we changed to a short road to Hendersonville, N. C. About midway between these points is the station of Tryon, where we left the cars and proceeded in a rickety "shay" to Lynn, a mile and a half distant, stopping a week at a house kept by a deacon and gentleman who entertained summer boarders. A hotter place I thought I never got into, the mercury ranging from 86° to 98°. Near by was Tryon Mountain, half way up which was an imaginary line following the trend of the mountain and called the Thermal Belt. This belt was the theme of much of the deacon's conversation. We had scarcely shaken the dust off at Tryon before the old gentleman pointed out the belt to us with much unction. He owned or was reported to own several thousand acres hereabouts, which may have accounted for his interest, for in the region of this belt frost was prohibited, or, at least, said not to make its appearance with killing power. Nevertheless, the previous April peaches were killed as dead as the traditional door nail. That was an unavoidable accident, however, which would not be permitted again. Along this belt was a bench, which was somewhat less perpendicular than the rest of the mountain, where, if the oxen were anchored out, the stones and dirt might be stirred up with a "bull tongue" so that potatoes and other truck might be planted. But a better place for grapes could scarcely be found. They grew wild everywhere.

I was up on the mountain squirrel hunting one day, and stopped about noon at the cabin of the only resident on the "hill." He had come from the North, and had been seduced by the old gentleman's glowing accounts into settling there. His accounts of men and means were quite the reverse of laudatory. I munched "pone" and drank buttermilk with him and left him to his devices. I shot a few squirrels while in the valley, but fully earned every one I shot. There were turkeys reported, but I failed to find them.

At the end of a week we bade good-by to Lynn, and one morning took passage in the deacon's conveyance for Tryon. When half way over the ram shackle rig broke in two and we footed it to the station, but the old gent charged us hack fare.

In Boylston valley, not far from the French Broad, we stayed for a few weeks at private house. The house was an old-fashioned one, fronting the valley and skirting mountains. Behind rose mountains, "Old Sharpie" overtopping them all. Along the road was a row of huge oaks tenanted by numbers of flying squirrels which squeaked and gamboled as I sat enjoying my pipe in the evening on the piazza that ran the whole length of the house. Houses in this region are not as a rule plastered, but walls and ceilings are ceiled with poplar, dressed and matched by hand, and wonderfully well done too, it being a rare thing to see a crack.

This farm was the property of a widow, whose unmarried daughter, son and his wife lived with her. The son was an easy-going, good natured fellow, whose going was so easy and nature so good that he couldn't find it in his heart to object to the milking being done by his aged mother, even though the rain poured, as it did quite frequently, the milking being in the open air. Sometimes he cut firewood, at other times I cut it rather than see the widow tackle it. While we were there it became necessary to plow the garden to put in turnips. Bill therefore brought out a wooden mould-board plow, such as his great gran'ther used—probably this was the same implement—and proceeded to disturb the soil. But he couldn't do it all at once. The lot was too large, being about forty by sixty feet, so he did part and postponed the rest until it was too dry to plant anything. But he could tilt back in a chair on the piazza and smoke a pipe just as easy.

It was a pretty valley, not over a quarter of a mile wide, shut in by mountains on either side, and capable of great productiveness. On the mountains near by were turkeys, grouse and squirrels, and further back were deer, while the small streams that tumbled down the mountain sides afforded moderate sport with the rod. Two or three times a week the mail carrier on horseback kindly brought my mail from the office below, and I was put in connection with the outside world. On Sunday, the mule and horse were hitched to the heavy farm wagon, chairs were put in, pains being taken to avoid the holes in the bottom of the bed, and we rode six miles up the valley to church at Davidson River. If the chair legs succeeded in dodging the holes all went well, albeit roughly; but if a leg found a hole then there was a spill and much merriment.

The poorer class among these valleys and mountains are not much given to literature, and the daily events of the world at large were of small interest to them. They are "rough and generous and kind," and any assistance in their power is never asked in vain. I thought they were more willing to lend a hand in other's work than in their own, for they are social and their little world furnishes but poor enjoyment at the best. A typical "mountaineer" was Fred Allen, who lived down the valley a mile or two, whose lank figure, with his long rifle and hounds were often seen, and perhaps more frequently heard, as he ranged the mountain sides after reynard, encouraging his "pups" with high-pitched and long-drawn halloo. When his rifle cracked it meant dead game. I can see him now as he came into the yard one morning to go deer-driving. His rifle was carried easily on his shoulder with his right arm thrown over the stock. Under his left arm swung a dirty bag of some stout cloth, once white, containing his "grub" and bullets. His hat was of felt, broad-brimmed, once black, but through much exposure to the elements now a yellowish brown and very limp. To keep it out of his eyes he tipped it back on his head and dashed the front brim over the crown. His shirt was made of a flour sack with part of the brand in large blue letters conspicuous on the breast. He wore no coat, and his trousers were held up by one "gallus." His lean hounds devoted their attention strictly to search for stray bits of sustenance around the yard, nothing coming amiss. He was a good specimen of his kind, rough, uneducated, warm-hearted and obliging, knowing the mountains like the deer he hunted, and the streams like the trout that swam therein.

I agreed to meet him one morning at his cabin to go after turkeys, he knowing their haunts. I was there a little after daybreak, but his wife informed me that a neighbor below had come for him the evening previous to watch a lime kiln and he had not returned. This was unfortunate, but having some idea of the lay of the land, I started up the mountain alone. Part way up I came out on a bench and beheld a most beautiful sight. Fog had settled in the valley, completely obscuring everything from side to side with a dense white mass as level as a floor, seemingly compact enough to walk upon. The sun was just showing himself, and as he rose higher, looking down in growing power upon that lovely scene, the white mass stirred as though awaking from sleep at the call of its master, and breaking into billows, fantastic wreaths and columns, departed into its own realms until another night; and day dawned upon the peaceful valley.

I had hardly reached the top of the mountain when I heard hounds and knew that Fred was on my trail, so I waited until he and a companion came up, when we proceeded along the ridge overlooking the valley. We found nothing larger than fox squirrels, however, and after going some miles turned to the right and descended to the valley, upon reaching which we entered a piece of woods, and about midway of it the dogs flushed an old hen turkey and her brood of eight or ten three-quarter-grown birds. They flew in all directions, quite a number taking to the trees, but we looked in vain for them, until our necks were stiff. The timber was thick and the tops dense, and though we did sight one or two, they left just as we did see them, as game is apt to do, and we got none. Leaving the woods we crossed a field toward the main road up the valley and stopped at a fence to sample some wild grapes that hung in profusion from a vine in a small tree. As we did so it occurred to me that I might return and call those turkeys a while with possible success, as I had my call with me. Fred said he didn't care about going back, so I retraced my steps, and before I reached the woods heard a turkey calling. I managed to get into cover without being seen and then called my bird up and shot him. Then I went further into the woods where I could, from a little elevation, overlook the place where the birds flushed, and concealing myself in the top of a fallen tree began to call. In front of me the ground descended a few rods to a level which reached to a fence a hundred yards or so away, the other side of which was a very dense thicket. In the course of half an hour I heard a faint call from that thicket, and in a few moments more I saw the turkey dimly, walking on the other side of the fence, whistling in young turkey style. He continued to walk back and forth under cover of the fence until I despaired of seeing him on my side. But at last he hopped up and sat there peeping about as long as he had walked on the ground. How I did wish for a rifle. His patience was exhausted at last, and he hopped down on my side and took a few steps toward me. My finger crept toward the trigger as I gently answered his whistle. But he thought better of it and hopped up on the fence again. Then after a moment's reflection and two or three agonizing peeps he hopped down on the further side of the fence and began his watchful promenade. While I was watching him intently and carefully calling, another young lost fellow had crept up on my

right in the bushes to within twenty feet and stood motionless watching the performance, until I shook my head at a mosquito that was endeavoring to explore my ear, and the way that turkey "skaddled" out of that vicinity was marvelous. My turkey soon mounted the fence again, and after a short survey of the field hopped down and at last walked straight toward me. I could feel the hang of that bird that minute as I carried him home, when he turned like a flash and stopped not until he had placed the fence between him and danger. I felt anathemas in me strong, but as it was only midway the afternoon I concluded to hang on a little longer if I didn't grow fast to the ground. So I piped up again, and after a season of reflection the bird ventured back to the fence once more. He went through the previous performance again, ending by walking up within forty yards and then lying down suddenly. I straightened out my limbs as well as I could, and took the road up the valley. S.

INDIANA.—Hartford City, June 11.—Quail are few and far between; here and there perhaps on a farm will be a pair, and often in my drives I have seen but one poor bird calling for a mate for a half hour, but no answer to its plaintive call is heard. I have again seen quail this spring, two and three together, and one or two of them with their feet frozen off and hobbling around on their stumps. It has been a wonder to me that any at all weathered it through, as the snow covered the ground for the period of three months that the birds could not get to the ground to feed, and the temperature was from zero to thirty below during all that time. Where we had two to three coveys of thirty-five to seventy-five birds in every open field we now see one or two quail in two or three miles. Like all else they must go too. Quail shooting is a thing of the past. Ruffed grouse are very plentiful, and a good snapshot can bag his dozen or two a day without much effort; they have hatched already. We have a visitation of the seventeen-year locust, and to say they are noisy would not express it. They are in the forest principally, and are doing no damage as yet. A party of us start on a frogging match soon; I will write you about it after our return.—AH LOOK.

IRONTON, Mo., June 12.—Last winter was very severe on game. I found dead quail in considerable numbers while hunting. Also saw one dead turkey. But at the present time quail are quite numerous, more so than for several years; I cannot imagine where they all come from, seeing so many dead ones last winter. I saw a few days ago a covey of young pheasants one-third grown. They were all fine, strong birds and could fly well. Turkeys are not quite as plentiful as usual. I saw several fine ones this spring while fishing. I have not seen any deer for some time, but I heard there were a good many about seven miles out from town. Squirrel and rabbit are very scarce at present. I have seen but one squirrel and three or four rabbits in the last three months. Our fishing is not very good this season. I have caught several fine bass, the largest weighing four pounds. Game laws are fairly respected in this locality.—W. E. B.

WHY THE DOUBLE-BITTED HATCHET?—*Editor Forest and Stream:* Would you ask "Nessmuk" what advantage there is in his double-bitted hunting tomahawk over a single blade with hammer head? I would say a double blade is dangerous to carry and use, for to be of any use must have extremely keen edges, whereas with a single blade and hammer head, nails, tent pins, etc., can be driven. The only reason why lumbermen (and very few of them) use the large, double-bit axe, in case of one edge blunting or breaking they have a reserve, but from the size of this tomahawk it is only intended for light work, and the chance of breaking very small. Having seen this weapon praised up without giving reason, I should like to have the inventor, "Nessmuk," give them.—SINGLE-BITT (Quebec).

DIVERSITY OF SHOT MEASURES.—Cazenovia, N. Y., June 13.—*Editor Forest and Stream:* Your article about shot measures is good, and it is time that something was done about it. I make the following statement, that no gunmaker in the United States can tell what a single gun they make will do at the target, for the simple reason that they measure the shot and don't know the number of pellets in the charge they use. The shot should be counted, then there is no mistake. Mr. Card, of trap fame, invented a simple machine for counting the shot (a cut of which is inclosed), but it is too accurate for them; they prefer to dip them up, thus getting fifteen to twenty more pellets in the charge than there is in 1¼ ounces by count.—WILL H. CRUTTENDEN.

THE FIRST AMERICAN RIFLES.—Smithsonian Institution, Washington, D. C., June 13.—*Editor Forest and Stream:* The Smithsonian Institution has been requested by Lord Truro to obtain information as to when firearms, especially rifles, were first manufactured in North America. He has heard that the first rifle makers in the United States were some German families, who settled in Pennsylvania. He wishes to know when they arrived, and whether the rifles used with such deadly effect by the Americans in the War of Independence (1775 to 1782) were of their own manufacture or imported from Europe? Can any of your correspondents throw any light on the subject?—Very truly yours, SPENCER F. BAIRD, Secretary.

A WORD FROM THE CHEF.—A few canvasback ducks were sent to market last week by a pot-hunter, who imagined he could find a sale for them, but he was disappointed. Wild ducks are to be had in Boston, but they are preserved in ice-houses from one season to another. We do not recommend the use of any food out of season, and cold weather is the only time a true epicure will eat wild ducks.—*The (N. Y.) Cook, June 13.*

PRAIRIE CHICKENS.—*Correspondents who may have observed the condition of prairie chickens this year are requested to send to the* FOREST AND STREAM *postal card reports.*

ATHENS, Pa.—Quail, grouse and rabbits wintered well. I expect some good sport here this fall.—PARK.

The latest reported mischief of the English sparrow is destruction of orange blossoms, the New Orleans *Times-Democrat* reporting the case of a tree which has for many years borne from 200 to 400 oranges, but now has less than a dozen of the fruit on its boughs because the sparrows devoured the flowers.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—III.

THE sun was well above the treetops across the lake next morning before Al aroused the happy family for breakfast. And that breakfast of coffee, biscuits, ham, eggs, fried potatoes and fish, and a tin cup each of wild raspberries, great red luscious ones, with sugar, and pure cold sweet milk with the cream on. Will we ever forget it?

The first work of the morning was to look after the cooking and dining department, and this required ridge poles and uprights to put up the two flies, each twelve by sixteen feet. Ben and I took the dugout with Bob and Kit for a ride, and paddled a quarter of a mile up the lake to an old log road, where, back in the brush, we found a scattering grove of young water maples, which were just what we wanted in the way of poles for the flies and two tents not yet put up. This load of green timber would have sunk an ordinary skiff, but the old "holler log" was a remarkable craft in more ways than one, and we paddled back to camp drawing but little more water than when we left it.

In two hours our canvas canopy was up; twenty-four feet long, with the sides sloping down to within three feet of the ground and fastened by the guys to stout stakes driven deep into the sandy soil. This afforded a good shade and protection from rain, to say nothing of its advantages for ventilation. Under one end was the table of rough boards, ten feet long by three wide, and under the other end, to one side, we put up a table for Al's special use, with one of the mess chests mounted on it for a cupboard. At this end the camp stoves were set up on a low platform, and near by was a big packing-box containing flour, corn meal, side meat and other delicacies. Altogether it was rather a creditable and handy kitchen and dining room, and we felt rather "stuck up" over it. "A leetle too good fur the Joneses," Ben solemnly remarked as he swallowed a dipper of fresh water just from the well.

Dan's tent was the next job, a wall tent, and the only one in the lot. The others were of the A pattern, and this, I believe, all things considered, is the best for the "bresh" of Northern Michigan, as they take up less room where room is often at a premium, are put up in much less time and with far less trouble, and there are no guy ropes to steer around or break your neck by falling over if you have occasion to get out in the dark to look after things in case of a sudden rain or storm.

It was with some trepidation and misgivings that Ben and I began the erection of that canvas "stone front," for Uncle Dan is, according to Dick Mac, "a little facetious" about the location and set of his tent, and it was not without a good deal of satisfaction that we got the poles sawed to the exact length, nailed firmly together, and the tent finally set up in a shape to please his critical eye. However, old Ben could not pass the opportunity to fire a good-natured shot after him when the old pelican was out of range in another part of the camp.

"Hickory, we'll hev to do some o' that work over agin or we'll git into trouble. Don't ye see that corner stake over there! it's a full half an inch too fur out, an' the next one this way is jest exactly a quarter of an inch out o' slant with the rest of 'em, an' ef Danny gets his cagle eye on them two stakes, an' we don't line 'em up, he won't sleep nary solitary wink this blessed night," and with one of his inimitable winks and an expression on his bronzed face as solemn as an owl, he shouldered the axe with "let's go an' cut a flag pole an' set that piece o' striped buntin' to flutterin', fur there's nuthin' like the stars an' stripes to set off a camp, an' make a feller feel fractious like."

In the swamps at the head of the field we found a tall, slim ash sapling that Ben said was "like a woodpecker's head—made a purpose." This was cut and planted in the bank near the water, a few yards below the camp, and the old flag was run up and unfolded itself in the light breeze amid a cheer from all hands. Then a washstand was devised at the edge of the water, near the dining-room, a couple of hammocks swung in the shade of the trees along the bank, and the camp of the Kingfishers was ready for the inspecting officer.

The hard work was done and we were well pleased that everything had favored us in getting our little village of six tents and the big fly into such good shape for a season of rest and recreation. In the afternoon the rods were brought out and jointed with many a critical squint to see that the guides were exactly in line, reels adjusted, hooks on gimp carefully tied on (for we were in the land of the pickerel and mayhap of the mighty maskalonge), and the annual summer campaign of the Kingfisher Club was about to open, although this shank of the afternoon would only be devoted to a careful study of the water within a mile or two of the camp.

This study of a new sheet of water or stream, I have a notion, is as necessary to the angler as a knowledge of the lay of the country he proposes to hunt over is to the hunter, and to be measurably successful he should know something of the habits and seek to learn the feeding places of his fish, as the hunter does of the game he pursues.

If the angler know nothing of the ways and habits of the fish he seeks, one place is as good as another to waste time at, and it is only by a stroke of luck that he chances on a "good place," and then like as not he credits his catch to his own smartness and not to the fact that just there is the only place within a mile where he might expect to find fish had he known anything of their manner of life and the kind of food suited to their tastes. I have seen two smart fellows who could talk fish by the yard sit on a bank and fish for bass three or four hours with a piece of raw bird, where the water was not a foot deep within twenty-five yards of them, and the bottom a clear white sand bar, while the veteran old Dan Sloan sat in a boat a hundred yards above them at the foot of a rocky riffle, where the water was a fathom deep, and took bass after bass with live minnows, to the utter astonishment of the two chumps on the bank. Dan knew where to fish, and how; they simply knew how, and not much how at that. Dan's fish knowledge had been acquired by close observation and practical experience; theirs was yet in the dim future, but their patience was commendable. They left the stream with just as many fish as they would have taken had they been trolling for suckers on that glaring sand bar with a five-inch maskalonge spoon. Truly, to be learned only in the nomenclature of flies, to be able to distinguish between a pectoral fin and the lateral line, and to be smart in the knack of the "Henshall" (?) cast at a tournament is not to know how and where to fish.

A few of the best of a very poor lot of small frogs were selected from the menagerie box and placed in the minnow buckets, and then for the boats. There lay four nicely painted new skiffs of as many different models, each with at least two barrels of water in it. In the press of putting the camp in order we had paid little attention to the boats, but now when wanted for use there they were—four clumsy, ill-shaped, leaky affairs that would require, it seemed, two persons each to manage, one to row and another to bail the water out as fast as it leaked in, while a third might possibly do a little fishing.

If there is anything "on the face o' this livin' earth" calculated to ruffle the temper of ye honest angler and make him forget he was once a shining light in the village Sunday school, it is a miserable, clumsy, wet, leaky boat in which he is forced to sit and fish.

While the girls retired to a safe distance Ben and I made a few remarks calculated to free the boats of water by evaporation, assisted by Uncle Danny, who occasionally wedged in a word where Ben had failed to make the case plain, and by frequent approving nods from Jim, whose natural proclivities for plain and scroll-work cussin' were almost bursting him, but who restrained the impulse to let loose no doubt out of respect to the teachings and influence of his gentle, pure-minded little wife. Ben seemed to understand and appreciate the fix Jim was in, and remarked in his dry way, "Never mind, Jim, Jeems Mackerel (meaning the writer) an' me'll do your share an' won't charge you a cent, ef you'll jest fan us a little once in a while to keep us from gittin' too hot."

It may be recorded here that our friend Couturier sent his son John up a day or two after to stop the leaks, and John succeeded by dint of much hammering and caulking, and nailing various strips of tin over divers seams and cracks, and a liberal use of a thin mixture of white lead and oil, in putting the boats in a little worse condition than they were in the first place. John's intentions were good, but his skill in the art of stopping leaks was not a noticeable feature amid his many other good qualities, for John was possessed of sundry good qualities, among them a hearty desire to drown the man that built those boats. Friend Couturier was not, however, to blame about them, as they had been built for him by some one that knew more about chopping cordwood than modeling a boat, and they were turned over to us as the best he had, but he treated us better probably than we deserved in the final settling up by charging us a mere nothing for the use of them, and promising too that next year he would have better ones. We pulled them out on the bank, tilted them up to let the water run out, slid them back and laid boards in the bottom to keep the feet dry for a while at least, and the search for fishy-looking water and a few fish for supper and breakfast began; but more fishy-looking places were found than fish, though enough were taken for present needs and we were satisfied. We found a dozen or more places within a mile either way from camp that promised good fishing, and we returned well pleased with the prospect of good sport ahead.

There were two or three of the party that never disturbed a fin that afternoon, and I am constrained as a veracious chronicler to own up that the writer was one of them, but I would not probably admit it so readily had not Bob and Kit told it the minute we got back to camp, and were it recorded otherwise those two teasing little damsels would have the "old man" cornered in a colossal fish lie. Kit said, "Would you believe it; papa never had a strike while we were out!"

"Strike" was a big stride in the rudiments, and she looked sedately at Bob with an air that said, "See how easy it is to learn to fish," but there was a shade of anxiety in the tone, lest in making this strike she had struck the wrong word.

"Yes," said Bob, as she half closed her left eye in a prolonged wink and took deliberate aim with the other, "Old Hickory, as you folks call him, fished and fished and never got a solitary (solitary, after her Uncle Ben) run—I mean nib; I believe that's what you call it—but how can a fish run when it's got no legs," and with a twinkle in the wide-open eye she demolished the old man's reputation as an angler and set the whole party in a roar with, "Papa, Hickory knows how to row a boat for us girls, but he can't fish."

"Now jest listen to them two twins," said old Ben, as he swapped legs and addressed a vigorous remark in parenthesis to a skeeter trying to locate a claim on his nose, "to hear 'em talk you'd think they'd been a fishin' ever sence they was knee high to a duck, but I'll bet a chunk o' maple sugar agin a pardnership kiss from 'em that nary one of 'em kin tell a striped perch from a zebray, 'less it would be by the shape o' the tail an' the gineral set o' the fins; the neutral fins of a zebray, mind ye, my dears, bein' hitched on a good deal furder aft than they are on a pearch," and with a solemn wink at old Dan, who was near bursting with smothered laugh, he lit his brier root, changed legs again and relapsed into silence, which lasted only till the skeeters, emboldened by his listless attitude, made a combined flank movement on his right ear.

"Them two gals," he went on after swiping off the mosquitoes, "we'll hev to call the twins, fur ever sence they met at Fort Wayne they've bin froz together 'xceptin' when Kit was actin' as master o' transportation comin' over from Sutton's Bay, an' while they're in camp here they saunter around with their arms locked, suckin' a hunk o' maple sugar an' lookin' as peert an' sassy as two bluejays, an' when their backs is turned to ye they're so near of a size an' muchness that ye can't tell t'other from which, only Bob's hair is as black as a crow and Kit's is a kinder off color hazelnut brown, jest afore the hazelnut gits dead ripe, an' ef you'll notice the kinks an' quirls around her head, it looks a good deal like a hazel burr after frost hes struck it." "Them two gals," with a twitch at the corners of his mouth and a furtive glance over his shoulder; but the sentence was never finished for lack of time. The girls made a dash for him, but he was too nimble of foot to be caught napping. Springing to his feet and kicking the camp stool on which he had been balancing himself to one side, away they went up shore, followed by shouts and laughter from the rest of the camp, with Ben a half dozen lengths in the lead.

The girls soon gave up the chase and came back tuckered out and puffing from the violent and unusual exercise, while Ben came sneaking in soon after and took his seat as unconcerned as though nothing had happened, but keeping an eye on the twins to see if there were any further signs in the air to bring on another race. Satisfied that the fun was over, he fired the brier wood, swung his right leg over the left into its accustomed place, and puffing a few meditative whiffs said: "You gals 'll hev to train down a leetle finer ef ye expect to come under the wire ahead o' 'Hyperboler,' but I tell ye, Dan," as he hitched around facing the old pelican,

"I thought I was a goner once, fur Kit kin run like a deer an' was a reachin' mighty close fur my suspenders, but I jest teched myself in the flank with the spur, figgeratively speakin', as ye might say, an' then ye ought to a seen the sand fly; 'xpect Kit must a got more'n a bushel of it in her eyes, an' that's what saved my bacon. Jest write it down, Hickory, in that notebook you're keepin' in yer head, that there's heaps o' fun in this camp an' Hyperboler is lookin' around fur his share of it."

It may be in explanation that Ben was called Hyperboler (accent on third syllable) by the girls on account of a very marked tendency to indulge freely in hyperbole when telling a story or relating in his inimitable manner his varied experiences by flood and field, and Hyperboler stuck to him till camp broke and he will no doubt be hailed by it when the next camp is made.

Jim's wife was honored as "Mother Jim" for the reason, as Bob said, that she was the only married woman in the party, and where there were so many girls—there would be two more next day—there ought to be a mother to look after and keep them straight. The blessed little woman entered into the spirit of the thing with great glee, and thereafter it was Mother Jim and the children.

And we could see, too, that Jim was pleased all over at the good feeling manifested toward his wife, as evidenced by the grin that made strenuous efforts to reach clear to the outskirts of his beaming countenance, but failed, as the territory to be covered was to much for one grin. Truly, it was the happy family.

We sat and talked and joked till darkness came down and the smudge went out, and, outside of the rays of the solitary lantern on the table, nothing was to be seen but black shadows, except a faint shimmer on the water where a bright star shed its luster on the bosom of the tranquil lake. The conversation took a turn in keeping with surroundings, and finally dropped to a few scattering remarks addressed chiefly to our enemy, the tuneful and ever-cheerful pest of the North Woods.

The labors and pleasures of the day were over, eyelids grew heavy, and we sought our beds and the protection of the mosquito bars, to be lulled to sleep by the lonely cries of a trio of loons, whose wailing notes came quavering over the water to us from far up the lake. KINGFISHER.

[TO BE CONTINUED.]

MINNESOTA FISHING.

AT 3 P. M. on Wednesday afternoon of last week, Clark Eldred and myself started out to interview the fish, my first handling of the rod this season.

After securing a bucket of minnows for bait, we pulled up across Swan Lake, using a trolling line, designing to do our still-fishing in other waters. Before reaching the head of the lake we had captured nine good-sized pickerel, and a huge old muskanonge had snapped my line in two, and made off with my trolling spoon. Leaving our boat at the head of Swan Lake, forty rods of travel brought us to Mons Lake, where we borrowed another craft, and making our way to the inlet commenced still-fishing. The first fish to come aboard was a wall-eyed pike weighing seven pounds, shortly followed by another weighing two pounds more. When the sun went down and we turned our faces homeward, we had taken exactly fifty fish, and the fifty fish average fully three pounds each. Not a bad catch for a part of one afternoon.

Just before we left Mons Lake Eldred made a strike, fastening to one of the largest fishes I ever saw in Western waters. Having no reel Eldred could only brace himself and hang on, but first his rod and then his line yielded to the tremendous strain and the fish was free. I saw the fish distinctly and am confident it was fully five feet in length, and would weigh thirty-five to forty pounds.

Long Lake, three miles from this village, is the best fishing ground I ever saw. I am glad to say, and I have no axe to grind, save that I want others to have as good sport as I have myself, that Mr. J. S. Grover of this town can furnish excellent accommodations for small parties, and furnish team and boats. J. FRANK LOCKE.

PILLSBURY, Todd County, Minn.

WHAT BAIT?

Editor Forest and Stream:

I have fished for just such trout as "Squatter" speaks of and have had others near by doing the same, and when I was entirely discouraged, my Indian told me to try the back under fin of a small trout, for I had caught some small ones. Now if "Squatter" will try this and tell me the results, so that I may compare them with mine, I will be obliged to him. And if it does not succeed I will send him a fly which an Indian of a good deal of experience showed me how to make, and if that won't catch them nothing will. Hope to hear from "Smuggler." H. G., JR.

ALBANY, N. Y.

Editor Forest and Stream:

In answer to "Squatter" I would suggest that should he hunt along the banks of the stream and procure some kind of crawfish or water-worm of any kind, the trout would be more likely to bite, as the bait used would not be strange to them. NIMROD, JR.

LEAVENWORTH.

Editor Forest and Stream:

I do not know that I ever failed myself in capturing any large trout that I knew the whereabouts of, and I see no reason why "Squatter" should not have the fish that he longs for. Let "Squatter" go to the pools very early in the morning (say when it is hardly daylight) and try a white miller and any slate-colored or drab fly. If neither of these succeed be provided with some worms that have been kept in damp moss for two or three days, or with some white grubs, as they are commonly called, or better yet, perhaps, woodworms or borers. Try these one after the other.

Should they all fail to tempt the cunning fish, a small dace or a bright-colored minnow may be tried. But should none of these succeed in the morning, then go to the pools late in the evening and try the white miller again, and then the bait until it is quite dark.

The early morning after a thunderstorm, the afternoon or evening before, I have always found the best for large fish. Stand well back from the pool when you cast. It is a good plan to notice the character of the little fish that may swim around the edge of the pool, if there are any, or the worms and flies that may drop from the trees into the water. Sometimes they make excellent bait.

However, I think the early morning, with the flies and bait that I have named, will do the work. The fish can be caught if "Squatter" has the time and patience to give to them. I have always thought that at this season of the year large fish feed generally in the early morning, and when it is raining hard.

Let your fly or your bait fall as near the plunging water as you can and then float out. And remember that it is not necessary to cast far out for trout; even large ones, when they are feeding, come very near the shore.

All that the suggestor of these devices will ask of "Squatter" is that he tell the readers of FOREST AND STREAM if he succeed in catching the wily fish.

Knock an old stump or log to pieces for the wood worms and watch any person breaking up "sod ground," or even digging in a garden for the white grubs. STILLABOY.

Editor Forest and Stream:

If "Squatter" can find a nest of young mice he will have no trouble in catching some of the large trout he seems to want. Hook the mouse through the nape of the neck, and with favorable conditions of weather he will be almost sure of success. I don't care for any of the catch, as trout shipped from Massachusetts to Minnesota would hardly be trout on arrival here. JUNE.

MINNEAPOLIS, Minn., June 10.

A TRIP TO RACCOON STRAITS.

IN comparing the relative merits of salt and fresh-water fishing, I am inclined to agree with the conclusions of FOREST AND STREAM that the former is entirely lacking in most of those features that contribute so largely to the interesting details of the latter, and which, when placed before us by the skillful hands of "Kingfisher" and "Wawayanda," seem to take us with them, away over mountain and plain to the forest lakes of Michigan or the idyllic atmosphere that the witchery of the writer has thrown around the charming description of his life at "Camp Flotsam." "Al Fresco" in his Florida home could, I fancy, give us something rather exciting in the salt water line should he ever be successful in any of his numerous attempts to land a six-foot tarpon, especially if the exploit was accomplished with a split bamboo and a braided silk, and I feel assured that after the veteran "Nessmuk" has fastened his line to some of those big fellows he saw in the vicinity of Tarpon Springs, he will be able to give us an article of an even more exciting character than anything of the kind that has ever yet emanated from his facile pen. Notwithstanding all this, the salt water narrator is, generally speaking, badly handicapped by the superior attractions and more diversified character of the sport furnished by sylvan stream and lake for exactly the same reasons that make a description of sea fowl shooting, however exciting it may have been to the participants, of less general interest than a forest sketch of the same description.

Influenced as we are by these reasons, we do not feel quite sure that the following description of a fishing excursion, taken by four of us to Racoon Straits a few days ago, will be found of sufficient interest to entitle it to a place in your crowded columns, although the pleasure we derived from it fairly places it upon the red-letter page of our piscatorial experience. All of our arrangements having been made the night before, we took the Market street cable car for the ferry at seven in the morning, where before boarding the steamer Fiburon we laid in a supply of shrimp for flounders and a cigarboxful of worms that live in great numbers among the muscles that cover the piles and rocks along the bay. These worms resemble an earwig much more than they do an angle worm; have numerous legs; are much tougher, and far more tenacious of life, and when just caught will sometimes bite hard enough to draw blood. Rather ugly customers to look at, but excellent bait for rock cod, porgies or sea perch. They are gathered by the quart at low tide; usually by boys, who dispose of them to dealers, who have small stands near the ferry landing for supplying fishing parties with bait.

The steamer was crowded with fishermen, hunters and a number of others who were intent upon a day's sport near Cloverdale, coursing jack rabbits with greyhounds. Half way to our destination we sighted a pleasure party about a quarter of a mile distant on our larboard bow who had come to grief through the swamping of their boat, the occupants, five in number, were hanging to the gunwales submerged to the neck and endeavoring to attract the attention of the passing boats by frantically waving their hats and handkerchiefs. The steamer was stopped and a boat manned by four lusty sailors was lowered with all possible expedition, while we resumed our course, leaving the small boat to rescue the unfortunates and return them to the city.

Landing at the Tiburon pier, the terminus of the N. T. C. R. R. we exchanged the steamer for a rowboat and pulled around the point about half a mile into a wide, shallow cove. Twelve or fifteen boats were already anchored on the fishing ground when we arrived, but none of them seemed to be having a very exciting time and the prospect for good sport looked rather dubious. We threw our anchor over, however, in about three feet of water and dropping down into the soft mud our hooks, baited with the tempting shrimp, awaited further developments. The tide was about half in and the odoriferous mud flats on either side still remained to a great extent uncovered, their monotony being relieved here and there by small gatherings of seagulls vigorously searching the oozy shore for small crabs and shrimps, with a view of getting themselves into an acceptable condition for the enterprising "chicken" tamale venders of the city. For a full hour we lay idly floating on the sluggish tide before a single nibble disturbed the soporific influences that were gradually stealing over us. Tom sat in the bow in a decidedly somnolent condition. Joe fastened his line to a rowlock, and taking a morning paper became absorbed in the latest features of the Sharon divorce case. Belden yawned until a dislocation of his jaw seemed imminent, while the writer, sitting in the stern, looked listlessly away over the green hills of Marin county, his hands dabbling in the water and his thoughts wool-gathering among the sage-clad mountains of Nevada.

"I've got a bite," shouted Tom, in tones that put every man instantly on the alert, and by the way of a practical demonstration of the truth of his assertion, a moment later he landed two flounders of at least a pound weight each into Joe's lap. All day dreams instantly fled, and the animation that was immediately perceptible in the surrounding boats announced the fact that the ball had opened with them as well as ourselves. Belden and the writer took in a couple out of the wet, followed by another pair for Joe before Tom could replenish his hooks for another cast, the two fish caught by the latter being evidently the advance guard of a vast army of flounders that were coming in on the flood tide; and for two hours the biting was fast and furious, until there was no room for our feet in the bottom of the boat without stepping on a fish. Then the sport stopped almost as suddenly as it had begun; the school had evidently gone by us further up the bay, for we could see the boats beyond still catching them rapidly after they had ceased biting in our vicinity. We did not care to follow them, however, we had had fishing enough in that particular line, and stringing our catch of ninety-six flounders on strong cords, we pulled up the anchor, rowed out of the bay and headed for Raccoon Straits, which separate Angel Island from the mainland.

The day was warm and very pleasant, and the wharf at Tiburon, as we passed it on our way up the straits, was thickly set with men, boys and even women who had come over from the city to enjoy a day's fishing in the country air. One fat old fellow in particular attracted our attention by the elaborate preparations he had made for a comfortable day's sport. Seated in a large easy camp chair with a lunch basket by his side, out of which protruded the neck of a wine bottle with a metallic drinking cup inverted over the stopper; he was puffing away at an immense meerschaum pipe, his three lines tied to the wharf near his feet having large floats, each of which was surmounted by a tiny brass bell, whose musical tinkle gave him warning whenever they required his attention.

A pull of a couple of miles up the straits took us to California City, consisting solely of a large packing house, where the catch of the Alaska cod fishery is prepared for market, and a few cottages for those engaged in packing the fish. It was nearly or quite noon when we arrived, and beaching our boat a short distance beyond the city in a delightful little nook where the hill that rose in a gentle incline from near the water's edge was covered with green grass, clumps of low trees and wild flowers of every hue, we spread our lunch beneath the shade of a stunted live oak, and proceeded to fortify ourselves for an onslaught upon the rock cod, sea perch and porgies for which the surrounding waters have quite a local celebrity.

We were in no great hurry, however, to get out among them, the morning's experience had been pretty good for a starter, albeit the fish had not been quite as gamy in character as those we proposed to interview in the afternoon. The lunch that gentle hands had prepared for us before starting was leisurely discussed with appetites gained by the long pull up the straits, the perfume of the flowers, the drowsy humming of bees, the twittering of the sparrows in the thickets around us, and the clear, ringing notes of the quail, whose nodding plumes were occasionally visible as they hurried through the grass calling loudly to their mates on the opposite hill—all had a tendency to render our surroundings too agreeable to be hastily disturbed. A few porpoises were lazily rolling about a short distance from the shore, and the swell from the paddles of a steamer bound up the Sacramento River came breaking in upon the sand at our feet. High in the air a file of pelicans, seven or eight in number, went winging their way slowly toward the north, their ungainly forms and great expanse of wing forming a striking contrast to the trim little ducks that went whistling away like bullets just over the surface of the water.

By 2 o'clock we were through eating and smoking and tired of lounging under the live oaks, and each expressed his readiness to test the resources of the new fishing ground. "Now for those villainous worms," said Joe, as we pushed off into the tide. "I had rather be whipped than take one of them in my fingers; they make me crawl every time I look at the squirming things." "That's because they have got so many legs," retorted Tom. "Nothing like getting used to them," chipped in Belden; "I used to think grasshoppers were nasty little cusses, but when I was prospecting one season in the Boise basin we ran clear out of grub and got so nearly starved before we got into camp that we not only made a square meal out of an Indian cache of roasted grasshoppers we found in a tree, but took along about a peck for future emergencies." "Did they make you sick?" inquired Joe, who was the only dude of the party. "Not much," was the grave reply, "beat the finest peanuts I ever eat."

A few vigorous strokes with the oars took us a suitable distance from the shore and dropping anchor in about 20ft. of water near a ledge of rocks, we all cast our lines over except Joe, who concluded to await results before he tackled the worms. There was no delay with the fish here, as was the case with the flounders, for the writer's lead had barely touched the bottom when a fierce tug from below announced the fact that they were not only there, but were ready for business, and as a fine blue cod of two pounds' weight came in over the gunwale followed quickly by a silver perch at Tom's end of the boat, Joe's scruples against the crawling things vanished into thin air, and calling loudly for the cigar box containing them, he grabbed a handful and placed them near him on a seat, and a moment later was as deeply absorbed in the sport as any of the party. There was a novelty, or more strictly speaking, a delightful uncertainty attending the fishing at this point that made it more fascinating than any other place we had yet visited in the bay. Sometimes it was a blue or red cod, then a silver or blue perch, then a sea trout or a porgie—no flounders, no sculpins, but all were fish that were desirable, and most of them tolerably gamy. A number of boats were fishing near us, some of which had ladies on board, and their screams of fright when one of them would draw to the surface instead of the expected fish, one of the enormous crabs that frequent these waters, never failed to elicit shouts of laughter from all but the victim.

From a rocky point jutting out into the bay near us two gentleman were fishing with rod and reel, and although they labored under serious disadvantages owing to the multitude of sunken rocks around them, beneath which the fish, especially the cod, would fly for safety the instant they felt the prick of the hook, it was nevertheless evident that they were extracting more real sport out of the capture of a half-pound perch than we obtained from our largest cod, but as the fish were much more abundant with us as well as larger, and the chances of getting our lines caught far less, we felt tolerably well contented with our situation. Sometimes there would be a lull for a few moments in the biting, as if the fish had left the ground, but they soon returned, and as the last boat for the city left Tiburon at half past five, we reluctantly took in our anchor shortly after four o'clock, and leaving them biting as freely as ever, turned our bow toward home, having taken sixty-three fine fish running from one-half to two and a half pounds since lunch, to go with our morning's catch of flounders.

As we rowed along near the shore on our return, my attention was attracted by a queer-looking craft, half boat and half dwelling, looking for all the world like the home of Mr. Peggotty in "David Copperfield." It was tied to the shore in a little inlet just beyond the wharf; it certainly was not intended for navigation, although it was almost entirely in

the water, and the cabin upon it, small as it was, covered nearly the whole deck. On the end over the water stood a tall man who had just got out of a small rowboat which he was fastening to the scow. He was very shabbily dressed, and his long-neglected hair and beard hung in shaggy masses over his shoulder and breast. He rose up as the splash of our oars fell upon his ears, and to my astonishment I recognized Charley K., who long years ago in the flush days of the Washoe excitement had, with his pockets full of gold, been a fellow passenger with me on a pleasure trip to the East in one of the fine steamers of the Pacific Mail before the rails had been laid a mile west of Omaha. I returned to this coast before he did, and for years had lost sight of him entirely until this strange meeting on the shores of Raccoon Straits, where he told me he had for the past five years eked out a precarious living hunting and fishing. Poor K., stocks and the subsequent dissipation brought on by his losses had stranded him and left him as complete a wreck as were the old hulks that lay beached on the shores where he had moored his floating dwelling. And there he is wearing out, year after year, without companions, without friends, broken-spirited, poverty-stricken and alone. FORKED DEER.

SAN FRANCISCO.

BASS NOMENCLATURE.

Editor Forest and Stream:

In Guizot's "History of France," vol. 6, p. 382, occurs the name of Dolomieu, who was, it appears, a commander of the Knights of Malta, which order was suppressed by Bonaparte in 1798. He also took part in the scientific expedition attached to the French army in Egypt in that year. Probably he was the man whose name was given to an American fish by Lacepede, his friend and fellow scientist, and who, perhaps, will be longer remembered from that circumstance than for his Maltese Knighthood.

Although his claim to have the small-mouthed black bass called for him has been revived and urged by Dr. Henshall with ability, yet after all it seems to rest solely on priority, and that is far from being an unalterable law in the world of science, much of the nomenclature of the most eminent men—Linnæus, Cuvier, Agassiz—having been set aside by later writers.

Dr. Henshall says that Dolomieu had about as much to do with the fish as George Washington. Probably less, since the black bass is found in Virginia rivers, where the youthful George no doubt caught them. The generic name "Micropterus," or "small fin," came, as we learn, from a mutilated specimen, which had the dorsal fin partly bitten off. From that abnormal peculiarity Lacepede gave the generic name, and the specific one from Dolomieu, member of the scientific corps of the army of Egypt, who were held in such esteem by that army, that it is said the order used to be given on the eve of a battle, "Asses and savants to the rear!"

The generic name being founded on a mistake, and the scientific one being inappropriate for a strictly American fish, let us look through the long list of names with which the bass is credited by Dr. Henshall, and see if a better can be found.

The generic name "Grystes" has the authority of Agassiz, Baird, Girard, Holbrook, Gunther, Garlick and Herbert. As to a specific name, that given to the large-mouth species by Dr. Garlick, "Megastoma," well describes an organic peculiarity. For the other species, why not "Microstoma" or small-mouth. S. C. CLARKE.

SNELLING HOOKS.

Editor Forest and Stream:

We have had talk about snelling hooks and snooding hooks, and here at the Hub sportsmen talk of "ganging" hooks. I do not find authority for this last parlance. Will you tell me if it is "good form"?

True, I am selfish; but I am happy when I can stir up Messrs. Cheney and Leopold to talk with their pens. I am grateful for what Mr. Leopold says in your columns of May 14. I not only read what they write, but study it, and have been benefitted. I am speaking of tapered hooks. It is easy to snell straight and "marked" hooks. Should be pleased to test the samples Mr. L. sent should they come to hand. The reason he gives for not using linseed oil in his wax does not seem like his usual logic. He well sticks to his text and strives to have his snells stick to their hooks—and for this reason should use the oil. I think I first got the idea from Thaddeus Norris's "American Angler's Book." Good authority, sure. When preparing it with wet hands he can "work" it, but when snelling hooks he may not put his hands to it at all. I have been of late using a cement, made a year ago, with good results, and have not once soiled my hands with it. I keep mine in waxed paper, there is no adhesion. I place a small piece by itself on the paper, and after placing the hook in a hand vise (a pin vise), I put it in the gas jet, then upon the said bit of cement, till there is a thin coat or film upon it. I use a silk thread of one of the beautiful colors that have come into the market within a few years and show a very high state of the art of coloring—say dark gold or light gold shade, or scarlet; some shade that is pleasing to the eye of man and said to be attractive to the eye of the denizens of the water. I put but a light amount of the cement upon the thread, while holding the cement in my hand shielded by the waxed paper. Then I draw the thread through a clean cloth to even the coating and remove any surplus.

I repeat what I said some weeks since. I soak the gut snell, and flute or corrugate and flatten it a little with a small instrument I made for the purpose. One movement of the hand with this tool does the work perfectly, then I singe the ends which forms a little knob. When I use gimp snells I take off the metal winding from about three-eighths of an inch from the end that is to come in contact with the hook. With a quarter of an inch of the gimp and the three-eighths of an inch of the silk floss with wire off well cemented, and in contact with the hook, and both parts well lashed to the shank, the work is durable and will stand an immense strain and the wire will not strip. To use the little fluting instrument is much more effectual and agreeable than biting the gut.

After this I do the winding similar to the manner described by Mr. Cheney, which method I learned by dissecting some snooded hooks that came from across the ocean. When I have completed my work my hands are not soiled nor the hues of the silk wrappings discolored, and I have yet to learn that the "big fish" was lost because the snell slipped from the hook when put on with this cement and in the manner described.

To preserve the colors of the silk of course the cement must not have lard or oil in it, but it and the varnish must be transparent and colorless. Now I prepare my cement by using such resin and pitch as Mr. Cheney advises. I do not put in grease or oil, but add a small quantity of Para rubber and white gutta percha. They furnish the elements required. After the wrapping is finished, I varnish the thread with a waterproof transparent varnish. A vise such as I have spoken of is necessary for close hard winding and for neatness. I think a dozen hooks snelled with the bright colors that may be selected gives a pleasing appearance and comports well with the gay flies in use and the æsthetic taste of our age. I have been drawn into this method of doing things by seeking to fill up time during enforced confinement and the pleadings of boy sportsmen around me. I should be pleased to see specimens from Mr. L. and to have him tell us further what he knows about this and other matters which interest the followers of Walton. J. W. T.

NASH STREAM BOG.

ONE of the unsettled townships in northern Coos county, N. H., is Odell. It contains five ponds, and two large streams have their source in its mountains, Nash's Stream and Philip's Brook. For several years it was a favorite fishing ground of mine, and at different times I have fished nearly all its waters, and was nearly as familtar with Trio Ponds, Pond Brook, East Branch, the Bog and Phillip's Brook, as with the streets in Lancaster village. Many were the excursions to its various waters, and one day at the foot of the falls on Pond Brook I caught over 100 trout from one pool.

Fifteen years ago I could go on any of its waters and get a good string of fish and always got all we wanted to bring away. They were of good size, and at the Bog, ten miles from the last place on the stream, I have several times taken them weighing a pound each after we got home. I caught a basket full there one afternoon just before a heavy shower, that would average more than half a pound each, all taken with a red hackle with a small piece of worm on the hook, by casting to the further side of the stream and letting the bait sink nearly to the bottom and drawing it quickly across, when it would be taken nearly every time before it would get half way across. I had tried several flies, but couldn't get a rise, and I am like "Nessmuk," if they won't take a fly I am not going without a mess of trout, because I won't put on a worm.

I took a team from Lancaster one afternoon in August, 1883, and together with a friend drove to the last house on the stream, about fourteen miles; and leaving our team we started for Nash Stream Bog, ten miles distant, for two or three days' camping and fishing.

We had a frying pan and coffeepot, which together with an axe and grub in our knapsacks, made all we wanted to carry that distance on a warm day. We were both good trampers, and stopping to rest occasionally without tiring us very much, we arrived at the bog at half-past 6 o'clock, where we found a good camp near a fine spring of water about forty rods from the dam at the foot of the bog. We had plenty of time to cut wood for night, and after catching trout enough for supper, we went to camp and dressed our fish, and had fried potatoes, fried trout, bread and coffee, to which we did ample justice, seated on the boughs in front of our bright camp-fire.

Knives and forks are made in a few minutes with our pocket knives from beechwood, for we don't believe in taking many utensils into the woods on a short trip. We have been there too many times for that. As our camp was a very good one for parties who are going to stay several weeks in the woods, I will describe it.

Logs of from five to seven inches in diameter were cut eight feet long and built up on three sides, leaving it open in front, notching them at the back end, and building up until the back is two feet high. Then take four stakes and drive them in the ground, one on each side of the front end of the logs, about six inches back from the end, leaving them six feet high and tie them together on each side near the top with withes. Then build up the sides and cut a pole nine feet long and about two inches in diameter, and lash it firmly to the stakes at the top; cut half a dozen small straight poles ten feet long for rafters, and tie them securely in place, letting them project about a foot in front, and cover with fir or spruce bark. Then gather moss and chink the cracks. Put a three-inch pole across in front on the ground to hold the boughs, which should be about a foot deep, and you have a camp that will be comfortable in the coldest weather with a good fire in front, and in summer with a lighted toadstool on a shelf in one corner, you won't be troubled with flies.

We had only a small fire, and some time during the night when the fire had burned low, a rabbit came into camp and Denny made a grab at it, when he jumped fairly on my face and made good his escape. "What are you striking me for?" said I, springing up from a sound sleep and thinking my companion must have been troubled with nightmare, and it was quite awhile before I could take in the situation. After replenishing the fire, Denny sung the "Flying Cloud" and told a few stories, and after a short nap it was morning.

The shores of the bog were formerly thickly covered with alders, but they had been cut away, leaving the stream open and a good chance for fly-fishing. The day was still and bright, and after the sun came on the water they stopped rising, and changing to a bait-hook, I joined Denny with bait-hook and worm, and at eleven o'clock we came to camp with nearly 100 trout, and scarcely any of them less than eight inches long. We ate dinner and dressed our fish and put them in a cool place and went out again toward night and took about fifty more. Below the dam, at the outlet of the bog, the stream is quite rapid its entire length, and as small streams come in all along it becomes larger as it nears the outlet, and for the last five or six miles it is from two to four rods wide.

After breakfast the next morning we began fishing downstream with pretty fair success, in some pools taking as many as four and five fine trout. It was quite awkward to carry our fish and handle our rods, so I told Denny if he would take all the trout and carry them down to where the east branch came in, and then fish back till we met, I would divide my catch with him. He willingly did so, as I could catch more than himself. That gave me a better chance to use a fly, and better sport I never wish for on a stream than I had that day. I used Ronald's stone fly with professor for a dropper, and in nearly every pool I could take one or more. I saved none of less than eight inches in length, and when we met at last I had a beautiful basket of trout, all the way from eight to twelve inches.

After packing our fish I dissolved some Rex Magnus and poured it on them, and we were ready for a start, having all the fish we wanted.

I wish here to say a word for Rex Magnus. I have used it for the past two seasons and find it of the greatest convenience when I wish to keep fish for several days. I kept trout three weeks last season, and at the end of that time they were still fresh and good. It will make part of my regular outfit for long trips this season, for I frequently wish to bring home a big trout in hot weather.

We stopped at the lower dam on the stream, four miles from the settlement, and tried them again, but it was too late in the season, and nearly all the fish were up stream further toward their spawning beds. Trout in streams are full of spawn by the first of September, and it would be better fishing in this country if the close season came on at that time. They bite quite readily all through the month but are quite poor eating compared to the June fish. They take bait freely in dark cool days when they won't rise to the fly in the deep sandy pools, and hundreds of fish are taken that ought to be left to stock the streams. The time is probably not far distant when our waters will have to be replenished from the State hatching house to keep up the supply. Our cold mountain streams would always furnish a good supply of trout if they were not overfished or fished out of season. There are now ten anglers to where there was formerly only one, and our waters will have to be stocked artificially to stand the extra draft made on them.

We arrived at our team and drove to L., arriving there in time to have about ten pounds of trout for supper at the Williams House that night. Denny says he wants to make the same trip this summer, but I am getting to like pond fishing better than wading a stream. S. J. G.

LANCASTER, N. H.

WAX RECIPES.

Editor Forest and Stream:

In his letter on wax and varnish (issue June 4) Mr. Harrington Keene undoubtedly speaks with practical authority and comes down flat-footed on hog's fat in wax for anglers' uses. Having had plenty of trouble in the same direction a few steps over a well-beaten track may be interesting to the tyro.

Fifty years ago there were but two waxes known to the lone fisherman, shoemaker's wax and beeswax (no doubt other and better wax was known to the trade and secretly guarded), but neither of the former filled the bill. Shoemaker's wax had the preference and was carried in a small double of thin leather in the tackle book, ready for instant use. Next was tried a piece of black pitch with a little fresh butter or fresh lard, rubbed into it before the fire, but was no improvement on the shoemaker's wax, as both were like the Dutchman and his wife who were brought before his Honor, the Court, "Hans, how old are you?" "I bees dirty." To the wife, "How old are you?" "I bees dirty too." His Honor, "You are a filthy couple."

As the years rolled on various mixtures had been tried, in which were either lard, butter, sweet oil, or linseed oil, with various results. In the meantime some good fish with a mouth full of hooks were staying behind. Some twelve years ago I was put on the right track, and have waxed to it ever since, except for a short time some six or seven years ago, when a correspondent of FOREST AND STREAM gave a recipe for wax, to wit: two ounces of rosin, half an ounce of gutta percha, tablespoonful of linseed oil, dissolved together. I tried it, used it for a short time only, and returned to what I know to be the best I have ever used. Others may have and use a better wax that we know nothing about, but if there is any grease of any kind other than that contained in beeswax I don't want it.

Take two ounces best rosin, two ounces beeswax (yellow), powder the rosin, shave or break the beeswax into small pieces, put both into a tin cup and dissolve over a slow fire, constantly stirring with a small wooden paddle. When all dissolved pour into a basin of cold water; when cool enough to handle have a genuine candy pull, in the good old way, then roll into a ball or cut into parts and divide with your angling neighbors. The thread runs through it easily, without jar or friction, and what adheres to the thread is there to stay, and a hook properly whipped close and firm, terminating in an endless knot, will defy the world of fish to part hook from leader. In fly-tying it will not soil the feathers nor will the fingers stick to everything they touch, nor need you soak or bite your gut, or remove the enamel from the taper end of the hook before tying. The enamel is placed there to protect the hook from rust which will burn through the gut. THOMAS CHALMERS.

HOLYOKE, MASS.

PORPOISE STEAK.

Editor Forest and Stream:

We live in an utilitarian age. An age in which a man anoints his rheumatic joints with the waste products of petroleum, fills his confectionery with the parings of hoofs and horns, and writes his *billets doux* on the pressed pulp of the rags that blow in the streets. Yet the historian of these times will write us down as an unenterprising and wasteful generation. With what abuse we should have loaded the Indian had he trusted for his subsistence to the animals he could tame and rear, and let the unnumbered herds of buffaloes that darkened the plains in the old days go by his lodge unmolested. We should have looked upon his destruction by our pious ancestors as not the least pious of their deeds. Yet we who esteem ourselves so much above the aborigines allow a vast race of food supplying creatures to disport themselves before our very eyes and make no effort to utilize them. I mean the cetaceans. But you will say that porpoises are not fit to eat, that their flesh is tough, coarse and ill-flavored. I have said so, too, and that recently before the American Fisheries Society. But I have been converted, and my conversion was in this wise.

On returning from their last cruise on the Hatteras ground, the naturalists of the Fish Commission's steamer Albatross captured and brought in on ice two specimens of the common dolphin (*Delphinus delphis*), one quite young. When these had been properly examined from a scientific point of view, the proposition was made that the younger one be converted into steaks. A number of pieces were cut from the middle of the back, and in a few moments the most promising of them were broiling in fine style before the fire. When they came upon the table they had the appearance of small tenderloin steaks, such as one may have served up in any well-regulated restaurant, and the best bull ever bred could have no spot in him more tender than were these same small steaks. But the flavor! Some one has said that the odor of a rose is not to be described. So with the flavor of this porpoise. If I say I was reminded of liver, you will cry out that it was coarse; if I say there seemed to be something in it akin to juicy duck, you will suspect rankness; while if I affirm that

there was a suspicion of delicate fish, your thought will be on blubber. But even as in order to know the delicacy of a rose it is necessary to smell one, so if you would know how the flavor of a porpoise steak can combine harmoniously that of a liver, a canvasback and a kingfish, you must eat one.

There are several morals which might be drawn from this simple and affecting tale, but perhaps the most important are these: (1) Take your steak from a young porpoise and (2) have it properly cooked.

If all young porpoises are as palatable as this dolphin of the ancients, it is a pity that so much succulence should waste itself upon the waves, and never a morsel come to relieve our *menu*. The golden age of gastronomy was long ago, and in that time kings and other great persons looked upon porpoise as a delicacy of delicacies. May we not hope that some day our *menus* may again be enlivened by some such phrase as *"Marsouin au Commissaire des Pêches,"* or *"Dauphin brasillé aux Esquimaux du pôle arctique?"*

F. W. TRUE.

WASHINGTON, June 8.

RIPARIAN RIGHTS.—United States Marshal McMullin, under an order issued by the United States Court at Wilmington, Del., on June 9 went to Port Penn and seized from Purnell J. Lynch, a local constable, two fishing skiffs which the constable and a party of fifteen Delaware men on June 3 cut loose and carried off from the sloop Mary A. Brown, which was on the sturgeon fishing grounds near Reedy Island in the Delaware River. The skiffs were restored to their owner, Thomas J. Torton, of New Jersey. The first seizure was made in support of Delaware's claim to the exclusive right to fish in certain parts of the river, and the replevin was obtained through the action of Gov. Abbett, of New Jersey, who sent Chas. G. Garrison, a Camden lawyer, to look after the interests here of the Jersey fishermen. The action of the Delaware constable is alleged to be in contempt of an injunction of the United States Supreme Court. A large party of fishermen at Pennsgrove, N. J., had armed themselves for a raid on Monday night for the recovery of the captured boats, but were restrained by a telegram from Gov. Abbett counseling delay. Any serious complication over the matter this year, except in the courts, is improbable, as the fishing season is nearly over.—HOMO.

A FISHING PROBLEM.—*Editor Forest and Stream:* Here is a problem for your readers and old woodsmen to solve. Given a lake in the North Woods full of large trout, but to be reached only by a tramp of fifteen miles through virgin forest. Piscator arriving there has no means on hand to get into deep water where the fish are. The shores are spreading and covered with about three-quarters of an inch of water, and under that soft mud of unknown depth. A raft will not float in the low water. Carrying an ever so light canoe in is out of the question, the difficulties encountered forbid it. The mud won't allow any wading, and the hungry sportsman sees hundreds of big trout jumping just about a hundred feet from shore. How is he to get on the lake and to the fish? Are there any rubber bags in the market which could be inflated and made the basis for a light raft for one man? Or anything in the way of a folding boat to carry one man and not weigh more than fifteen pounds? I know that hundreds of fishermen find themselves in the same quandary, and would heartily welcome a contrivance to help them out.—PISCATOR.

TROUT IN ENGLAND AND THE ADIRONDACKS.—Glens Falls, New York, June 6.—In a letter received from Mr. Marston to-day he says, "Spring trout fishing here has not been good—such gales that there was no chance of fly-fishing to speak of. Fourteen trout going about ten pounds is the best I have done yet this season. Fished eight hours yesterday in a cold gale of rain and only saw three rises; got one fish of three-quarter pounds." That is better trout (brook) than I have yet had. Our streams are too high and roily. Yesterday we had a rain fall of 2¾ inches. I shall try the trout again Tuesday. Saw a basket to-day that came from the North Woods with some fine trout. Last Tuesday I tried the trout, and they would only take a green drake in a certain stream, and this was the case last year in same water.—A. N. C.

SALMON IN THE POTOMAC.—A fine specimen of Penobscot salmon was caught in a trap net last evening in the Potomac at a point twenty miles below Glymont by Thomas Adams. It weighed nine and a half pounds and measured two feet eight inches in length. Ten thousand of these fish were planted in the Potomac four years ago. Since then they have increased rapidly. It was shipped to Mr. R. A. Golden, in charge of the fish wharves in this city.—*Evening Star, Washington, June* 13. [We do not think that any Penobscot salmon were ever planted in the Potomac. Some ten years ago many of the chinook salmon from California were placed in the river, but have not been heard from. If this fish was an Atlantic salmon it was probably a straggler from some other river.]

SHORT SUPPLY OF GUT.—Redditch, Eng., June 2.—*Editor Forest and Stream:* We have just received a report from the manager of our gut manufactory in Spain which will interest your readers. He says: "There will be a scarcity of gut this season. The gut harvest has been small, the north wind having killed the greater part of the worms. Thick gut is very rare, while the extra long, fine gut is all wormeaten and worthless." We have no doubt that your readers will regret this as we do.—S. ALLCOCK & Co.

BASS AND TEMPERATURE.—Lake, Pa.—I have made observations in the lake here for three seasons past with a view to ascertain the temperature of the water when the small-mouthed black bass made their first appearance after their winter's hibernating? None of them have been seen by me or by any of my acquaintances here until the temperature of the water had reached 51°, but always then. This information may be of no practical value to you; possibly it is only an accidental coincidence.—T. G.

A BIG TROUT.—London (Eng.) *Truth* records: A trout was caught last Tuesday in the Kennet at Newbury which weighed 16½ pounds. It was a well-known fish, and many anglers had visited Newbury in the hope of catching it, but it had always evaded the hook, although it could be seen every day swimming for hours in the neighborhood of the bridge. It was captured by means of a net, a scandalously unsportsmanlike proceeding, which ought not to have been allowed.

A WONDERFUL FISH.—A correspondent of the San Francisco *Examiner*, writes from Lake View, Oregon: "A wonderful fish is becoming numerous in Goose Lake. It is called by some the greenback fish, for it is certainly an inflationist. It has the power to fill itself with air until it becomes very much like a round ball. Of evenings about sundown they may be seen playing on the surface of the water. They will swell up by taking in the air, and the wind will blow them over the lake. They reflect all the colors of the rainbow, and when sporting over the lake are a grand sight. A hunter several weeks ago saw a crane swallow one of these fish when in its normal condition, but before the crane had got more than fifty feet above the lake the fish had taken in enough air to explode the crane, which at the sound of a report like that of a gun, flew all to atoms, and the fish came lightly down on the water, no worse off for the short ride in the air. The fish is a great curiosisy, never having been found, I believe, in other waters." On reading this our office boy was moved to amend this notice by saying that the greenback fish could be found in Fulton Market, but suspecting him of levity we suppressed him before he got off a new joke about the man who has toiled all day and caught nothing, and visited Mr. Blackford on his way home. Our ichthyologist says that this airy and festive fish is known to science as the *Windycus flatulentius*, and may be a hybrid between a puff-ball and a Boston baked bean. Our fishculturist doubts that such a hybrid would ever stay in the water, but would soar aloft like a balloon. The fishing editor, a truthful man, says he has used the *Windycus* as a float while bottom fishing for suckers in Windermere, and that its buoyancy is overrated. The yachting editor has heard the fish explode when jammed in the locks of the Erie Canal as he went through, and our rifle editor thinks that they can be employed by the Fenians to the exclusion of dynamite. Altogether we agree with the *Examiner* that it is a wonderful fish.

NORTHRUP LAKE.—Johnstown, N. Y., June 10.—I have just returned from my annual spring fishing trip in the Adirondacks. One of our guides (an old trapper who spends his entire winter in the woods) told us of an unknown lake he crossed on snow shoes in winter, while following an otter. The morning of May 24 saw an exploring party wandering by devious ways over mountain tops till at 3 P. M. the lake was found and the old trapper named it in my honor Northrup Lake. Soon a dead spruce was felled, withes twisted, a raft made and a line wet for the first time in its waters. Then such a sight I never saw; the raft was the center of jumping trout. We all believe that a barrel of trout could be caught there in an hour. But the lengthening shadows warned us to hurry back to camp, where the inability of eating one quarter what we could catch every day was the only drawback to our happiness. The weather of the two last weeks in May this year has never been excelled for camping out, sleeping as we did every night in an open camp with no fire after bed time. The glorious moon, the perfect days with total absence of those pests, blackflies and mosquitoes, made two weeks to live over in memory for the rest of the year.—M. S. NORTHRUP.

PHILADELPHIA NOTES.—Rockfish are biting at Columbia Dam on the Susquehana River. These rockfish can now be caught with pearl minnow or bright fly. It will pay to try them, although they do not run much over half a pound to a pound in weight. A number of black bass were taken this week in Shawmont Dam on the Schuylkill River—one very large one, four pounds it is said, but this is doubtful; two pounds is nearer the mark. White catfish are biting well at different points on the Delaware. At the bridges which cross the Rancocas Creek just before it empties into the Delaware many are now being caught on the young flood tide. Sturgeon bait seems to be the most attractive, although many use dough, cheese and raw cotton kneaded together into a paste. —HOMO.

THE PORPOISE FISHERY OF CAPE HATTERAS.

[Read before the American Fisheries Society.]

BY FREDERICK W. TRUE.

THERE is a legend among the Indians of Brazil that when the shades of evening are falling on the Amazon, the dolphin (called inia) becomes transformed from its peculiar fish-like form, and assumes that of a lovely maiden. Passing through the streets of the village, her fair hair floating on the breeze, the youths are attracted by her charms and follow her in crowds. When she has walked through all the streets she reaches the banks of the river, dons her fish-like mien, and plunges in suddenly. The youths in hot pursuit, oblivious of their danger, fall down the steep and perish in the water.

Such a transformation as we have indicated, though certainly with some radical modifications, has taken place in the eyes of some capitalists of Philadelphia in regard to one of the porpoises of our own coast. They think they see in this common porpoise not a useless creature, but an animal from which great profit can be derived if proper means are taken to secure it. They have, therefore, undertaken to utilize this animal for industrial purposes. It is not the first time in the history of industries that porpoises have been made use of. Inhabitants of all Arctic countries, as the members of this society are aware, are accustomed to feed upon porpoises, especially the smaller species, and to utilize especially their flesh and oil. In this country, too, certain species of porpoise have been employed at one time or another in connection with industrial pursuits.

About 1790 there was quite an important fishery for the capture of porpoises on Long Island. This was in operation for several years, but eventually failed to yield a profit. There is now a similar fishery, if such it may be termed, not only on our own coast at Cape Cod, but also on Norwegian shores. The object of capture in this instance, however, is a different species of the family of dolphins—namely, the blackfish. This animal is occasionally stranded on our shores, and usually is seen in herds comprising 400, 500 or 600 individuals. From these cetaceans valuable products are obtained, the most important of which is oil. It is a rather curious fact that many of the most important fisheries are carried on for the capture of animals other than fish. The whale, for whose capture so much energy is devoted, and so large an amount of capital invested, is not a fish. Again, the object of the seal fishery is a mammal; of the oyster fishery a mollusk, as also of the pearl fishery; of the lobster fishery, a crustacean; and it now seems as if we are to see and the fishery rise to considerable importance, whose object of capture is not a fish—the common dolphin of our coast. This species, *Tursiops tursio*, a cast of which I have placed before you, is exceedingly common. It sports in the waves from Maine to Florida. I have observed them at various points, especially between Cape Cod and North Carolina. They are fearless, approaching very closely in shore, perhaps not further than twenty or thirty paces. They play around the steamers and sailing vessels regardless of any danger.

The specimen before you is not full grown. The species attains nine, ten, and even eleven feet in length. They are not very rapid swimmers, but can attain considerable speed. Regarding their habits we really know very little. They appear to breed at all seasons of the year. It was this species and one other which were known to the ancients and entered into their art. They were portrayed with curious conventionalization on their coins, and were endowed with many peculiar attributes which certainly not even man himself possesses, much less the lower animals. The species before us has been known from time immemorial. Its distribution seems to be very wide. It probably occurs in all salt waters of the globe.

The fishery which is now being prosecuted at Cape Hatteras has been carried on in a minor degree for many years. As long as there has been a colony on the coast of North Carolina, the fishermen have been in the habit of catching some porpoises during the winter and converting them into oil. The apparatus used for this purpose was, however, very rude, and consequently the oil produced was of no great value. Last year, however, for some unknown cause, it occurred to certain gentlemen in Philadelphia that this animal could be made more profitable than had before appeared, and they therefore formed a company with their base of operations near to Cape Hatteras, where they were engaged last winter in catching porpoises. So abundant are the dolphins at this point that they had no difficulty in taking 2,000 during the cold weather. The fishing season is not yet finished, and it is probable that 1,000 more will be added to the number captured.

The method of the fishing is the same as has been in use for a long time by the fishermen of Cape Hatteras. Having explained this at length in print, it is perhaps unnecessary to dwell upon the details at this time. I may say, however, that it consists simply in surrounding the animals with large nets, forming a great pound from which they cannot escape, and then sweeping out a few at a time by means of a smaller net. Sometimes 600 are surrounded by the large nets, and of this number fifty or sixty are hauled ashore at a time. They are drowned as they come up, or if still living, are killed with knives.

The products, which the Hatteras Porpoise Fishing Company hope to derive from the capture of these animals, are primarily oil and leather. There is no doubt that, if properly purified, their oil would be of a high grade, and could be used to great advantage in the arts. So far as the leather is concerned, it must be more or less a matter of experiment for the present. Unquestionably certain members of the family *Delphinidæ* furnish excellent leather. We have in the museum some which was made from the skin of the white whale. This is (or until recently was) extensively used in Canada. Excellent leather is also made from the skin of the blackfish, of which I have seen magnificent samples. From the skin of a blackfish a piece of leather of large size can be manufactured. This porpoise leather, though not very thick, is exceedingly tough and entirely waterproof. It has not great market value at present, excepting in a limited trade, but I think this is simply because it has not been put upon the market in any considerable quantities. As soon as people recognize the quality of this leather, and as soon as a sufficient quantity of it is made, so that it may be brought into general use, I think it will become very popular in the manufacture of articles for which a somewhat thin, very tough and entirely waterproof material is required. The Hatteras Company, not satisfied to produce oil and leather only as fruits of their labors, hope to render the flesh palatable as food. In this I fear they will not be entirely successful. The flesh of this animal has a strong, oily flavor which does not disappear entirely until quite dry, in which state it would be, I fear, too tough to eat. In Arctic regions, however, the flesh of many such animals is eaten. In Norway, too, the flesh of considerable numbers of blackfish is consumed. It is cut up into small strips and dried in the sun until quite hard. I am not familiar with the process of cooking.

Regarding the value of this porpoise fishery, it may be said to be quite important. It has been calculated that each porpoise as it lies upon the beach is worth $25. If such an estimate be correct, it is not difficult to understand that the conversion of its oil and skin into objects of commercial use would add considerably to this sum. If the company captures 3,000 or 4,000 a year, the first value of the product to the company will, according to the figures, be $100,000. Of course, this value would be greatly enhanced when the products were manufactured into objects of use. For a single fishery this is by no means a small sum. The success of this company will probably have an important bearing upon the formation of other similar companies in the future.

I can see no reason why the pursuit of an animal so easy to capture, and from which marketable articles of such undoubtedly high grade can be obtained, should not be profitable to the fisherman. Of course, there are certain prejudices to be removed; but if the company shows a fair amount of persistence, I see no reason why their labors should not be crowned with great financial success.

MR. GOODE—I should like to say a word or two about the products to be obtained from the porpoise. It seems to me that the possibilities of this fishery are very great, provided that the number of animals caught is sufficient to make it worth while bringing them into the markets. As regards the food value of the porpoise I would say that I have tasted the Norwegian whale product—a whale hermetically sealed in tin cases at the London Fisheries Exhibition in 1883, and really it had in some way been divested of its oily taste, and resembled beef *à la mode*. It seems possible, therefore, that some method may be found for removing the oily taste from the porpoise flesh. As to the value of the oil it is undoubtedly so far superior to any other animal oil that I cannot doubt its coming into general use for lubricating purposes, as soon as it can be sold for a reasonable price. At present twenty-five cents is charged for a bottle hardly larger than one's little finger, and I am not aware that any other oil is put on the market in a cheaper form. The leather made from the skin of the porpoise is held in high esteem in Europe for walking boots—especially by Alpine travelers. In London a good pair of such boots is worth fifteen to twenty dollars, nor can they be obtained for less. As you are all probably aware, the leather of the white whale was some years ago used by the Canadian government exclusively in the manufacture of mail bags, being indestructible and impervious to the water. These qualities render it a most desirable leather for boots. I am also under the impression that this leather is particularly adapted for belting for machinery and for lace leather. Porpoise leather boot laces are in great favor abroad. I might perhaps enlarge upon what I have said in regard to the special applications of the products of this animal, but am satisfied that they are numerous and may be made of great commercial value.

MR. H. J. RICE—It will perhaps not be out of place for me to say that at the present time porpoise leather is used to a large extent in New Brunswick and along the coast of the British provinces from the St. Lawrence down, and is highly esteemed. I have been informed by Commissioner Stillwell, of Maine, that he uses shoes made of this leather in preference to any others, and I understand that they are quite commonly used in St. Johns and other cities of the Provinces.

MR. LYMAN—In regard to the use of porpoise flesh as food, I find that like many other things in this world, it is a matter of taste. One gentleman in Washington has said that he considered smoked porpoise flesh superior to smoked beef, and

another said he had eaten mule and consequently could eat porpoise. We all must have noticed, I think, that among civilized nations the favorite articles of food are the results of a passing fashion, certain conditions, as of nutrition and a fairly agreeable taste, being present. I remember that at one time about a dozen cusk would supply the whole of the Boston market, because there were only that number of families that knew it was good to eat. In external appearance the fish is extremely repulsive. At the present day this same fish commands a very large price as a delicacy. Again, in regard to the whiting of this coast, I have known it thrown away by the cartload because it could not be sold in our markets. On the shores of the Mediterranean, in France and generally throughout Europe wherever the whiting is found, it occurs in very great numbers, and is one of the highly-prized species. Therefore, I believe that, if porpoise flesh can be made to taste like smoked beef, push and perseverance on the part of this company will crown their labors in success. Oleomargerine is unblushingly sold for butter everywhere, and one gentleman, a member of the U. S. Geological Survey, said he preferred it to butter because it would keep better.

Under the instructions of the Executive Committee, the secretary has written to the private secretary of the President to ascertain if it will be convenient for the President to receive the members of the Society to-morrow morning. An answer has not yet been received, but the Society will be informed of the result to-morrow morning.

It was then proposed and carried to let the reading of papers be continued until Wednesday morning. The Society then adjourned until 11 A. M. Wednesday.

[A letter from Mr. True, giving a later experience with the porpoise as food, will be found in our angling columns.]

A MAMMOTH MAINE SHAD.—Portland, Me., June 13.—A shad of twenty-seven inches length (longitudinal axis to fork of caudal fin) and eight pounds weight was caught at Cape Small Point, near the mouth of the Kennebec River, a few days since, and brought to Portland. It was a male fish and not in very plump condition. This is an extraordinary large specimen for Maine, the shad here being of smaller average size than those of more southern waters. Possibly it may be one of the lot of young Maryland shad placed in the Kennebec River near Waterville, under my supervision as Commissioner of Fisheries, in 1880. I then hoped that similar work would be continued systematically for a term of years, and some practical provision made for yearly reports of the Maine fisheries, whereby the actual results could be determined, and theory and conjecture abandoned for the broad field of practical persistent investigation. Unfortunately there are no detailed returns of the fisheries of this State.—EVERETT SMITH.

SALMON IN CHESAPEAKE BAY.—A newspaper paragraph says: "The first salmon ever captured in Chesapeake Bay was caught Friday, near the mouth of York River. It was brought to Baltimore and weighs eleven and a half pounds." There is no hint given as to the species, and we do not know if it was an Atlantic salmon, *S. salar*, or a chinook, *O. chonicha*.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2450.**

MORE DEALINGS WITH "WILDFOWLER."

Editor Forest and Stream:

Very nearly eighteen months ago I sent to "Wildfowler," of London, Eng., for a black and tan terrier. I told him that I wanted a stud dog, and nothing but a good one would fill the bill. In reply to this he wrote (No. 1) as follows:

"LONDON, Eng., March 19, 1884. Dear Sir: I could send you a tip-top black and tan terrier, fit to win all over the States, for £50, and would pay freight and importing duty to a U. S. seaport. It would be of A1 pedigree, young, well-marked, whip-tailed, strong-loined, good-headed, and altogether first-rate.—L. CLEMENT."

In answer to the above I wrote him that I wanted a terrier very much, but couldn't go to his price, £50. His next letter to me is (No. 2) as follows:

"LONDON Eng., April 21, 1884. Dear Sir: As regards the terrier, I should like you to have it. He is a beauty, and will take £40 for him, and would pay freight to New York.—L. CLEMENT."

Immediately on receipt of the above I sent him £40, and here is where the trouble commenced, for it was almost impossible to get a word from him about the matter. While in Chicago one day I saw Whitford. I told him that I had sent Clement £40 for a dog, and that I could get no more from him about it. I also asked him if Clement was a reliable person to do business with. (From what the paper Whitford is connected with had said of Clement from time to time, I never thought it necessary for a moment to question his honesty when I sent the money, and did not do so until worn out with delay.) However, Whitford assured me that Clement was perfectly reliable, and said that he would write to him about the matter. Not a word did I get from Whitford on the subject. Finally, after writing again, I received the following (No. 3) from Clement:

"LONDON, Eng., July 21, 1884. Dear Sir: A letter had been sent you on receipt of your check telling you that I would set about at once *finding* you a good dog. I have seen several but only one is fairly good.—L. CLEMENT."

Now, Mr. Editor, it will be seen by referring to letter No. 2 that I was led to believe that he had the dog in his possession and could send it at once. After waiting some months I wrote him again, saying I could use a good bitch, one of good form and reasonable price. How about the dog, etc. Now, mark you how quick he answers my letter when he thinks there is a chance of getting some more from me. Here is No. 4:

"LONDON, Eng., Nov. 28, 1884. Dear Sir: I wish you had sent me the money with instructions to buy a bitch for you, as a very good one was brought me to-day, and I said I would have a reply from you in a day or two. Meanwhile before I hear from you again she may be sold. However, I can keep him waiting a while, I think. I should like you to have this one. I intend going to Birmingham to get a dog and will let you know about it. I do not think I could send the bitch for less than £35 and all expenses paid by me.—L. CLEMENT."

I wrote him I didn't want the bitch. We are coming now to a very shady part in this business. In February, 1885, Mr. W. B. McKinley left here for a visit to England, and to him I gave an order on Clement for the £40 I sent him. Mr. McKinley presented the order, but Clement at first refused to return the money, saying that he had been put to a great deal of trouble in the matter, that he had been to Birmingham twice and to some other places, all on my account. Mr. McK. told him that he would allow him a reasonable amount for his trouble, and unless he settled the business at once he should commence suit against him. They finally concluded to settle for £35. Clement paid McK. £5 on account, agreeing to pay the balance when he (McK.) should return from Paris. This conversation took place on March 6, 1885. Mr. McKinley returned from Paris on March 12, and called on Clement for the money. Clement then told him that during his absence a dog had been brought to him and that he had bought and shipped it to me. Subsequently I received the following from Clement (No 6):

"LONDON, March 16, 1885. Dear Sir: I received a visit a few days ago from a friend of yours, who presented an order from you, asking me to return the money you sent me for the dog. This I agreed to do, and paid him £5 on account, agreeing to pay the balance when he should return from Paris. During his absence, however, one of the many dogs I have been writing about in your behalf has been sent me by his owner, and as I agreed that if the dog was as represented I would take him, I have no alternative in the matter, but must take him and ship him to you, and this I intend doing with the next steamer, when full particulars and breeding certificate will be sent you. (Signed) L. CLEMENT."

The above was written on March 16, and on March 12 he had told Mr. McKinley that the dog had been bought and shipped to me. The dog arrived in New York on April 6, as will be seen by letter from Downing & Co., herewith inclosed:

"NEW YORK, May 28, 1885. Mr. H. Muss, Champaign, Ill. Dear Sir: Inclosed we beg to hand you American Express receipt for a Manchester terrier ex steamship Croma, shipped yesterday to your address. The dog arrived here on April 6, but were unable to forward it before on account of our not receiving a breeding certificate. We also beg to inclose you our bill of charges on this shipment, amounting to $67.80, which amount please pay on receipt of the dog, and oblige R. F. DOWNING & Co."

A few days ago the dog arrived in this city per American Express. The charges, including $6.15 for express from New York to this point, foot up a snug little total of $74.75. I have, of course, refused to pay these charges, so the dog remains in the hands of the express company here. It will be seen that Clement agreed to pay all cost of transportation to New York, and it will also be seen by bill herewith inclosed that for some reason or other he has failed to do so. My object in giving you the particulars of this transaction for publication is that fanciers who contemplate importing dogs in the future may profit by my experience with L. Clement ("Wildfowler"), editor London *Shooting Times*, London, England.

HENRY MUSS.

CHAMPAIGN, Ill., June 8.

Editor Forest and Stream:

Just as I told you I expected in my last letter to you, the letter I sent to Kent on Feb. 25 has been returned to me by the New York post-office authorities through the Dead Letter Office. I inclose this letter unopened just as I have received it back. I have, since I wrote you, heard that the beagle Victor (late Pleader) was landed in perfect health and condition, but, strange to say, he has since died in the customs stables! This is so very extraordinary that I shall be very glad to hear from the customs authorities whether any stranger has had access to the dog in their stables. L. CLEMENT.

LONDON, Eng., May 25.

[The letter was directed to "G. F. Kent, Monticello Kennels, New York, America," that address of course taking it no further than this city. It was held here, advertised, sent to the Dead Letter Office, and then returned to England.]

AMERICAN COCKER SPANIEL CLUB.

FOLLOWING is the annual report of the A. C. S. C.:

Toronto, May 14, 1885. To the members of the American Cocker Spaniel Club—Gentlemen: It is with much pleasure that your committee submit their report for the year. From the secretary-treasurer's statement it will be observed that the club have distributed $170 in special prizes during the year, including the produce stakes. As you have been notified by circular from the secretary, you will be asked to decide at this meeting whether the time has not now been reached when the sphere of the club should be extended, so as to include all breeds of sporting spaniels.—J. S. Niven, President; J. F. Kirk, Secretary-Treasurer.

Secretary-Treasurer's Statement.—Balance of cash on hand at May 8, 1884, as per accounts passed at annual meeting, $49.43; since received from members for dues to May, 1885, $124. Received for produce stakes, 1885, $25; 1886, $8. Received from F. S. Waters, Chicago, for special prize to be awarded at Toronto, to best black cocker dog, under rules of American C. S. Club, $10; total receipts, $216.43. Prizes paid out of club funds. New York, 1884, produce stakes, total stake, $39, divided as follows: First prize winner, Hornell Rattler, $19.50; breeder of Hornell Rattler, $9.75; second prize winner, Woodstock Flirt, $5.85; third prize winner, Darkey, $3.90; total, $39. Special J. J. J. Best cocker dog (any age of color), won by J. P. Willey's Obo II., $10; special K. K. K. Best cocker bitch (any age or color), won by A. Laidlaw's Woodstock Flirt, $10; New Haven, 1885, special to best cocker dog or bitch (any age or color), won by J. P. Willey's Obo II., $10; Boston, 1885, special to best cocker dog (any age or color), won by Mr. Willey's Young Obo, $10; special to best cocker bitch (any age or color), won by W. O. Partridge's Helen, $10; New York, 1885, special to best cocker dog (any age or color), won by James Luckwell's Brahmin, $10; special to best cocker bitch (any age or color), won by W. O. Partridge's Helen, $10; Toronto, 1885, special to best cocker dog (any age or color), won by A. Laidlaw's Dart, $10; special to best cocker bitch (any age or color), won by J. P. Willey's Shina, $10. Produce stakes, total stake $31, divided as follows: First prize winner, Shina, J. P. Willey, $15.50; breeder of Shina, $7.75; second prize winner, Belle, A. Laidlaw, $4.65; third prize winner, Genesta, Hornell Club, $3.10; total, $31.10. Mr. Waters's prize, won by A. Laidlaw's Rex, $10. Total receipts, $216.43; total expenditure, $202.75; balance on hand, $13.68.

Minutes of the Annual Meeting, 1885.—The fourth annual meeting was held at Horticultural Gardens, Toronto, on Thursday, May 14, 1885, and Friday, May 15, 1885. Present: E. Tinsley, G. Schofield, A. Laidlaw, B. Saunders, Jr., H. Fulford, J. A. Roche, R. Tinning, Jr., J. W. Kelley, J. F. Kirk, G. C. Thomson, John Wilson. Represented by proxy: A. C. Wilmerding, J. S. Cattanach, V.S., W. O. Partridge, Geo. R. Cummings, J. A. Nickerson, F. S. Waters, Geo. S. Tucker, J. Otis Fellows, G. W. Schenk, G. W. Leavit, J. P. Willey, F. F. Pitcher, C. H. Baker, S. R. Hemingway, J. C. Harriss, Dr. Woodruff, James Watson, Dr. J. S. Niven, James Luckwell. Mr. Tinsley was elected chairman, and Mr. Kirk, secretary, of the meeting. The minutes of last annual meeting were read and approved. The statements of account for the year were submitted and duly passed. Moved by H. Mulford, seconded by A. Laidlaw, that the sphere of the club be extended so as to include all breeds of sporting spaniels. Carried unanimously. Moved by A. Laidlaw, seconded by G. Schofield, that Article I. of the constitution be amended so as to read: This club shall be called the American Spaniel Club. Moved by R. Tinning, Jr., seconded by J. W. Kelly, that Article II. of the constitution be amended to read as follows: Instead of "the breeding of the cocker spaniel," substitute "of all recognized breeds of sporting spaniels." Moved by J. A. Roche, seconded by B. Saunders, Jr., that Article VII. be amended as follows: The words "at New York City, on a day during the week in which the Westminster Kennel Club show is held, and in the event of no show taking place, then" be struck out. Moved by G. Schofield, seconded by A. Laidlaw, that J. W. Kelly, of Woodstock, Ont., S. A. Roche, of Detroit, Mich., J. P. Willey, of Salmon Falls, N. H., A. C. Wilmerding, of New York, J. F. Kirk, of Toronto, Ont., Geo. W. Leavitt, of Boston, Mass., and E. Tinsley, of Hamilton, Ont., be appointed a committee for the purpose of formulating a standard for judging the different breeds of sporting spaniels, and that the result of their report be printed and submitted to the members at the earliest convenient date. Moved by G. C. Thomson, seconded by J. A. Roche, that the word "cocker" in Article IV. of the by-laws, section 1, be struck out and the word "sporting" substituted therefor; and in section 2 of same article the word "cocker" be struck out. In Article V. of the by-laws, section 3, the word "cocker" be struck out. The secretary presented his resignation to the committee, which was accepted with much regret. Moved by G. Schofield, seconded by G. C. Thomson, that George W. Leavitt, of Boston, be appointed secretary-treasurer in the room of Mr. Kirk, resigned. Carried unanimously. Moved by J. W. Kelly, seconded by J. A. Roche, that the following committee be elected for the ensuing year, viz.: J. F. Kirk, J. P. Willey, George W. Leavitt, Andrew Laidlaw, A. C. Wilmerding. Carried.

J. F. KIRK, Sec'y.

THE ENGLISH KENNEL CLUB'S FIELD TRIALS.

THE spring meeting of the Kennel Club commenced on Tuesday, May 5, with the eleventh Field Trial Derby, for pointer and setter puppies bred in 1884; first prize £100, £50 for the best pointer, £50 for the best setter; £20 for the second best of each breed, and £50 extra for the absolute winner; 127 subs.

POINTERS.

Col. C. J. Cotes's liv w b Dixey, by Garnet—Doxey; April, *beat* Sir T. B. Lennard's liv w d Politics, by Priam—Duchess; May 4.

Mr. F. C. Lowe's liv w b Bell of Frinsted, by Young Bang—Polly; March 30, *beat* Mr. A. P. H. Lonsdale's liv w d Dancer, by Garnet—Doxey; March 25.

Mr. A. P. H. Lonsdale's liv w d Dervish, by Druid—Florence; April 1, *beat* Mr. J. H. Salter's bk w d Treble X., by Priam—Malt; Jan. 27.

Mr. R. K. Armstrong's liv w d Gen. Grant, by Mars—Sal; April 1, *beat* Rev. W. Sheild's lem w d Gladsome, by Fluke—Glee; Feb. 25.

Mr. R. J. Lloyd Price's lem w b Half a Quid, by Lord Lieutenant—Golden Guinea; March 19, *beat* Dr. H. J. Gogarty's liv w d Young Graphic, by Graphic—Nora; March 28.

Mr. C. T. Abbott's liv w d Fulmen, by Young Bang—Flamen; Feb. 18, *beat* Mr. G. Pilkington's liv w d Gough, by Garnet—Doxey; March or April.

Mr. J. H. Salter's liv w d Stout, by Priam—Malt; Jan. 27, *beat* Sir T. B. Lennard's liv w b Nella, by Priam—Blarney; Feb. 10.

Mr. J. H. Salter's bk w d Osborne Ale, by Priam—Malt; Jan. 27, *beat* Mr. C. Drury's lem w b Aldin Bell, by Eldon Don—Juno; April 29.

Second Round.

Dixey beat Bell of Frinsted.
Dervish beat Gen. Grant.
Stout beat Half a Quid.
Osborne Ale beat Fulmen.

Third Round.

Dixey beat Stout.
Orborne Ale beat Dervish.

Fourth Round.

Osborne Ale beat Dixey.

SETTERS.

Mr. R. H. P. Llewellin's bk w d Dan Wind'em, by Count Wind'em—Novel; March 15, *beat* Mr. E. Bishop's lem w b Ranging Sarah, by Royal Prince—Lemon Maud; April 2.

Mr. A. P. H. Lonsdale's liv w b Woodhill Beta, by Baron Waterpark—Nora; Jan. 26, *beat* Mr. J. C. Wylde's Irish setter d Ormond, by Frisco—Grouse II.; March 4.

Mr. R. H. P. Llewellin's bk w gr d Grouse Wind'em, by Count Wind'em—Novel; March 15, *beat* Mr. E. Armstrong's lem w b Princess Ida, by King Ned—Slut III.; Feb. 7.

Mr. R. H. P. Llewellin's bk w d Dick Wind'em, by Count Wind'em—Novel; March 15, *beat* Mr. A. P. H. Lonsdale's liv w d Woodhill Bruce, by Baron Waterpark—Nora; Jan. 28.

Rev. R. O'Callaghan's Irish setter b Aveline, by Frisco—Grouse II.; March 4, *a bye*.

Second Round.

Woodhill Beta beat Dan Wind'em.
Aveline beat Grouse Wind'em.
Dick Wind'em a bye.

Third Round.

Aveline beat Dick Wind'em.
Woodhill Beta ran a bye.

Fourth Round.

Woodhill Beta beat Aveline.

Final Round.

Mr. J. H. Salter's pointer Osborne Ale beat Mr. Heywood-Lonsdale's setter Woodhill Beta and won.

We subjoin the comments of the London *Field* upon the most prominent dogs: "Osborne Ale, a black and white dog, on the small side, by Priam from Malt, both of whom are well known in field trial annals, was at the outset no favorite for the event. Not quite up to show bench form in general appearance, his head is a beautifully expressive one, full of intelligence, and just the sort one would expect to find on a good sensible dog. He goes a fair pace, quarters his ground well, not quite reliable behind an opponent, handsome on point, moderate pace and style; his great excellence lies in his nose. Here he excels any of the puppies we have seen at the trials this season, unless it be one or two of Mr. Llewellin's setters, who, however, were far from broken to perfection. Osborne Ale ran through the stake well, and beat the setter Woodhill Beta most decisively in the final. The latter is a liver and white little bitch, a merry goer, and very staunch when she points; still she did not this week perform quite so well as she had done in her first trial at Shrewsbury. Now and then wilfulness was apparent, and if she got too far away from her worker paid little heed to his whistle. She has a fair nose, but is too fond of hunting the hedge and fence, instead of quartering her ground properly. Dixey went a rare pace in good style, has a fair nose, but in her trial with the actual winner spoiled her chance early on by ranging wildly, and thus becoming unsettled. After her heat with Belle of Frinstead the stake was thought to lay between her and Dervish. It is something unusual to see an Irish setter perform well at field trials. Aveline did so, going a rare pace in good form, quartering her ground well, and evidently in the possession of a capital nose. She would not back, carried her head higher than most of her variety do, and showed but little of that tendency to point and then hunt up the game, so great a failing with 'red dogs.' Woodhill Bruce ran unluckily, and there was no more stylish or speedier dog on the ground than Dervish (second at Shrewsbury), who, however, now showed himself deficient in nose, as it was thought he did then. Fulmen went fast and well, and may be more fortunate on another occasion. The puppies from Mr. Llewellin's kennels were most disappointing in their performances; big raw dogs, who tired, and, from actual results, appeared not much more than half broken.

After the finish of the Derby on Wednesday, the running

was continued with the All-Aged Stakes; a sweepstake of £6 10s. for all-aged pointers or setters, dogs and bitches; £60 for the winner, £30 to the second, and the third and forth £15 each. If the stake does not fill, the prizes to be given in proportion to the number of entries. All dogs and bitches competing must be the *bona fide* property of the person entering them.

Mr. W. P. Arkwright's bk w t setter Little Bess, by Blue Bess—Maud (a bye), *beat* Mr. E. Bishop's Ranging Aaron, by Blue Boy—Maud (dr.).

Mr. Arkwright's lem w pointer Brave Bijou, The Fop—Bonny Laurel, *beat* Col. Cotes's Carlo, by Jasper—Sal.

Sir J. B. Lennard's liv w pointer Christobel, by Young Bang—Teal, *beat* Mr. Llewellin's bk w setter Peri Wind'em, by Wind'em—Novel.

Mr. C. T. Abbott's liv w pointer Duke of Wellington, by The Fop—Jane, *beat* Mr. Salter's bk w pointer Malt, by Mike—Romp.

Mr. Heywood-Lonsdale's liv w setter Woodhill Bruce, by Baron—Norah, *beat* Mr. R. K. Armstrong's liv w pointer Garfield, by Bob—Jane.

Mr. Heywood-Lonsdale's liv w Polly Peacham, by Beau—Peach, *beat* Mr. F. Ward's liv w pointer Kent Brine, by Split—Swift.

Mr. Llewellin's bk w setter Dashing Duke, by Dash II.—Rifle, *beat* Mr. J. C. Lowe's bk w tan setter Rose, by Diamond—Minnie.

Mr. E. Armstrong's bk w setter John Anderson, by John o' Groat—Wise (a bye), *beat* Rev. W. Shield's lem w pointer Gladsome, by Fluke—Glee (dr.).

Second Round.

Little Bess beat Christobel.
Duke of Wellington beat Brave Bijou.
Woodhill Bruce beat Dashing Duke.
Polly Peacham beat John Anderson.

Third Round.

Woodhill Bruce beat Little Bess.
Polly Peacham beat Duke of Wellington.

Final Round.

Mr. Heywood Lonsdale's setter Woodhill Bruce, and his pointer Polly Peacham, divided the stake.

Following are the comments of the *Field:* "Woodhill Bruce is a liver and white puppy, rather common in appearance, but a grand goer, possessing a capital nose, and, if allowed, can work out his ground in a wonderful fashion for a young one. He is a great hearted dog, and the way in which he retained his pace after all his long trials, stamps him, without doubt, as the best stayer we ever saw. This performance now was certainly no fluke, following as it did his success at Acton Reynald, where he was one of the winning brace of setters. Polly Peacham, a liver and white pointer of nice form and on the small side, ran well last season, and Polly was pronounced to be one of the best puppies of the year. She then ran third at Shrewsbury, when we pronounced her the best all-round animal in the stake, and, with her kennel companion, now Cassandra, afterward completely ran away with the braces. She was unsuccessful paired with Lymm this year. Going in much the same easy fashion now as then, not fast, but in a taking level form, her nose is good, so is her breaking, and she worked with a lot of sense too. So far as regards the latter, opinions were in favor of Duke of Wellington, he carries a knowing-looking head, but certainly the bitch, notwithstanding her lack of pace, out-generalled him in getting the wind and finding birds. He is a big, good dog, and one well fitted for killing a lot of game over. John Anderson performed fairly well, and so did Christobel, whose trial with Little Bess, as we saw it, was decidedly unsatisfactory. Rose, who had won the setter puppies at Shrewsbury last year and beat the pointer Lingo for the best dog in the stake, and there purchased by Mr. Lowe for £25, went merrily, and might have been allowed an opportunity of finding game, though Duke certainly had the foot of her. The latter, who gallops a bit heavily, appears to have a very sensitive nose, which, with the small fields where birds will run from hedge to hedge with the noise of the crowd, made him continually draw up and point at places where there is no doubt partridges had recently left. Brave Bijou ran a good dog, and all round in the all-aged class the animals competing were of good quality."

THE SHREWSBURY FIELD TRIALS.

WE are indebted to the *Kennel Gazette* for the following account of the National Field Trials at Shrewsbury, England, April 28, 29 and 30:

The National Field Trials at Shrewsbury may be said to have passed off very satisfactorily, and there was a slight alteration in the programme this year by the addition of an All-Aged Stake, but this did not fill very well. The judges were Sir Vincent Corbet, Mr. J. H. Whitehouse and Mr. T. G. Edmonson, and the running, as usual, occupied three days, commencing on Tuesday, April 29, with the pointer puppies, and for which the following were down on the card: The Rev. W. Sheild's Gladsome, by Fluke—champion Glee; Mr. Lloyd Price's Golden Slipper, Mr. Heywood Lonsdale's Dervish, Major Lake's Juno, Mr. G. Pilkington's Gough, Mr. Mawson's Quit's Baby, Mr. Hatfield Harter's Cranfield Bang, Mr. C. H. Beck's Naso of Upton, Mr. Heywood Lonsdale's Dancer, Mr. R. K. Armstrong's General Grant, Prince Albert Solm's Climax of Braunfels, Mr. W. P. Arkwright's Alaska, Mr. Norrish's Paragon, Mr. Thelwell Abbott's Fulmen, Mr. Statter's Lucky Girl, Mr. Kettle's Vacnol, Mr. Lloyd Price's Half-a-Quid, Colonel Cote's Dixy, Mr. Barclay Field's Compass, and Mr. G. Pilkington's Larkspur. Some interest was manifested to see the doings of Paragon, as he won the open class at the Crystal Palace last winter, but he did not do much, and the best performers right through were Gladsome, Dervish, Dixy, Larkspur and Quit's Baby. Gladsome, who won the stake, is a lemon and white, and Quit's Baby is of the same color, while Dervish is a liver and white by Druid, and he is one of the best young pointers seen out this season. Larkspur was unlucky, and wanted a little more breaking. The victory of Gladsome was very satisfactory to Mr. Shield, as he both bred and broke him, and he showed himself a careful, good puppy. The official award was Gladsome first, Dervish second, Dixy third and Quit's Baby fourth.

The setter puppies numbered eighteen, as follows: Colonel Cote's Dick III., Mr. Heywood Lonsdale's Beta, Mr. E. Bishop's Blair Athol, Mr. Haywood Lonsdale's Miss Mailee, Mr. Salter's King Dick, Mr. Heywood Lonsdale's Bruce, Mr. E. Armstrong's Princess Ida, the Rev. W. J. Richardson's Milton Rhoda, Mr. Purcell Llewellin's Dick Wind'em, the same gentleman's Dan Wind'em and Grouse Wind'em, Col. Cote's Edrie, Mr. E. Bishop's Ranging Sarah, Mr. Lipscomb's Dot, Mr. Clarke's Phœbe, Lady Florence Dixie's Royal, and Mr. G. Shaw's Joan of Arc. The best of these proved to be Princess Ida, Dick Wind'em, Dan Wind'em, Joan of Arc, Ranging Sarah, Miss Mailee and Beta. Princess Ida is by King Ned (son of the Laverack Emperor Fred) out of Slut, a three-parts Laverack that Edward Armstrong ran three years ago. Her daughter now fairly cleared out the lot, showing more pace, better nose and better style. She won in the easiest fashion, Dan Wind'em getting second, Dick Wind'em third and Joan of Arc fourth. In the All-Aged Stake Plum, by Bow out of Peach, won the pointer prize; and Ranging Aaron, last year's Derby winner, the setter prize. Peach, the dam of Plum, it will be remembered, Mr. Barclay Field and Mr. Heywood Lonsdale claimed at the Crystal Palace Show from Mr. Statter for 200 sovereigns. There were thirteen brace entered in the Cloverly Stakes, but only eleven competed, namely: Mr. Heywood Lonsdale's Lymm and Polly (pointers), Prince Albert Solms's Naso of Kippen and Jilt of Braunfels (pointers), Colonel Cote's Dashing Rose and Wild Daisy (setters), and the same gentleman's Carlo and Dixy (pointers), Mr. B. Field's Young Dick and Lincoln (pointers), Lord Berwick's Bess and Kate (setters), Mr. Purcell Llewellin's Nora Wind'em and Dashing Bondu (setters), Mr. Heywood Lonsdale's Bruce and Beta (setters), Mr. R. K. Armstrong's General Grant and Garfield (pointers), and Mr. J. Bishop's Bouncing Queen and Bonny Bevis (setters). Some of the work was very good indeed, and nothing could surpass that of Prince Albert Solms's pointers, as in two trials they were given they quartered their ground perfectly, and never made a mistake. Mr. Lonsdale's Bruce and Beta (setters) also did some very faultless sort of work, and Bruce showed sterling merit here, which came out more prominently at the Kennel Club trials. James Bishop's setters also did very well. The absolute result, however, was a clear win for Prince Albert Solms's pointers, and it must be most gratifying for the Prince, as he bred both Naso of Kippen and Jilt of Braunfels at his magnificent kennels in Germany. Naso of Kippen is a son of champion Maggie, and himself qualified to be a champion small-sized pointer, most judges thinking him now the best-looking small-sized pointer in England, and this proof of his great excellence in the field makes him something indeed to be proud of.

TO FORM A COLLIE CLUB.

IN response to the request of several collie breeders desirous of establishing a collie club we will open a list of names of those willing to join such an organization. It certainly seems very advisable that this interesting and popular breed should be cared for, and the interests of exhibitors catered for better than has been the case hitherto.

PRIDE II.—*Editor Forest and Stream:* An inquiry was made in your columns a short time since of the whereabouts of the Laverack setter dog Pride II. I take it that reference is made to a liver and white Laverack setter dog imported from Mr. Laverack's kennel seven or eight months before his death, by Mr. Chas Tasker, of Philadelphia. At the time the dog came over he was about nine months old, and I think clear of the distemper. A week or two prior to Mr. Tasker's leaving Philadelphia for Texas, where he intended going into the ranch business, he brought Pride II. out to my place for inspection, and I found him a very promising setter, and by no means a small dog then. He was well put together, and an animal to be proud of excepting color of coat. His breeding, if I remember correctly, was out of Cora, by Blue Dash. I am quite sure as to the sire, but not so certain as to the dam. Yet I have in mind now that old Cora was about the only bitch Mr. Laverack at that time could depend upon for breeding purposes. Mr. Tasker took the dog with him to Texas, a fact I deplored very much, as Mr. Laverack was very urgent in his advice for me to breed Fairy II. to him when he came to proper age; Fairy II. being my property then. Mr. Tasker returned from Texas in about a year, leaving Pride II. there in the possession of a Mr. Morgan or Major Morgan. I can not call to mind now whether at Fort Sill or some other military post in Texas was near to Mr. Tasker's ranch, it was, however, close to a United States Army post. This can be learned by looking over some back numbers of FOREST AND STREAM, which contains an article from Mr. Tasker from the point where his ranch was situated, relative to the price of trace chains, etc., etc., there. The information I received, or as much of it as I can now remember, from Mr. Tasker on his return to Philadelphia. I learned also that the dog proved gun shy while in Texas.—HOMO.

THE NEW STANDARD.—Steamship Celtic, June 6, 1885.—*Editor Forest and Stream:* In a very few minutes we are timed to weigh anchor, and the handsome Celtic, the queen of good sea boats, will be ploughing her way through the briny ocean. Before the good ship leaves her moorings may I respectfully ask what prompted that astute body, the A. K. C., to put my name down as one of the "select" few to report on standards? If I cannot breed dogs to come somewhere near a standard of excellence I most certainly do not wish anybody to frame a standard to "fit" my dogs. Your Western contemporary argues that as pointers and setters require greater powers of endurance in this country than is necessary in England, the standard should be altered. To attain the desired result he proposes to do away with good head, bone, muscle, strong loin, etc. These essentials, he said, are of little account. He does not think it right that owners of bitch-headed, dish-faced, sickle-tailed, slack-loined weeds should be kept off the prize lists any longer. Care should be taken of that man. A mad dog won't do much harm if he is kept on the chain, but if you let him run loose and have his fling he may do an immense amount of mischief. (Ding-dong. There goes bell number two). Did you see the report of the Philadelphia show in the Western comic but independent (of the truth) journal? Britomartis is a very good bitch, but is faulty in jaw; "there she is not level." Let the individual who wrote that report take my place on the "standard" list, and may heaven protect the "standard." If Mr. Mason gets hold of that "unlevel jaw" there will be some fun for the readers of your excellent journal. (Bell number three. There goes the whistle. Boy, take this to the FOREST AND STREAM). The ship trembles like a living thing—she moves. "Let her go!" "Whither are we drifting?"—RONALD H. BARLOW.

SENATOR VEST AWAY AWAY.—"I have a dog," said Senator Vest, who had just heard a precocious crow story "who is very sagacious. One morning he watched intently while a negro boy blackened my shoes. The following morning he came to where I was sitting with a blacking brush in his mouth. You may not believe it, but that dog got down on his haunches, spit on my shoes, took the brush in his teeth and rubbed away like a house on fire. But I must admit that he did not get up much of a polish. One Sunday while I was living at Sedalia this dog followed me to church. I noticed that he watched every movement of the preacher. That afternoon I heard a terrible howling of dogs in my back yard. I went out to see what was the matter. My dog was in the woodshed standing on his hind legs in an old drygoods box. He held down a torn almanac with one forepaw and gesticulated wildly with the other, while he swayed his head and howled to an audience of four other dogs, even more sadly than the preacher I had heard that morning." The narrator of the crow story "threw up the sponge."—*Washington letter to Memphis Appeal.*

THE MILWAUKEE DOG SHOW.—*Editor Forest and Stream:* J. D. Olcott of this city is making arrangements for the dog show in connection with the Milwaukee Exposition, Sept. 23 to 25, and which it is intended shall be equal to any similar show held heretofore in any portion of the U. S. Aside from the regular premiums, a thousand dollars will be offered in special prizes. The project is warmly supported by many of our leading citizens, which is amply attested by their liberal subscriptions. The show will be under the exclusive control and management of Mr. Olcott, which is a full guarantee that everything will be properly conducted. The time for the show is about the most favorable for such a purpose in this latitude. Arrangements will be made with railroad and express companies for the proper care and conveyance of all animals. The premium list will be ready about July 15.—M. J. E. (Milwaukee, Wis., June 14).

IRISH SETTERS AT NEW YORK.—We are informed that the third prize in the open class was awarded to the bitch Gay (Elcho—Fire Fly), and Lady Edith was given he. in the same class. It is stated that the tags were mixed up by what appears to have been stupidity rather than dishonesty, and in this way the mistake arose.

BULLDOGS AT TORONTO.—*Editor Forest and Stream:* Your special reporter in his report of the Toronto show stated that the bulldog Bill took first prize, Mills's Guillermo second. The facts are when Mr. Thayer's champions Tippoo, Rhodora and Romulus were ruled out on account of non-arrival of entry, my dog Guillermo was given first prize. Mr. Chas. H. Mason, in whose care Bill was, withdrew him from competition. Mr. Mason was good enough to remark voluntarily to me that my dog "was a fairly good dog," and in fact "there were far worse dogs than he around." Your special reporter in his comments allows him six words, saying he is "faulty in head and body;" therefore your special reporter does not agree with such a good all-round judge as Mr. Chas. H. Mason. —THOMAS W. MILLS.

COLLIE TRIALS.—It is possible that a field trial of collies may be given by the Pennsylvania State Agricultural Society in connection with the fair next fall. Dr. Twaddell, Messrs. Terry, Pugh and Rafferty are among those who are interested in the matter, and it is to be hoped that the project may be successfully carried through. Such trials serve a most useful end.

AMENITIES OF JOURNALISM.—In its last issue the Vacaville *Judicion* saw fit to call the editor of this paper a liar, an idiot, and an ass. Such "argument" is unanswerable by a gentleman, and we own ourselves whipped.—*Winters (Cal.) Express.*

MR. S. T. HAMMOND (Kennel editor of the FOREST AND STREAM) is the author of "Practical Dog Training, or Training vs. Breaking," the very best book on the subject to be had. The price is $1.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam,
8. Owner of sire.
6. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Trial. By Chequasset Kennels, Lancaster, Mass., for pug bitch, whelped April 15, 1885, by Treasure (A.K.R. 482) out of Victory (A.K.R. 1265).

Gaffney. By Geo. J. W. Wells, Philadelphia, Pa., for red Irish setter dog whelped Jan. 26, 1885, by Chester (Berkley—Lulu) out of Lady Bess (A.K.R. 2178).

Little Duke, Jr. By W. E. Deane, Somerset, Mass., for white, black and tan beagle dog, whelped Dec. 3, 1884, by Little Duke (A.K.R. 1994) out of Rose.

Loyal, Liebe, Lanza, Lys, Light and Linda. By Chequasset Kennels, Lancaster, Mass., for rough-coated St. Bernards, one dog and five bitches, whelped May, 1885, by champion Hermit (A.K.R. 23) out of Sombre (A.K.R. 798).

Triamond, Trinket, Trix and Trust. By Chequasset Kennels, Lancaster, Mass., for pugs, one dog and three bitches, whelped April 5, 1885, by Young Toby (A.K.R. 473) out of Tantrums (A.K.R. 220).

Laurian, Lindare, Lioqel, Luzern, Lintz, Lorenz, Launfal and Lona. By Chequasset Kennels, Lancaster, Mass., for smooth-coated St. Bernards, seven dogs and one bitch, whelped April 13, 1885, by Alp II. (A.K.R. 705) out of Alma (A.K.R. 27).

Luna and Lola. By Chequasset Kennels, Lancaster, Mass., for rough-coated St. Bernard bitches, whelped April 24, 1885, by Cæsar (A.K.R. 22 out of Theon (A.K.R. 94).

Richmond, Larry S. and Rosalie. By I. Henry Roberts, Moorestown, N. J., for red Irish setters, two dogs and one bitch, whelped March 14, 1885, by Chief (A.K.R. 231) out of Leigh Doane (A.K.R. 58).

Leonhard and Lotus. By Chequasset Kennels, Lancaster, Mass., for rough-coated St. Bernards, dog and bitch, whelped April 14, 1885, by champion Hermit (A.K.R. 23) out of Irma (A.K.R. 1051).

Little Fraud. By E. W. Jester, St. George's, Del., for black, white and tan English setter bitch, whelped Nov. 24, 1884, by Druid's Boy (A.K.R. 2270) out of Victoria (A.K.R. 1383).

Countess Victoria. By E. W. Jester, St. George's, Del., for lemon belton English setter bitch, whelped Nov. 24, 1884, by Druid's Boy (A.K.R. 2270) out of Victoria (A.K.R. 1383).

Jeannette. By H. E. Burkmar, Rockland, Me., for lemon and white pointer bitch, whelped March 31, 1885, by Glenmark (Rush—Romp) out of Zanetta (A.K.R. 1261).

BRED.

☞ *See instructions at head of this column.*

Ruby—Count Noble. The Field Trial Kennels' (Flatbush, N. Y.) black, white and tan English setter bitch Ruby (Rake—Fanny) to Sanborn Kennels' Count Noble (Count Wind'em—Nora), May 26.

Music. Bull-terrier bitch (A.K.R. 2302), owned by Geo. W. Dixon, Worcester, Mass., May 28.

Oscar Wild. Pug dog, 7mos. old (Toodles—Treasure), owned by Frank McMullen, Worcester, Mass., May 20.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

R. R. W., Albion, N. Y.—My cocker spaniel pup, eleven months old, has fits when exercised, he is otherwise in good health, is not over fed, has a good yard to run in. Will medicine help him, if so what kind? Ans. Give your dog one or two teaspoonsful of syrup of buckthorn each day and keep him on low diet. If this does not help him after a week give ten drops of tincture of nux vomica in sweetened water twice daily.

The Charleston (S. C.) *News* tells this story of the dog-pound in that city: "While the reporter and policeman were talking a very small white boy, barefooted and only wearing a kilt, dodged under the club of the policeman at the door and went up to the pound. He stood near the pound, and with tears in his eyes cried out 'Billy.' The call was answered by a shaggy little terrier, which had evidently been asleep, but which was aroused by the familiar name, and came at once to the rail, wagging his little stump tail, and the recognition was mutual. The little fellow wanted his dog, but the stern official at the round table informed him that he would have to pay $2 before he could be allowed to take his pet away. The law having been explained to the youngster, he dried his eyes, wiping away the tears on the cuff of his kilt, and starting out, said: 'Mister, please don't kill Billy till I come back. I've got the money in my savings bank, an' I'm going to get it.'"

ANOTHER CURIOUS BULLET.

Editor Forest and Stream:

I was much interested in the article of "W. A. A." in the issue of March 19, headed "A Curious Bullet," more especially as I have had for several years in my cabinet specimens obtained from the dissection of game and otherwise, a bullet of shape something similar, caused evidently by similar forces. It is herewith inclosed marked "A." It was picked up among a good many other bullets in the spring of 1882, after the melting of a snowbank just in rear of the target of a 200-yard range near Bozeman, Montana, by E. Hofer, one of the guides of the Yellowstone National Park, and had been fired over said range during the winter before. It was originally a .45-cal. 550-grains bullet of 1⅛ inches length, but has been elongated to 1.558 inches length after leaving the rifle. It was fired evidently from a Sharps rifle, and this elongation and reduction of diameter about midway of length evidently took place between the time of leaving the muzzle and its coming to a state of rest. As will be perceived, its weight has not been reduced in the least, and its diameter has been reduced to .388 inches by the process of elongation. I have often endeavored to arrive at a plausible reason for this elongation. Evidently either the rear or front part of the bullet was retarded, while the other portion pulled forward, but there is no mark on either end to indicate this. Can any plausible reason be assigned?

I inclose two other bullets picked up at the same time, of the same class (.45-550-1½) that are inclosed, in order to illustrate another phase of the subject, *i.e.*, the question as to the instant of time the "upsetting" of the bullet takes place. Bullet marked B indicates that the complete "upsetting" occurred before it left the shell, for there is the impression of the mouth of the shell around its base to the depth it was loaded into the shell. Forward of this narrow ring around the base are the impressions of the lands. This shows that no upsetting occurred after this ball left the shell, else the base would likewise have the impressions of the lands. Bullet marked C has the impression of the shell around its base to the depth loaded into the shell, but it has likewise the impression of the lands for the full length of the bullet, indicating that the upsetting of the base of ball occurred before leaving the shell.

After leaving the shell, however, further upsetting occurred sufficient at least to upset this narrow ring around the base, so as to make it bear upon the lands. I have other balls of the same class, picked up at the same time, that indicate, in their case, that the upsetting at the base occurred after leaving the shell. These specimens prove to my satisfaction that in their case the upsetting occurs very near the instant of time of the commencement of the ignition of the powder. I think this holds good also with the lighter balls. P.

APRIL 20, 1885.

THE CREEDMOOR FALL PROGRAMME.

THE directors of the N. R. A. have issued during the past week the programme for the thirteenth fall meeting at Creedmoor, which opens on Sept. 16 next and will run about eight days.

Entries will be received at the office of the Association, room 55, Temple Court, No. 5 Beekman street, New York, up to and including the 12th of September, and at Creedmoor during the meeting. All entries received after the 12th day of September will be considered post-entries and must be accompanied by an additional charge of 25 per cent. Spirit levels may be used upon the rear sights of all special military rifles, and also upon those of other military rifles, where permitted by the authorities issuing them. The Piffard heel pad may also be used. In any match of the Association full scores cannot be beaten. A supplementary programme will be issued in August, in which various prizes not at present known will be allotted to some of the various matches.

The conditions of the several matches are as follows:

No. 1.—Directors' Match—200yds., open only to directors of the N. R. A., rounds 5, position standing, weapon any military rifle including specials, entrance fee $3, prize the director's championship gold badge, shot for annually, and held by the winner during the year; to be shot at any time during meeting.

No. 2.—Judd Match—Offered annually, under resolution of Board of Directors N. R. A., to commemorate the services rendered by Hon. David W. Judd in securing the passage of the law by which the Association was enabled to obtain its range. Open to all comers, weapon any military rifle, including specials, distance 200yds., position standing, rounds 7, entrance fee $2 each or three for $5, but only the highest score to count, and only three entries allowed on each day, match to occupy two days, prizes cash, presented by the N. R. A., $315, divided into 21 prizes, viz.: $25, $24, $23, $22, $21, $20, $19, $18, $17; $16, $15, $14, $13, $12, $11, $10, $9, $8, $7, $6 and $5, contributed prizes to be added, in which event competitors will have the choice of prizes in order of merit of their scores. The aggregate of two scores to count for the first five prizes.

No. 3.—Wimbledon Cup Match—Open to all citizens and residents of the United States, distance 1,000yds., 30 shots, weapon any rifle within the rules, cleaning allowed, position any without artificial rest, entrance $5. First prize, the Wimbledon Cup, to be held by the winner till the next fall meeting thereof, when it will be shot for on the same conditions, value $500 and cash $20, or a silver medal of equal value at the option of the winner, second prize cash $15, third prize cash $10, fourth prize cash $5. Won in 1875 by Major Fulton, in 1876 by I. L. Allen, in 1877 by Dudley Selph, in 1878, by Frank Hyde, in 1879 by C. H. Laird, in 1880 by W. M. Farrow, in 1881 by F. J. Rabbeth, in 1882 by W. Budworth, in 1883 by H. T. Rockwell, in 1884 by J. W. Todd.

No. 4.—President's Match for the Military Championship of the United States of America—Divided into two stages. First Stage: 200 and 500yds.; seven shots at each distance; open to all members of the Army, Navy and Marine corps of the United States, or the National Guard of any State. Each competitor to appear in the uniform worn by the organization of which he is a member, and to shoot with the rifle with which he is armed at the public expense or with the United States service rifle. Officers to shoot with the rifle of their organizations or the U. S. service rifle. Prizes, one of $50, and thirty-nine of $10 each. Total, forty prizes amounting to $440. Entrance fee, $3 to both stages. Second stage: Open to all prize winners in the first stage; distance 600yds.; number of shots ten; position any; rifles same as in first stage, but .50-cal. Remington State model will receive one point allowance. Prize, the mid-range championship of America for one year, and cash at least $100, to be awarded to the competitor making the highest aggregate score in both stages.

No. 5.—The Shorkley Match.—Any military rifle, including specials. Distances 800, 900 and 1,000yds.; any position; open to all comers; ten shots at each distance. Entrance $3. $100 contributed by Maj. Geo. Shorkley, and $120 added by the N. R. A., divided into twelve prizes, viz., $50, $40, $30, $25, $20, $15, two of $10 each and four of $5 each.

No. 6.—Continuous Match—All-comers continuous match. Distance 200yds.; position standing; number of shots seven; any rifle within the rules. Military rifles to be allowed one point on each score, provided they are not cleaned between shots, and such handicap to be added to the competitors first shot below five. The aggregate of three scores to count for each of the first five prizes. Aggregate of two scores to count for the others. Entries unlimited; fee $1 each ticket. $130, cash by N. R. A., divided into thirty-nine prizes, viz., $50, $40, $30, $25, $20, $19, $18, $17, $16, $15, $14, $13, $12, $11, $10, $9, $8, $7, $6, and twenty of $5 each. Absolute ties to be divided.

No. 7.—Governors' Match—7 shots at 500yds., position, any. Rifle, any military, including specials. Open to all comers. Entrance fee, $1. Re-entries allowed. The aggregate of three scores to count for first five prizes. Aggregate of two scores to count for the others. Two points allowed on the aggregate of the three scores in first five prizes to State model rifles of 50 caliber. One point allowed on aggregate of the two scores. $300 divided into 18 prizes, viz.: $40, $30, $25, 30, 15, $10, and 12 of $5 each.

No. 8.—All-Comers and Marksmen's Badge Match—Open to everybody. Distances 200 and 500yds. Position, standing at 200, prone at 500. 5 shots at each distance. Entrance fee $1. Re-entries allowed. Rifle, Remington, .50 cal. Members of the N. G., S. N. Y., in uniform (jacket, cap and belt), may record their scores in this match as qualified for the N. Y. State marksman's badge, provided that if ordered they have attended (or do once during the season attend) general practice, and provided they have previously qualified in the "second class" (100 and 300yds.). $250 divided into 32 prizes, viz.: $25, $20, $15, $14, $13, $12, $11, $10, $9, $8, $7, $6, and 20 of $5 each, also a Bay State rifle, .28-cal., globe sights, value $24. May be exchanged before being used at John P. Moore's Sons, 302 Broadway, New York, for any other style or caliber rifle manufactured by this company, the winner may prefer. Presented by Bay State Arms Company, Uxbridge, Mass.

No. 9.—Brooklyn Furniture Company Match—First prize a handsome piece of bronze, value $400, presented by the above company. Open to teams of four from any regiment, company or battery in second division, N. G., S. N. Y. Each organization may enter as many teams as they wish, but no competitor to be a member of more than one team. Remington rifle, State model. 7 rounds each at 200 and 500yds. Position standing at 200, prone at 500yds. Entrance fee, $5 per team. First prize, "The Buffalo Hunt," value $400. To be held one year by the winning team in the company's or officer's room, as they may decide, and to become the property of the organization whose team shall win it three times.

No. 10.—Hilton Trophy Match—Open to teams of 12 from the following: 1. The United States of America. A.—The army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific and Missouri (three teams in all). B.—The United States Navy (one team). C.—The National Guard or un-uniformed militia of the several States and Territories, including the District of Columbia (one from each State or Territory). 2. Other countries. England, Ireland, Scotland, and each of the Provinces of Great Britain, each of the Provinces of Canada, and all other countries, one team each from the following: A.—The regular army. B.—The militia. C.—The volunteers. Separate teams may be sent out only when the organizations are separate. D.—The navy of any country. The members of each team to be officers or enlisted men, and active members of the corps or organization which they represent, and to appear in the authorized uniform (full dress or fatigue) thereof. They shall be selected in such a manner as shall be prescribed by the military authorities of the country or State they represent, and shall, if required, be certified to by them as being their authorized representatives. Distances, 200, 500 and 600yds. Rounds, 7 at each distance. Position, standing at 200yds., any at 500 and 600yds. Weapons, any military rifle which has been adoped as an official arm by any State government. Ammunition, any. Entrance fee, $2 each man. First Prize.—A trophy, presented by Hon. Henry Hilton, of New York, to be shot for annually at Creedmoor, or such other range as the National Rifle Association of America shall select, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof. Value, $3,000. Also a medal to each member of the winning team; won in 1878 and 1879 by State of New York; in 1880 by Division of the Missouri, U. S. A.; in 1881 by State of New York; in 1882 by State of Pennsylvania; in 1883 by State of Michigan; in 1884 by Division of the Atlantic, U. S. A.

No. 11.—Short Range Team Match.—Open to teams of four from any club or military organization, no limit to number of teams from one organization, but no competitor can shoot in two teams, 10 shots at 200yds., position standing.

No. 12.—Long Range Team Match.—Open to teams of four from all rifle associations or clubs in any State or Territory in the United States. Members of the various teams participating must, at the time of shooting, be residents, and must have resided in the State represented for at least three months prior to the date of the match, distances 800, 900 and 1,000yds., 15 shots at each distance, any military rifle within the rules, entrance fee $10 each team. Prize.—A trophy to be held for the year by the successful team, which shall be deposited in some central place in the State whose team may win it, also a medal to each member of the winning team. Won in 1877 by Amateur Rifle Club, N. Y.; in 1878 by Massachusetts Rifle Association, in 1879 by New Jersey State Rifle Association, in 1880 by Empire Rifle Club, N. Y.; in 1881, '82 and '83 by Ilion Rifle Club, in 1884 by Amateur Rifle Club, N. Y.

No. 14.—New York State National Guard Match—Open to teams of twelve from each regiment, battalion or separate company of infantry of the National Guard of the State of New York, each man being certified by his regimental commander to be a regularly enlisted member in good standing of the regiment, battalion or separate company he represents, and to have been such on June 1, 1885. All competitors must appear in the uniform of their corps (full dress or fatigue). Distances 200 and 500yds.; position standing at 200yds.; prone at 500yds.; weapon, Remington rifle, State model; rounds, five at each distance; entrance fee $1 each man. First prize, a trophy presented by the State of New York, value $800.

No. 15.—First Division National Guard Match—Open to teams of twelve men from each regiment, battalion or separate company of infantry in the First Division of the National Guard of the State of New York. All competitors to appear in the uniform of their corps (full dress or fatigue) and to be certified by their regimental commander to be regularly enlisted members in good standing of the regiment, battalion or company they represent, and to have been such on June 1, 1885. Weapon, Remington rifle, State model; distances, 200 and 500yds; five shots at each distance; position, standing at 200; at 500yds. prone. Entrance fee, $1 each man. First prize, a trophy presented by the State of New York, value $100.

No. 16.—Second Division National Guard Match.—Open to teams of twelve from each regiment, battalion or separate company of infantry in the second division of the National Guard of the State of New York. All competitors to appear in the uniform of their corps (full dress or fatigue), and to be certified by their regimental commander to be regularly enlisted members in good standing of the regiment, battalion or company they represent, and to have been such on June 1, 1885. Weapon, Remington rifle, State model. Distances 200 and 500yds., five shots at each distance. Position, standing at 200, prone at 500yds. Entrance fee $1 each man. First prize, a trophy presented by the State of New York; value, $100.

No. 17.—General Sheridan's Skirmishers' Match—Open to teams of 6 from the regular army, navy, marine corps, national guard, volunteers, or militia of any country, State or Territory. Any number of teams may enter from each organization, but no competitor may shoot in more than one team. All competitors to be regularly commissioned or enlisted members in good standing of the regiment, battalion, corps, troop or company they represent, and to have been such on Aug. 1, 1885, and to appear in the uniform (jacket, cap, trousers, belt and cartridge box or belt) of the organization they represent. Distances 600 to 200yds. and return. Second class targets. Weapon, the military rifle with which the organization has been regularly armed, unless such be a magazine gun, in which case any military rifle which has been adopted as an official arm by any State or Government. Entrance fee $3 for each team. A commanding officer or coach may be allowed in rear of each team, or as a member on the firing line. The first prize in this match is a trophy presented by S. D. Schuyler, Esq., value $150. This prize is to be won three times before becoming the property of the winner. It will be held for a year by the officer commanding the winning corps. Also a bronze medal to each member of the winning team. Won in 1884 by 4th Artillery, U. S. A.

No. 18.—*Army and Navy Journal* Match.—Open only to members of the Army, Navy, Marine corps and National Guard or militia of any state or territory. Rifle, the U. S. service 45 cal. or the Remington State model, 50 cal. Competitors to shoot in uniform, jacket and cap or helmet. Position standing, distance 200yds., number of shots seven, entrance fee twenty-five cents, re-entries allowed. First prize, a fine Webley double-barreled breechloading shotgun, choke bored and with rebounding locks, value $200, presented by Col. William C. Church on behalf of the *Army and Navy Journal*. The gun is to be shot for semi-monthly and during the fall meeting, and to become the property of the competitor whose ten best scores, made previous to the close of the fall meeting in September, 1885, shall aggregate the highest. Second, 3d, and 4th prizes, cash by N. R. A., $10 each; 5th, 6th, 7th and 8th prizes, cash by N. R. A., $5 each. The highest aggregate of five scores to determine the winners of the cash prizes.

RANGE AND GALLERY.

BULLSHEAD RIFLE CLUB.—June 5, 12-ring target, possible 120: M. Dorrler 118, G. Zimmermann 117, C. Rem 113, J. Schneider 113, C. Holzmann 112, D. Lowitzki 111, J. Jordon 110, H. Sindlinger 110, C. E. Gensch 109, H. Washmuth 107, H. Kruger 106, A. Koster 105, L. Bradfish 104, B. Wragge 103, J. Shaw 101, G. Tred 90.—A. LOBER, Sec.

BRIDGEPORT VS. SPRINGFIELD.—Telegraphic match, June 11, between the Bridgeport Rifle Club and the Springfield Schuetzen Verein at Bridgeport. A fresh 7 o'clock wind was blowing while the match was in progress, with the sky overcast part of the time, and a shooter thinking he had pulled for a bull would find he had scored a 10 low:

Bridgeport Team.														
Bassett	11	9	11	9	9	11	10	9	12	10	12	11	12	10—158

Barnes	7	8	5	11	5	9	11	4	5	8	8	7	8	5 11— 98—1174

Before the match the Bridgeport team was divided into two sides for a supper shoot. They tied, and so each man went home to supper.

INDIANAPOLIS, Ind., June 16.—The fourth biennial tournament of the Northwestern Shooting League began to-day with an attendance of about 300 of the 1,000 sharpshooters belonging to the league. The opening contests were for rapidity in scoring 15 bullseyes, and for the first 65 bullseyes scored. These were the only two rapid-firing contests, the prizes being gold medals. Emil Berg, of Davenport, Ia., made the first 15 centers, and when the shooting for the day closed led all the shooters with 63 centers to his credit.

SPRINGFIELD, Mass.—The day for shooting the match with the Bridgeport team was not first-class for rifle shooting. The score of A. Barnes was very poor indeed, but due due allowance must be made that he shot a rifle which he had never before used. The regular weekly shoot of the Rod and Gun Rifle Club was poorly attended, only three members showing up. The scores were very poor. The first class was won by A. Locke. His score was:

A Locke.....8 10 7 9 10 10 11 9 11 10—95

Second Class.

E S Field.....8 11 11 10 8 11 7 8 8 10—92
S K Hindley.....6 8 7 10 10 9 9 9 7 10—85

The club have voted to challenge the Canton Club of Collinsville, Conn., to shoot a match here July 4, as well as the Brattleboro, Vt.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

THOMASTON, Conn., June 6.—The weather conditions on Bridgemoor Range to-day were a bright light with a strong 10 o'clock wind. Subjoined are the scores:

G P North.....11 11 10 12 12 12 9 11 9 11—104
W H Dunbar.....10 11 11 12 11 11 11 9 9 11—103
G C Gilbert.....8 9 10 11 9 11 11 9 11 12—101
G A Lemmon.....9 9 9 10 10 11 11 9 11 10— 96
F Carr.....9 10 10 7 9 7 8 8 11 10— 90
A Fox.....11 8 9 12 7 5 11 9 4 12— 90
J L Alling.....5 9 8 8 10 9 11 9 10 10— 84

CREEDMOOR, June 13.—The third of the series of association matches for National Guardsmen was shot at Creedmoor to-day. The day was fine and cool, the wind being changeable in the morning, but steadying down to a brisk wind in the afternoon. The attendance was rather small, owing probably to the nearness of the camping season. The prize winners and their scores were as follows:

J F Klein	21 23—44	F S Kennedy	21 20—41
J P M Richards	20 23—43	McC Butt	18 22—40
G F Merchant	20 23—43	J H Lacroix	20 19—39
R M Kallock	20 21—41	W A Valentine	18 20—38

Col. Charles E. Bridge was the executive officer of the day.

F. W. FREUND, the patentee of a new rifle, is now here with a view to having it manufactured by machinery. He expects soon to have a company formed and to be ready for the demand. In the meantime he is still making his celebrated rifle sights. See adv. in another column.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ALLENTOWN, N. Y., May 30.—East Hill Gun Club's first regular monthly shoot, 10 glass-balls, Card's rotary trap, third notch, screened, 21yds. rise:

E R Curtin	1010111101—7	E M Strayer	1110101100—6
L D Strayer	1000100001—3	F J Weston	0000000000—0
S H Brown	0011111111—8	Stamm	0110101100—5
W W Curtin	0003000000—0		

Ten balls, same conditions:

E R Curtin	0111011111—8	Weston	0011000000—2
L D Strayer	1000 00000—1	Stamm	1101011101—7
Brown	1010011111—7	W W Curtin	0010010000—3
E M Strayer	0001010110—4		

Five pairs balls, 15yds. rise:

Brown	01 01 11 10 10—6	E M Strayer	10 00 00 11 10—4
Stamm	00 00 11 10 11—5	W W Curtin	00 10 10 10 10—4
E R Curtin	10 11 00 00 01—4	L D Strayer	00 10 00 10 10—3

Ten single balls, 21yds.:

Weston	0000100100—2	Stamm	1100101011—6
E R Curtin	00001w —1	Brown	0101100111—6

STAMM.

VAN ETTENVILLE, N. Y., June 10.—The Gun Club went to Danby yesterday to shoot a team match at twenty glass balls with the Danby Club.

Danby Club.

Patchin.....11111111011111011111—18
Mix.....10000000100111101001— 8
Roney.....01000010000011000111— 7
Lambkin.....11101101101011101101—14
D Norton, of Ithaca.....11111111111111111111—20
Beardsley.....01101111010111111111—16—83

Union Club.

Goldsmith.....00110010111111111110—14
Burlingame.....11011110101110111110—15
Fisher.....11011101101111111111—18
Hixson.....11110101101111111000—14
Rogers.....11111111111111111601—18
Gee.....11011111101111111111—18—95

The team match was followed by several individual sweepstakes at 5 balls each: First, Hixson 4, White 4, Norton 5, Goldsmith 4, Gee 4, Lambkin 2, Rumsey 4. Beardsley shot out White, Goldsmith, Gee and Rumsey; Patchin shot out Beardsley and Fisher; Lamkin shot out Roney.

Second, same conditions, D. Norton accepting a handicap of 3yds.: Rumsey 3, Norton 4, White 3, Patchin 5, Lamkin 4, Roney 4, Beardsley 2, Hixson 4, Gee 5, Rogers 5, Fisher 5. Gee and Fisher shot out Patchin and Rogers and divided, Hixson shot out Norton, Lamkin and Roney, Rumsey and white divided.

Third, same conditions, Rumsey 4, White 3, Norton 5, Fisher 5, Patchin 2, Gee 5, Hixson 3. Norton shot out Fisher and Gee, and Hixson shot out White.

After the shoot the visitors were very pleasantly entertained and given a fine supper at the town hall by the ladies of Danby, which was much enjoyed. On the way home, Dr. Gee, not having enough shooting, made a score of 3 woodchucks with 21 shots from a rifle.—K.

FALL RIVER, Mass.—The second shoot of the Fall River Gun Club took place June 2, and both prizes were won for the second time by T. S. Hall by the following scores:

Glass Balls.

Hall.....11111011111111111111111111—24
Buffinton.....00101001111110100011111—16
Mangam.....11110111110101011001010—16
Wood.....00111111010001w.

Clay-Pigeons.

Hall.....01111111101111111111011111—22
Mangam.....01001010111010111011111—17
Buffinton.....01010100001011111111100—13
Braley.....10010011111011011110w.
Wood.....0,11110011111110w.
Lewis.....11110110110101010w.
Pierce.....11111001011111w.

The first of a series of matches between the New Bedford and Fall River Gun Clubs was shot here to-day, and after a very close and exciting struggle was won by the home club by the following score, 25 clay-pigeons per man, four men on a team:

Fall River.

Hall.....11111111101111111011011—22
Braley.....01110011111111111101101—20
Mangam.....11011111100011111100111—19
Buffinton.....11100101101111010000101 001—14—75

New Bedford.

Smith.....10111011101111011011110—19
Stone.....01110101100111111101011—18
Slocum.....10101101111100101111110—18
Pierce.....00011111111010010011 11—16—71

Individual match, 25 clay-pigeons:

Braley.....11111 11110 11011 11101 11110—21
Hall.....10011 11110 11111 11010 11110—19
Mangam.....01111 10101 11101 11111 01101—19

Pierce.....11110 01001 10111 11010 11110—17
Stone.....11010 10001 00111 11111 11000—15

Brayley wins for the first time. A number of sweeps were shot. The next match will take place in New Bedford in July.—T. S. H.

CHICAGO, June 10.—Captain Bogardus and Andrew Meaders, of Nashville, Tenn., shot at live pigeons this afternoon at the Driving Park. Many sportsmen were on hand to witness the match. The officers were: Referee, J. B. Stice; judge for Meaders, T. R. Hasdell; judge for Bogardus, H. F. Orvis; scorer, L. B. Crooker. There was a light wind blowing, and the pigeons were rather tame and did not rise quickly. The first contest was at fifty birds each, single, rise of 25yds. and use of one barrel. Bogardus missed only 2 birds, making a score of 48, and Meaders missed 9, making a score of 41 killed. The other half of the match was at pairs, two traps, 25yds. rise and fifty birds for each man. Bogardus killed 39 out of 50 and Meaders killed 41. Bogardus won the match, the score being Bogardus 87, Meaders 82.

TEXAS.—The eighth annual tournament of the Texas State Sportsmen's Association will be held at Denison, Texas, June 23-27, under the auspices of the Denison Gun Club, J. T. Munson, Denison, secretary.

OTTAWA.—On the 25th and 26th of June a clay-pigeon shooting tournament will be held at Lansdowne Park, Ottawa. The affair will be managed by the St. Hubert Club. Six regular matches, besides an extra series, are upon the programme.

THE GLYNN GUN CLUB, of Brunswick, Ga., has elected Mr. J. Crovett president and Mr. S. C. Littlefield secretary.

JAMESTOWN, June 10.—Inclosed find score of Jamestown Shooting Club made yesterday at 20 Peoria blackbirds each, 18yds. rise, put in one barrel, heavy wind from 9 o'clock:

Carnahan	10111011010110110111—14	Walker	01100010000001111011— 9
L Pennock	10110101010110110101—13	F Pennock	00010001101010100000— 6

NEW JERSEY.—The Union shoots every Saturday afternoon at Marion, N. J., under the auspices of the Jersey City Heights Gun Club are rapidly growing in favor, and nearly thirty shooters faced the traps last Saturday. So far only one set of traps has been run at a time, but it will be necessary to divide the grounds and arrange two different scores to keep all shooters busy. The following are the scores, National Gun Club rules:

Eight Knoxville blackbirds, one trap, fifty cents entrance.

Lindsley	01111111—7	Tousey	11011100—5
Tomkins	01111011—6	Terry	10010011—4
Cromwell	00101010—3	Robertson	11011011—6
Still	01111101—6	Hughes	01101111—6
Holcomb	11000111—5	Craft	11101101—6
Lever	01111100—5	J von Lengerke	11110110—6
Van Brunt	00011111—5		

Lindsley first, Tomkins and Von Lengerke tied on five out of six and divided second, Holcomb third.

Eight American clay-birds, 5 traps, 50 cents entrance:

Tomkins	11111011—7	Lang	00101010—3
Lever	10101111—6	Van Brunt	01010010—3
Burdette	00000100—1	Craft	00111111—6
Fisher	00000100—1	Brown	10000001—2
Lindsley	10000110—3	Cody	01100000—2
Holcomb	10110101—5	Terry	11000111—5
Tousey	11001111—6	Bird	10000000—1
Robertson	11011101—6	Cromwell	10101011—5
Hill	00000110—2	Hughes	00101011—3
Smith	01010000—2	Carrington	00000000—0
Johnson	00001000—1	Rockfeller	01000110—3
Laure	00,00100—1		

Tomkins first, Craft won second on shoot off, and Holcomb third.

Match No. 3, 8 clay-pigeons, 5 traps, 50 cents entrance:

Robertson	11100111—6	Tousey	11100111—6
Bird	10110003—3	Edey	00111100—4
Lindsey	01100011—4	Clements	00111101—5
Tomkins	10011111—6	Cromwell	01100101—4
Lever	10110111—6	Smith	10100100—3
Still	00110011—4	Lang	01110011—5
Cody	00111001—4	Reynolds	10101000—3
Hughes	10110100—4	Terry	00111110—5
Heritage	11010001—4	Holcomb	01011111—6
Craft	10110101—4	J Von Lengerke	11011011—6
Burdette	01101111—6	La Rue	00100001—2

Bardette and Holcomb divided first after shoot off, Clements and Terry second, Heritage and Craft third.

GEDDES, N. Y., June 11.—Monthly shoot of the Geddes Shooting and Fishing Club for club gold medal.

Pratt	10111110111011—12	Westphal	01000001010010 1— 5
Case	11011111111111—13	Cummings	01111101100100— 6
Scanlon	00000001001000— 2	Steves	01111011110011—11
Trowbridge	11110111110010—11	Bronson	01010111011111—11

After the medal shoot a sweepstake was shot, with the following result: Trowbridge 5, Bronson 5, Steves 5, Armstrong 4, Scanlon 4, Pratt 3, Case 3, Fonda 4, Cummins 3. In shooting off ties Steves took first money, Fonda second and Cummins third. The next shoot of the club will be held at Lakeside Park, July 4, at 2 P. M.—G. F. G.

TRENTON, N. J., June 11.—Trenton Gun Club shoot at 20 clay-pigeons from three traps, 18yds. rise:

Allen, C	01101110111111111117	Barwis, W	00001100101011001010— 8
Allen, J	11001101111011111115	Barwis, C	00101100000000101011— 7
Dunont	11101011010111101101—14	Fox	10110100110101000110—10
Loveless	01110101111001111100—13	Lawson	01101010000010101010— 8
Crisp	01101111001101010001—11	Wilson	01111000001 w.
Leigh	00000011101111101010—10		JERSEY.

NEW ORLEANS, June 7.—To-day the Louisiana Gun Club indulged in a number of lively and interesting matches, during which the friendly spirit of rivalry increased with each shoot until it reached red heat. The first match was a clay-pigeon pool shoot, which results as follows: Mayronne 9, Cousin 10, Chaudet 7, Reneicke 7, De Fuentes 5, Feibeger 5, Jung 3, Scooler 7, Landry 2, Commagere 5, Poursine 4, Leveque 2, Cucullu 4, Carriere 1. Third divided between Scooler, Chaudet and Reneicke.

The second match was a double bat-pool shoot as follows: Mayronne 6, E. Dronet 3, Tabary 8. A. Drouet 8, Scooler 8, Landry 8, Commagere 6, Jung 5, Cucullu 5, Carriere 4, Lanaux 5, Feibeger 6, Cousin 6, Chaudet 7, Poursine 4, Leveque 7, Reneicke 7. De Fuentes 4. First divided between Scooler, Landry and A. Drouet on tie. Second won by Chaudet, by shooting off tie. Third, Feiberger on tie.

At the conclusion of the above contests, the long looked for dinner shoot between the two rival teams took place. The shoot was at double bats. 24yds. rise, Louisiana Gun Club rules, and resulted as follows: Cousin's team—Mayronne 9, Tabary 6, Scooler 9, Commagere 6, Cucullu 5, Leveque 5, Lanaux 5, Cousin 7, total 52. Chaudet's team—E. Drouet 4, A. Drouet 7, E. Landry 9, Jung 4, Poursine 2, Carriere 3, Feibeger 6, Chaudet 8, total 43.

Not satisfied with the result of this shoot, the Chaudet team challenged the Cousin team on the grounds for a team pool match shoot, which was accordingly shot with the following result: Cousin's Team —Mayronne 7, Tabary 8, Scooler 9, Commagere 6, Cucullu 4, Leveque 6, Lanaux 7, Cousin 10; total, 57. Chaudet's Team—E. Drouet 8, A. Drouet 4, E. Landry 10, Jung 6, Poursine 8, Carriere 6, Feiberger 6, Chaudet 8; total, 56.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (Signed) C. M. STARK.

PUBLISHER'S DEPARTMENT.

THE MEDFORD FANCY GOODS COMPANY have put on the market a new comb for dogs. They call it the electric comb. Its shape is in its favor and it will doubtless be well liked by those who believe in combing a dog's coat.

THE SHEPARD TENNIS RACKET took the first prize in the New Orleans competition.

Yachting.

NEW YORK Y. C.—JUNE 11.

IF the schooner fleet is ever again to regain its old-time popularity and numbers, it is full time that some indications of a revival were evident, as the interest in yachting generally is lively this season, consequent on the coming races for the America Cup, while in the New York Y. C. regatta the inducements to the two-stickers were greater than usual. Besides the class prizes, an extra one for keel boats was offered, and the Bennett Cup, reverting to the club by the sale of Montauk, was to be won again. An extra prize was also offered by Mr. W. W. Russell for the first schooner over the line, making five in all. Out of the list of schooners still on the club's book it might have been expected that all the classes would have been well filled, and that some of the famous names would be heard again, but the total entries were only eight, none in Class I., and the boats themselves were mostly second rate. Of all the old time craft only Rambler went so far as to enter in the keel class, and she did not start. Montauk was on hand with new crew and owner, Grayling was in fine form for racing, and for the rest there was Gitana, well known as a cruiser, with her short foremast and big squareheaded maintopsail; Varuna with a racing record yet to be made, Speranza, a new cruiser that has never raced, all in the keel class, with Clytie and Nirvana, once the sloop Julia, in the third class. Outside of the two boats the second class had prospects for a really good race were hardly first class, and taken with the turnout of two-stickers in the other two races of Regatta Week, there is little to indicate a return of the old-time glory to the schooner fleet about New York.

Naturally, with the advent of two single-stick vessels in a short time to compete for the America Cup, the main feature of this season's yachting will be the racing of the large sloops and cutters, and this week has been looked for as an index, to a certain extent, to the trial races of next month. Of course the two principal vessels, Priscilla and Puritan, were not ready; but, as the trial races are open to all single-stick vessels of 60ft. waterline and over, it was expected that all the old boats would have a try with their larger rivals, and that they would enter first in this week's races. The turnout, however, has been rather disappointing, Gracie has been in for one, racing three times, but with poor success; Mischief has entered twice and captured three mugs; Bedouin has entered twice with little profit, and Thetis has failed to astonish all New York yachtsmen and has been twice beaten.

The first class boats that are racing this season are but few; Bedouin and Ileen representing the cutters, and Mischief and Gracie the sloops; and of these, Ileen is not yet in commission. Wenonah will not fit out this year, as her owner has taken a liking to steam. Ileen will be raced by Diaper and an English crew, but has just been launched after a winter ashore, and Oriva, who, though in a smaller class, is always ready to tackle the big ones, is laid up during the absence of her owner abroad. Of the sloops, Hildegarde seems to have lost her taste for racing, and Fanny, though in commission, is by no means anxious to try conclusions with Bedouin, and will not enter even the trial races. Boston has sent one yacht to try for honors before the big Puritan comes round, the Thetis, a compromise sloop of great depth.

Looking over the week's record with a view to the coming races we may put down Bedouin as fully up to last year's form, and ready for a second string of flags, and likely to push the big ones in the trial races, especially if it blows. Mischief is at least as good as last season, and good as the best in such weather as Thursday's, over the club course, but needing every chance in her favor to make her time off of boats 24ft. longer. Gracie is not yet her old self, and looks to be good for no better than second place with Bedouin and Mischief, blow high, blow low. Thetis, from what she has thus far shown, is little to be feared. On Tuesday she had her weather to a fraction, a lively topsail breeze and smooth water, and yet she failed to beat Mischief, though the latter blundered at the Lightship, and on Thursday in a light wind she was nowhere in particular. Boston has another card to play besides Puritan and Thetis in Huron, practically a new boat, as she was entirely rebuilt and lengthened this winter, but though a keel boat with outside lead, she has too much beam and too little depth to trouble Bedouin.

As noted, Wenonah will not be out this year, but Ileen will have a chance in new hands to retrieve last year's reputation, and to justify the faith that her friends still have in her. That she is a fast boat if properly handled is just as certain as it is that she has never yet been given a fair chance to show what was in her. Her first captain, in spite of his reputation, was a failure in every way, and her second, though no doubt a good sailor in small craft, was not the man to handle the crew of a racing 40, and to get the last inch out of his boat. Her new master comes to her with a well-earned reputation abroad, to which he has a chance to add a no less enviable one among American yachtsmen. He has a fine boat under him, and the fact that she is unpopular, both from her extreme proportions and poor performances thus far, should only prove an incentive to put her where she belongs, with Bedouin and Oriva, as the fastest single-stickers in our waters. No other yacht of equal excellence has ever had so hard a task to make a place for herself as Oriva. Launched at a time when cutters were specially in disfavor, she at once proceeded to justify by her performances a good many of the severe comments showered on her, and nothing but the pluck and perseverance of her owner has brought out her many good qualities and shown her the best and fastest boat of her class. Captain Diaper has in Ileen the same task that Mr. Lee had three years since in Oriva, and we shall look this season to see similar results

follow his efforts. There are plenty of yachtsmen in America who have advocated the cause of the cutter and who would not hesitate to build other lines, but unfortunately there are comparatively few who have the means as well as the will. These few owe a duty, not only to their boat, but to those who have steadily advocated the cutter model in the face of derision and difficulties for six years past, and if they had fulfilled it as fully as the Corinthian owners of Bedouin and Oriva, the question of type would long ago have been settled beyond cavil. With the interest still felt in the question it is a pity that the Fanny has not for a year past done something to back up her reputation as the fastest "our weather" sloop, to which she still lays claim. Her boasted victory around Long Island dwindles to nothing when the circumstances are examined, but since then she has never raced, though kept up in racing shape. Discretion is the better part of valor, and it may only have been commendable prudence that kept her at anchor with the wind nor'west last October, or even on Tuesday of last week, but on Thursday she had every chance she could ask. Mischief and Gracie have bravely kept up their end of the stick against the cutters, and it is due to them that their sister ship should aid them. While the other two sloops have met Bedouin frequently in the past year, Fannie has not been measured with her since the alterations in the former, so we can only guess at their relative qualities at present and regret that while Fanny entered all the early races in '84 when Bedouin was kept out by an accident, she has dropped out and not entered a race since Bedouin went in again, last June.

Thursday last was one of the real old-fashioned New York regatta days, one of the kind which has aided so much in the development of the American sloop, and which is perhaps the most powerful argument that can be advanced for the retention of the type. If all days were like it, and all courses like the New York course, there would be no reason for building cutters, but on the other hand the experience of the previous regatta of June, 1884, together with other races in the fall and the high average of Bedouin's performance in June, July, August, September and October, is a convincing answer to any argument based on Thursday's weather. A clear, bright sky, smooth water, and a southerly wind in which club topsails were easily carried, made a "sloop day" to perfection, and besides contributed greatly to the enjoyment of the many to whom the New York Y. C. regatta is simply a fine water spectacle.

The prizes this season were ten in number—six class prizes, the Bennett Cup for schooners, the special prize for keel schooners, and two cups offered by Mr. W. W. Russell for the first schooner and first sloop over the finish line; all to be sailed over the usual course from Owl's Head past buoys 10, 8½ and 5, around Sandy Hook Lightship, and home over the same course, finishing at buoy 15. The tug E. Luckenbach carried the regatta committee as usual, while the steamer Columbia was well filled with the members and their friends. The Luckenbach ran through the fleet anchored off Bay Ridge and gave to each yacht a time card, then she ran down to Owl's Head, where Captain Jake Schmidt and Sailor were already waiting in the Parole, anchored as a stakeboat.

One by one the yachts got under way and approached the line in good time. The entries were as follows:

KEEL SCHOONERS.

	Corrected Length.	
Rambler	120.00	W. H. Thomas.
Gitana	93.00	W. F. Weld, Jr.
Varuna	87.00	G. W. B. Hill.
Speranza	81.93	H. W. Collender.

SECOND CLASS SCHOONERS, 80 AND OVER ON WATERLINE.

Montauk	94.06	J. A. Brooks.
Grayling	83.42	L. A. Fish.

THIRD CLASS SCHOONERS, 80 TO 100FT. WATERLINE.

Clytie	80.60	A. P. Stokes.
Nirvana	71.13	E. M. Brown.

FIRST CLASS SLOOPS, 55FT. AND OVER.

Gracie	71.52	J. P. Earle.
Bedouin	71.45	Arch. Rogers.
Thetis	66.69	Henry Bryant.
Mischief	64.79	J. R. Busk.

SECOND CLASS SLOOPS, 45 TO 55FT.

Whileaway	57.50	G. F. Randolph.
Athlon	56.36	J. C. Barron.
Isis	53.66	A. C. Canfield.
Gaviota	53.21	G. M. Edwards
Fanita	49.56	Geo. J. Gould.
Daphne	50.57	J. R. Maxwell.

THIRD CLASS SLOOPS, UNDER 45FT.

Espirito	47.08	R. B. Hartshorne.
Maggie	46.75	W. A. W. Stewart.

In this race, as in the Seawanhaka C. Y. C. races of Saturday, a new division into classes was followed, the yachts being classed by waterline length, while their time is allowed on the club rule of

$$\frac{\text{Length plus } \sqrt{\text{Sail Area}}}{3}$$

This change provides a better classification and prevents a yacht from entering in a different class by some small change in her rig, as has been done under the former method, where boats were classed by their corrected length instead of by waterline length.

Every yacht was provided with a number on each side of her mainsail at the intersection of the two diagonals of the sail, a new feature in the N. Y. Y. C. All were under clubtopsails, Bedouin and Gitana being noticeable from their square headers, Gracie's new jib was specially noticeable, sitting beautifully. It is an angulated jib, cut in a new manner, lately introduced from England, and that thus far has been very successful.

While the yachts were waiting, an odd-looking vessel with high, yellow stack steamed down the bay, and was recognized as the sorely "tried" Dolphin off for her run at sea. About the same time the attention of all on the yachts and steamers was attracted by a peculiar-looking craft, a long bow, black hull, with upper works of peculiar appearance, painted white. Above the planksheer the sides were carried up from stem to stern beveling in a little, and over them a deck was laid, arched from stem to stern, or with a reversed sheer. Above this deck was a large pilot house, a smokestack and three masts, one bearing a blue flag with a white dagger. The stranger was unlike anything yet seen afloat, but she was soon recognized as another of Herreshoff's annual surprises, the little Stiletto, whose famous feat of the day before had set all river men to wondering. She was here, there and everywhere, in and out among the yachts, and when the race was fairly commenced, she settled her stern well down and was off and out of sight in no time. At Buoy 10 she was found quietly waiting when the others came up, and was greeted with cheers from the whole fleet; out to the lightship she went ahead with the leaders, and coming home, while the Luckenbach was hurrying to time the finish she passed by on one side, and shortly after ran down on the other.

Precisely at 10:50 A. M. the hoarse whistle of the Luckenbach boomed out the first signal, and at 11 A. M. the starting whistle was blown. Mischief was first down on the windward end of the line, with full jib and mainsail, followed as closely astern as a single yacht, the Fanny, crossed the weather end of the line, blanketing her for a minute, and then sailing in company with the racers. All came over quickly with a good south wind and an ebb tide, Gitana only going over on starboard tack. Rambler did not start. Nearly all carried clubtopsails, and Gaviota, Daphne and Gracie had jibtopsails aloft as well. Clytie unfortunately fouled the stakeboat, but went on over the course. At 11:10, when the whistle blew, all were over without accident or handicap. The fleet moved off, mostly toward Long Island, then tacked over to Clifton where the big Amerique lay at anchor, while the motley fleet of steamers, tugs, steam and sailing yachts followed as closely as possible. Bedouin lay along the Long Island shore, Mischief was to windward of Gracie, but hardly footing with her for the time, both to the eastward, while on the other hand to leeward were Maggie and Isis. Montauk was ahead of the schooners over to the eastward. At 11:40 Mischief was below Dix Island, Gracie was a little to leeward on her starboard quarter, Bedouin astern of Gracie, while Thetis, to windward of Bedouin, was still some distance astern. At the same time Montauk was over near Coney Island Point, Gitana appeared to pass her to leeward, while Grayling was still astern of both, and Isis was not far from Montauk. Mischief soon dropped Gracie appreciably, and Thetis found her big topsail a little too much for her.

Above Buoy 10 Stiletto was going quetly about her business in company with the others, when the big Stranger began to turn up faster and show a bigger wave about her bows. The challenge was instantly noticed and accepted by the little boat, and she moved faster with the same small wave along her waterline, while the smoke and spray flew on the Stranger. A big wave rolled off her bow and another off her quarter, but all in vain. Soon the Stiletto was a black and white dot in silhouette against the sky, and Stranger dropped to her regular gait.

At noon Montauk was leading Gitana, and at 12:07 Mischief went on starboard tack, only holding it for two minutes. Gracie, who had lowered her clubtopsail, went on starboard tack as Michief, well ahead, went on port. Near Buoy 8 Thetis passed across Gracie's bows, and at 12:15 the order was Mischief, Thetis, Gracie, Bedouin. At 12:19 Mischief was about again on starboard tack for Buoy 10, where a large number of vessels were waiting to salute her. At 12:24:30 she rounded in fine style and stood on out. The others came up on port tack, turning as follows: Mischief, 12:24:20; Thetis, 12:28:11; Bedouin, 12:28:41; Gracie, 12:31:07; Montauk, 12:33:09; Grayling, 12:36:20; Athlon, 12:37:24; Isis, 12:38:32; Gitana, 12:40:47; Whileaway, 12:40:53; Daphne, 12:43:15; Clytie, 12:43:20; Fanita, 12:43:38; Espirito, 12:44:14; Gaviota, 12:49:45. Thetis tacked at 12:23; Bedouin, 12:28:45, and Gracie, 12:25, the latter losing ground. Here was Bedouin's opportunity and well she used it, walking out to windward and away from the other two, and taking a position where she pushed Mischief hard all day. Rambler was sailing about near the buoy when the yachts turned, but did not go out with them. Montauk went about at 12:28 and Grayling at 12:31, while Athlon and Isis came close together, Athlon going through Isis's lee at the buoy.

It was some little time before the rear guard came up, Daphne leading, Fanita on her weather quarter driving along with nose down, Espirito to leeward of both, and Gaviota still further under her lee astern. Daphne was laying well down under small topsail and jibtopsail, Fanita carrying the same canvas. Near the buoy Daphne luffed up, but paid off again, and Fanita followed the same maneuver. Astern were still Whileaway and Maggie, the latter pegging along bravely.

Once outside, the order was Mischief, Bedouin, Thetis and Gracie, the latter well astern, then Montauk close to Gracie, Grayling astern to leeward, Athlon, Isis and Gitana. At 1 P. M., Gracie sent up her jibtopsail again, and at 1:08 Thetis made a short tack into the beach and immediately after Gracie passed her.

The order out to the sloop was Mischief ahead and Bedouin close aboard, Gracie a good distance astern, and Thetis still in her wake. Stiletto was in and out between them all the time and was first at the Lightship. Bedouin steered a good course and gained on Mischief, and at one time it seemed as though she would round first. At 1:29 Mischief tacked, and at 1:33 she was again about, while Bedouin still stood on. The sloop sent up a big balloon jibtopsail in stops, and at 1:38:30 tacked for the mark just as the cutter made her first tack. Mischief made a fine turn, her balloon topsail breaking out all at once. As Bedouin turned, her spinnaker boom dropped to port, and the spinnaker went up handsomely. Gracie came up with her crew on the bowsprit, and as she turned up went the balloon jibtopsail. Thetis luffed round, coming up on starboard tack, and Montauk followed with a wide turn, losing some distance. Grayling was better handled and made a very neat turn close to the ship. Isis came down in good shape, but overran the mark badly and stood too far on, while Athlon, with jibtopsail set, turned ahead of her, followed by Gitana. Isis finally came down, breaking out jibtopsail below the mark, and was off after them. Whileaway came next, then Fanita, standing well over before tacking, but leading Daphne around. The latter made a neater turn, luffing close and breaking out jibtopsail. The times were:

Mischief	1 41 42	Gitana	2 04 20
Bedouin	1 44 02	Isis	2 06 03
Gracie	1 49 25	Whileaway	2 07 54
Montauk	1 52 59	Fanita	2 10 04
Grayling	1 54 10	Daphne	2 10 59
Thetis	1 54 41	Clytie	2 12 49
Athlon	2 02 12		

The wind was light from south, and all kites were set as the fleet ran for the Hook. Stiletto was soon a black and white streak in the distance, though the Luckenbach was turning her fastest through the Swash in pursuit of the racers. Off the Hook Mischief was still leader, with Bedouin hunting her hard, but gaining nothing. Breeze and water were both aiding the "iron pot" to do her prettiest, while the larger boat was just a size too large for the moderate wind. Bedouin sailed very fast all the way home, but Mischief sailed still faster, and the chase was a hopeless one. Montauk had third place, Gracie fourth, with Grayling fifth, and Thetis far astern. Spinnakers went up to starboard at buoy 10 and home they came flying, though the breeze was still light. At the line a stakeboat was waiting, with timers ready in case the tug was delayed, but the Luckenbach was there in good time to meet Mischief as she came down, a cloud of white, balloon jib and club topsails. Astern of her was Bedouin with a big spinnaker in the water and balloon jibtopsail. Montauk followed with kites set, and then Grayling showing a balloon staysail. The others came straggling in one by one, until all had passed. At the finish was a strange schooner, a large yacht, and yet not one of the fleet. She was recognized as the old Mohawk, now the Eagre, belonging to the Government.

The full times of the race were as follows:

	Start.	Finish.	Actual.	Corrected
SCHOONERS—KEEL CLASS.				
Gitana	11 01 49	3 37 52	4 36 03	4 24 44
Varuna	11 05 04	3 51 51	4 49 47	4 35 16
Speranza	11 02 32	4 13 54	5 11 22	4 53 19

Daphne	11 04 37	3 54 02	4 49 29	4 41 27
THIRD CLASS.				
Espirito	11 02 49	4 06 05	5 03 16	5 03 16
Maggie	11 03 33	4 18 00	5 14 22	5 13 53

The corrected times for the Bennett Challenge Cup are:

	Actual.	Corrected.		Actual.	Corrected.
Gitana	4 36 03	4 36 03	Grayling	4 15 57	4 10 39
Varuna	4 49 47	4 46 35	Clytie	4 45 36	4 38 34
Sperana	5 11 12	5 04 48	Nervana	5 10 58	4 57 24
Montauk	4 14 40	4 15 12			

Gitana wins the keel class prize, Grayling the class prize on allowance, and Nirvana, Mischief, Athlon and Espirito the other class prizes. Clytie was ruled out for fouling the mark at the start. Montauk takes the Russell prize for first schooner and Mischief for first sloop, and Grayling wins the Bennett Challenge Cup. The races were managed by Messrs. A. F. Tams and C. H. Stebbins of the regatta committee, Mr. Montant having charge of the club steamer, and the arrangements were perfect, the start was made on time to a second, all the boats were accurately timed at the start, and timekeepers were stationed at the finish, so that the judges' boat was able to follow the yachts very closely and to watch the progress of the race as well as the scattered condition of the fleet permitted, while the Columbia kept close enough to the yachts to afford a good view of the race to the ladies. Gitana did fairly well considering the light weather, her size, and the known ability of Montauk and Grayling, but she has no place with them over this course in summer, whatever she might do in an ocean race. The chances at the start were with Grayling rather than her larger sister, but the latter led over the course, though losing on allowance.

Clytie is not to be forgotten easily as far as time is concerned, but her unfortunate mishap at the start lost her the prize. Mischief sailed a good race all day and earned her victory without fluke or favor, pushing Bedouin closer than she has done for some time past. It is no discredit to her, however, to say that she had just her weather. Bedouin's sailing is a good earnest of her success this season, and a little bit of work at Buoy 10 going out and again nearing the weather mark showed that she knew the way to windward and ahead at the same time. Measured by these two Gracie can claim no better than third place, and she has much yet to do this season to put herself ahead of Mischief as the first sloop. Thetis showed on Tuesday what she could do in a blow, and on Thursday tried over again in lighter airs, but at her best showing thus far she has no place with Bedouin, Mischief or Gracie. No doubt she would have done better on Tuesday with double head rig, or at least a loose foot to her jib, but in such a breeze even she could not follow Bedouin in smooth water.

Thoroughly overhauled and altered this season, Isis promises to give trouble to Athlon before fall. Both boats are handled by ardent Corinthians and both have been put in better shape after a first season's trial. The owner of the Athlon well deserves the mug he has won, as his boat is always ready for a race and no trouble is spared to do justice to her. The same may be said of Isis, and her owner who designed and sails his own boat, and though her chances were spoiled on Thursday by the error at the outer mark, the American cutter shows such marked improvement over last season that her owner may well expect better things of her. Although entirely a home product, she has come out in a new suit of Lapthorne's best. Fanita has at last found a mate of about her own size that promises to hurry her over any course, as Daphne lowered her colors on Tuesday and hunted her close on Thursday, though a new and untried ship.

It may be a loss to the schooner class, but it is a decided gain to the small sloop class to have the old owner of Crusader at the helm of Daphne; and we believe it will be a net gain to the sport to have a new racer in the latter class. Good boats of Fanita's size have been none too numerous of late years, and the addition of Daphne and her owner will add greatly to the interest of future races, while the latter will no doubt find more sport in hunting or leading Fanita than in half a dozen of the staid and respectable contests open to his former boat. Espirito is remembered as the yacht that last year stole a march on the fleet at Buoy 10 in her first and only race. In her second race on Thursday she won first prize in her class by beating the little cutter Maggie in her first race in New York waters. A comparison of dimensions shows for Espirito 40ft. 6in. waterline, 16ft. beam and 5ft. draft, 44ft. 7in. waterline, 8ft. 3in. beam and 8ft. 6in. draft, the former being a centerboard and the latter a keel boat. Maggie is as yet in new hands unused to cutter sailing, and from appearances is handicapped with too large a rig, while her laced mainsail is a good deal of an innovation for so thorough a cutter. She certainly has a good record to fall back on, and we look to see her sustain it here when her new owner knows her better.

GALATEA'S FIRST RACES.

THE reports of Galatea's performances in the last *Field* hardly confirm the accounts received by cable, and nothing is said of the serious faults ascribed to her.

On May 30, in the New Thames match to Harwich, she met Wendur, Lorna, Anemone, Irex, Marjorie, Marguerite and Tara, coming in first, but taking second place to Irex on time. The course was forty-seven miles, and the times were:

	Tons.	Elapsed.		Tons.	Elapsed.
Irex	85	5 31 46	Marjorie	68	5 51 49
Galatea	80	5 31 25	Lorna	85	5 49 59
Clara	20	6 10 47	Tara	40	5 54 38
Wendur	125	5 34 21	Anemone	68	6 24 30
Marguerite	60	5 51 25	Ulerin	10	6 34 40

The race was sailed in a fresh breeze. The *Field* says: "The new Galatea hardly showed the speed reaching and running that was expected of her, and in the short burst by the wind she seemed crippled by the weight of her spars. The spurt, however, was not long enough to judge of her capabilities to windward, and all overdone with topsails and jibs for the amount of wind there was at the finish." On June 1 in the Royal Harwich race she met the same lot on the sail home down wind, leading for a part of the way, but being beaten by Wendur and Irex on even time, while Tara and Marguerite take first and second on allowance.

Next day over a fifty-mile course she sailed with all of them but Lorna, doing well in a light wind and leading over part of the course. Near the end she fluked into a calm spot and lost her place, the order at the line being Marjorie, Irex, Galatea, Wendur, Marguerite, Tara.

SEAWANHAKA CORINTHIAN Y. C., JUNE 8.

THE ill luck that attended the S. C. Y. C. last year at their annual regatta, when a postponed race of the New York Y. C. on the previous day disabled boats and tired out the crews, thus cutting down the entries, seems to have followed them this year also. Every care had been taken to secure full entries and a good race, and up to the time of starting all went well, but at the last moment a dense fog scattered the fleet and turned an exciting race into a walkover. While those who turned back are not to be blamed, an extra share of praise is due to the skillful and persevering Corinthians who found their way out and back in a fog that puzzled at least two professionals. As in the N. Y. Y. C., the classification this year is by waterline length, while time is given by the length and sail area rule. The classes and prizes were, schooners, second class, 85ft. loadline and under, $150; cabin sloops and cutters, first class, 55ft. and over, $150; second class, 45ft. and under 55ft., $125; third class, 35ft. and under 45ft., $100; fourth class, under 35ft., $100. Each yacht was to be steered by an amateur, and one man for each five feet of length on deck was allowed in addition to the helmsman, no professionals being allowed on deck except in the large sloops and schooners, where four were allowed for the former and five for the latter.

The courses were: For schooners and first and second class sloops and cutters, from an imaginary line between the committee steamer and Fort Wadsworth to Buoy 10, on the S. W. Spit, keeping it on the port hand, thence to and around Buoy 8½, keeping it on the port hand, thence to and around Sandy Hook Lightship, keeping it on the starboard hand, and return over the same course to Buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15, on the West Bank, and outside of Buoy 5 on the point of Sandy Hook, going and returning.

For third class sloops and cutters, from the same starting line to Buoy 10, on the S. W. Spit, keeping it on the port hand, thence to and around Buoy 8½, keeping it on the port hand, thence to and around Buoy 5 on the point of Sandy Hook, keeping it on the starboard hand, and return again over the same course to Buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15 on the West Bank, going and returning.

For fourth class sloops and cutters, from the same starting line to Buoy 10, on S. W. Spit, keeping it on the port hand, thence to and around Buoy 8½, keeping it on the port hand, thence to and around Buoy 5 on the point of Sandy Hook, keeping it on the starboard hand, and return again over the same course to Buoy 15, keeping to the eastward of buoys 9, 11, 13 and 15 on the West Bank, going and returning.

The finish was off Buoy 15 on the West Bank. The following yachts entered:

	Waterline.	
SCHOONERS.		
Clytie	78ft. 3in.	A. P. Stokes.
Albatross	72ft. 7in	S. B. Pomeroy.
SLOOPS AND CUTTERS—FIRST CLASS.		
Gracie	69ft. 9in.	J. P. Earle.
Bedouin	70ft.	A. Rogers.
SECOND CLASS.		
Athlon	51ft. 2in.	J. C. Barron.
Isis	51ft. 5in	A. C. Canfield.
Daphne	— —	J. R. Maxwell.
THIRD CLASS.		
Maggie	44ft. 7in.	W. A. W. Stewart.
Schemer	36ft. 4in.	Augustin Monroe.
Surf	35ft.	Rathbone & Zerega
Hope	38ft.	J. K. Benedict.
FOURTH CLASS.		
Petrel	28ft. 1½in.	E. A. Stevens.
Wacondah	33ft.	Meyer & Doscher.
Vixen	26ft.	Allan Seaman.
Aria	28ft.	William Quinn.

At 5 in the morning a fog lay over the Bay, but it cleared away early, and by 10 oclock all was bright over head with blue sky and warm sun, while a fresh breeze blew up the Narrows from southwest, the tide running a strong ebb. The Luckenbach with Messrs. Bayard, Beekman, DeLuze and Center on board, steamed to the line off Fort Wadsworth, and those on board noticed a dense bank of fog rolling up the Bay. All was clear near at hand. At 10:05 A. M. the first whistle blew, the second one following at 11:10. Hardly had it sounded before Isis rounded neatly under the tug's stern and stood over on port tack, and following came the whole fleet together, working across promptly without interfering with each other, in a way that spoke well for the skill of the amateurs in charge. None were handicapped as shown by the following times: Isis, 11:10:36; Daphne 11:10:56; Gracie, 11:11:34; Maggie, 11:12:08; Surf, 11:12:16; Hope, 11:12:28; Albatross, 11:13:09; Bedouin, 11:13:24; Athlon, 11:13:21; Clytie, 11:13:41; Waconhah, 11:13:41; Schemer, 11:13:48; Oriva, 11:14:35; Vixen, 11:15:00.

The race was open to the yachts of the New York, Atlantic, Larchmont, Eastern, New Bedford, Knickerbocker and New Haven yacht clubs. The Daphne hails from the Atlantic, the Vixen from the New Haven, and the Aria and Wacondah from the Knickerbocker yacht clubs. Hardly had the yachts passed the line before they were all swallowed up in a dense bank of fog, thick and white, that shut in everything. The tug ran on, and at 11:30 passed near Gracie. Soon she dropped back and disappeared, and the tug ran on alone until a clear space was reached, where she halted and blew to guide the yachts. At 11:40 a break in the fog disclosed Gracie, and near her apparently Bedouin, but in a moment both were lost. At buoy 10 the tug stopped, and all watched eagerly for some signs of the racers. At 12:05 a solitary topmast appeared at no great distance off, all below being hidden. It approached very fast and soon disclosed Gracie, coming rapidly down for the mark. She rounded the mark at 12:11:18 and started out, clewing up topsail at 12:17. Next Clytie broke out, at 12:10, turning at 12:18:24, and several others appeared, but no Bedouin. Isis came by with a very pretty turn at 12:21:54. Schemer followed at 12:22:47, Hope at 12:25:20, Wacondah 12:29:38, and Surf at 12:30:34. The little white cutter was pegging along finely under lower sails and topsail, heeling well down, but going through the water in the wake of Wacondah. Soon she overhauled the sloop and passed her before the fog shut them in.

At 12:45 the beautiful view of the Hook, the Jersey Highlands and Staten Island was completely swallowed up again in the fog. At 12:50 Hope was passed by the tug under lower canvas, and four minutes later Schemer was overtaken. The captain of the Luckenbach stated that 40 minutes from the Hook would bring him to Sandy Hook Lightship, and all on board believed him. At 1:10 the steamer Donau was passed at anchor waiting for the fog to lift. At 1:30 the fog was very thick, but Gracie was made out on the starboard bow, and the Luckenbach hurried on to find the Lightship and guide her to it. The 40 minutes ran into 50 and finally an hour, and no Lightship was in sight. Every pair of eyes and ears on board were on the alert to make out the mark or the yachts, or to hear the ship's bell, but all in vain. After gazing intently at the fog for a few minutes, a man could imagine he saw almost any kind of a vessel there, but they ale failed to materialize. Finally the lead was cast and showed 11 fathoms, the depth in which the Lightship is moored. The tug started off again as no ship was in sight, and steamed for some time

with no better results. Again she stopped, the first mate went to the rail and made a cast while all waited anxiously.

"There aint no bottom," he called out to the captain, and hauled in his line to try again. This time the result was, "There aint no knot here in the line." Again the lead was cast and bottom found at 17 fathoms, which was definite but hardly satisfactory. Steaming on again for a few minutes in the same thick fog the lead was again cast and showed as before, 17 fathoms. Matters began to look serious. Several expressed a desire to be taken home, and symptoms of a mutiny were evident, but they were quickly quelled by the determined announcement of Mr. Bayard, that he would find the Lightship if he had to chum for it all night, and again the lead went overboard in 17 fathoms. The tug was headed to the westward and started on, and in a few minutes the fog lifted a little, and later on the bright red hull of the Lightship was seen. At 2:30 the tug was alongside and learned that a sloop (Gracie), a cutter (Isis) and two schooners (Clytie and Clio) had turned. Soon all was bright and clear, and Gracie was seen far up and going home like a steamboat.

Up the east channel went the tug in pursuit, past the big Servia aground near Gedney's Channel, and on up to Buoy 15, but too late to catch Gracie or Isis, who were timed by the stakeboat. On the West Bank was Maggie, hung up and waiting for the flood tide, which soon lifted her off unharmed. She had stood in with a big three-masted schooner to the west of her, supposing the latter was in deep water. When the latter tacked out she did the same, only to find her heel in the West Bank near Dix Island. Albatross, Bedouin, Athlon and Daphne had given up and gone home, after groping around in the fog. Hope and Surf went outside but failed to find Scotland, and Wacondah and Aria went around Buoy 5. The times are:

	Start.	Finish.	Actual.	Corrected.
Clytie	11 31 41	3 41 20	4 27 39	4 27 39
Gracie	11 11 34	3 59 54	4 28 20	4 27 45
Isis	11 10 36	3 59 40	4 49 04	4 45 58
Schemer	11 13 48	3 43 00	4 29 12	4 22 36
Wacondah	11 13 41	2 24 30	3 10 49	3 10 49
Aria	11 14 35	2 41 55	3 27 20	3 22 00

The winners had a sail over except in the fourth class, but much credit is due the Columbians who took their boats over the course in fairly good time in a fog that was too much for the professionals. Mr. J. F. Tams piloted Gracie, while her owner and Mr. Lovejoy looked after Isis. The latter parted her jib and haul chain outside the Hook, but repaired damages and kept on. Mr. A. P. Stokes and Mr. Chas. H. Stebbins were on Clytie, and Messrs. Monroe and Alley, with the old Oriva's crew, handled Schemer. Although like last year's race, that of Saturday was by no means a brilliant success, it was like that race, a trial of the skill and pluck of the amateur sailors of the club, from which they have again come out successful.

WINTHROP OPEN RACES, JUNE 13.

THE races at Winthrop on Saturday last were quite successful, a number of good boats being entered. The entries were divided into two classes, 18ft. and over, and under 18ft., with four prizes in each class. The course for the larger class was from judges' boat to Sculpin Ledge buoy No. 2, leaving it on starboard, to Old Harbor buoy No. 4 west of Thompson's Island, leaving it on starboard, passing between judges' boat and flagboat; distance 6 miles.

For the smaller classes it was from judges' boat to buoy No. 6, lower middle, leaving it on starboard, to black buoy No. 5 off Jeffries Point, East Boston, leaving it on starboard, to judges' boat; distance 7 miles.

The first gun was fired at 10:45 and at 11:00 the start was made in a southwest wind, all going off on port tack. The times were as follows:

FIRST CLASS.

	Sailing Length.	Actual.	Corrected.
Black Cloud, C. Brown	22.00	1 48 32	1 45 24
Queen Mab, Burwell & Litchfield	22 06	1 50 26	1 48 02
Good Luck, A. M. Phillips	22.00	1 53 48	1 50 50
Sea Bird, C. L. Joy	28.01	1 52 40	1 50 53
Awilda, Farrell & Rich	24.09	1 55 31	1 54 54
Muriel, E. C. Neal	22.00	1 57 58	1 55 00
Crusader, A. Wilson	19.02	2 05 16	1 58 41
Majel, J. P. & C. Loud	21.00	2 02 52	1 58 42
Tartar, Brown & Dunne	19 11	2 04 32	1 58 58
Thrasher, G. G. Garraway	20.03	2 02 48	1 59 10
Thisbe, S. A. Freeman	21.05	2 04 20	2 00 49
Herald, S. S. Smith	20 09	2 06 18	2 01 44
David Crockett, H. Putnam	21.06	2 08 09	2 05 25
Expert, L. Whitcomb	23.08	2 07 18	2 06 11
Allie, A. S. Wattles	22 05	2 09 19	2 06 50
Hebe, F. N. Lambert	18.02	2 20 30	2 12 27
Imogen, B. Wendell	18.10	2 22 38	2 15 34

SECOND CLASS.

Flora Lee, D. Lincoln	17.02	1 25 50	1 25 27
Mirage, A. J. & L. M. Clark	17.09	1 27 40	1 27 40
Mischief, D. Belcher	17.05	1 29 33	1 29 08
Flirt, J. Hildreth	16.06	1 31 00	1 29 25
Cadet, H. N. Belcher	17.02	1 33 46	1 33 08
Phera, H. Hutchinson	15.11	1 40 40	1 38 17
Mascot, H. S. Vinal	15.06	1 41 24	1 38 25
Dot, S. A. Freeman	15.09	1 47 32	1 44 55
Valeria, ——	16.06	1 47 19	1 45 34
Racket, Hallett	15.00	1 53 41	1 49 58

Thrasher protests against Seabird for not giving way when on port tack, but the protest has not been decided. Black Cloud wins $36, Queen Mab $26.80, Good Luck $20.20, Sea Bird $8.50 under protest. In the small class Flora Lee wins $21, Mirage $15.40, Mischief $12.60, Flirt $5.00. The judges were Messrs. Peleg Aborn, G. L. Turnbull and Edwin Belcher.

BOSTON Y. C., JUNE 13.

THE two cups presented by Mr. W. E. Connor and Com. Jacob Pfaff have kept up a spirited rivalry for some time in the Boston Y. C., both in the large and small classes. The conditions were that each cup must be won three times to become the property of the winner. In 1883 Shadow won a leg in the first race, with Frolic in the small class. In 1884 two races were sailed, Adrienne winning each time, with Seabird in the second race and Edna in the third, each winning a leg of the Pfaff Cup. Thus Adrienne had but one more leg to win, while Shadow had two. Frolic and Seabird having left the club, had forfeited their chances, leaving Edna with one leg to her credit. In addition to the cups, second and third prizes were offered on June 13, $25 and a fine cabin lamp in the larger classes, and twenty-five dollars and a patent log in the smaller. The courses were as follows: First class off the club-house through the Narrows, leaving Spectacle Island, Nix's Mate Bell Buoy, Gallop's Island, George's Island, on starboard; Sound Point Beacon on port; Toddy Rocks and Point Allerton Buoy on starboard; Harding's Bell-boat, Whistling Buoy off the Graves, Egg Rock and Ram Head Buoy on the port; Fawn Bar Buoys on the starboard; Sound Point Beacon on starboard, to the judges' boat, passing between it and the flagboat, twenty-five miles.

Second Class—From off the club house, out Broad Sound, leaving Spectacle Island, Nix's Mate Bell buoy, Ram Head buoy, on the starboard; Sound Point Beacon, Fawn Bar buoys on the port, Whistling buoy off the Graves on starboard, Fawn Bar buoys on starboard, Ram Head buoy and Nix's Mate Bell buoy on port, Sound Point Beacon on starboard, to the judges' boat, passing between it and the flagboat, 15 miles.

The following regulations also governed the race: Thirty minutes before the signal to come into line, flags bearing the number of the courses to be sailed will be hoisted on the judges' boat. The yachts in each race will come into line without regard to size. A steam whistle on the judges' boat will be sounded at 10 o'clock, which will be the signal for all classes to form in line. At 10:30 it will be sounded again and a flag lowered, which will be the signal for both classes to start. The decision of the judges is to be final, and the races must be sailed within eight hours from the time of starting. The yachts were to start from an anchor with headsails down. The wind blew from southwest, a good sailing breeze, and the day was clear and warm. The list of entries was as follows:

FIRST CLASS.

Adrienne (schr.), Jacob Pfaff.....64ft. 02in.
Tempest (schr.), H. F. Whittier.....56ft. 09in.
Undine (sloop), Benjamin Dean.....50ft. 09in.
Shadow (sloop), John Bryant.....34ft. 06in.

SECOND CLASS.

Edna, Alma F. Smith et al.....28ft. 06in.
Kitty, E. H. Tarbell.....23ft. 08½in.
Eva, D. Sargent.....20ft. 00in.
Saracen, W. P. Fowle.....24ft. 01in.
Alda, W. H. Wilkinson.....24ft. 01in.
Straurare, George C. Brown.....22ft. 02in.
Mabel, G. R. Howe.....20ft. 01in.

At 10 A. M. the first whistle blew, and at 10:30 the start was signaled from the tug W. H. Clark, on which were the regatta committee, Messrs. J. P. Phinney (chairman), John A. Stetson, L. S. Jordan, George R. Howe and W. L. Wellman (secretary), and the judges, Messrs. Thomas Dean, Even Denton and Coolidge Barnard.

The Tempest was first over, with Undine next, then Shadow and Adrienne last. The latter boat has had an extra weight of lead added outside in place of her old iron keel, while Tempest comes out with an iron keel in place of all inside weight as before. Tempest soon tried her spinnaker, all having club topsails set. Adrienne soon passed Shadow and Undine, and laid alongside of Tempest for a short time before passing her also, leaving her to battle with Undine for second place, while Shadow was last. Undine and Tempest sailed pretty evenly up to Nix's Mate, but here the sloop dodged her rival, going between buoy 9 and the bell buoy, and gaining a good deal. The times at Nix's Mate were:

Adrienne	10 52 00	Tempest	10 55 20
Undine	10 55 00	Shadow	10 56 30

To the next mark was a reach with plankshear under, and Adrienne still led. Undine held her own until her topmast was carried away, when Tempest passed her again. The wreck was quickly cleared, but she was far astern, with only Shadow behind her. At Harding's Bell Buoy the times were:

Adrienne	11 21 17	Undine	11 30 17
Tempest	11 26 05	Shadow	11 33 26

On the next leg the wind was still on the beam and blowing fresher. The time at the Graves was:

Adrienne	11 47 20	Undine	12 00 15
Tempest	11 54 30	Shadow	12 06 15

On the last leg after passing Egg Rock, Undine overhauled and passed Tempest. Her crew had lashed a topsail yard on the bowsprit as a jibboom, and on it and the stump of her topmast she carried a balloon jib. The times of finish were:

Adrienne	2 25 08	Tempest	2 43 31
Undine	2 33 32	Shadow	3 00 44

The times were:

	Actual.	Corrected.
Adrienne, J. Pfaff, schooner	3 55 03	3 25 48
Undine, Benj. Dean, sloop	4 03 32	3 26 27
Tempest, H. F. Whittier, schooner	4 13 31	3 37 47
Shadow, J. Bryant, sloop	4 30 44	3 31 26

In the second class Kitty was first over, then Edna, Alda, Eva, Saracen, Mabel and Straurare, and at Spectacle Island Edna was ahead. At the Graves Buoy the times were:

Edna	11 48 06	Saracen	11 54 50
Alda	11 51 30	Mabel	11 55 57
Kitty	11 52 30	Straurare	12 09 00
Eva	11 53 04		

The wind blew heavily as the little fellows came home closehauled, Edna eating well up to windward and coming in without tacking. The times were:

	Finish.	Actual.	Corrected.
Edna	1 55 00	3 25 00	2 42 09
Eva	2 00 10	3 30 10	3 43 40
Kitty	2 07 28	3 37 28	2 47 10
Saracen	2 16 51	3 46 51	2 57 12
Mable	2 25 15	3 55 15	2 57 49
Alda	2 25 20	3 55 20	3 05 41
Straurare	Withdrew.		

The owner of Shadow requested that Adrienne be remeasured before the prize was awarded.

Undine takes second prize, $25, and Shadow third, a cabin lamp. Edna wins a second leg in second class, Eva takes $25 and Kitty a patent log.

HARLEM Y. C. REGATTA, JUNE 16.

THE Harlem Y. C. sailed their spring regatta on Tuesday over a course from Oak Point around Sand's Point Buoy for Classes A, B, C, D and E, and around the Stepping Stones for Classes F and G. Twenty-three boats started in a light southwest wind and ebb tide, the gun for first class beeing fired at 11:40 A. M. The steamer Crystal Stream carried the regatta committee and the judges, Messrs. Hyslop, Brown and Varian, besides the members and guests. At the start there was little wind, and kites were set on the larger boats with small effect, but the tide helped them all.

By 1 P. M. the yachts were along the Westchester shore, with Gussie ahead, then Little Dean, Truant, and J. W. W. Gee. The smaller boats reached their turn half an hour later, thanks to a light wind, in which they gibed around the Stepping Stones Light as follows: Little Dean 1:31:40, Jay W. W. Gee 1:41:35, Harry C. 1:41:40, Irene 1:47:49, Comet 1:47:53.

After Comet rounded the steamer hurried on to time the big ones at Sands Point. At Hart's Island Sasqua was leading with Carrie Van Voorhis second and Peerless third. The times were taken as follows: Sasqua 2:16.30, C. Van Voorhis 2:17:21, Peerless 2:25:26, Gussie 2:26:00, Nettie Thorp 2:28:59, Truant 2:29:10, Dandy 2:30:30, Crescent 2:42:38, Minnie 2:49:08, Sea Bird not timed.

Coming home the wind rose a little, and Sasqua increased her lead. The full times were:

CLASS A—CABIN SLOOPS, 32FT. AND OVER.

	Start.	Finish.	Actual.	Corrected.
Sasqua	11 58 56	4 01 58	4 03 02	4 03 02
C. Van Voorhis	11 56 56	4 11 28	4 14 32	4 13 32

CLASS B—CABIN SLOOPS, UNDER 32FT.

Peerless	12 00 10	4 22 41	4 22 31	4 22 31
Spray	11 58 24	...	...	...
Crescent	11 58 00	...	...	...
Vision	12 01 40	...	...	...
Sea Bird	12 00 33	...	...	...

CLASS C—OPEN YACHT, OVER 22FT.

Nettie Thorpe	11 53 21	4 16 29	4 23 08	4 23 03

CLASS D—OPEN JIB, UNDER 22FT.

Minnie	11 52 45	...	...	...
Dandy	11 52 25	4 37 41	...	...
Wave	11 50 40	...	...	...

CLASS E—CATBOATS, 20FT. AND OVER.

Gussie	11 47 30	4 28 17	4 40 47	4 40 47
Truant	11 49 50	4 39 24	4 59 25	4 58 40
Dora K	11 47 30	...	...	...

CLASS F—CATBOATS, 16 FT. AND OVER.

Comet	11 43 52	3 24 00	3 40 08	3 40 08
Lila	11 42 10	...	...	...
J. W. W. Gee	11 43 00	3 25 30	3 42 30	3 40 30
Little Dean	11 43 55	3 15 00	3 31 05	3 28 35
Goodenough	11 44 05	...	...	...

CLASS G, UNDER 16 FT.

Jean	11 43 10	...	...	...
Irene	11 42 20	3 24 02	3 41 42	3 41 42
Rambler	11 43 08	...	...	...
Harry C.	11 42 20	3 17 30	3 35 10	3 34 50

Sasqua wins in Class A, Peeress in Class B, Nettie Thorpe in Class C, Dandy in Class D, Gussie in Class E, Little Dean in Class F, and Harry C. in Class G.

GENESTA AND GALATEA.

THE following account of Saturday's race, Galatea's third trial, was telegraphed to the New York *Herald* by its London correspondent. While the reports thus far are unfavorable to the new cutter, they cannot be taken as conclusive:

The Royal Cinqueport Y. C. had its annual regatta to-day at Dover while "channel breezes briskly blew." The day has been a perfect one. Galatea sailed in company with several of her prior competitors, yawls and cutters, but was again beaten by the Irex. Galatea taking the second prize of £30. Yesterday also, notwithstanding sailors' superstition regarding Friday, she attempted to retrieve her reputation in still another Channel match—the Royal Thames Y. C.—from the Nore to Dover, the prize being Her Majesty's Cup, much coveted among yachtsmen. Irex, who led all day, came in first, beating Galatea by 3m. 58s. Vendur came in second, Marguerite third, and Galatea had to be content with the fourth position. Before, in the previous Royal Thames yacht race last Monday, Galatea was lightened to the extent of two tons of lead and her mast was shifted. Her previous performances were certainly most disappointing, and the alterations can scarcely be said to have made any perceptible difference.

A practical seaman, speaking to the *Herald* correspondent yesterday, said: "There is no doubt that the Galatea's fault is that she is too big over all. She carries a crew of twenty hands, but what with her 74ft. boom and enormous canvas she requires twenty idlers besides to do the rough work. Another fault she has is that her crew don't work together. Captain Cranfield had a good lot when he started. They were his old crew from the Miranda, but these have almost all left, and he has got nothing but new hands. Another fault she has is that that great boom of hers is too low. It scarcely clears the bulwarks, and if she gets heavy weather they won't be able to keep it out of the water. We could see it splashing in the Southend—Harwich match. She is sluggish still, although they have removed so much lead off her.

"Mr. Beavor Webb told me that he would pull the whole thing to pieces to find out what was wrong. There is no doubt about it that the Galatea has very radical faults, the principal of which is unmanageableness. This was very conspicuous in the Royal Thames yacht race rounding the Mouse buoy. At that critical moment the Galatea seemed quite unable to get out her spinnaker with any rapidity, and thereby lost time which in a close race would have been fatal. At present the Galatea has been found good only to windward, and, indeed, in the race mentioned she made the most brilliant tack of the day in that position, but the Marjorie can walk away from her before the wind and Irex can reach her. Galatea still remains sluggish, and doubtless considerable alterations in her will be made."

We are indebted to an English correspondent for the following clipping from the Glasgow *Herald* of May 25, describing Galatea's first appearance:

The Royal Northern Squadron opened the Clyde season on Thursday last by a start from Rothesay Bay on its spring cruise. Among the cruisers getting under big topsails lay the two splendid cutters Genesta and Galatea, and upon them all eyes were turned. The Genesta, Sir Richard Sutton, has been stretching her new canvas on larger spars previous to taking her flight across the Atalantic, and, lying at her chain, she looked all over fit to snatch back the Queen's Cup, if that coveted trophy is ever to be snatched back from its American owners. The Galatea, just built at Port Glasgow by Messrs. John Reid, for Lieut. Henn, of Ascog, was also lying at her chain, and the handsome look of this new cutter especially excited comment. The Galatea differs considerably in sheer and form from Genesta, and shows a somewhat novel and particularly graceful form of counter. Her taunt spars and great spread of canvas gave her a preference over Genesta for speed, and the hope was that a good breeze and a day's sailing would fix which was the champion. But Galatea's mainsail had just been bent, and she had no chance of sailing in anything like form. Besides, the wind was quite paltry, and with a murky sky there was no hope of a fine day. Mr. David Tod, rear-commodore of the Royal Northern, was present in his schooner Melita, and took command in the absence of Lord Glasgow. The Iona brought down a few yachting men, and sometime after her arrival owners were signalled on board Melita. The usual course to Arran was given, and Melita, firing the starting gun, led the squadron round Boguay. The cutters Galatea and Genesta slipped through the crowd, and under first topsails reached down the Ascog shore. From southeast to southwest the wind hauled up to west, getting Genesta, Galatea and Vanduara on the starboard tack for a stretch across Kilchattan Bay, out through the Heads. The Genesta was leading, but was not making much of Galatea. After a stand outside the Meads, both ran back to the anchorage at Rothesay.

STILETTO.

THE latest and fastest of the many fast boats launched by the Herreshoff Manufacturing Company made her entry in New York waters on Wednesday last, and signalized it by a race on the Hudson that afternoon with the Mary Powell, so long acknowledged the fastest of her class in the world, in which the newcomer defeated the old champion. Fast as many of the Herreshoff boats have been, the Stiletto is still faster, and the limit of her speed has not yet been reached. In design she is different from the ordinary run of steam yachts, a marked departure being made from the usual methods of construction, in order to gain increased strength with a very light hull. The hull proper is 94ft. over all, 90ft. waterline, 11ft. 6in. beam, 8ft. depth of hold, and 4ft. 6in. draft. The stem is plumb, and the stern resembles the other Herreshoff boats in its peculiar contour, while the ends under water are similar. Above the gunwale the sides of the yacht are carried up, sloping in a little, rising about 4ft. above the gunwale at midships, and but a foot at each end, the upper line of sides making an arch nearly the reverse of the sheer. Over the two sides an upper deck is laid, highest of course amidships, and curving down until it meets the plankshear at stem and stern. The two sides with arched top and bottom form braced girders, stiffening the entire boat, while the exposed surface offers little resistance to the wind. Inside is room for the ordinary cabins and staterooms of a steam yacht. On deck is a large wheelhouse and smoking room. The rig is that of a three-masted schooner with pole masts. The power consists of a Herreshoff compound engine, 12 and 21x12, with a coil boiler 11ft. square, of 450 indicated H. P.

Leaving Bristol on Tuesday night Stiletto steamed down, reaching New York on Wednesday morning. In the afternoon she was off pier 23 North River, waiting for the Powell, which leaves there at 3:30 P. M. When the big steamer started off the little black and white streak was not far away, and soon ranged alongside. The big one opened up and was soon under full headway, while a large number of steamboat men were on her decks to see her dispose of the presuming little rival. At first Stiletto hung to her, refusing to be dropped, and soon she began to advance from the Powell's quarter to her bow, evidently holding her own. Bets were made that she would not reach Carmansville and that she could not hold her steam, and when she began to drop astern the Powell stock rose rapidly, and all on board knew the Stiletto could not do it. When she was abreast of the Powell's fire room she stopped to have a look in, being only a few yards away.

After holding this place for a few minutes, one of the owners of the Stiletto said to the party on the Powell, "Good afternoon, gentlemen;" a jingle bell sounded, and easily and quietly the yacht glided ahead in spite of all the efforts of the steamer until she was only a speck far ahead. Sing Sing was reached at 4:50, or in one hour and fifteen minutes, the distance being thirty-two miles, while the Powell was over three miles astern. Considering the difference in size the odds were greatly in favor of the steamboat, but from the way the yacht left her, she has no chance with her. The Atalanta was also on hand and essayed a trial of speed, but was so completely beaten that it could hardly be called a race. On Thursday Stiletto was pressed by the New York Y. C. race, astonishing everybody and beating the Stranger as she had the Atalanta. On Sunday she returned to Bristol, but she will no doubt be heard from soon again. Thus far she has not been pushed and no one knows how fast she can go when she tries.

Editor Forest and Stream:

The steam yacht Lucille, Mr. Chas. Kellogg owner, left her anchorage at Seventy-second street, North River, Wednesday, June 10, with a few guests aboard, to witness the race expected between the passenger steamer Mary Powell and the Herreshoff's new steam yacht Stiletto, or No. 118. The Lucille belongs to the same family as the Stiletto, and was launched too late this spring to get into Olsen's List. She was built at Bristol by the Herreshoffs, and launched in April. She is 90ft. long, 11½ft. beam, 4½ft. draft, of 24.11 tons N. M., has two masts, and is supplied with Herreshoff's improved square boilers, maximum steam pressure 140 pounds. The engines are compound, two cylinders, 8x14 and 14x14, of 120 ind. H. P. The Lucille has the fine lines and sharp bow of these builders, flush deck and ample headroom below. The hull is divided in five water-tight compartments by iron bulkheads, with roomy cabin, staterooms, etc., furnished in mahogany. She is a most comfortable cruising yacht and speedy, having shown upwards of seventeen miles without crowding.

Shortly after guests were aboard the Lucille steamed slowly up the river, and as the time approached for the departure of the Mary Powell a sharp lookout was kept down the river where the Stiletto with the Herreshoffs and guests aboard was steaming slowly about waiting for her great antagonist. The Lucille kept on up the river well toward Yonkers so as to get a good view of the two steamers, and as the Powell left 23rd street and got under full speed her huge hull loomed up in the distance like the body of some immense aquatic bird sailing on the water, while the paddle wheels, its wings, beat and churned the water with tremendous power, which sent the spray flying in white clouds astern. At her side a mere speck seemed to float scarcely above the water, yet it moved as if driven by some unseen power which propelled it with the same tremendous speed that moved the mighty monster alongside which towered above and overshadowed it.

The Powell was now flying along at terrific speed and it seemed scarcely possible for any boat to pass her, much less the little thing that clung close to her stern. Suddenly that little black and white streak that looked like a rowboat from where we were, came crawling up abreast the towering paddle wheels of the great steamer. A few moments more and its speed increased, and with a bound it sprang forward like an arrow shot from a bow and fairly flew up toward the great bow of the river queen and on past the jets of spray that curled up high above the Powell's stem. On, on, each moment with increasing speed, until it drew past the great steamer, and open water could be seen between them. This black and white streak, with three little masts, its stem high in air and its stern scarce above the water, was the Stiletto, and as a swallow skims the air, without apparent effort, flew on up the river cutting the water like a knife and fast leaving her great antagonist behind.

The Powell was beaten, and each moment increased the distance between them. At 4:12 the Stiletto is off Yonkers, with the Powell a good mile astern. Still on the little yacht flew, and as she passed us the Lucille saluted her with a toot, a-toot, toot from her whistle. Hats and handkerchiefs waved as she passed. Jay Gould's yacht, the Atalanta, was met, reached and passed in just fifty-eight seconds after the Stiletto reached her stern till she was clear of her bows, though the Atalanta was steaming over twenty miles an hour, and soon the little yacht again looked like a black and white streak in the distance near Sing Sing.

When the Stiletto reached Sing Sing she was good two miles ahead of the Mary Powell, having made the run of thirty miles in one hour and fourteen minutes, and the Powell one hour and nineteen minutes. The express train on the Hudson River road covers the same in one hour and two minutes, or twelve minutes less than the Stiletto's time.

DORSAL FIN.

JERSEY CITY Y. C. REGATTA.—The twenty-seventh annual regatta of the Jersey City will be sailed on June 25, starting at 10 A. M. from Bedloe's Island. The larger boats will go to Southwest Spit, and the smaller will sail over shorter courses inside. The entries thus far are as follows: Class A, schooners, Beatrice; Class B, cabin sloops over 30ft., Naushon, Myra, Modesty, Elsie May; Class C, cabin sloops under 30ft., Lidee, Wabassa, Minnie T., Elcanor, Beulah; Class D, open sloops, Knight Templar, Georgiana, Alex, Forsyth, Torpedo, Psyche, Howdji; Class E, catboats, Bessie, Fanny Parnell, Jessie G, Fay, Hoodoo, Una; Class F, catboats, Mattie, Annie Forsyth, Emma, Edna; Class G, canoes. The time limit is eight hours for each class.

THE CLEVELAND DEATH-TRAP CAPSIZE.

Editor Forest and Stream:

I give you the following facts in regard to a capsize at this port on Sunday night last, by which one life was lost and the other four who formed the crew were picked up in an almost unconscious state after being in the water nine hours. The wind had been blowing strong from west to southwest all day, with indications of heavy squalls toward evening. About 3 o'clock in the afternoon five boys, who scarcely knew a boom from a breaker, and have had no experience in sailing, started in their yacht (?) Hydra, a trap about 20ft. waterline, 7ft. beam, and draft of water not over 1ft., for Coit's Beach (no shelter whatever), ten miles east of here. The run down before the wind was, of course, made easy enough, but at 7 P. M. they undertook to beat back, and after getting about three miles into the lake were struck by a heavy squall and capsized. After hanging on to the side of their boat for nine hours until daylight they were picked up and everything possible done for them to restore life, but one of the party who was slightly injured by the boom at the time of capsizing died soon after being taken ashore. The other four at the time of writing are doing as well as possible under the circumstances.

As this has been given out in our daily papers as a yacht with a party of yachtsmen aboard, I dislike to see it go on record as such. The boat is by no means a sample of Cleveland's yachts, for it has always been regarded as a flat bottom death-trap; neither are any of the crew who were on her to be regarded as Cleveland's yachtsmen, for, as I said before, they are inexperienced. We are thankful that neither the boat nor the boys were enrolled on the books of the Cleveland Yachting Association. YACHTSMAN.

CLEVELAND, Ohio, June 11.

LAUNCH OF THE MOHICAN.—The London *Field* of June 6 gives the following account of the launch of the new steam yacht Mohican, which, it is reported, will make New York her home port in the future: "On Monday the yachts belonging to the rapidly increasing fleet that fly the burgee of the Royal Largs Y. C. received a notable addition in the shape of the s. s. Mohican, built by Messrs. D. & W. Henderson, of Partick, and designed by Mr. G. L. Watson, to the order of Mr. John Clark, of Curlinghaam, commodore of the Royal Largs Y. C. The launch, which was a most successful one, took place at 3 P. M., the yacht as she left the ways being named Mohican by Miss Smiley, of Gallowhill, Paisley. The Mohican has a strong resemblance to the s. s. Amy, recently built by the same firm for Mr. N. B. Stewart, and has something of the racing-yacht look Mr. Watson contrives to give to all his boats of whatever kind. She is 700 tons, 199ft. long on the loadline and 215ft. over all, breadth 27ft., depth 18ft. Throughout she is constructed of steel, and the workmanship is worthy of the firm that turned out Vanduara and Wendur for the same owner, and that she is to Mr. Clark's order is a guarantee that nothing will be spared to make her internal fittings equal to those of the famous cutter and yawl. The dining-room is forward of the machinery, and is 25ft. 6in. long, 16ft. 6in. wide. The drawing-room is abaft the engines, and is 24ft. 6in. long and 14ft. wide. Aft of the drawing-room are two very large staterooms, and there is a suite (seven in number) forward of the dining-room. Ample accommodation has been provided for the crew in a forecastle 24ft. long and 17ft. wide. The officers' quarters are aft. The two fine deck houses are of steel, faced with teakwood. The entrance to the reception and state rooms is by means of a fine stair in the fore deck house. She will have three masts and a sail plan that will help to send her along when occasion requires. Her mean motive power is, however, a set of triple expansion direct-acting surface-condensing engines, with cylinders of the following diameters: 18in., 27in. and 43in. The stroke is 33in. She is to have a double-ended cylindrical boiler of steel, with a working pressure of 100 pounds. She will be commanded by Capt. J. Timpson, who was in charge of the late Mr. James Clark's s. s. Mona, and previously of the Walrus, yawl, and who, from his experience in the Livonia, will be able to take her across the Atlantic if the trip is decided upon. We understand that the trials of the s. s. Amy, whose launch we noticed recently, have been of the most satisfactory description."

ECLIPSE Y. C. REGATTA.—After two postponements the Eclipse Y. C. sailed their annual regatta on June 14. The courses were: For Classes A, B, D and E from 104th street, through Hell Gate and around the Stepping Stones, and for Class F around Throgg's Neck Buoy, making fifteen and ten miles respectively. There were thirteen starters in the five classes. The wind was southerly and the tide nearly full when the first signal was given, the classes starting separately. The first half of the course was before the wind and the Thorn led to the mark, jibing around with Violet and Hoodoo in her wake. Unknown carried away her mast at the outer mark and was towed home. The wind was ahead, but the tide helped all home, the times being as follows:

	Start.	Finish.	Actual.	Corrected.
CLASS A—JIB AND MAINSAIL.				
Thorn	10 49 00	2 21 20	3 32 20	3 30 05
J. D. K	10 49 00	3 23 40	4 34 40	4 34 40
CLASS B—CATBOATS.				
Gypsey	10 48 20	2 46 05	3 57 45	3 57 45
Hornet	10 48 55	2 32 22	3 43 27	3 41 12
CLASS E—CATBOATS.				
Violet	10 45 50	2 36 00	3 50 10	3 50 10
Unknown	10 40 00	Withdrew.		
Hoodoo	10 45 25	2 33 05	3 47 40	3 45 40
CLASS D—SLOOPS.				
Allie	10 50 40	Withdrew.		
Susie V	10 45 20	3 39 15	4 53 55	4 53 10
Annie	10 43 30	2 30 55	Withdrew.	
CLASS F—CATBOATS.				
Goodenough	10 39 03	2 33 18	3 54 18	3 54 18
Ghost	10 39 02	3 15 20	4 36 18	4 35 18
Jean	10 39 30	2 08 00	3 28 30	3 27 30

The winners in the different classes were Thorn, Hornet, Hoodoo, Susie V. and Jean.

YACHTING NOTES.—Wood Bros. have named their new sloop Maud, and have her now overboard and rigged.....Clochette, schooner, C. W. Galloupe, has been sold to F. F. Williams, of Jersey City. She is a keel boat, 48ft. waterline, 14ft. 2in. beam, and 6ft. draft... Schooner Sylph, A. C. Wheelright, has also been sold to P. F. McArdle, and schooner Sport, F. S. Eaton, has been sold to J. H. McGrady....Syphila—A steel steam yacht of this name has lately been launched by J. Kidd & Co., at Linwood, Pa., for J. F. Betts, of Philadelphia. She is 100ft. long, 16ft. 6in. beam, and 6ft. draft. Her engine is 11 and 20×18, with a four-bladed wheel, 6ft. diameter and 10 pitch. She is schooner rigged, with lowering masts and funnel....Huron comes out this week with a new mainsail by Wilson & Gurney, who also gave Thetis her fine suit of canvas....Decoy, sharpie, Dr. C. N. Hoagland, has returned to New York after a winter in Florida waters. ....Rosalie, sloop, A. C. Caufield, has been sold to E. F. Barney, of Honeywood, Va....Seminole, sharpie, Com. A. E. Douglas, St. Augustine Y. C., has been sold to Mr. E. R. Thornton, of Jamesport, L. I.

YACHTING ON THE PACIFIC.—On May 27 the San Francisco Y. C. started on an up river cruise, leaving the club house at Sausalito at 6 P. M. for Martinez, in a light wind. Chispa stole a march on the others, going between Angel and Alcatraz islands, while all were becalmed. Fleur de Lis nearly caught her and took second place in with Thetis third, but it was midnight before all the fleet reached Martinez. After waiting until noon on Saturday for Chispa to get off the mud, the fleet set sail for Vallejo. A race home was started at 10:30 next morning, Fleur de Lis taking the lead. The wind was on end and made a reef necessary. Lurline and Halcyon joined in when near the finish. Fleur de Lis finished at 3:45, with Rambler at 4:45 and Ripple at 4:55. Casco not going over the line. A race between the big schooners was to take place last Saturday for a purse of $1,000. It was expected that Lurline, Fleur de Lis, Halcyon and Nellie would enter.

MOBILE Y. C.—The officers for 1885 are: President, P. J. Pillaus; Vice-President, D. H. Lay; Secretary and Treasurer, B. C. Rowan; Commodore, B. Hinckley; Vice-Commodore, S. Woodhull. First Captain, W. B. Curran; Second Captain, R. A. Sadler. The following are the members the Governing Committee, viz.: P. J. Pillaus, chairman; H. Pillaus, F. Gibson, J. S. Woodhull, W. F. Kirkbride. The club enters on its second year under very favorable auspices, having an active roll of about fifty and a very nice little balance in its treasury.

THE SAILING OF GENESTA.—A special telegram to the *Herald* announces the departure of Genesta for America on Tuesday evening. She sailed from Gourock Bay at 7 P. M., and will come direct to New York. Her skipper expects to make the passage in three weeks, but she is provisioned for four. Her racing spars have been replaced by smaller ones, and will come out by steamer.

NEW HAVEN Y. C.—The programme for to-day's race included five classes, in each of which a prize will be given for the best corrected time, with a second prize if four start and a third if six start. Besides these, special prizes are offered for best elapsed time in Classes B, C and D, and the Derby Challenge Cup in Class C and Register Challenge Cup in Class D.

MARY ANDERSON'S STEAM YACHT.—The steam yacht Galatea, built for Mary Anderson, which was sold last spring, was launched in Lake George on Saturday, and rechristened with the name of her former owner.

STRANGER.—Mr. Warren's cutter sailed from Southampton on June 3 for Boston in charge of a Warren line captain as navigator. Her racing spars and gear will be shipped by steamer from Liverpool.

NEW YORK Y. C.—An important meeting was held on Tuesday night to decide finally about the Cup races, the committee making a report which was ordered to be printed in pamphlet form. It was decided to sail three races with Genesta, one over the New York course, one triangular outside the Hook, and one to windward or leeward and return. Should Genesta be defeated, three similar races will be sailed with Galatea. The date of the first series will be the first week in September. Mr. Beavor Webb has requested that the time allowance be based on an average of the New York and Y. R. A. rules, to which proposition the committee here objected. The question being referred to Mr. Geo. L. Schuyler, he has decided that the New York Y. C. rule shall be followed. July 29 was selected as the date for the redezvous at Glen Cove for the Cruise. The trial races will be sailed in about two weeks.

LOOSE-FOOTED MAINSAILS.—*Editor Forest and Stream:* It might perhaps interest some of your readers to hear the result of an experiment I have been making with an American made, loose-footed mainsail. It was made by P. W. Berglund, of Brooklyn, and so far has proved very satisfactory. In spite of the fact that neither I nor any one on the Petrel understood the peculiarities of a loose-footed sail and the disadvantage of a boom deficient in stiffness, the sail has been steadily improving ever since it was bent. So far as I can judge, the speed of the Petrel has been improved by it, as she seems to move through the water with more life. The sit of the sail is at least equal to that of any laced mainsail I have ever tried. As it has been bent for a few days only, it is too soon to say much about it. I shall let you hear from me again on the same subject.—E. A. STEVENS.

GREAT HEAD Y. C.—Commodore, George C. Abbott; Vice Commodore, Henry E. Turner, Jr.; Secretary, Albert E. Prince; Treasurer, H. A. Joslin; Measurer, E. K. Tewksbury: Regatta Committee—J. T. Washburn, F. H. Seavey, W. P. Hammett, H. T. Crocker and W. D. Lombard; Directors, C. S. Tewksbury, George H. Payne, F. L. Woodward and C. H. Billings. This club was organized last season; has a membership of over 150, and a fleet of about thirty sail. A handsome club house, with all the arrangements for social entertainment, has been built, as well as fine accommodation for yacht owners. It is proposed to have the old Winthrop Y. C., whose present commodore is H. Putnam, owner of the sloop David Crockett, amalgamate with this organization, thereby gaining about forty members and several well-known yachts.—*Boston Herald.*

TORONTO SKIFF SAILING CLUB.—A race was sailed on June 13 between the second class boats of the club over a course from the club house to a buoy near Hanlan's Point, thence to a buoy near Gooderham's, and thence to the starting point. The starters were Mr. J. B. Kilgour's skiff, sailed by Mr. G. E. Macrae; Mr. Close's and Mr. H. S. Hall's skiffs, sailed by the owners; Mr. J. Pepler's skiff Kite, sailed by Mr. T. W. Green, and Mr. J. A. Howard's skiff Arrow, sailed by Mr. T. C. Boyd. Mr. Hall was first away, but Arrow soon followed and passed him, leading easily at first mark, Mr. Hall capsizing after turning, owing to trouble with his spinnaker. Mr. Kilgour's boat was second to Arrow to the end. Arrow's time was 1h. 12min. and Kilgour's boat 1h. 22min. The prizes will be presented at the club's reception on Saturday next.

PENNSYLVANIA Y. C.—*Editor Forest and Stream:* On Monday the Pennsylvania Y. C. sailed for the championship, resulting as follows: Home buoy, Thos. M. Seeds, Willie Graham, Violet, John W., Rightley, Mortimer Dease, Geo. Bosler, David Bennett, Mediator, Sarah Nield, Mary McVey, Wm. Birch. The race was from club wharf to Delanco and return. Wind light from southwest. The run home against wind and tide for a good portion of the distance was unsatisfactory and tedious. This club have a limit of sail area, and approaches more nearly, especially for small boats, an equality of boat and sail. The Southwark Club will sail on Monday next.—R. G. W.

A NARROW FIVE-TONNER.—There was on Wednesday launched from Messrs. Simpon & Denison's yard at Sanquay the most remarkable boat of the year, which will probably create some stir in the coming season. She is built to the order of Mr. R. E. Froude and is a five-tonner. Her dimensions are: Length over all, 45ft.; beam 5ft. 6in. She has no less than seven tons of lead on her keel. The mainsail will have a 26ft. hoist, while her spinnaker boom is 36ft. long. This little wonder was named Jenny Wren. She has a Buttercup bow, with nice sweet ends. She is composite built of two thicknesses of teak.—*Glasgow Herald.*

TOLEDO Y. C.—A race will be sailed at Presque Isle on June 17 for the G. A. R. pennant, twenty yachts having entered. A canoe race will also be sailed.

QUEBEC Y. C.—A handsome silver bowl has been presented to the club by Governor-General Lansdowne, to be raced for on July 1.

SLEUTHHOUND.—This cutter arrived at Gibraltar on May 25, seven days out from Algiers, and sailed for Gosport on the 27th.

AMY.—Mr. Morgan was at Southampton on June 6, having bottom cleaned. Galatea was in harbor at the same date.

PORTLAND Y. C.—This club sailed a regatta on June 12, the reports of which have not yet come to hand.

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

June 24—Vesper Boat Club, Annual Regatta.
June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

CLUB UNIFORMS AT THE MEET.

Editor Forest and Stream:

We have just returned from the Hudson River local meet, and besides Commodore Oliver, of the A. C. A., being present, there were also the commodores of about nine or ten clubs, all more or less resplendent with gold or silver embroidery or lace. In such a camp as that, there being no special executive, it was proper for this official display. I wish to call attention to all commanding officers of clubs who may attend the A. C. A. camp, that all who attend there will do so in their capacity as A. C. A. members, and there should be no wearing of official insignia except by A. C. A. officers at Grindstone. My letter is by no means official, and I write it without even consulting Commodore Oliver, but being myself a wearer in club circles of embroidery, I feel that I can with good grace call the attention of my brother commanders to this possible discourtesy and thoughtlessness. In our own clubs it is known who the commodore or captain is, therefore it is not necessary for us to cause a possible confusion by the wearing of our club official insignia in the A. C. A. camp. My letter is intended to be entirely friendly, and I am confident it will be taken as such. ROBERT J. WILKIN, Commanding Brooklyn C. C.

OAKLAND C. C. RACES.—MAY 30.

Editor Forest and Stream:

To-day the fleet race for the champion pennant for canoes was sailed by the canoe fleet of Oakland Creek. The entries were:

Talisman	Racine.	18ft. 6in.×28in.	F. Pixley, Oakland C. C.
Undine	Carvel	16ft.×30in.	R. Cooper, Oakland C. C.
Sunbeam	Canvas	18ft.×24in.	W. Pixley, Oakland C. C.
Betsy	Carvel	18ft ×29in	R. Englebrecht, Oakland C. C.
Hattie Bell	Lapstreak	18ft.×29in.	W. H. Byrne, S. F. C. C.
Zephyr	Lapstreak	14ft. 6in.×29in.	W. W. Blow, Mosquito Fleet.

All except the Talisman and the Zephyr are California built boats, and represent all sorts of models and styles in cut, rig, etc. The Betsy particularly is the creation of a youngster some sixteen years old. He had scarcely ever seen a boat when he started in to make his. When she first appeared on the creek she elicited a great deal of amusement, for some of the points were very suggestive of cabinet maker's work. The workmanship, however, was very good, and the boy soon picked up the idea necessary to make his craft wearierly and serviceable. In a short paddling race to-day, he came in a very good second to the Talisman, Racine. He is now engaged in building another canoe, improving on the first in many ways. He is certainly entitled to great credit. The Talisman is one of the regular Racine patent, and the Zephyr was built by a New York builder, MacDonald, I think.

The race was called for 2 o'clock. It was blowing a stiff summer breeze and the sailing craft, big and little, were under reefed sails. The course was to a stake probably 100yds. or so short of a mile from the boat houses. We would gladly have postponed the race to a day with less breeze, but the committee—Messrs. Yale, Evans and Montague—say these races are to go on the day appointed, fair or foul, rain or shine. Soon after 2 o'clock the canoes were put in line and the word "go" given. The Hattie Bell, which is very quick on the start, jumped away with the lead, the Undine and Zephyr following. The Zephyr gradually caught up and passed to the front, and reached the stake first. Thus far the sailing was with a fair wind. Turning, the Zephyr, being provided with a reefing gear (like the Snake's, I think), instantly reduced sail to beat back. With 25ft. of mainsail, 12ft. dandy and 90 pounds of ballast, she bore up nicely and made the trip home in two tacks. The other boats kept full sail spread, and probably for that reason did not do so well. At all events, the finish was as follows: Zephyr, 30m.; Hattie Bell, 37½m.; Undine, 39m.; Talisman, 50m.; Sunbeam, 50½m.; Betsy, not taken. The Betsy came to grief—carried away some of her rigging, broke the rudder and lost her paddle. She was finally towed in by a friendly skiff.

The interest in canoeing seems on the increase. The cruise of the Talisman and Undine has started the upcountry boys, and before long we are likely to hear of new canoeists along the Sacramento River. I understand that a new boat is on the way to a member of the Oakland C. C., a Racine, 16ft.×33in., her special mission being to show her heels to the Mystic. MOSQUITO.

CANOEING AT LACHINE, CANADA.

IT had rained all day, and at 7 P. M. when the Marion L., Viva D. and Uno left the boat house at Lachine it was very threatening and becoming dark. It had been our intention to have a full club cruise to St. Ann's, about twenty miles up the river, but on account of the very disagreeable weather, it was postponed, and only the above three canoes started. The Marchioness, Iona and Verve had gone up during the morning, and we did not like to leave them to their own devices all Sunday. We kept together for about three miles, when striking Lake St. Louis the Viva D. decided to hug the shore, a very strong S.W. wind blowing. The Marion L. and Uno decided to make a straight line across the lake, and it was decided to wait for each other half way to St. Ann's at Point Claire.

After passing the two lighthouses and when we were just changing our courses to make the wharf at Point Claire a heavy sea caught the Uno, breaking her rudder, she then gibed her sail and upset. By this time it was pitch dark and blowing half a gale of wind right behind us. We were then three miles from the shore. The Marion L. was right at the Uno's stern, and when the accident happened came alongside and took the wrecked canoeist out of the water. We then fished out the mast, cleared away the sail, etc., and by this time the Marion L. was about a quarter full herself and started for the shore. The wind being dead up the lake would draw the Marion's head with it, the stern being held down by the Uno, which we were towing. After paddling about an hour and a half we reached shore, emptied out the water, and paddling up along the bank to Point Claire, where we found the Viva D., and proceeding to mine hosts, Mallette's, found her crew having a friendly game of draw. We lost the top boards off the Uno, which, going ashore, led to the belief that we were drowned, and parties called at the hotel during the day from where the boards went ashore to see if we had arrived. It blew so hard we could not leave for St. Ann's, but returned home in the evening, never having been really dry since the day before. The Uno and Verve sailed down next morning and had to go ashore four times to empty the water out before reaching home. This lake is very treacherous, many accidents having happened, especially of late years.

MERRIMACK RIVER CANOE MEET.

Editor Forest and Stream:

An invitation is cordially extended to members of the A. C. A. and other canoeists residing in Eastern Massachusetts and vicinity to attend a meet to be held under the auspices of the Vesper Boat Club of Lowell, at Winn's Bluff, Hudson, N. H., June 27, 28 and 29.

The site is a beautiful one, about nine miles from Lowell, and four miles from Nashua. Tyngsboro is about three miles below and Little's Station about three-quarters of a mile above Winn's Bluff. All of the places mentioned are on the Boston & Lowell Railroad, which follows the course of the river on the bank opposite the Bluff.

Canoes by freight should be sent to Tyngsboro; on passenger trains and accompanied by owners, Little's Station will be most convenient. An invitation is extended to visitors to rendezvous at the Vesper boat house, where canoes may be housed, and all possible attention paid to crews.

The majority of the canoeists present will camp, either in tents or canoes, at the place selected. Straw or hay for bedding and firewood will be provided. There are hotels within short distances, where those who desire can find suitable accommodation.

Either member of the committee on arrangements will furnish any further information or assistance to inquirers, and be glad to do any thing in their power to promote the convenience and enjoyment of visitors. Those intending to be present will confer a favor if they will notify the committee as early as convenient.

C. P. NICHOLS, PAUL BUTLER and R. F. HEMENWAY,
LOWELL, Mass. Committee.

NEW CRUISING GROUNDS IN FLORIDA.

Editor Forest and Stream:

Allow me to call the attention of canoeists to the almost unknown region of the Everglades of Florida. I have just returned from the shores of that unique lake, and am of opinion that a cruise among its countless islands would be very enjoyable to northern canoeists. The best time is from October to April; from then till June there is hardly any water, and summer is the rainy season. The islands are very pretty and are inhabited by Indians who would supply travelers with game, bananas and vegetables. A canoeist could go from St. Augustine or Jacksonville to the Indian River, down that stream into the glades, and could come out through the Miami River, which empties into Biscayne Bay. Five miles south of its mouth is a comfortable hotel kept by Mrs. Peacock. I was all over Florida and never saw anything equal to Biscayne Bay in point of scenery; the forests on the northern shore are full of large game, including panther, and the fishing is first-class. There is an inside route from Biscayne Bay to Key West along the keys, navigable for small boats, and fresh water can now be had on most of the keys. The distance from Biscayne Bay to Key West is about 150 miles. I shall be glad to answer inquiries from canoeists through the FOREST AND STREAM. J. L. N.

FROM LAKE ERIE TO THE MISSISSIPPI.—To go from Detroit to the Mississippi River by water it would be necessary to go north through Lake St. Clair, the St. Clair River and Lake Huron to the Straits of Mackinaw, then through the straits across Lake Michigan to Green Bay, Wis. There you will strike the Fox River, then up that river to Portage, Wis., where a canal joins it with the Wisconsin River, which flows into the Mississippi River. The portages are few and very short.—CHICK.

CLEVELAND, O.—I have just noticed an inquiry in your last issue as to whether a canoe can be floated from Detroit to the Mississippi by any other route than via Cleveland. There is no other route where a canoe can be floated, except via Toledo and canal from there to the Ohio River; but if a canoeist wants a better than the slow, tedious canal route from either Cleveland or Toledo, he can, after five hours' rail from Cleveland to Columbus, O., take the Scioto River from latter place to Portsmouth, on the Ohio River, just above Cincinnati; or if you want more river, by taking cars at Toledo and rail to Logansport, Lafayette or Terre Haute, Ind., you can take at either place the Wabash River and reach the Ohio at the boundary line between Indiana and Illinois.—G.

A TROY ESTIMATE OF DR. NEIDE'S BOOK.—The Troy *Daily Times* says: "At the close of the American Canoe Association meet in August, 1883, Dr. Neidé, in the Aurora, and S. D. Kendall, in the Comfort, set out from Lorna Island in the Adirondacks, for the Gulf of Mexico. The experiences in their long and extraordinary trip were novel and at times exciting. A faithful 'log' was kept by the 'skippers,' and its contents have been elaborated into a volume of unusual interest and originality. The work has long been anxiously looked for by canoeists, and it will be read by them and thousands of others with keenest zest."

LAKE ST. LOUIS C. C.—A regatta will be held at Lachine on June 20, by the Lake St. Louis C. C. The races will be called at 3 P. M., entrance free. Entries must be made by June 18, to Geo. Auldjo, secretary, Box 2147, Montreal. The programme includes the following events; 1. Single paddling race, one mile. 2. Sailing race, one mile. 3. Tandem race, one mile. 4. Portage race, one mile. 5. Hurry scurry, one-half mile. 6. Boys' Tandem, fourteen years and under, one mile. The races will be under A. C. A. rules.

LINDSAY C. C. RACES.—The annual races of this club were held on June 8, the course being from the boat house up the river. The single canoe race for the baukers' prize, a gold medal, brought out six entries. A. Downey, J. M. Knowlson, W. Waters, W. Howe, W. A. White and R. D. Thefton. Distance one mile with turn. A. Downey won by three lengths with J. M. Knowlson second. The

lawyers' prize, two silver medals, was offered for a double paddling race, and six crews entered. J. M Knowlson and W. Howe, A. Downey and W. Walters, W. A. White and W. Stewart, J. W. Edwards and A. D. F. McEachen, R. H. Hopkins and J. A. Bogart, S. Britton and T. B. Dean. The first of the above crews won by 6ft., with the others in the order given. The prizes must be won three times in succession before being held permanently.

MEET OF CANADIAN CANOEISTS.—Commodore Oliver and Dr. Neidé were present at the meet last week in the Bay of Quinte, an account of which we shall give next week.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

RIFLE, Boston.—I hunt moose and black bears. Do you know of an effective rifle with solid ball and flat trajectory; and if it has a magazine, how often will the magazine explode in actual service in the woods? I am sometimes a hundred miles from a settlement, with a little Indian, where a serious accident would mean death from several different causes. Ans. See our advertising colums for a number of rifles just such as you require. If a magazine rifle is properly handled there is no reason to fear its explosion.

H. M. G., New York.—You may secure permission to use the Creedmoor range by applying to the secretary of the National Rifle Association, Temple Court, Beekman street, New York

TARGETS, Hudson, O.—The Creedmoor 200yds. target dimensions are: Bullseye 8in diam., center 26in. diam., inner 46in. diam., outer remainder of target. The Massachusetts decimal target is divided into circles counting from 10 to 1, diameters being respectively as follows in inches: 3½, 5¾, 8, 10¼, 12¾, 16¼, 20½, 26, 33, 41¾.

BREECHLOADER.—Which of the two lakes, Cedar Lake or Lake Maxinkuckee, is the best place to camp and the best fishing point, also what kind of fish are taken from each? Ans. If you mean the lakes in Northern Indiana by those names, as we suppose, we should recommend Maxinkuckee. The fishing is fair all around the lake. You will find perch, sunfish, pickerel, etc.

J. L. L., New York.—Where along the line of the D. L. & W. R. R. nearest New York can I find fair bass fishing in either July or August? Will they take a fly during these months? Of course I would like a place where I could take my wife. If you can't name such a place on D. L. & W. R. R., please give me name of some place near New York other than Greenwood Lake. Ans. You will find bass in Lake Hopatcong and in the Delaware River from Lambertville, N. J., to the Water Gap and above. They do not rise to a fly well in lakes in July in that region. You will find hotel at Hopatcong. If you want river fishing try between Easton and the Water Gap.

R. H., West Torrington, Conn.—What is the name of this bird, black head and back, white breast and dark red spots on throat. That is the male; the female is brown and white; eggs are green spotted with brown; nest is made of sticks? Ans. A rose-breasted grosbeak, we presume.

W. S. L., Methuen, Mass.—Will you be so kind as to inform me what kind of a fish this is which I inclose? It was caught in a small brook that runs into the Merrimac River above the dam about three miles. The man that caught it called it a black bass, but I don't think so. They go in schools and run up the brook a little way. Ans. The fish is a darter, *Boleosoma*, but too dry to determine the species. The darters seldom exceed two and a half inches, and usually lie on the bottom and move by jerks, whence the name.

L. A. V. Z., New York.—Will you please inform me of the use of the click reel; how it is possible to throw a fly with it any distance, and also whether a hook and sinker can be thrown any distance with it? Ans. We would hardly know how to cast a fly without a click reel. The click acts as a drag and prevents the line from running off the reel unless pulled by the hand. Do not use it for throwing a sinker; you need a free-running reel for that. Go to the next tournament in Central Park and learn how a click reel is used.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

JUST OUT!

THE ANGLER'S GUIDE BOOK

TO THE

Fishing Waters of the United States and Canada.

COMPILED AND EDITED BY WM. C. HARRIS.

12 mo., 288 pages. Handsomely bound in cloth and gold. Price, postpaid, $1.00.

In collecting the material for this Guide Book, 17,827 special communications have been received, and every available, accredited authority consulted and "boiled down." The result is before the reader in form of 2,105 center points, from whence over 7,000 angling waters are more or less accessible. Of these the following essential data are given:

1—How they are reached. 2—Distance from nearest point by rail, road, or other public transportation routes. 3—The species of fish therein. 4—The fishes that are most abundant. 5—The best months for fishing. 6.—Local baits used. 7—Methods of local anglers. 8—Hotel accommodations and charges, also those of private boarding houses. 9—The favorite grounds, when known, of local anglers. 10—Cost of guides, boats and bait. 11.—Where salt water exists, the best tide to fish in. 12—Cost of permits when required.

By an arrangement with Mr. Harris, the editor and compiler of the Guide Book, we have been assigned the retail agency of this pub lication for the city of New York.

T. H. CHUBB'S

"Henshall" Split Bamboo Bass Rod.

This cut represents our "Henshall" Split Bamboo Bass Rod, length, 8 feet 3 3-10 inches; weight 8 oz. This rod has extra tip, light wood hand-grasp whipped with cane. Metal reel seat, or reel bands, as preferred. Hexagonal cap ferrules, with welt, no dowels, anti-friction tie guides. Three-ring tops, nickel plated trimmings fastened on. These rods are all ready for use, with the exception of winding and varnishing, for $7.50. This rod is made according to the dimensions given by Dr. Henshall, and is indorsed by him as a "Standard Henshall Rod." Above rod with German silver trimmings, instead of nickel, $9.25. Send for catalogue of Trout and Bass Fly Rods, also Amateur and Rod Makers' Supplies, to

T. H. CHUBB, Post Mills, Orange Co., Vt.

HINDS' BLACK-FLY CREAM,

For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

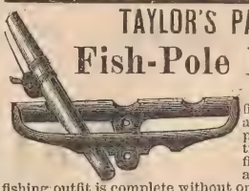
No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

"Repellene,"

An infallible preventive of the attacks of Mosquitoes, Black Flies, Gnats and all other insects. Neat, clean and easily applied. Contains NO TAR, will not *stain* nor *injure* the skin, easily washed off, may be carried without danger of leaking or spilling. Price 25 cents per box. Agents—T. J. Conroy, 65 Fulton st., N.Y. Abbey & Imbrie, 18 Vesey st., N. Y.



The English "Fishing Gazette,"

Devoted to angling, river, lake and sea fishing, and fishculture.
Every Friday, 16 pages, folio, price 2d.

Sold by Druggists and Dealers in Sporting Goods.
Agents: JOHN P. LOVELL'S SONS, Boston, Mass.
JOS. C. GRUBB & CO., Philadelphia, Pa.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

EVERY ANGLER KNOWS

That one-half the pleasure of angling is in having **Fine, Light, Reliable Tackle.** We make a specialty of just this.

NEW MARLIN RIFLE.

.32 and .38-Caliber.

Made with Rifle Butt.

Penetration Nearly Double that of other .32 and .38-Caliber Repeaters.

PRICES:

24in., 7¼lbs., $22.00. 28in., 7½lbs., $24.00. Set Triggers, $5.00 extra.

One great objection to magazine rifles heretofore has been that if one or more of the cartridges contained in the magazine were slightly shorter than regular, the mechanism would become clogged and the arm refuse to work, frequently at a critical moment. *This trouble is entirely obviated in these new guns by a recent invention patented by us. Even if one or all of the cartridges in the magazine should be half an inch too short the gun will work perfectly.* Every one who ever used a repeating rifle will appreciate this improvement.

All MARLIN and BALLARD RIFLES have been largely Reduced in Price.

Send for full Catalogue. THE MARLIN FIRE ARMS CO., New Haven, Conn.

GLOBE FLIGHTS

PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5¼ inches in diameter, the center cut out to admit a rubber balloon 2½ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

Adventures at Rangeley Lakes

Second Edition.

A spicy and fascinating story of sportsman's life in the wilds of Maine. In this book a great deal of valuable information is imparted in a pleasing and attractive manner. Handsomely indorsed by the people and the press. Beautifully illustrated with full page engravings. Nicely bound in cloth, 372 pages. Price $1.25. Mailed on receipt of price by

JAMAICA PUBLISHING CO,
JAMAICA PLAIN, MASS

CANADA.

Province of Quebec.

SALMON FISHING.

North Shore Gulf & River St. Lawrence.

WARNING TO ANGLERS

AND ALL OTHERS WHOM IT MAY CONCERN.

Whereas a suit at law respecting the ownership of certain territory on the north shore of the Gulf and River St. Lawrence, between Cape Cormorant and the northeastern boundary of the Province of Quebec is now pending in the Superior Court of this Province; and whereas a notice has been published by the Labrador Company, offering to lease the fly-fishing in certain rivers flowing through the said territory. Public notice is hereby given that any person or persons making use of the fishing privileges in any of the rivers flowing through the said territory under lease or permission from the said Labrador Company will render himself or themselves liable to prosecution for trespass upon Government property.

E. E. TACHE,
Assistant Commissioner of Crown Lands.

DEPARTMENT OF CROWN LANDS,
Quebec, May 21, 1885.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

ADIRONDACK DEER.

WHEN we began the discussion of the Adirondack deer-hounding practice, it was distinctly stated that the discussion would not be permitted to drift into other channels; and accordingly little mention was made of floating, hotel "mutton," crust-hunting and other topics, all important, but irrelevant to the subject in hand. That was the only thing to do if any result were to be obtained. It was the constant endeavor of those who attempted to defend hounding to make it appear that the opponents of water-killing were staunch advocates of January crust-hunting and June floating. In this way they sought to throw dust in the eyes of the Governor, and to preserve their famous clubbing fun. But the square issue was steadily maintained, and the bill was signed. Now if Assemblyman Husted, the editor of the Boonville *Herald*, the Adirondack landlords, and other friends of the deer, will give us some light on the jacking and crusting and hotel "mutton" abuses, we will be rejoiced to have it; and if they can show the proper remedies we shall be equally happy to assist in securing these. More than this, a little practical help toward the right protection of game will be a welcome assurance that our friends are actually sincere in their professions.

SPRING SHOOTING ABOLISHED.

A STEP toward the protection of migratory birds passing north to their breeding grounds has been taken by New York. The text of Section 2 of Chapter 485 of the Laws of 1885 reads as follows, the counties designated being Queens and Suffolk, which comprise the shooting along the Atlantic coast:

SEC. 2. No person shall, in said counties, kill or have in possession any bay snipe, sandpiper, shore bird or plover, from the first day of January to the tenth day of July in any year, or any rail bird, or meadow hen, from the first day of January to the first day of September in any year, under a penalty of ten dollars for each bird killed or had in possession.

Why should there not be such a law for every locality where snipe are now shot in the spring of the year?

OFFICIAL DOG SHOOTERS.—Twenty years ago it was the barbarous practice of the Mayor of St. Augustine, Florida, to go armed with a shotgun, at certain seasons of the year, for the purpose of shooting unlicensed dogs. Whenever he encountered one of the unfortunate brutes at large, he "turned loose" a charge of shot at it, and rather appeared to enjoy the agony that ensued. The old Florida town has long since put away such heathenish doings, but the mantle of the dog-shooting Mayor has fallen upon the shoulders of another. Across the East River, and in sight from the eleven-story building which looms up next door to the FOREST AND STREAM, is Long Island City, widely notorious for its ill-government, pool rooms and gambling dens. This Long Island neighbor of the metropolis, and in this present year of grace, has an ordinance directing that all unmuzzled dogs running at large shall be shot. An evening paper reports that the Long Island City policemen are now busily engaged in shooting on sight all vagrant dogs, and much brutality is daily witnessed, many dogs being literally tortured to death. There are few men on the police force who could hit a haystack across the street with a revolver, and therefore it is rarely that a dog is put out of his misery until he is finally clubbed to death. On Wednesday afternoon of last week, Officer Kelly, of Astoria, fired eight bullets at a large black dog which was tied to a lamp post, and then had to beat it to death with a bar of iron. Occasionally a dog escapes with a broken leg. When the Long Island city policemen have killed all the dogs there, they might find employment in Naples, where it is the custom to flay dogs alive for the sake of their skins.

POSSESSION OF GAME IN CLOSE SEASON.—It has been abundantly demonstrated that the liberty to sell game in the season when it is forbidden to capture it means the killing of that game for the market in the close season. Just as long as the men who hunt for the markets can find dealers to receive their game they will keep on taking it. This is so well understood that the laws of about all the States forbid the sale of game in the close season. The market dealers are continually working to have such provisions repealed. This has been the effort of the Boston dealers this year. The Massachusetts Legislature had so little gumption that the members of the Senate actually sanctioned the bill asked for by the men who wanted to sell game all the year around. A like bill introduced this year at Albany by the New York marketmen was promptly squelched. In another column is printed a paper prepared by Mr. E. A. Samuels, the president of the Massachusetts Fish and Game Protective Association, showing the attitude of the various States respecting this subject.

THE CANADIAN TEAM.—There seems to be no lack of energy among the volunteers of the Dominion. The campaign against the insurgents of the Northwest has been a short, sharp and decisive one. It was carried on by the volunteer or militia forces, and they have not yet returned wholly when we hear of the departure of the team to do peaceful battle with the volunteers of England and Scotland before the Wimbledon butts. It would have been easy to have made this an off year, to have sent over a note of apology that owing to home engagements the absence of the Canadian contingent at the English meeting would have to be overlooked. But the Canadians are not of that sort at all. The more work they do the more they seem capable of doing, and the team should get, if possible, a warmer welcome than usual when they reach the mother country.

THE MASSACHUSETTS LAW.—Last week the Massachusetts Legislature adjourned. No new game law passed. The marketmen's bill went through the Senate and the game protectors' bill went through the House; the law remains as before. It was a hard fight, the most bitter of the contests of many years. The feeling of the members was decidedly in favor of the dealers. There was manifested a most discouraging lack of common sense and of public spirit when the attention of the Solons was turned toward the game bills. If the members of the Massachusetts Fish and Game Protective Association had not taken so determined a stand, the dealers would have had things all their own way.

FROM HIS PULPIT, the Rev. Dr. Talmage, of Brooklyn, is reported to have proclaimed last Sunday, that "every man who went to a pigeon match went straight to hell." If the words are reported correctly the proclamation is rather startling; but then, perhaps Dr. Talmage does not know.

THE PERILS OF ANGLING.—An industrious compilation of newspaper paragraphs would show that in the course of twelve months more victims perish in the pursuit of big fish than are blown to atoms by the dynamite cartridges set on the stove to warm. The angler who falls into the water in a fit and drowns and the angler who gets drunk and falls out of his boat or capsizes it and goes to the bottom have already been heard from this season. The angler waylaid by tramps will in due time chronicle his adventures to the thrifty reporter, and then will come the regular annual tale of the little man chased up a tree by a big fish. [Since the foregoing was in type the waylaid fisherman has been heard from. It was on a New York dock, last Sunday. The victim was Anton Cermack, a Bohemian cigarmaker, who was fishing from a canal boat. Three young hoodlums assaulted him and bore off his fishline and all his money—ten cents. Before they could be captured the dime had been expended for beer. This is not a very aggravated case, but by the time the Associated Press dispatches of the occurrence have reached the Pacific slope Mr. Cermack will have blossomed into one of New York's millionaire anglers, his kit will be described as one of Blank's very finest, and the ten cents will have multiplied to a hundred dollars.]

BARNES OF BAXLEY.—The editor who presides over the local sheet of Baxley, Ga., has been relating his experience in killing quail this spring. He tells it that he went out with one Barnes, "a sportsman," who has a trick of calling up the birds within range. "Having secreted ourselves, he gave the female call, and here one came right straight for us. Sometimes they will come flying and pitch close at your feet. We were out but a short time and we killed five. Mr. Barnes tells us that he generally goes out in his buggy, calls them to him, and kills them at short range." They potted them on the ground, of course. This Georgia editor would do himself credit by sticking to his pencil and handpress, and if he wants to prove himself a real philanthropist, let him find some decent form of amusement for Barnes.

WHAT WILL THEY DO WITH THE HOUNDS?—The Adirondack guides own hundreds of hounds and mongrels, which have been used in years past to drive deer into the water for lazy sportsmen to shoot or club to death. It has been the practice of some of these dog owners to turn the brutes loose in winter to run down deer on their own account lest they should starve. Now that the use of the dogs is forbidden, it is quite clear that the owners cannot afford to keep them to look at and play with. What is to become of them? They must be put out of the way; and we suggest to all North Woods persons interested a study of the various methods of killing a dog humanely.

PASSENGERS VS. GAME CRATES.—Some of the officials of Arkansas railroads are blessed with sconce enough to see that passenger tickets are more profitable than the revenue from freight on game killed out of season. The pot-hunters, who in certain sections of that State had in years past an all summer's picnic shipping quail to the Little Rock and St. Louis markets, have been brought up standing by the refusal of the railroads to transport their unlawful plunder. There is nothing beyond good business sense in this, for if there are quail to shoot, sportsmen tourists will travel over the roads to the game country; and what the railroads lose in freight they will more than make up in fares.

THE MAHARAJAH DHULEEP SINGH is advertising to sell out. He has 17,000 acres of land in Norfolk, constituting the famous game preserve of Elveden. One of the annual game scores enumerates the season's slaughter of 9,600 pheasants, 9,400 partridges, 2,000 hares and 70,000 rabbits. Possibly Mr. M. D. Singh is rattled by his arduous labors in game potting, and very likely he is sick and tired of the business. It is no wonder that he wants to sell out.

WAWAYANDA AND TRUTHFUL JAMES will fly their flag over Camp Flotsam this summer in the Elysium of Perennial Bass, where the balmy breath of the balsam blows on the breeze and the lonely loon's ghostly laughter answers to the weird call of the whippoorwill in the hollow wood.

SUMMER READING.—There are so many harrowing accounts of murders, assassinations and suicides related at length in the daily press that it is a positive relief to turn from their stifling atmosphere to the ozone-laden pages of the FOREST AND STREAM.

The Sportsman Tourist.

IN THE FORESTS OF NEW BRUNSWICK.

THE bright green of the beeches was fading into yellow and bunches of crimson leaves were scattered here and there among the thick foliage of the maples, as our party took their way up the Nashwaak River, which unites with the St. John at a point directly opposite the city of Fredericton, the capital of the Province of New Brunswick.

The road up this stream was through a very pretty valley worn in the gray sandstone of the coal measures by the lapse of ages. The river itself is about sixty miles in length, its water being of the purest, here turns now to the right, then to the left in many a graceful curve, rippling over beds of gray gravel, among green meadows fringed by rows of maples and elms and by a thick growth of shrubs, which protect the banks by their friendly shade.

A journey of twenty-five miles brought us to the little village of Stanley, where we remained for the night. Resuming our journey next morning at an early hour, we reached the last settlement, and sending back our wagons prepared to enter the vast forest which extended to the northeastward more than a hundred miles without a single settler or clearing.

Two of our horses were reserved to draw over the rough lumberman's portage which we were to take for a part of the way, two sleds shod with wood, which pass more easily over the stones and roots than those shod with iron or steel. On these were loaded our bedding, provisions, and what few cooking utensils we required. A three days' walk over a rough and hilly portage brought us, after crossing the Miramichi River, not very far from Slate Island, to a lumberman's depot on the upper waters of the Burnt Hill stream, a branch of the last-mentioned river. The water of Burnt Hill is very bright and clear, and we could see a few trout darting about in it as we crossed. We made our headquarters in a little camp distant about a mile from the stream. This was built and formerly occupied by a hunter; there was in it a stove and rude bedstead, which latter we covered with freshly-gathered fir boughs, and tired enough, laid us down to rest, some on the bed, others on the rough floor.

About midnight we were awakened by a sudden thump on the spruce bark covering of our camp, and some one called out, "What is that?" One of the party who had spent the summer alone in this camp as guard, said from the floor where he was lying, "Oh, it is only the mink; he often does that; he is jumping about on the roof of the camp, and would have come in, but he knows there are strangers here." In the morning we heard the story from the watcher Patchell, who had acted as a guard over the oats, flour and other articles which had been left at this depot during the previous winter. He said that some time in the month of June he had caught a large bear in a trap, and after skinning him had brought a piece of meat with him in a bag, which he left at the door of the camp. In the morning he found a hole in the bag and a large part of the meat gone. A little observation showed him that the culprit was a mink who resided under a brush heap close to the camp. As Patchell showed no enmity to this animal he soon got so tame that he would run into and about the camp in the afternoon and evening. He was very fond of fish, especially of trout, of which Patchell caught great quantities in Burnt Hill. He said that he often used to amuse his lonely hours (for he had no companion) by fastening a trout's head to a piece of string and throwing it out to the mink and then dragging it away. The little brute would hold on to it as long as he could, and when it was pulled away from him he would snap and snarl at Patchell, exhibiting great rage.

The guardian of the depot also informed us that he had shot during the summer around the depot more than three hundred squirrels, which had come there to get some of the oats and flour which were in the storehouse. The squirrels must have some means of communicating the fact of the presence of food to one another, as in these thick and gloomy forests one may travel for several days without meeting one of them.

Not far from the depot there was Beaver Brook Lake. A hunter who was one of our party informed us that it was a great place for black ducks and that he had got as many as fifteen there in one day. A walf of a mile and a half, part of the way on an old timber road, the rest through the woods, brought us to its shores, which we cautiously approached crawling through the thick branches of the low cedars by which they were surrounded in this place; four or five hundred feet to the left we could see a large flock of black ducks feeding among the rushes close to the shore. Two of the party, leaving the others behind, crawled along until they got within gunshot and fired, but only two were secured. On our way back to the depot we shot some partridges so that the next morning we had an excellent breakfast on game. The black ducks were especially fat and good. This is a famous country for black ducks. McKeel Brook Lake, which can be readily reached from the Burnt Hill portage, about the first of September abounds with these fine birds as well as with other water fowl; caribou, too, seemed to be plenty as their tracks were abundant. Indeed we saw where a hunter had killed one, taken the skin and left the carcass to rot in the woods.

By means of chopping the brush and fallen trees out of old lumber roads we were enabled to take our horses a day's journey further to the east, to an old lumber camp on the Clearwater, a stream of very clear cold water about two rods wide and from a foot to eighteen inches in depth. It was bounded by high and steep hills, while the narrow rim of low land at their base was covered by a thick growth of tangled cedar and low shrubs of various kinds. We prepared to remain at this camp for the night.

The air had been full of smoke for several days, but this night it was so thick as to completely obscure the stars. Indeed only a few struggling rays of light reached us from the red and lurid moon. We had begun to feel uneasy lest the fires from which this smoke arose should overtake us on our road; but about midnight the flood gates of heaven were opened and the water fell in torrents.

In the morning when we looked out of our rude habitation everything was changed; the air was cool and bracing and the sky cloudless and of the brightest blue, while the pearly drops which yet hung on the leaves of the shrubs glittered like diamonds beneath the light of the early sun, and from the autumn leaves which were one by one here and there slowly falling from the trees.

The evening before when we were entering the camp we had noticed a strange freak of bruin, who had evidently been a frequent visitor there. A paraffine lamp which the lumberman had left filled with oil had been removed by him and left outside, the body of the lamp in one place and the chimney in the other, and we could see the marks where he had been rolling himself between these, which were yet unbroken. The bear seems to have a great liking for this oil. On our road out we had seen where one of them had lately been scratching around the roots of a spruce where some of the fluid had been spilt the year before, and the old hunter who was with us said that he had noticed that bears frequently visited this spot and scratched around the roots of this spruce.

So soon as we had got everything packed up we commenced wading up the stream, our horses, with the loads now on their backs, doing the same, as we found that we could walk easier and quicker up the gravelly bed of the Clear Water than through the tangled brush on its shores. A mile and a half of this wading brought us to an old hunting camp, from which a blazed or spotted line led in a northeasterly direction to the summit of the high hardwood-covered hills which lie between the two branches of the Miramichi River. Following this, evening brought us to another hunting camp, situated in a little valley among a magnificent growth of beech, birch and maple. On three sides of this there were high, semi-oval shaped hills covered by hard woods to their very summits. Through the green leaves by the slant rays of the sun I could catch a view of the Clear Water Mountain, whose conical and elevated summit was covered by a thick growth of dark green fir rendered black by distance. Not very long after sunset star after star came into view until the whole twinkled with the brilliancy of those which glitter in the forehead of the Arctic sky. We slept well that night, as each of us had carried his load, and our journey was all uphill from the shores of Clear Water to this camp.

As our hunter had left some beans and other provisions hidden here from the previous winter, we concluded that we would make use of them. In the morning I went with him to the place of deposit to notice in what manner he circumvented the wiles of the bear and squirrel, both very cunning animals. The plan which he had adopted was this: He had cut down a small fir, leaving five or six feet of the stump; the fir, which was a long one, he had trimmed smooth. The beans and other provisions he had put into an empty flour barrel which he had enveloped completely with white birch bark, which he had bound around the barrel with the small iron wire which is used for bundling hay.

The barrel thus protected from the effects of rain, he had suspended it to the smaller end of the fir by means of a piece of the same wire. He then had laid the lower part of the fir on the stump, pressing down the butt of this fir which elevated its top, to which the barrel swung, to a height of twenty or thirty feet from the ground, just as you see the bucket dangle from the top of the old-fashioned well poles. The end of the fir was well loaded, so as to keep it in its proper place, and as bruin did not know enough to remove this load and dare not venture to climb out on it, and as the squirrel could not climb down the wire to the barrel, everything had remained just as good as when it was first placed in the barrel.

Moose seemed to be tolerably plenty in this country, as we frequently saw where they had bitten off the moose woods or peeled their bark. After a comfortable breakfast we shouldered our packs and continued our journey, still over high, hardwood-covered hills. One of these was more than three-quarters of a mile long; this was the divide between the two branches of the Miramichi, and the view from it was lovely. Nothing was to be seen but forest-covered hills rising one after the other as far as the eye could reach, all adorned in the full glory of autumn, red and green here and there fading into yellow; while now and then one would get a view of some silvery lake wooded to its very edge. A large one lay not more than a mile from us in a deep valley. To the north we could see Clear Water Mountain not more than five miles distant from where we stood, while far off to the north dimly blue were to be seen the Blue Mountains, south of Tobique and more to the eastward the high range which divides the streams running into the Bay of Fundy from those which discharge into the Great Bay of Chaleur. Toward the afternoon we had descended into the valley of one of the western branches of the Little Southwest Miramichi, the growth here being largely of fir and the ground very stony. Our route became very rough and we were very glad to pitch our little cotton-shed tent before evening in a grove of hardwoods and fir, the former being of small size. We used a large white spruce for back logs for our fire, which we required of good size, as the nights were becoming cold.

In selecting a camping ground one ought always, if possible, to secure one where the level of the fire shall be a little above that of the bottom of the tent, as in such case the fire is reflected by the back logs into the tent; indeed, there is much more in this and in securing large back logs for the fire in order to keep one's self warm, than in almost anything else. Good back logs and good hand junks are absolutely essential to a good fire. "Hand junks" are the sticks which are placed under either end of the logs which are put on the fire so as to elevate them sufficiently to secure a good draft. They perform the same duty as the andiron did when we burned wood instead of coal. In the morning when we got up the fire had burned away the moss with which the stones were covered, and there were but a few embers left in a hole among a lot of angular rock fragments; indeed, in this part of New Brunswick there seems to be hardly any soil, and the wonder is how vegetation can be sustained. We had to wait here for more provisions, Patchell and his son having returned to the depot for a load.

As we were to have some idle time here, we concluded that we had better spend it in making a log canoe out of some of the few scattering white pines which were to be found not far from the bank of the stream which in places was navigable for loaded canoes. After breakfast we went to one of these which was large enough for our purpose. Two of the men who were with me sounded it on either side by pounding it with their axes, and pronouncing it good proceeded to chop it down with much labor. There proved unfortunately to be a small flaw in the heart; and condemning it, we cut down another which proved to be perfectly sound. Before felling the large white pines the woodsmen cut down small trees for bedding on which they fell them, and thus they are prevented from breaking.

Our cook, who was a handy man, aided the hunter to line out his canoe, at which they soon commenced chopping with their axes. It is astonishing how quickly the tree begins to assume the shape of a canoe, and how neatly they hew and trim it down with their axes alone. The only implements used by the men in this case to commence and complete the work on this canoe were their axes, an old, new land, or grub hoe which one of the men found in the camp at the Clearwater, and their crooked knives. This peculiar knife was in use among the Abenaquis Indians on St. John River as far back as the latter part of the seventeenth century. It is nothing more than a long, stout-backed knife, curved at the furthest extremity from the round handle, into which it is firmly fastened, and which is held by all the fingers in the palm of the hand, and shavings are removed from the axe handle or other article under process of manufacture by drawing the knife toward the person using it, instead of from him as is done when using the common jack-knife. A handle had been made and fitted into the grub hoe which the cook had sharpened some way or other, and by its use as an adze, and with the help of the crooked knife and axes, in a day and a half three men made one of the prettiest log canoes I had ever seen. The place where it was made was about a quarter of a mile distant from the still, a deadwater in the stream, which deadwater was four miles long. They soon brushed out a way to the bank of the stream, came back, shouldered the craft, and with some half-dozen rests brought it to the water, where it proved as good as it looked. He had some paddles made from a piece of good hardwood, so that we were all ready to make use of our new vessel. The hunter jumped into it and took it down the stream to look for ducks, which he said were plenty in the locality. The rest of the party retired to our little tent for the balance of the afternoon, now well advanced. Several times while we were lying in front of the fire we heard the sound of the hunter's gun as it re-echoed among those ancient hills, and we knew that the sound meant a prize of some kind.

Just before night Patchell and his son Archy arrived very heavily laden. It seemed that the latter and another young fellow who were driving back one of the horses we had brought to the Clear Water, the color of which was gray, were astonished at a fine caribou trotting up to the animals in the most unconcerned manner possible; when he was within fifty or sixty feet of the horse, Archy, who had a gun loaded with small shot, fired at him, when he soon disappeared in the woods. The caribou has been known before to do the same thing.

Just before night closed in we heard our hunter's gun for the last time. It sounded far off toward the foot of the deadwater, then the silence of night set in. It was a dead calm, and no sound was to be heard but that of the crackling of the spruce back logs as a spark now and then flew from them, or that of our own voices as we talked in somewhat subdued tones; we did not even hear the voice of Kook kookus, as an Indian boy of seventeen who formed one of the party called the owl. And this should have been his abode, for it was dark and gloomy enough to answer for such purpose.

The night was passing along and yet no hunter made his appearance. At last Frank (the Indian boy) said to one of the men, "Dan, come, let go and look for Henry (the hunter)." As there were some white birch trees, Frank soon peeled the bark from them and made several torches. Lighting one and taking the others under their arms, the two started off for the deadwater, distant half a mile. They soon got out of our sight.

Twenty minutes or half an hour had elapsed when a faint halloa was heard in the distance, then another nearer. At last a ruddy glow shone upon the tops of the trees, and in a little while we saw by the light of the torches three men approaching, one of them loaded down with black ducks which he had shot in the deadwater.

Molly (for thus we had named the canoe in honor of Frank's dusky love) was a charming craft, the hunter said, and would prove invaluable to us when we got down to the lakes on the head of the Little Southwest Miramichi.

HYBRID WOLVES.

Editor Forest and Stream:

I notice the reference by your Philadelphia correspondent to the supposed hybrid wolves recently born at the Zoological Gardens here. Hybrid wolves have always been very common along our western frontiers. I have seen several of them, sired both by dogs and wolves, and all I have seen have resembled wolves rather than dogs. While Minnesota was yet an "Indian country," I was living there and wolves were tolerably abundant, particularly the prairie wolves. Near my residence I had a rough, open poultry shanty. In one corner I had a large Brahma hen upon a nestful of eggs, patiently awaiting her chickens. Early one morning I heard an outcry from this hen. Seizing my loaded rifle I sprang to the back door and saw the old hen running round the shanty, followed by a large prairie wolf with feathers in its mouth. I ran toward the shanty, and as the hen came around the wolf was barely a yard behind, but seeing me it stopped suddenly and forgot to start again, having met a rifleshot. Beyond a serious loss of feathers the hen had not been injured, but at once resumed her duties. Upon an examination of the wolf my neighbors and myself were convinced that it was a hybrid, though the difference was not perceptible a short distance away, and especially when the animal was moving.

One of my neighbors, about one-fourth of a mile distant, had been losing some of his poultry in a thicket near his house. He had caught glimpses of a wolf in the thicket, and had now thought that my rifle had stopped the mischief. He was no gunner, but had a musket heavily loaded with buckshot behind a door which opened within thirty yards of the thicket. A few days after I had killed the hybrid wolf I heard the heavy report of his musket followed by the retreating yell of a dog. As he was not the kind of man to be killing dogs, I ran over to see what was up. As he was about coming out the door next the thicket he saw a prairie wolf just coming out of the thicket, but which stopped instantly. His musket being in reach he at once seized it and fired upon the wolf which dropped in its tracks, and at the same time a yell in the thicket beyond betrayed the presence of an unseen dog, which ran yelling out of the thicket and over the ridge beyond. It was a medium size strange cur dog. An examination of the dead animal showed it to be unmistakably another hybrid wolf and almost the *fac simile* in appearance of the one I had killed a few days before, but this one was a female and evidently in heat. We

passed into the thicket to see the effect of the buckshot upon the bushes. We saw rather more than we expected, for within about twenty feet of the wolf lay the lifeless body of a fine Newfoundland dog owned by a farmer about two miles away. After a brief consultation we concluded to bury the animal and keep our own counsels. This was in 1859, and I have finally concluded to tell of it.

MILTON P. PEIRCE.

PHILADELPHIA, June 22, 1885.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

43. *Dendræca cærulescens* (Linn.) Baird.—Black-throated blue warbler.

This species is never common in the extreme southern part of the State during spring migration, but much more abundant north of the parallel of 43°. All of the lists embracing the birds of our southern counties agree in calling this species a transient. Several writers consider it a migrant throughout the lower peninsula, but this is certainly an error, as the birds are found abundantly in many parts of central Michigan, and further north during summer.

The birds arrive in Southern Michigan usually in early May, as a rule, but occasionally as early as April 25, and sometimes not until May 14. This season the first birds were seen on May 12, but it has been a very late season. The males appear first and are not followed by the females and immatures until several days later. In fact, it is quite rare to see a female during migration, and they are but seldom seen even during the nesting season, on account of their plain colors and quiet ways. The black-throat, although active in its movements, is not a rapid migrant, and may often be found in our deep heavy woods for days at a time in some favored locality. In migrating, the birds keep pretty well among the lower limbs, and even on the ground and around piles of brush in the woods. They are occasionally found in the city but never abundantly. When the birds reach their nesting haunts, however, the upper branches of the tallest trees are selected, and in pineries, where they principally congregate during the breeding season, it is often difficult to secure specimens, owing to their distance from the ground. The habit of feeding in the very tops of the pines is singular when we consider that the nests are placed quite near the ground.

Upon arrival, or soon after, the birds are heard singing in the woods, their presence with me being usually detected by their song, which is highly characteristic and not like that of any other bird of my acquaintance. The song, to the uninitiated, is somewhat like the notes of the golden-winged warbler, and the resemblance is often puzzling to the young collector; but by a little care the two may be readily distinguished. The song of the black-throat, like many other songs of birds, is, if not variable, certainly to be described differently at various times. As an instance of the peculiarity of either writer or bird in the varied description of song, I will give here the changes of notes as recorded during several years. In 1882 I have described the song in my notebook as *chree-chree chree zreeeeee*, again *chree-chree-chree chreeezrrrrreeeeee*, with a strong *z* sound. Again, later, the notes are given as *scree-screee-screeeee*, and again, the last effort being from observations of 1885 taken the past May, is given *scree-scree-dee-dzee-dzeee*. As now remembered, the last description appears to me more nearly correct, notwithstanding that I gave careful ear to each song described previously, and closely studied the descriptions of others. While singing, the bird is sitting quietly on a limb and sounds forth his little drawling strain very leisurely, repeating it every thirty seconds or oftener as he searches among the budding foliage. Later in the season, and when the nesting is in progress, the birds are more often heard than seen, and a great many can frequently be heard in the lofty pine, the thick cedar or gloomy hemlock, when not a bird can be discovered.

Only one nest has as yet been secured in the State, and as the eggs and nesting habits are but little known generally, it may be well to describe them here. While collecting in company with C. W. Gunn, Esq., in Ottawa county, about 43° north, June 6, 1878, he discovered a nest at the edge of a deep pinery which contained four fresh eggs. The nest was a neat structure, and closely resembled that of the hooded warbler (*M. mitralus*, being composed of bleached maple leaves and lined with fine roots; it was placed in the crotch of a wild raspberry bush two feet from the ground. The eggs were pure white with reddish dots arranged more particularly at the larger end, where they formed almost a ring. He secured the male bird as it left the nest, so that the identity is positive.

The black-throated blue warbler is not as yet recorded from the northern peninsula, but it is undoubtedly a summer resident there. It is a well-distributed species, and during migration is recorded from nearly all parts of the State. Sager embraced it in his list, the first published in the State —1839. It begins its southern journey in August, and becomes quite common by Sept. 10, remaining within our boundaries during the month. It is not tuneful in its southern flight, and is only detected by its call note and vivacious movements.

44. *Dendræca coronata* (Linn.) Gray.—Yellow-rump warbler.

A common, well-distributed species, known to all collectors, and embraced in lists from the extreme southern boundaries to the most northern point of the upper peninsula. It is one of our earliest arrivals in spring, being preceded only by the long-billed water thrush some seasons, and is the last member of the family to be seen in late autumn. A pleasing bird with very agreeable manners and liked by all. First arrival, according to my records, April 13, but I doubt not it occasionally appears somewhat earlier. We may place an average arrival at April 20, as it does not appear until nearly the last of the month some seasons. I have met with it in 43° 30′ by April 16. It is not a summer resident in the State to my knowledge, and I have yet to meet with it in June, July and August. Covert, in his "Birds of the Southern Peninsula," does not embrace this bird as a summer resident, 1878, but in 1881, in his list of the "Birds of Washtenaw County," he embraces it as a rare summer resident. No other list embraces it as a summer sojourner.

About the middle of September, often earlier, the yellow rumps become abundant, and so far as my observations extend, are much more common in the autumn than during their vernal journey. In fact, the birds are more common during late September and October than any others of the family. Occasionally individuals may be seen as late as Nov. 1, but this is unusual, although I have no doubt but that they remain until Dec. 1 in very mild seasons. The song I have never heard until this season; it consists of the syllable *splee* uttered generally seven successive times, occasionally only six times, again eight. The song is not vivacious, and lacks the spirit of the call note, the syllable *chent*, which is known to all, and recalls so many pleasant days in budding woods in early May. The yellow rump is a very active bird, ever on the move, and of inestimable service as an insect destroyer.

45. *Dendræca maculosa* (Gmel.) Baird—Black-and-yellow warbler.

Not embraced by Dr. Sager, 1839. First listed by Cabot, 1850, in his "Birds of Lake Superior," a list of little merit, but nevertheless containing about 70 species of the northern peninsula. It is found in nearly all catalogues of the State, but is considered abundant by no writer of my acquaintance.

Usually arrives in Southern Michigan about May 12, but occasionally observed by May 4, and sometimes not seen until May 20. Never common so far as my observations extend, and I have failed to see it more seasons than I have observed. It is, in fact, as reported by several authors, an irregular transient. Only one list, that of A. B. Covert, gives it as summering in Michigan, and all other writers agree in calling it a migrant. It is a silent but active bird, often appearing in low bushes, but more frequently well up in tamaracks or other marshy tract trees. It is occasionally found in cities and also in orchards in thickly settled localities where forests are few. It cannot be claimed as a rapid migrant, but the birds are frequently observed but a single day or even afternoon in a locality. During their stay with us only call notes are heard, and I have never as yet listened to their song. It is rare, indeed, to see one after May 23, and I doubt very much if they remain south of 44° north latitude, at least trustworthy observations to this effect are not yet received. The fall migrants reach us about Aug. 25, and remain in Southern Michigan for a fortnight. I have yet to meet with a specimen after date of September 21. I know nothing of their nesting habits.

POLYANDRY VS. POLYGAMY.

IT was about a year ago that I wrote to the FOREST AND STREAM a brief account of the conduct of two male and one female Virginia quail which had been confined together for some time, and had apparently lived in perfect harmony. An interesting case of converse relations has just come under my observation.

Early this spring I placed in an outdoor coop a trio of young Virginia quail, a cock and two hens—all birds hatched and reared in confinement, and the two sexes not related. It has been my opinion that quail is polygamous in his nature, or would be if he had opportunity, and this arrangement was made for the especial purpose of giving the theory a practical test. Everything moved along harmoniously till about the 30th of May, one of the hens in the meantime having begun to lay.

But on the morning named I noticed that only two of the birds were visible, and supposing that the missing hen was on the nest I gave the matter no attention till afternoon, when on entering the coop I found her wedged in behind the dust box in the corner, bruised and bleeding, with the feathers half stripped from her back. When I released her from her refuge and she came staggering out into the coop the cock bird attacked her like a little fury that he was, regardless of my presence, and would soon have finished her entirely if I had not interfered. After a day's separation I placed the discarded hen in the coop but protected by a small slatted box. The cock bird paced up and down unceasingly in front of the box, while the hen seemed as anxious to get out as he was to get in. At the end of twenty-four hours' confinement in the box I released the hen once more. The reconciliation was apparently complete, and the three again seemed to make up a happy family. But fortunately I had taken the precaution to arrange a retreat for the member who had previously proved *de trop*, and in this I found her late in the afternoon. Again I took her out, and again I returned her, only to see the same apparent reconciliation. But on the second return the male bird showed himself not to be a monogamist from principle so much as for other reasons, for this time he fixed his erratic heart upon the previously discarded spouse, and drove his former love into retirement. This was too much for me, and I at once removed the wife whom he had twice thrust off, and have left the two other birds together ever since.

It is perhaps hardly fair to assume that this is entirely conclusive. The various removals of this rejected hen established that the one the cock bird had first chosen was the one that had begun laying. She has continued so doing after the removal of the odd female (which, by the way, was the larger and finer looking of the two), and now has a nest containing seventeen eggs. Had both hens begun laying and nested at or about the same time, would the male have quarreled with either? I cannot say; I only know that in all prior relations with the male, both hens stood on the same footing.

In the case cited last spring, had no opportunities for nesting and had not begun to lay. Had she done so, the relations between the two male birds might have become very different.

JAY BEBE.

TOLEDO, O., June 17, 1885.

FECUNDITY OF COLAPTES AURATUS.—A collector of this place has thirty-five eggs which he obtained from a single nest of the golden-winged woodpecker, while another collector obtained ten from the same nest, making a total of forty-five eggs from a single bird in one season. I will copy his notes, as it may interest your readers: "May 13, 1884, found nest and obtained six eggs; to-day May 17, took 3; May 23, 6; May 28, 1; June 2, 5; June 9, 3; June 13, 4; June 19, 2; June 26, 5.—VIOLET S. WILLIAMS (Coralville, Iowa, June 14).

THE PILOT SNAKE OR RACER.—On May 22 Mr. Chas. H. Neff, of Portland, Conn., killed a racer (*Coluber obsoletus*) which he said measured 7 feet 2 inches. I secured the specimen on the 24th, and after being in the sun on a bench near the window in his woodhouse for two days it measured 6 feet 8 inches. How long does this species sometimes grow? The specimen is now in the Museum of Wesleyan University at Middletown, Conn.—JNO. H. SAGE (Portland, Conn., June 8, 1885).

A "BROOD" OF WOODPECKERS.—Stewart Ogilby, the son of W. S. R. Ogilby, of Staten Island, reports finding a nest of the highholder (*Colaptes auratus*) which contained nineteen young ones, alive and in good condition. This is a remarkable case, although the golden-winged woodpecker is notorious for the number of eggs which it may lay in a season.

THE GREAT WOODPECKERS.—I have been a resident of this part of Florida for ten years, and since being here I and my two brothers have killed between twenty and twenty-five specimens of the ivory-billed woodpecker (*C. principalis*), and we occasionally see one now, though they are very rare and hard to get a shot at. We killed these birds for a taxidermist in Palatka, J. H. Fry, and one in Sanford, G. B. Frazar, of Mt. Auburn, Mass. I killed as many as three at one time. The natives here will tell you you can find plenty of them, meaning the pileated woodpecker, or pine duck as they call it. The two species look very much alike to a casual observer, but to a person knowing them there is no chance of confounding them. Their notes alone will distinguish them, and the ivory-bill has more white on it. The female has a black head, which in the other is red as is the males. I have seen a female around here for the last year, but the last I saw of her was on May 4. I tried to get her but failed as she was exceedingly wary. There was a friend of mine collecting for the Smithsonian who was very anxious to get it but we failed, and I have never seen it since. I have often thought it strange that here on the St. Johns River, only 160 miles from Jacksonville, that such a rare bird should have escaped the army of hunters which annually infest that river. I suspect it is owing to the similarity to the pileated.—W. A. D. (Hawkinsville, Orange county, Florida, June 12).

DEVOTION TO ITS YOUNG.—The following item shows the remarkable attachment of the female Baltimore oriole for its young. While out collecting to-day I found a Baltimore oriole's nest about twenty feet from the ground, the female bird being on the nest. I cut a long pole with a hook on the end to pull the nest within my reach. The bird sat in the nest all the time, until I pulled it within reach, and allowed me to lift her out of the nest. I held her in my hand for about five minutes. I never heard anything like it before.—H. C. KIRKPATRICK (Meadville, Pa., June 5).

Game Bag and Gun.

CHEYENNE TO INYAN KARA.—II.

WE crossed the Belle Fourche at the 70L and went nearly north. We were the better part of the day searching for a camping place, and found one, at last, where some hunter had built himself a brush shanty and put up several tons of hay. There was a little spring with a water hole near by. The locality was good enough for us—especially the hay. A merciful man is merciful to his beast, and we appropriated what we wanted of the hay and took our chances.

Tom started off the next morning after a deer. The German band went in another direction. Curtis and Foucab in yet another direction. The crippled Doc made a short trip on his own account, while the big sailor remained in camp to bake bread and putter around among the tin cups and plates. Betty, Tom's dog, remained in camp also. Betty was a very beautiful animal and becomingly attired with a half inch manilla rope at one end of which was securely fastened a wagon. Betty was a perfect lady in all her actions. She allowed no nonsense. You might say to her, Good morning, Betty, and pat her on the head once or twice and then she would be through with compliments and the like for that day. The next twenty-four hours was business or nothing.

"What did you see, Doc?" said the sailor as the cripple came stumping into camp.

"Signs, signs, and plenty of them."

"Any fresh ones?"

"Some were made this morning. I think they must have been made by a bunch of Scotty Miller's mares. They range through here, don't they?"

"Well, you didn't come up here hunting mares."

"No, but those were all the signs I saw excepting some 101 cattle?"

"Hark, there goes a rifle; and another, three, four, five. That sounds as though it might be Tom, he went out that direction."

Then there was quiet once more. You could have heard a gum drop. A half hour later Tom returned to camp for a mule with which to pack in a deer. He said he had dropped one deer, and then another, and also a third, which ran a few rods and fell, as he supposed, dead. While bleeding the second one, the first one rose and started into the woods, and he could not find him nor the third one either. He took Betty back with him, and if the deer are badly crippled she will come on to them. She can down the biggest of them when she secures her favorite hold on the nose. Tom returned a couple of hours later with one white-tail buck. He could not find the others. Probably the one was all he saw. He thought there were three, and he never accounted for the five shots we heard either, for the rest of the hunters came in early, and all denied having fired a shot. After we became well acquainted with Tom we knew precisely how to estimate him. Moreover, he very kindly and frankly told us we must not believe all he said, and we accepted his apology. But the whitetail buck was a very nice one and did credit to Tom's five shots. Curtis and Foucab reported nothing but signs, ancient and modern. The German band *idem*.

While smoking our after-supper pipes we were visited by a couple of professional hunters, one of whom had but one arm. They were camped a couple of miles from us. They were shooting for the Deadwood market, and were not meeting with much success. They had with them a burro, which packed their stores to the hunting grounds and their meat to market. He was burro size, not much larger than a ten-cent piece, and the color of a blacktail deer. He was a knowledgeable creature, his owner said, and to be depended on every time.

Fred, one of the German representatives, to the burro master: "I don'd vas vant to pe onberdinent or any dinks like dot, bud I nodice me you don'd has got bud von arm, und I subboses a dousand men ask you vot vas dot matter mid it, aind it?"

"Well, my friend, that was a fair question, and if you will promise me not to say anything more about it, and ask no more questions, I will tell you how I lost it."

"Dot was fair, und I bromise me to say nodings more aboud him."

"It was bit off when I was in Missouri."

"Dot was poody goot. You was from Missouri, hey? Ah, ish dot so-o-o? You must have peen von of dose first Mis-

sourian dot coomes to dis western coundry, Von of dose five hundred dot makes de droubles at Omaha."

"What five hundred was that?"

"It vas pefore dose pridge vas pilt und de beebles had to plindfolt de Missourians pefore dey vould go to the ferrypoat on. It vas bit off, hay? Vell, I dinks I goes me to mine leedle ped und schleep."

The burro man and his companion bid us good-night, and we rolled in, some underneath the wagons, some in the brush shanty, and all on the cold, cold ground again; but gentle sleep was hovering o'er us, and when she settled all was peace and quiet.

The next morning we missed several of the horses and Foucab saddled a pony and went in quest of them. He found them all below the camp of the burro man. Foucab said he rode along, looking carefully on all sides through the timber. "Presently I saw what I supposed to be a deer standing in some low bushes. He had not seen me, so I dismounted and walked and crawled toward him to see how near I could get to him, and all the while I was kicking myself for not having taken my rifle with me. I got within thirty yards of him. His head was hidden from me behind a tree, but his body was exposed and the nicest shot it was I ever saw, just behind his shoulder. The wind was in my favor, and still crawling carefully I got within ten yards of him, when I jumped up and shouted at the cussed old burro. It was a fortunate thing for me after all that I did not have my rifle, I'd have been a dead burro ahead and seventy-five dollars behind."

"Yes, you would if you had hit the burro."

The boys, old and young, scattered again through the timber, the German band—still a close and exclusive corporation—going their way; while Tom and Curtis hunted together, and Foucab hunted with Foucab, while Doc and the sailor remained in camp, the sailor from choice and the crippled Doc from necessity. Several hours later there was a most furious fusilade commenced apparently about two miles from camp. Doc and the sailor listened and counted one, two, three, four and up to eighteen, and then came a short pause, and again the firing commenced. There was more shooting than ever was seen around a fifteen-ball pool table.

"Sure enough the boys must have them corralled now. We'll probably have to take the big wagons and bring in the victims of Tom's unerring marksmanship, and you may be certain that Curtis is securing his quota, and perhaps Foucab, too. Fred and his companions are probably missing this chance, as they went in an opposite direction and no shots have I heard from their way. You can bet that Tom is downing them in great shape." This from the sailor.

By the time supper was ready our three domestic friends made their appearance. We could invariably count on Tom when any meal was ready. A favorite expression of his was "let's eat." They returned empty-handed, unable to account for their failure to bring in any venison. Tom and Curtis had run across a buck at the head of a little draw, in which was a dense growth of quaking asp. If "unhitched" is an allowable word, that's what they both did, and missed the buck in sight; and then the quaking asp seemed alive with startled deer. Legs were trumps and the deer playing them for all they were worth. Foucab hearing the first two shots started up the draw and headed off the bunch, which then turned back toward Tom and Curtis, and from the firing and its result it was difficult to tell which were the most demoralized. It was a great deal like two school boys, whose companions were vainly endeavoring to egg them on to a fight; one was afraid and the other "dasent." Tom was prolific in excuses and unembarrassed in his presentation of them. He was afraid of hitting Foucab or Curtis or the mules and was confident he had hit several deer, which could not have gone far before dying, but Betty's inability to trail any wounded deer invalidated that theory and Tom was really up a stump for a plausible reason for his dismal failure. He might have accounted for it with the expressive word "rattled."

Hans and Albert came in early with a doe across their saddle mule, and the burro man and his friend paid us another visit during the evening. Foucab related to them his early morning call on their burro. "That puts me in mind," says the burro man, "of what came near b'ing a very serious mistake on my part. When I first brought the burro into the woods several years ago, I tied him to a tree and started on a deer track. It was on a side hill. Presently I lost the trail, but continued hunting all the same, and must have been considerably turned around, for after an hour or so I came in sight of my burro. I could only see his neck through the trees, and I thought, now, Mr. Deer, you are my venison. It was in some respects the worst shot I ever made, but a very lucky one, for I missed his neck entirely and only bored a hole through his ear. If ever you heard an unearthly bray, it was about that time, but he was more frightened than hurt."

"Dot vas most as pad mesdake," says Fred, "as mine brodder Villiam makes oonce. He lived in Iowa stade. He vent to a neighbor of his, Misder Barmer, who vas a gunschmidt, und say to him, 'Misder Barmer, vill you loan me your beech-loater? There vas von skunk or veasel or somedinks dot vas coome into mine hen houaze avery night somedimes, und he youst shaw de feathers dot vas on mine hen's packs und dher vings, und breddy soon dhey dond vas got noddings to vear.' Vell, Misder Barmer vas a nice clever man, und he loaned mine brodder von of his beech-loaters, und vhen mine brodder dook him back in dot mornings, Misder Barmer onquired what he have kill. Mine brodder he say, 'I vent me in dot houaze by mineseluf, und I sees some crate pig dings pobbing up und down, und I turned me loose dot gun. Vell, it make such a glatter doh I shumps me pack und makes the door to, und I goes out acain shust a leedle vile ago und, by Shimmeni, vat you dinks I kill? It vas mine vife's bet gander, und I'm all proke up by mine frow, by Shimmeni, und if she vould only run avay mit some odder man's vife I vould go me back to Shermany.' Mine sister-af-law do him up fine."

"That was almost as bad a mistake as I made with my burro."

"It vas a tam sight badder misdake as you make mit your burro. Mine brodder vas a schmard man, and you vas a Missourian, und vat you expect?"

The burro man was evidently no favorite of Fred's. Fred could never forgive him for telling him how he had lost his arm, and the burro man was fortunately good-natured enough to take Fred's raillery at his native State pleasantly. The sailor man seemed as though he were fearful a quarrel might ensue, and busied himself by taking us aboard ship and spinning some of his experiences on salt water.

Bear Creek, Wy. MILLARD.

"SPICEWOOD'S" GAMEKEEPERS.

REPORTS from my gamekeepers (you perhaps remember that I mentioned in a former note that I had interested some of the farmer boys by the jingle of a silver dollar to feed the birds) are that quite a number of coveys of quail have wintered over, although a good many that were about during part of the winter have had their whistles frozen up. Last season there were more birds than in years before, and but for this severe and long winter we should have had excellent shooting. Have seen a good many pheasants; they seem to be able to take care of themselves, not only when Jack Frost is about, but when good shots and dogs are in the cover.

While fishing saw four wild turkeys. There are a good many on the mountains about here; they found it "hard picking" through this hard season; quite a number were seen in the farmyards feeding with the fowl there. Trout fishing has been unsatisfactory—a late spring and then dry weather. Happened to find an old mill dam away out in the wilderness and had some fine sport with the fish. Don't think the trout had ever seen a fly on a fish line before, so rather took the advantage of fifty-four nice fellows.

SPICEWOOD.

Centralia, Pa., June 19.

POSSESSION IN CLOSE SEASON.

Editor Forest and Stream:

Mr. E. A. Samuels, the President of the Massachusetts Fish and Game Protective Association, has prepared a digest of the various game laws so far as they relate to the possession of game illegally taken. Mr. Samuels says:

The plea is constantly made by game dealers and other interested parties, that, as the new system of refrigerating enables them to keep game for many months, they should have the privilege of storing certain species of game birds for their customers throughout the year.

Granted, for the sake of argument, that they can keep these birds through the hot months so that they are fit for food—this many persons deny—it can easily be seen that if any game birds are so stored and sold, there is nothing to prevent Massachusetts birds being killed and sold with them in the close season. This I have already shown.

If the dealers are permitted to have these birds in possession for sale during the months in which the killing of them is forbidden in this State, nothing can save our own birds, for it would be impossible to prove the killing, unless the gunner were seen to fire the shot.

The close season for market and field should be identical, just as it is in the other States, and our existing law, which gives dealers four months beyond the close season to sell certain species, should never have been enacted.

Objection, also, is raised by market gunners and unscrupulous sportsmen—men who care only to kill, and do not concern themselves in the preservation of our few remaining birds—to the provision by law that the possession of birds in the season in which their killing is prohibited shall be *prima facie* evidence that these birds were unlawfully killed. A single illustration will show the value of this provision. A market gunner with gun in hand, and his game-bag filled with woodcock, is arrested in the close time. On being arraigned, he coolly declares that he did not kill the birds found in his possession; but that he found some of them dead beneath the telegraph wires, and the others he had bought of another gunner in an adjacent town or even county. The officer who made the arrest cannot prove the contrary of this, he not having seen the birds shot, and the gunner escapes punishment, and goes out of court with the birds in his possession. Under such a law it would be next to impossible to secure a conviction; for, even if the gunner were seen to fire the shot, and even pick up and bag the bird, who would or could swear to the identity of that particular bird, if there were others of the same species in the bag?

Any law that does not make possession in unlawful times *prima facie* evidence to convict of unlawful killing is worthless. In almost every State in the Union, in their laws for the protection of game and birds, this provision is particularly made, and it has always been incorporated in our own State law. To show this, I herewith present brief extracts from the game laws of the different States, and respectfully ask of our legislators that, in the enactment of a new law for this commonwealth, they examine them, and incorporate in our law these provisions which are so universally regarded as of vital importance:

Rhode Island.—"Possession of any bird, during the time when the taking, or killing, or destruction of such bird is prohibited by this act, shall be *prima facie* evidence that such bird was taken, killed or destroyed in violation of this act."

New York.—"Any person violating either of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of $25 for each bird or animal so killed or had in possession."

New Jersey.—"No person shall kill, take, expose for sale, or have unlawfully in possession." (Species named in stated times.)

Pennsylvania.—"No person shall kill, expose for sale, or have in possession" (species named in stated times). "In all cases of arrests made for the violation of this act, the possession of the game, fishes, birds, animals, fowls, nets, or other devices, shall be *prima facie* evidence of the violation of said act."

Delaware.—"If any person shall kill, take, or destroy, sell, or expose for sale, or have in possession after the same have been killed" (species named in stated times), "such persons shall be fined," etc.

Maryland.—"No person shall shoot, catch, kill, or have in possession" (species named in stated times). "The possession of any of the birds or animals mentioned in the preceding sections, during any of the periods herein provided, shall be *prima facie* evidence of the guilt of the persons possessing the same."

Vermont.—"No person shall take or kill in this State" (birds named in stated times), "nor have in possession" (birds named), "taken or killed in violation to this section. The presence of a person without permission of the owner, with implements of shooting, trapping or fishing, upon land posted, shall be taken as *prima facie* evidence of a willful entry by him thereon for the purpose aforesaid," etc.

Massachusetts.—In this State it is now by Statute forbidden to buy, sell, or have in possession the species named in the close season, and "possession is *prima facie* evidence to convict." But the law now existing is faulty in many ways. By its provisions any person above the age of sixteen years may easily obtain a license to kill birds at all seasons, and as the law does not provide any limit to the killing, nor any penalty for wrong-doing, provided the person declares he is killing for scientific purposes, he may slay unrestrictedly. Some of these licensed bird-killers abuse their privileges, and destroy great numbers of our birds for commercial purposes.

Connecticut.—"It is unlawful to hunt or pursue, kill, destroy, or attempt to kill any woodcock, quail, gray squirrel or ruffed grouse (commonly called partridge) between the first day of January and the first day of October; and every person so offending shall for each offense (the killing or destroying or having in possession of each bird or squirrel, shall be deemed a separate offense), to be fined not more than $25."

"No person or transportation company shall buy, sell, expose for sale, or have in possession * * * for any purpose, any of the birds mentioned * * * during the period in which it is unlawful to kill such birds, under the same penalty as prescribed."

Alabama.—"It is unlawful, in any place in any of the counties named in this act, for any person to purchase, have in possession, or expose for sale any of the birds or game herein mentioned during the seasons when the catching, killing, or injuring the same is prohibited."

California.—"The possession of any of the aforesaid game, at a time when it is unlawful to kill the same * * * shall be *prima facie* evidence in any prosecution for a violation of any of the provisions of this section that the person or persons in whose possession the game is found, took, killed, or destroyed the same * * * * during the period when it was unlawful to take, kill, or destroy," etc.

Colorado.—"If any person shall have in possession any partridge, prairie hen, or prairie chicken, or grouse, at any time other than the dates above-mentioned, or any other of the birds or fowls mentioned in this section, at any time, it shall be *prima facie* that the same was killed, netted, ensnared or trapped, by such person, in violation of the provisions of this act."

Dakota.—"Any person who shall sell, expose for sale, or have in possession or custody (species named and times stated), is guilty of a misdemeanor, and liable to a fine," etc.

District of Columbia.—"No person shall take, kill, expose for sale or possess, dead or alive" (species named and times stated).

New Mexico.—"The possession of the above-mentioned animals or birds between the dates above named shall be *prima facie* evidence of a violation of this section."

Montana.—"Possession of the dead bodies or any part thereof of any animals or birds, mentioned in this act, by any person, shall be *prima facie* evidence that such person killed the same."

Louisiana.—"The possession of any animals or birds, during the periods when the taking or killing thereof is prohibited, except such as are domesticated, is *prima facie* evidence that the same were unlawfully trapped or killed."

Indiana.—"It shall be unlawful to sell, keep, or expose for sale, or have in possession" (species named and times stated).

Kansas.—"The having in possession by any person, company, or corporation, of any such birds, when the shooting thereof is prohibited, excepting the ten days above excepted, is *prima facie* evidence of a violation of this act."

Ohio.—"Whoever purchases, sells, exposes for sale, or has in possession any of the birds, game, or animals mentioned, * * * * when the catching or killing thereof is made penal, shall be fined not more than $25."

Nebraska.—"* * * Having in possession any of the named animals or birds between said dates shall be deemed and taken as presumptive evidence that the same were killed, ensnared, netted or trapped in violation of this section."

Virginia.—"The possession of any bird or deer herein mentioned within the period prohibited by this act is *prima facie* of its violation, and subjects the possessor to its penalties."

West Virginia.—"The exposure for sale of any of the birds or game mentioned in this act, during the time when the killing thereof is unlawful, is *prima facie* evidence that the same was caught or killed unlawfully."

Mississippi.—"If any person shall shoot, kill, sell or have in possession, or buy, offer for sale," etc.

Michigan.—"No person shall sell, expose for sale, or have in possession, for the purpose of selling, or exposing for sale, any of the kind or species of birds or animals protected by this act, after the expiration of eight days next succeeding the times limited and prescribed for the killing of any such birds or animals."

Oregon.—"Proof of the possession of any of the aforesaid animals, fowls, birds or fish at a time when it is unlawful to take or kill the same, in the county where the same is found, is *prima facie* evidence * * * that the person or persons in whose possession the same is found, took, killed * * * when it was unlawful to take, kill or destroy the same."

Wisconsin.—All persons are forbidden to "take, catch, kill, destroy, or wantonly molest or have in possession, when taken or killed" (species named in stated times).

Idaho.—"The possession of any of the dead bodies of any of the animals or birds herein mentioned is *prima facie* evidence that the possessor killed the same."

Iowa.—"The having in possession by any person, company, or corporation, of any such birds or animals, during such prohibited period, except during the first five days thereof, shall be deemed *prima facie* evidence of a violation of this act."

Minnesota.—"The possession of (species named), during the time when it is unlawful to kill or possess the same, shall be evidence that the same was killed at a time when such killing is herein prohibited."

Illinois.—"Selling, exposing for sale, or having the same in possession, for the purpose of selling or exposing for sale, any of the animals or birds mentioned in this section after the expiration of the time mentioned in this section, shall be *prima facie* evidence of the violation of this act."

Kentucky.—The possession of any of the animals or birds intended to be protected by this act, within the periods within which their killing or pursuit is prohibited, is *prima facie* evidence that the same were unlawfully caught or killed."

Georgia.—"The possession of such bird or animal, or the exposing of the same for sale, shall be *prima facie* evidence that the person possessing said bird or animal killed or trapped the same."

Missouri.—"It shall be unlawful to purchase, have in possession, or sell any of the game, birds, or animals specified—when the catching or killing is prohibited."

Nevada.—"It shall be unlawful within this State to have in possession, or to expose for sale, or to purchase, any of the birds, wild game, or animals mentioned in this act, dur

ing the season wherein the killing, injuring, or pursuing is herein prohibited."

MAINE.—"No person shall kill or have in possession, except alive, or expose for sale, any wood duck, dusky duck (commonly called black duck), or other sea duck, or plover, between the first day of May and the first day of September, or any ruffed grouse (commonly called partridge), or woodcock, between the first day of December and the first day of September following; or any quail or pinnated grouse (commonly called prairie chicken), between the first day of January and the first day of September following."

NEW HAMPSHIRE.—"No person shall" (in close season named) "take, kill, or destroy" (species named), "nor shall within the respective times aforesaid, sell, buy, or have in possession any of said birds."

The provision in relation to animals protected in stated months is: "If any person shall have in possession the carcase or hide, or any part thereof, of any such animal between the times within which the killing of such animals is prohibited, it shall be *prima facie* evidence that he has hunted and killed the same contrary to law." MASSACHUSETTS.

SOMETHING ABOUT FIELD SCORES.

I AM glad that my letter giving some details of a December visit to Chatham county afforded so much consolation to your correspondent "A. F. R.," of Belvidere, N. C. It is not my fortune to have the honor of his acquaintance. I wish it was. It would give me great pleasure to try the field with one who is so expert in the use of the gun at birds. I confess I cannot match the shooting which he did, nor do I know any one who can. I heard recently of a man who reported that he had shot fifty-four times and bagged fifty-two birds. When I see a man do that I will believe it, but never upon the unsupported testimony of the sportsman. If a man will go into the field alone, and shoot only when the bird is in open ground, giving the best of all chances, especially early in November, when many of them can barely fly, he might do it. But in December and January, when birds are strong, and half the chances are in the woods, no man can make such a score—provided he shoots at all he sees near enough to him. I have hunted with persons who were adepts in blowing their own trumpets, and extolling their prowess, but when with me they did no better than I. In open fields, when alone, and without apprehension that any one is going to get in his barrel before me, I can kill three-fourths, or more, of the birds I shoot at, but if I have a companion, and especially one who claims well, I think I am quite successful if I succeed in every alternate shot. When I use the word kill, I mean it to include only those which I put in my bag. During my last hunt, I think I shot seventy-two times. I bagged thirty-eight birds. Perhaps ten others were hit badly—but I did not get them. Some persons, I learn, count all the birds which they say were struck, and doubtless they have very vivid imaginations or extremely sharp vision, and see what ordinary mortals could not do.

Now, "A. F. R." must not suppose I have meant to question the accuracy of his statements as to his performance. Such is not meant. I am alluding to the boastfulness of some men who live much nearer to me than Albemarle Sound. It must be recollected that, as a general thing in the section where I hunt, a covey found in the stubble will take cover in pine thickets or in large patches of briers or swamps, or thick woods with much undergrowth, and hence that all the shots except those on the first rise of the birds are at a great disadvantage. Of course, if a man shoots a 10-bore cylinder and uses 1¼ ounces of No. 10 shot, he can kill more birds than he can with a 14 or 16-gauge gun with less than an ounce of shot. None of our sportsmen shoot larger than twelves, and several have fourteens and sixteens. One of our most expert sportsmen shoots with a 16-bore modified choke, and he not only gets more birds than any of us, but in my opinion there are very few who can equal him with any sort of weapon. He gets about two-thirds of the birds at which he shoots. He recently tried his skill in competition with some of the best shots in Virginia, and they acknowledged that they knew no one who with even a 10 bore could get more birds than he could. When, therefore, I hear of a man who alleges his ability to kill nine out of ten birds in an all-day's hunt, I can only say that if such a man were put on the witness stand, and I were on the jury, his testimony upon the subject matter at issue would have to be strongly corroborated before it would influence my judgment as to the verdict which I should render. Even then I should place far more reliance upon the statements of the corroborators.

Several years ago one of these blatant fellows visited our section of country with his dog and gun. He talked largely of his skill, and affirmed that if he did not get five-sixths of his birds he should think had done ge-whillikin bad shooting. (That was not the adjective he used as a qualifier. He took that very convenient one which fits all cases and conditions, whether good or ill, hot or cold, fair or foul, and to which the poverty of the human intellect sometimes—nay, very often, I am sorry to say—forces men to resort in order to the thorough completion and rounding of a description.) He went into the fields, shot twenty-five times and got five birds! He never indulged in his bragging any more in our neighborhood; but doubtless in other places, where his skill was unknown, he gained the admiration of unsophisticated auditors by his extravagant professions.

Now, I make no claims to special expertness. Many sportsmen can beat me, and beat me badly, particularly when the day is dark. My vision is not so good as it once was, nor are my limbs so agile. The right eye has lost far more of its former power than the left. I keep both eyes open when I shoot, and I shoot from the right shoulder. The right, or weaker, eye controls the line of vision. But yet I can kill and get more birds in a given number of shots than many who claim far more skill than I do. I sincerely wish that these "Big Ikes" would quit their portentousness and come down to the plane of truth.

I have little confidence in the statements often made as to the capacity of guns. Distance is frequently guessed, and the owner of the very remarkable gun is a full graduate with the highest honors in this department of the human mind. It is true a man is sometimes honest when he alleges that his fowling piece will surely kill a partridge (not a ruffed grouse) at sixty yards. His ideas of distance are rather crude, and a tape line would lessen it by many yards. No gun fit to be taken to the field for wing-shooting (Mr. Greener to the contrary notwithstanding) can be relied upon for even forty yards, as the pattern at the target will demonstrate. A very large majority of birds killed on the wing are dropped at less than thirty yards, and when the second barrel is used and the game is off beyond forty, the chances are against the shooter. I have owned quite a number of guns by the best makers, and among them those made by Scott, Greener, Westley Richards, Tolley, Webley, Williams and Powell, and not one of them had the power which some persons claim for theirs. The fact is, I have no desire to own such weapons. A full choke—indeed a fuller than choke—gun which will make a pattern at forty yards of 360 pellets of No. 7 shot, and distribute with exactness, would not do at a distance of twenty yards if the sportsman wants game for the table. Such a gun must be held with absolute precision. I prefer one which will afford a little margin. Such guns will serve for trap guns. But a decent sportsman would far prefer to bag ten wild birds who spring from the grass he knows not where, and take a line of flight he cannot foresee, to breaking fifty glass balls thrown from a trap and which follow a fixed law. WELLS.

ROCKINGHAM, N. C.

SPRING GRASS PLOVER.

DURING the beginning of the week woodcock were on hand "on the sly" at some of the game dealers' stands in Philadelphia; and this spring and summer quite a large trade has been done in this city by poulterers in grass plover and golden plover from the West. It would seem, then, as long as such a ready sale can be had for these upland birds that, as in the case of the spring flight of shore birds, there will be hereafter a steady demand for them, which will very soon tell upon their ranks. One game dealer told me that he had received this spring hundreds of them on ice from the West, and sold them almost before they reached him. "I can make more on them than I can on June woodcock," he remarked, "and can get more of them."

Now this is but one illustration of what a faulty game law brings about. Here are two varieties of game birds never before killed in the spring or sought for excepting within a comparatively short time, growing into favor and demand because they can be killed in the West just prior to the breeding season and shipped to an Eastern market by refrigerator cars when other game is scarce and not in season. We do not blame the epicure for enjoying a spring grass plover or golden plover, for they are both delicious morsels, but we must cry halt to the slaughter of them during their vernal migration, and, to use the heading of your able editorial a short time since, remark that it is indeed a "spending of principal." HOMO.

BEAR DOGS.

Editor Forest and Stream:

While we find dogs bred and trained to hunt the fox, deer and the various kinds of birds that exist on this continent, we find many kinds of game which no dog of any recognized breed will follow successfully. If large game had existed in Europe, especially in England, we should have had a dog we could depend upon to follow a bear and other similar game. I have been interested in hunting bear for the last twenty years, and have taken much pains to collect information upon the subject. While the hunters of Maine think a dog is of no use in hunting bear, our brother huntsmen in the Southwest use them with great effect, and in the place of one or two dogs, as in Maine, they use a pack. I am not prepared to say how many, I find it very difficult to get information upon this subject, as the most successful bear hunters cannot be induced to answer letters

I have been trying our common foxhound, and find while they might make good trailing dogs, they lack the courage necessary to stop a bear or drive them to tree. I am trying a cross with a bull-terrier, and expect better results. It seems that white dogs are much more effective in driving a bear to tree than dogs of a dark color. They are said to be feared by the bears.

An old trapper informed me that he and his partner trailed a bear, which had broken from the clog and escaped with a trap. With two dogs they came up with the bear and held him at bay until the hunters came up. One of them raised his rifle and sent a ball through bruin, back of the shoulder. He fell and rolled over, dead as they supposed; but in another moment he was on his feet. A second shot produced a similar effect, but before the guns could be reloaded, and while the knife was about to be used to cut his throat, he leaped to his feet and soon disappeared with both dogs hanging to his sides. In time the dogs returned and were sent on again, while the hunters followed as fast as possible. But the chase had to be abandoned; the bear or trap was never found. The dogs were part bull and probably curs.

Unless the bear is approached with great caution, while held by dogs, the prospect of getting a shot will be very poor, especially of killing the bear, as almost any amount of lead may be placed beneath their hides without doing execution, if fired at random, as was shown by taking seventeen heavy balls, a number of nails and a jack knife from a bear while skinning. This beast was killed in Roxbury, Maine. He was first fired upon in the night, and left a piece of his caul as large as our hands, while crawling through the brush fence. The next day he was followed by a number of men who kept up a fusilade with old smooth back guns as long as balls could be procured. Then they used such things as happened to be in their pockets, such as board nails and knives. One man took a four-bladed knife, opened the blade and slipped it into his gun, ran up behind the slowly retreating bear, and fired it into his hip. Bruin stood the balls and nails, but this was too much for his generally good and inoffensive disposition, so he turned suddenly and threw the man to the ground and began to bite his arm. Had it not been for one of their number rushing up and throwing his hat in bruin's face, the man would have been killed. An old hunter was sent for and succeeded in killing the bear with two balls. This bear was very large, weighing 400 lbs. In order to get him out to the road he was roped down the river with a man astride of him.

I have trailed bruin in his wanderings after snowfall, before he enters his winter home. I became interested in unraveling the most intricate and strange peculiarities possessed by this most hidden and eccentric of all our wild animals, for bruin can do the most traveling up and down inaccessible mountains, through cedar jungles, mud and water, going and returning, stepping so nearly in his tracks that it takes much time to find the trail, or where he left his back tracks. Much intelligence is shown. The place of leaving the track is chosen, so that by a long jump over a log or stone the trail will be hidden. I have had to go over the same ground several times, and not until one had followed the trail a little distance upon each side could it be found where he had left the track. I have tried to study the purpose of all these miles of seemingly aimless wandering, when no food is looked for or taken. I think at last I have become acquainted with the habits of our common black bear, and should there be any interest manifested upon the subject will gladly contribute my mite to bring out something of interest upon this much neglected subject.

Will the readers of the FOREST AND STREAM who have any knowledge on the subject, especially as relates to the use of dogs in such hunting, if any one has such dogs, tell us about them? I can assure you it will be read with great interest by many, to my certain knowledge, for all of those who wait for the coming of our paper with gladness do not own a fancy dog or gun, and yet they love the deep woods, and do not mind trifles. They are "deep-water fishermen" so to speak, who feel that they cannot write for a paper. I wish we might have a corner for such common talk, just as they talk to us. BRUIN.

NORTH CAROLINA QUAIL LAW.—*Editor Forest and Stream:* At the last session of the General Assembly of North Carolina the following law for the protection of quail or partridge in Currituck county was enacted, in order to prevent destroying them until full grown and strong. It has heretofore been the custom to commence shooting them about the middle of October, at which time the late broods are quite small and barely able to fly.—M. H. S. (Snowden, N. C.). An act to protect quail or partridge in Currituck county. Section 2834 of the Code of North Carolina is amended by adding at the end thereof the following: "And any person who shall kill or shoot, trap or net any partridge or quail in Currituck county between the first day of April and the first day of December in each year shall be guilty of a misdemeanor and fined not exceeding $10 or imprisoned not exceeding ten days for each offense. This act shall be in force from and after its ratification." In General Assembly read three times and ratified this 11th day of March, 1885. Chapter 396, page 661, Laws 1885.

MARYLAND WOODCOCK.—Woodcock are reported to be plentiful in Maryland, and it is said that many young birds were bred there. The weather lately has been very favorable to the broods, but if a dry season continues into July, the birds will all collect near the wet places and be the more readily found and killed by the sportsman who follows summer shooting. Why cannot a concentrated movement be made by the many game protective societies and sportsmen's clubs to abolish entirely summer shooting of all kinds? I doubt not but that the majority of shooting men of the United States would favor it.—HOMO.

BERGEN COUNTY BIRD PROTECTORS.—New York, June 17.—A goodly number of gentlemen, both sportsmen and those interested in the protection of song birds, met at the residence of W. Holberton, Hackensack, N. J., and reorganized the old Bergen County Association for the Protection of Game. The following officers were elected: President, W. Holberton; Secretary and Treasurer, Edwin Ackerman. The association ordered several hundred muslin posters, giving a synopsis of the new game laws, which will be distributed through the county, and vigorous measures will be taken for their enforcement.

WOLVES IN MAINE.—A newspaper paragraph states that on Thursday of last week, as Benjamin F. Pottle, of Pittston, Me., was walking through a piece of woods, he was attacked by a timber wolf that was making its way through the forest. Mr. Pottle is quite an old man and lame, which obliges him to carry a heavy walking-stick, and with his cane he made a vigorous fight, and after quite a struggle succeeded in getting in a couple of blows on the head of the animal that partially stunned it. By repeating the strokes he succeeded in killing the animal before receiving any serious injury.

QUAIL IN ARKANSAS.—Little Rock, Ark., June 18.—The prospects for quail are better than usual. They have wintered well and all the railroads are refusing to carry them to market during the close season, so they will have a chance. Heretofore numbers of professional market hunters have camped on the prairies and killed them all summer for the Memphis and St. Louis markets. The refusal of the railroads to ship the game has stopped this.—CASUAL.

RUFFED GROUSE ON LONG ISLAND.—A new law forbids the capture of ruffed grouse, commonly called partridge, in Queens and Suffolk counties, N. Y., between Jan. 1 and Nov. 1.

Camp Fire Flickerings.

"That reminds me."

153.

I WAS hunting with an army musket near Fort Totten, Dakota Territory, one intensely cold day in January, 1868, and fired at a buffalo seventy-five yards distant and missed. The bullet fired from the musket I was using at the time was frozen in the air twenty-five yards from the muzzle of the musket, and was thus held in suspension until it was released by the heat of the sun's rays on the 20th of April following, when it sped on its course and killed three elk out of a band of about three thousand, thence on a mile further—measured distances—and killed four jack rabbits, and then striking the water of Devil's Lake, two hundred and seventy-three yards further, the bullet cut a lateral parabolic curve and plunged into a large flock of trumpeter swans and killed five of them. The bullet that did all this bloody work was found in one of the swan's bellies, and was recognized by peculiar marks on it, and was presented to Jules Verne who, it is said, took it with him on his last visit to the moon. I have always regretted parting with that bullet, but I am consoled by a line from Mr. Verne, in which he states he will return the bullet when he goes to the moon and back on another trip, which he expects to make soon by the application and aid of elictricity. If Maj. Joseph Verity would like to have the bullet I will send it to him as soon as Mr. Verne returns it to me. JINGO SAM.

154.

The highly esteemed president of our game and fish protective society, proceeded to his favorite bass waters, Fites Eddy, on the Susquehanna below Columbia, last Saturday, to try his luck with the fish and mine host Bostick, who keeps the tavern at that point.

Quite close to the Eddy a small stream enters the river, in which a few trout still linger. This fact is known to but a few, among them our E. P. before mentioned. He is

rather a wiry little fellow, generally plucky and willing to attack any obstacle in his way that prevents his catching a fish, but don't know much about cows or bulls and the like. Thinking to vary the monotony of the bass fishing he concluded to try the trout. He climbed over a lot of brush and fallen timber to the head of a small fall, and emerged into an open space in the woods, in which were feeding something less than a hundred wild heifers, etc. Thinking to startle them and drive them from his pet stream, he let out a war whoop which stampeded all but half a dozen, among them an old bull, big as a house. This half dozen did not seem to mind him much and kept on feeding. Thinking to put them to flight as easily as the others, he walked quietly forward and gently prodded his bullship with the end of his rod, and let out another whoop Mr. Bull looked at him in amazement for a moment, and then lowered his head and let out a bellow that, compared to our president's war whoop, sounded like a calliope to a penny whistle. It didn't take our small friend long to make up his mind that it wasn't healthy on that stream, and dropping his rod he started back for the falls at a 2.10 gait. Reaching the top he shut his eyes and jumped, landing about nine feet below on brush, logs, stones and brambles, which he says he never felt when he struck, but gathered himself together and struck out for a safe position, reaching which he looked back to see if the bull was still following. His bullship, however, was contented and happy, and was quietly grazing at the top of the fall. Our poor friend waited several hours till the bull got out of range, then executed a flank movement for his rod, which he succeeded in recovering and found unharmed. His catch for the day numbered some sixty odd rockfish, bass and wall-eyed pike, but no trout. And it is not healthy to call his attention to anything resembling a bull just yet. PIGARTH.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—IV.

SATURDAY morning came in with a soft mist covering the water and a thin blue haze mellowing the woodland, with a feeling of rain in the air, but when the sun was an hour high everything took a brighter look, and a pleasant day and fair sport was anticipated.

It was decided that I should take Bob and Kit and fish and idle along down to Provemont, mail three or four letters that had been hastily written to the folks at home, and wait for the Mullers, who were expected there between 4 and 5 o'clock in the afternoon, while the others were to fish where the inclination led them. With a pair of rowlocks the "holler log" was converted into a rowboat, and with the lightest oars and lighter hearts we left the camp in our dry and steady old craft, ready to take issue with anything in the shape of a fish, from a simple-minded goggle eye to the mightiest maskalonge that claimed supremacy of the waters.

The first half mile was devoted to trying to teach the girls the knack of casting from the reel, which, I am constrained to say, did not produce any very remarkable results. Kit could not get the hang of the underhand swing of the rod, necessary to a good and accurate cast, but, to quote Dick again, "almost always invariable" brought the point of the rod back and then over her head, a regular woodchopper's cast, the frog striking the water a few yards away with a spat that flattened him out like a flapjack. This treatment persisted in for some time undermined his health and so discouraged him that he straightened out his hind legs and gave up the unequal contest. But perhaps after all it were an easier thing to be hammered flat and breathless at the hands of a green girl in the art of dropping a frog lightly and gently on the water, than to have the flesh stripped from his bones while alive, by the savage jaws of the first hungry pickerel that got his cruel eye on him. And Miss Kitty had a fashion, too, of taking her thumb from the reel every few casts at about exactly the wrong time, allowing the spool to overrun and foul the line into a score of fantastic knots and gnarls, after which performance she would placidly pass it to her patient teacher, who would diligently strive with it till the knotty problem was solved and the line wound on the spool again in proper shape, meantime whistling to himself a few bars of some soothing old air to keep from exploding with pent up language at the meek and lowly look on Kit's face as she watched the untangling. But she improved fairly, and in a few days was able to make a very creditable (woodchopper's) cast, and would occasionally get in an underhanded side winder that would have done no discredit to Doctor Henshall, the original discoverer, it seems, of this branch of the art gentle.

As the exertion was a little too arduous to dodge two frogs and two fish hooks at the same time, only one of the pupils was allowed to recite at a time. "Now Bob, stand up there in the bow—the old craft is perfectly steady—and see how close you can land your frog to that single bulrush over there toward the shore. You can always make a better cast standing than sitting, although after you have mastered the knack of it, you can usually place your bait near enough the desired spot while sitting." Bob's first cast was in the nature of a discourager, as she forgot to take her thumb from the spool of the reel at all and the frog came around with a swish, barely missing my ear, took a whirl over the rod and struck the water in a heap, too much bewildered to blink. The next effort was better, and the third time she dropped the frog within a couple of yards of the bulrush, which was ten yards away and without letting the reel overrun. Bob proved an apt scholar, and before the day was over could sling a frog ten or twelve yards with neatness and a reasonable degree of precision. With much complacency, but without showing the slightest shade of vanity at a word or two of merited praise, she took her place at the head of the class of two, although Miss Kit claimed that the "woodchopper cast" possessed hidden merits and advantages over the "Henshall style" that Bob and I did not seem to recognize.

But here we had loitered along till past the first point below camp and no fishing yet; and the lines were run off sixty or seventy feet astern and enough headway given to the holler log to keep the frogs from finding the bottom. As a rule in fishing in these Michigan lakes along the rushes and lily-pads, the one having the inside nearest them is likely to get the best of the fishing, and Bob was given the inside out of courtesy. Kit's line trailed straight astern, while the skipper's rod winged out lakeward to take any fish that might escape the lures of the twins. Kit had turned partly around on the seat to say something to Bob over in the bow when a smart tug at the line started the reel to whirling rapidly, but she did not seem to understand just what was going on. "Is that a fish doing that?" she asked; "why I believe it really is a fish."

"Fish, certain. Stand up, steady now and pay attention to business; he's got about enough line, and we'll see how you handle your first fish. Stop your reel now, firmly with the thumb on the spool, point the rod in the direction the line is running and when it tightens give the rod a smart sweep to the left, and the pull will more than likely head the fish out into the lake; if we were going the other way the pull would be to the right, for the same reason. There, strike! and you and I, Bob, will reel up out of the way and watch the fun."

The fish was struck in good style for a first attempt, and with a word or two about grasping the rod in the right place so the thumb of the left hand could be used for guiding the line on the reel to prevent bunching, and a caution about holding the point of the rod well up that the fish might not get the advantage of a straight pull on line and rod at the same time, Kit was left to manage the rest of her first battle and "fight it out on that (fish) line if it took all summer."

It promised to be an exciting struggle, for Kit was cool—more so than might have been expected—and in dead earnest, and the fish was a strong, vigorous one, as I could see by the working of the switch of a rod; was equally in earnest, and determined to smash something and go his ways. A sweep or two of the oars placed the canoe fifty feet from the rushes and in good position to insure a fair and even fight. The fish made a rush up the lake, but a hard pull brought him around in a circle with the line hissing through the water till he headed for the boat. The line slackened suddenly, the rod came back, and Kit looked around the picture of despair, with, "There, he's off! What will I do now?"

"Reel up, quick, and step aft and lead you line around the stern of the canoe; lively now, for he'll go under the old log like a streak, and if the line fouls the fight is over."

He passed close under the stern and kept on toward the rushes, but by this time Kit had regained her head and fought him slowly back to within a few feet of the canoe, where he made repeated efforts to get to the bottom of the lake by spasmodic jerks that took the tip of the rod under water in spite of all her strength, for she seemed to have made up her mind not to yield another inch of line if she smashed the rod. It was a good fight on the part of the fish, but the tough little rod soon broke his spirit, and he came to the surface rolling from side to side, with his mouth wide open in token of surrender. He was gently led alongside, and grasping his lower jaw I lifted him into the canoe, a bronze-backed, big-mouth bass of three and a half pounds, as recorded by the pocket scale that evening after we got to camp. (Never take your pocket scale out with you; that fish was a six-pounder in Bob's and Kit's eyes all day, and if the truth-telling scale had been at hand they would have been deprived of at least half the day's happiness).

Kit straightened up and sent forth a clear feminine yell that started a couple of bluejays to scolding back in the swamp, and exclaimed, "Chip of the old block, if I do cast like a woodchopper," which was not perhaps in the nature of a compliment to the "skipper of the holler log"—and Bob and I are convinced to this day that she was fully two inches taller than she was a half hour before. Over from the bow came Bob's deliberate "Hooray for Kit," and Kit echoed it, and then we all "hoorayed" in chorus.

Just how much clear, straight-grained happiness three people can get out of the capture of a 3½-pound big-mouth bass will probably never be found out. While the "chip" was nervously stringing the fish—insisted on as a branch of the art—it seems to me now that I made a blunder in the custom Uncle Dan and I have fallen into of kissing a fine bass when taken, and kissed Kit instead, but if this did happen the bass perhaps never noticed the mistake. It was Miss Kitty's first bass, and first fish of any kind, and she felt justly elated with it, and I know I felt as proud of her as she did over the achievement, but "blood's thicker'n water." The good points in the controversy were noticed with a word of praise, the bad ones pointed out and condemned, and we pulled back near the rushes and began fishing again. In the next half mile she took four more, while Bob and I sat like two toad stools on a log looking on with "nary a nibble" to stir the blood in our veins. Of these, one was a pugnacious small-mouth of nearly 3 pounds, that tried his level best to make us believe he owned the whole lake, and it took nearly fifteen minutes of vigorous argument with rod and line to bring him to a realization of his error and coax him to accept a vacancy on the stringer with his less belligerent cousins.

And just here, with the memory of that contest fresh in mind, it may be as good a time as any for a few "amphibious remarks," as Dick would say, about the game qualities of the large and small-mouthed black bass, based on a rod and line acquaintance with them of more than thirty-five years. With a few rare exceptions, my experience with the large-mouthed variety dates back to only about six years ago, when first fishing the Intermediate chain of lakes in Northern Michigan. Out of many hundreds of bass taken in the Wabash River while a "small boy" and youth, I don't call to mind a dozen that were of the large-mouthed kind, and these were called by the anglers thereabouts lake bass and Oswego bass. In fishing the Tippecanoe River, which empties into the Wabash a few miles above Lafayette, Ind., for more than a dozen years every fall, and sometimes a couple of weeks in the spring, I have taken not more than three or four big-mouths, and have known of as many more being taken by others. Two or three more in some of the streams of Eastern Indiana make up the sum total of big-mouths taken in running water, and it always seemed to me that they lacked the vim and energy to tackle the riffles and rapids of a swift-running stream, preferring the lazy existence to be enjoyed among the grasses and along the bulrushes and lily pads fringing the shores of lakes where there was no current to fight against and make them tired.

Since we began fishing the North Michigan waters I have become better acquainted with them, and have handled them till my arm has been tired out. I am not going to say they are not good, hard fighters for a while, but they seem to lose heart in the struggle after a few rushes, and it would be hard to convince me that they are anything like the equal of the small-mouth in dash, tireless vigor of action, and everything that counts in the make-up of a thoroughly game fish.

Some there are who will no doubt differ with me and say I am prejudiced in favor of the small-mouths, because I was "raised" with them, as it were, but I am not. I write simply what I believe to be the truth, after handling both day after day in the very same waters, with the same kind of bait, with the same rod, and under like conditions; and I write too only of my own personal observance of the qualities of the two varieties as fighters, and by the light of his own experience an angler, I take it, should be largely governed in making up his beliefs.

I am firmly convinced that the small-mouth fights harder and longer, and with a clearer understanding of the point at issue—to get away—than his cousin of the open countenance. He exhibits more cunning and strategy, and sense too, in his efforts to rid himself of the hook than the other. If there is a snag, root, log, boulder, or a bunch of grass, a bulrush or lily stem in sight or reach, he is going to whip around it and break away unless the tackle is strong enough to turn him away from it, and it is not skill that holds him away from a limb or root when he makes up his mind to go there, but a perfectly reliable rod and line and a cool head.

The big-mouth will do the same to a less extent and in a more listless way, and he don't display, as far as I have noticed, an equal amount of intelligence and pertinacity in doing it. As old Ben would say, "He don't git up an' hustle like the' was a nest o' yeller jackets after him"—and that word "hustle" about covers the ground in the matter of a fish that has the right kind of fight in him. Then as to their habit of leaping, I have observed that the small-mouth usually leaves the water from one to five and six times after being hooked, notably in open water, where there are no obstructions around which he may foul the line; and I have noticed, too, that they leave the water oftener in the fall than they do in the spring before spawning is over. Sometimes, however, he will not show above water during the whole struggle, not even in the most open water, but it is not usually the case. If the locality where he is struck is infested with roots, snags, etc., he is not so likely to break water, but will rather seek to get among them, where he is reasonably sure to take a turn around something and regain liberty.

This habit of leaping out of the water and trying to shake the hook loose is another point in favor of the small-mouth, for the big-mouth, as a rule, is not a jumper, although they often leave the water a foot or such a matter; but it is rarely more than once or twice at most during active hostilities, and what is more soul-stirring or calculated to make each individual hair of an angler stand on end than to see a big bass sail five feet into the air with his shining coat of mail glistening in the sun and shake himself, especially if he cast the hook and bait ten feet away and wave a good-by with his tail fin as he disappears under the water?

[TO BE CONTINUED.]

VERMONT BASS.

THE season opened here for black bass and doré, or pike-perch, on the 15th inst.

In the lake some large catches of these game fish are reported, which shows the good effects of protection. In the river here the catches have been small, which fact is accounted for, as the French residents have lined the river banks for the past six weeks under the pretense of fishing for suckers, and have cleaned the bass from their spawning beds. So far it has been impossible to convict one of these fellows, as they have banded themselves together in a body for the purpose of evading the fish law.

Our local fish warden has been almost powerless in the attempted performance of his duties, as those of our citizens who should be interested—the property holders—are perfectly indiffesent whether the law is enforced or not. At Swanton, a few miles down the river, matters are even worse than here, for here I have prevented illegal fishing being done openly; but there, in Swanton, large numbers of bass and doré have been speared and killed otherwise in open defiance to the law. Each of these villages has its monster maskinonge which has been seen in the river from time to time. The one at Swanton was speared a few weeks ago, but he broke away and was picked up dead about two weeks afterward some eight miles from where he was struck. The fish measured four feet and eight inches in length and though from the effect of his wounds was emaciated to a mere skeleton, it weighed forty-two pounds.

Last evening the writer, with one of Scribner's light rods, was skittering a small phantom minnow for bass at the foot of the rapids and in the presence of several spectators, when he struck the Highgate monster. The fish was plainly seen as he several times jumped at least six feet clean out of the water. The fight lasted fully fifteen minutes, and was ended by the casting line, which was twisted double gut, being bitten in two. Regarding this fish's size I will simply say that he was a monster; quite likely the father of the Swanton fish. STANSTEAD.

HIGHGATE, Vt., June 18.

LARGE-MOUTH AND SMALL-MOUTH.

Editor Forest and Stream:

Last year I spent some time investigating the comparative gaminess of the small-mouth and the big-mouth black bass in the Little Red River of Arkansas, where both species exist in about equal numbers, the one in the swift shoaly places and the other in the slack water or "holes" of that stream. I started in without prejudice and came out with an impression favorable to the big-mouth, of which I should probably have made no mention but for a kind word in his behalf from the philosopher of the Bigosh in a late number of FOREST AND STREAM.

Of course there is a difference in the "manner" of the two fishes. The big-mouth, for instance, in the stream to which I have alluded, takes the fly much more freely than his neighbor, and fights with at least equal determination after taking. In using the trolling spoon in clear water, I have frequently observed that the small-mouth will follow the lure for a while, and abandon the pursuit without an attempt to capture. This I have never known the big-mouth to do. He starts for it, goes straight to it, takes it, and fights it out on that line. There is nothing indirect about him—until he is hooked. Then he will cut the line on rocks, wind it about snags, tangle it among weeds, and do very many highly reprehensible things. In this regard he is no worse, however, if he be so bad, as his sly neighbor the small-mouth. The small-mouth, in this delectable stream, presents great variety of coloring, from very nearly that of the big-mouth to a dense inky black, even the inside of the mouth being black. The coloring of the big-mouth is perfectly uniform, dark olive green above, lighter below, with well defined black stripe on each side from gill cover to tail.

On one occasion I took when trolling from a boat, a specimen in coloring and markings exactly like the big-mouth, and in shape like the small-mouth. The grand test, the mouth itself, was non-committal, being too large for the one and too small for the other. The size of scales was suitable

to the small-mouth. Is it not possible that cross fertilization might occur? If it be possible, then I know of no place more likely than the stream mentioned, where both species are very numerous, and of necessity very intimately associated at times, as when the water is low and the stream confined to a very narrow channel. If I get a satisfactory answer to this question I will ask some more. SALMON ROE.

NEWPORT, Ark., June 13, 1885.

["Kingfisher" also discusses the subject this week.]

THE OLD RESERVOIR.

"Simple Truth his Utmost Skill."
—*Sir Henry Wotton.*

THE letters that I have received this spring from angling friends at home and across the sea, reporting their catches of trout, have made my own baskets seem smaller than they actually were, by comparison, and I can assure every one that they required a certificate of character to get into respectable society after the six-inch clause was added to the game law; but a day came when I could plainly see that there was to be an end of small things. On that day my old friend and fishing comrade for twenty-five years, Judge R., walked into my den, seated himself, blew a cloud of tobacco smoke from his mouth as though it was escaping steam and remarked judicially, "We are two blooming idiots." I demurred. He overruled the demurrer, and I told him to go on with his evidence, that I appeared as attorney for one of the idiots. There was a lurid glare in the off eye of the Judge that made me think the case ought to go to a jury if my client was to get any show for a favorable verdict. Between snorts of disgust and sulphurous exclamations the evidence was sworn in, but before it was half in I flopped from defendent to plaintiff without any retainer.

The case can be summed up as follows: This village is supplied with water from a mountain five miles away, where there are two reservoirs on one of the best trout streams that ever murmured, a stream that has in days gone by offered up more than one trout that would weigh full four pounds. One reservoir is near the foot of the mountain and is small, but from it I have taken some decent trout, until repeated cleanings made it hardly worth fishing. Two miles above the first and on the top of the mountain a second reservoir or pond was made about six years ago and this is half a mile long. I never had been to the upper pond, but the Judge, as a member of the Board of Health, made a visit to it the day before he called upon me. I do not know what the Board of Health went up on that mountain for except it was for the ride, but whatever their object, I will wager a trade dollar against a ginger cookie that the Judge did nothing but sit on the bank and watch, hoping to see a trout break the surface of the pond. Anyway, he came down from the mountain charged with pure oxygen, nitrogen, and wrath, to think that this pond, which must be full of trout—"old half-way brook trout"—had been slumbering over our heads while we had not sconce enough to think of it and fish it. We had been looking down when we should have been looking up.

The smoke from our cigars took on a rosy hue as we formed a plan to fish this pond, up among the clouds, that was spread out before my mind's eye with its surface broken by leaping trout and its shores an unbroken wall of living green. I could almost hear the splash of the feeding fish, and was tempted in imagination to weigh some of the larger specimens as I thought of the years that they had been growing undisturbed. As the pond was village property we must procure a warrant from the village to fish it, which we did at once at a mysterious interview with the president of said corporation, which ended by three men separating with fingers on lips and faces looking as wise as owls. We had a good thing and did not propose to give it away. We decided to make the first draft on the coming Tuesday, and as we concluded that we would take only eight or nine pounds each at the first visit, it would not be necessary to start until noon. If the Judge and I should drive out of town clad in dress coats we could make no one believe we were not going a fishing, so we could only hope to conceal our destination, and to this end at the appointed time we started north, and when well out into the country turned back and headed west.

There is one peculiarity about the trips taken by Judge R. and myself, that it is generally a matter of perfect indifference whether we got fish or not. We enjoy the ride, the mountains, the blue of the sky, the green of the grass and trees, the bloom of the wild flowers, and the sound of every living creature. Our tongues wag about other days, other fishing and past shooting, when game was not scarce as it is to-day. So as we jogged along and came to a long hill with a high bank on one side and a ravine on the other the Judge said: "It always makes me shudder when I come along here to think of how you drove the big mares down this hill that awful dark night when we just got our game in in time to be counted. It was about here that your game bag went out of the wagon!"

That dark night was nineteen years ago. I had chosen sides with Col. N. for a squirrel hunt, and all game had to be in at 9 P. M. or it would be thrown out. The Judge and I had shot over ground some distance away, and on our return home stopped at a road house and found a message from a member of my side which said that the game was all in except ours, and I was about 200 count behind. The Judge had a score of 277 and I one of 364, the largest ever brought in at one of our hunts. Feeling that we had won we dallied at the hostel until a look at our watches told us we had barely time to reach the rendezvous. There was a hurry of iron shod hoofs, and we disappeared in the darkness. The man who had that day carried game for me wished to see the close of the hunt, and was riding home with us. I told my companions to shut their eyes and hang on, and if the wagon held together we would get our game in. As we were going down the hill referred to, Andy accidentally pushed my game bag out of the wagon with his foot, and its contents were well scattered along the roadway. Lighted matches enabled us to find some of the game, but there was no time for a close search, and at three minutes before nine o'clock we were at the hotel door. My message was all wrong, for Col. N.'s side scored 2236, mine 2240. Only a slight difference, but enough to win.

The depression that we pass on our left that was once Forge Pond, awakens memories that we could talk about for days, and we feed upon them until we reach the mountain and begin the ascent, the road leading through alternate woods and clearings for a mile until we enter a sort of tunnel of green like a triumphal arch, through which the sun shimmers. There is a break in the foliage at our right as though a curtain had been drawn back to give us a peep at the plain at our feet and the town in the distance, while still further beyond the Green Mountains belie their name by rivaling the color of the sky, to which they reach and touch. The carpet of moss and dead pine needles muffles the footfalls of the horse, so that we come across a male wild pigeon sitting upon a dead limb and preening the feathers of its bronze breast. Our appearance causes it to fly only a little distance where we can see that it resumes its interrupted toilet making. A sleek catbird is so unconcerned that I can almost touch it with the end of the whip as we pass underneath its perch on a white birch; but all too soon the left wing of the dam which forms the pond bars our passage. One look at the pond and our air castle tumbles into ruins. A recent storm has changed the clear water into a good imitation of *bouillon*, and we know that a trout cannot see a fly five feet away, even if furnished with a water telescope. As we are on the spot we can do no less than try a cast, hoping that a few trout may be loitering at the surface. The scow that we find full of water is bailed out and we embark; but "ho! what ha hafternoon!" In the space of eighteen hundred and odd years nothing has been discovered that so thoroughly saps one's vitality and converts a comparatively young man into a centenarian as the effort to keep on the upper side of a cranky scow and at the same time cast a fly.

A bucking broncho once suspended me in the air like Mahomet's coffin and then threw himself on the top of me; but that was a picnic compared to riding a scow that insists upon turning bottom side up in thirty feet of wet water. Two hours of fishless fishing satisfied us, at the same time fitted us to fill an engagement to walk a slack wire, and we turned our faces toward the lower reservoir. There the water was clear, too clear, in fact, for the small quantity we found; but beginning at the inlet stream, I whipped it faithfully down the left bank to the dam and along the dam until I came to the spillway, which was perhaps twenty feet across and the bottom about four feet below the crown of the dam. There was about an inch of water on the spillway, from which it poured upon the apron a foot below; the apron was ten or twelve feet long, quite steep, and from it the water fell to broken rocks about ten feet beneath. In the middle of the spillway was a post, and from it extended short pieces of plank to the capstones of the dam at either side. When I came to this trap I looked it over to discover evidences of some one having crossed in recent years. The planks had a very aged appearance, and I tested their strength as thoroughly as possible with my eye, and decided to intrust them with 200 pounds of solid flesh rather than exercise said flesh by a walk around the pond. I planted one foot safely on the plank, but in bringing down the other (the plank was a foot below the top of the dam) the broad welt of my wading shoe caught a nail and chaos came. I made a frantic effort to catch the post as I struck it with my nose, and while descending head first I involuntarily pitched my Caledonia fly-rod into the pond, so I did not fall on it. When the planetary display (caused by the intimacy of my nose with the post) was over I took an inventory. My rod had been carried by the force of the water to the apron and was safely lodged. My Leyison fly-book was above high-water mark, ditto my watch, and these were my chief concern. Before I took the header my nose was pure Greek, but afterward it felt as though it were roamin' all over my face; it was not skinned as neatly as a surgeon would have done it, but it was thoroughly done and a fairly good job, considering it was done by a post. I was disgusted, not so much that I had saved myself from being shot like a bullet out of a gun on to the rocks below the apron, but because above the din of the falling water I heard a sound that came from the bank of the pond, and there stood a human figure clothed in corduroy with head thrown back and a gray beard pointing toward the horizon, its arms were wildly sawing the air, while the sound—a cross between a fog horn and a kazoo—issued from the beard. I suppose it was meant for an expression of hilarity. As soon as I could get on the dam, for the boards of the spillway were like grease and it was not an easy journey, I walked to that figure with fire in my eye and water in my lower pocket and shoes and demanded an apology for such injudicial levity. The figure, after a time, said: "I did not laugh until I found you were not going down the apron," and I replied, "Your explanation is satisfactory." We then adjourned to the wagon and came home. There have been many unvarnished tales, but mine has not even a priming coat of paint, and if any one can discover anything about it that is fishy, I would be pleased to have it pointed out.

A. N. CHENEY.

GLENS FALLS, N. Y.

THE STRIPED BASS LAW.

UNDER the head of "Fish Legislation" we referred, in our last issue, to the new law of the State concerning striped bass. Following this the New York *Times* of Saturday last gives the following interviews with prominent New York marketmen, as follows:

"A game law having been recently passed which makes it a misdemeanor to sell striped bass from Jan. 1 to the 20th of May, some of the leading wholesale and retail fish dealers in New York were asked by a representative of the *Times* to give their opinion in regard to this law. All were unanimous in condemning it. To some it was a matter of surprise, as they had never heard about the passage of such a law.

"Mr. Eugene G. Blackford said: 'This latest amendment to the game laws should be entitled "An act to suppress the fish trade of New York city." It deprives the people of this State of one of the most important items in their food supply, as during that period striped bass are most abundant, and are sold at lower prices than at any other time of the year. During the months of March and April from one to five tons of striped bass are daily received in New York from Southern States, and the effect of this law will be to drive not only the bass, but all other kinds of fish that are shipped from those places into the Baltimore, Philadelphia and Boston markets. I look upon it as very singular that the Legislature or the Governor should approve such oppressive and destructive measures. I have made a careful estimate that the result of this latest addition to our game law will have the effect of driving from our markets fish to the amount of at least $200,000 annually, which business will be gladly welcomed by Baltimore, Philadelphia and Boston, and no good result is obtained in the way of protection.'

"Mr. G. S. Laphear, of the firm of Moon & Laphear, said: 'The law is a very unjust one, taking in the best season for the fish. Very few striped bass come at all from New York rivers, but the bulk are from North Carolina, the Provinces, Maine and Rhode Island. The bass come to market from North Carolina with the first shad, and if there is an embargo on them very few shad will come from there. It is the bass business which is the main one for the North Carolina fishermen. It seems to me to be a shame that laws of this kind are passed in Albany, quite without our having any acquaintance with their character. The first thing we know is when they are printed. As the striped bass will not come here, but will go to Philadelphia, Boston, New Haven, Baltimore and elsewhere, it will spoil our general trade, because a customer who could not find striped bass with us would give his orders for all other kinds of fish, such as cod, haddock, halibut, crabs and shad, to parties who had a general stock.'

"Mr. Samuel B. Miller, of the wholesale Fulton Fish Market, said: 'It is the wickedest law ever made. I should not think people could pass such a law, knowing that the time when striped bass are excluded from market is just when they are most wanted. I believe that the people of New York State generally have as much right to eat striped bass as those of New Jersey or Pennsylvania. But if this law is enforced they will all go elsewhere. People who want to eat bass will have then to go out of the State.'"

FISHING AT SCHROON LAKE.—Schroon Lake, N. Y., June 29.—*Editor Forest and Stream:* Schroon Lake has lost nothing of her fame of years ago, as our guides and hotel men are earnest advocates of any law that will prove of benefit to our interests and are alive to the fact that the life of the entire region is dependent upon her fish and game. A hatchery has been built by private contribution, and through the kindness and courtesy of the State Fish Commission we have been enabled to place in the lakes and streams hereabouts thousands of trout, bass and salmon. California trout placed in the brooks two years ago have been caught measuring six inches in length, and these alone promise sport without limit, in the near future. In April C. W. Burwell, a gentleman who looks ahead rather than behind, placed in the lake a lot of pike, sheepshead, salmon and trout. To those who are considering a fishing excursion I would say that no better sport can be found in the Adirondacks than here, and if any one doubts my statement let them inquire of Messrs. S. P. White, 128 West Twenty-second street, Hon. Effingham H. Nichols, I. P. Chambers, General Auditor N. Y. C. & H. R. Railroad, or A. F. Cross, 21 Maiden Lane, and thus satisfy themselves of its truth. The season for speckled trout has now opened, and last week J. H. Washburn, Vice-President and Secretary of the Home Insurance Company, New York, in company with the experienced guide, B. F. Wickham, caught in Sand Lake, twelve miles distant, twenty seven trout, averaging in weight nearly one pound each. This, while being a good catch, is not as good as could have been reported had the weather been of a more auspicious nature. In my next I will try and give your readers an idea of the infamous dog law passed by a body of men called the State Assembly, who, had they possessed the average intelligence of the dogs in question, would not have passed it. More later.—ED. M.

THAT FISHING PROBLEM.—Albany, N. Y., June 20.—*Editor Forest and Stream:* "Piscator's" problem in your issue of June 18 is very simple. He says, "One hundred feet from shore the trout may be seen jumping." If the shore is wooded close to the half inch of water and mud of unknown depth, fell two trees parallel to each other, and if he can get them within two feet of each other he can walk on them their full length, trimming the upper limbs off as he goes. That should bring him within forty feet of his fish, and give him six inches or more of water; he can then cast the other forty feet. Given, the woods too far from water for such a bridge; fell a tree from six to eight inches at the butt, cut into two to four feet lengths, split through the center once, carry the smaller pieces from the top of the tree first, plant them flat side down in the mud a reasonable distance apart. If the water deepens stop splitting the logs, rolling them to their places. If the water gets too deep so that his logs float, cut some saplings from two to three inches at the butt, leaving the limbs on, and lay them out first, then his slabs on top at the outer end, or last bent of his bridge, lay the butts of his saplings outboard, else his leader will catch in them as he lands his fish. At the outer end of bridge he can build a crib on top of a good layer of saplings, and keep out of the water while fishing. After constructing his bridge or causeway, he can carry his material for a raft into a sufficient depth of water, there construct it and go where he pleases.—IRA WOOD.

"SKINNED STREAM."—*Editor Forest and Stream:* How pleasant it is for us Litchfield county farmers when we take up the FOREST AND STREAM to find such articles as that written by "Stillaboy" in issue of May 25. He tells how every day, when the law allows, the stream is skinned. By whom? Every train that leaves the cities of New York, Bridgeport and New Haven from April 20 to June 1 carries from one to ten men, equipped with fishing tackle and bound to the streams of Litchfield county. This leaves from April 1 to the 20th and the month of June for stragglers. All these persons come to fish our streams, running through our farms, on which we pay taxes. If we don't wish to be selfish and deny others pleasure even at our own expense, we allow them to make paths through our meadows, break down our fences and take our fish. Or if we do post our lann, what a row they make about it! Not content with this legal fishing, "Stillaboy" narrates with effusion how three weeks after the stream has been skinned, he proceeds, contrary to law, to save the horns and hoofs, even going up the little spring brooks, where the fish have sought cool water, to catch the fingerlings. All I can say is I wish I could catch him at it. He would have the most costly mess of trout that ever he took.—LITCHFIELD COUNTY FARMER.

DESTROYING DRUMFISH.—Staten Island, June 20.—The oystermen of Prince's Bay have opened war on the drums, which destroy their oyster beds by chewing up the oysters. On Friday last the bay was dotted with skiffs in which the owners of the oysters were busy either placing their ears close to the surface of the water or were occupied in making round balls of flour and glue and throwing the latter into the water. The drumfish make so much noise when crunching up the oysters that a person can easily tell where the fish are feeding by placing the ear near the surface of the water, when a distinct drum-like or thrumming sound is heard. The balls of flour and glue are said to be greedily eaten by the drumfish. The preparation is said to catch in the gills of the fish, clog the gills up, prevent their operation, and causes the death of the dreaded drumfish in about two days.—POKE-O'-MOONSHINE. [We doubt the statement that flour and glue will produce the result stated, and suspect the use of poison of some kind.]

PIKE COUNTY STREAMS.—I have recently returned from a short visit to Pike county, Pa. This, as many of the readers of FOREST AND STREAM know, is a region of trout brooks. Their cold waters, from the Bushkill to Port Jervis, run into the Delaware on one side, while on the other, and indeed almost around the whole county, fine streams are found. But this is not saying that the fish are plenty. Far from it, though with very little effort they could be increased abundantly. However, so far as I know, Dr. Fulmer, of High Falls Hotel, Dingmans and the Blooming Grove Park Association, are the only ones that have taken any pains to stock those waters. Dr. Fulmer has put 15,000 trout in the Dingman Creek, Adams Brook and Brookside River, while the Blooming Grove Park Association has of course looked well after its own preserves. We found no club organization in Milford. At least we could learn of none, and the consequence is that the Raymondskill, the Snowkill and the Vandermark are almost skinned of trout. Some of our party saw in the basket of a fisherman who was just leaving one of the supply brooks of the Sawkill, as we drove along beyond Milford, some fourteen trout, not three of them, we should think, over six inches long and many of them not up to five. And this is not only what has been going on in and around Milford during the past eight weeks or more. We were told of baskets half filled with little trout that had been brought into that village from the supply brooks (as we used to call them) in the vicinity. Fortunately there are some portions of these brooks that cannot be fished; were it not so fishermen would have less luck than they now have in the Sawkill. But this is not a pleasant reflection to the writer when he thinks of the efforts he made in the past to increase the trout in the Milford streams and afford them some protection. The only way I think it can be done now (and thus render Milford attractive to men who have not much time for recreation, nor money to spend upon their amusements) is for the hotel keepers to combine and refuse to purchase fish that are undersized, and also make a little effort to stock their streams and protect the fish. Frank Crissman, we think, and Emile Riviere with several of their friends might do much toward this. And now if they can be persuaded to make such an effort, let me ask them not to put the little trout into the larger streams, but into the best feeders to these and the brooklets that never run dry. The Fish Commissioners would do well to tell those who apply for fish (that is if they do not do so) to place their small trout in the branches of the main stream, where they will not be devoured by the larger fishes that may have survived the skinning process. We did not fish in any of the streams above mentioned this year. Indeed the dry weather and our lack of health prevented our fishing but for a few hours at all. During this short space we were rewarded, however, with our usual good luck—some thirteen fish that weighed in all nearly four pounds.—STILLABOY.

PHILADELPHIA NOTES.—June 19.—The weakfish have begun to bite all along the New Jersey shore, but better success has been had at the inlet south of Great Egg Harbor. At Barnegat and Tuckerton there has been so much seine hauling at night the fish have become disturbed, and not so many have entered the bays at these points. By the time the summer hotels and boarding houses begin to fill up there will not be so much net fishing, and more fish will come in. At Barnegat the sheepshead have been reported on hand, but few have been caught. Small sea bass and blackfish are biting at this point also, and some schools of bluefish have showed themselves outside. None have yet entered the inlet. The heavy rain on the 16th has made our rivers and creeks very muddy, and caused a cessation of bass fishing. By the time you go to press the streams will be in better condition. Rockfish are being caught at many points on the Delaware River now, but they do not run above a pound in weight. Sturgeon roe, as long as it can be procured, will continue to be the bait used. There is just now a big run of white catfish, and all the creeks flowing into the Delaware below Philadelphia are good grounds.—HOMO.

REUBEN WOOD.—In speaking of the exploit of Mr. W. H. Wood in killing a tarpon, as recorded in FOREST AND STREAM, "McLellan," in *Land and Water*, says of the late Reuben Wood: "I wonder, by-the-bye, whether 'the tarpon slayer' is any relation to that dear old American angler and prince of fly-casters, Reuben Wood, who was with us through the time of our Fisheries Exhibition. It seems only yesterday since he slept under the very roof which now shelters my own head from a splendid, and most May-like, shower of hailstones. And now, alas! he sleeps under the green, mossy turf, whose every blade of grass he loved with the sweet simplicity of a guileless heart. It is no exaggeration to say that every Englishman who had the pleasure and honor to know 'Uncle Rube' loved him alike for his simplicity of nature, envied him good-naturedly for his wonderful skill with the fly-rod, and honored and respected him for his sterling qualities as a sportsman.

> Poor mortals die, and make no sign,
> But Nature still its life renews;
> Spring woods, spring fields with glories shine,
> Spring blushes Nature's face suffuse."

THE SPAWNING OF BLACK BASS.—Young black bass of this year's hatch are now an inch long in the mill ponds at Cold Spring Harbor, Long Island. With perhaps the exception of the Adirondack region, they have finished spawning in the State of New York. Dr. S. P. Hubbard has just returned from a bassing trip in New Hampshire, and reports that on June 19 the bass had not spawned in Lake Winnepisaukie, and but one or two beds were seen. The fish caught were full of spawn that was well developed, but wanted at least two weeks to ripen, an estimate borne out by the fact that the making of nests had just begun. The Doctor tells us that the fish were just spawning on the 20th in Long Pond and Assawamset Pond, in Middleboro, Mass., near New Bedford. The latter waters are one hundred miles south of Winnepisaukie, and are at a much lower level.

LITTLE ROCK, Ark., June 18.—A camping party from the Ouachita River reports fishing very good. In Cache River at the Memphis and Little Rock railroad crossing bass and white perch are biting finely. This river is being injured by the large number of bell nets set in it. In White River, at the crossing of the same road, bass fishing is said to be good. Fishing in the lakes around here is not good. They are mostly shallow and grown up with lilies and moss.—CASUAL.

SEA BASS AT LONG BRANCH.—The large sea bass in our markets mostly come from the banks off Long Branch. The smaller ones are inlet and bay fish.—HOMO.

THE SEVEN PONDS.—Boston, June 19.—Returned from Seven Ponds last night. As to my trip, I can only repeat what I said of the locality last year, adding that the average weight was larger than my catch last year, taking very many of a pound to pound and one-half each. They were at their best, and when the boat was not anchored every fish struck would tow you around to new ground before you got him in the net. What would you think to have a trout of a pound and one-half jump two feet in the air and take the fly as he comes down, and twitch you right out from under your hat? By the time you have netted twenty such you are ready for breakfast. My party were all delighted with everything, as also are all who go there. Fact is, it is the best spot in this country for trout fishing.—M.

SALT-WATER FISHING.—New York, June 22.—*Editor Forest and Stream:* Salt-water fishing seems to be having a slight "boom" in the columns devoted to piscatorial art, and if some of the veterans would send in their experiences, not omitting such minutiæ as bait and arrangement of tackle, all, from the greenhorn to the "Old Pelican" of "Kingfisher" fame, would rejoice. Will you please inform me as to what bait to use to catch striped bass at night in a salt-water pond? Also as to arrangement of tackle.—A READER. [We have never fished for striped bass at night, but should think that clams or menhaden would be good bait. Perhaps some of our readers may answer this question.]

RESULTS OF PLANTING WHITEFISH IN LAKE ERIE.

[Read before the American Fisheries Society.]

BY FRANK N. CLARK.

AFTER the close of the fishing season of 1884 in Lake Erie, I began an inquiry to ascertain whether there had been an increase or decrease in the catch of whitefish as compared with that of former seasons. The investigation was conducted by personal interviews, through a representative, a practical fisherman, with the leading fishermen and dealers, and covers most of the important fisheries of that part of the lake from Erie, Pa., westward to Toledo, O. The results are most gratifying, as it is conceded by all and shown by the reports that the aggregate catch of whitefish was considerably in excess of that of any season for several years. The results are especially encouraging to fishculturists, as all the facts and statements point to but one conclusion; namely that the increase is due to the planting of young fish from the hatcheries.

No disappointment would have been felt had there been no perceptible increase, as much was required to offset the extensive and exhausting fishing carried on all over the lake, on both the spawing and feeding grounds, which was causing a gradual decrease of the catch. For many years every spawning ground had been literally covered with nets during the spawning season, while hundreds of gill-nets have been employed on the feeding grounds in deeper water and thrown across the path of the runs toward the spawning grounds. In no other of the great lakes has the fishing industry been pursued with greater persistence and skill than in Lake Erie. Notwithstanding this, however, we find that not only has the decrease been arrested, but that there is a tangible and satisfactory increase.

The figures given below show in round numbers the aggregate plantings of whitefish fry in Lake Erie, from the beginning of the work by the United States and Ohio and Michigan Fish Commissions. Some plants were also made by the Canadian Commission during the years mentioned, but I am unable to give the figures:

Spring of 1875.....	150,000	Spring of 1879.....	7,000,000
Spring of 1876.....	300,000	Spring of 1880.....	7,0 0,000
Spring of 1877.....	450,000	Spring of 1881.....	13,000,000
Spring of 1878.....	12,000,000	Spring of 1882.....	42,000,000

These figures include the latest plantings that could possibly be called due in the fall of 1884. Under the current method of computing the numbers of young fish in tanks and cans, there is no doubt that the estimates shown in the above figures are much too large.

Following are a number of statements from fishermen and dealers, in substantially the exact language of the parties making them, with regard to the catch and the value of fish propagation and planting:

L. Streuber, Erie, Pa., says: "Am a dealer and shipper of frozen fish, and fish considerable twine. Can give you the figures of my catch for only the past two seasons, which is as follows: Catch of whitefish for 1883, 110 tons, 1884, 150 tons. I believe the propagation of whitefish to be a great help toward keeping up a stock in the lakes; so much so that I am doing all I can to get a hatchery started here, believing it will pay."

C. D. Carter, another dealer and fisherman in the same city, says: "My catch of whitefish for the past two years is as follows: 1883, 175 tons; 1884, 225 tons. I think that the planting of young whitefish in Lake Erie has already done a great good toward keeping up and increasing the stock of whitefish in its waters. I hope to see the hatcheries kept up, and would like to see one here in Erie, believing we have a good location for one, and that it is a good point to plant fish from, as there are no carnivorous fish caught at the season of the year when the young fish would be put in."

John Harlow & Co., of Erie, make the following statement: "For the past five years our annual catch of whitefish has been about 150 tons, until 1884, when it was 200 tons. The increase of 50 tons I attribute to the planting of young whitefish from the hatcheries. I am very much in favor of the planting, and hope it will be kept up, as I am satisfied that it is of great benefit to the fishing interest of the lake. A few seasons since we commenced catching very small whitefish—so small that we had to get smaller-meshed nets, and now we are getting a larger class of fish again."

H. Divel, fish dealer and practical fisherman, also of Erie, says: "I have been fishing for some time, and think the whitefish for the past three years have been increasing. I can give the figures of my catch only for the past two seasons, as follows: 1883, 30 tons; 1884, 50 tons. I think the business of hatching and planting is of great benefit in keeping up the stock; for, with the increase of twine, the whitefish must soon be caught off if nothing is done to keep the stock good. There can be no reasonable doubt about the young fish living and becoming full grown. They stand just as good a chance as those hatched naturally, their danger from carnivorous fishes being no greater than those hatched on the reefs."

B. Divel, of Erie, gives similar testimony: "My catch of whitefish has improved for two or three years. The figures for the last two seasons are: 1883, thirty tons; 1884, fifty tons. From the fact that whitefish are steadily increasing in numbers, I believe the hatching and planting of the young is a success, and the cause of the increase."

Charles Joles, of Erie, a gill-net fisherman, says: "I fish gill-nets off Elk Creek. Cannot say how many whitefish I caught in the different years, but know I caught more in 1884 than in any season for several years. I attribute the gain to the planting of young fish at the upper end of the lake. I am satisfied that were it not for this whitefish would become so scarce that it would not pay to fish for them."

Rudolph Sifield, of North Bass Island says: "I fish with pound nets and own some gill-nets, but would willingly put the latter in a pile and burn them if gill-net fishing could be prohibited. Gill-nets are a great detriment to natural propagation, as they are set on the reefs in spawning time, right where the fish go to breed, and the schools are broken up or driven off entirely, and the eggs are then deposited in the mud and never hatch. Good results may now be seen from fish-planting, but the business has not been carried on long enough nor on a sufficient scale to tell what it will do in the long run."

Simon Fox, of North Bass, gives his opinion thus: "Have been in the fishing business for years, and until the past season never believed there would be any results from the planting of young fish. Now I am fully convinced that good results are to be seen, and if it is continued great results will follow."

Jasper Snide, of North Bass, says: "Our twine caught a few more whitefish in 1884 than in 1883, and I think we should have done still better but for the unfavorable fishing weather, it being so still that the fish remained on the reefs beyond our nets continuously until we got those heavy blows, which drove them off entirely. Formerly I did not have any faith in the planting of young whitefish, but am now sure we can see good results. We now catch a great many of a smaller class of fish which we never did before the planting was commenced, and if the stock had not been kept up in some other than the natural way they must have decreased in numbers, and we cannot see that they have in a few years."

George Axtell, of North Bass, states: "Whitefish are increasing in numbers all the time, at least this is true of my own nets, and I feel certain that it is owing to the planting of young fish from the hatcheries. Last fall I caught numbers of small whitefish, such as I never before caught in gill-nets."

William Axtell, practical fisherman, of North Bass, says: "I know that the planting of young fish is a great help to the fishing industry. Would like to see more fisheries put up—enough to take care of all the eggs that could be taken."

Eugene McFall, clerk of the steamer Jay Cooke, freight and passenger boat plying between the islands and Sandusky, says: "I think there is an increase in the catch of whitefish, and I suppose the planting must account for it. We carried from the islands in 1883 about 132,000 pounds of whitefish, and in 1884, 170,000; an increase of 19 tons for 1884."

George Winne, of Locust Point, says: "I fish gill-nets on the reefs off Toussaint Point. In 1883 I caught two tons of whitefish from sixty nets, and in 1884 six tons from thirty-six nets. A few years ago it got so it did not pay to go out on the reefs to fish, and I quit and went sailing. Since the planting of young whitefish has been carried on fish have become more numerous and I have done very well fishing, but best this last fall. Think if the planting is not kept up whitefish will soon become scarce again. Think a much greater percentage of eggs put into hatcheries will live to become mature fish than those deposited on the reefs by the fish themselves, for the reason that the former are protected from their enemies while hatching, and after the young fish are planted their chances are just as good."

M. Shepherd, also of Locust Point, states: "Am fishing fifteen pound-nets off Locust Poin. My catch the past season was about as usual—no material difference. Think the hatching business a good thing, but the proper place for a hatchery is on one of the islands; then the eggs would have the natural water, and when the fish are planted there would be no change from the water they were hatched in to that which they are planted in."

Nelson Parsons, a practical fisherman of Vermillion, says: "I have watched the fishing interests very closely for a number of years, and noticed that whitefish are steadily decreasing in numbers, until the supply was replenished by the planting of young fish from the hatcheries. If something of the kind had not been done, I think that whitfish would, ere this, have become so scarce that it would not pay to fish for them. Formerly we used to catch whitefish of all sizes at the same time, but this season at Cleveland, where I was, the fish were nearly all of one size—looked as if they were all of the same age, and I believe they were a school of the planted fish. I think if fishing is continued it must be done in this way."

Edson & Nichols, of Vermillion, caught one ton less of whitefish in 1884 than in 1883, but say: "We do not attribute the falling off to a growing scarcity, but to the direction and amount of wind, which is everything to us here in the fishing season. We think the hatching business of great importance, and the only way of keeping up the fishing industry."

Bert Parsons, also of Vermillion, caught no more whitefish in his pound-nets off Vermillion in 1884 than in 1883, but caught double the number in his gill-nets near the islands. He says: "I think if there had been favorable winds for pound-net fishing we would have caught more than double the amount of whitefish in our pound-nets last fall. I know the business of planting has been of great benefit, for in my gill-nets fished about the islands I caught double the quantity last fall that I did the year before. The figures are: 1883, 5 tons; 1884, 10 tons."

Leidheiser, of Vermillion, says: "I cannot give the amount of my catch, but it was rather light, owing to the unfavorable winds we had for our coast. I think the hatcheries are all right, and do a great deal toward keeping up the stock, and that the business should be continued and extended beyond where it now is."

Post & Co., of Sandusky, give some excellent testimony: "Yes, sir; I know that the business of propagating whitefish is a great benefit. In fact, if the United States and State hatcheries were to cease working, I believe it would pay the fishermen and dealers to continue it themselves. I would be willing to be taxed my share for supporting it. I understand that at Erie and Dunkirk a great many small whitefish were taken weighing a pound to a pound and a half, which was never done until the last two or three years, and they increase year by year, which is good proof that they are some of the planted fish.

"I received the fish from 100 pound-nets last year (1883) and from 110 this year (1884), with the following results: 1883, 50 tons whitefish; 1884, 80 tons whitefish.

"Whitefish are not now decreasing; but from the number of pound and gill-nets in use to catch them, a decrease is sure to follow unless the artificial hatching is continued to keep up the supply.

"I am opposed to fishing such long strings of pound-nets, and think the gill-netting needs regulating. The gill-netters commence away down below, off Buffalo and Erie, in deep water, and fish all summer; then, as the fish move up toward the head of the lake to the spawning grounds, the nets are moved right along with the runs, so that they are hunted almost the year round, which is done with no other kind of fish."

Harry Molyneux, of Sandusky, gives some valuable testimony: "Am a practical gill-net fisherman. A few years ago fishing on the island reefs got so poor that I gave up going there; but in the fall of 1882 I tried it again and did very well. In the fall of 1883 I caught double the amount of whitefish I did the fall before; and this last fall I caught almost twice as many as in 1883.

"I credit all the increase to hatching and planting, and would like to see more hatcheries."

William Rehberg, pound-net fisherman, of Middle Bass Island, says: "Think the hatching a good thing, but the planting has not been properly done long enough to tell really how much benefit it is toward keeping up the supply of whitefish. Think the supply could be kept up in Lake Erie by prohibiting gill-net fishing west of Kelly's Island, which would give the fish a chance to breed on the natural spawning reefs, where the gill-nets are now placed."

Caspar Voight, of Sandusky, says: "My catch of whitefish in the past two seasons was as follows: 1883, from 35 pound-nets, 37 tons; 1884, from 35 pound-nets, 45 tons.

"I have not thought much about the hatching business, but it must do some good; at least there seems to be an increase in whitefish the past two or three years."

Simon Schact, of Sandusky, says: "My catch for the past two seasons is as follows: 1883, 42 pound-nets, 40 tons whitefish; 1884, 48 pound-nets, 50 tons whitefish.

"I believe the planting of fry to be a good thing, and the only way the fishing can be kept up. I fear, however, that the way the gill-netters are catching them, and going on the breeding grounds and disturbing them while spawning, will do more harm than the hatcheries can do good. The fishermen down at Erie and Dunkirk receive the most benefit from the planting, as they fish with gill-nets all summer, and are using small-meshed nets every season on purpose to catch the small whitefish."

Lay Brothers, of Sandusky, say: "Our catch of whitefish for the past two seasons was as follows: 1883, from 20 pound-nets, 16 tons; 1884, from 30 pound nets, 26 tons.

"We think it is plain to see that there is a benefit to be derived from the hatcheries, and would like to see as many in operation as there are eggs to fill."

Dewey & Co., of Toledo, say: "Our catch the past season was rather light. We do not attribute this to a scarcity of whitefish, but to the unfavorable winds that prevailed on our Monroe coast grounds all the fall until a late date; then, just as the fish began to come on, we had two severe blows from the west, which drove the fish from the shore, and they did not come back, or, if they did, we did not get them, as our twine was out.

"We think the business of planting young fish an excellent thing; can see no reason why it should not be, as every fish planted in that way is a clear gain. We see no reason why planted fish should not stand as good a chance to live and become grown fish as those that hatch on the reefs."

Wm. St. John & Co., also of Toledo, say: "Our receipts of whitefish for the past two seasons are as follows: 1883, from 20 pound-nets, 6,000 pounds; 1884, from 45 pound-nets, 18,000 pounds.

"We do not see that fish planting has been of much benefit to this end of the lake, but I am informed that great benefits have been realized further down.

"We would like to see Congress take hold of the matter and enact a law to control and restrict the fishing with gill-nets; also with such long strings of twine. Although we ourselves are fishing 20 and 21 pounds in a string, we would like to see them cut down to six at most on main shore, and not more than three off the islands, or any place where there is a narrow channel. Then the whitefish would have a better chance to get through to the coast and reef spawning grounds at the head of the lake, which they would do if they were not turned back by the long strings of twine."

J. C. & J. H. Davis, of Toledo, says: "Our catch of whitefish for the past two seasons was as follows: 1883, six tons, and 1884, from the same number of nets, six and one-half tons.

"Do not know that planting of young fish has been of much benefit to us at this end of the lake, but can see no reason why it should not benefit somebody. Certainly, every young fish put in makes one more chance for a whitefish, as the eggs would be lost if not taken."

E. Alvord & Son, of Sandusky, says: "Our receipts of whitefish for the past two seasons were: 1883, from fifty-two pound-nets twenty-three tons; 1884, from the same number of nets, thirty and one-half tons.

"Yes, we think that propagation is a good thing and a great help in adding to the supply of fish in the lake. We think the young fry stand just as good a chance of becoming full-grown fish as those hatched in the lake.

"But there ought to be a law to stop fishing with gill-nets, for the reason that down below here, in deep water, where they fish through the summer, it is estimated that at least one-third of those caught in hot weather are unfit for market, and are thrown away, which is an outrage. And then in the fall the gill-nets are set on the spawning reefs, just when and where the fish should be left undisturbed."

Bear & Ruth, of Sandusky, state that in 1883 their catch of whitefish from 9 pound-nets was 7½ tons, and in 1884, from 11 pound-nets, 10 tons.

"The planting of young fish is undoubtedly of great benefit to the fishing interests. Were it not for this the stock in the lake would rapidly decrease."

A. Bremiller, of Sandusky, gives the following figures: Catch of whitefish in 40 pound-nets in 1883, 66 tons; in 1884, 69 tons.

"I think there is positive proof of the benefit of the hatcheries, from the fact that during late years, say the last two or three, there have been a great many small fish caught—smaller than ever were caught before the planting was commenced in the lake. Another fact to be taken into account is that the facilities for catching are becoming greater every year, and if the supply had not been kept up in some way, the stock must certainly have decreased, which is not now the case."

A. J. Gustavus, pound-net fisherman, of Huron, puts it in this light; "For every million fry planted there are a million more chances for whitefish. I think the greatest results are to come, as the business is not yet old enough for us to expect much benefit."

E. D. Smith, of Marblehead, says: "I know the fish-hatching to be a grand thing, for the reason that I have caught thousands of whitefish this season not weighing over a pound to a pound and a half each, and formerly I never caught them. I believe these small fish are some of those planted from the hatcheries."

Fred Motrie, of Port Clinton, says: "I fished 6 pounds in the fall of 1883, and 5 in the fall of 1884. Have no record of my whitefish catch for either fall, but know I caught more in 1884 than in 1883, perhaps 20 per cent. more. The hatcheries are undoubtedly a good thing and should be kept up. While the eggs are in the jars they are out of the way of sturgeon, suckers, and all fish that live mostly by sucking up spawn; and when the young fish are turned loose they will look out for themselves."

Felix Courchaine, also of Port Clinton, says: "I did very well the past fall, in fact the fishing was the best it has been for years. I caught 6 tons with 26 gill-nets. I have every reason to believe that we are getting results from the plantings from the hatcheries; and why shouldn't we? The fry planted in this way stand an equal chance with those hatched in the lakes, and as for taking care of themselves, I think nature will look out for that. I should be sorry indeed to see the hatching of whitefish discontinued."

F. Perry, a practical gill-netter, of Port Clinton, says: "In the fall of 1883 my catch of whitefish from 19 nets was 1 ton, and in the fall of 1884, from 37 nets, 6 tons—six times the catch of the year previous, with double the nets, on the same grounds. I think we are getting great results from the planting of young fish, for before it was commenced whitefish were fast playing out. But now they are becoming more plentiful again, and I know of no cause for it except the planting of the young in large numbers from the hatcheries."

From all the places named above, as well as other points on the lake, much more evidence of the same kind might be offered; but it would be merely a repetition of what has already been given. Accurate data showing the total whitefish catch of the lake for a term of years, or even for one season, would be almost impossible to obtain, from the fact that many fishermen classify their entire catch simply as "hard fish," "soft fish" etc., whitefish, of course, being included in the former. The statements, however, cover sufficient grounds to form a reliable basis for conclusions. They show that while there was no perceptible increase the past season in the whitefish runs at the extreme west end of the lake, there was a decided increase on the coast and island reefs further down; and a very marked increase in numbers still further down, on the feeding grounds, in deeper water, where gill nets are operated. On the whole, sufficient is shown to prove beyond a doubt that the aggregate catch was greater than for several years, that whitefish are decidedly on the increase in Lake Erie, and that the increase is simply the legitimate result of the work of the hatcheries. The removal from the lake every year of thousands and hundreds of thousands of adult fish, whether taken directly from the breeding grounds or not (the results are the same) must certainly ere this have caused a very material decrease in the stock but for the compensation of young from the hatcheries.

NORTHVILLE, Mich.

THAT POTOMAC SALMON.

Editor Forest and Stream:

The salmon taken in the Potomac near Glymont was a specimen of the Atlantic salmon (*Salmo salar*). We have now the specimen in the National Museum for preservation. It probably came from the plants of land-locked salmon which have been made at different times since 1876 in many of the tributaries of the Chesapeake Bay. Twelve thousand five hundred were planted by the Virginia Commission in the headwaters of the Shenandoah, and plants of the same species (to what extent I do not know) have also been made in the headwaters of the Potomac by the Maryland Commission. The specimen taken was probably one of these.

As you know, it is impossible to distinguish between the land-locked and the migratory varieties of *Salmo salar*. The two would be identical in appearance and characters after having gone to salt water. An undoubted specimen, presumably of this same species, has been taken in York River this season. One weighing eleven pounds was taken in the James River last year; and I have reports of the capture of fish presumed to be of this species in the Dan River near Danville. All the streams from which we have reports of the capture of salmon have been stocked with the land-locked variety, but no Penobscot salmon have been planted in these streams, with the exception of the Potomac River itself, in which I believe the Maryland Commission has planted the Penobscot, and the Susquehanna, which was stocked some years ago with this species. M. McD.

U. S. FISH COMMISSION, Washington, D. C., June 19.

THE CRUISE OF THE ALBATROSS.—*Editor Forest and Stream:* The Fish Commission steamer Albatross has just made a trip to the Gulf Stream off the coast of New Jersey for the purpose of searching for tilefish. This, it will be remembered, is the fish which was first discovered by the Fish Commission in the summer of 1879, and of which there was then no lack of specimens. But in the spring of 1882 there was an enormous fatality of tilefish, such that many thousand acres of water were literally covered with the dead bodies. One of the most careful experts of the Fish Commission, Capt. J. W. Collins, estimated that the number of dead fish reached 14,387,200,000 pounds. A careful examination of the area formerly inhabited by the tilefish was made by the Albatross a year ago, and again in the late cruise. The result was that after a most earnest effort not a single tilefish could be found. It is feared that it has been exterminated. The Fish Commission has published a pamphlet of 56 pages, illustrated with a fine drawing of the tilefish and a map of that part of the ocean covered by the dead tilefish at the time of the epidemic. Copies of this pamphlet can be obtained from the U. S. Fish Commissioner at Washington. The Albatross is at present on its way to the Grand Banks off Newfoundland, and will return about the middle of July. The object of the cruise is primarily to examine the fishing banks for cod and other species, as well as to examine unfrequented banks for the purpose of ascertaining what fish can be taken there. This is a part of a general survey of the ocean fisheries, from which such enormous commercial benefits are derived both by the people of the Dominion and of the United States. The project of capturing a mammoth octopus is only incidental, whereas the newspapers have made it appear that this was the chief object of the cruise. The late cruise of the Albatross in the Gulf of Mexico resulted in the discovery of large fishing grounds for the red snapper and other edible varieties, and has furnished us more information of the fisheries of that region than all heretofore possessed put together. A report of these fisheries is in preparation, and will prove of great value to the fishing industry.—C. W. SMILEY.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2450.**

A DOG PARTY.

ONE of our city belles has the dog fever badly. She keeps three or four small dogs and thought that she would give a dog party. So she issued cards upon which was written:

"The Misses Fox-Terrier, Bull-Terrier, Collie and Beagle, would be pleased to see Miss (or Mr.) Pointer (Setter, etc., as the breed may have been), at No. — street, Saturday afternoon, March —, 1885, from 3 until 6. *R. S. V. P.*"

Of course the lady owners were invited also, and it is unnecessary to say that they all came.

Miss Pug wore a velvet blanket trimmed with old gold braid, Miss Fox-Terrier was dressed in nature's garb only and was escorted by Mr. Poodle, whose white hair was brushed and combed in the latest style, while back of the shoulders he was shaved clean, and his stump of a tail was ornamented by a handsome tuft of wool. Miss Bull-Terrier, one of the hostesses, had been ailing the day before and was not in the best of moods; but her lack of good nature was amply made up by the happy way that the rest of the hostesses had of making it pleasant. All went on as merry as a marriage bell, and the frolics and tumbles indulged in were laughable to behold. The fox-terrier teased the cocker, the pug wagged his curl of a tail and winked at the poodle, who, being somewhat of a dude in his get up, was left rather to himself by the more fun-loving canines. The mastiff succeeded in upsetting a vase filled with flowers and spilling the water over the rather glum-looking pointer, who was talking over the field trials and bench show with the setter close to the stand upon which the flowers had stood. This rather disconcerted the pointer, who accused the setter of having upset the water so that his well-groomed coat would not look so sleek, and it looked a trifle dusky for the moment, but order was restored and the pointer apologized and resumed his conversation with the setter. Meanwhile the Clumber, who had been half asleep on the sofa, was rather rudely crowded off by a mischievous imp of a three-quarter breed bull-terrier (commonly known as pit stock), but who would rather tease than fight, but would, if crowded too far, make it very lively for any dog in the room. About an hour and a half was spent in dog sports, after which supper was announced. Then the sport began. Each young lady escorted her pet to his dish and then stepped back to see the sight of fifteen or twenty "little darlings" in a circle with "bibs" on eating. Everything was lovely until the hostess's bull-terrier, who had swallowed her supper in somewhat of a hurry, concluded that the piece of cake on her neighbor's plate was too good to lose, so reached for it, much to the disgust of the pug, to whom it belonged. The little fox-terrier wanted to take the part of the pug, but after looking at the ivories of her royal nibs concluded to let out the contract, so the hostess rather unceremoniously cleaned the plates of her guests, until she reached the "pit stock" who quietly eyed the whole proceeding and seemed to smile as much as to say, "Go it, old gal, but you will get left if you fool with my plate." Evidently her nibs had not observed the smile, for presently she sidled up to the "pit stock" and thinking that he was not looking, or perhaps thinking that he would not "quarrel with a lady," reached for a chicken bone that seemed to have been left on purpose. A warning growl was not observed until too late, and in less than a second the ball opened. Her royal nibs and pit stock were having it hot. The quiet setter tried to stop them, when the pointer who in his heart believed the setter to have been guilty of his recent bath reached for him and away they went at it. The pug took refuge under the sofa, accompanied by the poodle and Clumber, while the balance of the company followed the example set them by the terriers and were having a general "Donnybrook Fair" all over the room.

The way in which the fair proprietors climbed on top of tables, chairs, bookcases, and on to anything handy would make "the boys" smile. As the dance was getting rather serious and tiresome for some of the pets, the lady at whose residence the party was taking place, managed to escape by a side door and called in the coachman, who, with the aid of a club, broke up the dance. After which the "little darlings" were taken to their homes, and as they left the house expressions might be heard which sounded very much like "Nasty little brute, etc., etc." Suffice to say there will not be a series of dog sociables this year. ROSECROFT.

ENGLISH KENNEL NOTES.

XXXI.

FOR my American readers it will even now not be too late to devote a few lines to the charming show of harriers at Warwick. Doggy sportsmen are indebted to Mr. Harding Cox for this pleasing variety and innovation in show classes. This gentleman, in addition to giving a special prize, also acted as judge, not only, I am happy to say, to his own complete satisfaction, but what is too of some consequence, he was fortunate in gratifying the exhibitors, a feat which is not always to be performed by solely doing your duty or the right thing.

Mr. Cox being himself a master of harriers and taking great pains to induce men to enter resulted in the brilliant and novel sight that presented itself to the jaded view of the dog show frequenter. The presence of several of the huntsmen and whips lent color to the picture. Mr. Vaughan Pryse and his son, as first whip, both in green, were themselves there to look after their beauties Some of the uninitiated visitors appeared not a little surprised to see a few of the huntsmen in pink, and I overheard one bank-holiday sportsman gravely informing old Jackson, quite a character, that "only fox hunters had the right to wear scarlet, and that green was the color to hunt the hare." "Maybe you're right, sir," politely and in a dissembling tone, replied the ribstone-complexioned old 'un, with a weather eye on his instructor's trouser's pocket, "but some on us has the privilege to, because it's an old custom and there are no foxhounds in our countries." "Which are those?" "Um, let me see, there be the Todmorden, the Holcombe, the Rossendale, the Pendle Forest and the Pennistone. Those are about the lot, I think." Besides foxhounds the others who sport pink are those who hunt the stag.

Jackson's pack, the Holcombe, which are hunted on foot, besides being a very smart set, also contain many points of interest to the student of caniology. There are, I believe, still a few, very few, almost pure southern hounds of the old type about the country. Among the plates published by Jennings in 1835, and referred to in my notes No. 29, is an almost perfect representation of one; the stern is set on too low and carried too gaily, the head is also too short and thick, and these Holcombe harriers look to be lineally descended from them. The best specimens in the pack have long supple ears, curled at the ends and set on very low; the narrow hound head, full flews, give them a noble and blue blood appearance. Their master, Mr. Walter Mucklow, has just cause to be proud of such a kennel.

No pack presented a more workmanlike effect than Mr. John Greenwood's Todmorden harriers. At a glance one sees that these hounds have been intelligently and carefully bred for their special work in their own country. They have plenty of the Holcombe blood in them, and to the head and bone of the southern hound they unite the go of the foxhound. Their short backs are an important part of their anatomy, as a loosely constructed hound, long in the couplings, could never climb the hills of the Todmorden hunt The most beautiful in this pack, in fact of the show, was the blue mottle Forrester. In symmetry, build and character, he was perfect and his color is glorious. He stands a nice harrier height, twenty-one inches, on legs straight as a plumb-line to the toes, which just turn in as a hound's should. Bedford is another beauty, and has been much admired by that excellent sportsman, Colonel Starkie. The Brookside, to which an equal first was awarded, show too much foxhound for harriers; this was also the impression I formed of the Biggleswade, which look like dwarf foxhounds and so must be wanting in harrier character. Prizes were awarded to the Biggleswade, Mr. Vaughn Pryse's, the Brookside and the Holcombe. The special for the huntsman who showed his hounds in the best condition, was obtained by John Funnel of the Brookside, the silver horn for the best couple in the show went to Biggleswade.

I hear that the judge, Mr. H. Cox, has given up the Hambleden harrier and has taken over the "Old Berkeley," and I have also heard, which I hope is not true, that he intends to discard the old color and to hunt them in pink. This very famous old pack has always been hunted in canary plush, and it seems a pity, in my conservative mind almost a crime, to give up curious ancient customs, however trying they may be to the complexion.

All that need be further said of the Warwick show is that the committee cemented the good opinion of exhibitors by a prompt settlement of the prize money.

Mr. Stark's thoughtless little flutter among the bulldog ranks drew two replies the following week, one from Mr. Sprague, another from the Hon. Secretary of the club, Mr. Pybus-Sellon. Both of these exhibitors very properly reprimanded the fiery little Celt for the strong language he had em-

ployed, then proceeded to abuse him in terms that must have taken his breath away. As Mr. Stark has not responded I presume this to be actually the case.

Speaking about bulldogs I suppose I may as well mention their show now, though it is not chronological. It was quite the success it deserved to be. The entries were good, likewise the quality and the attendance exceeded expectation. Mr. Cary, the able and ingenious manager of the Aquarium, worked this in with his other shows, the singing ladies, the acrobats on the stage, the swimming matches, etc. When one of these other shows had terminated a showman mounted to the top of the staircase where the animals were located, and ringing a bell to attract attention, shouted to the sightseers to walk up and "behold the dog of beauty and power, who killed 250 rats in a quarter of an hour." I think the zealous stewart, Mr. Jackson, might have corrected the gentleman's strange and misleading views of a bulldog's merits and duties.

Mr. A. Benjamin in making his début under such circumstances put his knowledge and *sang froid* to a severe trial. The show was overfull the first day, and the judging ring was much too small and the exhibits were cramped for space. The awards were received with little outward expressions of approval or dissatisfaction. Some of the puppy owners drank an extra glass and drowned their feelings, and a lady "made remarks" to visitors who, catalogue in hand, paused opposite her aggrieved monstrosity. Mrs. Sprague won a sideboard of specials with her remarkable dog Grabber. The challenge cup would be considered a handsome ornament for the most luxuriously furnished bar parlor in England. I noticed Surplice in the challenge class looking rather light in body. Mr. Pybus-Sellon exhibited the historical old dog King Cole. The poor old chap is now blind in one eye, and begins to show plainly painful signs of old age, so that this will probably be his last public exposure. It is well that all dogs should end their days in private, since one cannot speak of the "fall" of their life as

"An age that melts in unperceived decay."

A very nice little, under forty-five pounds, dog that took my fancy among the rest was Lumpy. He was entered at a very moderate price, one that would have tempted me to interview his owner were I inclined to make my family circle miserable by the introduction of a bulldog. His most conspicuous fault is a far from perfect stern.

A friend of mind tells me the most amusing sight in the show was Mr. Berrie with his chair which he carried from dog to dog to sit on as he made his notes. I can't decide that point because I didn't see it. But what filled me with delight was the discovery of Briton Riviere's model for his world-famed picture of a little lonely desolate bull pup sitting on a huge flagstone, helpless and forgotten, with nobody in the wide world to cheer or tend him. But here he was to-day happy as possible, about three benches from the refreshment bar, his stomach was distended with buns and there was a "Derby" look in his mongrel eyes that made me think he had been drinking. I don't know if it was habit or happiness that made his ears stand on end, but it anyhow gave him a very dissipated appearance. The catalogue of this show is likely to fetch money one day, as apart from its being so admirably got up in accuracy, paper and print, I am told it was sold out before the last day. Another specimen that pleased me was Mr. Hodgson's Heiress. She is a most typical bitch, her ears I don't like; they are carried flat over her face like a fox-terrier's—button ears. She is particularly good in profile, much resembling Rosa in the well-known engraving. This print of Crib and Rosa, once rather rare, seems to have got common of late, there must have been a re-issue of it. No bulldog man's smoking den is complete without it. Shortness of face is a most essential point in a bulldog, but it won't compensate for the loss of character and expression. The fanciers had an opportunity at this show of seeing the trueism in living examples, viz.: Heiress and Faust. The head of the latter is far the shortest, but it is much behind the bitch in type of breed, in these very short faces one usually gets a thinner nose, a weak, pinched muzzle and the square powerful nose is lost.

The collie club will hold its show next week in the same locale The entries closed with the miserable total of eighty-three, but an energetic kennel to kennel whip has brought the entry up to about one hundred and twenty. I am afraid the dogs will suffer much from the heat, gas and smoke-laden atmosphere in the gallery.

We were astonished to hear of the return of Mr. Dalziel, it was quite expected he would be away another month or so. I have noticed some of his awards have been sharply criticised in your reports. By many I think "Corsincon" is supposed to be impervious to this process, to the best of my belief the many are not quite right. I should not be at all surprised to see him break out in some "American Notes" in the vein of the great author who was also not gratified with his first trans-atlantic visit.

Our Kennel Club is missing a great opportunity of earning the thanks of exhibitors by not taking up the railway charges question. Quite recently the companies have made a most serious alteration in their conditions and rates for conveying dogs. Under the old system all dogs went at certain dog rates except puppies, and these could at the wish of the sender travel at parcels rate. The new rule is that dogs sent loose on a chain can go as before, and also those in cases, which with the package do not exceed one hundredweight. But if the package should exceed that limit double rate is charged. This seems a most absurd, unbusinesslike and unjust arrangement. The owners of small dogs it will not affect at all; they will be in the same position as before, but owners of large dogs will now be obliged to send them loose or pay double fare for each animal. This is hard lines upon those who possess valuable exhibition kennels. They have gone to the expense of having crates and boxes made which will now naturally be useless. The risk to the dogs will be greater, we shall hear of more dogs lost, damaged, etc., nor can I see the gain to the company. It must have suited their convenience to convey animals under lock and key. What do the guards think of the new rule? It is with them that the sour-looking mastiff, the truculent boarhound in future will ride. An unmanageable monster flying about the end of his chain will not add to his comfort, and probably interfere with his duties.

To effect ordinary reforms on a railway, it is necessary that a bishop should be smashed in an accident. Perhaps the unwisdom of the new regulations will be brought home to the persons responsible when it is discovered that an appalling accident occurred through the neglect of some important act on the part of the guard who was occupied in a furious struggle with a canine fellow traveler.

But I very emphatically maintain that this most particularly is a matter in which the kennel clubs could have exerted their influence in favor of both sides. They had only—as soon as they heard of rumored alterations in the rates—to write to the secretaries of the great companies and offer to give evidence and information from exhibitors of experience. The result would have been very different, I am sure; but heigho, it's so easy to let things slide, it's so easy to do nothing, though it is hardly worth while to found a club for so simple a purpose.

The doggy world is little behind the larger social one in its ability to forget. Scarcely any, none I think, notice has been taken in our kennel press of the death of a once well-known lady exhibitor and breeder, Miss Hales, of Hales Place, Canterbury. Her name will be found in the first volume of the K. C. S. B. as the owner of some St. Bernards whose names will continue to figure in the pedigrees of the best so long as importance is attached to breeding. Miss Hales was also equally successful in the mastiff fancy. The deceased lady had long discontinued her interest in dog shows. Miss Hales was the daughter of the late Sir Edward Hales and Edmunda D'Cercy, and was the last survivor of an old Kentish family, dating back 400 years, who originally owned vast estates at Woodchurch and Tenterden. Miss Hales was a Roman Catholic and her loss will be much felt in that community. She herself took the veil. A few years ago misfortunes came upon her and most of her colossal fortune was devoured by the Jesuits and lawyers. Miss Hales is remembered by the public as one of the Tichborne witnesses. The claimant stated he used to visit Hales's place when his regiment was quartered at Canterbury, but Miss Hales was unable to identify him as Sir Roger Tichborne.

I heard a rumor in the Midlands that one of our doggy papers was fore sale. There is more than one of them that must soon either sell or shut. I don't think it can be the *Shooting Times*, the most that is likely to be parted with in that quarter is "a fifth share of the profits." I am told it is a paper that has hitherto been remarkable for the violence of its opinions, and further, what I can hardly realize, that the new proprietor is the latest subject of attack in its pages. This is what "They" say, so it is only deserving of such credence as that indefinite authority has usually accorded to it. Rumored news is generally the most diverting, if seldom the truest.

JUNE 1, 1885. LILLIBULERO.

AMERICAN KENNEL CLUB.

FOLLOWING is the text of the new constitution and by-laws adopted by the A. K. C. at the last meeting at Philadelphia:

CONSTITUTION.

ARTICLE I.—Name—The name of this organization shall be "The American Kennel Club."

ARTICLE II.—The object of this Association shall be to secure uniformity in rules governing bench shows and field trials, the revision of standards, the decision of appeals which may be taken from the decisions of managers of bench shows or field trials held by members of this Association, and the preparation and enforcement of rules and regulations necessary for the punishment of all cases of improper conduct on the part of managers, judges and exhibitors at any bench show or field trial held by members of this Association; also to adopt and maintain such measures as shall tend to the mutual benefit and protection of its several members.

ARTICLE III.—Section 1. All regularly organized clubs or associations in the United States and British American Provinces, under whose auspices bench shows or field trials of dogs have been held, or which shall be formed wholly for the purpose of holding bench shows or field trials, are eligible to membership. Sec. 2. All clubs or associations forming this Association shall annually appoint or elect one delegate to the National Association, whose election shall be certified to in writing by the Secretaty of the club or association which he represents, which certificate shall be delivered to the Secretary of the National Association at its regular meeting. A person to be eligible to act as delegate or proxy for a club or association, whose regularly elected member or representative is absent, must be a member of a club, one of the members of this Association, but in no case shall any delegate act as proxy for more than one other member of this organization.

ARTICLE IV.—The officers of this Association shall be a President, First Vice-President, Second Vice-President, Secretary, Treasurer, and an Executive Committee consisting of one delegate for each club, members of this Association. The President, Vice-President, Secretary, Treasurer shall be elected annually by ballot by the delegated members of this Association. Officers of the American Kennel Club shall not be privileged to vote upon business before the Executive Committee, unless regularly elected delegates from their clubs except the President, who shall have the casting vote in case of a tie. Provided that all organizations, members of this Association, that do not hold bench shows or field trials within two years, dating from Jan. 1, 1885, or actual date of their admission, shall not have representatives in Executive Committee meetings, nor its members be eligible to office. Upon holding a bench show or field trial the usual representatives shall be allowed.

ARTICLE V.—The President, First Vice-President, Second Vice-President, Secretary and Treasurer shall be elected at the annual meeting, and shall hold office until the next annual meeting or until their successors are elected. Each of the officers shall be at the time of their election, regular members in good standing of a club one of the members of this Association, and shall serve without compensation.

ARTICLE VI.—The President shall preside at all meetings of the Association. He shall have power to call a special meeting at any time when the interests of the Association require. The Vice-Presidents, in the order of their election, shall, in the absence of the President, preside at meetings of this Association.

ARTICLE VII.—The Secretary shall keep records of all meetings of the Association, make all calls for meetings, take charge of and keep a roll of membership, of all papers belonging to the Association, and do any other business proper for his office, or directed by the Executive Committee.

ARTICLE VIII.—The Treasurer shall receive all monies belonging to the Association, and disburse same under the approval of the Executive Committee.

ARTICLE IX.—Sec. 1. The Executive Committee shall conduct all the business of the Association, decide all disputes, arbitrate upon all matters affecting the welfare of the several clubs forming this Association, and make such rules and regulations as may be considered advisable for the advancement of the interests of dogs, dog shows and field trials. Sec. 2. All vacancies in the offices of the Association may be filled by the Executive Committee until the next annual meeting. The Executive Committee may assess the members of this Association in such sums as are necessary to defray its expenses. A club failing to pay said assessment within sixty days, shall forfeit representation.

ARTICLE X.—Sec. 1. The annual meeting of this Association shall be in the spring of each year. The time and place of meeting to be selected by the Executive Committee, and notice sent by the Secretary to the secretaries of the several clubs forming this Association at least three weeks prior to said meeting. Sec. 2. The President shall, on the written request of a majority of the members of the Executive Committee, call a special meeting. The notice for such meeting shall specify the particular purpose for which said meeting was called, and said meeting shall not consider or take action upon any matter other than that specified in said notice. The Executive Committee may conduct its business by correspondence among its members without assembling, under rules and regulations hereinafter provided. Sec. 3. At any regular or special meeting of this Association, five members in person shall constitute a quorum. Sec. 4. Clubs eligible to membership must be proposed by a member of the Executive Committee and elected by that committee. Three negatives shall exclude the applicant. The election shall be by ballot.

ARTICLE XI.—Sec. 1. This Constitution may be revised or amended at any annual or special meeting of the Association by a two-thirds vote of the members of the Association, but no such amendment shall be considered unless the same shall have been properly submitted to the members of the Association at least two weeks prior to such meeting, except by unanimous consent.

BY-LAWS.

Sec. 1. The following order of business shall be observed at all meetings of this Association: 1. Roll call. 2. Reading of minutes of previous meetings. 3. Secretary's report. 4. Treasurer's report. 5. Report of standing committees. 6. Report of special committees. 7. Untinished business. 8. Election of officers. 9. New business. 10. Adjournment. Sec. 2. The Executive Committee shall appoint from its members a Committee on Credentials, whose duties shall be to investigate the qualifications of all candidates for membership and report same to Executive Committee. They shall appoint from their own number a Committee on Discipline, whose duties shall be to investigate all complaints and protests which may be made to the Association, and report their finding, with such recommendations as they deem proper, to the Executive Committee. They shall appoint such committees as they find necessary to revise and adopt standards for all breeds of dogs, and all other committees desirable for the promotion and general welfare of the interests of this Association.

Sec. 3. In all business of the Executive Committee conducted by correspondence, the proposer or initiator of any resolution or other business shall deliver to the Secretary of the Association a written statement of the resolution or other business, which he desires to have considered by the Committee, together with as many copies thereof as there are members of the Executive Committee. The Secretary shall at once deliver to each member of the Committee one copy thereof, accompanied by a notice that said members shall within one month return the same with a written approval, disapproval, or amendment. In case of amendment, the proposer shall fill all the requirements necessary to the original proposition, and the Secretary shall also serve the different members with certified copies thereof. Upon the expiration of the period provided for in said notices, the Secretary shall deliver to the President the entire correspondence, with detailed report of all connecting proceedings, and the President shall make a ruling in accordance with said correspondence, and notify the Secretary, who shall in turn notify each member, giving the result of the vote and the manner in which each club voted. If necessary, the President shall direct further correspondence or advise the call of a special meeting to consider the subject. The Secretary shall enter upon his minutes full report of such proceedings.

RULES AND REGULATIONS.

1. The term "dog" where used in these rules is general in its application.

2. All dogs entered for competition or exhibition, only shall be entered in the name of the *bona fide* owner. Such entry must be identified by the name of the dog, its date of birth, and if known, the name of its sire, dam and breeder; otherwise it must be entered "pedigree unknown." If the name of a dog which has won a first prize has been changed, its name at time of winning any and every such prize, and the place thereof, must be given.

3. If a dog is entered without being identified, as directed in Rule 2, it shall be disqualified from competition.

4. Puppies may be entered in the grown classes in addition to the puppy class by the payment of an extra entrance fee.

5. A prize won in a puppy class does not count as a win under the champion rule.

6. Dogs to be eligible for special prizes must in all cases be entered in their regular classes, and no dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes." Stud dogs and brood bitches, with their progeny, may compete for such special prizes as may be offered, but the progeny must be entered in regular classes.

7. A dog to compete in the champion class must have won three first prizes at bench shows given under the auspices of clubs members of this Association. A dog having won three first prizes as above, cannot compete in an open class when there is a champion class for its kind, but must compete in such champion class.

8. Any dog entered in a champion class must have stated on its entry blank at least three winnings, with the date of each, to show that it is eligible to such class.

9. In estimating the number of prizes a dog has won, with reference to whether it should compete in Champion Class or not, the number of prizes won shall be calculated up to 12 o'clock noon of the day previous to the day of closing entries for the show.

10. Dogs that have won in a Champion Class shall be continued in said class.

11. A dog affected by mange or other contagious disease must be disqualified from competing, and be removed from the show. A competent person shall be appointed by the managers to pass judgment as to the disease of dogs.

12. The judge may withhold such prizes as his judgment may dictate.

13. In miscellaneous classes judges will award prizes only to dogs of a recognized breed, that have no regular classes assigned. Dogs that have a regular class provided for them will not be allowed to compete in the Miscellaneous Class.

14. Dogs that have been erroneously entered may be transferred by the judge to their proper classes. If such classes have been judged, they shall not be reopened.

15. The decision of the judges shall be final in all cases, except where mistake, fraud, misrepresentation, or collusion can be shown. In such cases the managers, or such referee as they may appoint, must decide all cases, and the dog must be re-judged.

16. All protests and charges must be made in writing, and be delivered to the Secretary as soon as practicable.

17. Any person guilty of misconduct, or has been guilty of misconduct, in any way in connection with dogs, dog shows, or field trials, may, in the discretion of the managers, be disqualified from exhibition or competition at these shows. Such disqualification shall be recognized by all the members of this Association, until the person or persons disqualified shall appeal to, and the case has been decided by the Executive Committee. The disqualification of the owners will apply to all dogs connected in the perpetration of the fraud.

18. A castrated dog or spayed bitch shall be disqualified from competing, or from receiving a prize if awarded. Total or partial blindness shall have great weight against a dog.

19. All clubs shall reserve the right to exclude or remove from the show such dogs as it may deem proper or necessary.

20. Each member of the Association shall appoint their judges, arrange prize lists, form of catalogues, assume its own financial responsibility, and arrange such other details as may properly come under its individual management.

21. Other rules and regulations not inconsistent with the Constitution and By-Laws, may be adopted by the members of this Association for the government of their shows.

THE STANDARD COMMITTEES.

At the late meeting of the American Kennel Club a number of committees were appointed to communicate with fanciers and breeders in relation to any changes which it may prove desirable to make in the various standards. The formation of any new standard does not come within the province of these committees. They are simply to receive the views of others and present these to the club. Since the club has undertaken the work, it is of the utmost importance that the committees should have the views of fanciers who are competent to advise respecting a given breed. Such persons should make their influence felt, whether they think that in any breed changes should be made or whether they make a stand for what we already have.

Following is a list of the committees:

Mastiffs—E. W. Dudley, Camden, N. J.; Herbert Mead, Lake Waccabuc, N. Y., and W. Wade, Pittsburg, Pa.

St. Bernards—A. W. Pope, Boston, Mass.; Rodney Benson, New York, and J. P. Haines, Tom's River, N. J.

Newfoundlands—J. F. Kirk, Toronto, Ont.; J. A. Nickerson, Boston, Mass, and James Mortimer, Babylon, L. I.

Deerhounds—J. E. Thayer, Lancaster, Mass.; Edward Kelley, New York, and Dr. Van Hummel, Denver, Col.

Greyhounds—H. W. Smith, Worcester, Mass.; H. W. Huntington, Brooklyn, N. Y., and J. R. Pierson, Buckingham, Pa.

English Setters—Maj. J. M. Taylor, Lexington, Ky.; P. H. Bryson, Memphis, Tenn., and J. C. Higgins, Delaware City, Del.

Irish Setters—Dr. Wm. Jarvis, Claremont, N. H.; W. N. Callender, Albany, N. Y., and C. H. Turner, St. Louis, Mo.

Gordon Setters—Harry Malcolm, Baltimore, Md.; Jerome Marbie, Worcester, Mass., and C. F. Keys, Washington, D. C.

Black and Tan Setters—H. C. Glover, New York, and Jean Grosvenor, Boston, Mass.

Pointers—E. C. Sterling, St. Louis, Mo.; E. F. Stoddard, Dayton, O., and R. C. Cornell, New York.

Irish Water Spaniels—John D. Olcott, Milwaukee, Wis.; T. O. Donoghue, La Salle, Ill., and J. F. Kirk, Toronto, Ont.

Cocker Spaniels—G. W. Leavitt, Boston, Mass.; A. T. Laidlaw, Woodstock, Ont., and J. P. Willey, Salmon Falls, N. H.

Chesapeake Bay Dogs—J. T. Norris and Harry Malcolm, Baltimore, Md.

Foxhounds and Harriers—Dr. L. H. Twaddell, West Philadelphia, Pa.; Hon. John S. Wise, Richmond, Va., and J. A. Stovell, Philadelphia, Pa.

Beagles—A. C. Krueger, Wrightsville, Pa.; C. F. Kent, Monticello, N. Y., and W. H. Ashburner, Philadelphia, Pa.

Dachshunde—Dr. L. H. Twaddell, West Philadelphia, Pa.; John H. Naylor, Chicago, Ill., and H. L. Goodman, Auburn, Ill.

Fox-Terriers—W. Rutherfurd, New York; J. E. Thayer, Boston, Mass., and Edward Kelley, New York.

Collies—Thos. H. Terry, New York; Martin Dennis, Newark, N. J., and A. S. Apgar, New York.

Bulldogs—J. E. Thayer, Lancaster, Mass.; R. Livingston, New York, and R. H. Barlow, Philadelphia, Pa.

Bull-Terriers—E. S. Porter, New Haven, Conn.; Jas. Mortimer, Babylon, L. I., and R. Livingston, New York.

Black and Tan Terriers—Dr. M. H. Cryer, Philadelphia, Pa.; S. Coulson, Montreal, Canada, and J. F. Scholes, Toronto, Ont.

Bedlington Terriers—J. F. Kirk, W. S. Jackson and J. F. Scholes, Toronto, Ont.

Irish Terriers—L. Timpson, Red Hook, N. Y.; Dr. J. S. Niven, London, Ont, and James Lindsay, Jersey City, N. J.

Skye Terriers—R. H. Barlow, Philadelphia, Pa.; W. P. Sanderson, Philadelphia, Pa., and James Mortimer, Babylon, L. I.

Hard-haired Scotch, Yorkshire, Toy, Broken-haired and other Terriers, Italian Greyhounds, Japanese, King Charles, Blenheim and other Spaniels—J. H. Naylor, Chicago, Ill.; Jas. Mortimer, Babylon, L. I., and J. F. Kirk, Toronto, Ont.

Pugs—Dr. M. H. Cryer, Philadelphia, Pa.; H. L. Goodman, Auburn, Ill., and W. R. Knight, Philadelphia, Pa.

Poodles—John G. Heckscher, New York; J. F. Kirk, Toronto, Ont., and Jas. Mortimer, Babylon, L. I.

THE ST. BERNARD GIROLA.—Andover, June 17.—*Editor Forest and Stream:* In your account of the Chicago dog show held June 4, I see that the smooth-coated St. Bernard pup Girola, formally Anno (A.K.R. 1606), received second prize in open class. How could that be when she is a puppy and there was a puppy class? I bred Girola, and she will not be one year old until July 29. She was entered at St. Louis in April in puppy class and won first; owner H. J. Clapham. She was entered at Cincinnati as owned by Millbrook Kennels and got he. She was again entered at Chicago as owned by H. J. Clapham. Is there more than one smooth pup Girola? If not, how did she come in the open class at Chicago, and who owns her?—ESSEX.

GOING OUT OF THE BUSINESS.—Mr. M. P. McKoon advises us that he is going out of the cocker breeding business, and is about to depart for Southern California, where he will engage in the culture of fruit. Our best wishes go with Mr. McKoon. May he find under the fair California skies those soothing influences which may transform him from a petulant, fault-finding writer of scurrilous and defamatory letters into a placid-tempered, "genial, whole-souled sportsman."

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Count Fritz, Bismark, Prince Cliff and Countess Fritz. By Chicago Kennels, Chicago, Ill., for lemon and white pointers, three dogs and one bitch, whelped April 4, 1885, by Fritz (A.K.R. 1351) out of Virginia (A.K.R. 1357).

Eugene Gladstone, Bennie Gladstone, Clifford Gladstone, Ruth Gladstone and Roy Gladstone. By Edward A. Todd, New Haven, Conn., for black, white and tan English setters, three dogs and two bitches, whelped June 12, 1885, by Don Gladstone (Gladstone—Juno) out of Bessie T. (Gladstone—Floy).

Belle of Newton. By F. H. Nichols, Newton, Mass., for black cocker spaniel bitch, whelped Nov. 17, 1884, by Obo II. (A. K.R. 432) out of Gem (A.K.R. 1312).

Shamrock. By W. P. Booth, Poughkeepsie, N. Y., for light red Irish terrier, whelped Nov. 23, 1884, by imported Slasher out of Sheila (A.K.R. 137).

Gyp, Carl, Cæsar, Admiral Dot and Nina. By Western Reserve Kennels, Palmyra, O., for pugs, four dogs and one bitch, whelped May 27, 1885 (Don Juan—Mollie).

Mertie. By Victor M. Haldeman, General Wayne, Pa., for black and white English setter bitch, whelped March 6, 1885, by Salada's Dash out of Thompson's Lill.

Queen Blue. By Forest Hill Kennels, Bangor, Me., for blue belton English setter bitch, whelped Feb. 9, 1885, by Gun (Gladstone—May B.) out of Pearl Blue (Royal Blue—Dryad).

Belle Nevison. By Harry Hollis, Wellsville, N. Y., for mastiff bitch, whelped May 29, 1885, by champion Nevison (Gurth—Juno) out of Lady Nevison (Nevison—Brenda).

Chicago Kennels. By J. Bardwell and J. B. Wickery, Chicago, Ill., for their kennel of pointers and setters.

Western Reserve Kennels. By C. F. Wilson, Palmyra, O., for his kennel of mastiffs and pugs.

NAMES CHANGED.

☞ *See instructions at head of this column.*

Pattie to Pattie B. Gordon setter bitch, age not given (Duke—Topsey), owned by J. Bardwell, Chicago, Ill.

BRED.

☞ *See instructions at head of this column.*

Nettle—Mixture. W. H. Cookson's (Hudson, N. Y.) fox-terrier bitch Nettle (A.K.R. 1704) to J. E. Thayer's Mixture (Spice—Fairy III.), June 17.

Daphne II.—Hermit. Essex Kennels' (Andover, Mass.) St. Bernard bitch Daphne II. (A.K.R. 489) to Chequasset Kennels' Hermit (A.K.R. 23), May 18.

Witch Hazel—Strephon. Scottish Chief Kennels' (Cleveland, O.) collie bitch Witch Hazel (A.K.R. 1233) to J. Van Schaick's imported Strephon (Eclipse—Flyaway), June 13.

Drew—Sportsman. C. Tucker's (Stanton, Tenn.) English setter bitch Drew (Druid—May B.) to J. W. Murnan's Sportsman (Gladstone—Sue), June 8.

Dashing Belle—Glen Rock. E. W. Jester's (St. George's, Del.) English setter bitch Dashing Belle (A.K.R. 814) to his Glen Rock (A.K.R. 1616), June 14.

Pearl—Snap. E. W. Jester's (St. George's, Del.) Italian greyhound bitch Pearl (A.K.R. 768) to Snap (Romeo II.—Naughty), June 16.

Princess Fairy—Paul Gladstone. G. L. Wrenn's (Concordia, Miss.) English setter bitch Princess Fairy (Prince—Fairy II.) to W. B. Gates's champion Paul Gladstone (Gladstone—Lavalette).

Princess Blossom—Paul Gladstone. W. B. Gates's (Memphis, Tenn.) English setter bitch Princess Blossom (Dashing Rover—Princess Rose) to his champion Paul Gladstone (Gladstone—Lavalette).

Bessie—Don. Wm. H. Force's (New York) pointer bitch Bessie (Sensation—Mineola) to R. T. Vandevort's Don (A.K.R. 165), June 18.

Rita Croxteth II.—Bang. J. E. Hill's (Newton, Mass.) pointer bitch Rita Croxteth II. (Snipe—Rita Croxteth) to Geo. S. Tucker's imported Bang, May 4.

Pauline Markham—Hornell Jock. Charles S. Baker's (Boston, Mass.) cocker spaniel bitch Pauline Markham (Obo II.—Hornell Ruby) to Hornell Jock (A.K.R. 1877), June 7.

Bessie T.—Don Gladstone. Edward A. Todd's (New Haven, Conn.) English setter bitch Bessie T. (Gladstone—Fly) to Don Gladstone (Gladstone—Juno), April 10.

WHELPS.

☞ *See instructions at head of this column.*

Nell. Geo. A. Stafford's (Cleveland, O.) black and tan terrier bitch Nell, June 10, five (four dogs), by Dot (Tip—Pippy).

Lady Nevison. Harry Hollis's (Wellsville, N.Y.) mastiff bitch Lady Nevison (Nevison—Brenda), May 29, three (one dog), by champion Nevison; the dog and one bitch since dead.

Bessie T. Edward A. Todd's (New Haven, Conn.) English setter bitch Bessie T. (Gladstone—Floy), June 12, five (three dogs), by Don Gladstone (Gladstone—Juno).

Zealah. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Zealah (Dan—Beaulah), June 14, ten (six dogs), by Thornton's Dash II. (Dash—Clytie).

Judy. C. T. Brownell' (New Bedford, Mass.) imported pug bitch Judy, May 14, eight (five dogs), by Pratt's Dick.

Princess Pearl. W. R. Traver's (Washington, D. C.) English setter bitch Princess Pearl (Druid—Princess Draco). June 19, six (four dogs), by champion Gladstone.

Rose Obo. J. B. Robertson, Jr.'s (New Haven, Conn.) cocker spaniel bitch Rose Obo (A.K.R. 1204), June 15, five (four dogs), by Young Obo (A.K.R. 861); all black.

Bluebell. Thos. Goode Tucker's (South Gaston, N. C.) Byron fox-hound bitch Bluebell (Plunder—Old Bett), six (three dogs), by Rouse.

Bawdy. Thos. Goode Tucker's (South Gaston, N. C.) Byron fox-hound bitch Bawdy (Plunder—Old Bett), four (two dogs), by Morse.

Nancy. Thos. Goode Tucker's (South Gaston, N. C.) Byron fox-hound bitch Nancy (Logan—Fancy), three (one dog), by Speck.

Leo. Elm City Kennels' (New Haven, Conn.) imported greyhound bitch Leo, June 20, nine, by their Dan (Hector—Beauty); four mouse-colored and three brindle dogs, and two black bitches.

SALES.

☞ *See instructions at head of this column.*

Obo II.—Gem whelp. Black cocker spaniel dog, whelped Nov. 19, 1884, by J. E. Hill, Newton, Mass., to Geo. L. V. Tyler, West Newton, Mass., and resold by him to F. B. Stafford, Fanuell, Mass.

Benny. Black, white and tan beagle dog, whelped Nov. 3, 1884 (Bunny. A.K.R. 1118—Bessy, A.K.R. 1117), by Haven Doe, Salmon Falls, N. H., to F. N. Marchant, Gloucester, Mass.

Bunny (A.K.R. 1118)—Bessy (A.K.R. 1117) whelp. White, black and tan beagle dog, whelped Nov. 3, 1884, by Haven Doe, Salmon Falls, N. H., to W. C. Wright, Great Falls, N. H.

Belle of Newton. Black cocker spaniel bitch, whelped Nov. 17, 1884 (Obo II.—Gem), by Geo. L. V. Tyler, West Newton, Mass., to F. H. Nichols, Newton, Mass.

Baronet—Olivette whelp. Lemon and white pointer dog, whelped Feb. 21, 1885, by Geo. L. V. Tyler, West Newton, Mass., to J. Herbert Baird, Newton Highlands, Mass.

Rita Croxteth II. Lemon and white pointer bitch, age not given (Snipe—Rita Croxteth), by Fred B. Stafford, Fanuell, Mass., to Geo. L. V. Tyler, West Newton, Mass., and resold by him to J. E. Hill, same place.

Frank Laverack. Black and white English setter dog, whelped Nov. 23, 1883 (Tempest—Lilly), by Edward A. Todd, New Haven, Conn., to Henry Plumb, same place.

Bessie T. Black, white and tan English setter bitch, 5yrs. old (Gladstone—Floy), by E. S. Hawks, Ashfield, Mass., to Edward A. Todd, New Haven, Conn.

Fritz (A.K.R. 1351)—Virginia (A.K.R. 1357) whelps. Lemon and white pointers, whelped April 4, 1885, by C. W. Littlejohn, Leesburg, Va., two dogs to J. B. Wickery and a bitch to J. Bardwell, Chicago, Ill.

Irma A. Mastiff bitch, whelped Feb. 24, 1885 (Hero II.—Countess), by Pine Hill Kennels, Melrose, Mass., to F. C. Pierce, Concord, Mass.

Nero. Mastiff dog, whelped Feb. 20, 1885 (Hero II.—Countess), by Pine Hill Kennels, Melrose, Mass., to H. Burt, Jamaica Plain, Mass.

Lady Bright. Black, white and tan English setter bitch, age not given (Rink II.—Aida), by M. H. Dailey, Bangor, Me., to Forest Hill Kennels, same place.

Bizorah. Red Irish setter bitch (A.K.R. 1388), by Ashmont Kennels, Boston, Mass., to Geo. H. Parkinson, Middletown, Conn., instead of Middlebury, as given last week.

PRESENTATIONS.

RANGE AND GALLERY.

THE WESTERN SCHUTZENFEST.

INDIANAPOLIS.—The fourth biennial tournament of the North western Shooting League began June 16, with an attendance of about 300 of the 1,000 sharpshooters belonging to the league. Among those here are William Farrow, kingshooter; William Hays, ex-kingshooter, and seven other members of the Manhattan team; Martin Graw, of Chicago; Emil Berg, leader of the Davenport team, which won the championship at Highland, Ill., in 1883; teams from Chicago, Davenport, Highland, Ill., Joliet, St. Louis, Dubuque, Milwaukee, Bloomingdale, Ill., and Monroe, Wis. Teams from Toledo, Cincinnati, Detroit, Peru, Ill., Princeton, Ill., St. Paul, Winona, Minn., La Crosse, Wis., and Pittsburg will be here to-morrow. The visitors were escorted to the shooting park by the local organization, and welcomed by Emil Martin, president of the league, and addresses were made by ex-President August Pagn, of St. Louis, George Reger and others.

The opening contests were for rapidity in scoring fifteen bullseyes, and for the first sixty-five bullseyes scored. These are the only two rapid firing contests, the prizes being gold medals. Emil Berg, of Davenport, Iowa, made the first fifteen centers, and when the shooting for the day closed, led all the shooters with sixty-three centers to his credit.

In the evening there was a reception to the delegates, at which Gov. Gray and Mayor McMasters spoke.

The shooting ran through the week, and on Sunday came a great picnic with the crowning of the shooting king. The team shoot drew out a big effort, and the scores ran: Milwaukee, 1,193; Newark, 1,181; Indianapolis, 1,145; Munroe, 1,116; Joliet, 1,111; Davenport, 1,095; Chicago No. 2, 1,092; Peru, 1,093; Chicago No. 1, 1,039; Toledo, 1,034; Cincinnati No. 1, 1,008; Iowa team, 1,001; Cincinnati No. 2, 937; St. Louis, 915. The first prize consequently will go to Milwaukee. The highest individual scores in this contest were the following: Stephen Menier, Milwaukee, 213; Captain Grindels, Cincinnati No. 1, 203; Mr. Simon, Cincinnati No. 2, 175; L. Adams, Toledo, 201; James Kelley, Joliet, 203; John Coppersmith and A. Bergeron, Newark, each 207; H. H. Schulde, St. Louis, 174; M. M. Plotke, Chicago, 190; D. Herlien, Peru, 205; Emil Berg, Davenport, 217; Nicholas Gerber, Monroe, 201; Dr. Alexander, Indianapolis, 212; A. Warnebold, Iowa, 203, and W. Wegner, Chicago No. 2, 213.

The attendance at the Park on Saturday was light, but the defect was more than met by the liveliness of the shooting, which was probably the greatest since the opening, and the scores show that the firing on the average was the best during the week. (The most interesting contest was that on the king's target, on account of the fact that on Thursday, in six hours' shooting, William Hayes, of Newark, had made 222, surpassing all other contestants and making a phenomenal score.) On Friday the nearest approach to his score was 206, and it was left for the shooting of Saturday to produce, if possible, the man that would defeat him. But as the record shows this was not done, the nearest score below him being that of H. R. Vonderhorst, of the same team (Newark) who made 209, Dr. A. M. Alexander, of the home team, making the third best score, 206. Mr. Hayes has won accordingly the king's medal and will be crowned to day king of the fest. He also secures an additional prize of $15 in gold. The second prize, won by Mr. Vonderhorst, of Newark, is $20 in gold.

On the union target W. M. Wegner, of Princeton, was the winner, and will receive the prize of $500 cash, offered by Schmidt's brewery. Valentine Link, of Peru, Ill., will receive the second prize, $150 in cash, given by the local association. Then follow three prizes of $100 each, which will be distributed among J. P. Delahanty, of Princeton, Ill., scoring 68; H. Hoehne, of Monroe, Wis., 67, and Wm. Hayes, of Newark, 66. The other scores on this target are as follows: E. Bretz, of Indianapolis, 64; W. W. Wormwood, of Newark, 64; J. Coppersmith, of Newark, 63; Richard Kolk, Dubuque, 63; M. Farrow, Springfield, Mass., 63; R. A. Miller, Indianapolis, 62; H. Mueller, Toledo, 62; M. F. Robinson, Indianapolis, 62; F. Toggenberger, Chicago, 62, and Emil Berg, Davenport, 62.

It will be noticed that the scores are very close, which seemed to be the order of the day, on the union target, as well as on the man target, on which the following scores were made: J. P. Delahanty, Princeton, 55; J. Tricker, Monroe, Wis., 54; H Spangler, Monroe, 54; G. Nitzel, Peru, Ill., 51; T. Merz, Indianapolis, 51; H. Mueller, Toledo, 51, W. M. Keller, Princeton, 50; J. Gramlich, Fort Smith, Ark., 50; H. R. Vonderhorst, Newark, 50; G. Kersten, Chicago, 50. For the best scores on this target there are 60 prizes, ranging from $5 to $80.

On the people's target the following scores were made: M. Gindele, Cincinnati, 71; Edward Bretz, Indianapolis, 68; H. R. Vonderhorst, Newark, 64; John Grimm, Chicago, 63; George Kersten, Chicago, 63; Stephen Munier, Milwaukee, 63; H. Oehl, Newark, 63; Geo. Knebbe, Chicago, 63; A. F. Meyer, Davenport, 61; John P. Hefner, Chicago, 60. For this contest there were sixty prizes offered, ranging in value from $5 to $35.

Mr. Hayes used a muzzleloader, a .32 cal., and this fact was much commented on as likely to set the muzzleloacing advocates active again. Dr. Alexander was noteworthy as being with Bretz and Soleman the only men shooting off-hand. He, too, uses a .32-cal., 40-grain charge. Z.

BOSTON, June 17.—There was a good attendance of bullseye hunters at Walnut Hill to-day, and the weather conditions being favorable, excellent records were made. The match for the director's medal was shot, and won by R. Reed on a score of 23 out of a possible 25 points. Private F. W. Perkins, Company L, 8th Infantry, during the day finished the last of four scores of 23 out of 25 points requisite to win the gold badge (first prize) in the competition, open only to members of the militia. The scores made by the team of the Manchester Rifle Association in the competition against a team of the home club, held last week, was received, the result showing the home team winners by a score of 687 to 657. The score stood:

Creedmoor Match.

BOSTON, June 20.—There was a good attendance of riflemen at the Walnut Hill range to day. The wind proved troublesome to the shooters, and prevented the recording of high scores in the early part of the day, but toward the latter part of the afternoon caused less annoyance. A team match between the Massachusetts Rifle Association and the Arlington Heights Rifle Club was shot in the afternoon, resulting in a victory for the former club. Appended are the scores:

Massachusetts Rifle Association.

MANCHESTER, N. H., June 14.—The detailed scores made by the members of the team representing the Massachusetts Rifle Association in its match with the Manchester Association were received in this city to-day. It appears that the local riflemen were defeated by a score of 687 to 657, being 30 points behind their Massachusetts rivals. The Massachusetts team was picked to win, and was one that could throw down the gauntlet to the whole of New England. Had any one made the prediction that they would not defeat the Manchester riflemen more than 30 points he would have been regarded as a boaster whose words were of little weight. The selection of such a team to compete against the Manchesters was in itself a compliment to the latter. Again, the shooting was upon decimal targets with which the home riflemen were unacquainted and they were also without the services of Mr. Bixby, who can always be depended upon to roll up a good string. Had the shooting been upon Creedmoor targets the defeat would only have been by three points. Decimal targets are the proper ones to use, however, as it gives riflemen the benefit of their close shots and these targets will undoubtedly come into popularity here. C. E. Berry, statistical officer of the Massachusetts Association, in his report to the Manchester club says: "Your team shot better than I expected they would, and your club need not feel ashamed of their representatives. Our team, with one exception, shot better than an average score, and our average per man was high for team scores. What is the verdict concerning decimal targets in your club? I think you would like them better than the Creedmoor. Your club has every reason to be proud of the shooting of its team." The scores follow, the possible total being 900 per team:

Massachusetts Rifle Association.

O M Jewell	8	10	7	9	5	10	9	10	6	8—125
F J Rabbeth	6	6	6	8	10	7	9	8	10	5—117
E F Richardson	6	8	9	9	8	10	9	10	10	8—116
J B Fellows	8	10	5	4	10	9	4	10	8	7—116
G R Russell	8	8	9	2	6	8	10	8	5	9—112
N C Nash	8	7	10	4	6	7	6	10	9	6—104—687

Manchester Rifle Association.

A B Dodge	4	9	8	7	8	8	7	9	9	8—120
C D Palmer	10	9	10	9	10	6	7	5	7	9—120
M Wadleigh	8	7	9	7	7	7	4	9	9	10—108
J L Niven	9	6	8	7	7	5	6	9	10	3—105
G A Leighton	8	6	10	7	3	8	8	5	8	6—103
E C Paul	8	9	7	9	5	4	8	6	7	8—101—657

The average per man was: Massachusetts, 114½; Manchester, 109⅛. Mr. Lyman, who was selected as one of the reserves to shoot in case one or more of the regular team failed to be present, made a string of 119, which, if added to that of team, would have helped out the record amazingly. Mr. Wadleigh was unfortunate with his last shot, his rifle being discharged as he was making preparations to shoot, the result being a 1 instead of a much higher figure, which he otherwise would undoubtedly have made. Other team matches are expected to follow.

JAMESTOWN, N. Y., June 2.—Scores at 200yds. off-hand, Creedmoor target, bright light, wind strong from 9 to 11 o'clock:

Moore	4554444443—43	Norton	4443443544—39
Dowler	5444445443—42	Sprague	4434434534—38
Burns	4444444440—40	Ward	4434445544—38

ARLINGTON, Mass, June 17.—Two matches were shot at the range of the Arlington Heights Rifle Club to-day, in the forenoon between five men from the home club and five from the Hillside Rifle Club of Waltham, strings of 10 shots per man, Massachusetts decimal target. The first match was a tie, each club scoring 308. The second resulted in a victory for the home club by a score of 328 to 287. Fair shooting conditions prevailed, with a light 5 o'clock wind. The scores:

First Match—Hillside Club.

H L Whiting	4	8	9	9	9	8	9	7	4	5—72
L O Dennison	5	6	7	6	10	10	7	7	7	6—71
P A Emerson	7	7	9	5	9	4	8	4	9	5—67

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

SPRINGFIELD, Mass.—The members of the Rod and Gun Club who went to shoot Saturday, June 20, for the monthly badges, did some fine shooting, the 112 of S. S. Bumstead being very fine. Mr. Bumstead has not had much practice of late, but is now getting into his old form for the 50-shot match, in which he shoots with Captain Wm. Farrow against J. A. Huggins, of the Pittsburgh (Pa.) Rifle Club, and Cale Mandlin and George Harrison, of the Minneapolis (Minn.) Rifle Club. The match, which is telegraphic, takes place July 4. The individual scores were for

First Class Badge.

S S Bumstead	11	12	12	10	11	12	10	12	11	11	—112
E T Stepheus	11	11	10	11	11	12	12	10	11	9	—109
T B Wilson	11	11	11	11	11	12	10	11	8	10	—106

Second Class Badge.

A Locke	11	11	11	11	12	10	10	10	10	12	—108

PIN HEAD.

MANCHESTER, N. H., June 20.—The Manchester Rifle Association have commenced practicing on the Massachusetts decimal target in their off hand shooting and thus far like it very well, and unless the ingenuity of target makers bring forth something with strong points in its favor, we shall probably adopt it for our match shooting in the future. At our semi-weekly shoot, held June 16 and 20, the following scores were made:

June 16.	Cr'dm'r.	Mass.	Dec.	June 20.	Cr'dm'r.	Mass.	Dec.
C D Palmer	47	79		A B Dodge	49	85	
J Lawrence	45	71		C D Palmer	47	81	
F J Drake	44	68		J B Anthony	45	75	
E C Paul	44	67		W Graham	44	64	
W Graham	43	59		J Lawrence	44	65	
J Hodge	42	61		F J Drake	44	65	
E J Partridge	42	54		T Pinch	44	65	
T Pinch	41	54				RIFLE.	

THOMASTON, Conn., June 20.—The weather conditions at Bridgmoor Range to-day were a bright light with a tricky wind, veering from 8 to 11 o'clock. Subjoined are the scores:

G C Gilbert	11	10	10	11	9	11	11	10	11	9	—103
W H Dunbar	10	11	9	10	11	12	10	10	9	9	—101
G A Lemmon	11	11	11	11	11	8	11	11	8	8	—100
E Thomas	10	10	3	10	11	9	11	9	8	9	—95
G P North	8	11	8	10	10	8	8	10	10	8	—91
J L Alling	7	10	9	7	11	8	10	9	8	11	—90
Fred A Perkins	11	12	8	10	9	10	7	7	11	4	—89
F Carr	8	8	10	8	9	9	10	10	5	10	—87
A Fox	10	6	6	10	9	7	7	7	8	7	—77
G Smith	6	8	10	10	5	7	5	6	6	6	—69

TOPEKA, Kan., June 19.—The Capital City Shooting Club held its weekly shoot to-day at the fair grounds. The target upon which the shooting was done is the Massachusetts decimal, upon which it is possible to count 100. The score was as follows:

Geo E Morrison	0	0	3	5	4	2	1	7	6	3—31	
J M Clark	7	8	5	2	9	5	4	8	7	2—57	
J L Paine	5	0	1	1	5	2	5	8	0	3—30	
Reed McCarter	9	10	4	3	10	10	7	3	7	4—67	
Robert Thompson	5	5	3	4	6	8	10	4	8	5—58	

RIFLE NOTES.—James S. Conlin has opened his shooting gallery for the season, at Leland's Ocean Hotel, Long Branch. He is personally in charge and gives instructions in shooting and bowling without charge. A high power musket of small-arm caliber is the subject of some important experiments by the Naval Bureau of Ordnance. This musket fires a steel bullet in place of the ordinary leaden bullet, and an initial velocity of two thousand feet per second has been attained with it. This new small-arm will, it is thought, be capable of piercing the sides of torpedo boats and cruisers.

OTTAWA, Ontario, June 22.—It is rumored that Lieut.-Col. Landry, member of Parliament, owing to adverse criticisms in military circles, has decided to withdraw from the command of the Wimbledon team. Col. Ross, of the Governor-General's Foot Guards, it is said, has been tendered the command, and will probably accept it.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

N. G. A. TOURNAMENT.

Editor Forest and Stream:

The preliminary arrangements for above tournament are progressing favorably. Pastime Park, which has been secured for the occasion, is probably the best inclosure for such an affair as can be procured anywhere. The park has been laid out and is used exclusively for all outdoor sports, such as shooting matches, dog races, lawn tennis, base ball, etc. There is an open level ground of nearly 400yds. square, so that five or six different sets of traps can be worked at the same time. The grounds are reached from depot on Seventh and Greene streets in about ten minutes, and trains run every ten or fifteen minutes, so that probably no shooting grounds can be reached as handily as this one from the center of any other large city.

The executive committee for this shoot has corresponded with all the manufacturers of the various targets besides the clay-pigeon, and there is no doubt that all the different targets will be represented. The Association has proposed to these manufacturers to take twenty or more shares of the stock, and so assist the Association and financially interest themselves in the future welfare of it. Under these circumstances the success of the National Association would be assured, and a bright future opened for harmonious actions of the large body of American trap-shooters.

All the different manufacturers have promised to be on hand, and look favorably upon the propostion to financially interest themselves in the "National," which business will come up at the meeting of the Association at the Girard House on the evening of June 30. It will be a gay sight to have a set of each of the different traps and birds to work at the same time. The first day of the tournament, July 1, will be open to all. All open shoots will be like the others, classified and pro rate, but five per cent. will be taken out by the Association for expenses.

The programme for the first day will comprise one or more sweeps each at the various targets represented, seven birds per man, three dollars entrance, and one live bird shoot from five ground traps, seven birds and fifteen dollars entrance. The detailed programme for the following three days will be divided at the meeting June 30 at the Girard House. It will be somewhat a repetition of the first day's programme.

There will be each day one or more shoots open only to men who have never won a prize in a State or inter-state shoot, and besides the executive committee will have power to bar any expert from these shoots, so that the amateurs will have a chance to shoot among their equal.

Extra sweepstakes with one, two and three dollars entrance will be shot constantly to keep all hands busy.

There is no doubt that this will prove the most interesting tourney yet held. J. VON LENGERKE, for Executive Committee N. G. A.

Editor Forest and Stream:

As this will be your issue immediately preceding the second inter-State tournament of the N. G. A., to be held at Pastime Park, Philadelphia, July 1 to 4, both inclusive, permit me to briefly call the attention of sportsmen thereto, and more especially the following points:

First—Any one can join the Association on the grounds and participate at once in the tournament.

Second—Members are reminded that a most important meeting will be held at the Girard House, Philadelphia, on Tuesday, June 30, 8 P. M., which all are urgently invited to attend. The selection of a new general manager will be the principal business. Other questions of importance will be discussed. The programme, as regards the various targets to be used, will be arranged and new members received.

Third—Members who do not attend the tournament are reminded as to the Fourth of July telegraphic match, 3 P. M., conditions announced in the hand book, with the following change: Send your scores per telegram to J. Von Lengerke, Girard House, Philadelphia. The latter will be the chief executive office of the tournament, assisted principally by T. P. Greger, of Philadelphia, and numerous other members.

Fourth—Among those who have been successively suggested as nominees for the office of general manager are, C. M. Stark, of Winchester, Mass.; Frank Drake, of Bradford, Penn.; J. C. Lineman of Bradford, and A. W. Du Bray, of Newport, Ky.. any one of whom would doubtless fill the office to the satisfaction of the members. The three just named have thus far declined in flattering terms, on the ground principally of other and pressing business. Mr. Du Bray has kindly consented to the use of his name for the position, at the urgent solicitation of such men as Messrs. Bandle, Lokan, et. al. He is a keen sportsman, a thorough worker, and one who will doubtless do justice to all. It is to be hoped that members attending the meeting will be prepared to nominate such others as they may deem worthy and as may be willing to accept the position if elected.

When participating in this tournament, every member should feel it as much his tournament as any other man's; and therefore he should lend a hand in assisting the managers, in expediting matches, acting as volunteer judges, etc., or in any other capacity on the grounds where he sees he can make himself useful or aid in increasing the mutual enjoyment of all concerned. To the Philadelphia sportsmen who are not as yet members we would say that most of our members who visit your city do so for the first time. It is there fore to be hoped that you will do as you would be done by" under similar circumstances, so that when they say adieu every one of you will feel that you have done your share toward rendering their stay pleasant and agreeable in all respects. You may not have the occasion so to do for years. Therefore, if there be any bickering among yourselves on various topics (which it is needless here to mention), it is to be hoped you will lay them aside for this occasion, and duly maintain together the old-timed hospitality for which Philadelphia is famous. J. BLOOM, Manager N. G. A.

MASSACHUSETTS GLASS BALL ASSOCIATION.

THE Massachusetts State Glass Ball Association opened its two days' tournament June 17. The pleasant weather made the breaking of birds and balls pleasant sport. Following is the result of the day's shoot:

1. Five glass balls—Schaffer, Rowell, Loring, Ames and Law divided first, Wilbur, Shumway and Libby divided second, Renaud, Buffington and Souther divided third, Williams, Papanti and Whitton divided fourth

2. Seven clay-birds—Perry and Starr divided first, Gilman and Allen divided second, Webber, Doane, Sanborn and Libby divided third, Renaud and Whittier divided fourth.

3. Fifteen glass balls—Dickey, Short and Werm divided first, Doane, Bancroft, Henry and Bowdish divided second, Rowell, Law and Purrington divided third, Eager, Knowles and Stanton divided fourth.

4. Seven birds, five traps—Clark first, Allen, Lovejoy and Stark divided second, Eager and Sawyer divided third, Houghton and Nichols divided fourth.

5. Five singles, straightaway—Houghton, Stanton, Howell, Robinson, Francis and Clark divided first, Wilbur, Barney, Lovejoy and Schaffer divided second, Berry and Blair divided third. Franklin fourth.

6. Three-men team match—Maldens first, Bostons second, Massachusetts team third, Medfields fourth.

7. Three pairs pairs birds—Dickey, Webber and Franklin divided first, Stark second, Perry and Davis divided third, Farrar fourth.

8. Five birds—Renaurd, Purrington and Francis divided first, Webber, Gilman, Tisdale and Law divided second, Frost and Bowdish divided third, Franklin fourth.

9. Five pairs birds—Eager first, Rowell second, Bancroft third, Purrington and Star divided fourth.

In the team match for the championship badge, 10 balls per man, the Malden team was first, winning the badge and first money, the Worcester team was second and the Suffolk team third.

In the individual match for a gold badge, Stark was the winner, breaking 42 balls without a miss. Dickey was second, with 39.

June 18.—The second day found the grounds of the Boston Gun Club at Wellington in capital order. The several events showed. First event, 5 singles, 1 trap: Eager 2, Perry 4, W. J. Braley 5, Allen 4, Sawyer 4, Davis 3, Bartlett 3, Webber 4, Purington 3, Houghton 4, Howard 2, Pond 2, T. S. Hall 3, Buffington 4, Copeland 5, Pratt 3, Aldoes 3, Tisdale 3, Bowdish 3. Braley and Copeland divided first money. Sawyer and Webber divided second money. Pratt and Tisdale divided third. Howard and Pond divided fourth.

Second event, 7 single birds, one trap: Eager 6, Dickey 5, Perry 6, Braley 5, Allen 4, Sawyer 7, Davis 2, Bartlett 4, Webber 4, Purington 7. Houghton 4, Howard 2, Pond 5, Hall 6, Buffington 3, Copeland 5, Pratt 4, Aldoes 3, Tisdale 5, Bowdish 5, Henry 4, Gilman 6, Farrar 5, Robinson 6, Rowell 7, Clark 4, E. T. Smith 4, White 3, Holden 7, Francis 5, Rice 5, Stark 7, Whittier 2, Atwell 1. Stark, Rowell and Purrington divided first money. Perry and Gilman divided second; Dickey and Bowdish divided third; Webber, Clark and Houghton divided fourth.

Third event, grand championship contest for the Ligowsky clay-pigeon badge, 15 single birds, 1 trap:

Eager	011111000111101—10	Bartlett	111111111111111—15
White	111111101011101—12	Webber	110111000111111—11
Allen	111111111010110—13	Knell	110101000101000— 7
Farrar	101111101111101—12	Braley	100111111111111—13
Perry	110111010111111—12	Tisdale	111001011111111—12
Dickey	111111001111111—13	Holden	111111011111114—14
Gilman	110101111111111—14	Smith	111011111111111—14
Whittier	100010101100101— 7	Stanton	111110101011111—13
Sawyer	110011111001111—11	Souther	010101111111110—13
Rowell	111101001111101—11	Aldoes	001010011w
Purrington	111111010011011—11	Pond	100010101111114—10
Stark	111111111111111—15	Loring	111101011111111—13
Davis	010110111111011—11	Hyughton	100010100110111 -11
Howard	111011110111101—12	Clark	111011011101010—10
Copeland	10000000w.	Francis	111100111111100—11
Hall	000001110111111— 9	Henry	011101111011111—12
Buffington	101001111111111—12	Pratt	011101111111110—11

C. M. Stark and J. G. Bartlett divided first money. Ties on 15: Stark —111111111111, Bartlet—1111111110; C. M. Stark, won the badge, Gilman and Smith divided second money, Allen, Braley and Dickey divided third, Howard and Buffington divided fourth.

Fourth event, three-men team match, five single birds per man:

Malden Gun Club.		Worcester S. C. Third Team.	
Purrington	11111—4	Houghton	01100—3
Sawyer	11111—5	E T Smith	11110—4
Loring	11110—4—14	Bowdish	11111—5—12
Worcester S. C. First Team.		M. R. A. First Team.	
Gilman	11111—5	Dickey	11111—5
Clark	11101—4	Rowell	10111—4
Holden	01111—4 —13	Stanton	11111—5—14
Suffolk G. C.		M. R. A. Second Team.	
Robinson	11111—5	Henry	01000
J C Smith	11101—4	Lair	11111
Pratt	01100—2—11	White	w.
Worcester S. C. Second Team.		Brockton G. C.	
Davis	10010—2	Allen	11111—5
Whittier	11111—5	Tisdale	10111—4
Webber	11001—3—10	Bartlett	11111—5—14
Boston Gun Club.		Fall River Gun Club.	
Eager	11111—5	Hall	11111—5
Perry	11111—5	Buffington	10111—4
Stark	11111—5—15	Braley	10111—4—13

Boston Gun Club won first, Malden second, Fall River Gun Club third, and Worcester S. C. Second Team fourth.

Fifth event, 7 single birds, 5 traps: Gilman 6, Eager 5, Perry 6, Webber 5, Robinson 2, Henry 4, Rowell 5, Dickey 5, Hall 5, Davis 2, Law 5, Sowther 4, Purington 6, Loring 6, Stanton 4, Whittier 3, White 4, Allen 6, Sawyer 6, Howard 5, E. T. Smith 6, Copeland 5, Aldoes withdrew, Farrar 5, Adams 2, Sanborn 5, Pond 3, Atwell 6, Braley 6, Stark 6, J. C. Smith 3, Witherell 3. Clark 6, Holden 5. Loring, Sawyer, Braley and Clark divided first. Eager, Rowell and Howard divided second money. Henry and Stanton divided third. Whittier won fourth.

Sixth event.—Grand championship contest. Team badge match; 5 men per team, 10 birds per man:

Mass. Rifle Association.		Brockton Gun Club.	
Rowell	1111011010—7	Howard	1111011101—8
Stanton	1001111010 6	Allen	1011111100—7
White	1111011011—8	Tirrel	1001011110—6
Law	1111101001—7	Copeland	1111101000—6
Dickey	1111100000—5—33	Bartlett	1111110111—9—36
Suffolk Gun Club.		Worcester Sportsmen's Assoc'n.	
Cranston	1101110011—7	Eager	1011011111— 8
Pratt	1111000111—7	E T Smith	1101011111— 8
Witherell	1110100101—6	Gilman	1111110111— 9
J C Smith	0011001100—4	Holden	1011111110— 9
Robinson	1111000111—7—31	Perry	1111111111—10—43
Malden Gun Club.			
Sawyer	1000111110—6	Loring	1111101101—8
Purington	1111111110—9	Francis	1111110111—9—41
Buffum	1011111111—9		

Seventh event, 7 singles, 1 trap: Eager 6, Rowell 3, Stark 7, Purrington 6, Henry 4; Webber 4, Law 6, Sawyer 4, Perry 7, Dickey 6, Atwell 5, Bartlett 4, Davis 7, White 6, Smith 5, Gilman 3, Howard 2, Francis 5. Stark, Perry and Davis divided first. Eager and Dickey divided second. Atwell, Smith and Francis divided third. Henry and Webber divided fourth. Gilman won fifth.

Eighth event—5 pair double birds;

Bartlett	10	01	11	11	11—8	Tirrell	11	10	11	11	11—9
Law	10	11	11	10	11—8	White	10	00	10	11	10—5
Dickey	10	11	10	10	10—6	Purrington	10	11	11	11	11—9
Sawyer	01	01	11	11	11—8	Stark	00	10	11	11	11—7
Eager	11	10	01	10	00—5	Rowell	11	10	11	10	10—7

Tirrell and Purington divided first, Law won second, Stark and Rowell divided third.

Ninth event, 7 singles, 1 trap: Dickey 5, Law 5, Bartlett 7, Sawyer 4, Tirrell 6, White 4, Robinson 6. Purington 7, Stark 6. Sampson 4, Smith 6, Pratt 6, Witherell 5, Rowell 6, Bartlett and Purington divided first. Stark and Rowell divided second money. Law won third. Sawyer, White and Sampson divided fourth.

JERSEY CITY HEIGHTS.—The open to all union shoot last Saturday at the grounds of the Jersey City Heights Gun Club at Marion, was again a very enjoyable affair, and the popularity of these shoots seems to increase with every weekly shoot. They will be kept up throughout the summer months, and the one o'clock Saturday closing movement will surely add a great many to the already respectable list of regular visitors. The following were some of the sweeps shot under National rules. As it is always at the option of the shooters whether to enter for the money purses or not, a number of contestants shoot for the price of birds only.

Eight clay-birds, 25 cents entrance:

Jim Blauvelt	10111111—7	Lever	00000110—2
Al Heritage	01101101—5	Paradine	01101110—5
Smith	01110011—5	F Sunderman	00000000—0
Townsend	00101111—5	Chetwood	10010110—4
D Sunderman	01100100—3	Burdette	01111010—5
J von Lengerke	01101001—4	Holcomb	11101110—6

Blauvelt first, Holcomb second and Burdette third.

Eight Knoxville blackbirds, 50 cents entrance:

J Blauvelt	01110111—6	Burdett	11101110—6
Smith	00011100—3	Tomkins	10111000—4
Townsend	11011110—6	Holcomb	11110111—7
Sunderman	01001000—2	Pellence	10111100—5
Meyer	00000100—1	H von Lengerke	00000111—3
Luder	11110010—5	Smith	01100111—5
Codey	00000000—0	Knowlen	01000100—2
Lever	00101111—5	J von Lengerke	11111111—8
Chetwood	01000110—3		

J. von Lengerke first, Holcomb second, Townsend third.

Eight American clay-birds, 50 cents entrance.

Lindsley	01101000—3	H von Lengerke	11110111—7
Tomkins	10001101—4	Townsend	11010110—5
Lever	00111110—5	Sunderman	00101000—2
Chetwood	10011110—5	Clements	00100110—3
Luder	10101100—4	Holcomb	10111101—6
Meyer	10100001—3	Burdette	11011111—7
Pelience	11001110—5	Edey	00011010—3
Blauvelt	11101111—7	Smith	10110111—6
Codey	00001001—2	J von Lengerke	10011111—6

Blauvelt first, Smith second, Townsend third.

Four pair double clay-pigeons, 50 cents entrance. Tomkins first, Lever second, Lindsley and Smith divided third. Several other small sweeps were shot.

CHESTER, Pa., June 15.—For some time past the members of the Thomas L. Briggs Gun Club, of Chester, have been making arrangements for their second contest with the Wawassett Gun Club, of Wilmington. The match took place yesterday near Ninth and Kerlin streets, and resulted in a victory for the Chesterians. The contest opened by shooting at glass balls. P. Ambold led off for the Wilmington team in a way that looked as though the Delawareans might get away with the prize, but Billy Gibbs tied his score on balls and beat him on pigeons. The contest went rapidly on, and was watched with great interest by the large crowd that had collected. The score follows:

Wawassett Gun Club.			Briggs Gun Club.		
	Gl. Ba.	Cl. Pi.		Gl. Ba.	Cl. Pi.
P Ambold	11111—5	01000—1	W Gibbs	11111—5	11111—5

EMERALD GUN CLUB.—New Dorp, S. I., June 18.—The day was all that was required and we had a very large attendance of members and friends. The members did their very best, as there were many of the fair sex as spectators, from all appearances the latter took quite an interest in the result:

G V Hudson, 30yds	1111101100— 7	J Measel, 25yds	1111001111— 8
B Lynch, 25yds	1111111111—10	N Measel, 25yds	1111100101— 7
Schermerhorn, 21y	1111111111—10	P Keenan, 21yds	1000101010— 4
H Rubins, 21yds	1001111000— 5	J Glaccum, 25yds	1111110101— 8
P Butz, 21yds	1111111011— 9	G Connor, 21yds	1010010001— 4
C Cody, 25yds	0111101011— 7	J W Godfrey, 25yds	1111111112—10
C M Granger, 30yds	1111101111— 9	S McMahon, 21yds	1111111000— 8
H Otten, 30yds	1111110101— 8	M Murphy, 21yds	1110000000— 3
C Measel, 21yds	1000111000— 5	A McHale, 21yds	1000101001— 5
R Regan, 21yds	0010111011— 6	T Schroder, 21yds	1110101001— 6
J Howard, 21yds	1110001001— 4	M McMunn, 21yds	1011111010— 8

Ties for first, miss and out—Lynch 0, Schermerhorn 2, Godfrey 1. Ties for second—Granger 0, Butz 1. Ties for third—Otten 1, J. Measel 2, Glaccum 0, McMahon 5, McMuna 4. L. Schermerhorn took first, P. Butz second and S. McMahon third prize.

LOWELL, Mass., June 18.—The Lowell Rod and Gun Club weekly shoot, 15 single clay-pigeons, 18yds. rise, 5 traps and 5 pairs double birds: Knowles won first medal, Smiley won second medal, Boynton won third medal.

Sweepstakes were in order, with the following results: Seven clay birds, 5 traps: Jones 5, Davis 5, Bates 5, Lovejoy 6, Dock 5, Knowles 4, Smiley 5, Frost 4, Gordon 2, Boynton 5. Lovejoy won first, Jones and Davis second, Frost and Knowles third, Gordon fourth.

Seven blackbirds: Jones 6, Knowles 4, Lovejoy 5, Bates 5, Davis 3, Dock 5, Frost 3, Colt 5, Smiley 3, Piper 6, Farrington 6, Putnam 4, Perham 4, Sturgis 2. Jones and Piper first, Lovejoy second, Knowles and Perham third, Frost and Smiley fourth.

Seven pigeons: Smiley 3, Bates 3, Frost 7, Jones 4, Piper 5, Dock 5, Davis 4, Varnum 3, Gordon 3, Torrey 3, Smith 5, Sturgis 5, Crown 6, Knowles 4, Perham 3, Boynton 6, Colt 5. Frost first, Boynton second, Dock third, Jones fourth.

Seven blackbirds: Smiley 5, Bates 6, Frost 6, Jones 5, Piper 4, Dock 6, Davis 6, Varnum 4, Brown 4, Gordon 6, Torrey 4, Smith 7, Sturgis 6, Runals 5, Knowles 5, Colt 1. Smith first, Frost and Dock second, Jones and Knowles third, Brown fourth.

Seven blackbirds: Torrey 7, Jones 7, Dock 7, Knowles 7, Frost 5, Crown 5, Colt 4, Smith 4, Perham 4. Jones and Dock divided first, Frost second, Smith and Perham third. The club numbers sixty-six members, S. H. Jones, President; G. H. Stevens, Vice-President, and L. H. Derby, Secretary and Treasurer.

HARTFORD, Conn., June 18.—First handicap shoot of the Colt Hammerless Gun Club, 25 clay-pigeons each, fourth notch: E. A. Folsom 19, G. Tolles 19, M. White 17, H. Gardner 16, E. C. Howe 16, W. Johnson 15, A. McMullen 15, M. Cook 15, A. C. Collins 14, G. Best 14, J. Cook 14, J. Alger 14, J. Peard 13, J. Cary 11, O. B. Treat 9, H. Jacobs 9, J. Reynolds 8. Tie between Folsom and Tolles: E. A. Folsom 2, G. Tolles 1. The club medal was won by Folsom.

STANTON, Mich., June 19.—At the regular annual meeting of the Stantou Gun Club for the election of officers, held at the Bailey House in this city, on Thursday evening, June 4, the following officers were elected: President, B. F. Littlefield; Vice-President, J. M. Zinkhan; Secretary, W. J. Percival; Treasurer, M. E. Fanning.—PAUL PRY.

ELMIRA, N. Y.—Match of the Elmira Gun Club, June 18, at 7 single glass balls, 18yds rise: Wagner 5, Baker 5, Davis 7, A. D. Smith 3, Growell 2, Everett 5, Bailey 6, Park 4, Pratt 5, S. H. Smith 2, Pagett 4. Pratt, Wagner and Davis divide third, Bailey and Pagett divide fourth. Match at 7 single clay-pigeons, 18yds. rise: Baker 6, Kniskern 2, Growell 0, Davis 3, A. D. Smith 1, Everett 2, Pagett 3, Rotan 0, Wagner 6, Bailey 2, Gerber 4, Pratt 4, Gee 5, Rogers 4. Wagner and Baker divide first, Gerber shot out Pratt for third, Davis and Pagett divide fourth.

Match at 10 single balls, 18yds. rise: Rogers 9, Growell 8, Everett 6, A. D. Smith 2, Pagett 4, Wagner 9, Baker 8, Pratt 5, Park 5, Gerber 7, Gee 7, Bailey 8, Davis 6, Gaylord 5, S. H. Smith 3. Rogers and Wagner divided first, Bailey, Baker and Growell divided second, Gerber and Gee divided third, Davis and Everett divided fourth.

Match at 5 double balls and pigeons, 15yds. rise: Baker 9, Gerber 8, Drake 8, Gee 6, Davis 6, Pratt 5, Groll 2, Wagner 8, Gaylord 2, Pagett 5, Bailey 4, Rogers 5. Gerber, Drake and Wagner divided second, Gee and Davis divided third. Pratt, Pagett and Rogers shot at two pair for fourth place, and Pratt won fourth.

Match at 5 double pigeons, 15yds. rise: Baker 7, Wagner 8, Drake 5, Gee 6, Pagett 3, Gaylord 7, Davis 5, Pratt 4, S. H. Smith 6. Baker and Gaylord divide second, Gee and Smith divide third, Davis fourth.

Ligowsky walking match, 10 single pigeons: Baker 8, Pagett 5, Drake 4, Wagner 8, Pratt 2, Everett 1, Gerber 5, Gee 9, Bower 4, Brown 7, Smith 5, Kniskern 7, Bailey 6, Rogers 8, Davis 2, Gee first, Wagner Baker and Rogers shot off for second, Baker won second, Bailey, Kniskern and Brown divided third.

Match 10 single balls, 18yds. rise: Gerber 10, Smith 5, Charles 4, Wagner 10, Bailey 7, Pagett 4, Kniskern 5. Gerber and Wagner shot at 5 and tied on 4; second 5, Wagner won.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

READING, Pa., June 17.—About 250 sporting men assembled at the Spring Valley Hotel this afternoon to witness the 50 bird match between Miles Johnson, champion of New Jersey, and Jacob Hill, champion of Reading, for $200 a side, Long Island rules, 25yds. rise and 80yds. boundary. A large amount of money was wagered on the result. The shooting at the start was good, Johnson killing 13 straight birds, while Hill missed one. Later on Johnson became nervous, while Hill was cool. At the forty-sixth bird Hill, who had shot 41, was given the match, as Johnson had killed but 35 out of 45 birds and could not tie Hill's score.

SYRACUSE, June 23.—At the twenty-seventh annual meeting of the New York State Association for the Protection of Fish and Game, held here to-night, Rochester was chosen as the place of the next meeting. John H. Brown, of Rochester, was elected President; W. H. Fleischer, of Rochester, First Vice-President; Dr. W. H. Booth, of Utica, Second Vice-President; J. B. Sage, of Buffalo, Recording Secretary; L. A. Pratt, of Rochester, Financial Secretary, and W. H. Cruttenden, of Cazenovia, Treasurer. To-day, W. H. Richmond, of the Genesee Gun Club, of Irondequoit, won the first prize in both of the contests shot. They were at ten clay-pigeons, and he did not miss a bird. The annual banquet was given to-night by the Onondaga Sportsmen's Club.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1392, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties."
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."

THE CUP RACERS.

ON June 17 the new sloop Puritan was under way for the first time, the wind being very light, and on June 20 she was out for a longer sail, though also in a light wind, running to Marblehead and anchoring off the club house. Apart from the stiffness of gear, and the new sails not being fully stretched, she is reported to have worked very satisfactorily, moving fast in the light breezes, and as far as tried, being very stiff. She was in the hands of Mr. Edward Burgess, her designer, and Messrs. Paine and Forbes, of the owners. On Saturday afternoon she had a brush with Adrienne, leaving her and pointing higher. Puritan is painted white above the waterline, the only white yacht to enter in the trial races. She will sail her first race on Tuesday next, in the spring regatta of the Eastern Y. C. off Marble head, after which she will come to New York for the trial races Priscilla is now at Poillon's with sails bent and nearly ready for her trial trip, which will take place next week.

On Sunday last Genesta put into South Bay, off Wexford, Ireland, as a heavy gale from the west prevailed. Galatea has sailed two more races, the Royal Thames Y. C. on June 8, and the New Thames on June 9, in neither of them winning a place. The first race was in a very light wind, and Galatea showed badly in the short tacks in Sea Reach, the *Field* speaking of her as "hanging fearfully in stays," while *Land and Water* remarks that "Marguerite was not cutting a dash, but was doing almost as well as Galatea; so it may be taken for granted that the display of the new cutter to windward was not a good one." Only Marjorie, Tara and Marguerite finished, owing to light winds. Of Tuesday's race the same paper says: "The Galatea, with a grand lead, should have done better, and it may be said that she is not a flyer in light weather on any point of sailing." In parts of this latter race Galatea was first boat, as told in the following account from the *Field:*

Match for yachts of any rig exceeding 39 tons; first prize £75, second prize £40; course, from the Lower Hope round the Mouse Lightship, and return to Rosherville; Y. R. A. rules and time allowances for a 50-mile course:

	Rig.	Tons.	Owner.
Wendur	Yawl	125	Mr. J Clark.
Lorna	Yawl	85	Mr. S. Hope Morley.
Galatea	Cutter	90	Lieut. Henn, R. N.
Irex	Cutter	85	Mr. J. Jameson.
Marjorie	Cutter	68	Mr. J. Coats.
Marguerite	Cutter	60	Mr. F. Connor.
Tara	Cutter	40	Mr. F. Taylor.

With a fine breeze from about N. N. E., Galatea, Irex, and Marjorie had second topsails over whole mainsails, and the rest sported jackyarders. They got their first gun at 11:53, and before the five minutes were up, Wendur, Irex, Galatea and Marguerite were over the line. Wendur at once went round to put herself right, but she never got over the line. Then came a delay of twenty-two seconds in firing the gun, which had the effect of putting all over the line. Irex was quite one hundred and fifty yards over, and she went around and reached back some distance, but the tide was coming down at such a pace that it would have taken her a quarter of an hour to have got on the right side of the line. As it was, she started nearly a third of a mile after the others, and had something to do to catch and pass them. All stood out of the Lower Hope on starboard tack, and then hove round to port tack under the Essex shore, being now able to lay a good clean full and bye down the river; Galatea, Marjorie, Lorna, Marguerite, and Tara figuring in a procession in the order named. Lorna, sailing wonderfully fast, went past Marjorie and hung on to the big cutter well, while both Tara and Marguerite were dropping away. Irex was making a steady gain on all, and had passed Tara and Marguerite before reaching the Chapman. She was now threatening to pass on the weather of Wendur, and undoubtedly would have done so had not the big yawl luffed out across her. This gave Irex a lee-quarter berth, and effectually disposed of her chance of getting to the front. A little lower down jibtopsails were started all round, and some got on balloon foresails, but the change was hardly worth the making. Nearing Southend there came some fresher streaks of wind which put them in to the top strake, but jibtopsails were carried all through. It was a wonderfully level piece of sailing on the part of the leading quartet out to the Mouse, and entirely uneventful. The time of rounding was:

Galatea	2 05 50	Irex	2 08 15
Lorna	2 06 09	Marguerite	2 11 40
Marjorie	2 07 30	Tara	2 15 00
Wendur	2 07 36		

They rounded at just about low water and went off back for the river, with mainbooms eased off port quarters a trifle. Wendur at once began to step out, and passing Marjorie, went on after Galatea. The latter, however, was not an easy prey to overtake, and led the yawl a long chase up to the Chapman before she could get up to her. Wendur then, without more ado, went through the cutter's lee and took the lead; Irex also reached up close under Galatea's lee, but there she stuck and could not get through. Soon after this, the wind fell off very light and easterned considerably, so that main booms were run nearly square off and spinnakers pulled out. The wind, however, was still rather short for spinnakers, and the booms had to be eased so far forward that head sails were covered up. Marguerite at once realized the situation, and pulled up bowsprit spinnaker instead. Directly it was sheeted she began to step out in the most wonderful manner, and went up past all but Wendur. Marjorie shifted for jackyard topsail, and held her place, while Irex, Galatea and Lorna were now continually changing places as the wind favored first one and then the other.

They now squared away till main booms were nearly off to the rigging in the chance of getting through the Lower Hope without a gybe; but this they could not do, and all had to let their main booms go over to starboard quarters without shifting spinnaker over. Marjorie, however, did shift hers over, but it was for a brief spell only, as they were nearly up to the Ovens, where they would have to gybe again. Tara, watching what was going on in front, gybed over on entering the Lower Hope instead of running by the lee, as the others had done. She gained a lot by this, and probably by her cleverness secured second prize. For the remainder of the journey it was uneventful, excepting that just as they were finishing a better breeze came out, northerly again. The time at the finish was:

Wendur	5 49 30	Galatea	5 54 55
Marguerite	5 50 30	Irex	5 55 12
Lorna	5 51 53	Tara	6 00 45
Marjorie	5 54 12		

Marguerite won the first prize and Tara second.

Thus far she has not yet shown herself equal to Wendur, Marjorie, Irex or Tara, nor has she founded any claim to represent the best of the English yachts in the Cup races. Making all due allowance for the fact that she is a new boat and as yet not in proper trim, she has not shown those qualities which entitle her to race as a representative of the modern cutters. While we believe that a cutter of her size can dispose of any of our centerboards, to do it with the new boats she must be the best of her kind, and fully up to the average in reaching and running. This Galatea certainly is not as yet, and while she may show improved form later on, it looks like a doubtful experiment to send her across in her present condition.

NEW HAVEN Y. C. REGATTA, JUNE 18-19.

THOUGH a young organization, having been founded in 1881, the New Haven Y. C. is one of the most prosperous and active between New York and Boston. Apart from the difficulty of shoal water in the harbor they have an excellent location in the middle of the north shore of Long Island Sound, and have already made themselves known from one end to the other. Several of the club yachts have entered the races of the S. C. Y. C. in New York waters and one in particular made an excellent impression on all who saw her last fall, while as cruisers they are well known in all Sound ports. While the fleet is composed mostly of centerboards it also numbers the big schooner Brunhilde, and the handsome little cutter Rajah, the latter described in the FOREST AND STREAM of Jan. 24, 1884. The total number of yachts enrolled is 37, 3 being steamers, while the members number 220. Last year the fleet made an extended cruise, and this season they will establish a new feature in the shape of an ocean race around Block Island.

While the club still possesses some of the shoal and wide centerboard boats, their cruising and knocking about is teaching the value of comfort and safety first and speed afterward, and deeper boats are coming into favor and would be still more common if it were not for the shoal anchorage. The flagship of the club, the Rajah, is as fine a cutter of the moderate beam type as we have here, safe, able and roomy, and the little keel sloop, Happy Thought, is as good a boat of her class as we know of, with an excellent reputation for speed, in addition to her other qualities. Last season the club erected a very handsome and convenient house, on Water and Franklin streets, built on piles over the water and reached by a plank walk from the shore. The house is in modern style, with ample piazzas down stairs and large open balconies above. The lower floor has a large locker room on which open dressing rooms, store room and workshop with a bench and tools. Above is a handsome meeting room with smaller rooms curtained off, the large windows opening on the balconies which command views of the harbor and also of the city and East Rock. A channel is dredged up to the float, allowing yachts to come close up.

The club numbers many enthusiastic yachtsmen, and the fleet are nearly all entered in the races, that of this year, sailed on June 19, calling out a good list, as follows:

Class B. 45ft. and over—Ariadne, W. L. Coggswell; Rover, C. F. Swan; Wild Pigeon, Frank Wheeler.

Class C, 35 to 45ft.—Rival, W. W. Converse; Rajah, Com. J. G. Beecher; Starlight, M. White; Mascotte, Weld and Jacobs; Marguerite, H. F. and C. M. Peck; Happy Thought, H. M. Graves.

Class D, 25 to 35ft.—Endeavor, H. D. Billard; Ceres, J. H Parish; Wanda, Durham and Waterhouse; Zephyr, Vice-Com. Dudley; Louise, T. H. Hall; Vivienne, Sheffield Phelps; Stranger, J. N. Macaulay; Vixen, A. Seaman; Anita, G. Adams.

Class E, 15 to 25ft.—Trio, W. L. Cheney; Roamer, H. W. Avis.

Four others entered but did not start. The course this season was a new one, that formerly sailed over being unsatisfactory. It was from off Pardee's Bar Buoy, leaving Ludington's Rock Buoy, Pond and Welsh's Point buoys and the buoy off the southward of Charles Island on the starboard hand, then to and around a stakeboat (located due southwest from Ludington's Rock Buoy, at a proper distance to make a ten-mile course), returning over the same course, leaving Charles Island, Welsh's Pond Point and Ludington's Rock Buoys on the port hand to the starting point, total distance twenty miles.

For Class E it was from off Pardee's Bar Buoy, leaving Ludington's Rock Buoy on the starboard hand, thence to and around Pond Point Buoy, and return over the same course, leaving Ludington's Rock Buoy on the port hand to the starting point, distance fifteen miles.

The prizes offered were first, second and third in each class, depending on the number of starters, all for best corrected time, while in Classes B, C and D a prize was offered in each for best elapsed time. Besides these were the Derby Challenge Cup in Class C, and the Register Challenge Cup in Class D, both for corrected time.

By 11 A. M. the steamer J. H. Starin was crowded to the upper deck with spectators, and shortly after she left her dock and ran down to the start. Following her was the little Messenger, with timekeepers and reporters on board, while the steam yacht Sophia, with the judges, was already aground with the falling tide, and had to be towed off by the Messenger, several of the yachts being delayed by the same cause. The wind was from the southwest, on end up to the course, and hardly of topsail strength at the start, dying down a little later on. An oyster steamer with an American ensign had been sent out 10 miles to mark the outer turn, and all were notified to look for her.

The first gun was fired at 11:13 from the Rajah. For some reason not evident the classes were started with intervals of 6 minutes between, so that over half an hour was gone before the last boat was over, having a big handicap. Such a fleet could easily have been started from one gun with a time limit of 5 to 10 minutes, giving a chance to time all and then follow the fleet. It is time that regatta committees recognized the uselessness of wasting half an hour or more after the leaders are over and losing all sight of the racers.

All went over on the starboard tack, carrying topsails, and were soon well strung out. As the way out was a beat, the press boat could easily have run in company and watched a very pretty race, but with the usual perversity of such craft she steamed off slowly in another direction, carefully keeping some miles away from the fleet, so as to allow the scribes to draw on their imagination for details, undisturbed by any necessity of watching the race.

Ariadne led the fleet out into the Sound for some distance until not one but a dozen markboats were sighted in various directions. The steam dredges of New Haven bear a strong family likeness, one to the other, and it seems that most of them have a flag of some description flying, consequently when the yachtsmen sighted a fleet of them at anchor over a space of some miles in extent, there was some uncertainty as to just which was their particular one. The leading boats, class B, sighted an oyster boat with flags flying after some delay, and some of them turned it, only to find that it was signaling to a party on shore who were surveying for the shellfish commission, and was not their boat. Most of the other boats also turned this mark. The flagship happened to know the particular boat in question, and not recognizing her among those near at hand, sailed on until Bridgeport was reached without finding her. After some hours of steaming nowhere in particular, the passengers on the press boat made out the yachts at a distance, coming down free with all kites set. Rival came in first and then Stranger, the others in a string, being over an hour in passing the line

CLASS B.

	Start.	Finish.
Ariadne	11 40 10	5 24 30
Rover	11 43 50	5 26 30
Wild Pigeon	11 43 05	5 50 56

CLASS C.

Rival	11 35 16	5 21 10
Rajah	11 38 26	. .. ..
Starlight	11 40 35	5 55 00
Mascotte	11 38 17	5 58 13
Marguerite	11 41 20	5 53 37
Happy Thought	11 37 05	5 44 45

CLASS D.

Endeavor	11 31 19	5 49 41
Ceres	11 33 30	5 59 00
Wanda	11 23 36	5 41 40
Zephyr	11 26 36	6 05 32
Louise	11 30 05	5 38 43
Vivienne	11 32 19	5 47 43
Stranger	11 32 17	5 22 50
Vixen	11 30 38	5 38 28

CLASS E.

Trio	11 26 23	3 50 45
Roamer	11 41 42	. .. ..

When all arrived at the club house it was decided that no race had been made, and that it should be resailed next day. In Class E, Trio came in, having rounded the buoy for her class, her time being 2:51:30.

On Friday the Thistle was on hand, having arrived the previous evening, and was allowed to enter in Class B, but a number of the yachtsmen could not get away, and some received no notice of the resailing, so the entries were but 10 in number: Class B—Thistle, Ariadne. Class C—Rajah, Marguerite, Happy Thought. Class D—Endeavor, Wanda, Louise, Stranger, Vixen.

The wind was the same as on the preceding day and the yachts beat out, this time finding the mark without difficulty. The times of the second race are:

CLASS B.

	Start.	Finish.	Elapsed.
Thistle	11 37 14	3 39 50	4 02 36
Ariadne	11 35 15	3 51 16	4 15 01

CLASS C.

Rajah	11 32 10	. .. ..	. .. ..
Marguerite	11 32 00	4 06 50	4 34 50
Happy Thought	11 31 29	4 08 05	4 36 36

CLASS D.

Endeavor	11 24 14	4 05 05	4 40 51
Wanda	11 23 45	4 13 15	4 49 30
Louise	11 24 15	3 58 37	4 34 22
Stranger	11 25 15	3 47 53	4 22 38
Vixen	11 26 20	3 51 33	4 25 13

The result of the race has given much dissatisfaction to the owners of the yachts concerned, and it will be some time before the matter is finally settled.

BEVERLY Y. C. REGATTAS.

THE programme for 1885 contains seven races, the first being at Monument Beach, on July 3, open catboat sweepstakes, entrance fee $5. The second on the following day, also at Monument Beach, is for the club yachts only, prizes being given in each class beside the champion pennants. On July 8, off Nahant, the first championship regatta will be held, the second being at Marblehead on July 25, and the third at Swampscott on Aug. 29. On Aug. 8 an open race will be sailed at Marblehead, and on Sept. 19 the fall matches at Nahant. The club classification is as follows: In Massachusetts Bay, all yachts over 23 6 sailing length and under 30ft. waterline will form the first class, schooners to sail at three-quarters length; all yachts over 19.6 and not over 23.6, sailing length, to form the second class, which shall be divided into centerboard cats, centerboard sloops and keels, though if only one keel starts she shall sail with centerboard cats; all boats in second class to sail together for the pennant. All yachts of 19.6 sailing length and under to form the third class. In Buzzard's Bay sloop yachts under 30ft. waterline to form first class; cats over 26ft. sailing length and under 30ft. waterline to form second class; cats over 24ft. and not over 26ft. sailing length to form third class; cats under 24ft. sailing length to form fourth class. The races will be under the management of the regatta committee: Geo. H. Richards (chairman), John Dane, Walter Abbott, Charles Francis Adams 3d, and W. Lloyd Jeffries (secretary).

BENT YACHT TIMBERS.

Editor Forest and Stream;

The superiority of bent yacht timbers over those worked out from natural crooks is so obvious that it is surprising that until recently they have received so little attention from yacht builders and owners.

The cause of this failure to appreciate the good qualities of bent timbers has undoubtedly been the difficulty and cost of obtaining them. It is but a short time ago that it was considered impossible to bend timbers large enough for yacht building, but during the last ten years rapid strides have been made by those engaged in experimenting, until at the present time timbers as large as four inches square can be successfully bent. So successfully can this be done that the two ends of a timber could be brought together, were it desired.

The bent timber has come, and it has come to stay. Its superior strength and durability will make it a prominent feature of yacht building in the future, and it is predicted that in a few years, when the subject has been more carefully studied, it will be possible to bend ship timbers also.

One of the great advantages of the bent timber is that the grain of the wood is sure to follow the sweep of the timber from end to end. In working out timbers from natural crooks it is always difficult and generally impossible to get crooks, the grain of which will follow the shape of the mould, hence it becomes necessary to cut across the grain. This greatly impairs the strength of the timber and renders it liable to break in case of a strain or shock. Again, in getting out long crooked timbers, especially those with double sweep for after

part of frame, or for hollow floor, it is impossible to find natural crooks that will work the whole length of the mould, so the builder is compelled to make them in two pieces and splice them together. This makes a weak place in the timber which must be strengthened by nailing into the side of the timber another piece of wood in such a way as to cover the splice. Thus when the timber is ready to become part of the frame it is made of three pieces and is much larger (and consequently much heavier) than would be needful were it not for the splice and cross grain. Besides its weakening the timber, the splice is very objectionable in that it offers easy ingress to the water between its parts which soon causes the timber to decay in this, its weakest point. Thus it will be seen the bent timber can be made much smaller than those worked from natural crooks and be stronger and lighter, with no splice to give way and no cross grain to split off or break.

Another advantage possessed by the bent timber is its peculiar toughness. The upsetting of the fibre of the wood resulting from the modern process of bending by end pressure makes the timber more solid and knits the fibres together so compactly as to greatly increase the toughness of the wood. When this upsetting process is carried to a considerable extent the wood becomes so tough that it is almost impossible to break it; it can with difficulty be torn into shreds by splitting into the end with a chisel, but it will not break; it will split and shred and tear before it can be gotten apart, and besides the increased toughness of the bent timber it is also rendered much more elastic by the process of bending; so much so, indeed, that in case of a sudden strain or shock it will generally spring or bend instead of breaking, and will resume its former shape as soon as the strain is removed. These good qualities of the bent yacht timber, it is confidently believed, will in a short time cause it to almost, if not altogether, supersede the old timber worked from the natural crook.

W. G. SHEPERD.

SOUTH BOSTON Y. C. REGATTA, JUNE 20.

ON Saturday the second championship regatta of the South Boston Y. C. was sailed in a light southwest wind, increasing in the latter part to a good sailing breeze, and making a lively race. The starters and times were as follows, Nydia being ruled out for starting in the wrong class:

SPECIAL CLASS.

	Length.	Actual.	Corrected.
Nimbus, Bernard Jenney	34.05	1 52 08	1 35 30
Violet, H. J. McKee	34.06	1 58 31	1 41 55
Maggie, Henry Hussey	32 08	2 10 08	1 52 35
Lizzie Warner, Thos. Lutted	31.06	. . ..	. . ..
Triton, D. H. McKay	34.03	. . ..	. . ..

FIRST CLASS—KEELS.

Altaire, A. J. McLeod	28.06	2 01 08	1 41 18
Ibex, Williams & Knowlton	25.04	2 05 54	1 42 43
Dorcas L., W. H. Lyman	28.04	2 03 01	1 42 55
Nellie, A. J. O'Leary	27.02	2 10 15	1 49 22

FIRST CLASS—CENTERBOARDS.

Em. Ell. I., P. M. Bond	20.01	1 57 20	1 30 32
Thisbe, S. A. Freeman	21.03	1 57 14	1 31 35
Awilda, J. B. Farrel	24.09	1 57 50	1 35 11
Nereus, W. L. Nichols	22.06	2 04 45	1 40 14
Rita, A. T. Bliss	26.03	2 05 52	1 44 21

SECOND CLASS—KEELS.

Unknown, Orcutt & Carter	24.02	1 15 45	0 55 57
Diana, Henry Burgess	24.06	1 19 35	1 00 20
Monarch, J. J. Bligh	20.00	1 22 58	1 00 32
Vera, J. Carter	20.08	1 23 03	1 00 35
Brunette, W. C. Cherington	23.11	1 24 30	1 14 32
Nereis, J. C. Jordan	24.07	. . ..	. . ..

The winners were, Nimbus first, Violet second in the special class; Altaire first, Ibex second in the first class keels; Em. Ell. I. first, Thisbe second in the first class centerboards; Unknown first, and Diana second in the second class keels. The judges were A. J. McLeod, J. J. Bligh, Henry J. McKee, F. G. Cooley, W. C. Cherrington, C. L. Braman and F. Williams.

EAST RIVER Y. C. ANNUAL REGATTA.

ON June 17, the sixth annual regatta of the East River Y. C. was sailed on the East River and Sound, over the usual course, from the club house through the Gate and around the Gangway Buoy, finishing at Hunt's dock. The 20 yachts entered were divided into 6 classes: Class A, cabin boats 30 to 36ft.; Class B, cabin boats 25 to 30ft.; Class C, cabin boats, 20 to 25ft.; Class D, jib and mainsail boats 20 to 30ft.; Class E, catboats 20 to 25ft.; Class F, catboats 15 to 20ft. The time allowance was announced as 1½min. per foot, but was protested against on the ground that the regular club allowance is 2min. per foot. The wind was northwest and the tide full at noon, and the steamer Columbia was on hand crowded with spectators. At 11:54 the gun sent them away, Mary Gibson over first, all on port tack. Off the start a tow of scows interfered with the fleet, and in the confusion Maud M. ran her bowsprit through the Ripple's mainsail, the latter withdrawing. For a time Narrioch took the lead, but above the Gate Mary Gibson and Nettie Thorp were first and second. From the Gate to the outer mark was a tedious drift in almost a flat calm, only the ebb tide carrying the boats along. The order had changed and at Gangway Buoy the leaders were Favorita and Louise, the former covering the latter very neatly at the turn, while Louise also lost her topmast. The times at Gangway Buoy were:

Favorita	4	58	30	Narrioch	5	01 20
Louise	5	00	25	Pirate	5	04 30
Avalon	5	00	30	Nettie Thorpe	5	05 01
Mary Gibson	5	00	50	Ed Kearney	5	12 11
Julia	5	01	00	Jas. Tregarthen	2	14 06
Progress	5	01	50	Jimini	5	14 17
Maud M	5	02	00	Lone Star	5	14 35
Alice	5	02	20			

After the first two turned the breeze freshened and helped the rear guard to come up, and topsails came down. Avalon was leader for a time, but Netty Thorpe finally headed her, while part of the fleet were hung up for a while on the bar near Ft. Schuyler. The last leg was to windward in a good breeze with some hard spots in it, and Netty Thorpe and Mary Gibson fought hard for first place, the former coming in first in her class. The following are the times as computed for 1½ minutes per foot, but the question of allowance is not yet settled.

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Actual.	Corrected.
Avalon	12 11 40	6 30 08	6 19 18	6 19 18
Fly	12 08 49	Did not finish.		
Favorita	12 09 26	6 33 28	6 23 58	6 18 33
J. Tregarthen	12 07 20	6 56 21	6 48 01	6 40 31

CLASS B—CABIN SLOOPS.

Louise	12 04 55	6 40 35	6 35 40	6 35 40
Maud M	12 06 18	6 32 40	6 26 27	6 24 34½
Alice	12 06 04	6 38 42	6 32 38	6 30 30½

CLASS C—CABIN SLOOPS.

Julia	12 05 41	6 47 26	6 42 45	6 39 37½
Progress	12 07 05	6 44 05	6 36 50	6 36 50
Lydia F	12 05 25	6 52 20	6 45 55	6 37 47½

CLASS D—OPEN BOATS.

Nettie Thorp	12 00 26	6 31 35	6 31 09	6 31 09
Mary Gibson	11 58 50	6 34 32	6 35 42	6 31 27

CLASS E—CATBOATS.

Ripple	12 05 50	Did not finish.		
Pirate	12 00 45	6 41 55	6 41 10	6 41 10
Jimini	11 59 28	7 00 10	7 00 42	6 58 41½

CLASS H—CATBOATS.

Ed. Kearney	12 01 20	7 09 25	6 51 45	6 51 45
Lone Star	12 00 20	7 03 45	7 03 45	7 01 02½
Narrioch	11 59 20	6 42 13	6 42 53	6 40 30½
Aida	11 59 30	Did not finish.		
Nettie	11 59 50	Did not finish.		

HULL Y. C. PENNANT RACES, JUNE 20.

THE calm weather of Saturday prevented many of the yachts from getting to Hull in time for the race, which was started at 3 P. M. Four classes were entered. Second class, 25ft. and less than 30ft.; third class, 22ft. and less than 25ft.; fourth class, 20ft. and less than 22ft.; fifth class, 18ft. and less than 20ft.

Class 3 was divided into keels and centerboards. The courses were: Second class—Across the line, between the judges' yacht and flagboat, leaving judges' yacht on starboard, through Hull gut, leaving Hunt's Ledge and Point Allerton buoys on starboard, to Harding's bell-boat, leaving it on port, to Martin's Ledge Buoy, leaving it on port, Hunt's Ledge Buoy on port, to and across line between judges' yacht and flagboat—eleven miles; limit of time, four hours.

Third class—Across line between judges' yacht and flagboat, leaving judges' yacht on port, around Black Brush buoy No. 1 (half a mile south of starting line), through the west gut, around Wreck buoy (off west end of Pettick's Island), leaving it on starboard, through Hull gut, to and across line between judges' yacht and a flagboat, six miles; limit of time, three hours.

Fourth and fifth classes—Across the line between judges' yacht and flagboat, leaving judges' yacht on port, around H. Y. C. barrel (off Harry's Rocks, near Prince's Head), leaving it on port, around H. Y. C. barrel (off northwest end of Bunkin Island), leaving it on port, around flagboat at starting line, leaving it on port, around H. Y.C. barrel (off Harry's Rocks, near Prince's Head), leaving it on port, around H.Y.C. barrel (off Bunkin Island), leaving it on port, to and across line between judges' yacht and flagboat, six miles; limit of time, three hours.

Banneret led her class for a long distance, but was passed on the last reach by Lizzie F. Daly. The times were:

SECOND CLASS—KEELS.

	Length.	Actual.	Corrected.
Banneret, J. F. Brown, sloop	25.02	2 46 10	2 11 06
Lizzie F. Daly, W. Daly, Jr., sloop	26.11	2 45 55	2 12 48
Gem, H. W. Savage, sloop	26.05	Time not taken.	

THIRD CLASS—KEELS.

Kitty, E. H. Tarbell, sloop	23.09	2 02 49	1 40 47
Thelga, A. P. Thayer, sloop	22.07	2 05 02	1 42 53
Straurare, G. E. Brown, cutter	. . ..	2 11 00	. . ..

THIRD CLASS—CENTERBOARDS.

Muriel, E. C. Neal, sloop	22.09	2 01 19	1 40 30

FOURTH CLASS—CENTERBOARDS.

Thrasher, G. G. Garraway, cat	20 03	1 49 00	1 26 10

FIFTH CLASS—CENTERBOARDS.

Spray, H. M. Faxon, cat	18 10	1 43 59	1 19 52
Imogene, B. T. Wendell, cat	18.10	1 46 03	1 21 56
Myrtle, R. C. Poor, cat	19.06	1 45 38	1 22 03

Silk pennants were awarded to the Banneret, Kitty, Muriel, Thrasher and Spray. The judges were Col. C. F. Harrington, Walter Starbuck, Otis A. Ruggles, Lander M. Bouve, John A. Stetson, Peleg Aborn and Z. Taylor Harrington. The schooner Silvie was present, her first appearance this season.

CAPTAIN RICHARD BROWN.

ALMOST as widely known as the name of the America herself is that of her captain, Richard Brown, or as he is better known, Dick Brown, and the news of his death will be heard sadly by many old yachtsmen who knew him only as the man who sailed her in her famous race, as well as to the many friends about New York who have respected him for over half a century.

Captain Brown was the son of a ship carpenter of Mystic, Conn., where he was born on July 3, 1810. As a boy he followed the water, first as a fisherman and sailor, then for a time as pilot on the United States brig Washington, engaged in a survey of New York harbor, from which he went into the once well-known brig Sooners, in the same work. In 1841 he joined the Sandy Hook and New Jersey pilots, and for nearly half a century has followed the same calling. The Mary Taylor, the first of Steers's departures from the old models, was built for Captain Brown and his partners about 1849 or '50. In 1851 he was selected to command the America, and in his hands she crossed the Atlantic and raced so successfully.

Nearly twenty years later he was concerned in another international yacht race, being with Captain Samuels in the Dauntless when she raced from Queenstown to New York. Last winter Captain Brown was exposed for twelve hours on the bridge of a steamer on an intensely cold night, and one foot was so badly frozen that he was confined to the house up to the time of his death, which occurred on June 18 at his home in Brooklyn.

DORCHESTER Y. C., JUNE 17.

THE Dorchester Y. C. sailed their eighty-sixth regatta on June 17, off Nahant, the races in first class being open to the yachts of any organized yacht club, and in the other classes to all yachts enrolled in the New England Y. R. A. The classes were as follows:

First class, all yachts measuring 40ft. and over; second class, all yachts measuring 28ft. and less than 40ft.; third class, all yachts measuring 21 and less than 28ft. Schooners will sail at five sixths of their actual measurement, yawls at seven-eighths of their actual measurement.

Money prizes were offered in first class, $75; second class, centerboards $25 and $15, keels $25 and $15; third class, centerboards $20 and $10, keels $20 and $10. No prizes were awarded for walk-overs.

The measurement for time allowance was waterline plus 1-5th overhang aft, and one man was allowed for each five feet or fraction of waterline length. The courses were: For first and second classes—No. 1. From starting line, leaving Shag Rocks on port, Graves whistling buoy on starboard, Davis ledge buoy on port, Graves whistling buoy on port, to starting line, 22 miles; limit of time, six hours.

Third class—No. 6. From starting point, leaving Winthrop bar buoy on port, Graves whistling buoy on port, to starting line, 10 miles; limit of time, 3½ hours.

The race was sailed under the N. E. Y. R. A. rules. The entries were:

FIRST CLASS.

		Length.
Huron (cutter)	Wm. Gray, Jr	64.11
Gitana (schooner)	W. F. Weld	81.08
Meta (schooner)	A. A. Lawrence	54 02
Fortuna (schooner)	H. S. Hovey	81.06
Wanderer (schooner)	G. W. Weld	86.06

SECOND CLASS—CENTERBOARDS.

Shadow	Dr. J. Bryant	34.05
Magic	E. C. Neal	31.01
Nimbus	B. Jenney, Jr.	33.11
Mabel	F. T. Clayton	33.04

In second class keels Hera and Fiona were entered, but Hera did not start and Fiona withdrew, as walk-overs take no prize.

THIRD CLASS—CENTERBOARDS.

Black Cloud	A. Brown	22.11
Muriel	E. C. Neal	22.07
Sea Bird	E. L. Joy	22.08
Queen Mab	Burwell & Litchfield	22.03
Alda	N. H. Wilkinson	23.09
Lizzie Warner	T. Lutted	25.05
Pearl	J. F. Lee	22.10
Herald	G. F. Smith	21.00
Expert	L. Whitcomb	23 05
Auralda	Fawell & Rich	— —
Una	J. Marus	21.00
Tartar	F. L. Dunne	21.00
Greta	W. S. Hill	23.00
Flora Lee	D. H. Lincoln	21.00
Jennie L.	C. H. Lockhart	23.09
Rita	A. T. Bliss	25.07
Juanita	H. L. Soule	21.10

KEELS.

Lizzie F. Daly	Daly Bros.	26.09
Banneret	J. F. Brown	24.07
Kitty	E. H. Tarbell	23.05
Gem	H. W. Savage	26.06
Fearless	F. G. Corley	21.06
Vesper	R. Bonner	21.00
Thelga	A. P. Thayer	21.11
Saracen	W. P. Fowle	23.08
Nydia	J. J. Galvin	22.08
Æolus	J. B. Mills, Jr.	27.11
Straurare	G. O. Brown	24.00

In the morning it was raining with wind northwest, dropping to a calm before the race but blowing a little while from the same quarter at noon. The first and second classes got away at 12:07, with Magic first, followed by Shadow, Mabel, Fortuna, Nimbus, Gitana, Huron, Wanderer, Meta. Spinnakers were quickly set, the wind decreasing rapidly. Fortuna and Gitana were close to each other, the latter a little ahead but to leeward, keeping evenly together for a time; but Gitana finally gained a slight lead and passed Davis Ledge Buoy half a minute ahead of the leaders, Huron was third, with Shadow and Magic next; Wanderer gave up the race. Going home Fortuna left Gitana and tacked inshore, and soon had run out of the wind, while Gitana had breeze enough to give her a lead of several miles, though closely hunted by Huron. At the whistling buoy Gitana led by 3min., and at the finish, after both had to make a leg, her lead was 2min. 56sec. Shadow and Magic were also closely matched, but the former had taken a lead and was holding it, when Magic followed Fortuna's lead and stood to the westward for wind, running into a calm. The order at the line was Gitana, Huron, Shadow, Fortuna, Meta, Nimbus, Magic, Mabel.

The times were:

FIRST CLASS—SCHOONERS AND CUTTERS.

	Actual.	Corrected.
Huron	4 44 03	4 22 45
Gitana	4 41 37	4 29 51
Meta	5 36 05	5 06 32
Fortuna	5 24 03	5 12 17
Wanderer	. . ..	. . ..

SECOND CLASS—CENTERBOARDS.

Shadow	5 21 52	4 29 35
Magic	6 00 59	5 03 05
Nimbus	5 56 16	5 03 10
Mabel	. . ..	. . ..

Huron wins $75, Shadow $25, and Magic $15.

The smaller yachts started ten minutes later than the above, with Sea Bird first, then Banneret, Queen Mab, Gem, Flora Lee, Lizzie F. Daly, Saracen, Kitty, Greta, Tartar, Thelga, Una, Nydia, Æolus. Gem at once took the lead, but soon lost it to Sea Bird, passed in turn by Lizzie F. Daly, better known as Transit. The times at Winthrop Bar buoy were: Daly, 12:45:01; Sea Bird, 12:45:45; Kitty, 12:46; Banneret, 12:47. Here the Daly was in trouble with her spinnaker, Sea Bird overtaking her, but when her spinnaker was once set, she soon drew away. At the whistling buoy the times were: Daly, 2:24; Black Cloud, 2:25:20; Banneret, 2:28:35; Kitty, 2:30:50; Muriel, 2:31; Queen Mab, 2:31:35; Sea Bird, 2:33:50; Greta, 2:36:30; Nydia, 2:36:55; Alda, 2:37:25. The Daly led home with Black Cloud chasing her sharply. The times were:

THIRD CLASS—CENTERBOARDS.

	Actual.	Corrected.

Lizzie F. Daly wins $25, Banneret $15, Black Cloud $25, Muriel $15. The regatta committee were L. M. Clark, H. B. Collender, George S. Forbush, Erastus Willard, W. P. Fowle. Judges, S. G. King, Hartford Davenport, Erastus Willard, L. M. Clark.

THE INTERNATIONAL CODE OF SIGNALS.

WE have received the following circular calling the attention of yachtsmen to the value of the International Code of Signals, and the importance of every yacht of any size being provided with them and of yachtsmen being accustomed to their use. While it is comparatively seldom that we hear of a yacht being wrecked, yet occasion may arise at any time for such a means of communication as the code affords, and yachtsmen should avail themselves of its advantages. The expense is not very heavy, especially when the benefit to be derived from them in an emergency is considered:

A FRIENDLY SUGGESTION.

The Bureau of Navigation, U. S. Treasury Department, Washington, has assigned to my little decked yawl Alice the official number 106,354, and distinguishing signal K. D. B. Q. The latter, of course, are letters of the International or Commercial Code of Signals.

This award is made by my request, as one means to aid in bringing that code to the notice of navigators on our inland lakes. For years I have wished that captains would resort to the use of the code as a means of communication between vessel and vessel, and vessel and shore, particularly in case of distress and peril. I have known many cases in which time, property, and, most particularly, precious human life, might have been saved had conversation been possible as the code provides.

The international code and flags are kept and understood at every United States life-saving station, and on board all United States navy, revenue, lighthouse and surveying vessels on the seas and inland lakes. They should be kept and used at every lighthouse. Captains are requested to look into the matter, and learn the utility and value of the system. Reporting vessels when they pass Mackinaw, through Detroit River, and elsewhere, would be easier by use of the code.

The signals can be read many miles, vision being limited only by the size of the flags and the power of marine glasses. No signal requires more than four flags at one hoist, while the most urgent ones require but two flags.

The cost of the 19 flags with the government signal book, is from $22 to $30. Their use can be learned in two hours, and that use may at some urgent time save your vessel and from five to one hundred or more lives. It is well worth while to be so provided, so that, when necessary, you can signal to government vessels and shore stations.

I heartily recommend the matter to you. If generally adopted, the practical use of the code would be constant, convenient, and in case of peril, most vital. I am in no possible way, directly or indirectly, interested in the sale of the code, though I will be very glad to answer letters respecting it. I simply want you and your property to be as safe as possible in your noble but perilous calling.

The yacht Alice is only a bit of a vessel. She hails from Chicago, is owned and sailed by Rev. Arthur Edwards, D.D., is 22ft. over all, has 6ft. beam, draft 4ft. 2in., is yawl-rigged (jib, mainsail and mizzen on the overhang, aft of rudder post).

The Alice is enrolled in the Chicago Y. C., and this midsummer may shake her bunting at you on lakes Michigan, Huron, Erie and elsewhere.

ARTHUR EDWARDS.

2,816 INDIANA AVENUE, Chicago.

THE INTERIORS OF ENGLISH RACING YACHTS.—An English correspondent writes as follows concerning the interiors of racing yachts: "On a 5-tonner, with two men or two men and a lad, if the owner is a sporting man he will make passages with one or two friends, and they will live on board for two or three months in summer, off and on, racing at different ports, twenty to twenty-five starts, and it is wonderful how little fittings—judiciously disposed by a designer who is a yachtsman—will make them comfortable enough; perhaps just as much so as if the yacht were lined and had considerable woodwork fittings. All sleep in folding, iron-framed cots, with stretched canvas, which can unship if necessary for a race in light winds, being placed face to face, with bedding between, roped together and sent on board of some useful cruiser. There would be seats with lockers inside, and cushions, and two cellaret lockers in the cabin. A 3-tonner would be similarly fitted, with one or two beds less, and a second hand, usually a boy, in a hammock forward. In a fast cruiser of 6½ to 7ft. beam, or in a modern 10, there are good opportunities for nice fitting up without much extra weight. But in all small racing yachts the forward bulkhead has to be so far aft to accommodate a large and hard-worked crew for four months, that the design does not show up well from the owner's point of view. In 20 tons and over this does not appear so much, as part of this large forecastle is encroached on by a stateroom on one side and forward of saloon for skipper, and also a sailroom, if a racer, while in a cruiser the latter would be the owner's or guests' room."

PETROLEUM AS FUEL.—The large ferry boat Solano, run by the Central Pacific Railway Co., carries two tanks of petroleum connected by pipes with the furnaces. The oil is driven in by a steam jet, and burns rapidly. The cost of running has been much reduced since oil was substituted for coal. A late issue of the *Pall Mall Gazette* speaks as follows on the same subject: "It would indeed be the irony of fate if our war ships of the future should draw their supply of fuel from the oil wells of Baku instead of from the collieries of Northumberland and Durham. That the tendency has already shaped itself in that direction there is no question. For years the steamers on the Caspian have burned petroleum instead of coal, from necessity rather than from choice to commence with, it is true; but it is now admitted that petroleum is far away superior to coal for the purpose. And the matter has at last been seriously brought before the Royal United Service Institution by Admiral Selwyn, who states that by the use of liquid fuel a vessel could carry twice as much power of propulsion as a ve-sel with coal, and full steaming for twenty-four days could be carried on where now it is limited to four. The change from the use of coal to oil could be made without any alteration of boilers or engines other than what could be done by a ship's own artificers and engineers. In fact, each ship would be six times as effective as now. Fortunately, we have oil wells in India, and under the circumstances the sooner they are developed the better."

SEAWANHAKA C. Y. C.—The club book for 1885 comes to us with a neat and shipshape cover of canvas, embossed with the emblem of the club, a style other clubs would do well to follow instead of the accustomed fancy bindings. The book itself is more complete than ever before, containing a good deal of information of value to all yachtsmen. We have noticed before the rules for colors and salutes adopted by the S. C. Y. C. and several other clubs, but we call attention to them again on account of the many inquiries received on the subject. Those given are the standard, and should be adopted by the smaller clubs, whose practices in such matters are usually very lax. The entire book has been thoroughly revised and corrected this season. The club list of members includes 320 names, while there are 96 yachts enrolled. These include 13 steamers, 15 schooners, 18 cutters, 23 sloops, and 27 open boats. On the list is the club yacht Venture, a boat of 16 tons, presented to the club by a member and now kept in commission for the use of non-owners among the members. In most of the club books there is ample room for improvement, and we can commend to those concerned in getting them up, the book of the S. C. Y. C. as a model, both in style and matter, the rules there laid down representing the best and latest practices of American yachtsmen.

LARCHMONT Y. C. REGATTA.—On July 4 the Larchmont Y. C. will sail their sixth annual regatta over the club courses, the entries being open to Boston, Beverly, Hull, New Haven, New Bedford, Atlantic, Seawanhaka and Eastern clubs. Besides the Connor prize, valued at $750, for sloops, cutters and yawls of Class C, is the Gould cup ($500), open to club yachts only. The time limit is eight hours. As the fleet of the S. C. Y. C. will rendezvous at Larchmont on the previous evening, there will be a fine turnout in the harbor. The Sylvan Glen will leave the foot of East Twenty-third street at 8:15 on Saturday.

SANDY BAY Y. C. RACES, JUNE 17.—The second regatta of the Sandy Bay Y. C. was sailed on June 17 in Ipswich Bay, from the mouth of the Annisquam River, to and between Squam buoys, thence to and around Essex outer black buoy, thence to Plum Cove buoy, returning between Squam buoys. Leave on starboard and repeat, making 16 miles. The morning was rainy, but cleared at 10 A. M. with no wind. At 11:45 the signal was given and the Nora started, followed by Kate Donnell, Callie, Foam, Kittiwake, Albion, Petrel, Dove, Jennie C., Sara, Hestia, Eliza, Fatinitza and Spark. With no wind and a strong head tide many of the yachts gave up, the winners being: First prize—Kittiwake, Capt. Cunningham; actual time, 4h. 27m. 15s.; corrected time, 3h. 28m. 35s. Second prize—Lovette, Commodore Haskins, of Rockport; actual time, 4h. 37m. 45s.; corrected time, 3h. 37m. 45s. Third prize—Petrel, Fleet Captain Paul, of Rockport; actual time, 4h 41m. 25s.; corrected time, 3h. 38m. 13s. Fourth prize—Hestia, Capt. Dennen, of Gloucester; actual time, 4h. 49m. 41s.; corrected time, 3h. 44m. 21s.

QUAKER CITY Y. C.—*Editor Forest and Stream:* At the last monthly meeting of the Quaker City Y. C. the new rule of measurement, after a warm debate, was adopted. The Minerva, Olga and Thomas voting against it. Will send you particulars at another time. Permit me to correct a mistake in my last communication. Ex-Commodore Vallette, R. G. Wilkins and S. A. Wood, judges of the regatta, in their report find "That the Thomas was compelled, according to the sailing rules, to tack to the eastward to give room to the Tilger, then on starboard tack, and having the right of way. The Spratt was notified to tack, and failing to do so in accordance with the rules, was caught by the Thomas. The latter boat being void of all blame." It would be well in future for the skippers of yachts to read up the rules and obey them.—R. G. W.

CAPT. COLLINS'S NEW SCHOONER.—The model for the U. S. Fish Commission's new fishing schooner, from designs and suggestions by Capt. Collins, is on exhibition at the rooms of the American Fish Bureau. She will be 883/4ft. in length over all, 79½ft. on the waterline, 22ft. beam, and 10ft. 3in. draft. She will be provided with a laboratory for the preservation and examination of specimens, and a well for keeping fish alive. She will probably make winter cruises to the Banks, to demonstrate her superiority to vessels of the old model. Capt. Collins has devoted much study to the subject, and if it shall be proved he has devised a safer model for the winter fishery he will be entitled to rank as a public benefactor.—*Cape Ann Advertiser, June* 19.

FAST SPEEDS OF RIVER STEAMERS.—The latest exploit of the Stiletto has awakened considerable interest in previous records of speed, and a correspondent of the *Tribune* sends the following: There are two river steamers reputed to have made twenty-six miles an hour, viz., the South America and the Mary Powell. Both records were made on the Hudson River. Other fast records are: The Mary Powell made 76 miles, New York to Poughkeepsie, in 3.39.30, Aug. 6, 1874; Chrysopolis, 125 miles, Sacramento to San Francisco, in 5.18, on Dec. 31, 1861; Alida, 145 miles, New York to Albany, 6.21; R. E. Lee, New Orleans to Natchez, Miss., 16.36.47, on Oct. 28, 1870; the same steamer, New Orleans to St. Louis, 3 days, 18.14; Stiletto, yacht, 29 miles in 1.17.

THIMBLE ISLANDS AND STONY CREEK.—A company has been formed in New Haven to run a steam ferry between Thimble Islands and Stony Creek, connecting with trains for New York and Boston. A new steamer, the Messenger, was built last winter by Mr. Thatcher, of New Haven, specially for this service, and will begin her trips at once. She is commanded by Capt. C. W. Foster, an old New Haven yacht sailor. The islands are every year becoming more popular with yachtsmen, and the new ferry will make them still more accessible. It is proposed also to connect with the Sound steamers from New York and Boston, taking passengers from them for the islands.

SAVANNAH Y. C.—The officers for 1885 are: Commodore, Wm. Hone; Vice-Commodore, J. N. Johnson; Rear Commodore, T. P. Bond; Secretary, Frank Winter; Treasurer, M. A. Cohen; Board of Stewards, T. C. Kinsey, Chairman; Frank Winter, Secretary; D. C. Bacon, F. S. Lathrop, R. M. Demere, H. A. Palmer, A. S. Bacon, T. Ballantyne, G. W. Haupt, S. P. Goodwin, L. Hartshorne, M. Y. Henderson, F. C. Wylly. House Committee, Messrs. Palmer, Haupt, Lathrop, Bacon and Ballantyne. Sailing Committee, Messrs. Henderson, Goodwin and Hartshorne. Measurer, F. C. Wylly. The club numbers 162 members.

ACCIDENT TO A SAILBOAT.—On June 21, Mr. E. P. Mott, of Bath, L. I., left Far Rockaway in a sailboat for the latter place. The boat, when some distance off shore, was swamped by a big sea, and Mr. Mott was unable to free her from water, so he found refuge on the stern while the boat drifted out to sea. About 6 P. M. the excursion steamer Columbia sighted the wreck and a boat was lowered and Mr. Mott taken on board the steamer, where he was well taken care of.

ANNISQUAM REGATTA.—Races for two classes, 20ft. and over, and under 20ft. will be sailed at Annisquam on July 11, starting at 10:30 A. M. The course is from Squam Light to Essex buoys and return, two rounds. The prizes are $75 for first class, and a silver pitcher, valued at $25, for the second class. Entries should be made to A. J. Forbes, Annisquam, up to July 10.

CORINTHIAN RACES IN FRANCE.—French yachts, except the smaller open boats on the rivers, are manned and largely sailed by professionals, but this year a change will be made in the establishment of a Corinthian race, which will be sailed soon at Havre. The entries will be open to all keel yachts of 8 tons or over, no paid hands but a pilot being allowed on board.

MOBILE Y. C. RACES.—The Mobile Y. C. will sail the following races this season: July 4, annual cup regatta, Mobile Y. C.; July 5, class regatta, Mobile Y. C.; July 19 and 20, rendezvous, cruise and regatta, Mobile Y. C. and Southern Y. C. All of the above will take place at Point Clear, Ala., the regattas being sailed over a triangular course of 15 miles.

CORA.—This new steam yacht, built by Poillons from Mr. Ellsworth's model, for Mr. John Morris, made a trip from Newark, where she recived her engines, to New York, and was on the screw dock last week. She has made a successful trial trip, and is now in complete trim, and will leave this week far Mount Desert with her owner and his family.

TORONTO Y. C.—A special meeting was held at the club-house on June 18, the new constitution and by-laws being read and adopted. On Saturday next a race for five-ton yachts will be sailed for three prizes presented by Mr. Geo. P. Magoun.

LAUNCH OF A STEAM YACHT.—Cramp & Son, of Philadelphia, launched on June 20 a steam yacht, No. 246, which they have built for speed. She is 152ft. waterline, 159ft. deck, 166ft. over all, 22ft. beam and 13ft. depth.

PHOTOS OF THE PURITAN.—Several photographs of the Boston sloop Puritan were taken by N. L. Stebbins, 521 Washington street, Boston, just after she was launched. Mr. Stebbins will soon have some views of her under sail.

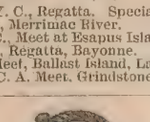
ANOTHER MIGNONETTE.—A sloop on the lines of the Mignonette is being built by Mallory at Syracuse, N. Y., for C. M. Brown. She will have 2,000 pounds of lead on her keel, and the head room will be 5ft. 4in.

THETIS.—Mr. Bryant's sloop arrived in Boston on Thursday last from New York. She will at once have a new jib by Sawyer, without a club. On June 30 she will start in the Eastern Y. C. race.

A NEW CATAMARAN.—It is reported that the owner of the catamaran Jessie will build a steel boat with two hulls nearly 60ft. long. Her mast and bowsprit will also be of steel.

CLARA.—It is reported that this famous 20 has been sold by Mr. N. B. Stewart to Mr. Charles Sweet, of New York, and will cross at once to America.

PUBLISHER'S DEPARTMENT.



INOCULATION AS PREVENTION OF CHOLERA.—This new procedure for the prevention of this disease is attracting much attention at this time. Dr. Koch, Pasteur and Dr. Ferran, a Spanish physician, are experimenting by inoculating with the germ of the cholera disease, with the result, as the latter claims, of producing a very mild grade of cholera, and afterward immunity from an attack. Thus far its advocates seem to hold the ground, and government experimenters are seeking to condemn or verify the procedure. Meantime Dr. Humphreys, the well-known homeopath, claims that this morbid inoculation is but invading and preoccupying the system by the similar, that is, homeopathic and hence protective influence, and that the same end with milder and safer means may be obtained by taking the similar, that is, Specific Cholera Medicine. That to bring the system under the similar medicinal influence is as protective as to have been inoculated with the mild form of cholera germ. Vaccination with the knife or cow-pox is as efficient a preventive of smallpox as inoculating with the small-pox, and by virtue solely of its similar, that is, homeopathic influence. And this result is better obtained by the medical similar or specific than by the morbid one, being much more agreeable as well as free from the danger of also being inoculated with whatever constitutional disease which the person had from whom the cholera matter was taken. Dr. Humphreys has prepared a little pocket and family case of such cholera specifics and preventives, and will send the little pamphlet to all who seek to know of this subject. Humphreys' Homeopathic Med. Co., 109 Fulton street, New York.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 3—Rondout C. C., Meet at Esopus Island.
July 4—Bayone B. C., Regatta, Bayonne.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

ROCHESTER C. C.

THE Rochester C. C. held their spring regatta on June 18 at Irondequoit Bay. The first race was for Class II. canoes, paddling ½ mile with turn. The times were: Mellen, 4m. 15s.; Andrews, 4m. 28s.; Moody 5m.; Wilson, 5m.

A sailing race, Class B, came next, over a triangular course of 1½ miles. Times: Angle, 38m.; Mellen, 41m. 30s.; Moody, 44m.

Following this was a combined sailing and paddling race, all classes, same course as last. Sail to first buoy, paddle from first to second buoy, sail to third buoy. All sails to be lowered over paddling course: Won by Andrews, 28m. 30s.; Mellen, 46m.; Wilson, 47m.

The course for the tandem paddling was ½ mile with turn: Ward and Andrews, 3m.; Mellen and Stewart, 3m. 18s.

The sailing race for the Angle Cup was over the same triangular course, the times being: Andrews, 28m; Mellen, 28m.; Ward, 35m.

The last was an upset race for all canoes: Andrews, 4m.; Mellen, 4m. 30s.; Moody, 5m.

THE CANADA SPRING MEET.

THE first spring meet of the Canadian canoeists was held at Unger's Island, Bay of Quinte, on June 8-10. Some canoeists were in camp by Saturday, in time for a heavy thunder storm on Sunday morning. On the same afternoon the steamer from Clayton brought Commodore Oliver and Secretary Neidé, with Mr. Richards, of Brockville, and next morning Vice-Com. Rathbun, A. C. A., arrived and took command of the camp. On Tuesday the first races were to be sailed, but the weather was very cold, and a high wind blowing. The first races was started, however, the Wych and Topsy being the only boats. The latter soon retired, leaving Wych to complete the course, which she did. Her owner is Mr. E. W. Rathbun. Mr. Bell, of Belleville, invited the canoeists to sail with him in the Norah, and after the race a party went out with him.

On Wednesday there was still plenty of wind, but the Class B race was called, the course being 3 miles. The entries were Ripple, Star, Lou, Grebe, Gipsy, Topsy, Ripple, Dr. Clinton, won easily in 55min. The Grebe had a sail over in the 3 mile open to all race. In the half-mile paddling race the entries were Black Diamond, Gypsy and Star, the former, paddled by Mr. J. B. McMurrich, of Oswego, coming in first. The prizes for the races were flags presented by ladies. The camp was a great success, in spite of the weather, and will probably be repeated next year.

MOHICAN C. C. SAILING CHAMPIONSHIP.

THE first race of the season for the club sailing championship was contested Thursday evening, 18th inst., in a light west wind. Four canoes entered and started in the following order, at 5:43 P. M.: Marion B., Com. R. S. Oliver; Annie O., H. L. Thomas; Thetis, P. M. Wackerhagen; Snake, H. W. Gibson. The course was twice around an elongated triangle, about 3 miles. The Marion got away with a considerable lead. All hugged the east shore except Annie O., and she, in the force of the ebb and current, fell to the rear. Snake passed Thetis also by the aid of her "bonnet" (which gave her a mainsail of about 80ft.) and rounded the first buoy soon after the Marion B. The Marion went about for the return trip immediately but Snake stood out into mid-channel for better wind and water and passed to windward of her opponents by the maneuvre, having a considerable lead on the first round. The second round was made in the same order, the chief incident being the Marion B. getting within a length of the Snake again as she was making every effort to get round the second buoy in a calm. When she got away, however, the Marion's turn had come and Snake won the badge and pennant at 6.41½. Marion B., second, 6.45; Thetis, third, 6.46½. Capt. G. H. Thacher (Lasca) acted as starter and judge, Mr. W. Wackerhagen time keeper. Several challengers promise the Snake a lively struggle next month.

A CRUISE IN A BIRCH BARK.

THE day had been anxiously awaited when our vacation would begin, and all possible arrangements had been made to enable us to start at the earliest moment. Work was finished at noon, and at 4 P. M. our packing was completed. Then, followed by the good wishes of several lady friends who had assembled to see us off, we turned the adventurous prow of our bark canoe northward. After getting clear of the town, we put up our sail and for a short time skimmed along over the water in a manner entirely satisfactory to ourselves. Soon, however, a change in our course brought the wind too much ahead, and we were obliged to resort to the paddles. When night came on, we found that we had made about twelve miles. We were somewhat late in camping, for we were delayed by shoals occasionally. Our choice of a camping ground lay between the sand of the beach and the apparently harder mainland. We chose the latter, and having selected a level spot, we pitched our tent and kindled our first camp fire.

Our outfit consisted of two rods, one gun, one dog, Barney by name, together with tent provisions and a goodly number of other articles necessary to the comfort of the camper out.

The tent was provided with a sort of curtin sewed all around the bottom. This had been added after the tent was made, and was designed to lie on the ground inside. On it we placed our boxes and other articles, thus securing us in great measure from the presence of mosquitoes when the outlet was closed. Before retiring, we slaughtered all the mosquitoes that had entered during the day, and by this means we generally were enabled to enjoy a good night's rest.

I do not, as a general thing, sleep very well the first night out, and this was no exception to the rule. The bed was unmistakably hard, for we were not yet in a position to indulge in the luxury of a bed of boughs. When the ground admits I sometimes make an excavation for the reception of the hips. This renders the position somewhat easier, but is not an unqualified success.

Next morning we were up very early. After a frugal breakfast we loaded the canoe again and made another start. It was a fine morning with little wind, and we were in high spirits. So far we had come between the beach and the mainland, but now we were to make trial of the open sea. At noon we took our dinner, using a log both as table and seat. I cannot say I enjoyed this part of our trip; there was too much sand for comfort. It may be imagined that we did not tarry long after our meal was finished. In the afternoon there were thunder showers all around us, but we escaped a wetting. However, to make up for it, our canoe began to leak. It became so bad after a while that we had to land, kindle a fire, and repair damages. While doing this another shower came up, which did not prove so obliging. We had another dinner before we started, for we intended to paddle along until nearly dark, to make up for lost time. However, we did not go far before the canoe was leaking as badly as ever. We kept on, bailing out the water when necessary, until about a mile above the Escuminac Lighthouse. Then we went ashore for the night, although it was only 4 P. M.

After all was made snug for the night, P. visited the lighthouse, while I took mine ease in the tent, and in lazy enjoyment of my position watched the vessels, great and small, gliding past, near at hand and in the distance. This, however, became monotonous after a time; Barney and I took a walk in quest of berries. That, at least, was my object, but Barney did not appear to be deeply interested in my proceedings, and went off on business of his own. His object soon became apparent, for looking up I saw him making gallant efforts to overtake an old duck. He did not seem to realize that this was only a ruse on the part of the wise old duck to entice him away from her young family, and he doubtless thought from her seeming inability to get more than a few yards away from him that to overtake her was only a question of time. I do not have my dog trained like that of a certain Acadian of pot-hunting proclivities, whose acquaintance I made some years ago, to catch the young ducks before they can fly. This effort on Barney's part was purely voluntary, and owing, no doubt, to the exuberance of his feelings.

Our tent was pitched on the "blacklands," a formation, I imagine, of the nature of peat. They occur at intervals all along this eastern coast of New Brunswick, so far as my knowledge extends. They appear to rise abruptly from the sand of the beach, and sometimes rise to a height of twelve to fifteen feet. On top they are covered with moss, into which one sinks at every step. They are always damp, and small ponds are of frequent occurrence. Ducks are generally to be found in these ponds at the proper season, and there are also extensive marshes near by in which excellent duck shooting may be had. Flocks of large curlew also frequent these blacklands.

Next morning we again set sail with a fair wind and smooth sea. It is not our usual custom to travel or work on Sunday, but on this occasion we did so because we saw that a storm was brewing, and we were in a very exposed condition. Shortly after noon we reached Fox Island in the Miramichi, where we were obliged to land, for the wind had increased considerably and the water was becoming too rough for our small canoe.

During the whole morning the storm clouds had been gathering seaward, and we had encountered some danger in crossing the channel between Huckleberry and Fox islands, where the wind, acting against a strong tide, had caused an ugly chop. After crossing the channel we had kept on for some time in the hope of finding a good landing. We did not succeed, however, and by this time we were glad to land anywhere. Imagine us then, having turned our canoe toward shore, riding in on the summit of a big roller. This would carry us some distance up on the beach, but just before the canoe could strike the shore, the order is given; and P., who occupies the bow, sprang overboard. Then while he held the canoe Barney and I do likewise. This is far from being a pleasant operation, but it is the only plan known to me whereby a landing can be made in a sea without filling the canoe. During the process of unloading we got wet nearly to the neck, for it was necessary to hold the canoe off shore.

Having carried our impedimenta up on the beach, we put up our tent, and having donned dry clothes, were at liberty to hang up our dripping garments, but not altogether as an offering to the powerful god of the sea. During the night the wind increased to a gale, and moreover it began to rain. Sometimes I thought the furious gusts of wind would blow the tent down, although it was pitched in a hollow and thus was somewhat sheltered. Neither wind nor rain showing any signs of abating in the morning, we removed the tent to a still more sheltered spot. Looking seaward after our removal we saw that a barque which the evening before had been riding at anchor a few miles off, had been driven ashore during the night. We could see the waves strike and break over her. The vessel, however, did not go to pieces, and we learned later that none of her crew were lost.

At this place we remained until Wednesday noon, and I may safely say that I never spent three more uncomfortable days in camp. It was so wet that we did not venture out of the tent even with oilskins on except when absolutely necessary. Most of the time we lay on our blankets, reading, smoking and growling at our hard fortune and the exceeding hardness of our bed, for of all hard beds commend me to the sand. Having had, then, about all we could stand of Fox Island, we hired a team to carry our canoe and baggage across to the leeward side. By this time the wind had gone down considerably, but the rain continued. We found smooth water to the end of the island, a distance of four or five miles. Then came the most dangerous piece of water in the whole voyage, the ship channel between Fox and Portage islands. We consulted a friend who does business on the island, and when he did not absolutely forbid us, we decided to attempt the passage. It is, I think, about three miles across, and we found the sea very heavy before we reached the other shore. By the time we discovered how bad it really was, to return was no less dangerous than to go forward. It was a tight place, but good luck, united to a fairly good knowledge of the "pints" of a bark canoe, brought us out all right. After we got across, though, and were congratulating ourselves on having once more escaped the clutches of "Davy Jones," I was pitched headlong into the sea while engaged in bailing out some of the water taken aboard during the passage. That was a trifling misfortune, for the water was not deep; and so far as getting wet was concerned, it did not matter much whether one was in the canoe or out of it, for it rained all the time.

The "gentle rain from heaven" was still falling abundantly when we encamped for the night among the pines on Portage Island. These islands, Huckleberry, Fox and Portage, stretch across the Miramichi, forming the arc of a circle. They seem like the continuation of the beach on the northern side of the river, and may have been so once. We had a very good camping ground on this island, sheltered from the cold easterly wind, to which we had been so long exposed. After a comfortable supper, not intermingled with sand, we stretched out in front of a big fire and enjoyed the situation for some time. Then we turned in, and slept the sleep of the camper out.

Leaving Portage Island on Thursday morning, we passed Burnt Church on our left. Here in the summer of '83 on St. Anne's Day, a tragedy occurred. This is a great day among the Indians, and a large number had congregated in honor of the occasion. It seems they had an old cannon which they were accustomed to discharge in honor of the day, although repeatedly warned that the gun was liable to burst. As usual they had loaded the gun, placing sods in the muzzle. As usual, the Indian on whom fell the dangerous duty of discharging the piece was warned. He replied, "Two, tree hundred Injuns stay this point; s'pose one killed, him not missed." He then discharged the gun and was instantly killed. What had been so often foretold came to pass.

Passing Burnt Church we came to Neguac, an Indian name signifying "shoal water," and shoal it is. Shortly after noon we reached Tabusintac beach, where we remained until the following Monday. We knew the water in the river would be too high to admit of fishing, and we were therefore in no hurry, besides we wished to get our blankets and clothing dried.

On Monday, July 21, we made another start, wind again easterly. We "put 'em up sail," as advised by some Indian friends, who always take great interest in us because we use a bark canoe; our canoe is of the Milicite model, and is much smaller than the Micmac canoes in use on this coast. Having crossed the inner bay, we enter the mouth of the Tabusintac. A short distance from the mouth the river apparently branches, and a stranger would be at a loss to know which he ought to take. The river does not branch, however, but from its appearing to do so it is said to gets its name, Tabusintac, meaning "two rivers," according to one authority, "may be two" according to another.

A wet, disagreeable day again, but after laying in a supply of provisions at a farmhouse we proceed on our way, bearing the ills of fortune with great equanimity. That night we camped some miles above the last house on the river. We found the stream swollen high by days of rain, and it was difficult to find a place on which we could pitch our tent, the low ground on the banks being overflowed. The approach of night, however, left us little time for deliberation. When we could delay no longer, we ran the canoe to the bank and tied it to the bushes. Then, having unloaded our canoe, by no means an easy matter under the circumstances, we made a small clearing on which to pitch the tent. It was not a spot marked out by nature for a camp; the ground was not only uneven, but covered with specimens possibly of geological interest, but not at all satisfactory to a person who expected to make his bed there. However, by the exertion of considerable muscular effort the ground was cleared and partially leveled. Then we spread a thick layer of boughs, from which we shook the rain, and were prepared to make the best of our situation. We remained here until Wednesday. On our return we found an excellent pool in front of this camping ground, containing an abundance of fish. We, of course, did not attempt to fish, for the water was at least three or four feet higher than usual.

On Tuesday we were badly sold. The water appeared to be falling, and to test the matter I placed a gauge at the margin of the stream. Sure enough, the water was falling, and rapidly, too. Our spirits rose in proportion. We spent a portion of the day in preparing poles, with which to complete the remainder of the journey, for the water was too swift to admit of paddling. After a time I looked again at my gauge, and found to my extreme disgust that the water was rising. Then it dawned upon me that we were below the head of the tide. I suppose we fell into this error because the water was to all appearances running down all the time.

Shortly after noon on Wednesday we reached Big Hole, the end of our journey. This Big Hole is situated at the confluence of Big Hole Brook and the Tabusintac, and has been the scene of many campfires. Our toil was over. Now we were to enjoy our hardly earned reward till the inevitable day of departure came.

Our first care was to spread out our goods and chattels in the sun. Our next was to remove from the ground the dead boughs of last year's bed. Then we proceeded leisurely in the preparation of a new bed of luxurious softness.

I found my smoke-house, built two years before, still standing, but in a dilapidated condition. This structure had been erected for the purpose of smoking a few of our trout for the benefit of our friends at home. It was also useful as a place of retreat when the mosquitoes became too persistent in their attentions.

I may say here that this Tabusintac River is, or was, one of our best trout streams, but from an acquaintance of several years I am

inclined to think it greatly overrated. It is true that some good trout are taken, but after fishing Big Hole for a few days the catch falls off rapidly, and it becomes necessary to rest the pool. That would not so much matter if there were any other pools near at hand; but such is not the case. I am not in the least a "trout hog," and resort to the woods more for health than sport. Indeed, until this year when I was thrown on my own resources by the departure of my former comrade to the Pacific coast, I did not fish at all. The above mentioned result followed the use of one rod by my friend, who is a very "economical" fisherman, by which I mean that he never caught more fish than was necessary, and returned all small fish to the water.

Here, then, we took our ease, waiting with what patience we could command for the subsiding of the water. Noah never wished more fervently for that desirable event than did we, for we were trout hungry; and not a fish could we get except some diminutive specimens, whose brief span of life we regretted to terminate. Neverless a few found their way to the frying pan—necessity knows no law. Fortunately the famine was not of long duration, and we were enabled to satisfy the cravings of appetite with more legitimate prey. Although there was a plentiful lack of sport, the days passed pleasantly and all too quickly away.

As there was no more rain after our arrival at Big Hole the water soon began to go down, and at length was low enough to admit of something like fishing. Hitherto P. had mainly supplied our table with the above-mentioned fingerlings by dropping his fly over the bank here and there. It was impossible to make a cast. Now the sandbank upon which the fishing is done at this pool began to appear. Here, then, one evening I had taken my stand, while P. was collecting wood for a night fire. I had an old rod and an old reel which could not be fastened securely to the rod.

After making a few casts I had a rise from a very large fish I thought I had the grandfather of all the trout at the end of my line. Presently the fish leaped, and I saw to my extreme surprise that I had caught a salmon, and at the same time a Tartar, as I soon found. (Salmon ascend the river later in the season, and I had never seen any on my former trips.)

Having a salmon, then, securely hooked, the fun began. The pool is quite large and free from rocks, but I was wholly unprepared for such game. That salmon appeared to be at both ends of the pool at the same time from the rapidity of its movements. I was calling at the top of my voice for P. to come to the rescue, but before he arrived on the scene there was no necessity for his services, the contest was over. The old reel flew off the rod, and soon the salmon was free, except for a small souvenir of the encounter in the shape of my fly and half the leader. Then I wended my way sorrowfully back to the tent, and mentally weighed that salmon. Next morning, having in the meantime fastened a better reel to my rod, I tried again. The result was discouraging, for I lost two more salmon, together with the flies and leaders. I then came to the conclusion either that my tackle was not strong enough or I was not sufficiently expert in the use of the rod to capture such noble game. I gave it up, and did not again make a cast on the waters of Big Hole until the morning on which we left for home; then I captured three trout of about three pounds each.

Being debarred then from fishing in the best pool on the river, by the fear of hooking a salmon, I turned my attention to the discovery of other pools, if any there were. I found a few small ones by going a considerable distance up the river, from which I took enough fish to supply our table, but none of large size; the largest would weigh, perhaps, one pound. To do this I used to start after breakfast and pole the canoe up stream, where I sometimes remained until evening. I do not know how far I ascended the stream, but should think at least five miles. In that distance I found only two pools of any importance, and they were small. There was one only a short distance, less than half a mile above Big Hole, which rejoiced in the pleasing name of the Devil's Elbow.

At length the conviction forced itself upon us that our stay must soon come to an end. First the tobacco showed signs of failing. To remedy this misfortune we resorted to the use of Indian willow bark —kinikinik—in the language of the red man, as near as I can make out from the pronunciation. A little kinikinik mixed with a good deal of tobacco does not make a bad smoke; but a good deal of kinikinik mixed with a little of tobacco is not entirely satisfactory. Then our supply of provisions began to grow small, a defect not so easily remedied.

Our last day in camp arrived. I started early in the morning determined to have a full day up the river. On my way up I stopped at the Devil's Elbow, where I had a rise from a large fish which I did not succeed in striking. When no efforts on my part succeeded in making the fish rise again, I went on. Finally I came to the pool furthest up the river. Here I had some very good sport, as things went on this trip. On my way back to camp in the evening I stopped again at the Devil's Elbow to give that big fish another opportunity to try my fare. Long and faithfully I whipped the pool, but without success. I was cold from standing so long in the water, but I concluded to change the fly and try a few more casts. I did so, and then came the crowning success of the trip, the fish rose, and I had another salmon. I do not think that at first I felt particularly grateful, for I fully expected the usual result would follow. A short time, however, convinced me that the tackle was likely to hold, and then arose the embarrassing question, How was I to land the fish? The pool is not very large, and some rocks showed themselves here and there at the lower side in the swift water. On one side of the stream rocks towered up almost perpendicularly from the water's edge; on the other was a narrow sandbank, three or four feet wide and a few yards in length, but overhung by bushes. Various schemes for the capture of the fish passed through my mind, but none offered any very striking hope of success. I was alone and had no gaff; I had not even a landing net, having lost that article in ascending the stream. Finally I concluded that the question must be fought out on that sandbank.

Meantime the salmon was going through the usual performance, sometimes rushing down stream till I thought all the line would be reeled off, then allowing itself to be reeled slowly back. Then would follow a rush up stream. At length the fish became tired out, and swam around and around in a small circle, passing within a few feet of me. Judging that the time had come to bring my plan to the final test, I turned the fish toward the sandbank, applying just sufficient pressure to keep it in the right direction. When it came to the shore it lay motionless. Then, keeping a taught line, I waded quietly to the fish, put my boot under it and threw it ashore. Thus, without the aid of the usual appliances, I landed my first salmon, a fish of ten pounds.

Next morning, bearing the inevitable with what grace we could command, we packed up and started for home. The first man we encountered was called upon to furnish us with some tobacco, which he did most generously. In return we presented him with some trout, after which we separated with feelings of mutual esteem. That night we camped near the house of Mr. Petrie, a gentleman of whose kindness to us I cannot speak too highly, and to whom I would commend any sportsman who found himself in that locality.

Next day, Saturday, we reached Tabusintac Beach, where we remained until Monday morning. Late Monday night we reached Fox Island, where we passed through a second ordeal. This time it was mosquitoes. Here P., who had started off as soon as we landed in quest of water and grub, was mistaken for a tramp, a not unnatural mistake under the circumstances, for he had not taken time to put on his dress suit, but one which was nearly the cause of our going to bed supperless. After partaking of a supper consisting mainly of hard tack, we went to bed in a fishing camp, thinking it too much trouble to put up the tent. That camp was full of mosquitoes, and after standing the torture as long as we could, we went out and pitched the tent in the wind, hoping by that means to obtain some sleep. It was no use. We got no sleep that night, and almost before daylight were off. When we came to our old camping ground at Escuminac, we went ashore and made up for lost time in the sleeping line. Wednesday noon we came to Point Sapin, and here we were likely to stay longer than we desired, for the sea was too rough for us to go further. In this emergency a friend came to our assistance, put our canoe and luggage in a big boat, and carried us to the end of the point, where we were again sheltered from the wind. It was now nearly sundown. I do not know why we did not stay there all night, unless it was that our pleasure was a thing of the past. At any rate, we kept on poling and paddling all night—a most lovely one—and at daylight reached home. So ended a holiday trip to the woods, one in some respects attended with many discomforts, but whose pleasures, looked back upon, far outweigh them all.

CHIPLOQUORGAN.

AN OUTSIDER'S VIEWS ON CANOEING.

AND whole fleets of lately launched butterflies, with streaming pennants and gaily painted sails, go drifting by. Poor butterflies. In a fresh breeze they remind me of canoeists. Nature has been niggardly to them in the matter of centerboards, and their rudders are makeshift affairs at best, so when they down helm it is not always certain that they'll get about, and if they start for a beat to windward the chances are that they fetch up against the wrong tree.

But canoeists enjoy themselves on this (Indian) River. I suppose that in the whole Union there are few waters which afford better facilities for their favorite sport. You can get a canoe here at small cost, and by covering it over carefully it will keep for an indefinite length of time. Commodore Morris, of Cincinnati, was canoeing with us for some four days. It only cost some ten dollars, I think, to bring his canoe from the Western city and land it safely on our little wharf. So far from being inconvenient in traveling, the canoe was quite a comfort, he says; indeed, he could not have well brought the paddle and sail without it. And as he carries his clothes in it, too, it saves his being bothered with a trunk. Every morning he goes down to the river bank and polishes his canoe till it shines like a good deed in a nautical world; then he puts the lid on, screws it down, spreads a tarpaulin carefully over all, and sits down on it and eats an orange. Canoeing is a very healthful exercise, he says. There was no seat by the river side till the canoe came, and we shall miss it sadly when 'tis gone. The Doctor says that if he were not afraid that some new guest might make a mistake and go out in it, he'd buy a couple (when his pineapple patch pays) and put one on each river bank. I've never done any considerable canoeing, but I know a good many canoeists, and I'm very fond of them. There was my friend, Commodore Will Alden—who wears side-whiskers and is one of the great and original canoeists of the period. He came canoeing to Nantucket the summer before last. He forgot to bring his canoe with him, but he had a photograph of it and remembered just how much it cost, which was about the same thing. And as I took him out sailing in my catboat several times (which gave him an opportunity to explain how much nicer and more comfortable canoeing was) I fancy he enjoyed himself quite as well as if he had come with his canoe under his arm—perhaps a little better.—*John Paul in N. Y. Tribune.*

A NEW YORK ESTIMATE OF DR. NEIDE'S BOOK.—The New York *Evening Telegram* closes its review of the "Cruise of the Aurora," as follows: "There is no more popular canoeist in the American Association to-day than Dr. Neidé. A veteran of the secret service of the Army of the Potomac, an enthusiastic woodsman from boyhood, the Doctor's life has been one of unusual adventure. Qualified to see and appreciate whatever was worth recording on his singular cruise, he has the happy faculty of being able to tell his story with sprightliness and *verve*. The log of the Aurora is continuous in its interest to the end. It describes the realities of canoeing, the fun and the fatigue, the drollery of the mishaps and the excitement of the rush of rapids, with the humor and the *verve* of an earnest sportsman and a clever writer. The book will take a high place in the rapidly increasing literature of canoeing."

RACES AT TOLEDO.—At the recent G. A. R. encampment at Presque Isle, a canoe race was sailed by Toledo canoeists, the Louise winning in 1hr. 35min. 15sec., with Kittie second, Violet third, and Gypsy capsized.

CANOEING IN GERMANY.—The *Wassersport* of June 4 publishes the burgee of the Bonn C. C., with a request for the burgees of other clubs. We quote from its canoe notes as follows: "In addition to our recent remarks on the 'Lead Period' for yachts, we now learn that the miniature yachts, the canoes, are also conforming to the same innovation. The 'Jersey Blue' canoe Theres, at present on the stocks at Sakrow, is receiving a keel of 40 pounds. The owner, Mr. Belitz, hopes to increase the stability and sail-carrying power of his boat to a noticeable degree. The floating capacity is in no way impaired, as the boat is still unsinkable, having watertight compartments fore and aft. The total weight is thus increased to 100 pounds, making it difficult for one person to transport."

A NEW CRUISING CANOE.—As the decked canoe becomes better known in Canada it meets with more favor, and with the double blade, promises to prove a formidable rival to the old open canoe and single blades for cruising purposes. A new canoe has been built this winter by Sauve Bros of Brockville, for Mr. W. B. Richards, of that place, for cruising and racing. This boat is 15x31¼, 11½in. deep at gunwale, and fitted with large air tanks. She has an Attwood board and a drop rudder, and two Mohican sails of 63 and 25ft., reefing to 45 and 16ft.

A CANOE MEET AT ESOPUS ISLAND.—Last year the Rondout C. C. held a pleasant camp on Esopus Island on July 4, and this year they propose to repeat the experiment at the same place, and other canoeists are invited to join them. They will go into camp on Friday, remaining until Monday morning. Canoeists from New York can take the Mary Powell on Friday and land at Hyde Park, two miles below Esopus Island. Paddling and sailing races will be arranged on Saturday.

A CRUISE ON THE SACRAMENTO RIVER.—Canoe cruising is a new idea in California, where canoeing is confined mainly to day trips and sailing, and few long cruises are made. A long cruise has lately been made by two members of the Oakland C. C., Messrs. Pixley and Cooper, of San Francisco. They went by steamer to Jacinto on May 5, and from there followed the river up.

KNICKERBOCKER C. C.—The club book, lately issued, contains the names of 41 members and 34 canoes. The officers for 1885 are: Commodore, J. L. Greenleaf; Vice-Commodore, Edwin Fowler; Secretary, E. W. Brown, 4 Bowling Green, New York; Treasurer, R. P. Martin; Measurer, E. C. Griffin; Lay Member, E. A. Hoffman, Jr.

TRANSPORTATION TO THE MEET.—Particulars will be given next week.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. F. P.—The woodcock season in New York opens Aug. 1.

T. G., Pennsylvania.—About 3in. of keel is equivalent to the board.

AMATEUR, Lynn, Mass.—1. The canoe yawl would cost about $125 for hull only. 2. They would not build one boat of any model.

W. J. F., Ogdensburgh.—Either one of the guns will do for your purpose. There is not any difference between the two. The rifle is safe but not good for much except target play.

NEW BEGINNER.—You will find fishing within fifty miles of Philadelphia in the Delaware River from Delaware City, Del., to New Hope, Pa. About the latter place you may find black bass. On the lower river, near the Bay, you will find an assortment of river fish, perch, etc.

B. R. P., B. C. School.—Could you give me any information about this egg. It measures 6×5½ inches, of a dirty white color, about the shape of a duck's egg; found it on the edge of a river; probably washed down from an island near Lennoxville, Canada? Ans. Your description is too vague. We cannot identify the egg.

G. H. E., New York.—1. Will you kindly let me know when the open season begins for upland plover in New Jersey? 2. Do these birds stool well? If they do I want to get decoys, as there are a great number of them on my farm this season. Ans. 1. Aug. 1. 2. They will sometimes stool when they first come on and before they have been harrassed, but are extremely wary, and no precaution must be omitted in concealing oneself. You certainly cannot depend on them to stool well.

W. C. M., Brooklyn.—1. Where can I find the best black bass fishing on the Delaware River in July? 2. Will they take the fly in that month, and what flies do you advise? 3d. What is the pedigree of the Irish setter Rose, owned by Dr. Jarvis? Ans. 1. About the Delaware Water Gap. 2. Yes, at times, according to their caprice. The following flies are usually good: Cheney, scarlet ibis, Henshall, oriole, Mather, jungle cock and Ferguson. 3. Rose is by Palmerston and out of Flora.

TOM BOY, New York.—Would you advise a young man without money to go to California? I have just about enough to pay my passage there. Am a good shot, understand dogs and all that. Was once very comfortably fixed but stocks broke me. Ans. We do not advise you to go to California unless you have some definite purpose for going there. A simple change from one side of the continent to the other is not likely to make a given kind of employment any easier or more profitable. If you understand enough about dogs to take care of them and train them for field trials, you may find enough to keep you busy in the vicinity of San Francisco or Sacramento; Mr. N. E. White, editor of the Sacramento *Sunday Capital*, can tell you of that. For other employments, if you wish to go to the Pacific Coast, Oregon and Washington Territory offer stronger inducements than California.

COMPENSATING REEL.

Patent January 17, 1882.

QUADRUPLE MULTIPLYING.

Nos.	0204	0206	0207	
Capacity	40	60	80	Yards of Largest Size Bass Line.

This is not the **"coming quadruple reel,"** but **the reel already come.** The only quadruple reel made on scientific principles. It is the smoothest and most perfect running reel in the world. With ordinary care it will last a lifetime. The simplicity of its construction makes it hard to get out of order and easy to repair.

If your dealer does not keep our goods in stock, or will not order them for you, send 50 cents for our 120-page illustrated catalogue.

Two Beautiful Illustrated Books
PADDLE AND PORTAGE
AND
Canoe and Camera.

BY THOMAS SEDGWICK STEELE, of Hartford, Conn.

123 exquisite illustrations of life in the woods, with map in each copy.

The humorous as well as the serious side of camp life is vividly represented, while Mr. Steele's well known artistic perceptions, and a most intense love of nature, has made the work all that could be desired.

SEVEN EDITIONS of these works sold. Most popular books in the market. Cloth. Price $1.50 each.

A NEW MAINE MAP.
The headwaters of the
Aroostook, Penobscot and St. John Rivers
Compiled by THOMAS SEDGWICK STEELE.

The chart is 20x30 inches, printed on Government survey paper and **mounted on cloth.** Sent postpaid on receipt of price, $1.

HINDS' BLACK-FLY CREAM,
For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

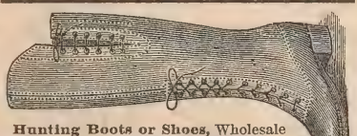
GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.



Harlow's Angler's Comfort.

The long approved, surest safeguard against mosquitoes, black flies, etc. Recommended by Commissioner of Fisheries and Game for State of Maine. New style. Larger boxes. Sent by mail on receipt of 25 cents, Usual discount to the trade.

N. S. HARLOW, Druggist,
BANGOR, ME.

"Repellene."

An infallible preventive of the attacks of Mosquitoes, Black Flies, Gnats and all other insects. Neat, clean and easily applied. Contains NO TAR, will not *stain* nor *injure* the skin, easily washed off, may be carried without danger of leaking or spilling. Price 25 cents per box. Agents—T. J. Conroy, 65 Fulton st., N. Y. Abbey & Imbrie, 18 Vesey st., N. Y.

A Handy Tool for Sportsmen.

HENRY'S PATENT
Combination Haft.

It is the only haft or tool holder that carries the tools in the same end of the holder as they are used. No shaking the tools out into the hand to get the one wanted. The same motion that unscrews the instrument in use removes the cap that covers the surplus tools. No wrench to be used. It has a solid handle and can be used with a mallet. The tools are of Jessop's steel and nicely tempered. Sent postpaid to any part of the U. S. or Canada on receipt of 75c. postal note. Extra Brad Awls, 15c. per doz. JOSHUA BRITTON & SON STOUGHTON, MASS.

TO AMATEUR PHOTOGRAPHERS.
Try the new Seed Dry Plates. GEORGE MURPHY, 250 Mercer street, New York.

HILL ON THE DOG.

THE STANDARD WORK ON THEIR
MANAGEMENT AND DISEASES.
Price $2.00.
For Sale by the Forest and Stream Pub. Co.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

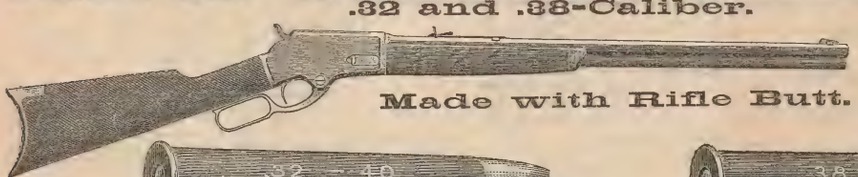
SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each specie. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.



CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

NEW MARLIN RIFLE.

.32 and .38-Caliber.

Made with Rifle Butt.

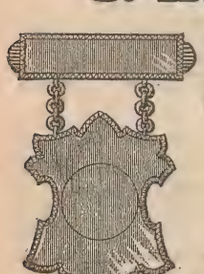
Penetration Nearly Double that of other .32 and .38-Caliber Repeaters.

PRICES:

24in., 7¼lbs., $22.00. 28in., 7½lbs., $24.00. Set Triggers, $5.00 extra.

One great objection to magazine rifles heretofore has been that if one or more of the cartridges contained in the magazine were slightly shorter than regular, the mechanism would become clogged and the arm refuse to work, frequently at a critical moment. *This trouble is entirely obviated in these new guns by a recent invention patented by us. Even if one or all of the cartridges in the magazine should be half an inch too short the gun will work perfectly.* Every one who ever used a repeating rifle will appreciate this improvement.

All MARLIN and BALLARD RIFLES have been largely Reduced in Price.



Send for full Catalogue. THE MARLIN FIRE ARMS CO., New Haven, Conn.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

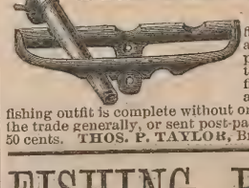
Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.



3-Piece Fly Rod, Brass Click Reel,

100ft. Linen Trout Line, 6 Flies, 6 Hooks to gut and Leader, complete, by express, $4.50; by mail, postpaid, $5.00. 3 Sample Flies, by mail, 25 cts. GLOBE FLIGHTS

PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber balion 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 30ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Gordon Setter "ARGUS."

Argus is thoroughly trained for field work; has an excellent nose and great endurance. The following are his bench show winnings: 1st prize in Toronto, puppy class, 1880; 2d prize, London, 1881; 1st prize, Cleveland, also special for best Gordon setter exhibited, 1882, 1st prize, champion, Ottawa, 1883; 1st prize, champion, Chicago, 1883; 1st prize, Montreal, and special for best Gordon setter F, 1883; 1st, champion, London, also special for best Gordon setter dog in show, and special for best Gordon setter dog or bitch, 1883.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even mark of rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 13 second and 3 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

PUBLISHERS' DEPARTMENT.

THE SUFFOLK SHORT SHRIFT.

IN Suffolk county, Long Island, New York, there are presumed to be a few deer, stragglers left over from last season. They owe their existence to the stupidity of those who had planned against them a raid of extermination. These men blundered about the date of the opening of the season, and after they found out their mistake too short a time was left to complete the work of deer eradication. It is not intended that such a stupid blunder shall happen again. A pack of hounds, a charge of buckshot and a short shrift are in waiting for every Suffolk county deer.

When the bill against deer hounding was in the Senate at Albany, Mr. Otis, mindful of the true interests of his constituents, demanded an exception in favor of Suffolk county. It was very properly granted him, for, as we told Gen. Curtis at the time, it was better that the Long Island folks should be given their customary exception than that the progress of the bill should be put in jeopardy. Accordingly the deer of Suffolk county are not included among those which the new law protects from the hounds. The first ten days of October are specified as the time in which it will be lawful to dog the deer of Long Island. The two Sundays which come in that time are excluded, and the full open season is therefore reduced to eight days. That is a short time in which to complete the work of deer extermination; but, as has already been explained, these animals are not numerous, and if the Suffolk county sportsmen are properly supported by outsiders, as they hope to be, the campaign will be successful.

We are advised that, with that generosity which ever marks the sportsman, the Long Island deer hounders invite all their friends in the neighboring counties and States to come down to Suffolk next October and join in the chase. Every man or boy who likes the fun and owns or can borrow a gun is cordially invited to join in the sport on the opening day and stay until it is through. Those who can furnish dogs are urged to bring them; the more the merrier; and if there are not enough deer to go around it is hoped that every hunter will at least be fortunate enough to get a shot.

We shall take pleasure in frequently recalling to the memory of interested persons this courteous invitation of the Suffolk county sportsmen. They make it open to all without a particle of restriction other than the condition that the antlers of the last deer killed shall be reserved to be presented to Senator James Otis as a slight token of gratitude for his deer hounding services at Albany.

SETTLED AT LAST.

IN the years 1880 and 1881 a frequent subject of discussion in these columns was the propriety of State game protective societies engaging in the wholesale slaughter of pigeons at the trap. Those discussions provoked much acrimony and engendered toward the FOREST AND STREAM some enmities which have not been healed. And yet how strange it all seems now. Inveigh against such "game protective" wholesale pigeon tournaments to-day, and who would care a straw? It is a dead issue. The question has been settled. Three things have done it: 1. The wild pigeon supply has been trap-shot to smithereens. 2. Public opinion has come around to the view taken by this journal in 1881. 3. Good and sufficient substitutes have been provided for the live birds.

Wild pigeons are now very scarce, and their netting is expensive. As the cost of pigeons has increased the associations have grown poorer. They can no longer afford to shoot live birds. If birds were still abundant they would not be employed. The sentiment of the day is against it. The Coney Island Tournament of 1881 was the turning point. No body of respectable men would care to submit themselves a second time to the scoring given the New York Association by the press of this city on the occasion of the Coney Island meeting. A great majority of those who approved of and participated in that shooting feel very differently about it now.

There is no reason whatever for regret that the birds are no longer netted by tens of thousands for such tournaments. It has been demonstrated that there can be just as successful gatherings of trap-shooters without the wild pigeons. Satisfactory artificial targets have been substituted. The competition is just as keen, the same degree of skill is requisite, and the tournaments are even more largely attended. The members of the Massachusetts State Glass-ball Association, who demolished 7,500 clay-pigeons at their annual tournament last month, went home just as well satisfied as if they had shot at live birds. The meeting of the New York State Association for the Protection of Fish and Game last week was more of a success than it would have been if the managers had limited the matches to live bird shooting, and the tournament of the National Gun Association at Philadelphia this week will doubtless furnish another example to be cited in this connection. So in all parts of the country trap-shooting is just as much of an institution as ever it was in its palmiest days; but it is not now necessary, as formerly, to hunt about for an excuse to justify the living sacrifice of wild pigeons.

SUMMER WOODCOCK.

IN this vicinity, yesterday, the first day of July, opened cool and bracing. It was a delightful morning for the field, and across the North River, in New Jersey, where the woodcock season was so propitiously ushered in, very many shooters were gladdened by the fair weather as they set out for the covers. They had every reason to anticipate a good day's sport, and we shall doubtless hear that large bags were the order of the day with those who know the habits of the bird and where to find them.

At this season of the year the woodcock are in excellent condition for the table. They are about two-thirds the size attained by fall, and as every market gunner knows, they form a most dainty dish for the *bon vivant*, and bring a good price when smuggled into the New York market. There is good reason to anticipate that the July woodcock shooting in New Jersey will be good. The late spring delayed the northern flight of the birds. Many that, under ordinary conditions, would have gone on further north to breed, were kept in this latitude by the cold weather and eventually bred here, and as a consequence the supply of home bred birds is unusually large.

But that is no excuse why New Jersey sportsmen should indulge in July woodcock shooting; on the contrary, it affords a very good argument for deferring all shooting until the fall. The birds are much more easily and surely bagged now than they would be at the later season. It is quite within the power of sportsmen and market hunters who know the haunts of the birds to thoroughly clean them out before August. No birds whatever need be left over, provided the gunners are moderately diligent in their pursuit. And so it will happen that while this year the birds are unusually plenty, next year there will be no reason to expect anything but the old barren covers again.

The result would be far different were July woodcock shooting abolished. All migratory birds are accustomed to return to the vicinity of the grounds where they were bred to propagate their species. Were these New Jersey birds left until fall, some of them would escape, and in the spring they would come back again to the New Jersey breeding grounds; and by judicious management the localities adventitiously stocked by the cold spring of 1885 might be made permanent game grounds.

July woodcock shooting in New Jersey is very foolish.

A WORD TO SOME NORTH WOODS GUIDES.

IT was repeatedly stated in these columns during the progress of the deer hounding bill, that the most intelligent and provident guides of the North Woods were heartily in favor of the proposed law. In this statement we were perfectly correct. These men did ask for the law; and now that it has been enacted, they demand its observance, and they call upon the State officials to see that it is enforced and its violators punished.

But there are many other guides and residents who did not want the law, and who are now inclined to make light of it. They have taken no measures toward disposing of their hounds. The dogs in some localities are as numerous as ever; they have been running loose this spring, chasing deer, and they are running loose now. Their owners, when remonstrated with, reply that the hounding law does not go into effect this year, and they guess it won't amount to much even when it does take effect. The dog owners who talk in that manner are likely to be brought up standing, if the game protectors do their duty. By reference to another page of this journal, where the new law is printed in full, it will be seen that it takes effect immediately. We commend to Adirondack guides and residents and to all other parties concerned a careful study of the new statute. It is very plain. A magistrate will find little difficulty in arriving at a proper construction of its provisions. The most stupid man, whose hounds are now in the woods, can understand it, if some one will read it to him.

It is intended by those who labored to put this law on the statute books to see that it is enforced. The State game protectors are charged with the duty of detecting violators and bringing them to justice. These officials for the Adirondack districts are as follows:

Fifth District.—Saratoga, Rensselaer, Washington, Warren and town of Indian Lake, Hamilton county.—SEYMOUR C. ARMSTRONG, Weavertown, Warren county.

Sixth District.—Essex, Clinton.—JOHN LIBERTY, Elizabethtown, Essex county.

Seventh District.—St. Lawrence, Franklin.—PETER R. LEONARD, Ogdensburg.

Eighth District.—Fulton, Montgomery, and the towns of Benson, Hope, Wells, Lake Pleasant, Arietta and Morehouse, in Hamilton county, except that portion of Morehouse and Arietta lying north of the south branch of Moose River.—THOMAS BRADLEY, Rockwood, Fulton county.

Ninth District.—All that part of Lewis lying east of the Black River, and of the west lines of the towns of Diana and Crogan, all that part of Wilmurt, Herkimer county, and of Morehouse and Arietta in Hamilton lying north of the south branch of the Moose River, and all that part of Long Lake in Hamilton county lying west of the east line of great lots numbers 4, 5, 41 and 42.—JOHN L. BRENCKERHOFF, Booneville, Oneida county.

Tenth District.—All that part of Oneida county north of the south line of Verona, Rome, Marcy and Deerfield, all of the county of Lewis lying west of the Black River and west of the west lines of Diana and Crogan, and all of the county of Herkimer lying south of the south branch of the Moose River.—NATHAN C. PHELPS, Remsen, Oneida county.

These officers should be notified of all deer law violations. The facts should be given them. Our advice to those North Woods guides who want to see the new law in operation is that they give the game protectors all the aid in their power. The good of the great community of guides demands that the new law be rigidly observed; and there should be no hesitation about giving evidence that will lead to the punishment of offenders. The guides of the Adirondacks who are in favor of the new law are abundantly powerful to put a stop to hounding if they will only exert their influence in that direction, and display a moderate supply of backbone.

The first important step is to make known the exact provisions of the law. Every owner of deer dogs, every guide and every visitor in the North Woods should be made to understand that the use of hounds is unlawful and will be punished. We have prepared a poster containing the law, which will be sent free to any person who will place it in a conspicuous position, and we ask all persons interested to assist first in making the law known, and then in securing its enforcement.

But ignorance of the law will excuse no man. And not even the plea of ignorance can be argued by the dog owners in the neighborhood of Keene Valley, Essex county, whose hounds were chasing June deer.

THE SPARKLING SPOKANE.

Editor Forest and Stream:

Even in far off Washington Territory there are many sportsmen to whom the weekly appearance of the FOREST AND STREAM is an event of importance. I enjoy many quiet evenings reading the experience and adventures of the hunters and anglers who talk to me through the columns of your paper, and I find myself comparing notes with them, laughing at their jokes, entering into the spirit of their sport, exulting over their successes, and sighing for their failures, until I am becoming acquainted with all of them, and they are hereby invited to visit the banks of the Spokane River at any time between this and the 15th of September, and I hereby pledge myself to give them an experience in fly-fishing which, when written up, will be a rare contribution to the sportsmen's literature. If the tenth part of my fishing experience in this Territory was given to your readers, I should probably be set down at once as yarning, and my local reputation in that direction is quite sufficient without giving it the national circulation which your paper would insure. And why not come to Washington Territory? Our streams and many of our lakes are alive with trout; our waters are practically new and untried, except by a few anglers, among our business and professional men, who find fishing so inexpensive and so profitable in its return of good sport that they are not particularly anxious to publish our rich resources to the great brotherhood of anglers who depend upon the FOREST AND STREAM for information as to the best places to select for their summer sport.

The Spokane River is a deep, swift stream of clear, cold water, which preserves a very even temperature the entire year; it is not too warm for drinking purposes in summer and it never freezes in winter. It is a grandly beautiful river, with a rugged, rock-rimmed shore, and its forceful current flows over a rock bottom from where it finds its source as the outlet of Cœur d'Alene Lake, in Northwestern Idaho, to where it discharges its waters into the Columbia River, 100 miles further west in Lincoln county, Washington Territory. There are two great falls on the river, the largest being at the city of Spokane Falls, an important town on the Northern Pacific Railroad. Here the fall is 156 feet, and affords one of the grandest and most imposing views to be found on the Pacific coast. A sight of these falls is alone worth a trip across the continent, and the trout fishing either above or below the falls is exceptionally fine.

The angler will find here advantages which other streams do not furnish; our river is exceedingly well behaved and never overflows its banks, is not subject to sudden rise or fall, we have no cyclones, no wind storms, but the most delightful climate in the world, and camping out here at any time during the summer months is a real luxury. Yes, come to Washington Territory and cast your fly in the best trout stream in the world. G. H. MORGAN.

SPOKANE FALLS, W. T., June 15.

A MOONLIGHT MEMORY.

THE glories of nature are generally too common to excite more than a transient interest, but occasionally it is given to mankind to behold a scene of beauty which is calculated to live long in memory. I have seen one or two in the course of my lifetime, and if I could reproduce a tenth part of the emotions which those scenes awoke in my mind I could stand unchallenged among the great poets of this world. It will be observed, however, that I am not standing there.

Lake Michigan has its moods, as fickle and changeable as the clouds above it. I have walked its beach when its pulse was dead, and the lake lay so smooth and still that the long line of the water's edge never wavered half an inch up and down upon the hard yellow sand. "But let the ruffian Boreas once enrage the gentle Thetis" and you may see its mighty surges, urged on by a gale that sweeps the lake from Michillimacinac to Michigan City, thunder against the Chicago breakwaters, wresting piers from their sandy bed, overturning long lines of pile and stone work, and not unfrequently tossing an unhappy schooner on the threatening shore, "a toast to Neptune."

I lived at Kenwood last summer, and while there we had a long reach of that hazy halcyon weather in which all nature lies languid and lethargic under the drowsy influence of the heated air, and the strident call of the locust, basking in the dry sunlight on high, is the only animate sound that breaks the stillness of the sultry hours. I never allowed one of those midsummer evenings to pass by without carrying my birch canoe across the railroad tracks, launching her on the cool lake, and floating idly off the shore, until either my tobacco was exhausted or my vertebral column in danger of severance against the sharp edged brace which Indian ingenuity has made an essential principle in his naval architecture. Nor was I alone, for other canoeists, yielding to the glamor of the soft evenings, might be seen impelling their dainty crafts through the dusky air like shadows, as silent and impalpable.

One night in particular I recall. We, that is, my brother, a jurisconsult of eminent talent, and a Canadian friend and myself, had launched our canoe and were resting on our paddles, meditating in devout silence over the first pipe of the evening and waiting patiently for the rising of the full moon, a phenomenon which, as the almanac assured us, might be expected to occur toward 10 o'clock. Why we were waiting for that event, or just what we expected to do when it came to pass, I cannot now remember. It is irrelevant and immaterial anyway. Twilight had fled and black night settled down on the water. From the shore came the note of preparation, the plash of paddles and the rattle of oarlocks as various parties got under way and put off, and presently all around us arose the sounds of different craft moving over the surface, and the whole air was voluble with the murmuring voices of their crews.

Was it not all the poet sung—

"* * * Argosies of magic sails,
Pilots of the purple twilight dropping down with costly bales."

But veiled in darkness we saw them not, or only noted now and then the swift gliding gleam of a stray lantern. Under the silent but effective play of the jurist's paddle our light birch glided here and there through the fleet, as we sought better acquaintance with our neighbors. Some we knew and others not, and some evidently preferred to know each other better than to know us at all. But these last (showing such evident bad taste) were of opposing sexes and running in companies of twos, and we, on encountering such, and appreciating the delicate situation, would magnanimously sheer off and run down more practical and less romantic mariners. Thus we lay in the darkness, nothing visible except the lights of the city stretching away to the northward, and in the south a baleful gleaming in the heavens, betokening the furnaces of South Chicago.

And finally the moon rose, a faint gleam on the horizon at first and then at a bound stood on the water's edge "round as the shield of my fathers," huge, red, refulgent, and after a seeming pause, as though making a preliminary survey, took up its march across the sky, becoming smaller and silvery as its altitude increased. The soft light lit the lake from shore to cloud line, disclosing the flotilla to our view scattered widely over the smooth water. By common impulse the boats moved toward each other and assembled off the gaunt and desolate ruin of the old Hyde Park Hotel, where every one said "hello," and every other one remarked that it was "a perfect night." A small sail yacht was there, and although not the slightest ripple blurred the polished surface of the water, and not the faintest breath of air could we detect, yet some current was stirring up aloft, for her topsails were full and she hovered about the circle of canoes as softly and as noiselessly as an owl on the wing.

Some singers, too, were among the company, and the same were moved of course to break forth into a song; a thing often commendable, but not always. At that time, that particular time, it struck me that silence was not only golden but eloquent, and I was for decamping. But the jurisconsult thought otherwise, and as he was sustained by the Canadian, I submitted and listened indignantly while a bevy of maidens monotonously alleged that

"Many a stormy wind shall blow
Ere Jack comes home again."

Doubtless I was wrong, doubtless it was the music of the singers alone that lent any charm to the quiet night and the moonlit lake, and doubtless I am a miserable and crabbed misogynist in thinking otherwise. I admit the soft impeachment, and will live in the belief that the singing of those romantic damsels was the only spot upon the beauty of that perfect night.

An hour later we stood on the beach, and shouldering the dripping canoe passed into the abodes of men. C.

ZUNI AS IT IS.

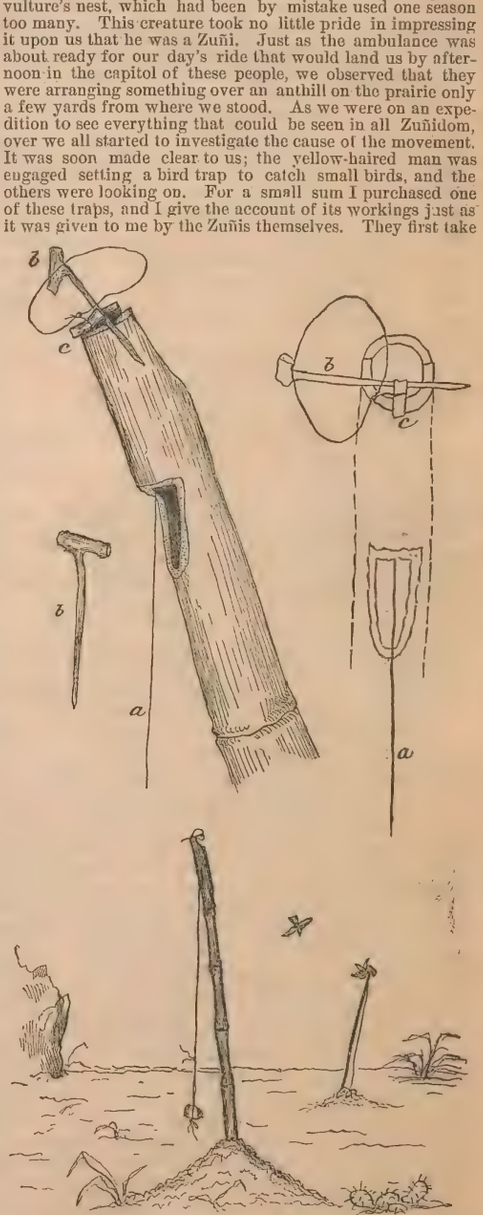
THE morning of April 7 opened with a cloudless sky and all the characteristics of a perfect spring day. Indeed, Northwestern New Mexico had rarely experienced such a season; bright skies, no wind, and balmy airs, and of a consequence excellent roads, no dust, and the cautious advent of the early birds and flowers.

One of my companions was a jovial traveler from Philadelphia doing the States and Territories, the other was an honored curator and professor of one of our worthiest universities of the East. He was on a year's vacation; was traveling for the change, but still had a keen eye on the fauna of the countries lying in his intended route, and did not hesitate to gather in all the birds and mammals that he could on the way for his museum collection.

Away we went—we three and the driver—in an old-fashioned army ambulance, drawn by four mules, up the hill back of the Post, off for Zuñi. I had heard many, many stories about the place, I had read the papers by Frank Cushing in the *Century Magazine* and the reports of the Bureau of Ethnology, and I looked forward to this visit with the keenest pleasure. My friends enjoyed a similar frame of mind; and we were soon exchanging former experiences in our lives, of collecting trips, hunting excursions, and voyages over the sea. The mules in the meantime tugged away up the mountain road, through the scrubby piñons and junipers, until we came to the top. Here we find Bradley Station, a rough, ladderlike structure, erected by the United States Geological Survey a year or so before, and named in commemoration of the officer in command at the fort. The view from this, the highest point, is truly magnificent and beyond the powers of pen to adequately describe. We all disembarked to enjoy it for a little while. The elevation at this point is between seven and eight thousand feet and overlooks an enormous valley, flanked on all sides by the grandest of pine-clad mountains and cliffs of forms most grotesque and colors most various.

From this point our road lay through, for several miles, a magnificent pine forest, to be occasionally varied by an open mountain park, or perhaps some narrow valley, presenting us in its peeping verdure with the first evidences of spring. Here we saw perching upon dead stalks of some gaudy flower of the year before, the brilliant arctic bluebird, and less frequently its cousin of the Eastern States, the common form. Here, too, an unsuccessful attempt was made to capture a fine specimen of the shining fly-snapper (*Phainopepla nitens*), a bird of so much interest to ornithologists. Thus we rode along, now enjoying the stampede of the prairie dogs, as we passed through one of their towns; again, making mental notes of the birds that we observed. Few of these had as yet arrived, as the vanguard of the migration had but barely put in an appearance. One swallow was noticed, and we saw killdeers and *Colaptes mexicanus* and western robins, with a sprinkling of nuthatches, chickadees and sparrows.

Plenty of turkeys are found in these pine forests, and two or three kinds of rabbits with an occasional deer, or in the cañons a bear; but the game is rapidly disappearing before the persistent Navajo Indian hunter. At the end of our sixteenth mile, we passed down a high hill, over which the road ran into the beautiful valley of Las Nutrias, named from a sparkling mountain stream which courses through it. Here we found our tent already pitched for us by our escort, which had preceded us with a four-mule wagon carrying provisions and other necessaries for the trip.



Ah! the charms of a mountain camp in the spring time, and above all, on a quiet spring evening. Every lover of the forest knows them, and is only too happy to seek them whenever the opportunity offers. The absolute freedom from all restraint can only be appreciated here; one feels as free as air, and a peculiar elasticity and strength seem every moment to be taking possession of you.

How we enjoyed each his hot pot of coffee and the Boston baked beans, as we sat, Turk fashion, about my little iron-bound chest, just within the tent. Then the talk and the pipe afterward, which is prolonged until evening steals over all, and by common consent we are soon curled up under the blankets, to be lulled asleep on the New Mexican frontier by the distant music of the coyotes.

In the morning we were all up betimes, and strolled down to the stream to take our "rub up." Then back to camp again with sharpened appetites to partake of an excellent field breakfast.

A mile and a half further along on our road there was a small pueblo, called the Nutrias Pueblo, after the stream. A large number of Zuñis were living at this time of the year in and about this point, as it was the wheat season. Several of them now began to drop into our camp, and I must own that I was by no means favorably prepossessed with their appearance in this first introduction to them. They were exceedingly untidy in their dress, besides being unwashed and unkempt. Of the number standing about the tent, I failed to see a single individual that might in any way recall that manliness in bearing and fastidiousness in attire which is by no means an uncommon thing among the Northern Sioux and Crows, as I myself have frequently observed.

One of their number, a man who appeared to be about three-fourths white, was a particularly uninviting specimen of humanity, with his sore eyes, filthy skin, foul and ragged dress, and with his head covered by a mass of matted yellow hair, that reminded one of the abandoned inner lining of a vulture's nest, which had been by mistake used one season too many. This creature took no little pride in impressing it upon us that he was a Zuñi. Just as the ambulance was about ready for our day's ride that would land us by afternoon in the capitol of these people, we observed that they were arranging something over an anthill on the prairie only a few yards from where we stood. As we were on an expedition to see everything that could be seen in all Zuñidom, over we all started to investigate the cause of the movement. It was soon made clear to us; the yellow-haired man was engaged setting a bird trap to catch small birds, and the others were looking on. For a small sum I purchased one of these traps, and I give the account of its workings just as it was given to me by the Zuñis themselves. They first take

an old hollow reed about two feet long and cut one end of it, just as our boys go to work to make a willow whistle, only the Zuñis do not put the end plug in. Next they get a dried little twig with a small piece of the main stalk attached to it, as shown at *b*. The lighter and dryer this is the better. Then they take a little cylindrical piece of wood (*c*) and tie it securely around its middle with a horsehair, leaving enough to make a small noose at one end, and some twelve or fifteen inches at the other. This passes through the opening in the side of the reed and appears at *a*. Its lower end has fastened to it, first, about eight inches of a narrow piece of rag, which in its turn is fastened to a small stone of some two ounces weight. Now to set it, the reed is stuck firmly in an anthill and allowed to slant over just a little. Then *b* is placed across the top, as shown in the cut, with *c* at right angles to it, and barely resting on the margin of the reed and the middle of that part of *b* which crosses it. The horsehair noose is now made and placed on the upper side of *b*, being held in its position by the little cross stem on the end of it. The trap is then ready, and if some small bird lights on top of it, which is pretty sure to happen on the open prairie, its feet resting on *b* within the noose, dislodges *c*, which is really the only thing which holds up the stone, and this falling to the ground holds the victim fast on the top of the reed.

In one of the pueblos on Las Nutrias I counted seventeen

roughly-made skins, males and females, of the Arctic blue-bird (*Sialia arctica*), and this seems to be the bird most often taken, and the one they care most about. I believe these skins are used as ornaments to their attire in some of their dances.

As we started in the ambulance on our road, the day was all we could wish, with no dust and not a cloud in the sky; in fact, this was the kind of weather we enjoyed the entire journey until our return to Fort Wingate, a very unusual thing for this time of the year. Almost at once we passed through a prairie dog town, where the large, pyramidal ant nests are so often seen, and I counted quite a number of the bird traps sticking up in every direction, indeed, hardly an ant nest was without its trap. As we intended stopping on our return, we passed right through the small pueblo of Las Nutrias into the cultivated valley beyond. Here the bright morning sun shone upon a sight as pretty as it was gratifying. At least 400 acres were under cultivation, the ground thus utilized being nearly level, very rich and carefully irrigated throughout its entire extent. The bright green spring wheat had already begun to show itself, while groups of Zuñis were at work in all directions. Still others were plowing or repairing the irrigating ditches. It would be hard to imagine a picture more gratifying to the eye; and indeed apart from everything else, these groups of peaceful Indians, some clad in their bright parti-colored blankets, at work, yes, actually at the plow of their own free will, constituted a scene so picturesque that one would not likely have it effaced from his memory in many a long day. Our road still lay through the level river bottom, after we passed the wheat fields of the Zuñis, and what we had just witnessed kept us all on the alert to see other objects of interest.

The Professor by this time began to think of "taking in" a few specimens, and he had expressed himself as being particularly desirous of securing a skin of one of the magnificent old ravens (*Corvus corax*) that were seen from time to time. The opportunity for doing this was not long delayed, for to the left of the ambulance some forty yards distant, strutting through the low sage brush on the prairie in a most stately manner, was a fine old male with his jetty coat reflecting all the purples and blues in the sun as he moved. The ambulance was checked up, but before I could cover him he was in the air and well under way. "No use," said the Professor from the front seat in a disappointed tone, "he's off." Yes, but my ounce and a quarter of No. 5 shot, backed out of my favorite gun by three and a half drams of Orange ducking powder, was after him. Down he came with a broken pinion with a heavy thump on the prairie. Out jumped the Professor in a minute, and it did my very heart good to see the enthusiasm in this old gentleman of over sixty, as he, in his black suit and beaver and flowing white beard, made chase in zigzags and curves after that old wounded raven over the plains of New Mexico. The specimen was bagged at last and properly stowed away.

Here we passed the extensive and extraordinary lava beds, there, on the other hand, lofty mesas, standing out against the blue sky, bold and grand in the extreme. Sometimes these latter were sentinceled by some isolated peak, standing well away from their base, and erect as the pines they dwarfed about them, rising seventy or eighty feet or more. Further along these mesas were almost continuous, being of fantastic shapes and broadly striped, horizontally, by their brick-red bands of strata. This section is known as the Red Cañon, and its geology is full of interest.

As we passed once more into the rolling prairie some specimens of birds were taken, and we observed *Sturnella neglecta*, *Lanius ludovicianus excubitorides* (Say's flycatcher, Western sparrow hawk), *Eremophila*, *Totanus melanoleucus* (Steller's jay, mountain chickadee), and a few others; but, on the whole, the absence of animal life was painfully noticeable. At 1 P. M. the vegetation was becoming scarcer, the country rolling, and the mountains further removed from our road. On our left, however, we were now nearing one grand, level-topped old mountain that I at once recognized as the far-famed Thunder Mountain of Zuñi lore, and I knew the pueblo would soon be visible. It came in sight at last as we drove down the gentle decline which enters the valley of the Zuñi River. There in the distance, lit by the noonday sun, of the same reddish mud-color as the level prairie that surrounded it, was the pueblo of the Zuñis. The river running by it sparkled in the light, and it was soon evident that the houses were on a slight elevation above the surrounding plain, which latter was, at this time of year, devoid of all vegetation, or with barely a dash of grass at long intervals apart to relieve the monotony of the red glare of the clay bottom.

My first impression was, "Why, how small it is," and the second soon followed, "The isolated fragment of a former race, and such isolation!" Then, had it not been that my mind appreciated the fact that it was soon to have new sights and objects to feed upon, would have crept over me (which I've more than once experienced in former years) that sickening feeling that takes possession of one as he enters the *Terres Mauvais* to cross them.

Some gardens occupy the outskirts of the pueblo, but whatever was planted in them was not above ground yet. I noticed some ingenious scarecrows, made of empty tin vegetable cans, swinging in the wind. Our road led through these gardens to two very well-constructed adobe houses lying some little distance from the pueblo. One of these was occupied by the missionary schoolmaster, while the other was his schoolhouse. This personage met us as we drove up with our ambulance, closely followed by the escort wagon. I descended and introduced myself to him and then presented the visitors. Everything at his command was offered to us, but it was finally decided that the Professor should occupy the spare room at the missionary's, while my Philadelphia friend and I still stood by our tent, which I had pitched near the schoolhouse. We all, however, had the use of the dining-room given us, and our cook served our meals there.

We had hardly made the acquaintance of the missionary's family, consisting of his wife and his niece, before we were called upon by the Governor, ex-Governor, and other functionaries of the tribe. Our salutation was a warm one, as the Governor gave us each in turn a hug like a bear, and then with no little dignity took a seat opposite us, those with him following his example. The conversation turned principally upon points for mutual information, with the usual little pleasantries thrown in. The ex-Governor, who spoke just a little English, ascertaining that I had been in Washington only a few months before, asked me about Col. and Mrs. Stevenson, and others who had been at different times in Zuñi, and I answered his many questions as best I could. It then being about half past two, we determined without further delay to pay a visit to the pueblo.

Our party was made up of our three selves, the missionary and the Governor. We had hardly a hundred yards to walk before we reached the rounded knoll upon which the houses composing the pueblo were massed. As we strolled over I noticed that two new Zuñi houses had already been erected in the bottom and were then occupied. Gardens and corrals surround the hill nearly all about. These are fenced in by high, rough poles, upon the tops of many of which were perched the ever-present ravens. The general appearance of Zuñi houses is so well known to us now, through the illustrations in many of the reports of the Ethnological Bureau of the U. S. National Museum, and those in the admirable articles of Mr. Cushing, which appeared in several of the numbers of the *Century Magazine* for 1883, that any description of them here would be quite superfluous. It was to me like stepping from the pictures into the reality. There were the squarish houses all piled up on one another, with the chimney pots and openings on the roof; there bristled up in many directions the tops of the ladders; there were the Zuñis themselves on the roofs with others in the streets, bearing on their heads the very jars, the like of which I had so often seen my artist friends in the National Museum illustrating, in short, here was Zuñi, for it has not its counterpart in all the world. At our approach a dozen dogs raised the alarm, and off scampered a group of half-naked children of both sexes with their black, mop-like heads of hair (the biggest part of some of them) blowing in the wind.

Strange as it may seem, our first inquiry was, how came the hill there upon which this ancient pueblo is erected? The plain for miles about it is almost as level as the surface of a lake. Imagine the impression it made upon us when, after our examination, the undeniable fact stared us in the face that, although Zuñi may have originally been started on a slight rise in the plain, yet its present elevation—between thirty and forty feet above the datum plane—is due largely, in some places, to the accumulated excrement of the burros, and I suspect, too, to some degree, the refuse from the houses. This condition can better be seen at the pueblo of Las Nutrias, where the entire lower stories of some of the houses are covered above their roofs by a like guano deposit, while additional stories have been built on and above them. In Zuñi, this condition is more particularly the case on the side of the pueblo facing toward the missionary house. In this situation the side of the hill has been cut away to make room for a garden, and its composition is easily studied. I am not aware that this fact has been published before; but it seems hardly possible that a thing so evident has been overlooked. We were disappointed finding the pueblo so nearly deserted; not more than one house in ten was occupied, as every able-bodied man and woman was at this time of the year away planting wheat, as we saw them at Las Nutrias. Upon leaving home, a Zuñi closes the little low door to his house by piling a quantity of stones up in front of it. He also takes the precaution to plaster up with clay the opening upon the roof. Such fastening is considered a sacred seal, and no honest one would think of breaking it any more than we would a seal to a letter. We saw all the empty houses closed up in this way, and it lent to the pueblo a terribly deserted appearance. The entire pueblo only covers between twelve and fifteen acres.

Our party next took its way through the short, little streets, to the principal plaza. This is a small patch of ground, perhaps sixty by seventy-five feet, inclosed by a low stone wall pointed up with mud. The cathedral closes in the western end of this oblong plat, and a gateless opening allows you to enter it on the opposite side. The plain, vertical upright of an old wooden cross, stands in its center, supported by a rough stone pedestal.

This ground, which appears to be the *bona fide* top of the hill, though not the highest elevation of the pueblo site, has been used as a burial place by the Zuñis for ages. Its surface is everywhere strewn with human bones in all stages of preservation, and in two or three places the white vaults of the weather-beaten crania of its occupants just peeped above the ground. It was a graveyard where there were more bones than earth. Much as I liked to moralize over all that this little yard contained, just at the moment there were but two favors I wished it could have granted me—one was a scientifically chosen series of Zuñi crania for the Army Medical Museum, and the other, that six of its most truthful and first occupants could arise in the flesh and recount the early history of their race.

From the graveyard we entered the cathedral, through its main door, or rather half door of unpainted wood, and so jammed by the bones, dung and refuse at its threshold that one could only squeeze in with difficulty. Once within the building a most extraordinary view met our sight. The old tumble-down structure consisted of but one room, the wall of which had once been handsomely frescoed, but at a late date smeared over with mud, allowing the fresco to show only in small places. The heavy rafters of the roof were fast falling in, and large breaks showed the sky through it. Burros and other animals had evidently made it their headquarters, and the place had an odor about it that strongly reminded me of a college dissecting room during the summer months. The further wall opposite the door was covered with rude carvings in wood; a separate and oblong one, of some size hanging above the others, showed a raised carving of one of the popes wearing the tiara. This carving had been colored entirely white. The carvings on the uprights below were quite elaborate and the faces of the cherubim were symmetrical, and the whole thing looked like comparatively modern work of the Mexican Catholics. After seeing all we wished, we passed out of a low side opening on to the street; then the Professor kindly taking charge of our outer wraps and remaining below, the rest of the party started to examine the roof of the structure. We first had to enter a narrow creep-hole in one of its angles, then going on up through a winding mud staircase we found ourselves on the roof of the front part of the building. Here hung to a wooden crossbar in an adobe frame two metal bells, each fastened to its bar by an ordinary Mexican lariat. These bells were almost exactly alike, bore no date nor other markings and were without tongues. They appeared to be cast in ordinary bell metal, and in dimensions something like two feet high with an aperture of a foot and a half each.

The point where we now stood afforded us a fine view of the pueblo and all its surroundings. Some very old women were at work on the roof of the house nearest us, and a few children at play under the lone cottonwood in front of the piazza—the only tree of which the country could boast. After a last look we all descended to the ground and walked down the hot, dusty and filthy street to visit the Governor's house at his invitation. Here we were introduced to many of the mysteries of the Zuñi household, and here we saw the various belongings to a well regulated Zuñi house in actual use by their owners and manufacturers.

Subsequently we entered many other houses and scrambled over their roofs to our hearts' content; visited their dance court (a place that any New England farmer would have been ashamed to exhibit as the stallage for his cattle) and peeped into their secret dance halls under ground.

I saw several of their faces scarred with the marks of smallpox, and a number of the babies and children suffering from loathsome diseases of the skin. In calling the missionary's attention to this he remarked, "Yes, it's a wonder to me that most of them are not diseased, as I've known them to eat the bodies of their burros that have died from disease, and been kept too long besides."

Every law known to sanitary science seems to be violated in this Zuñi pueblo; the houses are not ventilated, they are overcrowded; there is no sewerage, and the dejections of all kinds from the human body are to be seen standing in vessels in the broiling sun on nearly every housetop and corner of the streets.

The faces of some of the younger women are quite pretty, but of the young married women, or those that I saw, the faces had an oldish cast.

Some of their dances I am told are quite chaste, while others are accompanied by customs too foul for record, and the people who practice them but merit the fate of those we read of in the Biblical legend of Sodom and Gomorrah. Many of their ancient myths are pretty and full of romance, and their language is a sweet one to listen to; but as I strolled back to the missionary's house with my friends, I knew too well that the picture I had painted in my mind of Zuñi was forever spoiled by the first glimpses I had had of the reality. To us the study of their language is of the highest importance, and as a living link, connecting the people of ages gone by with those still with us, the value of a searching study of the Zuñis themselves can hardly be overestimated. Beyond this Zuñi has no further attraction for me.

The Professor robbed it of all poetry when he remarked with a sigh of relief as we walked along, that "he had seen enough of that mass of mud hovels on a dunghill, inhabited by people whose habits and customs are too frightful to think of." This was placing it in rather a strong light, but I fear with more truth than poetry in it.

In the cool of the afternoon my Philadelphia friend and I returned to the pueblo for further investigations, and we saw much more that was interesting. We had the opportunity to watch a group of women paint the pottery, and later bake it on the street. They do this by placing the freshly painted pots, after the designs are dry, bottom side up on the ground, and, protecting them with old broken pieces of pottery, proceed to build over the lot a flattened dome of very regular outline of dried chips of cattle or burro dung, in such a way as children build blocks, leaving alternate openings. A hot fire is then started inside, which soon brings the pots to a white heat, and the operation is completed in about half an hour. It is accompanied by a practice, a description of which I will here omit, though it will do no harm to mention that, as "the bake" took place on the street by the graveyard wall, I picked up in the ashes afterward fully a dozen completely calcified human bones; so the pots when done, and we afterward purchased them, were certainly thoroughly Zuñified.

Of particular interest to me were the golden eagles (*Aquila chrysaetus*) that they keep penned up for the feathers they afford. Numbers of these birds are found all round the pueblo, inclosed in small cages of poles driven in the ground for sides, and lashed overhead for tops. Similar structures confined their prisoners in the angles of the houses and yards. In some of the eagles I noticed that the eyes were nearly yellow, and they were in all stages of albinism. One bird had its entire breast and tail, the scapula regions and other isolated patches, composed of entirely pure white feathers. Others were in various stages of this condition, and from my inquiries I could not quite determine whether it was due to old age or to long confinement in limited quarters, or to the practice of pulling out the feathers or to the change of food and environment; or perhaps to all these causes combined, with certain ones predominating. A colored man, whom they call Cuff, employed by Mr. Graham, the trader of Zuñi, told me that these eagles lay in the cages and rear their young there; that he has repeatedly seen them do it. I have reason, however, to doubt the word of this same Cuff, and I must see the truth of his statement with my own eyes before I believe it.

My friend, who was the wealthy one of our party, was very fortunate in his purchases, and came away with fine specimens of belts, moccasins, pottery, drills, hatchets, sacred basket and what not. I contented myself with very little, as I hoped to pay them another visit later in the season when the nation would be at home.

After our exertions of the first day, we spent a pleasant evening and enjoyed a good night's rest.

Next morning I was awake before daylight, and as my tent door faced toward the pueblo, the rising sun upon that strange scene, with old Thunder Mountain and the hills as a background, will long remain impressed upon my memory. Would that its light could make clear to us, as its own face, at least some of the mysteries that lie hidden in the unwritten history of that curious little group of structures on the banks of Zuñi River.

After breakfast my friend and I took a morning walk through the pueblo again. On this occasion we watched an old Zuñi woman weave a blanket, and I purchased some of the tools with which she did it. In another house where we had entered in our search for one of their spinning wheels, as my friend was very desirous of purchasing one, we saw standing behind one of the stone slabs where they grind their corn, a pretty little Zuñi girl, not a day over a year old, and as naked as the hour she was born, with the stone grinder in her hands, playfully showing her mother, who watched with no little pride on her face, how to grind the corn. The picture was a charming one, and if the expressions of all could have been caught at the proper moment, what a study it would have made.

But the morning hours were passing, so a little after 10 o'clock away we drove from Zuñi, and in a very short time Thunder Mountain and the pueblo were once more beyond our sight.

The objects of interest by the wayside had lost none of their charm for us on our return; in fact, I think we rather enjoyed them the more for seeing them on different sides and in a different light. Just beyond the Pescado, a creek that we cross close to the road, we pass what appears to be the ruin of some old fortification. We all descended from the ambulance and rambled over this curious heap of almost shapeless ruins and débris. It covers some two or three acres, and we had no trouble in finding parts of human skeletons, pottery of various kinds, bones of eagles and turkeys, and scraps of implements. All these relics bore evi-

dences of being very old indeed. I captured some interesting reptiles and insects here, which were duly placed in alcohol on our return to the ambulance.

About 4 in the afternoon, after an unusually pleasant drive, we pulled up at the pueblo of Las Nutrias. [I find that many people call this the "Nutria," and it is so printed on many of the Government maps, but I believe it is correct as I have written it above, and it signifies, in Spanish, the beavers.] Here we saw some Zuñis, very different in appearance from those we had left behind us in the morning. One young chief, who spoke a little English, took us into his house. This was kept in very excellent order, and thrift marked all its appointments. The walls were freshly whitened, the corn nicely stacked up on one side, and all the cooking utensils cleanly kept. Indeed, the whole was quite inviting. The women of the establishment, including two or three pretty young maidens, were much more tastefully attired and pleasing in their manners.

Outside, however, it was the same old, tumble-down pueblo with its almost unbearable odors, its heaps of refuse and its general uncleanliness.

Here we watched the women baking bread in one of the curiously-shaped, little oval ovens, like Dutch ovens, found in all situations in these pueblos, from street to house-top.

The bread was made into oval rolls, with a crease obliquely cut through the middle. I have seen just such bread in old Mexico, while in Cuba I remember they twist up the ends of their rolls and the crease marks it vertically. We saw them also making the *he-we* here, and to me it was a very palatable production.

The last mile of our twenty-six was now rapidly driven over, when we were once more on our first camping ground to find everything prepared for us. As there were at least two good hours before sunset, we left the Professor to skin his birds and prairie dogs, while we explored a magnificent cañon near at head, through which Las Nutrias finds its way. The rocky sides of this cañon rear themselves to a height of 130 feet or more, and plainly show the action of water near their summits worn during geologic times. In these inaccessible places numbers of the white-throated swifts (*Panyptila saxatilis*) had built their nests and already had young. I tried both above and below in the cañon to secure some of these, but failed from both points. They are the hardest bird to take on the wing that I know of. I did kill one fine old male, but he dropped far below, where after a careful search we failed to find the specimen, and I reluctantly gave it up. This consumed all our time before dark, so we strolled back to the tent just in time to enjoy a hearty supper.

We pulled out early in the morning to drive to the fort, and the clear mountain air was absolutely delightful as we passed through the piñon hills and great pine forests.

During the ride I collected several fine birds for the Professor, and took a magnificent specimen of a large gray squirrel with black tufts by his ears fully an inch and a half high. It also had a broad chestnut stripe down its back, and a splendid gray and white tail. If I am not mistaken, we had before us a specimen of Abert's gray squirrel (*Sciurus aberti*).

At two in the afternoon we drove into Fort Wingate once more, and our trip to Zuñi and back was at an end; its pleasant incidents not soon to be forgotten, although I am afraid that those who took part in it may never be associated together again. DR. R. W. SHUFELDT, U. S. A.

FORT WINGATE, New Mexico, April 18, 1885.

PHOTOGRAPHING A SITTING GROUSE.—Lennoxville, Que., June 23.—*Editor Forest and Stream:* I was much pleased by the account of photographing a woodcock on the nest, as mentioned in last issue of FOREST AND STREAM, and congratulate Mr. Kibbe on his feat. It was more interesting to me on account of a somewhat similar experience this spring in photographing a sitting partridge or ruffed grouse (*Bonasa umbellus*). The bird was discovered by a young lady at a picnic. After several attempts I secured a negative of the bird, also one of nest and eggs, copies of which I send you. I did not attempt posing my sitter, but from her general behavior I do not think she would have allowed any such familiarities. In fact I only succeeded in getting a negative, by arranging with the aid of an ingenious friend, Mr. Peabody, a sort of double drop shutter, worked by strings from about thirty feet away. The camera was placed and focussed about five feet from the nest during the bird's absence and concealed with brush. I then left the place for an hour or two as the bird refused to come back while I was near the nest, and after seeing from a distance on my return that she was on the nest again, made the exposure, as above, by strings. Amateur photographers may like to know that the exposure was about ten seconds with a diaphragm of about one-quarter inch, and an instantaneous plate which proved to be rather under-exposed. If any FOREST AND STREAM readers wish for copies of these pictures I can procure them at twenty-five cents each.—W. A. FARWELL.

HABITS OF THE PRAIRIE DOG.—*Editor Forest and Stream:* Mr. E. S. Noble, of Elk Rapids, Mich., a gentleman with whom many of your readers are well acquainted, brought home from Colorado about a year ago two prairie dogs. They are still alive and in good condition. Mr. Noble informs me that they drink water not often but copiously. There is not the slightest doubt as to this fact. A gentleman from whom one of these animals was obtained, and who has shown a good deal of interest in their habits, is of the opinion that there is always a large hole which leads to water in each of their villages, and that it is used by all the inhabitants. In this connection Mr. Noble raised the question how the vast number of rabbits inhabiting the great arid plains of the West are supplied with water. The distance at which it appears to be from their ordinary haunts is often very great, and they, of course, are not supposed to construct wells.—KELPIE.

AN OWL IN A COOP.—Mr. Webb, a farmer residing in the town of Somerset, brought into the city to-day a great-horned owl (*Bubo virginianus*) that was caught in its own trap. Mr. Webb had propped up one end of a chicken coop by putting a small stick under it. *Bubo*, while foraging for a late supper or an early breakfast, thought he saw his chance for a meal of genuine spring chicken, and so intent was he in securing it, that he passed by the old hen—as he entered her domicile, who made an abrupt exit—and in doing so knocked out the stick from under the end of the coop, and *Bubo* was a prisoner. The chickens being small, all but one made their escape through or under the slats in front. *Bubo* was so taken aback in finding himself in such a situation, that his appetite failed him, and his meal of spring chicken was found uneaten by Mr. Webb the next morning. —J. L. D. (Lockport, N. Y., June 26).

THE DEER HOUNDING LAW.

LAWS OF NEW YORK.—By Authority.

CHAP. 557.

AN ACT for the better preservation of wild deer, and to secure the evidence of accomplices in certain cases.

PASSED June 13, 1885; three-fifths being present.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. No person shall hunt or pursue any wild deer in this State with any dog or bitch, except in the county of Suffolk, where it shall be lawful to hunt with dogs during the first ten days of October, excluding Sundays, in each year. If any dog or bitch shall be found so hunting or pursuing in the State, it shall be *prima facie* evidence of the violation of the foregoing provision of this section by the owners of, or person or persons having or harboring such dog or bitch. Any person offending against any of the provisions of this section shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each and every such violation, to be sued for and recovered as provided by Chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, as amended, for the recovery of the penalties thereby imposed.

§ 2. This act shall take effect immediately.

STATE OF NEW YORK,
Office of the Secretary of State } ss.:

I have compared the preceding with the original law on file in this office, and do hereby certify that the same is a correct transcript therefrom and of the whole of said original law.

JOSEPH B. CARR, Secretary of State.

CHEYENNE TO INYAN KARA.—III.

"SPEAKING about shooting," he said, "reminds me of some wonderfully effective shooting I once saw aboard a ship of which I was third officer. It was on the Libbilly from San Francisco to Liverpool. She was a big four-master and one of the speediest craft that ever scoffed a storm. Our cargo was silks and silver and probably worth a million dollars or more. The sailors when we slipped our moorings at San Francisco had no knowledge of the value of our cargo, but as we were slowly drifting through the doldrums off the Canary Islands, between them and the Bermudas, they having little to do for several weeks but kill time, had accidentally discovered the value of our cargo and entered into a plot to seize the ship at the first opportunity. The plot was revealed to the officers by a young lad who had been befriended by the captain. The boy's name was Scotty and he had been picked up in the streets of San Francisco and well cared for by the captain. He could chew more tobacco and drink more whisky than any person I ever saw, and was, withal the best sailor aboard ship. He could walk any rope in a storm with his hands in his pockets."

Here Curtis went to bed.

"I have seen him shin up the topgallantmast skyclew hazard, over six hundred feet above deck, and come down head first, then go out on the jibboom, dive overboard when the ship was making thirty knots an hour, catch hold of the rudder and be on deck ready for duty at a moment's notice hardly wet."

Here Foucab and Doc rolled into bed.

"The last I heard of him he was first officer on one of the Cunarders. Well, we officers watched out very carefully day after day, and finally learned that the crew intended to take possession of the vessel on the first dark and stormy night. Everything went well until we were four days from Liverpool, in latitude 34.7, and longitude 6.8½, when at about five bells a little speck of black showed in the sky off our larboard side. The captain called the first officer and myself into his room. It was the second officer's turn on deck and I was to go on at three bells, which would bring it into dark. I filled my pockets with hand grenades and went forward toward the forecastle, taking care to avoid getting mixed up with too many of the men, as I did not care to tackle over ten or a dozen at a time."

Here Hans and Albert went to bed.

"Darkness came on, and soon the ship was laboring. Darker and darker came the night, and the wind began to whistle through the shrouds. In less than the telling you could not see your hand six inches from your face. Though it was now my turn on deck, the captain came up and ordered a dozen men to go aloft and take in the maintopgallantsail. Up they went and in five seconds down they came. I never saw such quick work in all my seafaring life. 'Up aloft and clew the mizzen royal to the yawl,' cried the captain. Up again they went and were down again soon as before. The captain mistrusted that they had cut the canvas loose and cast it into the sea, but it was so dark that not a sail could be seen from the deck. Calling Scotty, he told him to go aloft and see if the sails had been furled or cut loose and report immediately. Scotty was right back and reported that they had been cut away. Calling the men to him he ordered them up aloft again, told them what they had done, and bringing his Winchester up to his shoulder threatened to kill the first man who made a cut at a rope."

Here Fred went to bed, leaving Tom, the burro man, and his partner to hear the last of the sailor's yarn.

"They had gone about ninety feet up the mast, and, supposing they were hidden in the darkness, drew their knives to cut loose the mainskysail, when bang! bang! bang! spoke the Winchester and three sailors came tumbling on the deck, each man shot in the back of the head, and dead before they struck the deck. They were remarkable shots, each man hit on the bump of animosity.

"The other men did their duty and put the sail shipshape and followed each other down, and then huddled around the captain, seized his rifle and hurled him to the deck. I commenced to throw the hand grenades among the crowd. The first one thrown struck the lock of the Winchester, and exploding, scattered itself in the face of the sailor holding it, killing him instantly."

Here Tom went to bed.

"The rest released their hold on the captain, when I struck one full on the teeth and shattered his head, and the rest of the sailors threw up their hands. Meanwhile the storm had abated, the moon came out, and presently everything was quiet. We put three of the men in irons. The rest we kept at work under close watch until we reached Liverpool, when we delivered them to the authorities and two of them were hung and the rest sentenced to Pitcairn Island for life. The owners of the ship rewarded the captain and offered me command of a steamer running from Queenstown to New York, but I had tired of sea life and declined it."

The burro man and his partner, pale and trembling, were too tired to return to their own camp, and made down as best they could by the fire to dream of sailors, hand grenades and longitude.

It was very late next morning before the quiet of camp was disturbed. Hardly any one dared to move for fear of hand grenades, but finally, when the sailor rose, and the rest saw the childlike and bland expression of his really good-looking face, they ventured forth and had breakfast. The burro man was glad enough to get away, whispering as he went, "If he makes many such breaks as that last night, I couldn't get on with him twenty-five years. That was a twenty four carat story, wasn't it? It will always make a cold chill run down my back and my feet freeze whenever I think of it."

"Bet your life," says Tom, "I'm a pretty good liar myself on the ground, but when he takes me on salt water and up those tall masts he makes me dizzy."

Tom and Doc saddled up a couple of clever-looking mules preparatory to having an antelope hunt on the big flat three or four miles from camp. The antelope he reported were usually very plenty, but cautiously announced that possibly we would not see any, as they were here one day and somewhere else the next. It was the next with us. We took our direction northwest, then north, then east over toward the Devil's Tower, climbed hill after hill, searched carefully, but if there had ever been an antelope in the country he could have proved an unimpeachable alibi for this day. It made the Doctor say that the next time he went antelope hunting he'd take a shovel and hunt for angle worms, or dig a well.

We rode for two hours through a big flat covered with a rank growth of sagebrush, where any antelope crossing would have to provide himself with a haversack of hay and a bottle of water. It would have been a good location to establish a sausage factory if the hogs could only stand it. Happy is the angler who, after patient waiting and no returns, can wade ashore, and seating himself by the brookside listen to the forest melody, rejoice in the balmy breath of the woodland mornings, and watch the dart of the swallow and the plunge of the kingfisher. Some of my pleasantest days by the trout streams have been when I have caught nothing. It's different with hunting here, or perhaps the surroundings and accessories are inferior, or perhaps I don't enthuse sufficiently for the average hunter. As some philosopher says, "That kind of hunting may be sport, but it is not pleasure."

Tom and Doc appeared in camp feeling like the principal mourners at a funeral. Curtis had been in two hours. His day was a red letter one. Two fine bucks, one particularly an ex-monarch of the hills. As a friend of mine once remarked in all seriousness—and why shouldn't he be serious about it—"I think my mother was one of the nicest old ladies I ever saw," which reminds me that this was one of the finest deer it was ever my good fortune to inspect.

Curtis was resting after an hour's tramp on a hillside. He had stretched himself out very comfortably by the side of a log and almost lost to his surroundings, when he heard a gentle break among the twigs and leaves at the foot of the hill. He quickly discovered the disturber of his day dream and entered into negotiations for his surrender by hiding behind his log, where he watched the near approach of the buck, who came directly toward the log, then turning slightly, donated his side for a mark. Four shots, any one of which would in connection with old age, have eventually proved fatal, testified to Curtis's accurate holding; but as long as the buck stood up within decent range he was a receptacle for lead. While Curtis was returning to camp for a pack mule, he was lucky enough to break the neck of the other buck, downing him in great style at the first rattle out of the box.

It rather put Tom on his mettle, while Curtis tried to wear his blushing honors meekly; yet one could readily detect the slight undercurrent of self-complacency which possessed him. These were the only specimens brought into the establishment during the day, but as they made ample amends for other shortcomings, and as there was no present prospect of half rations we were all serene.

Bright and early rose Tom, long before the morning sun commenced to mount into the fathomless blue. He bolted such remnants as he could readily find of the last night's repast with a do-or-die manner, and shouldering his rifle, hastened to the woods as though he had an important business engagement. Betty is with him, for he is determined to use every precaution toward making a good showing, for he begins to feel that he must verify some of his boasts.

The well-trained Betty follows closely at his heels, never once offering to lead nor stray to either side. A half hour passes, and Tom, hurriedly examining some tracks which cross his direction, turns sharply to the right and in ten minutes more begins more carefully to conceal his movements. A finger raised quickly—a signal which Betty well understood—makes that young lady even more careful than before. Away in the distance, browsing beneath a small cluster of trees, stands a blacktail. Carefully as though he were treading on eggs, Tom picks his way until almost within fair shooting distance, when an unfortunate step snapped a dead limb, and the deer, hearing and looking up, stood not upon the order of his going but immediately started.

There was nothing to do but to fire quick as he could bring his piece to bear; and doubled up like a jack-knife was that deer a moment after Tom pulled that trigger. It looked like an accidental intentional shot, but it opened the aforesaid deer from a to izzard. Betty was let loose, but her services were not required, for before Tom came up the deer was as dead as Charles II. Betty had, however, secured her favorite hold on the nose, and Tom, stroking his moustache, said, "Oh, no, I can't hunt any. It's the man who lives around the corner who downs them all alike. Come, Betty, there's more of them beyond here." Tom's next shot was not as well placed as the first, but it was easily to be seen that it hit hard. Away went the deer at an unnatural gait, and away went Betty full of music and excitement. This was the opportunity she had been patiently and anxiously awaiting, and how she did put the yards and rods behind. Slowly and surely she gains, until at the right moment she makes her spring and her jaws close with a firm grasp on the nose of the wounded deer. There is no shaking loose from that vice-like grip, struggle you ever so hard. Over a

ledge of rocks in his blind desperation he went, but Betty went too; and when Tom finally reached the scene the battle was over, the deer dead, and Betty unharmed and ready for the next.

Tom brought two deer into camp, Curtis one, the Germans two, and Foucab a dozen or more grouse. Next morning the burro man passed our camp on his way homeward. The little burro was trudging bravely and steadily along under what seemed more than his own weight of venison. The burro man shouted good-bye, and holding up his empty sleeve said, "Fred, it got bit off in Missouri," and he journeyed on. That was the last we saw of him and his partner; on short acquaintance good fellows both.

Several days later we struck across country, intending to hunt back toward Inyan Kara, by way of Wind River, Mason and Arch creeks. Some call the first mentioned stream Wind River and others call it Wind Creek. We did not consult any authorities as to which was the proper name, but about the wind part there was no mistake. We saw no water and but little ice. We saw wind and plenty of it too. The old channel was full of it and overflowing. It had blown the water somewhere high and dry. Wind Creek or River was appropriately named for a fact; and dry season or wet it will never be empty.

We were on the wrong side of it for our purpose and drove nearly all day before we could find a crossing place, and even then it was a "ground hog case." We just naturally had to make the attempt, for wood and water were in sight on the opposite side. We had amused ourselves by shooting sage hens, which, with our consent, the Germans had loaded into their wagons. Old hens and cocks they must have been and rank, and the fresh zephyrs stirred up and doubled their rankness.

We made the crossing with much geeing and hawing and liberal applications of the breaks and whips with a little amalgam of nervous Saxon, such as is prescribed for horses in like emergencies the world over. Driving into the timber for camp we started a fine whitetail from his afternoon's nap. Fred pursued him and brought him into camp by dark and loaded him into the German band wagon among his other specimens and sage hens. After an early morning's hunt we continued our homeward journey. We camped that night on Mason Creek. Nothing in the creek except ice, which we had to melt for ourselves and horses.

The next day we came to a fine spring on Arch Creek, and with good water and feed and wood we camped and hunted with success enough to add four deer to our load, and then set out for home. Inyan Kara Mountain, bleak and black, was in sight, but many miles away. Noontime came, and Inyan Kara, much nearer, was clothed in purplish blue, and when we again rested at Coltalluks it had put on its evening dress of green.

Our trip to the Belle Fourche, though it had been an enjoyable one, had not resulted as satisfactorily as we anticipated, and after distributing our captures among Mr. Coltalluck's friends and neighbors, and resting a few days, we outlined a programme for a week's hunt in what Tom called the Cold Spring country, some fifteen miles from Inyan Kara, and thither we went. The German element was eliminated at their own request, as they said they had meat enough to supply their bachelor wants for the winter.

The Cold Spring valley is quite narrow, and the sunshine visits it but a few hours during the day. The stream is narrow but deep, with a very rapid motion, and carries a large quantity of water which is very free from alkali. The deer were fairly plenty, and five days' hunt loaded our wagon and half a day's drive brought us to our temporary home again.

The white, soft-winged heralds were here. Winter was no longer in any season's lap, but had commenced to assert itself in earnest; and recognizing and appreciating that fact, we were loth to dispute its claims, much preferring to devote our unoccupied time to shin toasting before Coltalluk's cheerful fireplace, until it became necessary for us to journey south. MILLARD.

BEAR CREEK, Wy.

FIREWATER.

[From an unpublished addendum to "Woodcraft."]

Fellow Sportsmen, Hunters, Anglers, Canoeists:

When, in organizing your duffle for an outing you are tempted to add a stock of Old Crow or brandy, remember the advice of *Punch* to people contemplating marriage, "Don't."

It is of no earthly benefit, and is a disturbing element in camp for the most part. I have tried it scores of times, and have gone to the woods for long hunts without any strong liquor quite as often. I am no prohibition crank, not even a temperance man. But my verdict, based on forty years' experience, is decidedly against firewater in camp.

It is true that, on coming into camp at dusk after an exhaustive day's tramp without food, a moderate drink of whisky or brandy will tone up the flaccid muscles and liven up the tired hunter in a most grateful manner. And if the stuff were only used on such occasions there would be no objections to it. But the truth is, if liquor be taken into camp it will certainly be drank. And it is pretty certain that it will be used just when it is least needed; while in cases of exhaustion a drink made from Jamaica ginger or a cup of strong green tea is equally refreshing and more healthful.

I am not offering a temperance lecture, only giving an opinion founded on a pretty extensive experience on both sides of the question; and I say without prejudice that it is better to leave all sorts of firewater at home.

It is not an antidote for snake bites, let alone the fact that you are much more likely to be struck by lightning than bitten by a poisonous snake.

I can recall only two instances in which I found strong liquor of any positive benefit.

Once I was in camp far up the trackless banks of the Second Fork of Pine Creek, when a little after midnight I was taken with a sudden and violent attack of pleurisy. The night was pitch dark and rainy. It was fifteen miles to the nearest medical aid, and no man could find his way out until daylight. It was reasonable to suppose that I would be dead long before a doctor could be brought to camp. We tried heavily folded towels wrung out in hot water, but the fiend that was rapidly shortening my breath was not to be stopped with hot water. And then as a last resort, I had four thicknesses of dry paper folded into a six-inch square, saturated with brandy and fitted snugly over the seat of pain, and then got a friend to touch me off with a lighted splinter. It was what you might call heroic treatment; but it was effectual. It cooked me pretty thoroughly down to the ribs, but the pleurisy left as suddenly as it came. It was three months before the burn was thoroughly healed. Counter irritants, to be effective, should be applied without any childish dread of pain.

The other instance referred to happened in Tuscola county, Michigan, where I was hunting with a doctor to whom I had brought a letter from a mutual friend. The doctor was a "little, short, fat, fodgel wight," but an ardent sportsman, and he led me to a camp on the waters of White River, miles away from the nearest road, and by a very puzzling route. Game was exceedingly plenty, the weather fine, and the doctor's appetite more than good. It struck me he was eating more than was good for him, just to save the game from waste. Anyhow, on the fourth day, and just as we were ready to break camp, he was taken with what Byron mentions as

* * * "a pain
"About the lower region of the bowels."

At first he thought it an ordinary attack of colic. The only medicine in camp was a small vial of laudanum and half a pint of strong kanuck spirits. The laudanum failed to relieve and the medico rapidly grew worse. He lay on his back, loosened his clothes and roared with pain. He expressed his opinion as a medical man that he had a most violent attack of bilious colic, and was more than likely to die miserably right there in camp. I was a trifle frightened myself, and hastened to get some water up to the boiling point. But hot towels failed to relieve and it began to look serious. Then I told him of my own case, and said I thought a fire blister would relieve him in ten minutes. "Go ahead and try it," he yelled. So I made an eight-inch square of dry paper, four thicknesses deep, saturated it thoroughly with spirits, and fitted it snugly to his capacious abdomen. Warning him that his life might depend on standing the fire without flopping, I touched him off. There was a blue flash, a quick blaze for a few seconds, and the business was done. Not only was there a most effective blister the size of the paper, but quite a number of minor blisters where the alcohol had slopped over in adventitious rills. During the operation he kept up a dismal howl with no ups or downs in it. But he managed to keep quiet, and the cure was almost immediate. We staid in camp until next morning, when the doctor cached his rifle and knapsack, took a cane in one hand, held his clothes aloof from his burned abdomen with the other, and led the way out to the clearings at a snail's pace, I following behind. It was the most laughable burlesque pantomime I have ever seen. But I dared not laugh—not aloud. And after all it is not certain that alcohol was so very necessary in the doctor's case. Four thicknesses of blazing paper would pretty well blister a tender cuticle. Or, if worst came to worst, and there was no paper in camp, I dare say I could have built an efficient bonfire on his belly with a handful of dry leaves.

Why do I write thus? Well, a life in the woods does not always give immunity from sudden attacks of dangerous maladies.

I know of one instance where a hardy professional hunter perished miserably in camp with pleurisy. I know another case where a strong, healthy hunter and trapper was attacked by inflammation of the bowels. He was packed out of the woods by four stout men, only to die in a day or two at home. Either of these cases would have been relieved at once by an unflinching application of the fire blister. I could give other instances, but the above will serve to illustrate the value of pluck and forethought. NESSMUK.

THE PRAIRIE CHICKENS.

Editor Forest and Stream:

The chickens are hatching out all right, as the weather could not be any better for them. They are coming off with full clutches. There are three nests this year to every one last season in this locality. J. R. O.

DWIGHT, Ill., June 20.

Editor Forest and Stream:

Owing to the cold and rainy spring we have had, I am afraid the young prairie chickens have suffered. I have seen none as yet, and this is just my opinion from observation. Quail seem quite plenty, and I believe now they are protected.

ANITA, Iowa, June 21. C. B.

Editor Forest and Stream:

This immediate locality has never been considered very favorable prairie chicken ground, but as the area of cultivated ground increases that species of game becomes more abundant. Last winter a covey of forty-six was seen in my field, and this summer almost every field has one or more broods.

I do not know of a pointer or setter dog in town, mine having been stolen. This would be good missionary ground for the owner of a good dog when the open season commences.

The ruffed grouse crop promises to be even unusually abundant despite the persistent market-hunting of last year. The birds wintered well and young broods are now numerous.

Several deer have been seen near the village of late, and the want of a good tracking snow during the open season for two years in succession has undoubtedly tended to the increase of this noble game. J. F. LOCKE.

PILLSBURY, Minn.

THE FIRST AMERICAN RIFLES.

Editor Forest and Stream:

I notice in FOREST AND STREAM of June 18 a communication from Hon. Spencer F. Baird requesting information on this subject. In reply I present the following:

My grandmother was the youngest of thirteen children and she was born in 1785. The eldest of these children married Ezra Engel (pronounced Ingle), a German by descent, and a gunsmith. Engel made no guns but rifles. He lived for many years in Greensboro, Greene county, Pa. His brother, Barnes Engel, still lives there, a man over eighty years old. Ezra Engel went to Cape Girardeau, Mo., about 1840, where his descendants still live. I have seen a "deer gun" bearing his brand which has been altered from a flintlock to a percussion lock, and which is known to have been in the family owning it for more than 100 years. This gun is peculiar in having a gain twist. It carries a ball which runs 48 to the pound, and, according to the notches on its stock, has killed many a deer, bear and redskin.

The Engels were all gunsmiths, and I have no doubt they sent many guns into the American ranks during the Revolution. I have no doubt that letters to Hon. C. A. Black, Waynesburg, Greene county, Pa.; James A. Black, Esq., Greensboro, Greene county, Pa.; Elias C. Storie, Esq., Greensboro, Greene county, Pa.; George Engel, Cape Girardeau, Cape Girardeau county, Mo., and Ben F. Stone, Browning, Linn county, Mo., will elicit much reliable information regarding the Engels. I am fully inclined to think Ezra Engel the first gunsmith in Pennsylvania west of the Alleghenies.

P. S.—Barnes Engel, Greensboro, Greene county, Pa., might be written to, but he is now so old and decrepit that his information would not likely be of much value, his memory being untrustworthy, though he still knows how to sight a gun. AMATEUR.

SOMERSET, Pa., June 20, 1885.

THE RED DEER OF KILLARNEY.

AS in the New World, so has it been in the Old from time immemorial. All kinds of game are becoming scarce. The Irish elk, the wolf and wolf dog are traditions of the past in the Green Isle. Except in parks, the red deer no longer roams over "Merrie England." It is still common in the highlands of Scotland, but the original stock in Ireland is only to be seen on the mountain ranges round Killarney.

There are many ancient races, and many old, noble and long descended houses and families in Ireland and Scotland. But can any of them pretend to a presumptive title of possession, even approaching to that of the red deer? They hold their privileges by the true *lex terræ*, by a law antecedent to all customs, usages, grants or patents. They are the true aboriginal owners of the lake districts, their inalienable, unperfected forests, walks and pastures. They range at will within "their own manor and hunting ground," indifferent to what men may call change of ownership, or new title in the lower world. These denizens look from the green valleys and hoar hills in calm indifference upon the ephemeral possessions and visitors of successive generations. The laws of primogeniture have preserved a few of the ancient landmarks. In Ireland, were it not for the late Col. Herbert, my father, the last of the old Irish red deer at Killarney would long since have passed away, gone to condole with the ghosts of the Irish elk and wolf. Owing to his fostering care, where there were but few left there are now many hundreds, and they afford much pleasure to sportsmen and lovers of nature.

In October the deer-stalker in our country has to put aside his rifle. The first bell of the hart is a notice for him to quit, so that these wild denizens of the woods may carry on their courting at their leisure. An American friend was staying with me, at Muckross, at the end of the fall—the weather was all that could be desired. The light frosts were beginning to touch the woods with every variety of shade, which though not so magnificent as the gorgeous coloring of the American autumn, is still very beautiful, and gives the wondrous alternation of tints that are the autumnal charm of the scenery of Killarney, though, alas, it is also a premonitory sympton of the fast-closing season, and the wild blasts of November.

The red stags were heard through the day all round the woods on the various points of Torc and Mangerton mountains. As evening fell the sounds became louder and more frequent, and while standing on the terrace of Muckross House, my friend asked me what they could be. "That," I replied, "is the hart's bell; it is too late now, but to-morrow we will climb Torc a little way, and I think I may be able to show you something not easily seen elsewhere, at least on this side of the channel, or below the Grampians." My friend while accepting the invitation expressed serious doubts as to his powers of climbing the steep sides of Torc, fearing that shortness of his breath might prevent his following me over ground which in those days was as easy for me to tread as the velvet lawn in front of my house. But the hopes of seeing the belling harts in their homes overcame all these scruples.

About three the next day we started for the haunts, where I knew some of the largest antlered lords of the forest would be congregated. Our way led through the woods of Muckross, by the waterfall path of Torc cascade and so on to the partly wooded and partly cleared hills in the defile which separates Torc and Mangerton Mountains.

When we had attained this point, the belling from the woods all around became more frequent, nearer and louder; we were in the midst of red deer, but were not able to see them, owing to the roughness of the ground and the interlacing of larch trees. My deer-stalking experience was now to be put in practice. Enjoining perfect silence we crept from tree to tree with stealthy pace and occasionally sweeping the opposite brow of Hangerton with a deer glass to discover some of the numerous harts which were belling and calling, some in defiance, others in love. In a few moments I saw one, and handing my companion the telescope, he was enabled to see a fine, well-grown hart standing like a warder at his post on a projecting crag and sending forth his challenge to all rivals and antagonists. This animal reminded us of a living example of Landseer's famous picture, "The Monarch of the Glen." My friend feasted his eyes to his heart's content, while I made off several more deer on the side of the hill around us. Most of them were hinds moving uneasily about as if uncertain to which of the invitations from the challenging suitors below they should respond favorably.

In the excitement of the moment all fears of fatigue had fled from my friend, and a whispered question, "Is there no chance of seeing them nearer?" recalled me to a sense of duty. "We will try," I replied; and advancing cautiously into the wood on the left, on Mangerton side of the pass, we were presently stealing among trees and underwood as thick as a jungle. The red deer were moving in all directions, but see them we could not. One hart, which from the tone of his voice must have been a heavy beast, seemed to come directly through the thicket opposite us, but just at its edge he stopped, and with an alarmed grunt turned away. He had avidently got the wind of us, which he did not like, and moved off in suspicion and alarm. Soon his challenge was again heard in the distance.

"This won't do," said I, turning to my friend; "we must try ground that has never failed me yet. It was too early before, and we were sure to find them in the cliffs and openings above the waterfall. Retracing our steps a short way, and wading down and over Torc stream, we presently found ourselves on the edge of a piece of open woodland where the timber is of older growth, chiefly oak, overshadowing the greensward, perfectly free from brushwood, which enabled us to glide from tree to tree without noise or difficulty. Strict silence was the order of the day, and my companion was compelled to play one of the games of his youth, "follow my leader."

The belling here was as loud and tumultuous as ever, and at length, through the still, frosty air, we heard something like a clashing, not of cold steel, but of branching antlers. I advanced a short way among the rocks, and beckoning to my companion, whispered, "We have them," and stealing

from tree to tree a few paces further, we found ourselves on the edge of what might be called a "tilt yard," where the dudes of the forest looked on while the better champions contend for "Laus and faire ladie" with an engrossment of attention which completely prevented their noticing us or our movements. In an open space among the trees four or five young harts, with their half-grown antlers, were striving with each other, now rushing together, butting their heads and interlacing their horns, until the weakest was borne back, when he presently fled to a short distance and there renewed his belling until he could muster wind and courage to come up to the scratch again. No two stags were individual antagonists, but all strove alternately as if each in turn were testing the strength of the rest, until the other should remain master of the field, and not of the field only, but of the woodland representatives of those fair dames of old—

"Whose eyes
Rain influence and adjudge the prize,"

for whose good graces the combatants were evidently contending. A herd of hinds, to the number of twenty or thirty, stood on the opposite side of the glade from us intently regarding the encounter. Something more was to come, I felt certain, and suddenly a stag challenged in the distance, louder, deeper, and more angrily than anything we had yet heard, and in a moment a "muckle hart," so much larger, indeed, than the others that he scarcely seemed of the same species, rushed into the arena. He had been most likely lying down, when his small rivals presumed to invade the sacred precincts of his harem, and awoke in wrath proportionate. "He checked himself in his mad career," stood and glared around him for a moment, and the breath from his nostrils rose the while like the steam from the escape pipe of an engine; in another moment he had dashed at the animal next him, and his doing so was the signal of *sauve qui peut*. In an instant the rivals were dispersed through the mazes of the wood, as of old it was "*Veni, vidi, vici*," and the huge suitor was left in possession of the field. The hinds, in the meantime, demurely trotted across the opening to meet and welcome the conqueror with the usual exclamation of the fair sex, when any quarrel or mischief takes place, and we could imagine them assuring their lord and master, open-mouthed and self-justifying, saying, "We hope you don't think us to blame for the intrusion of these contemptible puppies on your privacy."

In answer to some queries put to me by my companion, I informed him that the red stags at this time of the year were often very dangerous, particularly in parks where they have been accustomed to the sight of man, and that they have often been known to attack and seriously injure or kill people. The red deer, as are all the species, are fierce fighters, often killiny one another in their battles. A few years back on this same ground, a pair of stags got their antlers so entangled that they were unable to tear themselves apart, and dying in their hated embrace, were so found. Their heads are still to be seen as first discovered, impossible to separate. Nature supplies them with a pair of new horns every year, and it is a curious fact that should the animal have received a severe injury, the horn on the same side as the wound is sure to be in some way distorted or stunted, even after recovery. Some foresters or hunters think that the number of points or the tynes on the antlers indicate the age of the animal, so that a stag of ten would be ten years of age. That is not my experience, the number of points and size of antlers depending more on the feeding the animal has than anything else. The cast off horns are sought after and eaten by the hinds; they are constantly found half devoured and gnawed, and I have more than once had the opportunity of watching this singular feast. Naturalists and physiologists must explain the functional effect of this singular fact. "Nature does nothing in vain," and it may help the reproduction of their magnificent head-dresses year by year.

Evening was closing in fast. Our appetites reminded us that nature must be supported, and we started for home, and gained the old bridle-road, the roaring all around us being deeper and fiercer than ever, which, in the darkness and gloom of the night, recalled Dante's Inferno.

In shooting the red deer we judged the stags by the size of their antlers and partly by the size of the body. The average weight of a stag fit to kill is about 18 stone or 252 pounds dressed. In Scotland the weights are much less, being somewhere about 15 stone or 210 pounds. The larger weight of Irish stags is accounted for by the fact that our climate is superior, there being comparatively no snow in winter, and again, the vegetation and grasses are more succulent and nutritious. The season for killing the stags begins about the first of August and ends about October 10. The hinds are killed in the winter from the month of November to the first of February. Any hind so killed is called a yeld hind, and is chosen from the herd for being barren and not having a fawn at her foot. Stags have been killed of far greater weight than 18 stone.

Early in October a large party of friends were gathered together under the Muckross roof. Among them were Col. Long, a man who had seen sport all over the world, and there are few who can boast of such a sporting record as his. At this time his spirit was still willing, but his age and strength prevented him from joining in the active pursuits he loved so well. The head keeper reported to me that a stag had managed to find its way into the inner walls of my domain, so I determined, if possible, to give Col. Long a chance of killing a beast on ground that would not be too fatiguing for him to travel over. Venison was wanted for the house, and my *chef* hinted at the extinction of certain venison pasties which were generally appreciated. To avert so disastrous a result, and that the temper of this most important functionary should not be ruffled, orders were given to the head keeper to go to a certain district in the deer forest and endeavor to obtain the supply wanted; and as another friend was coming to stay with me, strict injunctions was given head keeper to disturb only certain parts of the deer forest. The following morning we were astir early, I had the satisfaction of seeing Col. Long kill the stag that had invaded the home precincts, and we were all joyously returning home when we were met by the head keeper, Mr. John Ross, whose long and doleful face at once told me that something had gone wrong, nor was I mistaken, his exclamation being, "I have missed the biggest stag that I have ever seen; that is not all, sir, I am afraid your rifle is burst." "John," said I, "it is an invariable rule with deer-stalkers, that when they miss a stag, that stag is always the heaviest and largest." On cross-examining him, however, it was clear to me that the stag he had missed must have been an exceptionally fine animal.

This man and myself had been brought up as boys together, had spent many happy hours on the wild moorlands among the red deer, and we both determined that the trophy of the head should be placed in my halls. My neighbor, Lord Kenmare, soon favored me with the loan of a new Express rifle, and my friend arriving that evening, a plan of campaign was soon formulated. He and the keeper were to take the northern part of the forest while I secured the southern portion. With full instructions as to our limits, so as not to disturb each other's sport, we all started at 4 o'clock the following morning in full expectation of a triumphant return. My friend, to reach his hunting grounds, had to ride up to an elevation of 3,000 feet; I, on the other hand, was to drive some seven miles before beginning my work. One of the gillies or under keepers accompanied me to carry my rifle and lunch, as I did not expect to be home till late. The ground we started over was very steep, woody, with alternate glades and high rocks. We had been climbing scarcely half an hour, when suddenly I perceived over the tops of the bushes, about 200 yards off, the head of an exceptionally large stag. I pushed my hand back for the rifle and sat quietly down on the heather, knowing full well from the lay of the ground and the course he was taking that he must pass within shot of me. A few moments of anxious expectation which felt like hours followed; but suddenly he loomed in sight, at the same instant his quick eye caught a glimpse of us, but too late to save his skin, the trigger had been pressed and the bullet had sped, and had gone through his heart. On walking up to him I found that I had killed a magnificent animal, he had fourteen points or tynes and weighed fully twenty-five stone. My henchman was delighted, and I think his joy was increased by the fact that it being close to the boundary of my neighbor, the stag belonged to what we always phrase "the enemy's side." My man went back to the nearest keeper's lodge with instructions to send and have the stag taken home. Big as the stag was that I had killed, from the description that was given, I felt certain that it was not the one that had been missed the day before. The shooting season was drawing to a close, and these two reasons gave an additional incentive to my ardor as a sportsman.

As we ascended the ground became more broken, and owing to small herds of hinds we were compelled to pick our way with the greatest caution for fear of disturbing them. About 11 o'clock we arrived on the Cores Flats, a large tract of table land before the next hill was reached and the goal we were making for. Here began the most serious and difficult part of our work, which was to secure the spot where we could command an extended view of the hunting grounds.

Some deer had to be moved away, others to be avoided, and the wind that had shifted being uncertain, made the task all the more arduous. Luckily, at this time of the day most of the deer were chewing the cud and resting after their morning's feed. A mist had settled down, which, combined with the shelter of an old water-course, aided us considerably in effecting our difficult crawl. The foot of the hill was at last reached, and a welcome spring in a secluded nook under a hanging rock not only sheltered us from the falling rain, but gave us water that tasted like nectar. Lunch was soon over, Tanguiney kept looking dismally at the weather, and suggested that we should start for home as the day was getting lowering and dirtier; but my mind was made up to attain a certain spot whence I had spied many a muckle hart. So, putting the best face on it, we breasted the hill. My goal was in due time reached, and the clouds began lifting and clearing away. A charming sight presented itself to our view. In the foreground lay the forest, the Upper Lakes of Killarney lying snake-like on the valley; towering above them the beautiful rugged Reeks, the highest mountains in Ireland; to the left, the Kenmare estuary; beyond, the Atlantic with nothing but that between Ireland and America; but exquisite as all this was, the movement of a hind below called me back to the real business of the day. My field glasses were brought into play, running quickly over the various haunts of the bigger stags of the forest. Suddenly my eye was arrested by a sight that caused my heart to thump. Within half a mile lay the very stag I was seeking, the Jumbo of the forest; even without my long glasses it was easy to see that every word Ross had uttered the day before was not exaggerated. A good stag was standing near him, and acting as sentinel, a stag which at other times many a man would have been proud to kill, but now looking like a pony compared to a horse. The next question was how to get near him for a shot, and a glance sufficed to show me to arrive on even terms with him would require no small degree of patience and forest lore. We had to go around the crest of a hill, and more than ordinary caution was required, as if any one of the numerous deer lying around saw or winded us our chances were gone. It took fully two hours to get around, and I had the satisfaction of seeing the huge animal still in his old position. The other stag was standing a little apart from him, making it impossible to get as near as I wished, to make a sure shot. Leaving my man, with the strictest injunctions not to move from the rock behind which we were ambushed, I seized my rifle and crawled on my stomach for a hundred yards, to the nearest attainable point I could get to. What moments of anxiety were those. I could hear my heart beat, and old hand as I was at this kind of sport, I felt like a boy about to shoot his first deer, and it made me well understand how "stag fever" had caused many a "good man" to miss his shot. Waves of clouds kept sweeping over the crest of the hill, occasionally concealing the quarry below me. The shot was a long one, fully 300 yards, and the stag in his recumbent position made it all the more difficult. A cloud concealing them from my view for a longer period than those that had gone before, determined me to take the first opportunity for a shot, more especially as I saw full well that the best part of the day had gone by, and that the mists might close my chances entirely. Resting my back against the rock, I waited for a few minutes—minutes that appeared hours—and as if the fates were aiding me, a gleam of sunlight burst from the clouds, falling directly on the back of my unconscious victim, and throwing him into bold relief amid the purple heather. Putting up my sight, and aiming carefully behind his ribs, I pulled the trigger. Horrors of horrors! The rifle missed fire, owing to a defective cartridge. I had presence of mind not to move hand nor foot. The big stag turned his head down the valley; his comrade looked uneasily about, and followed his leader's example. Instantly another cartridge was inserted in the barrel, and again the deadly tubes were leveled. This time the sharp crack of the rifle, and a dull thud of the bullet told me the messenger of death had done its work. The big brute reared wildly, staggered a few paces, and rolled into a little glen beneath. A wild yell of delight from Tanguiney appeared to let off all the pent-up excitement of the last few hours, and we rushed together to get a nearer view of our prize, and to put an end to him with our knives. The other stag in the meantime appeared loth to leave his fellow friend, but our appearance on the sky-line determined him that discretion was the better part of valor. On arriving at the spot where the game had fallen, we found the finest stag that it has ever been my luck to shoot at or see on foot. A magnificent beast he was, fourteen points on his antlers, and these the largest of their kind, his weight, as afterward proved, thirty-one stone or four hundred and thirty-four pounds. A sportsman alone can appreciate my feelings. The only regret was that my friend had not the chance of the shot, and this was dissipated when I found on my return home that he also had killed a fine stag and had not had his day's tramp for nothing. These were two of the remnant of the once mighty hordes that covered our dear Green Isle, amid scenery of its kind, unequalled in the world. Surely such animals are worth preserving.

HENRY A. HERBERT.

MUCKROSS, Ireland.

A BIG B'AR.

THERE be valiant men among us. They killed a bear yesterday—a bear of a size not often seen in this region. A man was riding over a hill some two miles from this place, and saw an old bear and three cubs. He notified some of the mighty hunters, and they picked their flints and started, taking with them a dog. Tony Miller was at work in his clearing. He was gunless, but possessed a .22-caliber revolver, of that sort which may be purchased in quantity at the rate of three York shillings for a level peck. To him appeared Willet Washburn, also gunless, and said, "Lo, there be bears afoot." This statement was regarded as untrustworthy by Tony, but he moved forward in column of attack, though he did not think it necessary to take his .22, never having been bothered with bears on his pre-emption.

The skirmish line advanced, the dog began to kick up a bobbery and growls were heard. The hunters picked their flints again. Then there was more racket in the brushwood, and the advanced line of skirmishiers was seen in full retreat, Tony leading by at least half a length—not more, though they did their best, for Tony is fearfully long, in the legs especially. You see, the old bear was only a few rods behind; they had seen her plainly, and for a few minutes it was just nip and tuck. Then the bear slacked her pace and growled some more; and proceeded to attend to family matters, but unfortunately for her peace of mind, she had not been able to keep her progeny together, hence, the wild huntsman of the Hartz, who was kind o' slashin' around in that region, saw the bushes move, and levelling the piece, slung an ounce or two of shot around on general principles and hit a bear, which by the combined efforts of the expeditionary corps was eventually saved.

Nobody seems to know just why the shotguns did not move forward at the time the old bear made her charge, but Tony, who had a good view of the animal, a little nearer perhaps than he desired, expressed his regret that he had not brought the revolver aforesaid, in which case his bachelor cabin would surely have been decorated with a bear skin, and his larder supplied with three or four hundred pounds of "bar meat and sich." Those, however, who have ventured to express an opinion on the matter, have said that they would have given more to see Tony's legs going through the brush than for a shot at the "old she." PILGARLICK.

P. S.—I omitted to say that the estimated weight of the slain monster was twenty pounds.

P. P. S.—Another bear was seen last week crossing Wilson's Lake. The man who saw it is a hunter and was strongly disposed to attack it, but having his oars only as weapons, he prudently refrained. He states that he was in plain sight and but a few rods away when the bear took water, and that he could easily have overhauled it. When the creature landed it paused, shook itself, and took a good look at him. It was of the size apparently of a very large dog. P.

CENTRAL LAKE, Michigan, June 23.

THE ROCKLAND COUNTY SNARERS.—Stony Point, N. Y., June 26.—*Editor Forest and Stream:* In reading your various editorials in this week's issue on the deer hounding bill, the statute prohibiting spring shooting of bay birds on our State coast, and more especially the squelching of that villainous bill introduced into the Legislature last winter by the game dealers of the State, it struck me very forcibly that your paper was exerting a powerful and good influence on this all important subject of preserving our game. I am well aware of the fact that if the game dealers of New York city were law-abiding citizens, the trapping of partridges in this county would be at an end, but so long as our partridge thieves here can dispose of their plunder to a higher grade of the same class in New York city, so long will the nefarious business continue. Last fall there were shipped from this county several thousand partridges, every bird either snared or trapped, and our efficient game protector succeeded in arresting and convicting some eight or ten of the miscreants, yet judicial sympathy was so strong that a fine of only five or ten dollars per man was inflicted (two of the fines were paid in court, the others were never collected), thereby making a complete farce of the proceedings and encouraging the scoundrels to renewed activity in breaking the laws again this season. There are few finer partridge grounds in the State than are to be found in Rockland county, and could these scamps be made to observe the game laws, and not clean our covers out annually, good shooting could be had. We are so near the city, and all parts of the county so easy of access by rail, that it appears to me to be to the interest of every lover of partridge shooting, and especially to such as do not find it expedient to make long and expensive excursions in quest of the sport, to join us in an effort to put an emphatic stop to this trapping business. Your efforts to bring the game dealers, caught selling or holding in possession, snared or trapped birds, to grief, is an effort in the right direction, for these thieves of ours have no home market, and would not trap a bird if your dealers dared not buy and receive them. From personal knowledge of the life and character of most of our trappers, I am confident that under such circumstances they would at once go back to their original avocations, chicken stealing, etc., and give the game a rest.—T.

FLORIDA.—Tarpon Springs, June 17.—The long, dull, close season begins to open a little. Some varieties of fish, having recovered from the wear and tear of the spawning season, are in first-rate condition and may be legitimately caught. Beach birds have put in an appearance. Sickle-bill and straight-bill curlew, with willet and other snipe may be shot any morning. And the four-ton sharpie is nearly ready to go outside. She carries 102 yards of canvas, cut into jib, mainsail and balance lug. "Tarpon" and I can make her go where she will do most good. Then I shall have something to say.—NESSMUK.

THE DOUBLE-BITTED HATCHET.—Cleveland, O., June 22. —*Editor Forest and Stream:* Will you permit me to reply to "Single Bitt's" inquiry "Why the double-bitted hatchet?" Why not the double-bitted hatchet? The double bitted hatchet is no more dangerous to carry than a single bitt, or than a single or double edged knife, when protected by a sheath, as all such articles should be when worn on the person. As for use in driving tent pins, etc., the side of a hatchet or axe is always more convenient than a small hammer head. And who over heard of a hunter carrying a pocket full of nails to the woods? And for the same reason that the double-bitted axe is used, so is the double-bitted hunter's hatchet. It is virtually two hatchets in one—two cutting edges with the weight and bulk of only one, having one always in reserve in the event of one becoming blunted or broken, which is liable to occur even with the best material and care. For blazing trees the double bitt cannot be equaled, as an up and down cut can be made without turning the hand or hatchet, a great advantage over the single bitt, in a long tramp through the woods.—E. P. LORD.

NEW HAMPSHIRE MOOSE.—Second Connecticut Lake, June 22.—We have not found an untold number of echoes for the diversion of strangers, but the old bull of the bog came down to the lake this morning as he often did last year. He is the property of the State, and let no man think of molesting him while he is on exhibition here. His near relatives of exclusive habits must look out for their own affairs if they will drive caribou and deer from their feeding haunts. The moose seen this morning is large enough to weigh 1200 pounds when fat, and is in good condition for this time, after a long, hard winter. The old hair is nearly all shed and the horns are nearly, if not quite, half grown. I have seen tracks of several sizes of moose at one of the ponds to-day, but rain put a stop to the tramp just in the first "calf pen." We saw one large beaver and one dam made since October 9 last, when I visited the same place. We found some large trees newly cut by the four-footed lumbermen. Deer tracks abundant in all directions.—NED NORTON.

SHOOTING WOODCOCK OUT OF SEASON.—Complaint has been made to the West Jersey Game Protective Society that some Philadelphians have already been killing woodcock near Hammonton, N. J. Although these Philadelphians may be members of the Association and carry with them the proper licenses to shoot in the State of New Jersey, this does not protect them, and every effort should be made to have them indicted for this breach of the law. The statute is bad enough in itself to allow summer woodcock shooting at all. Two wrongs do not make a right. The late dry weather has concentrated all the birds, and they will suffer. Cannot the sportsmen wait until fall?—HOMO.

THE ADIRONDACK HOUNDING BILL.—The Curtis bill, forbidding the use of hounds for hunting deer in New York, was the last bill signed by Governor Hill. It is now a law, and a good one, as it will prevent the merciless slaughter of deer by dude sportsmen, who have been in the habit of following the hounded animals out upon the lakes and clubbing them to death while the guides held the frightened animals by the tails. To the FOREST AND STREAM, of New York, great credit is due for the pertinacity with which it has fought for the passage of this law.—*Newark Sunday Call.*

THE DEER AND THE "FOREST AND STREAM."—*Editor Forest and Stream:* Your commendable efforts in behalf of the bill for prevention of hounding deer in the Adirondacks should receive recognition from every sportsman and person interested in prolonging the pleasures left to us in this part of the country. Every time I see a deer (and I like to watch them) in the Adirondacks I shall think of FOREST AND STREAM.—SPENCER M. NASH.

CHINESE PHEASANTS IN OREGON.—A report from Lebanon, Linn county, Oregon, says that the Mongolian pheasants which were turned loose in that region have wonderfully multiplied. Scores of half-fledged pheasants of this breed are seen almost every day scurrying about over the prairie. These are the birds which were brought from China by Mr. Denny, formerly United States Consul there.

GAME IN THE NATIONAL PARK.—A correspondent writing from Fire Hole Basin, reports elk and deer abundant in the southern part of the Park, with antelope and wildfowl. One party, on a recent trip from Fire Hole to Yellowstone Lake, saw sixty-four buffalo. Bears are also frequently encountered, and are found fishing in the streams where the trout spawn.

OHIO.—Vanlue.—Woodcock shooting in this part of Ohio promises to be very fine. Quail were very plenty here last fall, but the excessive hard freezing thinned them out quite perceptibly. A few snipe were killed here this spring.—E. L. E. M.

LOCKWOOD, Tioga County, N. Y.—The summer has been thus far a favorable one for game, with no long continued storms nor cold weather to kill the young grouse. A gun club keeps the sportsman in practice at the trap instead of at birds. The laws are better kept than before in years.—J. H. ANDRE.

New Publications.

HUNTING TRIPS OF A RANCHMAN.*

LUXURIOUS books upon the better class of field sports are certainly more highly appreciated now than they used to be, and no better evidence of this is needed than the rapidity with which they follow one another. The fact is that people nowadays realize in some small measure the importance of the sports of the field and water, and have come to understand something of the benefits to be derived from a reasonable and reasoning indulgence in them. Now they are applauded—not too enthusiastically, but still applauded—a very few years ago they were barely tolerated, and a short time before that a man who went "gunnin' or fishin'," lost caste among respectable people just about in the same way that one did who got drunk.

Of course publishers follow the popular taste in these matters, and produce beautiful volumes which now sell by hundreds, where a few years ago they would have sold by units. One of the most noteworthy of the books of this type was the beautiful English volume on "Sport in Moray." Not very long after its appearance the Century Company published their superb volume on "Sport With Gun and Rod."

Not inferior in beauty of execution, excellence of materials and the care which has been exercised in getting it up is a new book of this class, "Hunting Trips of a Ranchman," just issued from the press of Messrs. G. P. Putnam's Sons, of this city. Its author is Mr. Theodore Roosevelt, who is best known as an earnest and energetic politician of the best type, though he has also done more or less writing. The excellent work which he has accomplished at Albany shows him to be—if nothing more—a person of exceptionally well-balanced mind, and calm, deliberate judgment, and these qualities cannot fail to make their impression in any pursuit to which their possessor may choose to turn his attention.

Mr. Roosevelt is not well known as a sportsman, and his experience of the Western country is quite limited, but this very fact in one way lends an added charm to his book. He has not become accustomed to all the various sights and sounds of the plains and the mountains, and for him all the difference which exists between the East and the West are still sharply defined. The old-timer who attempts to write of life in the Far West, is almost sure to grow prosy. He takes too much for granted, and regards as commonplace a great many features of that life which are, in fact, extremely interesting to those before whom they are brought for the first time. Mr. Roosevelt's accounts of life on a ranch are delightful from their freshness.

The book treats of sport with all the different kinds of game, from grouse and fowl up through the list of big game to bear.

The style of the work is very attractive, and the matter which it contains interesting. Where Mr. Roosevelt details his own adventures he is accurate, and tells his story in a simple, pleasant fashion, which at once brings us into sympathy with him. We are sorry to see that a number of hunting myths are given as fact, but it was after all scarcely to be expected that with the author's limited experience he could sift the wheat from the chaff and distinguish the true from the false. The illustrations, which appear in great profusion, are most of them very admirable, as might be expected when the list of the artists' names is read. Some of the etchings by Mr. Gifford are extremely fine, and in most cases the wood engravings are excellent. The illustrations of the chapter on the elk, however, are anything but satisfactory. The large head drawn by Beard and engraved by Clement is the best of them, but nothing could be less like the true elk than the full page illustration entitled, "A Band of Elk." Of the two figures, the male is short-faced and stubby, and the female a hydrocephalous dwarf. The full page illustration, "The Home of the Elk," would be a beautiful picture if it were not for the figure of that animal, which is so obtrusive and which is hopelessly unlike any elk in life.

The Medora edition, of which only 500 copies were struck off, is remarkable for its beauty. It is printed on heavy vellum paper with rubricated title and initials, and no effort has been spared to make it a most attractive volume. The heavy buckram binding, with its tasteful gold lettering and medallions, give the volume an appearance which is at once simple and elegant.

HIBERNATION OF THE BLACK BASS.

IN the paper with the above caption, read before the Fisheries Society, the author, Dr. Henshall, inclines to the opinion that the hibernation of the black bass is influenced as much, if not more, by the supply of its principal food as by the state of the temperature.

This theory is contrary to what personal experience has taught me, and I have a firmly rooted conviction that the torpidity of the black bass is caused by the temperature alone.

This being the cause, the natural consequence is the effect, viz.: That in a state of semi-stupor, the bass have little inclination or power to seek for food, however abundant it may be. Whatever falls directly under their noses they accept with thanks. I ought, perhaps, in justice to say that my observations regarding hibernation have been confined to waters in Northern New York, because at the season when this sluggishness overcomes the black bass, it is hardly worth while to go far to seek them as they render little or no return for the angler's outlay of time and patience.

The principal food of the black bass in Northern New York is the yellow perch, and if at any time during the open season ten bass are opened and examined, nine of them will be found to contain little, if anything, but perch in process of digestion. The food supply—even the favorite food of the bass—ought not once a year to seriously diminish in forty-eight hours, but the black bass during that period of time will change from a state of activity and become inactive.

In fact, the food supply does not apparently decrease at the time the bass becomes torpid, for besides the perch, which resort to the same depth of water and often to the same kind of bottom with the bass, crayfish are plentiful, and crickets and grasshoppers are abroad, and I am not prepared to say that other crustacea, and insects in some stages of development between the larvæ and winged states, do not also abound. But certain it is that the black bass become torpid while yet there is an abundance of food similar to that upon which they feed during the summer months. A case which illustrates my belief, although not an isolated one by any means, is found in the last bass fishing I did during the past year.

Oct. 15 I started with a friend whom I have mentioned in FOREST AND STREAM, Mr. Cleveland, for Cape Vincent, expecting to get some black bass fishing in the St. Lawrence River. During the day there was a change in the weather and before night it was quite cold. The next day there was a strong north wind and still lower temperature, and we went over to Lake Ontario, hoping to get a little fishing in the lee of an island. This proving impracticable because of the increasing wind, we gave up the bass and arranged to go out on the following day with the sturgeon-netters to lift their nets. The morning opened with a hailstorm and a furious north wind, but the netters decided in the middle of the forenoon to venture out, and we prepared ourselves by putting fur greatcoats outside of our ordinary overcoats, and were then not uncomfortably warm, as the wind continued in the north all day. The next morning (the 18th) we awoke to find it snowing, with dark, forbidding clouds piled up in the north, and we concluded to return home. Sunday, the 19th, was pleasantly warm, and we decided to fish Long Pond the next day, which we did without getting a bass, although just before our departure for Cape Vincent the bass in this pond were in a biting mood. We did get some fine perch in the pond after we found we could not inveigle the bass.

Tuesday we went to Brant Lake—the weather continuing like Indian summer—and arrived in time to fish during the afternoon. The landlord of the "Bass Pavalion" told us that two gentlemen had been fishing there with excellent success until the "cold snap" came, when the bass ceased to bite. I thought the water must have been warmed somewhat during three days of genial sunshine, and had great hopes. We had for bait minnows, crayfish, crickets, frogs, grasshoppers, and dobsons (the last mentioned were sent by "Wawayanda" to the two gentlemen referred to above, and arriving after their departure we had the benefit of them); all but the dobson were caught on the spot after our arrival. I was well aware that it would be useless to fish where we had had the best success earlier in the season, and two hours were spent in sounding for the proper bottom, *i. e.*, boulders or broken rocks in deep water. When found we also found the bass, but oh, what a change had come over them since our last visit. When a hook was baited with a minnow or a crayfish and lowered to the rocks a faint nibble might be felt, but it was very faint, as though the nibbling fish was extremely weary. The few bass that we did catch were taken on crickets, which seemed to be sucked in without the fact being communicated to the angler through the medium of the line, so the hooking was done by the exercise of faith. When hooked the bass were reeled in without any resistance and the fishing was tame beyond comparison, except where a yellow perch would take a cricket with a snap that was refreshing.

The second day was but a repetition of the first, and then we came home and shelved our bass rods. Our boatman assured us that until the time that the cold wave came the bass were as vigorous on the hook as when we were there in August, but in October their vigor had departed and they demonstrated that torpor had seized them at a time when food was all about them in abundance. The air was much warmer than the water, but I had no means of recording the temperature of the latter. I have known black bass to be taken from a lake after ice had formed upon its surface, but the process was not very unlike fishing for a dead squirrel in the hollow of a tree with the wormer on a ramrod. If the worm-baited hook got into the right crevice in the rocks and was held under the nose of a bass it would take the worm, if the fisherman did not freeze before the fish opened its mouth with a yawn and swallowed it, but when the operation was over the angler did not feel that he had been a fishing, for it was more like snaring suckers. I can cite other instances to show that it is the cold and not lack of food that is the cause of hibernation of the black bass in this section of the country, but if one case is not convincing I doubt if others and similar will be more so.

A. N. CHENEY.

GLENS FALLS, N. Y.

THE NEWFOUNDLAND SEAL FISHERY.

THE seal fishery of Newfoundland, which has brought and continues to bring such an amount of wealth to the colony, is comparatively of recent origin. The codfishery had been prosecuted for nearly four hundred years, but the seal fishery was of little importance till the beginning of the present century. It would appear that the attention of the people was so absorbed in capturing and curing cod that they neglected this industry, which, though difficult and dangerous, was capable of being made very profitable. Thus, while plying nets and hook and line on the Banks and along the shores for centuries in capturing the cod, they paid no attention to the oleaginous treasures which the vast ice fields every year brought within their reach, and the great seal herds were left to bring forth their young amid the icy solitudes, undisturbed by the murderous gun, club and knife of the seal hunter. But this paradisaical condition of the seal was not to last forever. The day at length came when thousands of savage hunters forced their way through the crystal ramparts by which nature had so long guarded these helpless innocents. With exultant shouts the invaders leaped on the ice fields, and soon the "shivering seals' low moans" were heard ascending to heaven in piteous appeal. The happy nursery of countless mother seals became a slaughter house, red with the blood of their murdered darlings slain in their ice cradles. All around the bloody carcases were strewn, staining the virgin snow; and the spot where tender mothers were lately fondling their white-coated babies became a scene of horror and death. Such is the seal hunt of to-day, involving each year a vast destruction of young and old seal-life for the benefit of man, "the lord of creation," and for the promotion of our modern civilization with its ever-increasing wants.

The value of the seal for human uses and the right method of capturing it in these regions was slowly learned. At first seals were taken in nets which were placed between the shore and some island or rock at no great distance. In their migratory movements the seals go south along the shore during the early part of winter, and by means of the nets placed in these narrow passages a few were taken. L'Abbé Raynal tells us that even previous to the year 1763 English fishermen were in the habit of repairing to certain favorable places in order to capture seals by nets placed in the way referred to. The same method is still pursued on some parts of the northern coast of the island and at Labrador, especially in capturing the bay or shore seal which is non-migratory. This net fishery is continued throughout the winter, but, of course, the number thus taken is comparatively insignificant. When thus captured the seals are generally left in a frozen state till the latter end of April or beginning of May, when the increasing warmth permits the extraction of the oil. In some instances they are "sculped" when taken, that is the skin and fat are separated, the former is salted and the latter treated in such a way as to extract the oil.

This net-fishing must have been supplemented by other methods of taking seals on the ice in spring, either by shooting them casually or taking them along shore, when the ice was pressed in on the coast by easterly winds. In proof of this, we find from the annual returns made by the admirals commanding on the Newfoundland station to the Board of Trade, that from 1750 there was a gradual increase in the quantities of seal oil exported. This item of export is mentioned for the first time in the returns for 1749, when its value for that year is stated to have been £1,006 sterling. In 1767 the seal oil exported had risen in value to £8,832, and in the following year to £12,664. In 1769 it fell to £5,375 and in 1772 rose to £13,406. The largest export mentioned in these returns was that of 1773, when its value was £26,388. During the following year it fluctuated greatly, just as it does at the present day, sometimes sinking to £3,000 and £4,000 and only once exceeding £11,000 in value. The last of these returns was for 1792, when the seal oil was in value £11,920.

There is another rather curious item in these returns which in these days is hardly intelligible. In the return for 1767, mention is made, for the first time, of "seacow oil, skins and teeth," which are valued for that year at £1,238. Two years later the value rose to £2,226, but the entries under this head suddenly ceased in 1774, when the value was £1,065. Probably this industry ceased to be prosecuted after that date. The "seacow" of those days was the animal known now as the walrus. It was also called "morse," and sometimes "sea-horse." In the early days of the Newfoundland fisheries, walruses and whales were plentiful on certain parts of the coast, and the capture of them was prosecuted by the more enterprising and daring fishermen. Hackluyt, the indefatiga-

ble chronicler of early voyages, in giving an account of a expedition to Newfoundland in the year 1593, consisting of two vessels commanded by Richard Strang and George Drake, informs us that, "in his time there were on the shores of the island of Ramea, within the Straits of St. Peter, on the back of Newfoundland, chiefly in April, May and June, multitudes of amphibious creatures called *vaccæ marinæ*, or morses, the two large teeth of which resembling ivory and their oil, were considered as valuable articles of commerce. That Captain Drake found there a ship belonging to the inhabitants of St. Malo, almost full freighted with morses. That he also observed several whales of an enormus size, together with great numbers of seals and porpoises, of which they killed several."

Then the simple-minded old chronicler goes on to tell us that these morses or sea cows were very strong and difficult to be taken on shore, and that the inhabitants used to catch them by the following stratagem: "They tie," says Hackluyt, "a bull to a stake in the depth of two feet of water, they then beat and torment him by twisting his tail until they make him roar; as soon as these creatures hear his cries they crawl to the bull and are easily taken." With our knowledge of the habits of the walrus we smile at this ingenious method of taking the animal in the olden time. We are lost in wonder as to how the scattered fishermen of those days managed to procure enough bulls for the prosecution of this branch of the fisheries, and how it came to pass that the roaring of the bull proved so irresistibly attractive to the walruses that they scrambled ashore to him. Was there an "affinity" between "sea cows" and land bulls in those primitive ages? Evidently our honest chronicler had been imposed on by some sailor's "yarn" which he was too unsuspicious to question. In those days there were no means of verifying the tales of wonder told by sailors and travelers who had visited the New World.

In Churchill's collection of voyages published in 1606, the following account of the walrus is given in a description of "New France:" "This animal is called morse, hippopotamus or sea-horse, and is said to be more like a cow than a horse; of hair like the seal, that is to say, dapple gray and somewhat toward red, the skin very hard, and small head with two rows of teeth on each side, between which there are two of them hanging from the upper jaw downward of the form of a young elephant's tooth, wherewith this creature helpeth himself to climb on the rocks; his ears are short as well as his tail; he loweth as an ox, has wings or fins at his feet and the female calleth her young ones on the land."

It is quite clear from these accounts and especially from the returns of the admirals already referred to, that the walrus was found on the southern and western coasts of the island at an early date in considerable numbers, and that it was captured for a lengthened period, and finally became extinct or scarce about 1774. An occasional wanderer from the Arctic regions is sometimes taken at present by the sealhunters among the ice fields to the northeast of the islands, but it is not now met with near the shores.

Hackluyt's account of Drake's voyage, already referred to, and that of Captain Rice Jones's voyage in 1594, make it clear that whales were also found in these regions in greater abundance than at present, and of larger size than any to be met with in these days. In fact, a whale fishery on rather an extensive scale was carried on in the Gulf of St. Lawrence, off the southern coast of Newfoundland and as far south as Nantucket; and New England men were actively engaged in it. In the *Scots' Magazine* for March, 1764, it is stated that a valuable whale fishery had been discovered and prosecuted, during the preceeding three years, in the Gulf and River of St. Lawrence. The New England people sent from fifty to eighty vessels to take part in this fishery, which appears to have been very valuable. A "History of British America," published in 1773, mentions that whales formerly set along shore by Cape Cod for many successive years, at which time there was good whaling in boats. After this the whales left this ground and the fishermen had to follow them further out into the ocean. "Letters from an American Farmer," published in 1782, inform us that the whale fishery was at that time very considerable at Nantucket, this being the greatest mart for oil, whalebone and spermaceti on the continent; and that there were no less than eleven different species known then at that part of the North American coast. The whale fishery is still pursued, to some extent, in the Bay of Chaleurs and the adjacent seas. The whales caught within the Gulf of St. Lawrence are the humpbacks, which are from 40 to 70 feet in length and yield from three to eight tons of oil. The same species is still seen occasionally on the Newfoundland coast, and also the finback, the spermaceti of various sizes, the blackfish whale, the grampus and porpoise. In Fortune Bay whales are still taken, but the fishery is now unimportant.

While the whales have been gradually disappearing from these seas, the seals, on the other hand, have not diminished in numbers, and their capture now constitutes one of the most important industries of the Newfoundland fishermen. We have seen that at first the seals were taken in nets. The next step was shooting them from large boats, which sailed about the middle of April. At that time of the year the young seals had left their icy cradles and taken to the water, so that only a few could be reached by the seal hunter's gun. As late as 1795 the whole catch of seals only amounted to about 5,000 per annum. At length an important step in advance was taken by fitting out small schooners of from thirty to fifty tons, carrying from twelve to eighteen men, the outfit of each vessel costing about seventy-five pounds. The vessels were strongly built and had certain appliances for encountering ice. They did not at first leave port till after March 21, in order to avoid the equinoctial gales, or "St. Patrick's brush," as it was called. Soon, however, they learned by experience the advantage of making an earlier start in order to reach the young harps before they had taken to the water. The first of March at length became the usual time for starting on the seal hunt. In these little schooners the men speedily acquired hardihood and daring, and became expert in battling with the floes. The people of Conception Boy led the way in this new enterprise, and Carbonear, Harbor Grace, Bay Roberts, Cupids and Brigus became the centers of the sealing industry. The skippers of these little vessels of from 40 to 100 tons, became "mighty hunters" of seals, and many of them acquired considerable wealth. St. John's, the capital, soon followed, and its enterprising people had speedily a small fleet employed in the hazardous but frequently lucrative industry. One hundred vessels used to leave the port of St. John's for the ice fields. There can be little doubt that seals were in those days much more numerous and were taken nearer shore than at the present time. So remunerative was the new industry found to be that its growth was wonderfully rapid. In 1800 and the five following years there were only about 50 vessels from all the ports in the island engaged in the seal fishery, the largest not exceeding 60 or 70 tons. But the returns show a striking expansion up to 1815, when the whole business of the country sustained a severe shock by the termination of the war between England and France, and the depression of trade which followed. In 1805, 81,088 seals were taken; in 1815, 126,315; in 1820, 213,679; in 1822, 306,982; in 1826, 292,007; in 1829, 357,523; in 1830, 558,942; in 1831, 686,836; in 1832, 508,407; in 1836, 384,321; in 1840, 631,385; in 1844, 685,530; in 1848, 521,004; in 1852, 534,378.

During the decade from 1852 to 1862 the average catch diminished. In 1855, 293,083 were taken; in 1856, 361,317; in 1858, 507,624; in 1859, 329,185; in 1860, 444,202; in 1861, 375,282; in 1862, 268,624. In 1857 there were 400 vessels of from 80 to 200 tons engaged in the seal fishery, their united crews numbering 13,000 men. The average annual value of the fishery, at that period, was from a million to a million and a quarter dollars.

The history of the seal fishery during the last fourteen years shows the usual fluctuations and but few large catches, as the following table will show:

Years.	No. of Seals.	Years.	No. of Seals.
1871	537,094	1879	457,855
1872	278,272	1880	323,795
1874	398,366	1881	447,903
1875	316,924	1882	200,500
1876	500,000	1883	300,350
1877	451,678	1884	238,887
1878	409,658	1885	(estimated) 210,000

The foregoing table shows that during the last four years the seal fishery has been a failure, the catch not having been much over half the average of former years. Whether this has been caused by an actual diminution in the number of seals or has arisen from the unfavorable condition of the ice which prevented the vessels from reaching the seals, or, what is more likely, partly from both causes, cannot at present be determined.

The practice of killing old breeding seals, in large numbers, in addition to the young, has been followed for the last ten years, and may have exerted an injurious influence on the fishery. That practice has now been partially abandoned, by an agreement among owners of vessels not to continue the fishery after April 30 in each year. I do not believe that any serious injury has yet been done, or that the number of seals is less than formerly.

In the year 1863 the great innovator, steam, entered the field, and the first steamer took part in this fishery. The value of steam, in connection with Arctic explorations, had previously been demonstrated; and its introduction has revolutionized the sealing industry. It was soon found that steamers strongly built and armed for encountering ice, possessed an immense superiority over the old sailing vessels. They could cleave their way through ice in which the sailing vessel would be powerless; could hold on to a "seal patch" when the other would be blown off; and carrying larger crews could bring in immense loads of pelts when the seals were met with in abundance. In consequence the number of steamers rapidly increased, and the number of sailing vessels still more rapidly diminished. In 1866 there were 177 sailing vessels and 5 steamers; in 1873 there were 18 steamers; in 1882, 25 steamers. Since that date the number of steamers has lessened, and is now about twenty. They are from 350 to 500 tons burthen, and carry from 200 to 300 men each. During the last few years six of the Dundee steamers, formerly engaged in the Greenland seal fishery, have come out here each season, and after shipping Newfoundland crews have taken part successfully in this fishery. When it closes they leave for the whale fishery in Davis Straits, and return to Dundee in October.

To the poor fishermen of Newfoundland the introduction of steamers, in connection with the seal-fishery, has been most injurious. The work is now done with far fewer hands; large numbers of the men fail to find berths, and the competition on the part of the fishermen is so keen that they will accept any terms rather than be left behind. In steamers men share among them one-third the proceeds of the voyage, the owners get two-thirds. In sailing vessels the men share among them one-half the proceeds. Capitalists thus obtain the lion's share. Of course the expense of fitting out steamers is very great. Only a little more than half the number employed in the sealfishery in the "good old times" now find employment, and their number is diminishing; not more than 7,000 to 8,000 men now take part in it. The probability is that sailing vessels in connection with this industry will soon be things of the past, and that it will be entirely carried on by powerful steamers. Sailing vessels have but a poor chance in competition with steamers.

In spite of frequent failures and disappointments, the seal fishery will continue to attract enterprising capitalists by the enormous prizes it presents to those who are fortunate enough to win them. Should a steamer obtain a full load only once in three years, she would pay her way. This year the fishery is likely to wind up very poorly, but as an illustration of the large prizes sometimes within reach, we may take the case of the two steamers Resolute and Ranger, both of which brought in full cargoes. The former had on board 34,628 seals, the gross weight being 772 tons, 0 cwt., 2 qrs., 22 lbs., the average weight of the seals being 49¾ pounds. The crew's share was $68 per man. The Ranger had 36,112 seals on board, the gross weight of which was 755 tons, 3 cwt., 2qrs., 19 lbs. The average weight of seals was 46¾ lbs. The crew shared $91.28 per man. Thus these two steamers in three or four weeks brought in 70,740 seals, value, at $2.50 per seal, $176,850. When they entered port their decks were hardly twelve inches above water at midships. Every nook and cranny was filled with pelts. The men's berths were filled; the coal had been thrown overboard to make room for the precious seal fat; and the decks were piled with pelts. The Ranger, the smaller of the two, had 7,100 on deck. Of course this is a wonderful success, but then eight or ten steamers will return almost "clean," as they get jammed in the ice and could not reach the seals. The Esquimaux arrived two days ago with less than 100 seals on board. The Aurora brought in 12,000, the Terra Nova 24,000, the Falcon 24,000, the Vanguard 11,000, the Wolf 8,400, the Iceland 24,800, the Neptune 5,500. These are the successful vessels, but the failures are so many that the whole catch this year will not greatly exceed 200,000 seals—about half an average catch. The ice this year has been most unfavorable for sealing, being very heavy and jammed together in huge masses which never opened out. In this way nature guards the young seals from the selfish cupidity of man, otherwise speedy extermination would overtake the plump innocents. It may be that the large number of young seals which have escaped during the last few years will have the effect of increasing their numbers and improving the fishery in the future.

I may mention that a still larger load than those named was brought in last year by the Neptune. She had on board 41,900 seals, the gross weight being 874 tons. This was the largest and finest trip of seals ever brought into port in this or any other country. Its value was $103,750. In the annals of seal hunting, a halo of glory surrounds the Neptune and her commander, Captain Blandford. This year the same vessel had only 5,500 seals.

The average annual value of the products of the seal fishery of late years had been about $1,100,000. These products include the skins and oil. The former are salted and sent to England, where they are tanned or used by furriers. It should be observed that these are not the fur seals whose skins are manufactured into ladies' cloaks. The fur seals are now chiefly obtained in Alaska. The seal oil, now extracted by steam process, is exported chiefly to Britain, where it is largely used in coal mines for illumination; also in lighthouses. It is also used in the manufacture of the finer kinds of soap. The respective values of the skins and oil will appear from the following returns for the years 1877 and 1878:

1877.	
Seal skins, 451,678, value	$361,342
Seal oil, 6,081 tons, value	754,044
	$1,115,386
1878.	
Seal skins, 409,658, value	$286,760
Seal oil, 5,932 tons, value	719,040
	$1,005,800

ST. JOHN'S, N. B., April 22, 1885. M. HARVEY.

JOHNNIE AND I.

EVERY ONE called him Johnnie—probably as much on account of his small stature as anything—but that was not his name, nor does it matter about his name and age, only that while he looked to be about thirty with his hat on and twenty years older with it off, he was in spirit every inch a boy. Johnnie and I were fishing chums. We lived in a quiet little village at the foot of one of the prettiest lakes in Central New York, a lake where can be found some of the best fishing for black bass, pickerel, perch, lake trout, and the inevitable sunfish, that is to be had in the central part of that State. Johnnie had a shop—a veritable Uncle Lisha's shop—which was headquarters for all who either fished or hunted. There they would congregate and exchange ideas on the subjects uppermost in their minds or nearest their hearts. Johnnie had the reputation of being a lucky fisherman, the luckiest one in the town; this reputation was shared in part by his chum, who always fished with him. Johnnie was an old one; he was always too busy to sit on a jury or go to a funeral, but to go fishing, never.

It has probably been noticed by the readers of FOREST AND STREAM, that among anglers in general and bait-fishers in particular, one who is commonly successful is termed "lucky." His brothers will not credit him with doing harder work, with being more observing, more patient and persevering, and with being better prepared. No! it must be luck.

Johnnie and I were termed lucky fishermen, and as this reputation was earned by nothing more nor less than hard work, work that was a pleasure to us, I will give a description of how we fished, what we caught, and what we caught them with. (This may seem a little egotistical, but then I am open to criticism, and if the relation does no good, like the quack's bread pills, it will do no harm whether you take the whole or half the dose. And I might explain here that this is a bait-fishing story; fly-fishermen can turn over the leaf). Our rig was inexpensive, and consisted of a jointed rod each, a minnow pail, a minnow net, a box for grasshoppers, several long lines and a "ditty bag" that held miscellaneous paraphernalia beyond any description, and only to be conjured up by the brain of an experimenting angler. Our start was generally made in this way: I would drop in at Johnnie's shop and suggest that it was a good day to go fishing; he would cast his weather eye about, and if the weather was right he was ready to go (and it was always near enough right for him), or if it did not just suit him, he was willing to try it in the hope that it would be better before we got back. If I should drop in during the evening and remark that we had better go and try the next day, his answer would invariably be, "I was just thinking about it."

Our first move, then, was to get the bait. Always catch your own bait; therein lies half the pleasure of fishing. When we took a day for fishing, one-half was spent in catching bait and the other half in catching fish, and it would be hard to tell which half of the day gave us the most pleasure. Certain it was that by catching our own bait we got just what we wanted, and would catch more fish in half a day with good bait than in a whole day with a poorer quality. And in this matter of bait, to my mind, lies the whole secret of success. Fish are always hungry (or curious), but they cannot always be tempted by the same morsel; therefore, when a half day was spent in securing the necessary bait, it was not in vain. We would start out with our minnow net and pail, and in following up the brook where we caught the finest minnows, now and then we came across a crayfish of just the right age, or perchance a burdock patch where nice yellow grasshoppers were to be found, or, in some widening of the stream which formed a marshy spot, we stop for a few of the fat, speckled frogs that "Kingfisher" lays in such a store of; and now we come to a cow stable, with its roof of old, weather-beaten boards sloping toward the brook, where we add to our variety the ugly helgramite. Do we stop here? No. Unless we include the angle worm, which all good anglers know how to capture, or the white grub of the rotten log, which is sometimes a very good bait, our variety is not complete; but we go on, interested and fascinated by the sport, ever looking for choicer minnows, fatter frogs or softer-shelled crayfish, until our appetite or the whistle on the village shop reminds us that half the day is gone.

Ah, what happy hours have we spent in following up some winding brook, now watching a kingfisher dive and bring up a redfin that we knew would be worth a four-pound bass, or may be startling a blue heron just in the act of gobbling up the very frog we had come a mile and a half to capture; now wondering why we did not bring the rifle along, for there sits a woodchuck on yonder high bank, just ready to turn a handspring and disappear. Would we have taken his life? I don't know; it was a beautiful shot. It is well we left the gun at home, for now we surprise a gray squirrel that has come a long way from home to get a choice ear of green corn, too early our little friend for us and the corn, but you can scamper up that tree yonder by the fence and bark your defiance at us, we may see you later. And so we wander on, enjoying the scenery, the potpourri by the birds and beetles and frogs, and ever and anon finding some new

study in nature to interest us. But we have caught our bait and now we will go fishing.

It is just after noon, the breeze has gone down, the lake is calm, and the sun pours down what seems to us an unnecessary amount of heat. We will pull to our favorite bass ground, and as it is nearly two miles, we drop in a spoon, hook and troll—oftentimes we catch some very fine pickerel on this course—but it is too still to-day; we reach the bass ground without a strike. If we had a day before us we would go ashore and wait for a breeze to spring up, but as the day is fast going, we decide to try the only method by which we have been successful in still water. We each prepare two lines of about forty yards, one for each rod, and the others to be used as hand lines; we bait them all differently, Johnnie uses a minnow for his rod and a crayfish for his hand line, while I put a tempting grasshopper on my rod line and a frog on the hand line (we have when at anchor had out as high as six kinds of bait in this manner). Being all baited up we cast our lures with a splash on the unruffled surface of the lake, and as they sink I take up the oars, while John plays out the lines until we have given out from eighty to one hundred feet of each line, then sculling with one oar I keep up a drifting motion until the whole length of the bass ground is covered, when changing the course of the boat we scull back again.

We are drifting along slowly, my one hand working the oar, the other holding the rod which I have lazily let rest on the gunwale of the boat; we are talking of some scheme whereby we can make money enough in the winter to allow us to fish all summer, when, just as we have the idea about perfected, zip, goes Johnnie's hand line, he drops his rod and before the slack is quite gone, brings up Mr. Bass with a suddenness that gives him to understand that he has important business on hand; and now for a settlement, about 100 feet of line out and a stubborn fish at each end, the line comes and goes, the fish tries the air without success, he goes to the bottom, but there are no weeds here, now he tires, and slowly but stubbornly comes in a zig-zag course to the boat, one rush to go under, he is balked, and before he can rally for another I have the landing net under him. We weigh him, four pounds and a half. Johnnie declares it is the smallest one he has ever caught on a crayfish. While bass do not take crayfish as freely as most other kinds of bait I have never known of a small one being caught when they were used; the same I think may be said of the helgramite.

I now take in my frog and substitute a crayfish. Drifting on, I hook and land a two-and-a-half-pounder on my grasshopper; out goes another 'hopper, and in less time than it takes to tell it, I hook another bass of about three pounds. Now we bait all our hooks with 'hoppers and the fun begins. The fish are evidently near the bottom, for our bait must drag before they will bite. We catch quite a number in a very short time, and have great sport; but suddenly a breeze springs up and there is not another bite. We fish in this way a long while hoping for just one more big one, but they are either off on this bait or have left the bottom, so we finally anchor and change off to minnows. To shorten our lines and bait up takes a few moments, and by the time we are rigged again the anchor rope is taut and everything nicely settled. We cast, using the large brook reelin, without sinker, thus giving the minnows a chance to roam at their own sweet wills, and with nothing to hold them down they will take advantage of the opportunity. We do not have to wait long before the bass are biting. We pull them in lively, not taking time to weigh them on the old spring balances, being content to allow a guess to go as fisherman's weight, and here we stay completely absorbed in the sport till the sun is far down behind the hills, only thinking of the present, ever waiting for one more "bite" till we are reminded that it is getting dark, and although the bass are still biting, we pull up anchor, light our pipes for a smoke of satisfaction, and slowly row down the lake as the moon peeps o'er the hills, and glistens on the leaves of the vineyards that are already dampened with the evening dew.

It is late when we get home, but there is one thing more to be done that will put the finishing touches on a day's glorious sport; we are tired, but it refreshes us to receive the thanks and compliments from our friends as we distribute the fish among them. And how much better we all feel to know that the fish did not cost their weight in gold, but were only the fruits of a day well spent. RAVELSTONE.

LANSING, Mich.

MAINE ANGLING.

ONE'S annual spring trip to the Maine trout waters is fraught with interest, especially if he be a veteran. In the first place, nature has put on a new coat and the waters are deep—the angler must be there to see. But alas, the march of improvement! It is hardly worthy of the name in a State where the woods and waters, just as nature left them, are worth far more in dollars and cents even than the improved—what shall we call it?—can ever possibly be. But civilization marches on, and handsome Swiss cottages are springing up where only a dozen years ago the writer considered himself out of the reach of anything but wilderness or possibly a brother sportsman. But some points are gained if romantic uncivilization is lost. The fishing grounds are more quickly reached, and for less money. A box of lemons and a fresh roast can be had in camp where salt pork and hardtack had to answer formerly. Ladies can also find the retreat, and it is more of a joy to them than to their husbands and brothers, while they gladden by their presence. A good shingled roof and a cook stove now take the place of the dripping tent and the smoky camp-fire. Since the fishing is nearly as good—propagation and protection be praised—we will not complain.

But the glorious good time of our party of seven—three ladies and four gentlemen—must be passed over for a future article, while a few practical observations are taken up. In the first place fly-fishing in the Androscoggin lakes and ponds is again very late. Next to nothing had been done with the fly in Mooselucmaguntic or Richardson lakes up to June the 20th, and in a few of the adjoining ponds and streams the trout had just begun to rise. Up to that time also fly-fishing had been very poor in Tim Pond and Seven Ponds. But so much the better; the fishing will be good later on. On the other hand "the trolling has never been better." This is the common remark of old visitants. The number of trout has been great; the size has not been small by any means, but the nine and ten-pounders have been fewer than last year. Not more than three trout which would go above eight and a half pounds have yet been taken from the Androscoggin waters this year. The crowds of sportsmen have not been less—on the contrary, rather increased—but the giant trout have not been hooked. But fish weighing four, five and six pounds have been plenty.

How about those landlocked salmon? Still they do not appear. They have been a long time in Rangeley, Moosehucmaguntic and Richardson lakes, but all the fish of that description taken from those lakes this spring can be numbered on the fingers of one hand without the thumb. Are they a success? It is too bad to find one word of fault with the good work of the Maine Commissioners, but would not the same number of brook trout put into those waters have made a much better showing than the landlocked salmon have done? The *Salmo fontinalis* is certainly a grand success in those waters natural to them; the trout of the world. Who can say as much of the landlocks? In the Sebago waters and the Schoodics, their natural home, are they as much of a success as the red spot trout of the Androscoggin? In the Sebago waters two or three weeks sport of trolling and the landlocks are done for the season. Who has ever caught one there with the fly afterward? Where would all the late fly-fishing be if all the red spots were changed to landlocks?

The last observation noted on our trip must be the first one brought to our notice. It came with a sing and a stab. It meant blood every time. Cruel was it? Yes, our only weapons of defense were tar and a smudge. It is the common remark of the trout fishermen that mosquitoes are thicker than ever this season. But the black fly is nowhere. He gave us no trouble at all. Old guides and stagers at the Maine lakes say that black flies are growing hopefully less. One sportsman is of the opinion that the mosquitoes have eaten them all. BOSTON.

DRUM FISHING AT BAYSIDE.

LATE in the season last August, Matt Quay caught sixteen drumfish in one day at Atlantic City, but they don't often bite with that degree of freedom. Early in June the best fishermen at Bayside, Cape May county, N. J., sent a telegram that the drum had begun to bite. We lost no time in overhauling our lines and sharpening our Limerick hooks, having little doubt that our double plaited linen lines, which had stood the test of time for three years, would hold the biggest drum in the bay. We reckoned wrong, as sequel demonstrated. Our guide, counselor and friend was Bill Chambers, who knew every oyster bed at Fishing Creek, every drum resort along the bay shore, and had agreed to pilot us out, guaranteeing that we would catch some big fish before we got home.

We drove behind Chambers's spanking bays till we arrived at his neighbor's living nearest Fishing Creek, who, though rich, did not scorn to scoop in fifty cents as "hon orarium" for the use of his boat for half a day. When the dudes want any drumfish we advise them to buy them at Fulton Market, for it requires courage, endurance, and the real inspiration of a gamy fisherman to bear the pains and penalties attached to drum fishing in the bay. Catching black drum in the surf is but child's play to the work we did last week. Get your sand fleas at Atlantic City, coil your Cuttyhunk line in a small basket, wade three feet deep in the surf, give your line a whirl over your head till it goes beyond the breakers, say fifty feet, and if you are in luck you have three or four big drum in one hour.

Our party consisted of Dr. R., a young physician of Philadelphia, St. John, a retired Cape May gentleman, his brother, the writer, and Bill Chambers and son. As I felt perfectly sure that the young Doctor, who never saw a drum and who possessed enthusiasm "added to a skipping spirit," would overturn his boat the first drumfish he fastened on, I quietly whispered to Chambers that he and I could take the Jersey Quaker's boat, while Doc, St. John and his brother could take the second boat with Chambers, Jr. I am now describing the events which filled our measure of fun for the third day. For the first two days the Doctor sang:

"Oh! wake and call me early, Bill,
For I'm to be king of the drum."

But the Doctor knew immensely more about pills, potions and gallipots than he did about drum, and went home both nights, as did the writer, both being living embodiments of fisherman's luck; the Doctor with a woe-begone countenance looked at Bill, and Bill looked at Doc exclaiming: "You look like two of my sick turkeys." The point was well taken, for we had sat in the bottom of a pine skiff half a mile from shore for seven hours, with a nor'easter in our faces, and "not a drum was heard nor a funeral note." We wrapped our bare feet in Chambers's blanket, for we had to wade out across the oyster beds and push the boat into deep water, and could not get our shoes on.

But albeit the festive Doctor R. was wet to the skin with the spray of the nor'easter, and his shoes and stockings were full of sand, when he reached Chambers's hospitable house and devoured about seven fried eggs, a modicum of ham, and twelve "chunks of butter thickly spread on corresponding chunks of bread," he swore that a drumming he would go next day, if so be it he could crawl out of bed. I confess I was ready to do what the Jerseymen call "quank," *i. e.*, give out; but the sight of the "Doc" at 5:30 A. M. as fresh as a daisy and as lusty as a speckled trout, kindled up my sinking spirits. After more fried eggs, more ham (cured by Chambers himself; and it was good, for Doc seemed ready to devour the whole hog) after plenty of ripe strawberries smothered in Jersey cream, we found the tide did not suit for drum biting till 3 P. M. We were at Cold Spring, only two miles from Cape May city, so the bays were hitched up again and at 9 A. M. we had another breakfast, at Charley Williams's; this time fried eels done to a turn, soft-shell crabs, and coffee "the color of Sammy Bettle's coat," which is the Jersey recipe for good coffee.

By this time the Doctor had purchased one fishing line and six big hooks, and began to exclaim with the late Patrick Henry, "Give me Liberty—and a drumfish—or give me death." Here our party was increased by the St. John brothers, and the last day we struck for Town Bank. There was not a breath of east wind anywhere, for the day the drumfish bite is when the wind is southwesterly. At 4 o'clock we had the killick out, and we were riding at anchor on Delaware Bay, on as calm a day as ever floated a ship. Our bait was fresh clams tied to the hook by wrapping the bait carefully with pack thread around our hooks. St. John and his youthful brother did not know a drumfish from a North Sea whale. As he sat in the stern of the fishing skiff he felt something running away with his line. He held on like grim death to a defunct African. As the line began to cut his fingers he called loudly to his brother, "Harry, I say, catch on and help me haul in this whale." Both pulled hand over hand, without giving an inch. The line was well-seasoned, but when two stalwart youths are pulling at one end and a ninety pound drum at the other, something is bound to yield. It wasn't the drum, for the line parted just above the sinker; the drum started for the deep sea with two books in his mouth, and the two big St. John boys wiped up the bottom of the boat where they fell. Bret Harte's hero, struck in the pit of the stomach with a piece of red sandstone, looked like a gladiator compared with the crest-fallen St. John brothers. They took a back seat, for there were no spare lines, no spare hooks. The contingency of my linen line giving way had not been considered.

Half past 4 P. M., Dr. R. made the welkin ring with the gladsome shout "I've got him, I have, and it is a whopper."

"Give me an end of your line," said the elder St. John.

"Not if the court understand itself, and she think she do," answered Dr. R., as he played his fish like a veteran observer and an old-time angler. He kept a pressure of twenty-five pounds on the line, and after twenty minutes' skillful play slowly essayed to lead Mr. Drum toward the boat in out of the wet. But the fish was not done with the fun yet. It made a wild dash toward the Cape May lighthouse, and the young Esculapius from Eleventh and Vine let go 100 feet of line, still eager to view the drum face to face. Chambers, Jr., said: "Now pull" "Easy over the stones," said the now confident son of Galen. As the drum, pretty well tired out, reached the side of the boat, the happy doctor leaned over excitedly—both scared, fish and pill-vender—and as Esculapius's hand slipped up toward the drum's gills, he gave one flirt of his tail, filling Robbin's eyes with water and breaking the hook off short in his mouth. When the famous painter limned the face of a father at the hanging of his own son, he hid the parent's face. So I hide from the gaze of this cross world the youthful and festive sport's feelings, as a big drum (fully 90 pounds) started off on a run toward Barnegat. The doctor began to hum, "Come ye disconsolate," and "I never loved a dear gazelle, but," etc.

But the fishing fates became more merciful, Dr. Robbins bagged two big drums in the next hour, and as the sun went down the sea became peaceful as a child on its mother's breast. Far away toward the Delaware Breakwater the white sails of commerce dotted the surface of the sea like peaceful banners, and the very air had a human tenderness of feeling. In the west the sun was wooed by the crimson clouds, fringed with fire, the dying God of day looking like some amarous Cleopatra in the embrace of an ardent Antony. The scene was beautiful enough for the pencil of Millais or the brush of Hamilton. But our artists in drums were still carrying on the old business.

Old man Chambers, my "pard," hauled in a 70-pounder, and "quicker'n a cat can wink its eye." I felt a semi sheepshead bite, something slowly masticating my fresh clam. I waited one minute by the clock in my pocket, and when my Jonah of a clam had got down into the whale's belly of the drum, I gave a twist to my wrist, and Monsieur Le Drumfish was securely hooked. Away he'd run seventy-five feet and lash the water with his tail like a Florida alligator. All in vain. I gave him the butt (as the trout-pigs say) for a full half hour; then he turned on his side. My right hand was in his gills, and in one second Mr. Drum flopped into the boat, dropping with that deep and welcome sound to the fisher's ear—a sound like the diapason of a big bass drum. My fish pulled the scales at ninety-two pounds. Dr. Robbins got three of good size. He was "high hook" as to numbers, the writer as to weight. We arrived in Cape May, in an open wagon full of drum, at 10 P. M., "tired now and sleepy too." St. John says he will "copper the ace" and play the deuce with the big fish the next time, and has ordered two drum lines, the latter end of which is two feet of fine copper wire, strong enough to hold a North Sea whale. Dr. Robbins sent one of his big drum to Hon. Samuel Randall and one to Hon. Mr. McMullen, and when last seen the hero of the Bayside, Dr. R., was softly singing—

"Am I a man or am I mouse,
And do I run this house?"

Chambers, Jr., says the last time the Doctor sang this song he was trying to lift his ninety-pounder in the boat, but said *sotto voce*: "The drum don't lift worth a cent." And if he (Chambers) hadn't got Esculapius by the coat tail, the latter would now be a "moist body" floating out to the sea. The writer of this, whose duty it was to aid Chambers to get the dory off the mussel shoals and oyster beds, and who with bare feet, blistered by the sun, was compelled to lie abed for two days annointing his ankles and feet with vaseline, and yet goeth lame, but joyous, meditated long and well as to whether three days' work after 420 pounds of drum could be summed up in a brief *cui bono*, is satisfied with his sport. He renewed his youth like the eagle and now riseth refreshed like a giant who tasteth new wine. He goeth again after drum next Wednesday. I. M. S.

CAMDEN, N. J., June 22.

THAT PECULIAR TWITCH.

I HAPPENED to spend one of my former vacations with a friend up in Orange county, N. Y., where there was excellent pickerel and fair black bass fishing.

At the house where we were staying we had the good fortune to make the acquaintance of a gentleman from New York, who, although somewhat of a crank, proved a very jolly companion. At the supper table to hear him talk you would think he was a wonderful man, and in fact he was. His son was to have been up on the afternoon train, but as he failed to put in an appearance, the old gent, whom I shall call Mr. Pike, asked me if I would go trolling with him in the morning. As I was very anxious to go fishing, I willingly complied, but I had my doubts as to whether we would get back without a ducking, as he weighed about 250 pounds, and the boat was small and narrow. About dark, however, his son arrived, so I didn't go. All that evening he was giving it to us strong about pickerel fishing, and "that peculiar twitch" they give, but to tell the truth I believe he never caught a pickerel in his life. That evening before retiring I asked Mr. Pike if he had the necessary spoon, line, etc. He gave me to understand that he had, and said all genuine fishermen carry their own tackle. After they had retired, my friend, who is an expert pickerel fisher, said we would go trolling after they returned, and he would bet that we would catch more fish than they.

Early next morning long before daylight there was a terrific knock at our door, and on opening it who should be there but Mr. Pike. He said he was sorry he had disturbed us, but he couldn't find his spoon and line, and would like to borrow ours. I unstrapped the bag and gave them to him, and asked if there was anything else. As he assured us he had a full supply, telling us we would have pickerel for breakfast, he left, but in about five minutes he returned, this time to borrow some snelled hooks. Now, this made us kind of mad, and we resolved to get square with him. When we went down to breakfast we found Mr. Pike and his son minus the pickerel, trolling spoon and fifteen yards of line. Before we were fairly in the room Mr. Pike started

to tell all hands of the monstrous big pickerel he had hooked that morning. He said: "Boys, there is a tremendous big pickerel down in that pond and I'm afraid there isn't any cord around these diggings that will hold him. He has got your trolling spoon in his jaw and about fifteen yards of line. You see, S. was rowing and I was trolling, and had just let out a lot of line when I felt 'that peculiar twitch' which only a pickerel can give, so I gave a tremendous jerk and then I knew I had on a big one, so I told S. to row quick while I hauled in, but to this the pickerel seemed to object, as I could hardly get in any line, so giving the line an extra strong pull to move the tramp it parted. I think the line must have been rotten."

During this ghost story my friend who sat opposite me at the table kept giving me the wink. We knew very well it wasn't a pickerel that parted that line, for it was strong enough to hold the two largest pickerel in the pond, so when the old gent said it was rotten it got us excited, but the old fellow took it all back and said he would send down to the city for a new spoon and line. We got the location where he lost the spoon and started out. We had been fishing about fifteen minutes when something struck the spoon, or rather the spoon struck something, and held fast. We backed down and before we could see the spoon we saw another line quite a distance below the surface, running parallel with ours. Of course we got excited, and when we got a short distance further we were somewhat surprised to find on an old pole about a foot under water our spoon and the one Mr. Pike lost that morning securely hooked a short distance below ours. Now, here was a chance to get square. As the spoon was securely fastened in the pole we broke off the upper part of it with the hooks in, and after trolling about an hour and catching six pickerel and one bass we started for home. It was just dinner time and we left our traps out in the hall, and as we entered the room the first question was if we had caught that big pickerel. My friend said we had, and that we would show it after dinner. This would not do, however, as most of them thought he might be giving them a fish story; so being hard pressed he related how we were trolling when he felt "that peculiar twitch," and after a good deal of work got it alongside of the boat, and found the spoon which Mr. Pike had lost, not six inches from where ours had stuck, and my friend skipped out in the hall (Mr. Pike saying in the meantime that he could always tell "that peculiar twitch"), and brought in the pole with the spoon securely fastened in it.

I wish you could have seen "that peculiar twitch" fisherman. I think he hardly knew whether he was in Orange county or in Africa, but after that we never heard any more about pickerel fishing or "that peculiar twitch."

GUS. FERON.

LABRADOR TROUT.—In an article on the Labrador Fisheries in the Bulletin of the United States Fish Commission, Mr. W. A. Stearns says: "Trout are caught at all seasons, from early in the spring, when the ice breaks up, to late in the fall. They are most abundant just before it is high tide: and their favorite time is from 2 to 4 in the afternoon of a rather windy and lowering day. They at all times seem to prefer cloudy weather in which to be about, and when the wind blows lightly, ruffling the water, and are then caught in greater abundance than at any other time. In some of the bays the trout are so abundant that you can cast a double hooked line and generally catch a fish almost instantly on each hook. I have in mind a locality called Baie Les Roches, where a small stream comes down into a sort of bay or arm of the sea, and where, in 1875, a party of five of us succeeded in taking with hook and line some 938 fish, large and small, fishing only part of two days. The fish bit at the red and gray flies, and as fast as we could haul them in. About 100 of these would weigh less than half a pound each, the majority between 1 and 2 pounds, as many as 75 of them 3 pounds apiece, and the largest weighed 4½ pounds. There seems to be three or four varieties or species of trout in these regions, but they have not all as yet been positively identified. They are called here salmon trout, spotted and gray trout, sea trout, and another species, if indeed it be a valid one, called by the people the mud trout. Of these three or four, the sea and spotted and gray trout alone appear extensively as articles of commerce. Trout are caught all along the coast from Mingau to Blanc Sablon, if not to Belle Isle itself. Anywhere about the mouths of small streams these fish are abundant. The large streams are usually so completely filled with salmon nets that trout nets are of no account whatever. In the small places even, I have known a small boy hardly ten years old to catch from half a barrel to a barrel and a half of trout in a season with one or two small nets only, thus earning from $15 to $20 on this alone. The fish, like all other catches, are taken by the traders at a nominal price in exchange for food and articles of necessity, and sold in Quebec as grade 1, 2 or 3, according to quality, as seen by examination of the barrels by the inspection officer."

MAINE SALMON.—Yesterday forenoon E. M. Hersey landed a fine salmon and F. W. Ayer two with fly hooks. This makes half a dozen caught within a few days by Mr. Ayer, who was fortunate enough to catch the first salmon with a fly on our river. He has thoroughly demonstrated the fact that salmon fishing with fly and rod is as good on this river as on any river in the world. Mr. Ayer, together with all other "lovers of the gentle art," desires to extend hearty thanks to our able and enterprising Fish Commissioners, Messrs. Stilwell and Stanley, for the noble work they have done in stocking our rivers and ponds with game fish. Had others been present yesterday afternoon with rod and line, fifteen salmon at least might have been taken. Mr. Ayer has demonstrated the fact that there is no better place in the world for salmon fishing than in the waters of our own noble Penobscot and below the dam in our city. Ex-President Arthur, who is now fishing at Restigouche, would do well to try his luck and skill here.—*Bangor (Me.) Whig, June 27.*

"SKINNED STREAM."—*Editor Forest and Stream:* We have read the criticism of "Litchfield County Farmer" in FOREST AND STREAM of last week. That good man and myself do not differ in respect to protection for farmer and fish. We only wish that all men were as ready as he is to enforce the laws. All we ask of him, though, is to remember that when "Stillaboy" fished Skinned Stream it was neither against the law nor did he take the fingerlings. And we would add that should he or any other man ever find "Stillaboy" violating any game law, he would deserve all the threatenings of "Farmer's" wrath.—STILLABOY.

"CAMPS OF THE KINGFISHERS" continued in next issue.

THE MOST KILLING FLY.—*Editor Forest and Stream:* In your issue of June 4 an article by "Sport" recommends the black prince fly for Colorado waters. I am unable to find the fly in Orvis or Conroy's selections of flies and would much like to correspond with "Sport" unless you can tell me where I would find said fly. I have fished Colorado waters for years and agree with him and "Cyrtonyx" that the coachman is the killer.—C. E. HART. [We do not know the black prince, perhaps "Sport" will give us a description of it.—ED.]

BERKSHIRE HILLS.—New Marlboro, Mass., June 17.—Angling reported very good here this season. Expect to wet my line in a trout stream this afternoon. The Berkshire people have been persistently stocking their streams, and more particularly their lakes, with Sebago salmon for seven or eight years past, but no mature fish have ever been taken. Now the lessees of Lake Buel propose to keep their lot of fry in a prepared pond for three years before turning into the lake, caring for and feeding them meanwhile. A good plan. —P.

PILLSBURY, Minn., June 27.—Last week Willie Bain, a lad of nine years, caught a wall-eyed pike weighing eleven pounds. The same day, Clark Eldred captured one which raised the beam at exactly twelve pounds. Leon Honde, A. P. McRae and several others have just returned from a three days' camp at Long Lake. They report a magnificent catch and a general good time.—J. F. LOCKE.

NORTH CAROLINA QUAIL.—The prospect for Bob White was never better. I heard the same report during a recent visit to my kinsman M., who resides in Goochland county, Virginia.—WELLS (Rockingham, N. C., June 26).

THE NEW YORK OYSTER COMMISSION.

WE have the first "Report of the Commissioner of Fisheries of the State of New York, in charge of the Oyster Investigation." It is an octavo of 137 pages and seven plates. The law authorizing the work provided for an investigation in three particulars: As to the decrease of oysters; as to the enemies of oysters; and as to the means of increasing the supply of oysters in our State waters. In each of these particulars the investigation to be of value requires thorough and careful work, which demands time. So far the time for the investigation has been a little more than six months, consequently very much that it would have been desirable to have done has had to be left undone, and many localities have had to be left unvisited. During this short time the Commissioner accomplished much in the way of getting information touching upon the aims of the investigation from as many of those localities which are fairly typical oyster regions and from as many individuals who are engaged in practical oyster work as was possible, so that the results should at least serve as a basis for further research. The time did not permit nor the means allow, a systematic survey of the oyster grounds of the State, which may be done hereafter, but a superficial inspection of the oyster territory was made and much information gained.

The work covered a large portion of the western part of Long Island and the vicinity of New York city, but did not extend east of Patchogue on the south side, nor of Port Jefferson on the north side of Long Island. Near City Island and in the Spuyten Duyvil Creek were formerly valuable oyster grounds, and there are still natural beds which produce some oysters by reason of the continual working of the beds favoring a catch of spat on the clean shells, yet this continual working prevents the oysters from attaining to any respectable size, and, as there appears to be no close season recognized, the dredging and tonging continuing right along through the summer and fall months, for "seed," as it is said, thousands upon thousands, perhaps millions upon millions, of the newly-attached young, and the young in all the stages of growth when the shell is thin and easily crushed, must inevitably be destroyed.

As might be expected this greedy and persistent working of the oyster territory has had a marked effect in diminishing the oyster areas, and in many places tracts that formerly were flourishing beds of native oysters, have, by this means, been completely ravished of their inhabitants. As a rule, the natural oyster beds in the neighborhood of all large oyster centers have been so depleted that practically they have ceased to be beds, and after thus being despoiled have been claimed as vacant, or not natural oyster territory, staked in, and appropriated for planting purposes, since any land upon which a person cannot get enough oysters to constitute a good day's work is generally considered by the oystermen as not natural oyster territory, and can be claimed for planted beds by the first person who finds and wishes to hold it, and in very many, perhaps the majority of cases, these exhausted localities, which have been claimed and planted, are now highly productive properties. Just how much of the land along the north shore of the Sound, which was originally oyster-bearing territory, and which having been exhausted, is now "planted" property, it is impossible at the present time to say, but probably by far the larger portion of the land in the immediate vicinity of City Island which is now used as oyster producing territory, belongs to the class of exhausted, natural oyster lands. Not all of the exhausted land in this neighborhood, however, was depleted entirely by the working of the oystermen. Some has been the result of the increase of sediment and dirt in the water, such as the sewerage and refuse material floated from the cities of New York and Brooklyn, and the dirt caused by the increased working along the shores, which, lodging upon the oysters, forms a slimy or dirty coating to the shells and upon which no young can then attach themselves. The annual supply thus being cut off it did not take long to use up the adult oysters and so depopulate the bed. The sediment, which was sufficient to prevent the attachment of the "spat" and thus eventually cause the extinction of the beds, was not, however, of sufficient amount to prevent these localities from being excellent planting grounds; indeed the sediment and mud may have improved them in this respect, and accordingly they are to-day in excellent condition and produce great numbers of fine oysters for our markets. The localities of these old natural oyster grounds are not the only locations where planted beds are now found around City Island, for a large part of the soft bottom, upon which no oysters ever grew naturally, or at least with rare exceptions, is now planted, and the growth in most cases is fully equal, and in many cases superior, to that upon the old natural ground. The reason for this is that the tides which serve to bring the sediment in abundance, also bring plenty of that kind of food which the oysters need for their growth, and undoubtedly more food is found when there is plenty of sediment than when the water is very clear. The oyster business as a whole is therefore much greater than it was years ago, and this has been brought about by the extension of the planted lands and at the expense of the natural beds. Fifty or sixty years ago efforts were made in these waters to increase the supply of oysters by planting shells for the spat to attach themselves to, and about the same time the first stakes were stuck in the East River to mark off a bed for the purposes of planting. These were probably the earliest attempts in this country in the direction of what has become, through the increased and still increasing demands of customers, a gigantic industry, that is, the increase, by means of cultivation, of the supplies to be obtained from the natural grounds. And with the increase in the planted areas came greater demands upon the natural beds for seed and the consequent depletion of many of them. Up to the present time most of the seed used at City Island has been obtained from the natural beds near at hand, but it is becoming necessary for the oystermen to go further and further away each year for the required material to replant their beds, and soon it will be necessary to adopt some more certain method for getting seed, over and above what can be obtained from the natural beds, than by throwing down old shells either upon the old beds or upon new territory where they may become buried in the mud. Further than this no systematic efforts have ever been made at City Island to collect the spat. But in this direction thousands of bushels of shells, since the initiative step was taken, have been thrown overboard here and in other sections of New York waters, sometimes with excellent results, sometimes with no results at all. The fact is, few of the oystermen make a study of their business, as most farmers do of the demands of their farms, so as to introduce any improvements in their methods of work, or so as to enable them to explain, with some sort of reason, why their efforts are not more successful than they often are. They are content to follow in the old rut until some one more enterprising than the rest shows them the value of a new road, when they eagerly "follow their leaders" where they can see "any money in it."

Complaint is made of the dumping of the garbage and city refuse along the Sound as far as Execution Light, Portchester and Rye Beach, and it is thought if this could be stopped and proper care could be taken for the removal of the excess of old shells, and the preventing of over-dredging by a close season, and perhaps by a limit to the number of oysters which any one person could take from the beds per day, there seems no good reason why this bed should not be a fine source of supply, for the planted beds, at least, for years to come; but if it is not protected in some efficient manner, it hardly seems as if it could long be of any great value. Its location is entirely in its favor, and this is probably what has kept it in fair condition up to the present time. The oysters from the bed were mostly of fair size, but generally set in clusters much like the raccoon oysters of the South. Upon opening them they were found to be thin and watery and the flavor was not good, but as these oysters spawn very late, probably as late, if not later, than those of any other bed in New York waters, they would undoubtedly be of much better flavor, as well as in better condition, later in the year.

Most of the oysters in this part of the Sound and in the East River and the bays and inlets of the north shore of Long Island are not placed in fresh water to "tone down" their flavor. They are sometimes "drinked" in order to "fatten" them, but as a rule their flavor does not require that they should be freshened in order to suit the palates of the majority of those who consume these bivalves. Execution Light-House rock is worked by the oystermen from both sides of the Sound, and the oysters taken are either carried directly to market, or more commonly, planted in private beds for a short time, at least, before they are offered for sale. The number of oystermen who work here, and the number of oysters taken from this bed in the course of the year is large, but it would be difficult to make any definite estimate in either case from our present knowledge. On some of the shells taken from this bed there were a few "set," but it was too early to form any opinion as to what the set of the year might be. There were a few drills noticed among the oysters, and unquestionably the drills do a great deal of damage here, as well as on the other beds in the Sound, among the young "sets." No other enemies were found, although periwinkles are at times plenty, and star fishes are now and then very destructive, and more or less of them are gathered every season. The dredges used on this rock are large and weigh up to the limit allowed by law in the State.

The investigation, so far as it has now been carried on, has demonstrated beyond question that, with the exception of one section of our oyster territory, and in certain individual cases, the industry upon neither the natural nor the planted beds, is in as flourishing condition, or as well conducted as it should be, owing, in many cases, to bickerings and diverse workings among the local townspeople, and to a rather general effort or desire on the part of the oystermen to work more territory than can be well and systematically handled. Still, the investigation has also demonstrated that as a whole, the oyster industry, as carried on in the waters of our State, is of much greater scope than it was formerly, and is of constantly increasing importance, and that this extension of the boundaries of our oyster areas is due entirely to labor in the direction of private cultivation.

It is recommended that the Commissioner in charge of the Oyster Investigation be authorized to make a close season on the natural growth beds from the 15th day of July until the 1st day of October, of every year; to offer some reward for the capture of starfishes in quantities, and to be empowered with authority to compel the captains, or those in control of garbage boats, and of all other vessels, to comply with the laws in regard to dumping various commodities into our State waters, and some arrangement should be perfected with the New Jersey State authorities whereby the dumping of garbage, or the pouring of any deleterious substance into our State waters should be prevented, even to the absolute prohibition of the placing of any refuse material from any oil or sugar refinery into the waters at all. While the natural beds can thus be protected to a certain extent, that part of our oyster territory which is at present time occupied by private individuals for the purpose of cultivating oysters, and which has drawn so largely in the past and depends so much in the present upon our natural areas for its supplies, offers a somewhat perplexing problem for solution, since the requirements of the one are somewhat different from those of the other. There can be no question, however, but what every effort should be made to encourage and promote the oyster industry, as carried on by private enterprise, in the various sections of our State waters, but just what had better be done, is not so easy to determine.

The experiments in propagation were placed in charge of Prof. H. J. Rice, who established his headquarters on the grounds of the N. Y. Fish Commission at Cold Spring Harbor, where the facilities offered inducements. In his report to Commissioner Blackford Professor Rice says: "The State hatchery, which was formerly used as a mill, is located on the western side of the harbor, just south of the limits of the inner bay, and a short distance beyond the reach of the highest tides. It is admirably situated in every way for the purposes for which it is now employed. The hillside to the west and the surrounding land contain innumerable springs of clear, cold water, so that any desired number of fish ponds can be constructed with unfailing water supplies and the hatchery itself can be furnished to any desired extent from the same sources, consequently the producing power of the hatchery is only limited by the ability or desires of the Commissioners to make use of the facilities. Some of the State Fish Commissioners have long recognized the advantages offered by this locality, not only for the propagation of the fresh water fishes, but for the increase of those species found in the ocean, many of which have become quite scarce within the past decade or more upon many sections of our coast, and as it became more and more apparent that something ought to be done toward increasing the supply of salt water food fishes, and on account of the comparative ease with which the salt water from the inner bay could be intro-

duced into the hatchery at Cold Spring harbor, the Commissioners finally decided to add this branch of fishculture to those already in progress in the State, and in the fall of 1883 work was begun with this end in view. Two reservoirs were constructed; a large one, 115x215 feet in dimensions on the inner bay, and a small one about twenty feet square just above the hatchery. The large reservoir was surrounded on the water side by a solid stone wall backed by sand and gravel, and was so arranged with flood gates that the sea water at flood tide could enter and fill the reservoir to the depth of the rise of tide, about nine feet, but could escape only by means of a pipe which was laid from the reservoir to a well near the hatchery, from whence it was drawn by means of a small hot-air engine and forced into the small reservoir. From this small reservoir it could be drawn at pleasure for use in the hatchery. The water thus obtained was of a density of 1,020, and in order to take advantage of this supply for our experiments, it was decided to construct two receptacles, one a wooden tank, to be placed close to the hatchery and to receive the water direct from the small reservoir already mentioned, and one a small pond, to be dug out of the marsh at a short distance northeast of the hatchery and within high-water limits. This pond was to be so arranged that it could receive not only the outflow from the hatchery and tank, but be supplied with fresh sea water at each flood. Work was begun on them early in July, but owing to the difficulty of getting help and to the necessity of raising and strengthening the wall of the large salt water storage reservoir before it could be used, we were not able to begin our experiments until Aug. 12, or after the better portion of the breeding season had passed, and even then I was able to use only the tank, owing to the difficulties met with in constructing the small pond. The tank, which was placed on a firm foundation close to the south side of the hatchery, was twelve feet long, six feet wide and three feet deep. It was made of thoroughly seasoned two-inch pine plank, rabbeted and nailed together, with the joints set in white lead and battened upon the inside, and it was firmly yoked together with two strong frames which were placed around it at one-third the distance from either end. The top was open and the inside and outside were coated with three layers of coal tar, which I found to be very good to protect the wood of the tank from the effects of the water, but it should not have been used, as it caused the wood to absorb entirely too much heat, and in this manner very seriously affect the temperature of the water upon the inside, and to obviate this it became necessary to sheath the tank with a covering of undressed lumber and also to build a rude roof above it."

Shells were suspended on strings in the tank, and the eggs were first placed in it on Aug. 13, with the thermometer at 67 deg. in the morning. Two days later it was 74, but difficulty was experienced in keeping an even temperature, and while the eggs hatched the embryos did not live. Sediment came in the pipes, and it was decided to build a small pond twenty-five feet square in the meadow. Here fresh-water springs were struck, and the work was delayed until the spawning season was about over.

He further says: "Everything seemed unfavorable to success; we did not commence work until the breeding season was nearly over and it was difficult to get spawn; the weather was bad, with irregular and generally low temperature; and then the leaking from the marsh into the pipe capped the climax. But I do not think that the lack of success was of such a character as to discourage us from trying again. It would seem as if the experience gained this season would enable us perhaps to be successful the next time, provided we commence early enough to have everything in readiness for work during the spawning season. And I would advise that an experimental pond, upon a larger scale than that of the past season, be made down near the large salt-water reservoir, and that the water be used directly from the reservoir, instead of after having passed through the pipe connecting the reservoir with the hatchery. This will enable us to get rid of all leakage from the marsh as well as dispense with the use of the engine, and we can obtain plenty of water to enable us to obtain an even temperature for our young oysters. Three things appear to be indispensable to successful oyster breeding, a moderately high and even temperature and clear water, and it can hardly be doubted that the varying set that takes place along our shores during the different seasons is due, in a very large degree, to variations in these three particulars."

The report is a valuable contribution to our oyster literature, and the chapter on the "Natural History" and "Habits of the Oyster," as well as the plates, makes it exceedingly interesting.

CANADIAN FISHCULTURE.

WE have supplement No. 2 to the first annual report of the Department of Fisheries, containing the Superintendent's report on fish breeding in the Dominion of Canada for 1884. There are now twelve establishments for the propagation of fish by artificial methods in operation in the several Provinces of the Dominion. There were not as many eggs taken as in 1883, because of the less number of parent salmon captured. The number of fry bred at the different hatcheries was:

Sydney, Cape Breton, salmon	1,000,000
Bedford, Nova Scotia, salmon	1,000,000
Dunk River, Prince Edward's Island, salmon	1,000,000
St. John, New Brunswick, salmon	811,000
Mirimichi, New Brunswick, salmon	795,000
Restigouche, Quebec, salmon	940,000
Gaspé, Quebec, salmon	859,000
Tadoussac, Quebec, salmon	985,000
Magog, Quebec, lake trout	100,000
Newcastle, Ontario, lake trout	5,150,000
Newcastle, Ontario, brook trout	50,000
Newcastle, Ontario, whitefish	3,500,000
Newcastle, Ontario, black bass	100,000
Sandwich, Ontario, whitefish	27,000,000
Sandwich, Ontario, pickerel	10,000,000
Total of all kinds	53,143,000

The "pickerel" referred to is the doré or pike-perch, *Stizostedium*.

The new hatchery on the Frazer River, British Columbia, built by Mr. Thomas Mowat, in 1883, gives promise of being of great value. The quinnat and suckeye salmons have been bred there to the extent of 3,000,000. Reports from all the hatcheries are given in detail and a colored map giving the position of hatcheries, places where fry were deposited, etc., accompanies the report.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. B. W., New York.—You will find there, in season, bay birds and ducks.

A. M.—Please tell me what bird the blue chableur is? A gentleman in England has asked me to send him a few skins for feathers for salmon flies. Is the bird the American jay? Ans. Probably the blue jay (*Cyanurus cristatus*) is meant.

W. L. A.—Can you or some of your subscribers inform me how to catch crayfish? There are enough of them around here, and I wish to get some for bass bait, but don't know how to catch them. Ans. Crayfish are usually taken in pots like lobster pots. They are made of wicker with a funnel opening and baited. Nail kegs with a funnel of stocking leg have been used.

EAGLE, Missoula, M. T.—1. I contend that the eagles in this Territory feed upon dead horses, cattle, etc., when pressed by hunger. A friend of mine thinks that the eagle will not eat anything except what he kills. 2. What is the proper name of our Rocky Mountain eagle locally called black eagle? Ans. 1. Your friend is quite wrong and you are right. 2. *Aquila chrysaetus*, the golden eagle. The bald eagle occurs in the Rocky Mountains in the neighborhood of the Yellowstone Lake or indeed may be found near any very large body of water, but the common eagle of the mountains is the golden eagle.

R. O. A., New York.—Is it lawful under the recently enacted game laws of this State to keep brook trout under six inches in length, and if unlawful, does the act apply to Queens and Suffolk counties? Ans. It is unlawful to keep or kill brook trout under six inches long anywhere in the State. The exemption of Queens and Suffolk counties only applies to the date of capture. See law published in full in our issue of April 23.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association, John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2450.**

CONCERNING DOGS AND RECORDS.

Editor Forest and Stream:

Pray do not head this letter "The Pittsburgh Piece of Paper," and please grant me a new lease of life, that I may settle up monthly accounts. My last contribution to your esteemed columns contained so many stinging facts that Mr. Mortimer required several weeks to dodge them, but I see he puts in the old plea—"busy." It takes about as long to produce a Mortimer letter as it does to erect a Bartholdi pedestal, and when the work is completed there are indications that the "committee" have had a hand in the generous enterprise. The six feet and four inches long owner of a rather good-looking bullterrier has just called upon me, and wishes me to say that in his opinion Mr. Mortimer's latest per-"version" is a Baby-long production, "crooked fore and aft." In remaining silent for a while I hoped that my friends would gather up the fragments of their not very sweet tempers. The calendar is so full of errors, and savors so much of blackguardism that I should have been justified in discarding it, but "peace at any price" never was my policy. A clear statement of facts is what dog lovers need, and those who cannot face the music should step down and out.

Why does the owner of Rory O'More try to ape that funny fellow "Lillibulero?" Imitations are not desirable, so let the witty Irishman hatch his own little jokes, and patent them as well, if he thinks fit. All of us cannot be "Lillibuleros" and "Porcupines," neither can the ignorant rise to the level of the educated. Blackguards are so numerous, and are so frequently dubbed gentlemen (?) that "Lillibulero" thinks it best to give gentleman a distinguishing name, and he fixes upon "man" as the nearest approach to "gentleman." The great judge of mastiffs struck a sweet chord and one that is certain to be resounded. The mistake of Rory O'More's master was in not advising the public before he stepped into "Lillibulero's" boat, which, by the way, is only big enough for one. Several uninitiated persons jumped at the conclusion that the Albany writer was in earnest when he said a "pop bottle" is a scholar and a rogue is a gentleman. If the individual with two skulls only had known what the Rory O'More boomer said about him at the Boston show, he never would have allowed him to join the shattered ranks of the aristocratic and gallant "Kill Mason" regiment. Neither would the Albany man have been allowed a seat in the syn—agogue had the gentleman with two skulls heard his not very complimentary remarks about the chaplain of the regiment—the Bishop of Canterbury (Conn.). Duplicity, the Rory O'More man should be told, is no sign of good breeding, and *bon sang ne peut mentir*. The gentleman says he has made Irish setters a specialty; how would it be to sell out and make good manners a specialty. They would stand him in better stead than a thousand little Rory O'Mores. He made his debut in 1877, and since then he has bred Rory O'More II., the fortunate recipient of undeserved honors at the last New York show. What a record! In a recent letter to a Western paper he said he never heard of me as an owner of dogs "outside of the pointer, which, with one or two other breeds of non-sporting dogs alone, seemed to be his [my] specialty." Does he think I owned any dogs inside the pointer, and does he firmly believe that the pointer is a non-sporting dog? The record proves that I owned and exhibited Irish and other setters before the Albany novice made his debut, and that I have won a special prize "for the best sporting dog in the show" (with an Irish setter), before ever this new light was heard of in connection with dogs. Yes, he is a great man, a genius, and I hope "wont lose his reputation by dying."

I cannot please my friends, they ask too much of me. Mr. Mortimer is not satisfied when I judge for him, and allow him to take not only the honor and the glory, but the pay as well; whereas the man with two skulls goes into mourning because I refuse to write prejudiced reports for his paper—"keep it quiet"—and establish a reputation for an individual whose ignorance is equalled only by his roguery. Will the gentlemen please find another tutor? My engagement with them is cancelled.

It was cunning of Messrs. Mortimer & Co. to try to convince the readers of this paper that I never have won first prizes with pointers of my own breeding. That position was not tenable, and so Mr. Mortimer qualified the falsehood by adding, "mentioned in the E. K. C. S. B." A smart attempt to mislead the public, and it is not the first time Mr. Mortimer has tried the experiment. Why didn't he say "mentioned in the N. A. K. C. S. B."? When I exposed Mr. Mortimer's record (?), proved that the business he was engaged in when he was in England prevented him keeping dogs, challenged him to show that he ever bred, owned, or exhibited a decent specimen in this country, and gave his complete list of winnings, *i. e.*, fifteen prizes won with fifth-rate bulldogs and bullterriers, he replied as follows: "Dalziel says in his notes on 'Judges, Their Election,' 'There is a rather broad-spread opinon that to be a good judge a man must have been a successful breeder. The experience gained by breeding may be beneficial or prejudicial, but it can never make a man a judge.'" Dalziel's opinion was very weighty when Mr. Mortimer hoped that by quoting it he might get James Mortimer out of a corner. How does Mr. Mortimer reconcile that argument with his statement that I am not a judge because (in his opinion) I have only bred two good dogs? Mortimer-like, isn't it? He continues: "I will wager that I am correct in stating that first prize at Birmingham with Viscount, and first prize at Belfast with Lady Godiva were the only first prizes mentioned in the E. K. C. S. B. that Mr. Mason ever won with pointers which he had himself bred; that is to say, from 1872 to 1881 he succeeded in breeding one dog, with which he won one first prize at Birmingham, and one with which he won one first prize at Belfast." What has become of the dogs exhibited by other persons, but which were bred by me? Tricky, isn't it? If Mr. Mortimer will consult the blue book at Babylon he will find that very few shows were registered in the stud books between the years 1872 and 1881, for the very simple reason that few shows adopted the K. C. rules, and the club only admitted such shows as did. I will explain this for Mr. Mortimer's benefit. The "Book of the Dog" says: "Amongst older breeders the names of Mr. T. Statter, Mr. C. H. Mason, Lord Sefton, Lord Downe and Mr. Garth, Q. C., appear most prominently, and their blood is eagerly treasured by breeders." How many first prize winners which they had themselves bred were registered in the stud books between the years 1872 and 1881? T. Statter, 1; C. H. Mason, 2; Lord Sefton, 0; Lord Downe, 0; Garth, 0. If Mr. Mortimer's argument is worth anything C. H. Mason is the best judge of the lot. Will Mr. Mortimer be good enough to display his ability in another direction? When I require his assistance he shall hear from me. If a man wants to secure an able defense he should persuade the plaintiff to engage Mr. James Mortimer and the Bishop of Canterbury. If he can do that he will get a verdict with costs.

Mr. Mortimer accuses me of not confining myself to the "subject matter under discussion." What next? When I placed Mr. Mortimer's record in the hands of the public what did he do? Dodged my questions and invited me to discuss "Buddensiek buildings," "bar-tenders," "raffles," "stud books," "damaged garments," "mice," etc. All of my questions were relevant. Mr. Mortimer denied my having judged more than two dogs for him at Pittsburgh, but admitted that "he forgot all about it," consequently I challenged him to deny that I judged certain dogs for him at the Chicago show of 1883. My object in doing so is apparent. Mr. Mortimer dodges the question and creeps behind the statement that "he [myself] does not know how to conduct a controversy in a temperate and gentlemanly manner." Had Mr. Mortimer denied my having judged certain dogs for him at Chicago I would have produced a live witness in support of the assertion that I did. I might have asked Mr. Mortimer if he is acquainted with the individual who called upon me (shortly after my arrival in this country) and said, "Let's see the bulldogs and Young Bill, I know nothing about the others." Mr. Mortimer might also have been requested to furnish particulars as to the name and residence of the person who not very long ago (within the last four years) used to send dogs in a hamper to a man to find out "which is the best and what are they worth?" No wonder when Mr. Mortimer sees a short-faced spaniel he thinks its skull has been smashed in with a "mallet" upon the anvil of some little London smithy. What is the use of showing good dogs? Mr. Barlow is right in refusing to serve on a committee of which Mr. Mortimer is a member.

This is how Mr. Mortimer demonstrates that "I don't know how to conduct a controversy in a 'temperate' manner," and that he does know: "Mr. Mason thanks me, and hugs the delusion to his breast, that I have, as he has heard, told people that he was 'much the best judge in America.'" What I really did write is, "Mr. Mortimer has never been asked to consider me a judge, but I thank him for having told people that 'Mason is much the best judge in America.' What a splendid indorsement! But how does Mr. Mortimer know when a man is or is not a judge?" Really, I fail to see any hugging about that. Perhaps it is hugging *à la* Babylon. Temperate, very temperate. Mr. Mason does not know how to conduct a controversy in a "gentlemanly manner," but Mr. James Mortimer does, and this is how he proves it: "Mr. Mason refuses to discuss either 'tumble-down liquor or bartenders,' whatever that may mean." This is what I wrote: "Mr. Mortimer will please pardon me for refusing to discuss either tumble-down buildings, liquor or bar-tenders." Mr. Mortimer's experience with such things, extending over a number of years, gives him a decided advantage over an opponent, and I never undertake to write on subjects I am not familiar with. How would it be for Mr. James Mortimer to adopt a similar resolution?" Gentlemen do not resort to trickery and falsehood, and as a rule are sufficiently well educated not to misquote. When a gentleman joins in a controversy he retires therefrom precisely as he entered—a gentleman. With just enough of learning to misquote, Mr. Mortimer can scarcely be considered a success in his new role of exponent of etiquette.

Now for Mr. Mortimer's Chicago questions, that is to say, "pertinent" questions. He asks who, when I "prated" about the wrongful entry of Meteor and Vanity, was the owner of Princess Phœbus. I will tell him who was not the owner—the judge; and further, that she was entered in strict accordance with the rules of the show. Had she not been I would have referred Mr. Mortimer to Rule 12 (old style). Mr. Mortimer's vicious insinuation that I gave the greyhound Friday Night a spurious pedigree would be treated with the contempt it deserves, had I not undertaken to meet all charges from Babylon. Friday Night was sold to me by Mr. Lancaster, of this city, who gave me the following pedigree: "Friday Night is brother to Saturday Night; sire, Master's Prince; dam, Sally." It is easy to see that either Mr. Lancaster or somebody else fell into an unaccountable blunder. Saturday Night is by Master's Sam out of Polly, and therefore is a better bred dog than if he had been by Prince out of Sally. Would any sane person intentionally give a dog a worse pedigree than it really had? What object could Mr. Lancaster have in giving Friday Night a false pedigree, when he sold the dog as the "brother to Saturday Night"? Does Mr. James Mortimer think that because dogs are brothers they have different pedigrees, or what in the name of common sense is he driving at?

Mr. Mortimer's next question is, "who is the real—but hold up, I have resolved not to do this." Did man ever hear of a more sneakish, contemptible, mean, ungentlemanly piece of work than this? It has only been equaled by the fellow who, when he found he could not "kill Mason," went home to write my dogs down, and by the scoundrel who suggested "throwing poison to the dogs." Who is the real owner of Rockingham? That is what Mr. Mortimer did not care to ask because he thought that his cowardly insinuation imputed fraud. Gentlemanly, isn't it? The reason why Rockingham has been written down in a Western paper is because the Bishop of Canterbury thinks "the dog belongs to Mason." The report was circulated at New Haven for a joke, the bishop got hold of it and all of your readers have heard of the resolution that was passed several months ago, *i. e.*, "Seeing we cannot 'kill Mason, Watson and Davidson,' we will go for their dogs." Poor Rockingham! a worthless-looking cur, because a disreputable character thinks "the dog belongs to Mason." Mr. Mortimer's other questions were so well answered by "Porcupine" in the *Sporting Life* of June 24, that I will simply quote them here. The prickly-backed tyke has already accused me of stealing his points, and I don't want him slinging his quills at me. I know two men in Chicago who have been wearing heavy overcoats all through the spring, and yet there isn't an inch of their bodies that isn't tattooed by the quills of "Mr. Lillibulero Porcupine."

To show a few of the fatal blunders Mortimer's blind egotism leads him into, let us see what he says about Mr. Mason's knowledge of dogs: "My confidence in his capabilities as a judge of dogs has been rudely shaken by more recent developments, notably by his claiming worthless dogs at catalogue prices, by some of his awards at the Washington show in 1883, and more particularly by the absurd fact of his competing with the mastiff Nevison against Bonivard for the special prize for best non-sporting dog at the New Haven show 1884." In the first place he calls these "more recent developments." Mr Mason arrived here in the spring of 1881, judged at London, Ont., in October of that year, and there claimed a first prize winning pointer at $100, refusing a large bonus to be off the trade; at New York the following May, 1882, he claimed Jester, the English

setter, at $100 *before the dogs were judged*, and after Jester got first prize, one of Mr. Mortimer's present employes bought and paid for the dog, doing Mr. Mason out of the purchase. The latter was going to make trouble, but on having an opportunity to examine the dog and see his pig jaw he wisely drew out and left the field and the dog to Mr. Wright. The last of these two claims at catalogue price was made over three years ago. A year later Mr. Mason judged at Washington show and Mortimer vaguely says some of his awards were bad. The fact is he didn't know enough about dogs then to tell whether awards were right or wrong except in bull-terrier and bull-dog classes, and Mr. Mason did not judge these. Notwithstanding these rude shocks to Mr. Mortimer's belief in Mr. Mason's ability and knowledge, some two months later he asked Mr. Mason to tell him how he was to place the black and tan terriers at Pittsburg. Queer that such a shocking bad judge should be appealed to by know-every-breed Mortimer to tell how to place Vortigern and Reveller. The last stipulation deserves to be set out by itself. The crowning absurdity which caused Mortimer to cease believing further in his teacher, was the latter's showing Nevison against Bonivard for a special. Now for the facts. Mortimer, judging at Pittsburg, put Nevison ahead of all mastiffs there, including Creole. Mr. Watson followed that up by giving him the special at New York. Then at New Haven, at the show referred to, Mr. Mortimer gave Nevison the special for the best mastiff in the show, beating Hero II. It is somewhat singular that Nevison has never yet been beaten, and certainly was in 1884, if not now, the best mastiff in the country. On the other hand, we find Mr. Mortimer putting Bonivard behind Duke of Leeds a month after the New Haven show, thus displaying not only his ignorance of St. Bernard type, but showing that, in his opinion, Bonivard was not the best St. Bernard, while at the same time his opinion that Nevison was the best mastiff still held good. Even if it had been absurd to show Nevison against Bonivard, Mr. Mason knew who he was showing under, but Mr. Mortimer doesn't note that point.

This is the last letter I shall write in a controversy which, although very distasteful to me, was absolutely necessary. A thorough exposure has been made and honest owners of dogs will be immensely benefitted thereby. No "fly on the wheel" can run the machine now, and unless dog lovers allow themselves to be fooled over the standards question, there is smooth sailing ahead. CHAS. H. MASON.

NEW YORK, June 29.

SALE OF SPORTING DOGS AT ALDRIDGE'S.—Yesterday (June 12) several important lots of pointers, setters and other sporting dogs were offered for sale by Messrs. Freeman. There was a large attendance, and the prices must, in almost all cases, be deemed highly satisfactory to the venders. Pointers and setters, the property of the late Earl of Wilton, were first under the hammer, and Nog, a five-year-old liver and white pointer, sold well at 17gs.; his sister Doll went for 13gs.; Bloom, 13gs.; Bloss, 18½gs.; Brag, 14gs.; Wag, 20gs.; Tramp, 27gs.; Romp, 34gs.; Fop, 23gs.; Foam, 30gs.; Sir Garnet, 17gs.; Nora, 15½gs.; Grouse, 18gs.; Garland, 30gs.; Juno and Don, 14½gs. and 23gs. respectively. The setters from the same kennel sold quite as well. Marvel, a black, white and tan bitch, reached the top figure of 32gs.; six others brought 83gs. Col. Legh's pointers have a considerable reputation, still the three brace offered went within their value at a trifle less than 80gs. Don XI., a liver and white dog, three and a half years old, of Mr. Lloyd Price's strain, at 18gs., having the honor of the highest figures. Maharajah Dhuleep Sing secured a brace and a half of spaniels for 15gs., and a Skye terrier bitch puppy, by Kingston Roy, was well sold for 10gs. Col. Starkie's pointers changed hands as follows: Beau II., 17gs.; Brace, 18gs. Setters: Jezabel, 11gs.; Niobe, 15gs.; Prince 27gs.; Placid, 18gs.; Rue, 48gs.; Dash II, 10gs.; and a brace of lemon and whites, by Llewellyn's Random from Yate's Venus, brought 40gs. Eleven pointers from Lord Sefton's brought 123gs.; 21gs. for Joy, by Don—Jilt, the most valuable animal. A retrieving spaniel from Sir Philip Egerton's sold for 11gs., and a brace and a half of pointers from the same realized 26gs. Several fair setters, the property of Mr. W. F. Baily, sold for from 25gs. for Velvet, 20gs. for Violet by Emperor Fred, to 5½gs. for Vic, a little red bitch, six brace of dogs from this kennel realizing 115gs.—*London Field.*

JUDGES FOR THE NATIONAL FIELD TRIALS.—Cincinnati, O., June 23, 1885.—*Editor Forest and Stream:* The following named gentlemen have accepted invication of the National Field Trial Club to judge at its trials to be held at Grand Junction, Tenn., commencing December 7, 1885: J. H. Dew, of Columbia, Tenn.; F. I. Stone, Chattanooga, Tenn., and E. F. Stoddard, of Dayton, Ohio, will judge in the All-Age Stake. Mr. E. C. Sterling, of St. Louis, Mo., will judge with Messrs. Dew and Stone in the Derby, Mr. Stoddard declining to judge in the Derby on account of having entries in that stake.—W. B. SHATTUC, President N. F. T. Club.

DACHSHUNDE AT CHICAGO SHOW.—Preston, Minn., June 22, 1885.—*Editor Forest and Stream:* Through mistake of the printer the pedigree of my five-year-old dachshund bitch Gretchen, winner of first at Chicago, 1885, was given wrong in their catalogue, and consequently in your report of the show. I entered Gretchen: First, Cleveland, 1882; first, Chicago, 1883; by Unser Fritz (first, Philadelphia, 1876; first, Baltimore, 1877; first, Philadelphia, 1879) ex Waldine (first, St. Louis, 1880). The printer left names of sire and dam out, and credited Gretchen with prizes won long before she was whelped.—Wm. LOEFFLER.

BONE AND SUBSTANCE.—A subscriber wishes to know what the expression "lacking in bone and substance" means when applied to a pointer or setter. It means precisely what it says, and is intended to carry the idea that the animal so spoken of has not bone and muscle enough to carry him through a long and hard campaign.

THE COLLIE CLUB.—Cleveland, O., June 20.—*Editor Forest and Stream:* I am willing to join and advance the interests of a Collie Club by every means in my power.—C. VAN W. FISH.... ST. LOUIS, Mo., June 23.—*Editor Forest and Stream:* Please record me as in favor of the establishment of a Collie Club.—J. A. LONG.

EASTERN FIELD TRIALS DERBY.—We are advised of the following mistakes in date of birth of entries for the Eastern Field Trials Derby. Blue Specks, March 28, should read April 3. Happy Medium and Huguenot are of one litter and were whelped July 28.

EASTERN FIELD TRIAL JUDGES.—The Eastern Field Trials Club have appointed as judges at their trials next November, Messrs. D. C. Bergundthal, Indianapolis, Ind., and J. M. Hunter, New York. We hope to be able to announce the third judge next week.

BEAUFORT AND BRADFORD.—Mr. C. H. Mason has placed his brace of pointers, Beaufort and Bradford, in the hands of Tallman, who will run them at the field trials next fall.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Snow. By G. N. Leavens, Belleville, Ont., for black cocker spaniel bitch, whelped June, 1883, by Bramble (Rover III.—Fern) out of Nell.

Traddles, Tempest, Tony and Tiny. By Chequasset Kennels, Lancaster, Mass., for pugs, three dogs and one bitch, whelped June 21, 1885, by Young Toby (A.K.R. 473) out of Lady Flossie (A.K.R. 1446).

Lars. Lodi, Lehman, Leopold, Luck and Lerna. By Chequasset Kennels, Lancaster, Mass., for St. Bernards, five dogs and one bitch, whelped June 16, 1885, by champion Hermit (A.K.R. 23) out of Brunhild (A.K.R. 28).

Rockingham II., Count Rockingham, Prince Rockingham and York. By Frank Windholz, New York, for blue belton English setter dogs, whelped May 8, 1885, by Rockingham (Belthus—Bess) out of Princess Phœbus (A.K.R. 1287).

Rosalind. By Frank Windholz, New York, for lemon belton English setter bitch, whelped May 8, 1885, by Rockingham (Belthus—Bess) out of Princess Phœbus (A.K.R. 1287).

Topsy Obo. By Geo. L. V. Tyler, West Newton, Mass., for black cocker spaniel bitch, whelped Nov. 17, 1884, by Obo II. (A.K.R. 432) out of Gem (A.K.R. 1312).

Marion. By A. C. Wilmerding, New York, for black and white spaniel bitch, whelped March, 1881, by Bragg out of Princess.

BRED.

☞ *See instructions at head of this column.*

Flake—Cashier. John J. Scanlan's (Fall River, Mass.) English setter bitch Flake (Druid—Swaze) to Cashier (Dash III.—Opal), June 16.

Lulu III.—Brish. John J. Scanlan's (Fall River, Mass.) red Irish setter bitch Lulu III. (Glencho—Lulu II.), to Brush, June 20.

Dashing Jest—Glen Rock. E. W. Jester's (St. George's, Del.) English setter bitch Dashing Jest (A.K.R. 1614) to his Glen Rock (A.K.R. 1616), June 25.

Nun—Hermit. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Nun (A.K.R. 24) to their champion Hermit (A.K.R. 23), June 21.

Polly—Knickerbocker. Knickerbocker Kennel Club's (Jersey City, N. J.) pointer bitch Polly (Beaufort—Nymph) to their champion Knickerbocker, May 12.

Nellie Bird—Don. Jos. R. Trissler's (Lancaster, Pa.) pointer bitch Nellie Bird (Harry—Nell) to R. T. Vandevort's Don (A.K.R. 165), June 20.

Flora—Rob Roy. S. H. Hewlett's (St. Louis, Mo.) collie bitch Flora (Bruce—Nelly) to J. A. Long's Rob Roy (A.K.R. 334), May 29.

Cassandra T.—Cashier. John J. Scanlan's (Fall River, Mass.) English setter bitch Cassandra T. (A.K.R. 943) to Cashier (Dash III.—Opal), May 25.

Mignon—Kidlewink. Mignon Kennels' (Cortland, N. Y.) cocker spaniel bitch Mignon (A.K.R. 1002) to their Kidlewink (A.K.R. 997), June 20.

Newton Abbot Lady—Black Prince. A. C. Wilmerding's (New York) field spaniel bitch Newton Abbot Lady (Bend 'Or—Ladybird) to his Black Prince (A.K.R. 62), May 9.

Queen—Black Prince. Fred Smith's (Jersey City, N. J.) spaniel bitch Queen (Charley—Powder) to A. C. Wilmerding's Black Prince (A.K.R. 62), March 31.

Mignon—Black Prince. A. C. Wilmerding's (New York) spaniel bitch Marion (Bragg—Princess) to his Black Prince (A.K.R. 62), May 21.

Suwanee—Sport. A. C. Wilmerding's (New York) cocker spaniel bitch Suwanee (A.K.R. 658) to Sport (Jet—Daisy), May 11.

Sheila—Duke of Leeds. K. E. Kopf's (Newark, N. J.) St. Bernard bitch Sheila (A.K.R. 796) to E. R. Hearn's Duke of Leeds (A.K.R. 1535), May 26.

Beauty—Brier. E. L. Bailey's (Pittsfield, Mass.) fox-terrier bitch Beauty (A.K.R. 1896) to his Brier (A.K.R. 1898), April 25

Princess Ida—Guillermo. Thos. W. Mills's (Montreal, Can.) bull bitch Princess Ida (Byron II.—Rhodora) to his Guillermo (A.K.R. 671), June 6.

Lillie Langtry—Guillermo. Thos. W. Mills's (Montreal, Can.) bull bitch Lillie Langtry (Jack—Venus) to his Guillermo (A.K.R. 671), June 2.

Brownie—Bang. Geo. L. V. Tyler's (West Newton, Mass.) pointer bitch Brownie (Don—Maud S.) to Geo. S. Tucker's imported Bang.

WHELPS.

☞ *See instructions at head of this column.*

Jilt. Neversink Lodge Kennels' (Guymard, N. Y.) pointer bitch Jilt (Croxteth—Lass), June 5, six (three dogs), by F. R. Hitchcock's Tammany (Tory—Moonstone).

Romp. Neversink Lodge Kennels' (Guymard, N. Y.) pointer bitch Romp (Croxteth—Lass), June 26, nine (all dogs), by their Drake (Croxteth—Lass).

Midget. J. C. Vail's (Warwick, N. Y.) pointer bitch Midget (A.K.R. 768), June 24, nine (two dogs), by Croxteth (Young Bang—Jane).

Beauty. Gate City Kennels' (Atlanta, Ga.) spaniel bitch Beauty (Diver II.—Topsy), June 10, six (four dogs), by their Flush.

Gretchen. Mignon Kennels' (Cortland, N. Y.) cocker spaniel bitch Gretchen (A.K.R. 996), May 5, six (four dogs), by their Kidlewink (A.K.R. 997).

Brunhild. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Brunhild (A.K.R. 28), June 16, eight (five dogs), by their champion Hermit (A.K.R. 23).

Lady Flossie. Chequasset Kennels' (Lancaster, Mass.) Lady Flossie (A.K.R. 1446), June 21, four (three dogs), by their Young Toby (A.K.R. 473).

Flirt. Knickerbocker Kennel Club's (Jersey City, N. J.) pointer bitch Flirt (A.K.R. 1348), May 31, fifteen (nine dogs), by J. Swaine's Rush III. (A.K.R. 402).

Lady Isabel. Knickerbocker Kennel Club's (Jersey City, N. J.) pointer bitch Lady Isabel (A.K.R. 461), June 1, seven (three dogs), by their champion Knickerbocker.

Zoe. E. M. Crouch's (Thomaston, Conn.) pointer bitch Zoe (A.K.R. 1444), June 22, ten (six dogs), by his Trim (Sprague's Morn—White's Grace).

Juno. Geo Langran's (Yonkers, N. Y.) red Irish setter bitch Juno (Berry—Tilley), June 12, two (one dog), by champion Glencho.

Daisy Murdock. Dr. G. P. Rasbach's (Mohawk, N. Y.) pointer bitch Daisy Murdock (A.K.R. 1782), June 17, six (five dogs), by Jimmie (A.K.R. 1589); color, orange and white and liver and white.

Gem. Geo. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Gem (A.K.R. 1312), June 19, six (five dogs), by Mrs. G. A. Warren's Ebony (Obo II.—Lofty); four black and two liver.

Nellie Nell. Julius Fehr's spaniel bitch Nellie Nell, Jan. 1, five (three dogs), by A. C. Wilmerding's Black Prince (A.K.R. 62); three black and two liver.

SALES.

☞ *See instructions at head of this column.*

Trinket. Pug bitch, whelped April 5, 1885 (Young Toby—Tantrums), by Chequasset Kennels, Lancaster, Mass., to D. A. Goodwin, Jr., Newburyport, Mass.

Chirp—Gretchen whelp. Black and white ticked cocker spaniel dog, whelped Oct. 30, 1884, by Mignon Spaniel Kennels, Cortland, N. Y., to R. K. Winslow, Cleveland, O.

Linda. Tawny, with white markings, rough-coated St. Bernard bitch, whelped May 5, 1885 (Hermit—Sombre), by Chequasset Kennels, Lancaster, Mass., to C. H. Spring, Newton Lower Falls, Mass.

Kalmia. Brindle and white St. Bernard bitch, whelped Oct. 13, 1884 (Hermit—Alma), by W. W. Tucker, New York, to C. E. Tobey, Eau Claire, Wis.

Bismark, Jr. Liver and white English setter dog, whelped March 10, 1884 (Ponto, A.K.R. 714—Lady Snow, A.K.R. 710), by Z. T. Mumma, Bluffton, O., to E. E. Mumma, Van Lue, O.

Triamond. Pug dog, whelped April 5, 1885 (Young Toby—Tantrums), by Chequasset Kennels, Lancaster, Mass., to Mrs. C. S. Marshall, North Leominster, Mass.

Kidlewink (A.K.R. 997)—Gretchen (A.K.R. 996) whelps. Cocker spaniel dogs, whelped May 5, 1885, by Mignon Spaniel Kennels, Cortland, N. Y., a black and white to A. M. Clarke, Rochester, N. Y., and George Furness, Auburn, N. Y., and a liver to J. Grossman, Cortland, N. Y.

Lady Knickerbocker. Liver and white pointer bitch, whelped March 24, 1885 (Knickerbocker—Birdie) by Knickerbocker Kennel Club, Jersey City, N. J., to Geo. W. Wade, New York.

Mirth Elgin. Lemon and white English setter bitch, whelped Feb. 26, 1884 (Zanzibar—May Elgin), by H. B. Vondersmith, Lancaster, Pa., to E. B. Convers, Englewood, N. J.

Dashwood (A.K.R. 2049)—Nell whelps. Black and white English setter dogs (three), whelped April 30, 1885, by Diamond State Kennels, St. George's, Del., to Dr. J. R. Housel, Watsontown, Pa.

Topsy Obo. Black cocker spaniel bitch, whelped Nov. 17, 1884 (Obo II.—Gem), by Geo. L. V. Tyler, West Newton, Mass., to Miss Kate M. Galoin, Waltham, Mass.

Rockingham II. Blue belton English setter dog, whelped May 8, 1885 (Rockingham—Princess Phœbus), by F. Windholz, New York, to L. E. Wills, Lehighton, Pa.

Rosalind. Lemon belton English setter bitch, whelped May 8, 1885 (Rockingham—Princess Phœbus), by F. Windholz, New York, to Wm. Brooks, same place.

Count Rockingham. Blue belton English setter dog, whelped May 8, 1885 (Rockingham—Princess Phœbus), by F. Windholz, New York, to H. C. Glover, same place, and resold by him to E. Matheson, Brooklyn, N. Y.

Prince Rockingham. Blue belton English setter dog, whelped May 8, 1885 (Rockingham—Princess Phœbus), by F. Windholz, New York, to H. C. Glover, same place, and resold by him to E. Matheson, Brooklyn, N. Y.

Fuerst. Black and tan dachshund dog, age not given (Waldman II.—Congo), by Wm. Loeffler, Preston, Minn., to J. A. Krentzlin, Columbia, S. C.

Dove. Black and tan dachshund bitch, whelped April 21, 1885 (Bergmann—Liana), by Wm. Loeffler, Preston, Minn., to J. A. Krentzlin, Columbia, S. C.

York. Blue belton English setter dog, whelped May 8, 1885 (Rockingham—Princess Phœbus), by F. Windholz, New York, to Dr. Chas. E. Stanley, Middletown, Conn.

Flora II. Red dachshund bitch, whelped April 13, 1885 (Waldmann II.—Crawl), by Wm. Loeffler, Preston, Minn., to G. Utz, Boston, Mass.

Hero. Black and tan dachshund dog, whelped March 14, 1885 Waldmann II.—Babette), by Wm. Loeffler, Preston, Minn., to H. W. Blattmacher, Brooklyn, N. Y.

Louise. Black and tan dachshund bitch, whelped April 13, 1885 (Waldmann II.—Crawl), by Wm. Loeffler, Preston, Minn., to H. W. Blattmacher, Brooklyn, N. Y.

George. Red dachshund dog, whelped April 13, 1885 (Waldmann II.—Crawl), by Wm. Loeffler, Preston, Minn., to H. Rose, Philadelphia, Pa.

Mina. Black and tan dachshund bitch, whelped April 13, 1885 (Waldmann II.—Crawl), by Wm. Loeffler, Preston, Minn., to H. Rose, Philadelphia, Pa.

Custer. Chestnut and tan dachshund dog, whelped March 14, 1885 (Waldmann—Babette), by Wm. Loeffler, Preston, Minn., to G. Braun, Ashland, Wis.

Rebel Red dachshund dog, whelped March 14, 1885 (Waldmann II.—Babette), by Wm. Loeffler, Preston, Minn., to F. Fingerling, New York.

Wodan. Red dachshund dog, whelped April 21, 1885 (Bergmann—Diana), by Wm. Loeffler, Preston, Minn., to J. P. Schaefer, Canal Fulton, O.

Apollo. Black and tan dachshund dog, age not given (Waldmann II.—Congo), by Wm. Loeffler, Preston, Minn., to J. P. Schaefer, Canal Fulton, O.

Obo II. (A.K.R. 432)—Gem (A.K.R. 1312) whelps. Black cocker spaniel bitches, whelped Nov. 17, 1884, by Geo. L. V. Tyler, West Newton, Mass., one to W. H. Bragdon, South Boston, Mass., and one to Master Rufus Warren, Waltham, Mass.

Black Prince—Suwanee whelp. Chestnut spaniel bitch, whelped Dec. 19, 1884, by A. C. Wilmerding, New York, to C. V. V. Sewell, Tarrytown, N. Y.

Gust. Black and tan dachshund dog, whelped April 13, 1885 (Waldmann II.—Crawl), by Wm. Loeffler, Preston, Minn., to G. Utz, Boston, Mass.

Donald. Black, white and tan English setter dog, whelped April 5, 1884 (Zanzibar—Lill), by H. B. Vondersmith, Lancaster, Pa., to LeRoy B. Haff, Englewood, N. J.

Ned. Cocker spaniel dog, whelped Feb. 17, 1885 (Obo II.—Smut), by H. C. Bronsdon, Boston, Mass, to Fay & Baxter, Malden, Mass.

Sophronia. Cocker spaniel bitch, whelped Feb. 17, 1885 (Obo II. —Smut), by H. C. Bronsdon, Boston, Mass., to Fay & Baxter, Malden, Mass.

Sheila. St. Bernard bitch (A.K.R. 796), by Alpine Kennels, Mount Vernon, N. Y., to K. E. Hopf, Newark, N. J.

Lady Buffo. Orange and white English setter bitch, whelped Feb. 22, 1885 (Duke Gladstone—Luna), by Henderson & Mason, Jacksonville, Ill., to Dr. A. D. Taylor, Williamsville, Ill.

Norma. Gordon setter bitch, whelped June, 1884 (Blossom—Bessie B.), by H. Schlichte, Morrisania, N. Y., to Dr. Franz Heuel, New York.

Maud S. Fawn and white Italian greyhound bitch, whelped April 2, 1885 (Puck—Zelpha), by H. C. Burdick, Springfield, Mass., to Geo. Gillivan, West Jefferson, O.

IMPORTATIONS.

Snow. Black cocker spaniel bitch, whelped June, 1883, by Bramble (Rover III.—Fern) out of Nell, by G. N Leavens, Belleville, Ont., from the kennel of J. Farrow, Ipswich, Eng.; she is in whelp to champion Obo.

DEATHS.

☞ *See instructions at head of this column.*

White Princess. Bull-terrier bitch (A.K.R. 2202), owned by Geo. W. Dixon, Worcester, Mass.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

X., Girard Manor.—To cure the puppy of worms, feed plenty of sour milk.

C. D., City.—I have a black and tan setter, about five years old, I notice that she is losing her hair off her tail. Is there anything that I could get or make that would make the hair come on again. I know it is not the mange, and she has always a good appetite. Ans. It is impossible from your very vague description to tell the cause of rouble. You must give more details.

J. S. H., Montauk Point, L. I.—We have a collie who seems to have a disease on his back. The skin seems to come off in scales and he is scratching it all the time, he had it all last summer. Can you tell me of anything that will stop it? Ans. Wash the parts once each day with carbolic soap and then, after drying, rub in with the hand the ointment of the oxide of zinc. If this does not cure him in three weeks give him three drops of Fowler's solution of arsenic daily in his food, increase the dose one drop daily to eight drops and then decrease to three and stop Keep up the local applications all the time and see that the bowels are in order.

D. J. G., Flint, Mich.—What is the matter with my setter pup, and what treatment will I pursue? His nose is hot and dry, his hair appears dead, and mucuous matter runs from his eyes. He is about seven months old. Do you know of any better work on the diseases of dogs and their treatment than the one by Ashmont? Ans. Your dog has the distemper. Give him three drops of the tincture of aconite root, and while the fever lasts repeat every two hours, give it in a teaspoonful of sweetened water. Be careful of the food. Give beef tea, milk and lime water, and feed often if the stomach is not weak. In great exhaustion you may give a teaspoonful of whisky every three or four hours. Ashmont's book is an excellent work, one of the best.

J. A. W., Philadelphia, Pa.—My setter bitch, ten months old, has but little strength. After half hour's lively run is exhausted, pants and blows painfully. Had the distemper very slightly. Appetite very good. Poor in flesh, otherwise appears healthy, lively and intelligent. Ans. The bitch is very likely suffering from anæmia or want of blood, or some of the necessary ingredients of the blood. This may be dependent upon the sexual organs, which are beginning to take on functional activity. Have a prescription made containing a half ounce each of tincture of nux vomica and tincture of the chloride of iron; one ounce of simple syrup and enough water to make a four ounce mixture. Of this give a teaspoonful three times daily. Keep the bowels regular with castor oil or syrup of buckthorn in teaspoonful doses, and give but little meat, and that cooked and mixed with the other food.

W. W. P., Macon, Ga.—What would you do for a pointer five years old who shakes his head constantly and has a fit about every fifteen or twenty days during the hunting season. The paroxysm lasts for about fifteen minutes. I can find nothing like canker. He has had these fits for three years, but he only had two fits last season, about the first of November, but has had two in the last twenty days. I gave him each morning last summer a pill of asafetida. I think that the fits and shaking of the head are caused by the same thing, viz.: some brain affection. He is a noted performer in the field, and I would like to cure him. Ans. It seems as though your dog had canker or perhaps disease of the middle ear. You had better have an aurist or physician examine the ears carefully. The fits may be due to this trouble. They may be true epileptic attacks, or due to digestive troubles. We have seen them appear in an old dog at hunting season from excitement and also from feeding with raw meat when unused to such diet. The bowels should be kept freely open and the diet mild. Give the dog two grains of oxide of zinc in a pill hidden in a morsel of meat morning and evening, and continue until the fits disappear.

G. R., Philadelphia, Pa.—A mastiff dog is afflicted with diarrhœa. He has had it two months. At one time he was very much emaciated when kept on an exclusive diet of boiled rice, boiled milk and beef tea. Under this regimen he not only became very much reduced, but the diarrhœa became increased. I then changed him to boiled beef with a little rice and bones, on which he has been kept for about three weeks. He at once improved on this diet. His appetite is enormous. His spirits are good, and in other respects the dog seems well enough, except that the looseness of the bowels still continues more or less. Ans. Your dog suffers from gastro-intestinal catarrh. The causes are very numerous. It may be from some indigestible matter taken in or the remains of a distemper. The diet you give your dog is very good under the circumstances, and with some medication he should entirely recover. The disease has become chronic, and it will take some time to bring him around. Have a dozen powders made, each powder to contain one-half a grain of powdered opium, five grains of powdered camphor and ten grains of subnitrate of bismuth. Give one powder morning and evening. Give little or no solid food. A little finely minced raw beef might be given each day, and if difficulty is found in administering the medicine, you may mix it morning and evening in a little of the minced meat. The stomach and intestines need rest, and fluid diet will accomplish

this end. Milk with lime water, beef tea with rice and such foods are best.

H. T. M., Quebec, Can.—My dog, a collie, four years old, had an attack of laryngitis a year ago this spring. I blistered his throat without much effect, but got him over it by applying hot linseed meal poultices to throat for three or four hours, and giving aconite and the cough ceased. He has coughed more or less since then, the cough generally ending with a gag. This spring he has had what seemed a combined attack of laryngitis and influenza. Treated him with the hot linseed, administering aconite and arsenicum. He has never fairly shaken off the influenza or catarrh, breathes more or less through his mouth, sneezes, getting rid of mucus, and besides coughing has now and then a spasm for breath, lasting for a few seconds. Naturally a lively dog, he has become dull and quiet, appears in fact just as a person does with a heavy cold in the head. He has been a house dog, sleeping in the house and accompanying me to the office, but getting a fair amount of walking exercise. Ans. Your dog seems now to be suffering with asthma brought on by his previous colds and lazy habits. If the dog is not a native it would look as though the climate was too severe. Nothing is so tedious to treat in a dog as chronic laryngitis. Medication does little or no good. Change of climate is useful. Spasmodic asthma or a chronic spasmodic cough is best treated by inhalation of burning stramonium leaves. If the dog is fat his diet should be lessened and his bowels kept free. Expectorant drugs, such as serpentaria, senega, squills, wild cherry, and so on, in doses of a teaspoonful three times daily, are sometimes beneficial.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR.—The programme of regular matches at the N. R. A. range during July and August, provides the following events: Saturday, July 4, off-hand and mid-range matches; Saturday, July 11, qualification, champion marksman's class and *Army and Navy Journal* matches; Saturday, July 18, mid-range match; Wednesday, July 22, qualification, champion marksman's class and *Army and Navy Journal* matches; Saturday, July 25, mid range match; Saturday, Aug. 1, mid-range match; Saturday, Aug. 8, mid-range match; Wednesday, Aug. 12, qualification, champion marksman's class and *Army and Navy Journal* matches; Wednesday, Aug. 19, mid-range match; Saturday, Aug. 29, qualification, champion marksman's class and *Army and Navy Journal* matches. The conditions of the several matches are:

The Champion Marksman's Class Match.—Open to all members of the N. G. S. N. Y. (except as hereafter noted) and members of the National Rifle Association, the latter, however, not being eligible to win the principal prize. 200 and 500yds., five shots at each distance; the Remington Rifle (N. Y. State model).

The Qualification Match of 1885.—Open to members of the N. G. S. N. Y. and N. R. A.

Army and Naval Journal Match.—Open only to members of the Army, Navy, Marine Corps and National Guard, or Militia of any State or Territory. Rifle, the United States Service, .45 cal., or the Remington State model, .50-cal.; position, standing; distance, 200yds.; rounds, seven.

Mid-Range Match.—Open to all comers; 500 and 600yds.; the Remington State model.

Off-Hand Match.—Open to all comers; 200yds.; number of shots, seven; any rifle within the rules; military and special military rifles allowed one point handicap.

BOSTON, June 25.—The riflemen at Walnut Hill were not so plenty as usual at the Saturday shoot. The morning promised a hot day and many preferred to stop at home. Those who did come out found fair weather conditions and good light. Several fine scores were made and are reported below:

SYRACUSE, June 24.—At the rifle range of the Onondaga Rifle Club, at Onondaga Valley, this afternoon, a heavy rifle shoot took place. The guns were "cannon" guns, whighing 35 pounds, and were rested on double "railroad" rests. Telescopes and flags were used. The distance was 40 rods. Twenty shots were fired by each of the seven contestants yesterday and they will shoot the other twenty shots to-day. The method of reckoning is by the distance from each shot to the center of the target. The contestant whose 40 shots in the aggregate are at the shortest distance from the center takes the first prize. The shooting of the first 20 shots resulted: H. Warner, of Syracuse, 19 5 16 inches: C. Frazier, Syracuse, 22 9 16; H. T. Hart, Rochester. 29 4-16; C. H. Remer, Syracuse, 32 10-16; H. V. Perry, Jamestown, 36 6-16; John Short, Syracuse, 36; R. C. Price, Jamestown, 38 14-16.

June 25—In Onondaga Valley, this afternoon, occurred the second day's shooting in the heavy rifle shoot. The prizes were awarded to the contestants whose 40 shots taken together were at the least distance from the center of the target. Twenty rounds had been shot on Wednesday and the other 20 to-day. The score of the entire shoot is:

	1st Day, Inches.	21 Day, Inches.	Total Inches.
H Warner, of Syracuse	19 5-16	20 11-16	40
C Frazer, of Syracuse	22 9 16	28 14-16	51 7-16
H F Hart, of Rochester	29 4-16	22 7-16	51 11-16
C H Remer, of Syracuse	32 10-16	22 5-16	54 15-16
H V Perry, of Jamestown	33 6-16	26 8-16	56 14-16
John Short, of Syracuse	36	32 6-16	68 6-16
R C Rice, of Warren, O	33 14-16	25 4-16	64 2-16

H. Warner, of Syracuse, took the first prize, his average shot being at a distance of exactly one inch from the center of the target. C. Frazer, of Syracuse, took the second prize, and H. F. Hart, of Rochester, third.

PORTLAND, Ore, June 14.—A 200yds. off-hand match was fought to-day at the City View Park, between 10 men of the Fourteenth Infantry, U. S. A., from Vancouver's barracks and 10 men of the Oregon State militia, Springfield rifles were used:

Vancouver Team (Regulars)		Portland Team (Militia).	
Sgt Weagraff	4455444345—42	Dodge	3455244454—40
Sgt Hudson	5454444345—42	Freeman	4344434444—37

CALIFORNIA RIFLE ASSOCIATION.—The spring meeting of the Association was held on the Shell Mound Range, June 14.—The first match was for a diamond team trophy, open to teams of six representatives from any military company, field and staff, board of officers, police department or rifle club, now in existence. Springfield rifles were used, and the ranges were 200 and 500yds., 7 rounds at each distance. The prize, a present from General W. H. Dimond, was won in November, 1883, by the police team. The condition upon which it may become the property of a team is that it must be won three times at regular meetings of the California Rifle Association. The competing companies were Company C, First Infantry, Nationals and Police Teams Nos. 1 and 2. The Infantry team won by a score of 360 to 343 each made by the police teams.

The Siebe team trophy was the prize in the second match, open to teams of six representatives from any company of the National Guard or Police Department who have never made more than 70 per cent, in any of the Association's matches. Range 200yds., 7 rounds: It was won by the Police team, with a score of 164 against 140, made by Company A, Fifth Battalion team.

In the third match, open to teams of six representatives from companies of the army or N. G. C., 200yds. range, rounds seven, the carbine team trophy was carried off by Battery A, Second Artillery, team. Score, 160. The score of the San Francisco Hussars team was 145.

In the fourth match of the day, for the Dunphy team trophy, any military rifles, under the rules, were allowed. The match was open to teams of six representatives from any military company, field staff, board of officers, Police Department or rifle club. The distances were 200 and 500yds.; rounds, seven at each range. The conditions of winning the prize were the same as in the first and third matches. The police team won it in 1883 by a score of 370. In this match the shooting was exceptionally good, and the rivalry among the contestants for the prize waxed warm. Police team No. 1 made a score of 372, the Pacific Rifle Club team 370, the team of Company C (Nationals) 364, Police team No. 2,357. The Police team won the match on the 500yds. range, the Rifle Club beating the Police team ten points on the 200yds. range.

The Hammond consolation match, open to all competitors having no record exceeding 70 per cent. at Association meetings, was the fifth match on the programme. The distance was 200yds., 5 shots, with any military rifle not barred by the rules. The first prize was presented by Lieutenant R. F. Hammond, N. G. C., and the other prizes were 25, 15 and 10 per cent. respectively of the net receipts. The prize winners were:

C M Wollam	45445—22	S J Pembroke	44454—21
A Johnson	44554—22	G Wittman	44445—21
L Radovich	44445—21		

The sixth match was for the Association medal, entries unlimited, 10 rounds, with any military rifle under the rules, at a range of 200yds. Condition of winning the medal for good the same as that governing the other trophies. Beside the medal there were cash prizes of $10, $8, $6, $4 and $2. Following are the winners:

P D Linville	5455455555—48	Sergt F Kuhls	4555545554—47
Lieut F Kuhnle	5454544555—46	A T Fields	4445545355—46
Lieut J McDonald	5545555445—47	Lieut S J Kellogg	4445555425—43

The trophy in the seventh match was the California Powder Works medal. It has been won twice by three different marksmen. The competitors and scores made yesterday were:

	200yds.	500yds.
Lieut S G Kellogg	4445422—30	5455555—34—64
Capt J E Klein	4454446—30	5554555—34—64
A Johnson	5445544—31	4555455—33—64
Sergt C Nash	4554354—30	5455455—33—63

Lieutenant Fred Kuhnle won the Director's medal, making a score of 31 out of 35 on the 200yds. range. The meeting was in every way a successful affair.

BALL AND BULLET.—Central City, Col.—*Editor Forest and Stream:* I have noticed a rather persistent use of the term ball in articles on the rifle, when speaking of rifle projectiles. Such as "round ball" "spherical ball," "conical ball, "etc., to such an extent as to be at least a little disagreeable. Who ever saw an elongated ball or a conical one? I submit, would it not be better to say bullet instead?—CENTRAL. [The objection is not well taken. Ball and bullet are interchangeable.]

DUBLIN, June 25.—The American Cup, presented by Col. Gildersleeve of the American Rifle Team of 1875, to the riflemen of Ireland as a memorial of the first international rifle contest, was won to-day at Dollymount by William Russell Joynt, who thus becomes the champion shot of Ireland for the year. Mr. Joynt stands at the top of the list of the Irish eight at Wimbledon, with a score of 453 out of a possible 500. Mr. Joynt was a member of the team which shot at Creedmoor in 1876, and also opposed Colonel Bodine's American team at Dollymount in 1882.

THOMASTON, Conn., June 20.—The weather conditions at the weekly shoot of the Dmpire Rifle Club to-day were a bright light with quite a strong wind, veering from 8 to 11 o'clock. Subjoined are the scores:

Fred A Perkins	12	10	12	10	12	9	9	11	12	12—109
G A Lemmon	12	12	8	12	11	10	10	11	10	11—107
C L Alling	7	11	12	10	8	12	12	11	11	8—103
G C Wollam	11	9	9	11	10	9	10	10	11	12—102
W H Dunbar	9	10	11	11	10	8	10	11	10	11—101
G P North	11	11	9	12	12	10	10	8	10	8—100
C F Williams	8	11	7	12	9	8	12	10	12	0— 98
E Thomas	11	12	9	12	9	10	9	7	8	11— 98
F Carr	7	8	10		8	9	7	7	11	10 11— 88
A Fox	7	8	11	8	7	10	8	12	5	11— 87

THE TRAP.

THE NEW YORK STATE SHOOT.

SYRACUSE, June 23.—The State shoot opened to-day on the course of the Syracuse Driving Park, with a fair attendance. From 300 to 500 people watched the shooting during the day. Several tents had been raised on the ground, over one of which waved the flag of the Onondaga County Sportsmen's Club, the only organization encamped on the grounds. Marksmen were stationed in the middle of the track, tables behind them being supplied with ammunition and necessary tools. At a distance of 18yds. were placed five traps, concealed from the marksmen by boarding. Two men in a ditch placed the clay-pigeons in these traps as they were needed. The very high wind and the flying dust contributed to the holding down of the scores. The marksmen did fine work on the whole, considering the disadvantages. The first contest opened at 10:30 o'clock. Each marksman had 10 pigeons to shoot at. The scores made by each of the marksmen is as follows: H. Fleischer 6, M. C. Hadley 7, A. Baker 8, W. S. Crothers 9, W. N. Booth 8, B. Richardson 7, W. B. Kirk, Jr., 8, C. Wagner 6, M. Smith 9, W. Richmond 10, Plank 7, Andrews 6, Chapman 7, Courtney 7, Crouch 6, Cosad 6, Fuller 7, Goodrich 4, Davidson 4, Luther 6, Whitney 7, Norton 9, Hess 3, Hudson 7, White 4, Catchpole 6, Hill 4, Coolridge 5, Whiting 6, M. J. McIntyre 5, Fowler 6, Reed 5, Gabett 6. Wm. Richmond having been the only one to break 10 clay-pigeons, received the first prize, a Spencer repeating shotgun, value $100. Mr. Richmond is of Rochester, and is a member of the Monroe County Club and Genesee Sportsman's Club of Irondequoit. The second prize was not awarded. Norton, of this city, a member of the Onondaga County Sportsman's Club, won first prize in Class B, $50 in cash. A. Baker, of the Northern Wayne Gun Club, of Wolcott, took the first prize in Class C, $25 in cash. W. B. Fuller, of the Onondaga Sportsman's Club and a member of Syracuse University, took first prize, $10 in cash in Class D.

An intermission for lunch followed. At 2 o'clock in the afternoon the shooting began in the second contest. The scores are: Fuller 4, Hadley 4, Kirk 5, Coolridge 4, Norton 9, Green 8, Smith 7, Harris 7, Chapman 5, Courtney 6, Richardson 4, Hill 6, LeFevre 4, Rowley 1, Brunt 4, Crouch 6, Peters 5, Booth 6, Walters 4, M. J. McIntyre 6, Andrews 6, Richmond 10, Goodrich 6, Hudson 6, Luther 7, Waggoner 7, Fleischer 9, Greener 4, Stahlbaum 4, Whiting 4, Cosad 5, Baker 5, Whitney 8, Crothers 6, McCormick 7, Frank 5, York 5, Hess 7. Richmond, of Rochester, who won the first prize in the morning, also won the first prize in the afternoon, being the only one to break 10 pigeons. The prize was $100 cash. Edward Hudson, of Syracuse, won first prize in Class B; Fleischer, of the Genesee Club, of Rochester, took second prize. Whitney was the winner of the first prize in Class C. Munroe C Smith, who won in Class D, is a member of the Onondaga Sportsmen's Club, and son of L. C. Smith, who donated the Smith cup. Hess took second prize, a hunting hat. He is a member of the Genesee Club. A sweepstake shoot was held after the regulation contests. There were 28 contestants, Whitney of Phelps, Courtney of Syracuse and Andrews, of Rochester, divided first money; George Luther, of this city, took second; Fleischer, of Rochester, third, and Smith, of Syracuse, fourth.

Syracuse, June 24.—The second day's contests of the shooting tournament passed off quietly, nothing of particular moment happening. Much better scores were made than on the preceding day, the wind having subsided. About 300 people assembled at the Driving Park to watch the shooting. The contests were with clay-pigeons as on the first day. The prizes in the third contest of the shoot amount to $257. The records made by each marksman are: Whitney 9, Richmond 9, Baker 9, Crothers 8, Smith 7, Waggoner 8, Norton 8, Hudson 8, Hadley 6, Bronner 6, Sodek 6, Kirk 8, Fuller 5, Green 8, Fleischer 8, Andrews 6, Coolridge 4, York 7, Reed 6, Elliott 6. DeWolf 6, Hill 6, Cosad 9, Lefever 9, Harris 3, Catchpole 8, Luther 8, Walters 6, McCormick 8, Brunt 4, Frost 4, Taylor 7, Courtney 8, McIntyre 6, Greener 7. No one of the contestants having shot 10, the ties of 9 were shot off to determine the prizes in class A. Richmond, of Rochester, took the first prize, $75 in cash, and a shawl valued at $25. H. H. Fleischer, of the Genesee Club, of Irondequoit, took first prize in Class B. M. D. Smith, of the Onondaga Club, took first prize in Class C. W. C. Hadley, of the Genesee Club, of Irondequoit, took the first prize in Class D.

The fourth contest of the tournament began at 1:30 o'clock in the afternoon. The record is as follows: Baker 8, Waggoner 6, De Wolf 7, Palmer 8, Richardson 6, Smith 7, Elliot 9, Fleischer 10, Hadley 8, Pratt 5, E. H. Smith 10, Richmond 8, Green 9, Goodrich 7, Brunt 6, Lefever 7, Hudson 10, Whitney 10, Norton 8, Courtney 8, Luther 9, Mann 9, Kendall 6, Williamson 5, Four contestants had tied at ten. The shooting off result: Fleischer 3, E. H. Smith 4, Hudson 4, Whitney 5. Whitney, of Phelps, took the first prize, a hammerless gun valued at $150. Green, of Rochester, took first prize of class B. Baker, of the Northern Wayne gun club, of Wolcott, and Richmond, of Rochester, instead of shooting off their tie, decided to divide the second and third prizes of class C. A sweepstake shoot followed, in which there were a large number of contestants. A. G. Courtney, of Syracuse won first money, Hudson, of Syracuse, second and George Luther, of Syracuse, third.

Syracuse, June 25.—Contest No. 5, the amateur shoot, was to have begun at 8 o'clock this morning, but owing to unavoidable delay, the shooting did not begin until after 10. The day was a fine one for the competitors, there being no wind, and remarkably good scores were made in both contests. The following are the scores for amateur contest No. 5, the prizes in which amounted to $200: B. Tolsman 6, A. Coombs 6, D. Norton 7, S. Soule 7, A. Baker 9, M. C. Smith 9, G. G. Campbell 6, Peters 6, Crothers 5, Chapman 7, Chismore 6, Partiss 7, Dodson 6, Homec 7, Plank 9, Moorhouse 5, Larned 7, Harris 3, Booth 7, Bennet 6, Hadley 7, Taylor 8, P. T. Perkins 8, W. R. Sill 9, Brunner 6, Fuller 7, Palmer 7, McChesney 7, Kirk 5, Greener 8, Sterling 7, Van 7, Stalbaum 4, Emerick 5, McCormick 8, C. Walters 7, Kendell 6, Tack 7, Le Fevre 8, Cosed 7, York 7, Munz 3, G. Cress 9, Isbester 5, Mann 5, Smythe 10, Elliot 7, Catchpole 6, Ayling 5, Jackson 5, Turner 6, M. J. 8, Gale 7, Hankin 7. De Wolf Smythe of the Oneida County Sportsman's Club won the first prize, $100. Plank of the Onondaga County Sportsman's Club took first in Class B. Perkins of the Oswego Leather Stockings took the first prize in Class C. Walters of the Onondaga Club took the first in Class D.

After a short interval, contest No. 6, open to all members of the Association, was called, and although there was $326.50 in prizes only 25 entries were made. The clay-pigeons had a hard time of it from the start, high scores being the general result of the efforts to bag the first prize, $130, donated by the hotels of Syracuse. The scores are: Smith 8, Baker 10, Waggoner 9, Hadley 6, M. C. Smith 9, Richmond 9, W. H. Sill 9, Whitney 10, Green 10, Brunner 8, Ed. Hudson 7, Luther 8, H. H. Fleischer 10, Courtney 8, LeFevre 8, Forest 10, Gress 7, Hankin 5, Gale 8, Norton 7, Kirk 4, Chapman 7, Smythe 10, McCormick 7, Elliot 10. Several scores of 10 being made added much interest to the race for first place, of which the following is the result: Baker 4, Whitney 5. Green 4, Fleischer 4, F. W. Partiss 5. Smythe 5, Elliot 4. Whitney, a member of the Genesee Club, residing at Oaks Corners and only 17 years of age, with a score to his credit of 25 straight, won first, Smythe of the Oneida County Sportsman's Club, took second, F. W. Partiss, of the Ilion Gun Club, third. Wagoner and Sill, both of the Genesee Club, divided first in Class B, leaving second choice to LeFevre, Gale taking first in Class C. Chapman made the highest possible score in three trials for the first prize in Class D.

Syracuse, June 26.—Five clubs were represented by teams in the shoot at live birds for the Dean Richmond cup to-day. This cup is valued at $1,150, and has been keenly contested for by the clubs of the Association for a number of years. The Audubon Club was the fortunate one this year, the team, consisting of Fisher, Scheibert and Downs, winning with a score of 57 out of a possible 60. This ties the highest score ever made in the trial for the cup, surpassing the record in so much that no bird out of the whole number was challenged, and each man has equal claim to the glory of the victory with a score of 19 apiece. The complete scores for all the teams are:

Audubon.		Genesee.	
Fisher	1111111111110111111—19	Couch	1111111011111111011—18
Scheibert	1110111111111111111—19	Andrews	1111011111111111111—19
Downs	1111111111110111111—19	Evershed	1111011101111111111—18
	57		55

Onondaga.		Monroe County.	
Hudson	0111111011111111111—18	Richmond	0101111101111101011—15
Luther	1110110111111110111—17	Brown	0111111111111011111—18
Courtney	1101111011111111110—17	Fleischer	0111101111010111111—16
	52		49

Queen City.			
Haskin	1100101011110110111—15	Talman	0011111111101111111—17
Behring	1111011111110101010—15		
			45

There are 20 single birds to each marksman in the match. The pigeons used were tame birds, and owing to their tossing about during transport a good many flew poorly, making poor sport in such cases.

At 3 o'clock contest No. 8, 10 clay-pigeons, 26yds. rise, was called on with a list of 34 entries, containing the names of all the crack shots present during the convention. The scores are: Smith 9, Hudson 9, Baker 9, Wagner 8, Courtney 9, Richmond 9, Sill 7, Andrews 7, Hadley 7, Evershed 8, Whitney 9, Luther 9, Crouch 6, Smith 9, Soule 8, Chapman 5, Green 9, Portiss 8, Chismore 5, Lefever 9, Gale 8, Minton 9, Fisher 7, Scheibert 7, Wood 8, Fleischer 8, Crothers 8. McCormick 8, Kirk 6, Prettie 9, Stalbaum 8, F. A. Elliott 10, Brown 6, Walters 7. The Onondaga Sportsman's Club came to the front in this, F. A. Elliott taking 10 straight in splendid style. He was the only one in Class A, taking first prize, $100. Edward Smith, of the Niagara Club, carried off first in Class B. McCormick, of Salina, took the first in Class C. William Scheibert took first in Class D.

While contest No. 8 was in progress the off-hand rifle match was also going on in another part of the field. The distance was 100yds., ten shots allowed each, position standing. The scores are these: Eggleston, Sharp's Creedmoor, .44-cal., 44; Kirk, Winchester, 62; Gates, Remington, .44-cal., 33 2-16; Morris, Remington, .38., 48 13-16; Zischong, Sharps action, own make, 30 2 16; Jones, Remington Creedmoor, 27 2-16; Koehler, Remington, .38-cal., 33 14-16; Barnum, Zischong, 43 3-16. O. D. Jones took first prize, E. O. Zischong second, Allen Gates third, and N. A. Koehler fourth.

PORTLAND, OREGON.

Editor Forest and Stream:

The annual shooting tournament of the National Rod and Gun Club commenced at City View Park, Portland, Saturday morning, June 6. The day was showery, which, however, appeared to dampen nothing beyond the ladies' toilets.

The value of prizes divided among the five events (two Peoria blackbirds and three clay-pigeon) amounted in the aggregate to $1.000. The shooting, except in two or three individual instances, was very ordinary, and the first portion of live pigeons trapped of the sickest ever introduced into a shooting tournament.

Walla Walla, Seattle and Vancouver each furnished a team of five men each, the home (Multnomah) club entering teams Nos. 1, 2 and 3, of a like number each. Shooting for the team champion cup, value $100, with photographic group of winning team, value $20, added, was restricted to organized clubs of the Northwest, the remainder being open to all.

The announcement of three matches at live birds drew together quite a concourse of people, for your average Oregonian sees but little fun in shooting at anything unless there's some "killing" in it. Besides there had been no live-pigeon matches since the palmy days of the "white house," some eight or ten years ago, when such men as Tex Aubrey (then a resident, and one of the leading spirits here, and now of Walla Walla), Acker, Prettyman, Tom the Gypsy, Stephens, Major Babbitt, Schenck, and a host of others too numerous to mention, were to the fore; when breechloaders (in Oregon) were nearly as scarce and as great a novelty as are hammerless guns (here) to-day But a decade thins out and scatters the ranks of even such usually long-lived men as lovers of the trigger, and not so many of the old familiar faces were present Saturday as one would like to have seen. National Association rules governed, and more than one old, well-tried muzzleloader and owner were cebarred in consequence, much to the disgust of one or two of the latter who openly declared their ability to "out-shoot them darned 'britch'-loaders, gun for gun."

Apropos muzzleloaders, there were one or two of the masterpieces of the gunsmith's art on the ground, notably one by old Wm. Greener (father of the present W. W. Greener), in the possession of Mr. J. G. Bliss; a 10-gauge, 9-pound, 32-inch pigeon gun, built especially for trap and wildfowl shooting, many years ago, at a cost (laid down in Oregon) of $275; and the manner in which it bundled some of the many escapes out of the surrounding fir timber, proved conclusively that, as far as killing powers went, it could have held its own at the trap. Judging from the hammerless *pieces de luxe* in the hands of a few of the most wealthy, high-toned sportsmen, Messrs. W. W. Greener and W. & C. Scott & Sons had each some ardent admirers. Noticeably among the other breechloaders were names of almost every gun maker of the present century, living and dead, from Manton and W. Richards down, and if ever dear old Joe Manton, of small bore flint-lock and percussion celebrity, or his honored compeer, Westley Richards, could see the vicious-looking rattletraps bearing their prated names, they would turn uneasily in their graves.

There being upward of 56 entries in the first clay pigeon matgh (7 birds each, and 3 minutes grace in which to gather all doubtful birds), it was night ere the programme was half through, so that the remainder of the matches were shot off subsequently. Following are the scores:

Multnomah Team No. 1.

E J Stuart	0001111001010111101—12
W F Spencer	0101101101101001011—12

W T Peet.....1011111011110010111—15—59

Second Event.—The shooting was at five pigeons, seven birds from ground traps at 30yds. rise, the prizes, valued at $25, to go to the three highest scores. The score was as follows:

F G Sanborn	2121112—7	T B Jones	2102100—4
A D Bevan	1111212—7	E Thayer	1110010—4
D K Howe	1011020—4	D Loring	2100011—4
W T Muir	1002200—3	R W Vaughn	0000100—1
T M Payne	1111111—7	E J Jeffery	0*012000—3
W P Burger	1020200—3	W A Scoggin	1100000—2
W D Close	1111100—5	F Bier	1102010—4
E W More	1111201—6	R E Bybee	0102120—4
W A Eberly	1100201—4	W G Chapman	1121211—7
J Pacquet	2211211—7	G Stewart	0112210—5
J T McNaught	1110121—6	J W Whaley	0000111—3
B H Nichol	1020001—3	A Evens	0110100—3
T P Maynard	1211111—7	W T Peet	1011110—5
J M Gearin	0111100—4	A B Riky	0100200—2
T Davis	1112211—7	M F Spencer	0121212—6
B St. Mary	1000100—2	F Brooks	2111111—7

The figure 2 signifies that both barrels were fired to make the point.

Third Match.—This match was shot at seven live pigeons, under the same conditions as the match of Saturday. The following was the score:

M W Stackpool	1111111—7	H T Hudson	0111110—5
J F McNaught	1011111—6	B D Payne	1011111—6
J Pacquet	1011111—6	Frank Brooks	0111111—6
T Davis	1111110—6	W D Close	1011111—6
A Evans	1111010 —4	George Stewart	1110111—6
E J Stewart	110110 —4	Doc Eberly	1111010 —4
Wm Robertson	1011111—6	M F Spencer	1011111—6
E W Moore	1111110—6	W R McDonald	1111110—6

In shooting off the ties Spencer won the second prize and Pacquet the third.

Second Event.—As the stock of pigeons was beginning to run low it was agreed that this match should be shot at three birds, miss and out. The score was as follows:

D K Howe	111—3	W L Curry	0
D Loring	10	M F Spencer	10
T B Jones	110—2	Geo Stewart	0
F G Sanborn	10	E T Stewart	10
Doc Eberly	0	F Brooks	111—3
J Pacquet	111—3	Frank Zan	0
W T Muir	0	Theo Davis	111—3
A D Brown	10	J M Gearin	0
W T Peet	10	E W Moore	111—3
T F McNaught	111—3	W A Eberly	111—3
M W Stackpool	111—3		

In shooting off the ties Pacquet won first, Moore second and Brooks third.

Third event, blackbird championship—This match was shot at 10 Peoria blackbirds, 18yds. rise, use of one barrel only. Following is the score:

Chapman	1111001100— 6	Spencer	0111100010— 5
Loring	0111111111— 9	McDonald	1101011111— 8
Boarman	1101010111— 7	Stackpool	1100110111— 7
McNaught	1111111111—10	Muir	1011111111— 9
Pacquet	1111110101— 8	Moore	1111110000— 6
Aubery	0001001011— 4	Woodman	1100001011— 5
Whalley	0110111011— 7	Peet	1111111111—10
Howe	1011111110— 8	W A Eberly	1011000000— 3
Lewis	1110111101— 8	E T Steart	1111101111— 9
Hudson	1101111101— 8	Robertson	1010011111— 7

In shooting off the ties Peet won the second prize and Loring the third. I. G.

TORONTO, June 23.—This morning at 10 o'clock the International Shooting Tournament at Woodbine opened with an open shooting match at 21 Peoria blackbirds, 18yds. rise, for $300 in cash prizes. The scores made were as follows: Smith (Niagara) 15, J. P. Moore 5, E. S. Rogers 4, Howard 12, Doubray 13, R. Stroud 6, Ward 4, Chambers 6, E. Axton 11, A. Patterson 12, Wilkinson 10, Geo. Rogers 9, Geo. Briggs 9, Heatherington 9, T. George 9, Riordon 13, G. M. Dunk 10, A. Kay 14, Kimball 12, Morris 5, Montgomery 9. T. Loudon 14. J. Townson 12, M. Shannacy 13, J. Humphrey 11, Miller 10, Thomas 8, John Smythe 16, J. Douglas 13, W. S. Miniszek 9, Griffin 10, E. Reid 14, P. Bugg 11, G. Smith 7, J. Warden 5, F. Mallat 6, Wm. Smith 4. John Smythe of Hamilton took the first prize, $100; Smith of Niagara secured second prize, $70; A. Kay, T. Loudon and E. Reid divided the next three prizes, which came to $33 each; Doubray, Shannacy, Douglas, and Riordon divided the next prizes, which amounted to $7.50 for each man.

JAMESTOWN, N. Y., June 24.—Telegraphic match with Winchenden, Mass., 20 clay-pigeons, fourth notch, 18yds. rise, use of one barrel, 3 angles, viz: Straightaway, right and left outer quartering, screened trap. The wind blew at about 50 miles an hour, which carried the birds away far enough to get a good spread of shot, consequently good scores were the result:

Walker	10110001101011111111—14
Burns	01000111101010111111—13
L Pennock	00001101111110110111—13
Moore	00110001010111111011—12
Carnahan	11111101000101010001—12
Shattuck	01101011100010100001—10
F Pennock	10000001101110100001— 9—83

Ten Peoria blackbirds:

Carnahan	1111111110—9	F Pennock	0101000110—4
Walker	1110011111—8	Garfield	1000101100—4
L Pennock	0011001111—6	Burns	0110000000—2
Shattuck	1101011000—5		

PARIS, Ill.—The Paris Gun Club's regular weekly shoot, June 26. Teams of six men, birds thrown from 4 screened traps:

N Barker	1111010110	11	01	10	11 11—15
N Bell	1010111111	00	00	10	10 11—12
E Parish	0111111110	01	00	10	11 10—13
A Traglon	1010110101	10	00	11	00 10—10
W Sheppard	1110001011	11	10	10	11 01—12

W Buchanan	0110010111	00	10	10	10 10—10—76

—S. C. H.

GIRARD MANOR, Pa., June 27.—Our club has been organized but two months. None of the members had shot at clays previous to our first shoot, May 2, 1885. The following is the score made Saturday afternoon, June 27, at clay-pigeons, 10 birds each:

J Lorah	1111111111—10	Stauffer	1101011111— 8
M Lorah	1110111111— 9	MacMillan	0011111111— 8
Kleckner	0110111111— 8	Clark	0101101101— 6

GOLDEN GATE GUN CLUB.—San Francisco, June 14.—At a meeting of the Golden Gate Gun Club held last Tuesday evening, June 9, the following officers were elected for the ensuing six months: President, Edgar L. Forster; Vice-President, Stanley G. Scovern; Secretary, Edwin L. Forster; Treasurer, Rudolph Schlueter; Sergt. at Arms; Eugene F. Bert. Executive Committee, Edgar L. Forster and Roger Kershaw.

ALLENTOWN, N. Y., June 27.—East Hill Gun Club monthly shoot, 20 single and 5 pairs clay-pigeons, 5 traps, N. G. A. rules governing:

J Fay	10101000001011001111	00	10	11	10 01—15
E R Curtin	10011000100011101010	00	01	10	10 11—14
L D Strayer	11101110011011001100	11	11	11	10 10—21
S H Brown	00011101110111100110	10	00	11	11 11—19
W W Curtin	00010100101111000001	00	11	10	10 11—14
Z Stamm	10110000111111101111	10	00	11	11 11—21

D. Phillips, C. Meldrum, C. Kendle and C. L. Farnum withdrew.

TRAP NOTE.—The Illinois State Sportsmen's Association will meet at Delavan, July 7, and hold a four days' session before the trap.

WELLINGTON, June 25.—There was a good attendance at the grounds of the Malden Gun Club this afternoon. Following is the result of the several matches: 1. Five blackbirds—Shumway and Snow first. 2. Five birds—Shumway first. 3. Three pair birds—Parker first. 4. Five blackbirds—Loring, Pratt and Parker divided first. 6. Three pairs pigeons—Schaffer and Shumway divided first. 7. Five blackbirds—Loring first. 8. Five birds—Shumway, Evans and Schaffer divided first. 9. Seven blackbirds—Pratt first. 10. Five birds—Perry and Parker divided first. 11. Parker and Spencer divided first. 12. Three pairs pigeons—Perry first. 13. Seven straightaways—Shumway and Snow divided first.

The Boston Gun Club held its fortnightly practice prize shoot on the club's grounds. Quite a number of sportsmen were on the grounds ready to exterminate any number of "clays." The perfect weather made the shooting fine sport. 1. Seven singles, 18yds.—J. Philbrick first. 2. Sev n singles—D. Mitchell first. 3. Seven birds—G. Cutting first. 4. Seven birds -Philbrick first. 5. Seven single birds—Field and Philbrick divided first. 6. Seven single birds—Stanton and Stark divided first. 7. Seven singles—W. A. Spencer first. 8. Seven singles—Cutting first. 9. Seven birds—Stanton first. 10. Seven singles—Stark first. C. M. Stark and C. Snow are tied as winners of the prize 22-cal. rifle. G. Cutting for the Victoria gun case, and Philbrick, Ward and Mitchell in line for the other prizes, Stanton and Souther taking the lead for the Visitors' prizes, all of which will be determined at the next shoot.

HAGERSTOWN, Md., June 24.—We have formed a gun club in this place, and have regular practice on each Monday afternoon. We use clay-pigeons principally, but also shoot at live birds and glass balls. Following is score between our regular club and a picked crowd from the best bird shots in the county and from neighboring counties:

Visitors.		Association.	
A Lutz	0100010110—4	Geo Aiken	0101010110—5
Chas Rigney	0110001101—5	J U Adams	1011111111—9
A H Mumma	1010001000—3	A M Ordway	1011101000—5
R Albert	0111000100—4	S J Wishard	1110110111—8
Wm Albert	1000100100—3	L A Spickler	1110101111—8

OSWEGO Y. C., LADIES' DAY.—Nothing has occurred in the quiet, easy-going annals of this frontier city that has so put society on the *qui vive* as the sail of the Oswego Y. C. on last Thursday. The milliners, dressmakers and tailors were taxed to their full running power to make everybody look pretty and nautical. Then, the Count de Champfen, of the "Statue of Liberty"-bearing Isere, was on board the Ruth (steam yacht), who took the fleet in tow after sail had been used to get clear of the harbor and the fickle wind had come to a halt in contemplating the scene of gayety and festivity that reigned on board the fleet. Sodus, fifteen miles off, was reached at 4 P. M., and after exchanges of visits and the gallant and genial Frenchmen had clicked Piper Heidsieck with the Commodore and his saucy crew, supper was spread on deck, and everybody seemed to imagine it was their last meal. Tons of salads, cream, etc. were stowed away. Home was reached at 9 P. M. as per programme, and a beautiful scene it was as the yachts swung to their anchorage off the club house, and landed the ladies on to the ball room floor of the new club house, when dancing was indulged in until eight bells, when everybody went home. Any little boy or girl on the street can tell you of ladies' day of the Oswego Y. C.—PORT LIGHT.

CHANGED HIS MIND.—A few days ago a tall, lank, brawny, sailor-looking man called on Capt. Crocker of the Puritan, at City Point, with a view of shipping on board the Yankee sloop as foremast hand. He was a genuine Cape Cod, Yankee, barnacle-back tar. "Do you want any hands?" asked the Cape Coudder. "Well, what is your experience?" asked the famous skipper. "Anything from splicing a rope to handling a square rigger suits me." Capt. Crocker turned and looked at the applicant, and was weighing him up before giving him an answer. The sailor, who during this time was intently looking at the "long bowsprit," suddenly broke the silence and queried: "Say, is it expected that I am to go out on the end of that bowsprit and furl the sails?" "Yes," replied Capt. Crocker. "That settles it; I guess I won't sign," and away went the son of Neptune, evidently to take the cars for home.—*Exchange.*

NEW YACHTS.—Messrs. Poillon have in hand a new schooner about 60ft. long and of only 2ft. 6in. draft for Florida waters, and a small vessel to be propelled by a new motor, the nature of which is kept secret.

BROOKLYN Y. C. ANNUAL REGATTA.

AFTER lying dormant for eight years the Brooklyn Y. C., once among the largest and most powerful clubs, but of late little heard of, has at last started off on a new tack that promises to make them once more a prosperous club. The old fleet with its large tonnage has totally disappeared, and the club will, in the future, devote themselves to the encouragement of smaller yachts and amateur seamanship.

While there may be a slight loss of prestige in this new departure, there is no doubt but that it will bring a strong element into the club and add many to the roll, while all are sure to take a strong interest in club matters. They have secured a club house on the old dock at Locust Grove, Gravesend Bay, with a good anchorage, and quite a fleet is already enrolled. Their annual regatta was sailed on June 27. The courses were: For Class C, to and around buoy No. 7 off the lower end of the West Bank and return; 13¼ miles. For all the others except No. 4, to and around buoy No. 8½ and return, 16½ miles. For class 4, to buoy No. 8½, thence to buoy No. 5, then back to place of departure over the same course; passing west of buoy No. 8½. The following yachts were entered: In Class B, catboats over 20ft., Ripple. Class C, open sloops, 25ft. and under, Gracie, Surprise, Fern. Class 1, cabin craft of all rigs, 25ft. and under, Sea Robin, Mamie, Vida. Class 2, cabin craft, between 25 and 30ft., Mignon, Zetta. Class 3, cabin craft from 30 to 35ft, Wacondah, Carrie May, Widgeon. Class 4, cabin craft, 35 to 45ft., Æolus, Circe, Chance, Gladiator, Genevieve, Kismet.

The start was set for 11 A. M., but a long delay ensued after the yachts were ready, and it was noon before the gun was fired. A heavy fog had shrouded everything in the morning, but it had lifted by 10 A. M. No sooner had the fleet started than it dropped again, shutting them in. All went over promptly without handicap or fouling, making a good start. The fleet carried booms to starboard, Gladiator leading. Æolus was last of her class to start, but soon overhauled all but Genevieve, Carrie May held out well to the big ones out to buoy 8½. Circe lost her topmast near buoy 16, and continued for a time but finally withdrew. Genevieve turned buoy 8½ the leader, with Æolus close astern, then Chance, Gladiator, Circe and Kismet. It was a beat out to buoy 5, with a light wind and no sea. The times of the smaller boats at 8½ were: Carrie May, 1h. 10m.; Widgeon, 1h. 14m.; Mignon, 1h. 16m. 30s.; Ripple, 1h. 17m.; Wacondah, 1h. 17m. 30s.; Sea Robin, 1h. 20m. 30s; Zetta, 1h. 24m.

At buoy 5 Genevieve rounded first and jibed, coming in so close to Chance that she was obliged to round a second time to avoid fouling the latter. All jibed neatly, Chance and Æolus starting home on even terms with Genevieve, the former with jib boomed out. At buoy 8, Genevieve led with Æolus close to her, then Chance, Gladiator and Kismet. Here the breeze freshened, and Æolus speedily left the pack and walked up to the Leader's weather quarter, gaining all the time until off Norton's Point the wind dropped, when she slowly fell astern and Kismet passed her. The times of all were:

	Start.	Finish.	Actual.	Corrected.
CLASS B—CATBOATS.				
Ripple	12 03 13	2 47 48	2 44 35	2 44 35
CLASS C—OPEN SLOOPS.				
Gracie	12 02 48	2 14 42	2 11 54	2 11 54
Surprise	12 03 50	2 24 26	2 20 46	2 19 14
Fern	12 03 48	2 25 25	2 21 37	2 12 52
CLASS NO. 1—SLOOPS, CUTTERS AND YAWLS.				
Sea Robin	12 03 30	3 06 30	2 56 30	2 56 30
Mamie	12 04 54	3 29 04	2 24 10	3 23 15
Vida	12 01 39	Did not finish.		
CLASS NO. 2—SLOOPS, CUTTERS AND YAWLS.				
Mignon	12 03 45	2 50 00	2 46 15	2 46 15
Zetta	12 03 55	3 26 06	3 22 11	3 20 27

Carrie May	12 01 43	2 31 15	2 29 32	2 26 20
Widgeon	12 05 03	2 36 30	2 31 27	2 28 00
CLASS NO 4—SLOOPS, CUTTERS, ETC.				
Æolus	12 04 38	3 16 45	3 11 07	3 11 07
Circe	12 01 38	Did not finish.		
Chance	12 03 22	3 22 10	3 18 48	3 12 51
Gladiator	12 02 04	3 18 15	3 16 11	3 11 14
Genevieve	12 01 35	3 12 30	3 10 55	3 04 38
Kismet	12 03 37	3 15 30	3 11 53	3 06 31

The Gracie, Sea Robin, Mignon, Carrie May and the Genevieve are the winners.

Prizes of plate were awarded to the winning yachts. The regatta was in the hands of Mr. Wm. Bishop, to whose efforts much of its success was due. With the exception of the delay at the start the race was well managed throughout, and gave satisfaction to all the participants.

OPENING DAY OF CHESAPEAKE Y. C.

THE 10th of June was appointed for the newly-organized C. Y. C. to hold its opening meet at the rendezvous of the club at Oxford. The yachts Cora and Zema left their anchorage in Miles River to attend the meet on the afternoon of the 8th, they having to sail about 50 miles to reach the anchorage. The Zema, in making a start, thought she had better inspect the cornfield of the Vice-Commodore before proceeding on her voyage, owing to the creek's being too small or the cornfield being too large. This accident delayed the boats, so they made harbor under Deep Water Point. The 9th was a splendid day, wind fresh N.W., and temperature just right. The Cora (yawl) got under way under mainsail and No. 2 jib for a beat to Tilghman's Point, at 7 o'clock; the Zema got off 10 minutes later. Cora made Tilghman's Point at 8:10 o'clock; here the course was S. S. W., so she took in her mainsail to wait for the Zema to come up, and set her driver, running under driver, staysail and No. 2 jib. The Zema had started under a reefed mainsail and jib with foresail stowed. With this canvas she fell a long way astern, so made foresail, but not soon enough to overtake the little Cora, who made the balance of the run under the short canvas named, and arrived off Oxford at 1 o'clock. Both yachts then proceeded to the anchorage of Commodore Dimpfel, where we found the schooner Gaetina (flagship) and sloop Euchre with a merry party of yachtsmen on board. The afternoon was very pleasantly spent visiting the different yachts, and at the beautiful residence of the Commodore, where music and fireworks helped to pass the evening.

The morning of the 10th opened with a light air from N., which died out entirely, and about 11 o'clock came out from S. As soon as the breeze came the Commodore fired the starting gun, with orders for the fleet to proceed to Oxford, about two miles distant. The saucy Cora felt the light air first and jumped off with the lead, and after running down to the railroad pier, she came back to find the other yachts at anchor off the River View House. Soon after anchors were down the beautiful sloop Lulu hove in sight and came to anchor in line. The Willie (yawl) was the only yacht belonging to the club not in commission, but her owner could not have some repairs completed in time. A business meeting was held in the cabin of the Gaetina, new members were elected, and other business transacted. Then an adjournment was made to River House, where dinner awaited the call. Dinner disposed of, during which many speeches were made, toasts drank, and the usual formula made and provided for such occasions gone through with, the Commodore ordered all aboard the yachts for a sail round the lighthouse at the mouth of the river, the wind having freshened to a nice sailing breeze from S. The Cora, though next to the last to weigh anchor, under instructions from the Commodore, caught the wind at once and took the lead, followed by the Lulu, Euchre, Zema and Gaetina in the order named, wind dead ahead. On the first tack the Cora's mainsheet fouled, causing her sailing master to throw her up in the wind before it could be cleared. This let the Lulu ahead, which lead she continued to hold on the next two stretches, but the Cora then got down to work and crawled out to windward, and closed the gap very fast, tacking just in time to make the lighthouse, turned it first boat and was off for home with such a lead, that the Lulu did not round the lighthouse.

This sail closed the opening meet of the club, and a very successful and enjoyable day it proved. The fleet disbanded, the Zema and Cora accompanying the owner of the Lulu to his beautiful home, Ellerborough, in the Third Haven, where we were entertained with generous hospitality. The next morning, after a visit to our host's well appointed and very complete farm buildings and an inspection of his fine stock of all kinds, in which his unrivalled flock of Oxford-down sheep, the finest in the country, if not in the world, were much admired, the three yachts got under way for a run down the river to attend the annual shoot of the game association of Talbot county, several of the members of the C. Y. C. being members of the association. After witnessing the match for the glass ball and clay-pigeon badges of the club, the yachts got under way to return to Ellenborough, not being able to escape the fascinations of this lovely spot.

After breakfast on the following morning the Zema and Cora's crews, after bidding adieu to their host and his brother, got under way for home, stopping to pay a visit to our rear-commodore at his residence in Oxford. They anchored for the night in Black Walnut Harbor, and after a very pleasant run reached home on Saturday afternoon, all feeling sorry that the cruise was over.

In reference to the sailing of the Lulu and Cora, these two boats are old rivals and always hunt each other when they meet. There is very little to spare in speed between them, although the Lulu is the larger boat. The owner of the Cora changed her from sloop to yawl in rig, and is well pleased that his boat continues to hold up her end of the row so well under her present rig, which was put on for convenience and handiness for winter cruising, she being in commission all the year round. He is of the opinion that his boat is as fast as ever in running or reaching, while her speed is but little

less to windward than it was under sloop rig, she probably losing a little in point of weatherliness. The sloop rig, if we could be sure of always having no more than a whole sail breeze, would do very well, but when it comes on to blow there is no comparison for handiness as between the sloop and yawl with double head rig. SINKBOAT.

THE EFFECT OF OIL ON WAVES.

WE published some time since an account of experiments made by the English government, as to the effect of oil on waves, a subject that our own government has considered of sufficient importance to warrant an investigation, and the Hydrographic Office are now collecting such data on the subject as is available, which it is proposed to publish in the form of a pamphlet. Among other instances, Capt. Jones, of the British steamer Chicago, reports the use of oil while rescuing the crew of the brigantine Fedore, in a gale, with a high sea running. Lying to windward of the Fedore, a can of oil was poured overboard from the Chicago and the lifeboat launched, carrying another can of oil which was poured on the seas at intervals, preventing them from breaking in its immediate vicinity. Oil was also poured alongside by the crew of the Fedore, calming the waves so that the boat laid by and took all off safely. Only about half a gallon of oil was used in the boat. Another instance is that of the Menzalah, from Italy to Philadelphia, last March, where the vessel was pooped and hatches stove in during a southwest gale. Men were stationed forward to pour oil through the scuppers and the vessel was at once brought to, and laid to easily, shipping no water. Still another case is reported by Capt. C. M. Lawrence, of the American ship Lucille, on a voyage from San Francisco to Liverpool, where in a heavy gale from the south, with seas breaking over the vessel, bunches of oakum were soaked in paint oil and dropped over through the fore scuppers, instantly calming the sea for some distance around the vessel, so that no further water came on board.

The English steamer, Fern Holme, Captain Ritchie, on a voyage from Baltimore to Shields, hung an oil bag over each side just forward of the bridge, while running before a southwest gale, with equally good effect. The German steamer Colon and the American brig P. M. Tinker tried the same experiment, with corresponding results, the oil being placed in bags and allowed to run out slowly. In November, 1881, the steamer Venice, from Savannah to Europe with cotton, was boarded by a sea when running before a northwest gale. The captain resolved to heave to, but first oil was poured over forward and waste soaked in oil thrown over the bow to windward, after which she came to without any trouble. Later on she was put before the sea and ran without shipping any water as long as oil was used. Her captain tried the same experiment again in 1884, with similar good results. A rather curious application of the same idea is reported by Captain Amlot of the British steamer Barrowmore, which rescued the crew of the ship Kirkwood. On approaching the vessel in a very heavy sea he noticed that the water was much calmer near the Kirkwood, and discovered that the crew of the latter, which had a lot of canned salmon in her cargo, had opened the cans and poured the oil on the water, thus calming it greatly. Steaming to windward the Barrowmore dropped her lifeboat and then ran to leeward, picking it up, repeating the operation a second time and rescuing twenty-six men. To what extent oil is to be relied on is not yet determined, but in view of the above statements the subject seems to be of sufficient importance to warrant a careful inquiry to determine what oil is best and how it can best be applied, and also to disseminate the facts among shipowners and seamen.

The following letter, addressed to Capt. David G. Patterson, gives some information as to the best methods of applying oil, and when its use may be beneficial, by Mr. R. B. Forbes, an authority on seamanship.

MILTON, Mass., June 10, 1885.

Capt. D. G. Patterson, East Boston:

DEAR CAPTAIN—Yours of the 6th, addressed to me as "President of a Board," came last evening. I have long ceased to have anything to do with the Life Saving Service, except as occasional correspondent. The subject of oil on the waters has been of late fully discussed on both sides of the Atlantic, and much has been written about it. Two or three years ago at my suggestion the Superintendent of Life Saving Service of the United States ordered B. C. Sparrow, of Orleans, to make experiments. He did so, and made a very full report of the result, going to show that, while oil would prevent the sea from breaking in water of several fathoms deep, it had little or no effect in preventing the breaking of the sea on a beach where the waves, being pushed up hill, must break on approaching the shore. I do not think that your plan would help you in launching a boat through surf, but it would no doubt be very useful in calming the sea when once clear of the beach. I inclose some remarks on oil, cut out of a late "Proceedings of the Naval Institute" for May, Vol. II., No. 2.

There are bushels of evidence of the value of oil at sea, but none of any value on a beach where heavy surf is breaking.

In scudding, in lying-to, and in lowering boats oil is of great importance. When a vessel is lying-to drifting it is only necessary to drop oil from the bow or the beam—it is not necessary to throw it to windward.

I have recommended steamships to have a long spar running out ahead carrying a small hose, through which, by steam power, oil may be thrown ahead. This would only be good when the ship is going slow against a heavy sea; there are times when such a thing would be useful. But if steamers are forced by full power against heavy seas oil cannot be sent far enough to protect them.

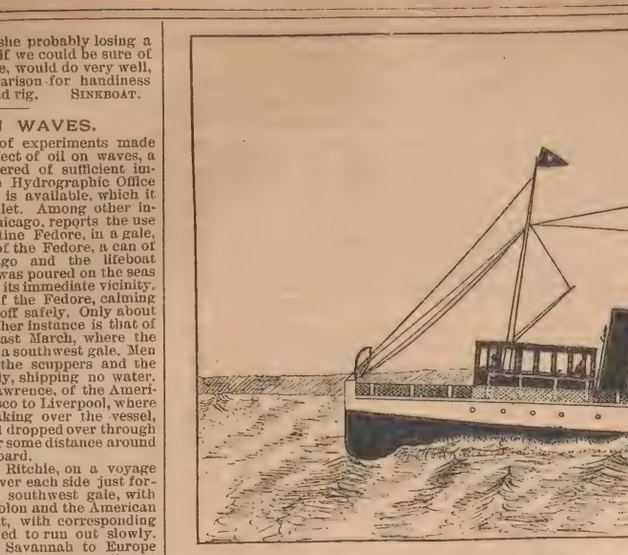
Some one has lately suggested throwing projectiles filled with oil to a distance by air or by powder, the idea being that on striking the water the projectiles burst. But I think that the projectile, if made of glass or anything that would break on striking the water, would be sure to burst on leaving the gun. Another person proposes to throw glass balls containing oil by means of a spring worked by hand, something like the machine by which shooters throw out imitation pigeons to fire at. On striking the water the balls are supposed to break. This appears to me more practical than the other. My general idea is that any plan for calming the sea must be simple, handy to manage and cheap. Complicated machines will not do.

In 1858 I sent to La Plata a small iron steamer, jury rigged, as a three masted schooner. I put a keg of oil on the stern and one on each bow near the fore rigging, and I ordered the captain when scudding to bore a small hole in the keg at the stern, and when lying-to to do the same forward. His report was to the following effect: "I cannot scud her, she broaches-to and stays there when it blows a good breeze, and when hove to she drifts so fast that no sea comes near her. The oil keeps down the break of waves, no doubt of that."

I think oil dropped from a surf boat when running for a beach may be very useful in keeping down the breakers until approaching the shelving shore, then it must break.

A fisherman at anchor on a bank may attach a bag of oil to the cable and pay out 20 or 30 fathoms, the bag being punctured will let out the oil slowly and prevent the sea from breaking on board. What do you think of that as a new idea of mine? I am very truly yours,

R. B. FORBES.



EASTERN Y. C.—The chief interest of the Eastern Y. C. race off Marblehead last Tuesday centered in the performance of the Puritan. The course for all classes was a triangular one, as follows: From the starting boat off Marblehead rock, five miles east, one-half south, then five miles northeast, three-quarters north, to starting point, five miles south-southeast. This course was gone over twice, making the whole distance sailed thirty miles. The weather was very favorable, and the yachts went over the course in the following times:

	Return.	Actual.	Corrected.
FIRST CLASS SCHOONERS.

PELHAM BAY Y. C.—The first race of this club was sailed on June 27, the course being from the club house at Pelham Bridge to Gangway Buoy and back, 8½ miles. Three prizes were offered, a silver cup, silver shaving set, and silver pocket flask. The entries were: Uncle Dave, Wake, Dart, Clara, Cygnet, Mist, Kathie and Harry C. The boats had a beat out and run home, with an ebb tide, the times being as follows:

	Start.	Finish.	Corrected.
Uncle Dave	2 37 10	1 45 13	1 44 25½
Clara	2 36 10	1 55 15	1 51 04
Wake	2 37 15	2 02 18	2 02 18

The Dart did not finish and the Harry C. was disqualified, owing to a misunderstanding of the rules, though coming in first. The judges were J. F. Patterson, H. C. Daniell and N. F. Calvert.

THE STILETTO.

STILETTO.

YACHTSMEN, steamboat men and the public generally have not yet done talking of Herreshoff's latest wonder, the little Stiletto, who has made herself famous by an hour's run on the Hudson River. Her appearance, as shown above, is most peculiar and totally different from the usual run of steam vessels. The hull is of the usual Herreshoff model, both ends very nearly alike. The construction is the same as in their other yachts, a very light but strong hull, a frame of bent oak well fastened to heavy keel, and garboards with two heavy oak wales on each side, making a very strong framework, which is covered with a double skin of white pine, with decks of the same material. The hull is divided by watertight bulkheads. The most peculiar feature is the upper portion above the hull proper. Instead of the ordinary deck and cabin trunk the sides are carried up, as shown, beveling slightly high amidships and low at the ends, the curve being almost the reverse of the sheer line. These two sides each form a trussed girder, stiffening the entire hull, while the weight is mostly amidship. From their shape they offer little resistance to the wind. Her dimensions are: Length over all, 94ft.; beam, 11ft. (a proportion of 8 6-11), and depth of hold, 7ft. 9in.

The engines and boilers are also of peculiar construction. The former is a compound, 12 and 21x12, capable of 450 turns per minute. Annular valves are used, cutting off generally at ⅝. The weight of the engines is 4,375lbs., and they can work up to 450 H. P. Many of the parts are of steel, the shaft being 4in. diameter. The wheel is 4ft. diameter with 6ft. 6in. pitch, fourbladed. The boiler is a sheet iron box 7ft. square, set on a firebrick foundation; the upper part of this box tapers into the stack, like an inverted mill hopper. Inside the fire box is 6ft. 3in. square. Just above the fire is a row of tubes 3½in. in diameter, running side by side thwartship, each tube being connected to its neighbor at alternate ends. Above are six other sets, decreasing in size to 1¼in. diameter, the second set running fore and aft, the third parallel with the first, etc., making practically one long tube, folded compactly into a small space. The upper or smaller end of this coil is connected with the feed pump, and the lower and larger end with the separator, a vertical cylinder 4ft. long and 18in. diameter, placed in front of the boiler. On this are the gauges and cocks. The water and steam entering here from the pipes are separated, the latter passing to the high pressure cylinder. The water is used continuously, the only waste being by the whistle or leakage. The water pumped into the boiler at the top of the coil, converted into steam as it descends through the pipes, passes to the separator, thence to the high pressure cylinder, the receiver, low pressure cylinder, and condenser, and finally to the feed pump and boiler, any loss being supplied by an injector. The heating surface is 615sq. ft. and the boiler works up to 160lbs. pressure. The total weight is 13,637lbs. The consumption of coal is about 2lbs. per H. P. per hour. The displacement of Stiletto is 28 tons, or 16 H. P. per ton, while the ratio of H. P. to displacement in the best merchant vessels is about 3 H. P. per ton. Lightness and power have been combined to an extraordinary degree, and with corresponding success, as her trial performances have fully demonstrated.

THE DUPLEX—NEMESIS RACE.—Catamaran racing is more active this season than ever before, and the question of centerboard vs. keel that is now involved lends additional interest to the matches. Another of the races made last winter between an old boat and one then building was sailed on June 23, resulting in a victory for the old craft. The Duplex, Com. Longstreet and Mr. Ogden, has been favorably known for some time as a very fast boat, while the Nemesis was built last winter by her owner, Mr. George Everson. The former is of the usual model, with a centerboard in each hull, while the latter has two narrow and deep hulls with rockered keels, and also carries much less sail. The match was made for $200 a side. At 11 A. M. the tug Lyndhurst was ready at Bedloe's Island with Ex-Com. Dilworth on board as judge. The tide was well down and the wind fresh from northwest when the whistle blew at 11:26, Duplex going through Nemesis's lee and making a fine start, with a long lead to her credit. Running over to the Long Island shore, both passed out the Narrows at noon, the Duplex 5m. ahead, and at buoy 8¼, where they turned, her lead was 7m. 30s., the times being, Duplex 12:51:10, Nemesis 12:58:40. The home course was still a reach, the wind being more to the westward. Nemesis held her own and rather more on the new course, but at 1:15 her mast buckled and broke about the middle. She was taken in tow by the Lyndhurst and brought home, Duplex finishing at 2:15, her time being 2:43:42. Thus far the victories have been with the centerboard boats, but on the other hand the old boats have beaten the new ones, and the latter are yet far from their best trim. The Ægir, Mr. Stephen D. Field, has changed her name to Corsair.

SOUTHWARK Y. C. ANNUAL REGATTA.—The Southwark Y. C. sailed their eleventh annual race on the 22d inst., starting at 10:30 A. M. The wind was fresh from W.S.W. The following boats started; First class, double enders—J. Bright, Maid, J. Mitchell, Emma Brugam. Second class, double enders—H. D. Boardman, Start, Frazier, Mamie, Addie, J. M. Mayloy, Gertrude, Morgan. Third class, tuck-ups—Thos. Ledyard, J. J. Sheridan, Myrtle, Hugh Boyle, Frank Mershon, Dad Flick. Fourth class, tuck-ups—Amanda C., S. M. Morris, V. P. Dorp, Julia Dorp, J. Nobre, Joseph Jacobs, A. W. Brenner, A. L. Rivell. The different classes were started at intervals occupying 30 minutes in all. It was a hard fight for the little flyers to cope with the wind and the sea. All reached the lower buoy, however, save the Amanda C. and Nobre, both of which upset, and the Boyle who broke her mast. The home stakeboat was rounded as follows: Ledyard at 3:52 P. M., Mershon, 3:56; Myrtle, 4:20; V. P. Dorp, 3:54; Jacobs, 4:05; Rivell, 4:08; Brenner, 4:09; Boardman, 4:10; Gertrude, Morgan and Addie, 4:37, with but two seconds difference in the order named. This was the most exciting part of the race. More rests with the men than the boats who shall win, and it is surprising how long one of these "water rats" can stay under water. The race was a success, as all the Southwark races are. The large and commodious steamer Warner accompanied the races with the judges on board. She was crowded, but harmony and good will prevailed throughout.—R. G. W.

SEAWANHAKA C. Y. C.—A meeting was held on June 25, at which it was resolved to offer Sir Richard Sutton and Lieut. Henn the use of the club-house and anchorage. The subject of the coming cruise was discussed, and it was decided to rendezvous at Larchmont on July 3. The following names were presented to the Board of Trustees as candidates for membership: William Gardner, Wyllys Hodges, George J. Gould, W. Harry Motley, William Caldwell, J. Leslie Cotton and Percy R. Pyne.

SOUTHERN Y. C. REGATTA.—The annual regatta of this club was sailed on June 23 on Lake Ponchartrain, near New Orleans. The course was fifteen miles, three turns over a five-mile triangular course. The entries were: First class boats—Mephisto, Alex. Brewster. Cabin yachts—Annie M., J. Marencovitch; Zoe, E. J. O'Brien; Katie, H. Dressel; Violet S., Sam Gautier. Cat-rigged boats—Carrie V., Carlos; Evelyn, John Phillips; May, R. L. Robertson; Juanita, R. Gage. Schooners—Rosa Astredo, John Astredo; Viola, C. Fallon; Mascot, J. McConnell. A start was made at 1:58:15 in a fresh north wind, Evelyn being first, then Zoe, Violet and Viola. The order at the end of the first round was: Annie M. 3:43¾, Zoe 3:45½, Violet S. 3:50, Mephisto 3:54¾, Katie 3:59½, Carrie V., 4:11½, Viola, 4:14, May 4:14¼, Evelyn 4:16¼, Mascotte, 4:23¾, Juanita 4:29½, Rosa Astredo 4:31¼. On the last leg of the second round Zoe took the lead, while Juanita and Rose Astredo withdrew. The times: Zoe 4:40¼, Annie M. 4:40½, Violet S. 4:40½, Mephisto 4:45½, Katie 5:11½, Carrie V. 5:18, May 5:21½, Viola 5:24½, Evelyn 5:25, Mascotte 5:34. On the next leg Annie M. worked to windward and took her lead again, holding it to the finish: Annie M. 5:35, Zoe 5:37:16½, Mephisto 5:37:35, Violet S. 5:49:23, Carrie V., 6:29:35, Evelyn 6:31:30, May 6:34:30, Viola 6:39, Mascotte 6:40:15. The winners were: Challenge cup, Mephisto 3:59:9; cabin yachts, Annie M., 3:36:45; cat rigs, Carrie V., 4:31:20; schooners, Viola, 4:40:45. Viola was awarded an aneroid barometer, Carrie V., a gold pitcher, and Annie M. a handsome epergne. After the regatta a ball was held at the club house.

JEFFRIES Y. C. REGATTA.—The second regatta took place June 27 off the club house, East Boston, beginning at 3:15. There were two classes, and they sailed over the following course: From starting line, leaving buoys in Back Channel, as they belong to No. 2; Governor's Flats on starboard; No. 7, Castle Rocks on starboard; No. 2, Thompson's Island on starboard; returning leaving No. 7 on port, through Glades, leaving buoys as they belong, East Boston Flats, red buoy on port, black buoy on port, to starting line. The start was from anchor. The Sea Bird got away first and led all the way around, although the Topsy seemed to gain on her at one time. In the keels, although the Æolus was slow in getting away, she gave the Zeta a good race and came in only half a length behind. The actual time of the yachts was as follows: Centerboards—Sea Bird, 1h. 21m. 15s.; Topsy, 1h. 23m. 42s; Phallas, 1h, 27m, 5s.; Ariel, 1h. 31m, 32s.; Spider, 1h. 31m. 56s. Keels—Zeta, 1h. 25m. 49s.; Æolus, 1h. 25m. 55s.; Hard Times, 1h. 30m. 13s.; Lilly, 1h. 30m, 57s. There were two prizes given in each class, $10 to first, and $5 to second. The judges were E. T. Pigeon and W. B. Pigeon.—*Boston Courier.*

DORIS.—One of the new English racers mentioned in the FOREST AND STREAM of June 4 is Doris, 5 tons, designed by G. L. Watson. This extreme boat, 38ft. 6in. stem to sternpost on deck, 43ft. over all, and 5ft. 6in. beam, 7 tons on keel, entered in the Royal Clyde Y. C. matches, in the handicap races sailed under the new classification, giving 36 minutes time to her rivals. In heavy weather, squalls and rough water she went in under gaff trysail, not only beating all her class, Oril, Leveret, Nancy Lee and Merope, by over an hour, but going to the windward of the 10 and 20-tonners in the same races, in a very heavy sea. Doris's rig is peculiar, a very low hoist and long boom, while her jib and balloon jib are carried on separate stays. On June 6 she entered again in the Royal Alfred Y. C. races, beating easily the two tried cracks Delvin and Shona.

TARTAR.—This new catboat has lately been completed by E. A. Willis, of Port Washington, Long Island, who built the Cruiser. She is 19ft. 11in. both over all and waterline, 9ft. 6in. beam, hoist 23ft., gaff 14ft. 9in., and boom 23ft. 6in. She will sail from Boston, and is owned by J. F. Browne and F. L. Dunne, who will sail her in the Quincy, Hull and Dorchester clubs. Tartar is lapstreak built, with square stern and a large centerboard with gear for holding it down.

CAPSIZE OF A YACHT.—On Friday last the schooner yacht Vesta was sailing in Salem Harbor, when the schooner Florence P. Hall, from South Amboy, was coming in. In attempting to cross the latter's bow the schooner's jibboom picked up the yacht's topping lift and capsized her. The Vesta now lies in five fathoms of water. The crew of two were saved by their own boat. The Vesta is not the famous old yacht of that name, but a newer and smaller craft.

ACTORS AFLOAT.—Mr. J. H. Ryley will take his yacht Madeline to Boston, and use her there during the run of "Polly." Mr. Lawrence Barrett has lately purchased the keel schooner Breeze of Mr. N. C. Nash. The Breeze was built by Harrington, at Bath, Me., and is 48ft. over all, 36ft. 6in. waterline, and 8ft. draft. Mr. N. C. Goodwin, Jr., has purchased the sloop White Wing of Mr. G. N. Spinney, and will use her as flagship of the Winthrop Y. C.

GAETINA.—This fine little cruiser, described in FOREST AND STREAM of April 24, 1884, is advertised in another column. She has proved herself an excellent boat for general cruising, and her owner intends to build a larger one on the same lines. The model is that of the Penzance luggers, widely known from their qualities as sea boats. She would make a good yacht for two or three young Corinthians to spend the summer in.

COLUMBIA Y. C. June 28.—Corinthian race over the club's triangular 15-mile course—with a "loop" in it—and the sides of the triangle ran northeast along the east bank of the river, east and west over to the New Jersey shore. The "loop" in its direction was northwest from the club house and defined by two stakeboats, the outer or westerly one making the apex of the triangle.

PELICAN.—A sharple with this name has lately been launched by A. C. Brown, of Tottenville, S. I., for Messrs. Hine, of Woodside, N. J., for use about Vineyard Haven in summer and Florida in winter. She is 41ft. long, 10ft. beam, 3ft. depth, with a cabin 13ft. long. The foremast is 36ft. above deck, and mainmast 32ft.

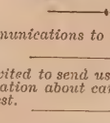
ACCIDENT TO THE UTOWANA.—On June 24, as the Utowana Com. W. E. Connor, was entering a slip on the North River with a strong tide running, she collided with Pier 4, carrying away bowsprit and head gear, but doing no serious damage.

EAST RIVER Y. C.—The protest in regard to last week's races has been decided in favor of the Mary Gibson, the old allowance of 2min. per foot being sustained.

CONCORD.—This sloop has lately been purchased by Com. H. C. Roome, J. C. Y. C., whose sloop, Linda, was lost on Sandy Hook last fall.

AMAZON.—Com. Beames, B. Y. C., has sold the sloop Amazon to Mr. H. W. Belcher, of Brooklyn.

WANDA.—This steamer made her first trip under steam on June 24, showing good speed.



Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

FIXTURES.

July 3—Rondout C. C., Meet at Esopus Island.
July 4—Bayone B. O . Regatta, Bayonne.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

HOW TO GO TO GRINDSTONE ISLAND.

WE commend to those canoeists who ask the question, "Why should I join the American Canoe Association," the following circular sent out by Vice-Com. Rathbun, showing what has been done on behalf of canoeists by the Association. Those who have traveled by rail or boat with canoes before the formation of the A. C. A., and who have experienced the great trouble that always followed an attempt to ship a canoe, or to explain to the average baggage agent that it was not an ocean steamer or a canal boat, to be charged for accordingly, will fully appreciate the concessions granted to members of the A. C. A. by nearly all the transportation companies. While these special privileges are accorded to members only, the outsiders reap an advantage as well, as the influence of the Association has wrought a great change in the attitude of the companies to all canoeists, from which they also derive a direct benefit every time they ship a canoe. This year the arrangements have been entirely in the hands of Vice Com. Rathbun, and it is due to his labors that all has been arranged so successfully. We know of no similar trip that can be made for less than three times the expense of three weeks at the canoe camp on the St. Lawrence, due to al cost for members who camp out and cook for themselves averaging under $30, including living and traveling expenses. The special rates given above are only obtainable on presentation of a members' certificate, and those proposing to join the Association must do so at once in order to obtain their certificates in time. The arrangements this year are better than ever before, and a large attendance is expected. All of the officers have interested themselves directly to secure the complete success of the meet, and strangers making their first visit may be sure of finding all ready for them.

To the Members of the A. C. A.:

GENTLEMEN—I beg to advise you that arrangements have been made for the transportation of members, with their canoes and camping outfits, as follows:

New York Central & Hudson River R. R.—From the following points to Clayton and return, canoes and outfits free: New York $10. Yonkers $10. Sing Sing $10, Newburg $8.70, Poughkeepsie $8.40, Albany $6.90, Troy $6.90, Schenectady $6.60, Amsterdam $6.25, Fonda $6.05, Syracuse $5, Rochester $6, Buffalo $7.25, Niagara Falls $7.25. Tickets will be on sale from July 20 to Aug. 8 inclusive, and will be good for return to Aug. 31; the regular membership certificates to be presented at ticket office. A special baggage car will be run through if a sufficient number start together from any one point. The following are the names of the agents at the points where the tickets can be obtained and all arrangemente made: Brooklyn, Geo. W. Dixon, 326 Washington street; New York, Geo. L. Baker, 413 Broadway, and Jarvis DeGroot, Grand Central Depot; Yonkers, A. T. Reynolds; Sing Sing, W. T. Lyon; Newburg, W. H. Weston; Poughkeepsie, W. H. Miller; Albany, P. H. Mann; Troy, T. C. Wilbur; Schenectady, Paul Ramsay; Amsterdam, Mrs. M. L. Cole; Fonda, I. H. Fonda; Syracuse, F. Gibson, at depot, and B. B. Brayton, city office; Rochester, I. C. Kalbfleisch, at depot, and Lewis Schwendler, city office; Buffalo, John Q. Adams, Exchange Street Depot; Niagara Falls Depot and Cataract House office, F. C. Belden.

New York, West Shore & Buffalo R. R.—On presentation of the regular membership certificates excursion rates will be given; canoes and outfits free. Notice in advance must be given to Mr. Henry Monett, general passenger agent, 280 Broadway, New York. A special baggage car will be provided if a sufficient number will start from any one part together.

Utica & Black River R. R.—On presentation of the regular membership certificates tickets will be issued from the following points to Clayton and return; canoes and outfits free: Utica, $5; Philadelphia, N. Y., $1; all other points in proportion. For further information address Mr. Theo. Butterfield, general passenger agent, Utica, New York.

New York, Ontario & Western R. R.—On presentation of the regular membership certificate, tickets will be issued at one fare and one third for round trip.

Boston & Albany R. R.—No special arrangements yet made. Would advise addressing Mr. A. S. Hanson, general passenger agent, Boston, Mass.

Rome, Watertown & Ogdensburgh R. R.—On presentation of the regular membership certificates, tickets will be issued from the following points to Clayton and return; canoes and outfits free: Niagara Falls, $7.25; Rome, $5; Charlotte, $6; Syracuse $5. (Canton via Cape Vincent, $2 for five or more). Tickets good for the continuous trip, going and returning only. From Canton to Philadelphia, N. Y., and return; canoes and outfits free, $2.50.

Ogdensburgh & Lake Champlain R. R.—On presentation of regular membership certificate, tickets will be issued from Rouse's Point to Ogdensburgh and return for $5; canoes and outfits free. Tickets good from July 21 to Aug. 12.

The Delaware & Hudson Canal Company R. R.—Upon special application to Mr. I. W. Burdick, general passenger agent, Albany, N. Y., tickets will be issued to Rouse's Point or Mooer's Junction and return at one and one-third fares; canoes and outfits free.

Central Vermont R. R.—Special tickets will be issued on application to Mr. S. W. Cummings, general passenger agent, St. Albans, Vt., to Rouse's Point and Ogdensburgh.

Fitchburgh R. R.—On presentation of the regular membership certificates, tickets will be issued at one and one-third fare; canoes and outfits free

Boston and Lowell R. R.—Applications should be made to Mr. Lucius Tuttle, general passenger agent, Boston, for special rates.

Grand Trunk R. R.—From all points to Prescott, Brockville, Kingston, Gananoque and return, one and one-third (1⅓) fare. Canoes and outfit free. Tickets good from July 20 to August 12. Members must purchase full fare tickets when traveling to the meet, and obtain a receipt for purchase of ticket from agent at starting point, the secretary (Dr. C. A. Neidé) will then give a certificate of the number attending the meet who have paid railroad fare and who hold these receipts, the return ticket will be issued on presentation of this certificate at one-third the regular fare. The return trip must be made by the same route as traveled by members when going to the meet. N. B.—Members from the Lindsay section can secure tickets from July 15.

Canadian Pacific R. R.—Return tickets at one and one-third fare, canoes and outfits free, can be secured by following the same course as explained in connection with the Grand Trunk R. R. Blank receipts and certificates can be obtained from the undersigned. Arrangements have been made with the steamer Magic to leave Clayton daily for camp at 8:30 and 10:30 A. M., and 1, 3 and 6:30 P. M. Fare twenty-five cents, canoes and outfits free. It is intended, if possible, to have a customs officer stationed at the camp, in which case Canadians arriving by the Grand Trunk at Gananoque can be landed at camp (without going via Clayton) by the ferry steamer. Fare twenty-five cents, canoes and outfits free.

All freight for the camp should be consigned to Mr. I. Palen, agent, Clayton, who has kindly agreed to care for same until called for.

I shall be pleased to assist in securing special rates over any other lines of railway or steamers that members may wish to travel over to attend the meet.

Arrangements should be made as soon as possible. Canoes carried free are at owner's risk. F. S. RATHBUN, Vice-Commodore A. C. A.

A GUNNING TRIP IN A CANOE.

H. AND I had sold our canoe in the spring, so one Saturday in August when we and our friend P. thought we would like to smell powder again, we found ourselves canoeless. However, we had set our hearts on going that night, and were not to be stopped by trifles, so we went to the different boatbuilders to see if we could get a craft that would suit us, and at last we found what we wanted, a fine double Peterboro, and just the right color, so we bought it and sent it around to our boat house. The next thing was to get our kit and provisions together, which took some time, as we had not been out that year, and everything was in disorder. We managed to get all our traps into the wagon at last and drove to the boat house. We proposed to sleep at K— Island, three miles down the river, that night, as it was very late when we started. When we arrived there we unloaded the canoe and pitched the tent, and then H. called out for a candle, P. said, "They're in the grocery bag," I looked for the bag but it was not to be found. Then, to our horror, P. said that he thought it must have been left behind, as he had ordered the things to be sent to the house, and they must have got there after we left.

Of course we tried to lay the blame on one another, but it was of no use, it didn't bring the bag, but we felt easier after it, a good slanging relieves a fellow. We drew lots as to who was to go back, and H. and I drew the long straws, so we jumped into the canoe and paddled back. It had begun to rain and blow a young gale, so we had a very hard three miles pull against wind and stream. Having got the bag we paddled back to camp. There was no light in the tent, which we wondered at. We landed quietly and walked up to the tent, pulled back the curtain, and saw a sight which made us open our mouths with astonishments. There in the middle of the tent sat P., white as a ghost, a revolver in one hand, and an axe in the other, a hatchet and a bowie knife stuck in his belt, and the three guns, cocked and loaded by his side. He looked for all the world like a traveling hardware and gun establishment.

He told a woeful tale. Just after we left (he wasn't sure how many) men had landed from a boat, surrounded the tent, and tried to pull it down. (I suppose they stumbled over the tent ropes.) Then one of them went to the door and asked if they could come in, he said "no." Then he said, "I put out the candle so that they couldn't see my shadow to shoot at, and covered myself with blankets to break the force of the bullets. But I was all ready for them, I wasn't going to die alone."

While speaking his color came back, and he looked fierce and bloodthirsty. We lit the candle and gave him some brandy, and soon he wanted to follow and massacre them, in the revenge for the fright he had got. H. and I then remembered that the grass was wet, and we might catch our death of cold in walking down to the canal, so, when he found he'd have to go alone, he remembered how subject he was to earache, and that wet feet always brought it on, and so decided to let them off just this time.

We turned in and slept like tops, in spite of P.'s nightmare and H.'s snoring (I never do either, being a model sleeper, although malicious people say I snore so loudly that I wake myself, and am a very unpleasant bedfellow when in a nightmare).

Next morning we took our guns and shot a few plover. I got into a bog and lost both my shoes, and having to go through a dense cover to get back to camp, hurt my feet so much that I didn't feel much like walking any more that day, and persuaded the others that as there was a favorable wind, sailing would be both conducive to comfort and beneficial to health. Then we remembered that we had no sail; however, "necessity being," etc., we cut up some bags and soon rigged up a sail that was useful if not ornamental.

The wind was strong and right astern, so we slipped along very fast, and soon arrived at our destination, the L. islands, or rather, we guessed at it, as we had never been there before.

We turned into the first inlet we came to, and waded about in the mud for some time, trying to find the channel. At last I slipped in over my waist and discovered it. We wandered about among the islands, knocking over a few snipe on the way, and at last found the camp ground we had been told to go to. It is a beautiful place, tall trees shading it, nice level grass, and a very good landing place.

When we had pitched the tent and put things to rights, H. and I went off in the canoe to see if we could knock over a few ducks, leaving P. in charge, who made us promise solemnly to be back before dark.

We paddled about, not seeing a feather, till we got to a bay with a large marsh on one side of it, on the edge of which H.'s quick eye detected something moving. On paddling up to the spot we saw a duck making his evening toilet. As he got up H. downed him. Thinking the marsh a likely-looking place for ducks, I tramped it and bagged a couple, and as there was no sign of anything more and it was getting dark, we went back to camp and found P. getting dinner ready.

After a good meal we laid around the fire and chatted. My teeth began to ache, but found whisky (taken in sufficient quantities) eased the pain very much, but affected my knees in such a way that I was obliged to turn in for the night.

We were out at daybreak, hoping to find some birds, and just as we turned the corner of the island three black ducks flew over us. H., who was in the bow, fired and downed the leader, and then, without any warning, turned right around in the canoe, and, looking at us very fiercely, said he'd shot it. As we (nearly) always tell the truth, and he had still one barrel loaded and pointed at us, we agreed with him. We did not see another duck all the morning, but knocked over a few snipe. After breakfast we tried again, but ran out of No. 8 cartridges, and, as there was no game about except snipe, our No. 3's were useless.

As we did not want to work hard going home we started at midday. In one of the inlets we saw a couple of black ducks; I paddled the canoe toward them, H. and P. getting ready to shoot. H. wanted to get them both, and was aiming so as to be able to take them as they got up, when P., thinking he was going to fire, blazed away both barrels, H. not being able to see through the smoke fired where they ought to have been, but they weren't there (ducks generally aren't where you think they should be when you fire). After relieving our minds we went on. There were a great many sandpipers on the shore, so I landed, hoping to have some fun with them. But they were in the wrong places like the ducks, so I didn't get any. I got my gun barrels full of clay, though, as I had a bad fall, and in falling my gunstock gouged half a pound (more or less) of skin and flesh from my leg, taking a little trouser with it.

A little further up the river we saw a flock of ducks close to shore, and were just going to let fly, when we heard a shout, and on looking around saw an old farmer aiming at us from behind a tree with an old match-lock. We began to feel pale, as match-locks very often go off when they shouldn't, and tried to beat the record for a half a mile or so. I suppose they were tame ducks belonging to the old farmer, who protected his property in this alarming way. Our nerves were rather upset by this adventure, but as we thought he might follow us up we worked away without a rest four or five miles. We turned into a channel, thinking it would be a short cut, but found a boom right across it; however, as it was floating we managed to pull the canoe across it.

We got on very fast after this, and did the remaining fifteen miles in very good time. It was just dark when we got back to the boathouse, having had a most enjoyable trip. F. M.

CANOE RACING AT LACHINE.

THE first regatta in the Province of Quebec for canoes only was held at Lachine on Saturday, June 20, by the Lake St. Louis Canoe Club and was a great success, both as regards entries and spectators, the boat house being crowded. Single paddling race, three entries, won by George Auldjo, second, C. S. Shaw. Sailing, six entries: this was a grand race, all kinds of canoes entering, Racine, Juniper, Herald and English's makes were represented. The Lively Ann, one of English's open canoes, sailed by Spencer Dowker, won; he is a fine sailor and champion of Lake St. Louis. Tandem race, three entries, won by Robertson and Stewart. This was the race of the day, and one of the best contested ever seen in Lachine. Messrs. Robertson and Stewart in Duchess, and Shaw and Shearwood in the Water Lily, kept neck and neck for the last half mile, and at the finish the Duchess only won by three-quarter of a length. Boys' race, five entries, won by Amos and Force; second, Barry Brothers. Portage race, four entries, won by Shaw and Shearwood. Hurry scurry, won by C. S. Shaw; second, T. Stewart. In this race the contestants had to run 100yds., jump a 6ft. picket fence, go through water, then paddle 200yds. Stewart was first in his canoe, and would probably have won the race had he turned his buoy the right way. The prizes were then distributed to the lucky winners by Mrs. A. Boyer, the very graceful wife of the worthy secretary of the Lachine Boating Club, amid great applause. The officers were: Referee, R. J. Ross; starter, J. G. Monk; Judges, A. Boyer, M. P. P.; Captain Howard, and H. D. Whitney. GEO. AULDJO.

RONDOUT C. C. MEET, JULY 4.

THE following quaint invitation, printed on coarse brown paper, has been sent out by the club. The meet will be held at Coddington's Point instead of Esopus Island. Canoeists can take the Rondout steamer:

RONDOUT CANOE CLUB.
Club Signal.

M.....

Ye yonge menne whych are joyned togetherre inne ye guild ycIept as above, doe moste humblie crave ye favour of yr companie onne ye occasion of ther annal meetynge, for ye bakynge of clampes, onne whyche occasion ye farocious Venus mercenaria wl be subjed to ye directe taste of fire and devourd by such as doo so desire. This meetinge wille be holdene inne a place onne ye river named Hudsonne, known as Codyngton's Dock, & tyme of assemblynge wl bee onne ye afternoon of Saturday, in ye monthe of July, onne ye fourth day of ye monthe, inne ye year mdccclxxxv.

A boate propelled with a form of heated waterie vapour sometimes called steame, wl be inne waytinge atte Romer & Tremper's Dock, & wl leave same place atte onne of ye clocke, wythe greate promptitude.

SHATTEMUC C. C. REGATTA.—The opening regatta of the Shattemuc C. C., was held off the club house on Saturday, June 13, at 4 P. M. The programme included one sailing race each for Classes A and B, one paddling race each for Class 2 and Classes 3 and 4, and one special sailing race open to all. There was a strong southwest wind and a flood tide. Class B, sailing, was won by Wilson & Phraner, canoe Dingbat; sailing, Class A, by J. K. Hand, canoe Midget; W. M. Carpenter, canoe Dawn, won the Class 2 paddling race, and H. M. Carpenter, canoe Gypsie, the paddling race for classes 3 and 4. The special sailing race was won by the Commodore, J. H. Carpenter. There was a first prize offered for each race, and a season sailing prize, to be raced for every two or three weeks until October.

TORONTO C. C. SAILING RACE.—Messrs. Tyson, Nicholson and Neilson started on Saturday, June 20, for the second race for the all-round cup and the Newman medal. The wind was from the east, fresh to strong. Commodore Tyson's new fan sail got into a snarl on the word being given, and the other two had a long lead before he straightened out after them. This lead they gradually increased until at the finish Neilson, in the Boreas, was some three hundred yards ahead of Nicholson, in the Sadie N., and about a mile ahead of the Isabel. This is two wins of the cup for Boreas; five times is necessary to secure it. The handicap paddling race for the cup presented by Mr. Fred Mason comes off Saturday, the 27th.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

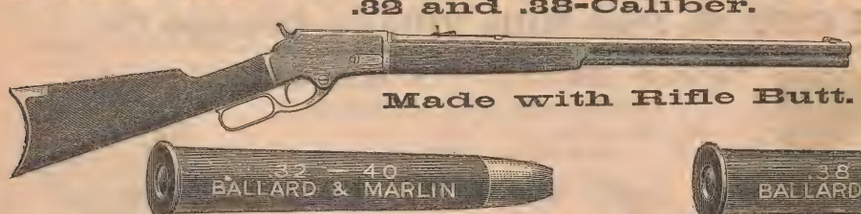
SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.



CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

NEW MARLIN RIFLE.

.32 and .38-Caliber.

Made with Rifle Butt.

Penetration Nearly Double that of other .32 and .38-Caliber Repeaters.

PRICES:

24in., 7¼lbs., $22.00. 28in., 7½lbs., $24.00. Set Triggers, $5 00 extra.

One great objection to magazine rifles heretofore has been that if one or more of the cartridges contained in the magazine were slightly shorter than regular, the mechanism would become clogged and the arm refuse to work, frequently at a critical moment. *This trouble is entirely obviated in these new guns by a recent invention patented by us. Even if one or all of the cartridges in the magazine should be half an inch too short the gun will work perfectly.* Every one who ever used a repeating rifle will appreciate this improvement.

All MARLIN and BALLARD RIFLES have been largely Reduced in Price.

Send for full Catalogue. THE MARLIN FIRE ARMS CO., New Haven, Conn.

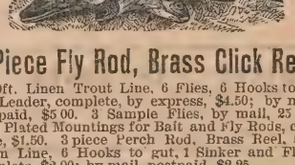
CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.



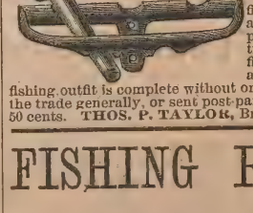
Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.



3-Piece Fly Rod, Brass Click Reel,

100ft. Linen Trout Line, 6 Flies, 6 Hooks to gut, and Leader, complete, by express, $4.50; by mail, postpaid, $5 00. 3 Sample Flies, by mail, 25 cts. GLOBE FLIGHTS

PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber ballon 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

HINDS'
BLACK-FLY
CREAM,
For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

Harlow's Angler's Comfort.

BLACK PRINCE.
Black spaniel; at the stud; 14 prizes. Fee $15.
A. C. W. P. O. Box 1483, N. Y. City. mar26,3mo

In the Stud.

ENGLISH CHAMPION
BULLDOG
GLADSTONEKOFF.
BRINDLE BULLDOG.

Winner of eight silver cups, five champion medal and number of first prizes at first-class shows in England. Considered by bulldog authorities best dog ever coming to America.

Fee $50 for Service.
Address
J. P. BARNARD, JR.,
23 Myrtle street, Boston.

IN THE STUD.
GRAPHIC.
(K.C.S.B. 13,666).
Champion Pointer of England.

Whelped April 15, 1881. Imported May 7, 1885. Services limited to two approved bitches per month till Oct. 1. Fee, including best care at kennels and express charges, $100 Address GRAPHIC KENNELS, Lynch's Station, Campbell Co., Va. jy2,3mos

PURE LAVERACK SETTER
ANTIC
IN THE STUD.

Thoroughly broken and a fine field animal.

Also setter pups of first-class breeding for sale. For terms, etc., apply to
A. S. HOFFMAN,
Estleville, Atlantic county, N. J.

Champion Nevison.
The acknowledged best mastiff in America. Winner of 42 champion and first prizes. Sire of winners. Fee $50. C. H. MASON, 255 West Twenty-second street, New York City. je25,tf

The Kennel.

WM. GRAHAM, NEWTOWNBREDA, BELFAST, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

CHAMPION BRED ST. BERNARDS.
CHAMPION BRED ENGLISH PUGS.
Enclose stamp. CHEQUASSET KENNELS, Lancaster, Mass.

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept22,tf

Prize and Pedigree English Mastiffs.
American gentlemen desirous of purchasing these noble dogs should communicate with JAMES HUTCHINGS, 25 Gandy street, Exeter, England, who has the largest kennel of mastiffs in the world.

Rory O'More Kennels.
For Sale—Thoroughbred red Irish setter stock, full pedigreed. Address with stamp,
W. N. CALLENDER, Albany, N. Y.

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMELL, Denver, Col. apl16,tf

DOGS. DO YOU WANT TO BUY A FINE bred dog of any kind? If so write and name the kind you want. EDMUND MAURER, 1020 Spring Garden street, Philadelphia, Pa.

YOUR DOG'S PICTURE.
Life size crayons of dog heads or full figure accurately and artistically made from photograph by an experienced crayon artist. Prices reasonable; satisfaction guaranteed. M. LEWIS, care Forest and Stream.

BOOK YOUR DOGS FOR MY COMING TRIP, which will be a grand one for young dogs on quail, woodcock and partridge. The best of reference furnished. H. A. SAUNDERS, Elm Grove Kennels, South Norwalk, Conn. je18,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 9, 1885.

VOL. XXIV.—No. 24. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng.

THE CUP OWNERS AND THE COMMITTEE.

SINCE it was decided by the Commodore and Vice-Commodore of the New York Yacht Club (the custodian under the deed of gift from the original owners of the Cup won by the America in 1851) to build a yacht to defend the Cup against the visiting English yacht, the committee of the club, to whom the details of the new boat were intrusted, have endeavored to keep secret all information concerning her. Beyond the bare statement that she was a centerboard boat of such a length, breadth and depth, they have made public nothing concerning her, and those engaged in her construction and fitting out, have by their orders been equally reticent, so that all that is known of her to day is only that which could not well be concealed. The committee have taken the ground that the Priscilla is a private yacht built by private parties, and that how large she is or how she is rigged is simply nobody's business. If this view is correct they are justified in withholding all information, but they must first defend the position they have taken.

The America Cup is a trophy belonging to no club nor set of men, but as an emblem of national superiority it belongs for the time being to the nation who can hold it against all comers, as we have done for thirty-four years. It is intrusted very properly to the leading yacht club of America, the club whose members first won it and whose yachts have four times successfully defended it; and on the occasion of another contest the club have intrusted its defense to a committee composed of its most active and prominent members. Two of the flag officers of the club have built and intrusted to this same committee a yacht; not a pleasure toy for a few persons, but as an active agent in the defense of the people's trophy and our reputation as yachtsmen, and to the real owners of the Cup the committee must answer for its defense.

There is no suspicion that they have not done all that is possible, or that the Priscilla is not fully worthy of the task she very probably will be called on to undertake; but more than that is necessary if they would avoid all responsibility in the event of a victory for Genesta or Galatea. There is nothing, it is to be hoped, about the Priscilla, that they need be ashamed of, and certainly little or nothing, the knowledge of which could in any way injure her chances; and by making public all concerning her, they secure themselves from blame in case of failure; while on the other hand, if they keep secret what they are doing, they must shoulder the entire responsibility.

That their views are not shared by at least one of the gentlemen most concerned in the Priscilla is shown by the peremptory dispatch from Commodore Bennett that a representative of the *Herald* should be present on the trial trip, which the committee intended to keep as secret as possible. There can be no question of the widely spread and intense interest felt by the American people, not merely by yachtsmen, in the coming contest, and they will look directly to their representatives, the committee of the New York Yacht Club, for the retention of the trophy.

PROFESSIONAL CANOE PADDLING.

FOR the twenty years that canoeing has lived and grown it has been entirely free from any tinge of professionalism, and since the formation of the American Canoe Association, and the increased interest in the sport, extra efforts have been made to exclude such a professional element as has worked so disastrously in rowing; and thus far with perfect success. Canoeing depends for its success on various elements that are not compatible with extreme speed, the only end and aim of professional racing, and the sport really offers little inducement to the "sporting man," compared with rowing, as the latter must always be speedier. Among the many races sailed and paddled in America none that we know of, except a few among Indians and Canadian woodsmen, have been in any way professional; and none thus far have been attended with the gambling, quarreling, and bad faith that have brought rowing from the place it held in 1875 to that it now has, and it is with regret that we notice the following in a San Francisco paper: "A member of the South End Club, who is an acknowledged expert with the paddle, is desirous to make a match for $100 or so, the race to be paddled over a suitable course in canoes of equal speed and dimensions." A similar race was talked of in Canada last fall but did not come off, and we hope that the canoeists of the Pacific will discourage the present attempt. There is now ample incentive to competition in all localities where canoeing is established, in the rivalry among members and the prizes offered by clubs, while at the same time the restrictions imposed by building rules and cruising necessities prevent the building of paddling shells. Of course the professional camper or general canoeist is an impossibility, the only branch of the sport that is available being paddling.

Racing for valuable stakes can encourage but one end, the one that canoeing is directly interested in discouraging, that of mere speed. The main advantage of canoeing at the present day is that it is a sport to be enjoyed at one's leisure; that a man gets in a canoe nine times out of ten, not to go somewhere in a hurry, but for rest from business, leisurely loitering, and a temporary escape from the unending hurry of modern life. Take this element away and canoeing can no longer be what it is, a sport for everybody, but must follow the downward course that rowing has pursued for thirty years. From a standpoint of mere speed, boats, oars, fittings and crews have taken an enormous stride forward, well illustrated by the comparison of an old inrigged wherry with a paper four or eight of to-day, but no one can say that rowing is as healthy or as accessible to every one as it was in the earlier stages. It would seem that the many, with neither time, strength nor desire for racing, might still find their pleasure in wide and comfortable tubs with an easy stroke, leaving the outriggers and racing to the few who can enjoy them; but curiously enough, there is an unalterable natural law by which when a certain standard is set up, no matter how distant and unattainable or how undesirable, all men must aspire to it, and either work to attain it or abandon the sport entirely. Oarsmen have set up a standard of speed, the taking a shell of lightest possible construction over two, four or five miles in the least possible time, regardless of every other consideration, and that standard exerts an influence on all varieties of rowing.

Thus far canoeing has been free from such evil influence; the only end sought has been true recreation, and racing has been encouraged only to an extent that will add additional interest and promote improvements in the boats; while its development has been carefully guarded by retrictions that encourage cruising and pleasure paddling, rather than speed only. Under these conditions it meets the wants of an immense number as no other sport yet has done; but only let the standard of fast paddling be set up by a few, and we may expect to see canoeing follow the same course as rowing and with similar results. No one can explain why this should be so, but few will deny that it will; that the tide once turned in that direction will carry all before it, and ultimately destroy the very features that now make canoeing enjoyable. It has been so with many other sports that have been improved to death, or as some one has expressed it, have "died of their own too muchness."

We would not be understood as depreciating rowing in any form, recognizing the part it now takes among the outdoor amusements of the day. The changes that have arisen in the course of years, whatever their result, are simply natural, and what must be expected in these days of progress; and freed from the evil influence that has of late retarded it, there is no nobler sport for the athlete. Canoeing, however, appeals to a different and larger class, which the introduction of such improvements would soon exclude as the form of the sport varied. The cinder track and the sliding seat still offer a large field to the budding professional, and we hope for many a day he will leave the paddle to those who are better able to appreciate its many good qualities, and put it to its proper use.

THE GERMAN SHOOT.—The trip to Bingen on the Rhine of the independent New York German riflemen has roused no end of enthusiasm in the quiet little German town. There were marksmen and orators and warriors in the party. There has been some shooting, much talking, no end of wine drinking, and altogether a capital time. The visitors made the place particularly lively on the Fourth of July and America was boomed in every respect. There was some shooting at the usual eagle, and it was dismembered and divided around as follows: Weber, middle crown; Bruns, right crown; Bergman, left crown; Gramm, right wing; Weiler, left wing; Schuhmacher, right head; Kugler, left head; Witt, right neck; Koerben, left neck; Boeswald, imperial eagle; Schwarz, sceptre; Bopp, German flag; Stein, American flag; Nehrbas, right claw; Zuschlag, left claw; H. Weber, right thigh; Wassung, right wing; Berndt, left wing; Crous, tail; Roedler, body. Roedler became rifle king. In the afternoon the American riflemen made an excursion to the Niederwald and the New Yorkers placed a wreath on the pedestal of the statue of Germania. In performing this act, Mr. William Weber, secretary of the Schuetzen, said: "The independent New York riflemen, in the name of the Germans of the United States of America, place at the feet of the symbol of the reëstablished German Empire this oak wreath, in testimony of their unbroken love and attachment to their old Fatherland." The coronation of the Schützen König Roedler followed with high festivities.

TOY PISTOL DAY.—The toy pistol did its deadly work on the recent national holiday. The laws are against the little pest, but the small boys are friendly to it, and the small boy wins every time in the preliminary tussel. When it comes to his later set-to with the toy itself, the lad is not always so successful. Into a bit of flimsy machinery, made only to fire off the inoffensive blank cartridges, the youthful gunner pokes a ball cartridge, or perhaps a charge of nails; and then comes the ruction, and the youthful experimenter parts company with a finger and thumb. One or two good test cases made against prominent dealers in the prohibited articles would do more in checking the sale and distribution of these nuisances than any amount of general talk or writing. There are plenty of officers paid to do this very work, and when grief and sorrow have been brought into many more households perhaps some real restrictive work will be done.

NATIONAL GUN ASSOCIATION.—At the meeting of the National Gun Association at Philadelphia last week, Mr. J. E. Bloom resigned the position of general manager, and Mr. A. W. Du Bray, of Newport, Ky., was elected to fill his place. The next tournament of the Association will be held at Augusta, Georgia.

DEER LAW POSTERS.—It is important to make the new law known in every part of the North Woods. We have prepared a poster giving the text of the law, with the names of the State game protectors for the Adirondack counties. These will be mailed free of charge upon application.

THE WORLD IS SMALL.—One of the curiosities of the news of the day is to be found in our angling columns, where it is stated that the tackle supply of American anglers is to be affected by the ravages of the cholera in Spain.

WEEHAWKEN.—The guns of the Algonquin Gun Club, at Weehawken, N. J., opposite New York city, wake the echoes among the bluffs that once answered back to Burr's pistol shot when he killed Alexander Hamilton.

A SCHOOL MEETING IN DISTRICT 13.

FOR a week before the first Tuesday in the April of a certain year half a lifetime ago, the battered door of the shabby old school house in District 13 of the township of Danvis, bore a conspicuous patch of white paper among its scratches, bruises and awkwardly carved initials. Some wayfarers knew at first sight what this early spring blossoming of the school house door heralded; those who did not or hoped that it might advertise a "slayth o' hand show" or "a 'stronermy lectur'," or "temp'unce meetin'," found upon examination that it warned the "legil voters in school meeting in Dist. 13 in the town of Danvis to mete in the school house in sd. dist. on Tuesday evening, Aperil 3," etc., etc.

Accordingly on the evening named in the warning, as the dismal landscape of the season grew dim in the twilight, the little building was illuminated by four candles, and the cracked, rusty stove glowed with fervent heat, for the committee and the "deestrick clark" had not been negligent of their duty, and having lighted the candles and the fire, now sat gazing thoughtfully, or with absence of thought, at the stove while they waited the coming of their neighbors. Presently, announcing their arrival with more than needful stamping and scraping of boots, there entered nearly all the legal voters of the district and almost as many boys, for without the presence of this non-voting but not altogether silent element, no school meeting had ever yet been held in District 13. Uncle Lisha Peggs, the cordwainer, was there, and Solon Briggs, the man of big if not weighty words, and Joseph Hill, and his aged sire whom Ethan Allen had assisted in the capture of Ticonderoga, and who had fought at Hubbardton and Bennington, and had ever since been ready to take a hand in any fight, whether of words or deeds. There were also present Samuel Lovel, the hunter, and his companion Drive, the hound, who took now no active part in the proceedings, but got himself under the stove and toasted his gaunt ribs with exceeding comfort while he bided his time. Loud and forthputting there was Beri Burton, an uncouth giant, who had not long been a resident, having moved into the township from no one knew where, and who had the air of being burdened with a grievance and the mal-odor of "spilin' for a fight." Gran'ther Hill set his toothless jaws as he rested his chin upon his cane, and glowered at him as he could not have done more savagely at his ancient bitterest enemies, the Tories and Indians. Antoine Bisette, the Canadian, attended the meeting, not a voter, but interested as a furnisher of scholars, for every year was added one more black-polled, bare-footed toddler to his dusky brood that came jabbering along the dusty summer road to the old school house.

Joel Bartlett, "clark of the deestrick," was a staid Quaker, whose mouth was made up for a whistle that the strictness of his religious views had never permitted him to utter, and he wore a wide-brimmed hat always abroad and much at home, and almost as constantly as this and the pucker of his lips, a coat supposed to be somewhat like that of George Fox, the founder of his sect. "Samule," he said, when after sitting some time in silence his attention was attracted by the hound's yelping and pawing the air in pursuit of a shadowy fox on the hills of dreamland, "thy dawg appears kind 'er lanky, 's 'ough he hed n't wintered fust rate. Thee feeds him, I hope?"

"Feed 'im!" said Sam, indignant at such an imputation on his treatment of his friend. "The' haint a day goes over Drives's head 'at he don't hev a johnny cake baked for 'im, an' he gits it, too. The trouble with Drive is, he's ben a preachin' raound hum all winter, a prophet 'thaout honor in his own country, ye know, an' not much profit to his marster. Mebby you've hearn him holdin' forth on Hawgs Back an' raound. He's got kinder thin duin' so much for so little, for he ain't no hirelin' minister, an' don't git nothin' but his board for his sarvices. Tow-ward the latter eend o' nex' month, Fif' month, I'm a goin' to start him off for yearly meetin', to New York or Newport, an' if he don't fat up there, I'm a goin' to git him recommended, an' hev 'im git a consarn to go on a visit to Friends to the east'ard. Ef that don't git 'im in good trim, I'll disown 'im, for he can't 'preciate blessin's, an' haint fit to be a member 'mong Friends."

"Wal, Samule," said Joel, with a twinkle in his eyes, "if thy dawg has ben a preachin' anything weighty, I'm afeared his marster's ears hes been closed, an' I think he better continner a sowin' the seed to hum, an' if the graound is barrern keep a harrerin of it in."

The men laughed, and the boys snickered in the dark corners, and Joel rising and looking around said, "I think everybody is present 'at 's 'xpected, an' perhaps the meetin' might as well be called t' odder. Friends 'll please come t' odder."

All but himself took off their hats, and the whish of the boys' whispering ceased while he slowly read the warning, stooping to the nearest candle while he followed his forefinger along the lines. This ended, he said, "The fust thing is to choose a mawdrator. Will some friend please nomernate?"

"I nomernate Solon Briggs," said Sam Lovel promptly, and "I secont the motion," some one else said as promptly. Then Joel proclaimed that Solon Briggs was "nomernated and seconted as mawdrator, an' them 'at favors him will say aye," and there was a small thunder of ayes.

"The contrayry minded will say no," and only Beri Burton growled no.

"You hev made chice of Solon Briggs to sarve you as mawdrator," Joel announced, and Solon took his seat beside the clerk.

"In consumin' this persition," he said, slowly rising, and as slowly grinding his palms together, "to which I was chose unomynous without only one disseminatin' voice, I du it a hopesin' 'at this meetin' will cornduck itself becomin' an' harmonous an' proprietory; an' that them 'at is in the mynority will feel as content to be minoritorious as them 'at is in the may-jority will be to be majoritorious. An' we will naow perceed to transack business. The fust thing on the progerammy is to eleck a clark. Please nommernate a clark."

"I guess," said Uncle Lisha, scraping the wax off his left thumb with the nail of his right forefinger, and rolling it into pellets which he dropped upon the floor, "I guess 'at we'd better hev Joel. He's taown clark an' clark of his meetin', an' ben deestrick clark this ever so long, an' so he's got uster bein' clark. I nommernate Joel." Joel's nomination was seconded and he was elected.

"The nex' thing," said Solon, "on the progerrammy—or things—is a committee, one, tu, or three, to sarve as committee for the pursuin' year,"

"Bein' 'at the' 's some," said Joseph Hill, propping himself into a half standing position with his hands on the desks each side of him, "'at thinks we'd better not go t' the expense o' hirin' of a man, but better kinder git along wi' a woman teacher this summer, an' the' 's some 'at don't, perhaps we 'd better hev a committee 'at does or don't think so. F' my part, I d' know 's it makes much diffunce to me. I sh'ld like to hev a good teacher cheap, or a cheap teacher, an' hev him—her—it—a good one. I d' know 's care much which sect the teacher is. I move 't we hev a man—or a womern."

"We do' wan' no schoolmom!" roared Beri Burton; "Gol dum schoolmom!"

"Afore we go any furder," said Joel Bartlett, rising and laying aside his hat, "I feel it borne in upon me to caution friends agin givin' away to their passions, an' to try an' conduck themselves with proper regard o' one 'nothers' feelin's. Bein' 'at we haint all o' one mind, we can't expeck to be all on us suited; an' them 'at haint mus' try an' bear their disapp'intment, an' them 'at is mus' try an' not kerry 'emselves too high-headed." As he went on he unwittingly set his words to the dolorous tune to which the movings of his spirit went forth to those of his own belief on First day and Fifth day meetings. "An', beloved friends, we must all on us, them 'at is up an' them 'at is daown, indivor for to—ah—be charitable an' kind an' forgivin', one untu another. A speakin' for myself, I can say that I think a suitable young womern 'ould arnswer aour purpose very well for the summer, as well as bein' more equinomical—"

"Thar!" cried Beri Burton, springing up like a gigantic jack-in-a-box, and mumbling his words as if they were so many hot potatoes, "thar, Misser Bartlutt, we do' wan' hear no more your dum blob; we do' wan' no schoolmom, I tell ye. Had un las' summer, didn't us, an' what kin' er teacher was her? Why, noons an' art' school, an' boys aout an' gals aout fo'noon an' art'noon, the' was a feller—won't call no names—'at uster come to schoolhaouse, 'n' him an' schoolmom 'ld go daown inter medder strawberrin'. Schoolmom 'ld rub strawbers on 'er cheeks an' that 'ere feller 'ld buss 'em off! Gol dum such schoolmom! Then 'ey 'd come up ter schoolhaouse, an' that 'ere feller 'ld git a board an' run it through the fence, an' schoolmom 'ld git ont' one end on 't an' he'd get ont' tother, an' then they'd go teeter-tawter-tee ter, tawter! Gol dum such schoolmom. Do' wan' no more on 'em!"

"Ef I could on'y a hed that 'ere big heathin a front on me to Hubbar'ton or Bennin'ton," said Gran'ther Hill in a hoarse, whistling voice, "a painted an' feathered, er dressed up in a red cut, he would n't a ben a troublin' 'on us to-night, he would n't."

"Ef I 'd ha knowed," retorted Beri, "'at this was a goin' to be a resurruction stiddy a reg'lar school meetin', I'd ha' tooted up some o' my fo'fathers, or dug 'em up, an' brung 'em along to vote agin ye, ye ol' onbaried cuss."

"Odder! Odder!" called Solon.

"Forefathers!" sneered Sam Lovel, "Ye never hed none, 'n' 'f ye hed the'y be 'shamed o' yer com'pny. I say odder, tu. He 's same 's a skeeter to me. I don't care nothin' baout his bitin', but I do hate his cussed yowlin'."

"Jozeff!" commanded the ancient warrior, "you kinder stiddy me on my laigs so 's 't c'n run my cane through that Hessian's in'ards!"

"Wal, naow, no, father, I guess I wouldn't, not 'f I was you," said his peaceable-minded son, "seem 's 'ough I would n't. 'F you sh'ld kill him, you'd git hung, 'n' that 'ould be turrible disgraceful for a man o' your years, an' one 'at's hed such 'scapes from Ticonderoge an' Hubbar'ton an' Bennin'ton. An' if you didn't, he might lick both on us, for I haint so spry 's I was, an' that would be turrible onpleasant for us an' turrible gratyfyin' for him. I haint no mind to give him no sech satyfaction."

"Bah gosh!" screamed Antoine, spring to his feet and dashing his tasseled woolen cap upon the floor, "Ah'll mek it notion we ant have it no school, 'f 'e can' have it aout all a tam quarly, quarly! Ah'll mek it notion we ant have it no school, me!"

"Odder! Odder!" Solon shouted in a stern voice, "you're aouten odder, Antwine."

"What for Ah'm aout norder, M'sieu Brigg, hein?"

"Why, Antwine, you haint a legle voter in school meetin', ye see, don't ye? It 'ould be a diabolishment of parloramentary rules to 'low you to vote or speak. Ye haint never ben nat'ralized, ye know."

"Wal, Ah don' care 'f Ah don' nat'ral lie, so much you do. Ah'll show you jes' many chillun for go school any boddee, bah gosh! More of it all a tam, evrec year, evrec year Ah guess Ah m's more norder you was, M'sieu Brigg. You be marree more as Ah was, an' don' have it on'y but one chillun, bah gosh!" and Antoine grasped the seat of his baggy trowsers with both hands preparatory to jumping upon his cap.

"Good airth an' seas!" Lisha roared in a voice that made the cracked window panes jingle and brought down some crumbs of plastering from the ceiling. "What's the motter ails ye, all on ye? We never hed no sech cussed works afore to a school meetin' sen I was ol' 'nough to go to one! Ann Twine! You seddown an' shet up yer dum canuck head! What's the motter ails ye?"

"It all comes," said Solon, "o' hevin' this 'ere imported disturbin' elephunt in aour midst of us, which we didn't uster hev it prevariously before last year."

What might then have happened if something else had not presently happened will never be known.

The men were growing angrier, and the repeated calls to order by the moderator, the loud voices and warlike demonstrations of their elders had hushed the boys in the back seats to such silence as their exuberant spirits had seldom known. Pelatiah Gove was the biggest of them, and having ciphered to the rule of three, was therefore, unless he chose to make his painful way further up the hill of learning toward the temple of science pictured on the first page of the spelling book, to be considered a graduate of the district school. He was old enough to begin to think of the past, but whether with any longing to recall it perhaps he could not himself quite tell. He sat in his old seat by the window, vainly trying to accommodate his longer grown legs to their old position, and studying the initials and unmeaning devices his jackknife had carved in the noontimes and stolen moments of past winters. He contrasted the present turbulent sounds with the drowsy buzz of the flies on the windows in the summer days when he so longed to go a-fishing in the brook that shot its tantalizing glints through the stems and shadows of the alders, and he turned his head to the window and looked toward the brook in a dreamy way. There seemed not much in that direction now to tempt one away from the warmth of the schoolhouse, only that its atmosphere was becoming a little too warm, and if there was really to be what Pelatiah called "a reg'lar carummux," he, being a lover of peace, would rather not be present.

But something caught his abstracted gaze. He rubbed the dusty pane and put a hollowed hand on either side of his face, and looking intently counted one, two, three, four dark objects moving slowly across the dingy snow and dun dead grass of the fields, revealed with dim distinctness in the clouded moonlight. After a long look—though it was only a minute—to verify his first suspicion, he jumped to his feet, in his tangled haste almost tearing the desk from its place, shouting, "'Coons! 'coons! four on 'em a crossin' the road! Come on, all on ye! Here, Drive, sic 'em!" and made a dash for the door, shouting as he went, and emphasizing his calls with the thump! thump! of his heavy boots. "'Coons! come Drive!" and Drive came suddenly out of dreamland and shot through the open door in hot eagerness for game more tangible than the phantoms of his sleep. Pelatiah and the hound were followed in a mad rush by every one but the moderator and the clerk. These two stood aghast at the sudden breaking up of the meeting, and as Solon heard the shouts of the men and boys, and the baying of the deep-voiced hound coming fainter and fainter as they sped across the fields in pursuit of their quarry, he said, turning to his unmoved colleague, "The quorum has absquaterlated, an' I pernounce this meetin' is a-journed, Simon Dyer!"

And so he and Joel put out the light and made the fire safe, and themselves went out. As they paused listening on the doorstep, with a human curiosity that neither the dignity of office nor the precepts of a stern religion could quite restrain, the voices of the men and boys of the pursuing party were hushed, and there was heard only the steady, insisting baying of the hound, now evidently not moving any further away, nor moving at all.

"I ruther guess," said Joel, with his best ear turned toward the sound and his mouth more tightly puckered for the unvoiced whistle; "I ruther guess the dawg has treed 'em, onless he's preachin' to Samule. Don't thee think we'd better go an' see, Solon?"

And so ended that school meeting in Dist. 13.

DOWN THE SOUTH SASKATCHEWAN.

IT was a bright Sunday morning toward the end of April last that a small party were at breakfast in a caboose on the line of the Canadian Pacific Railway, at Swift Current. We were talking about an encounter that had recently taken place between a party of half-breeds and the force of Canadian militia under General Middleton, and discussing the probabilities of a steamer called the Northcote, which had recently left the crossing on the South Saskatchewan River, distant some thirty-three miles north, making her way down the river successfully with her cargo of supplies and reinforcements. A happy thought occurred to me, "Why shouldn't I go down the river in a canoe I had with me." I would be such an insignificant object that if there were hostile Indians along the bank I would probably pass them without being seen. I would see what the river was like and how the steamer was getting on. So I broached the subject, and after a little discussion with the General in command (who made one of our party) it was decided I should start next morning. Then I set to work to make my preparations, not without sundry misgivings as to my reaching my destination, a sort of half regret that I had committed myself and mental visions of wily Indians taking a pot shot at the solitary navigator and sending him to the happy hunting grounds to paddle his own canoe at his leisure. The distance from the Battleford Ferry on the South Saskatchewan to Clark's Crossing, on the same river, fifteen miles below which General Middleton was encamped, was estimated to be about 220 miles. (The captain of the Northcote in a subsequent conversation made it out to be over 300, but the former estimate is probably the more correct.) The steamer had made the voyage up the river the previous autumn, how she would fare going down was a matter of doubt.

The canoe in which I proposed to take the cruise was a canvas folding one built at Peterboro. Its dimensions were 12 feet in length, 30 inches in width, 12 inches in depth amidships and 18 at stem and stern when set up; it weighed about fifty pounds, with paddle, seat and flooring boards. Some experience of river cruising has made me discard a sail, except for a large open river such as the St. Lawrence, and I trusted to my paddle alone on this as on other occasions. The canoe was of the Canadian or birch bark model, but I used the double-bladed paddle, taking also a single blade in case of accidents. The rest of my outfit was simple, consisting chiefly of blankets and an india-rubber sheet, biscuits, tinned corn beef and fruit, tea and sugar. I took no tent, and my cooking apparatus consisted of a tin pint pot and a small spirit stove. I had a small revolver, but didn't anticipate much benefit from it in the event of meeting a hostile red man, as he would probably have got the drop on me long before I sighted him.

Behold me, then, next morning starting to drive to the river. The General had kindly provided a "buckboard" for my transport. To the side of this vehicle I tied my canoe, of course folded in its bag, in which shape it somewhat resembled a bundle of sticks, and behind and underneath the seat I packed the rest of my dunnage. My friends bid me good-bye with requests for locks of my scanty hair, to leave as little as possible for the inhabitants of the country through which I was going to pass to exercise their peculiar talents on, and off I started. The animal that drew the vehicle was a mild and meek-looking specimen of the Indian "kyuse," apparently broken down by hard work. He had refused a meal of oats that had been set before him upon starting; it was a luxury for which he hadn't acquired a taste. I took the trail northward, sufficiently marked by the strings of vehicles passing over it. The prairie looked barren enough in that locality, undulating into little hills and ridges, in the hollows between which were collections of melted snow or rain—"sloughs" or "slews" in the nomenclature of the Northwest. The country reminded me of the table lands of Central India, except that the green patches of cultivation and groves of trees which made pleasant breaks in the dreary waste were absent. On the trail were numerous teams, some loaded with supplies, others returning from the crossing empty. When I had got twelve or fifteen miles on my way I got down to adjust the package containing the canoe, which the jolting over the road had loosened. I never thought the meek animal I had been driving would take an unfair advantage of me, but he did. No sooner was I engaged with both hands about the package than he humped his back, kicked up his heels and away went buckboard and pony at a pace I should never have dreamed of him being

able to accomplish, leaving me standing holding on to my canoe package. He made a circle round on the prairie, and then on to the home trail for Swift Current. I followed at such pace as I could best manage to keep the animal in view, not with any expectation of coming up with him. After he had got two or three miles on his road home he came on a party of teamsters encamped for their dinner; about twenty of them spread themselves out on the prairie and tried to stop him, but he dodged them all cleverly and on he went gaily. "It's no use running," said they when I came up with the party; "take it quietly." So I did. Two miles further I found another lot of teams, and here to my delight I saw my pony with the buckboard intact tied to the wheel of a wagon. He looked as sleepy as ever, and immediately coughed as if to hint his chest was delicate. The teamsters offered me dinner, of which I was glad enough, and one of them who had been a sailor discoursed of the sea, a pleasant reminiscense in that desert land. This little escapade fortunately ended without any damage, so I was soon on my way again after gathering up my canoe and the dunnage that had been spilt on the prairie. This time I took the precaution to tie the animal to a telegraph pole. About 5 o'clock in the evening I reached the river, where I found a small encampment in charge of the supplies. Here I left the "rig" with the officer to whom it belonged pro tem., and who sympathized with me when I told him how my confidence in the animal had been abused, as he had had the buckboard nearly kicked to pieces without the least provocation when the animal was going along at a quiet walk.

He gave me a shake-down in his tent, and after supper I went down to look at the river, a dull looking stream flowing between sandbars in a bed much too large for it. I tried my boat, which was a new one hitherto unused, and found it answer my expectations, so I left it on a scow to be ready for an early start in the morning, and climbing up the steep bank returned to the tent in the neighboring encampment. Next morning shortly after daybreak I got my gear together, stowed it in my little craft, and started on my lonely paddle of over 200 miles. The river was free from ice, but had not been reinforced as yet by the melted snow from the Rocky Mountains, so the water was low; the stream ran between sandbanks at the rate of about two to three miles an hour (as nearly as I could judge), and its depth was variable. High clay banks on either side shut out all view of the surrounding country, not that there was anything to see when one did surmount them.

Helped by the current, I paddled on at the rate of about five miles an hour. "The thief doth see in every bush an officer," so at first I thought of an Indian lurking behind each thicket. After I had passed a good many without seeing any Indians I felt more at ease, and amused myself forming imaginary pictures out of the irregular masses of clay and sand past which I swept; pinnacles and round towers, forts with moats, successively came into view. Desolation is the chief impression I have carried away of the South Saskatchewan. Except one slight "race" I met no rapids or difficulties such as canoeists delight in surmounting; to find the channel at times was the only difficulty. The river wound among the sandbanks in a way that was confusing, and unless I watched carefully the set of the current I would suddenly find myself with only about two inches of water under my keel. Occasionally I was tempted to make a short cut, which was not a success, as I was soon reduced to wading bare-legged through sand and water for about a quarter of a mile until I regained the main channel.

At noon I stopped for dinner and a short rest, and then on again, my course was east at first, then northeast, and by the afternoon of the second day I had made by reckoning a point near the Elbow. A head wind then got up, and as I found I was not making much way against it, I camped for the night. This process was simple. I usually selected a small dry ravine, made a bed with my blankets and canoe bag and over this I turned my canoe, bottom upward, resting on one gunwale, then I spread a waterproof sheet over the canoe, and after I had crept beneath it, turned it down over the open side. In this way I managed to make a comfortable bed and slept soundly in spite of the cold nights. It was the end of April, and the nights in the Northwest are cold about that time. On the morning of the third day, about seven o'clock, I reached the Elbow, where the river changes its course from N.E. to N., making a decided bend. Here I saw a solitary hut, the only sign of habitation I had met since leaving Swift Current station. It stood bare and lonely on the hillside above the river, tenantless, without a sign of cultivation near it, and added to the desolateness of the scene. After rounding the Elbow the navigation of the river improved and its course became more clearly marked, but as soon as I had got well on my way northward, I met a stiff breeze from the north, blowing right up the river, a regular "nose ender." I hammered on against this for a short time, but soon came to the conclusion that the game was not worth the candle, and accordingly made for the shore, landed and built a small fire, at which I read and meditated and slept the rest of the day and night.

I was up betimes the following morning, for about 3 A. M. the temperature of my lair under the canoe was not conducive to sleep. The wind had fallen during the night, and the clear dawn gave promise of a fine day. Relighting my fire, I soon made myself a cup of cocoa which, with "hard tack" (sailor's biscuit) constituted my frugal breakfast, then I got under way again just as dawn was breaking. The morning was fine and calm, and helped by a strong current, I made good way down stream. After paddling about twenty miles I was somewhat startled by the unexpected boom of a steam whistle lower down the river. Following its windings, I soon came in sight of the smoke stacks of a steamer, without doubt the Northcote. Was she on her return voyage, or was she making her way down the river like myself? A few more strokes of my paddle settled it. I saw the red-coated line of militia soldiers, and rounding to under the lee of the steamer (which was wedged on a sandbank), was greeted by a cheer from them. I spent a few hours on board the steamer, but soon tired of the monotony of seeing the ship, heavily loaded, with two barges alongside, warped or lifted off from one sandbank on to another. So after dinner I launched my canoe again, and left the Northcote as I found her, stuck on another sandbar. The afternoon was hot enough, a contrast to the night.

As I got near the Moose Woods, where the river widens out to two or three miles, from one bank to another—the current passing between mud banks and islands—wild geese (*Outarde*, Canada wild swan) and ducks became more plentiful; these were so tame, I came up within a few yards of them; evidently canoes were a rarity on the river. I forebore shooting at them with my revolver (the only weapon I had) on account of the time which would be lost if I did happen to hit a goose or duck, in getting it, plucking and cooking it, besides I had no cartridges to spare. A herd of antelope also came down to the river bank about a couple of hundred yards from me, gazed for a moment, and then trotted off. Beavers splashed into the water from the bank, put their heads above to look around, and then treated me to a view of their tail. About sunset I got to the expansion of the river and paddled on, hoping to find a suitable camping place, but they were rare in that locality. At last as the evening darkened into night, I put to shore, climbed up a low muddy bank and found a dry spot with brush, on which to build my fire. Tired with my long day's work I slept soundly, though it was so cold that the rubber sheet over me was caked with ice when I woke up toward morning.

Now I made my way between steep mud banks, following the main stream as well as I could. After about twenty miles' paddling I got to where the river narrowed again, and where an island split the current in two; the prettiest little bit of river scenery I had met with. Below this I came on an inhabited house on the bank, near which were two boys watching me. From these I learned that I was close to the colony of Saskatoon, a small settlement on the river where I was expected, as my departure had been wired from Swift Current. Two or three miles lower down I came upon a ferry, and landing here I carried my canoe and lading up to the ferryman's house. The village was in a state of commotion, a fight between the Canadian militia and half-breeds and Indians had taken place a week before, about thirty miles lower down on the river, and some thirty wounded men were to be brought in in the afternoon. So I had other work than canoe paddling to do, and my solitary paddle cruise came to an end.

C. M. DOUGLAS.

CAMPS AND CAMPING OUT.

[From some addenda to "Nessmuk's" "Woodcraft," printed here for the benefit of those who have the volume—as well as of those who ought to have it.—ED.]

As the methods of camping out, cooking, etc., recommended in this little volume have been pretty widely read and commented on, perhaps a few words of explanation may not be out of place.

One very pleasant writer in FOREST AND STREAM gives his mode of making a four-post bedstead for camp, and adds: "Had 'Nessmuk' built his bunk with four bedposts driven in the ground that night on the Tiadaghton he would not have lain a prisoner with guard-mounting performed over him by a rattler." True, dear "Wawayanda." But it required less time and labor to out-stay the snake than to build the bedstead; and it was an incident not likely to happen again in a lifetime, while the building of bedsteads would become a constant quantity in camp life.

Again "Wawayanda" says: "We will speak right here of the superior advantages of what is called in 'Woodcraft' the worst kind of a tent—the wall tent. For tramps through the woods and over carries, stopping where night overtakes one, the less there is to carry the better. The 'Indian camp,' the 'brush shanty,' or the 'shanty tent' is undoubtedly the best for that sort of business. But a majority of the grand army of outers will be found in camps located for a stay of from ten days to three weeks, where ample space and a homelike air within are * * desirable. Besides, parties of four and five are the rule, and often a wife among them. For such the 'shanty tent,' pronounced the 'perfect camp' by 'Nessmuk,' will hardly answer. * * * One or two hardy men may get along in it, though with discomfort, through a four days' nor'easter. * * * Under such circumstances and a 'shanty tent,' were a woman added to the camp, we opine that 'Nessmuk' would feel like shouldering his knapsack and striking out for the clearings." You are well right; he would. And probably the woman would want to go home by that time.

In FOREST AND STREAM, Jan. 8, 1885, "Wawayanda" alludes to "Woodcraft" again as follows: " 'Woodcraft' is itself the gospel of relaxation, the apostle of a new life; but it is the voice of one crying in the wilderness, the enthusiasm of the hermit and the song of the recluse. For a party embarked on an extended outing, its precepts are incomplete. * * * The out-of-door methods are in every way worthy of all acceptation for a fair-weather camp, but of the indoor life of the camper through a week of storm * * * when there is no place of comfort or enjoyment other than the camp, of this part of the outer's experience we find nothing in 'Woodcraft.' It is a phase of camp life which doubtless has often fallen to the lot of 'Nessmuk,' and it is a matter of no little curiosity to know just how he manages it with his shanty tent." I will try to explain.

It may safely be inferred that the man who has spent thirty autumns in the wild highlands of northern Pennsylvania and the Lower Peninsula of Michigan, has seen his full share of long, tedious rainstorms. If I have mostly been silent as to this particular phase of camp life, it is partly because it is so dull and monotonous, both in experience and description, and partly because it is childish and unmanly to put up winding, querulous complaints about the weather. All the same, I have had my full share of "nor'easters." Just how I managed or mismanaged them can better be shown by "plain narration" of actual experience than by any amount of theorizing.

For instance: The autumn of '64 was exceptionally wet, dull and cloudy. Commencing about the middle of October, there was a month when it rained every day, and there were twenty-one consecutive days during which the sun never showed his face for a single minute. It was not a down-pour, but a steady, dull, incessant drizzle that had the searching faculty of wetting everything in the woods, inside and out. It happened just then that I went with a reliable partner to a distant camp for a fall hunt. We had been there the previous summer and partially organized a camp by putting up a rough frame, cutting a lot of wood, and peeling bark for a roof, the latter being laid on the ground with heavy stones on it to keep it from "curling."

It was late in the afternoon of a dark, rainy day, when, after a man-killing tramp, we arrived at the camping grounds, only to find that the ubiquitous swamp hoodlum had preceded us, and had burned up all the wood, and a part of our bark as well. It did look a little dreary.

But it was no time for whining. We soon managed a rousing fire, covered the frame with hemlock brush properly laid, and placed what bark we had where it would do most good. We worked hard with the axes as long as we could see to chop, and by dint of roaring fires, with the rather scant protection of the leaky roof, contrived to pull through the night in tolerable comfort, though it was no picnic. The next morning we were out before it was light enough to shoot, and before the sun was an hour high a streak of luck came to us in the shape of a fat doe, which my partner shot down on sight. A fat deer on the first day of the hunt was beyond price. It meant not only a full supply of choice venison from the start, but the skin would help out materially as an addition to the roof. As it was raining steadily we decided to pack the doe back to camp and put in the balance of the day making things comfortable for a protracted hunt; for deer sign was abundant, we had the ground all to ourselves, and were steadily resolved not to be beaten off by rain. We stretched the deerskin on the roof, picked a full supply of browse and piled it before a blazing fire to dry, drove stakes at the sides of the shanty and wattled in hemlock brush for a wind-break and also to retain and reflect the fire heat, cut a good supply of wood for the night, and then went skirmishing up and down the narrow bottom for an old log that would peel. We found an uprooted basswood that was just the thing, and spent a couple of hours cutting rectangular strips of bark and toting them to camp. We laid them on with care and found that our shelter was rainproof. It was enough. Given a dry flooring, 8x9 feet, with a bright fire in front, and any two hunters who cannot make the thing enjoyable in spite of rain had best take to the clearings.

We hunted from that camp all the week days (and some others) of an entire month, never letting up for rain, and we were wet every day and comfortably dried out every night. It was the wettest hunt I ever was on, but I look back to it as one of the pleasantest. The "perfect camp," the waterproof "shanty tent," would have made the thing delightful from the start, and saved hard work, wet and inconvenience in the beginning. But the facts that two hunters made a successful and most enjoyable deer hunt during an entire month of rainy weather, that they remained healthy, hearty, and enjoyed the soundest sleep every night, and with such slender material for making a comfortable, dry camp, these facts may be suggestive to those who wonder how an old woodsman manages with only a shanty tent during a nor'easter.

I may add that I do not need head room to walk about, read and write, play cards, etc., inside the camp. I do my walking in the grand old forest aisles, rain or shine, and as for writing, I can do enough of that at home. Nor do I take books into the woods.

I carry a sufficient supply of Shakespeare, Pope, Byron and Burns under the little gray hunting cap, which I can draw on at need, and I would as soon start a mouth organ at a first-class concert as draw a book or a euchre deck in the presence of lakes, forests and mountains.

I have read and heard much of the tedium pertaining to protracted storms in camp; of the weary days and the long, dreary nights, when the world seems to be reduced to ten feet square. I shall never understand it. I have certainly spent much more than one hundred days in small, narrow camps alone during the "dark days before Christmas," when there was more than fifteen hours of darkness to be got over each twenty-four hours; and the time never yet seemed long nor hung heavily on my hands for a single hour.

The half-hotel-half-picnic style of outing most in favor with "Wawayanda" is no doubt a pleasant way of passing a portion of the heated term. It is amiable in *pater familias* to take his wife and little ones to a green, well-shaded island, and give them the benefit of an out-o'-door life for a few days or weeks. In which case a wall tent with flaps, and a two-horse wagon load of duffle will be none to much. And a little woodcraft may well be dove-tailed in. The adoption of the "out-door range," and the methods of plain cooking described in "Woodcraft," will be found to work satisfactorily. As to cooking out of doors in the rain, simply drive four crotches, lay two cross-poles thereon, then lay strips of bark or slabs over the fire in such a way as to lead most of the water back of the fire. In very bad weather I sometimes do that. The out-door range obviates any necessity for sheet-iron contrivances and old stove tops, and is much better.

In conclusion, any style of outing that rests, recreates and refreshes men, women and children, is to be commended and encouraged. True, the cumbersome picnic style would not do for me; and my lone, light, hunter style of outing cuts off all possibilities for women and children.

"There is room for us all,
Room in the greenwood if not in the hall."

HYBRID WOLVES.

Editor Forest and Stream:

Some ten years ago, I think in 1875, Mr. Henry Dowdney was keeping hotel here, near the depot of the New York, Lake Erie & Western Railroad, when a show came along, and among other curiosities collected to make up a small museum was a large Canadian gray wolf, a female. The party stopped at Dowdney's, and bad luck, bad weather, etc., found them when ready to leave the town without means, and the entire collection, the wolf included, was left as collateral security for the hotel bill, and was never redeemed. In due time the wolf came in season, and was bred by Mr. Dowdney who, by the way, is a great lover of bulldogs, to a very handsome white bulldog that he then owned. In due time she gave birth to six very handsome puppies, all a sort of yellow-white. Mr. Dowdney sold all of the pups but one, and I often saw that after it was matured. He made a dog of about 70 pounds weight and quite handsome, but never showed the tenacious disposition of the bulldog, but was of a very treacherous disposition, and would not stay to be punished. Mr. Dowdney finally sold him, and he got into the hands of a farmer, who became afraid of him and killed him. The bitch went to Ohio, and a man there bred another litter from her.

Another case nearly the same came under my observation when I lived in Hornellsville, N. Y. Mr. Owen Sarsfield, who still lives there, kept a grocery and tap room. He was quite a fancier, and among other pets he kept a tame fox and a black and tan terrier, and I saw two litters of hybrid foxes bred from the pair; but it seemed so natural for the two breeds to produce young I thought it of too little importance to notice before.

BURR HOLLIS.

WELLSVILLE, N. Y., June 24, 1885.

[The fact that the wolf and fox will freely cross with the domestic dog has long been known, and still authentic accounts of it are worthy of record. A case where a large black smooth-haired dog kept at a ranch in Nebraska paired with a wild gray wolf (*C. occidentalis*) once came under

notice. In this case some of the pups resembled the father and some the mother. The litter grew up and were terribly destructive to the cattle, sometimes killing yearlings and two-year-olds. They were finally with the mother all shot. The dog was never seen after his elopement with the female wolf and was no doubt killed by lupine rivals.]

THE NEST AND EGGS OF SWAINSON'S WARBLER.

(*Helinaia swainsoni.*)

BY WILLIAM BREWSTER.

IT is already a matter of record* that during the year 1884 Mr. Arthur T. Wayne and myself found Swainson's warblers in some numbers near Charleston, South Carolina, where upward of fifty specimens were taken, including the previously undescribed young in first plumage. But although we ascertained beyond all doubts that the birds bred there we utterly failed to find the nest or even to learn anything definite regarding its probable character and position.

In May of the present year I visited Charleston for the third time, and with Mr. Wayne spent several days wading about in the swamps in the hope of stumbling on the prize. But the birds—perhaps thinned by our merciless collecting of the preceding season—proved so very scarce that we often spent an entire day in their haunts without either seeing or hearing one, and the search for a nest seemed so hopeless that I soon abandoned it for a more promising undertaking elsewhere. Mr. Wayne, however, continued it with unremitting perseverance, and after many disappointments his labors were finally rewarded, for early in June he succeeded in finding two nests, the first that have ever been taken. His account of the interesting experience, kindly placed in my hands for publication, is as follows:

"Feeling sure that a pair of these warblers had a nest in a swamp, I searched the place carefully many days in succession. The male was usually present, but he sang in so many different places that I could not tell where his mate and eggs were concealed. At length (on June 5) while forcing my way through a dense tract of canes, I stopped to rest and look about, feeling half disposed to give up the task altogether, when my eye was suddenly arrested by the sight of a bird sitting near at hand on what appeared to be a mass of rubbish lodged in the top of a cane. I saw almost immediately that it was a Swainson's warbler, and advanced, when it flew and alighted on the ground, feigning lameness, but keeping perfect silence. Upon examining the supposed rubbish I found, to my great delight, that I had at length discovered the veritable nest of a Swainson's warbler, but to my disgust it contained only a single young bird about five days old. I shot the male shortly afterward as it was feeding the young bird, but the female escaped. The nest was built in a cane about four feet above a pool of stagnant water.

"Having now some definite knowledge of the position of the nest, I went next day (June 6) to a neighboring swamp where I had seen a pair of the birds. After a short search I started the female, who sat very closely, merely dropping to the ground as I brushed past the nest, and quickly gliding out of sight, simulating lameness like the female of the first nest. I waited fully half an hour before she returned accompanied by her mate. Both birds chirped like a *Parula*, and finally the female went to the nest and resumed incubation. I crept cautiously to within three feet of her, and looked at her for a few moments, then retreating to a proper distance, shot her on the nest. I afterward secured the male also, but not easily, for he was unusually shy. This nest, like the first, was built in a cane over a pool of stagnant water, but it was placed higher—at least six feet above the water. It contained one young bird just hatched and two eggs, addled, but in every way perfect."

These eggs, with the nest in which they were found, have been very kindly sent me by Mr. Wayne for examination and description. The nest is a remarkable affair, composed mainly of leaves—chiefly of the red maple (*Acer rubrum*), sweet gum (*Liquidamber styraciflua*), water oak (*Quercus aquatica*) and cane (*Arundinaria tecta*)—bleached by the sun and winds or stained by long immersion in swamp water, and loosely impacted in a large and nearly globular mass, one side of which rests between, but is in no way fastened to, the upright stem and nearly upright, slightly diverging, fascicled branches of a cane; the bottom of the structure being about four inches above the point of junction of the main stem and its fascicle. As only a little more than one-third of the circumference of the nest is inclosed by these supports it is probable that they were forced slightly outward during the process of building, for otherwise they could scarcely clasp this small portion with sufficient firmness to sustain the weight of the whole. The sides of the mass round inward at the top, which, however, is round and flat as if a perfect globe had been first formed and the top afterward sliced off. Near the inner edge of this flat surface is the nest proper, a deep, neatly-rounded, cup-shaped hollow, smoothly and very prettily lined with needles of the short-leaved pine (*Pinus mitis*) and a few fine black roots, which curiously resemble horse hairs. The inner walls of this cavity next the supporting canes are only about half an inch in thickness, but its outer rim is bordered by a platform from one and one-half to two inches in width. Many of the leaves on the outer edge of this platform are fixed with their stems pointing obliquely upward and outward, forming a bristling fringe, an arrangement which may have been accidental, or perhaps was intended to give the exterior a natural and inconspicuous appearance. If the latter, the design was most happily conceived, for from the outside the whole affair looks like a bunch of old leaves. Something very like it might be made by taking the nest of our oven bird (*Siurus auricapillus*), tearing off the domed top, and pressing one side down among a cluster of elastic sprouts. In a word, it is a ground nest placed in a bush, or rather a hybrid between the ground and bush types of bird architecture, loosely, yet on the whole substantially constructed, planned with rare cunning, and admirably calculated to escape detection from prying eyes.

The interior cavity measures 1.75† in diameter by 1.50 in depth; the entire nest externally 4.00 across the top, 4.50 in horizontal diameter at the middle, and about 4.00 in total depth.

The other nest is described to me by Mr. Wayne as "a rude structure, in fact a mere bunch of leaves, chiefly of the sweet gum and cane, lined almost entirely with 'pine straw,' some rootlets, and a few strands of horse hair. Although rough outwardly, I must say that it is beautifully finished inside."

*See FOREST AND STREAM, Nov. 6, 1884, pp. 285, 286, and the *Auk*, Vol. II., No. 1, January, 1885, pp. 65-80.

†The measurements given in this article are all in inches and their hundredths.

The eggs measure respectively .75x.59 and .74x.59. The one giving the former dimensions is almost perfectly elliptical, the opposite ends being essentially uniform in size and outline. The other is more oval but its smaller end is still decidedly blunt and rounded. In color both are dull, dead white with a bluish tinge, so faint that it is appreciable only in certain lights or when the specimen is placed on white cotton or by the side of a perfectly white egg, as that of a swallow or woodpecker. The shell is smooth to the touch but under a glass shows rather numerous pits or pores. It has a moderate polish, more than that of a swallow's egg, less than that of most woodpeckers'. At first sight both eggs appear immaculate and one is really absolutely so. The other has a single small round spot of a deep golden brown color. This will not rub off under a free application of water and as much friction as I have dared to use; but nevertheless I am inclined to consider it merely some accidental stain.

The character of these nests, their position, and the color of the eggs which one of them contained, are all alike unexpected. One would have predicted that the bird would prove to be a ground builder, that its nest would be closely concealed, and that the eggs would be distinctly spotted; all of which goes to show how very idle any speculation in such cases is likely to prove. In respect to the eggs, it is possible that they may be normally spotted. If always immaculate, they will be unique in this respect among the eggs of North American *Sylvicolidæ*. This point probably requires further investigation, but in a general way the mystery hitherto enveloping the breeding of Swainson's warbler may be said to be ended. The thanks of ornithologists at large are certainly due Mr. Wayne for his important services in this connection, services performed at no small risk to health, if not life itself, for the Southern canebrakes reek with malaria, and moccasin snakes are dangerous neighbors. But in spite of these obstacles the life history of the interesting bird has been worked out nearly to the end, and the pages that remain to be added are comparatively few and unimportant.

THE WHITE GOAT.

Editor Forest and Stream:

On my return, quite recently, from Europe, my attention was drawn to your issues of Feb. 26 and March 12, containing what you quite rightly characterize as very interesting contributions to our knowledge of the white Rocky Mountain goat (*Aplocerus montanus*), by the pens of Captain Bendire, Mr. S. Garman, and "W. N. B.," information elicited apparently by a paper of mine in the December *Century*, in which I attempted to give some account of the habits and chase of this animal. Captain Bendire's valuable notes concerning the distribution of the antelope goat to regions so far south (36° N.L.) as Mount Whitney are indeed most interesting, and I am glad I limited my own remarks on this subject in the *Century*, "No authentic instance is known to me of its appearance south of 45° N.L.," for when I wrote the article, almost two years ago, I certainly, in spite of the great pains I took, knew or could learn of no authentic record proving this southerly extension of its zone, and to repeat the usual western hearsay information is, as Captain Bendire no doubt himself knows, not conducive to assist serious study. His authoritative addition to our knowledge of what, from my personal cognizance, I have every reason to believe, is, I need hardly say, very welcome to me and no doubt also to others interested in this subject.

Concerning the weight and measurement of the great ram killed by a friend (Mr. F. Medhurst, a noted English sportsman, whose word I personally guarantee), which I mention in the *Century* to have been between 300 and 400 pounds and who taped round the withers 7 feet 3½ inches, I should perhaps have added that, according to my experience, rams of this size are the exception. I have never killed an *Aplocerus* heavier than about 180 pounds, but then I never got a really large male, though I have seen some that must have equalled my friend's ram. The pages of the *Century* were hardly the place to enter into a disquisition concerning the weight and size of exceptionally large rams; but as this subject happens to have interested me a good deal for the past eight or nine years, I now would like to recur to it briefly. In the first instance, let me inclose for your inspection the photograph of a live ram, no less an individual than a very famous giant ram, which was caught alive some fifteen years back in the Cable Mountains, near Deerlodge City, Mont., and which was kept for some time at the latter place. I did not see the live animal, for he died before my first visit to Montana. Knowing satisfactorily that what I heard of the size of this brute would meet with some head-shaking doubts in Europe, I took pains to collect written and oral testimony from ten respectable citizens of Deerlodge, including the two men who photographed him, the latter's names and addresses being Thos. H. Rutter, Butte City, M. T., and Wm. Hyde, Deerlodge City, M. T., who, I have no doubt, will be glad to repeat the information they gave me. These ten men were, as I say, as trustworthy sources of information as one can find in the home of tall talk. They had all seen the animal weighed and measured, and they all agreed that it scaled 480 pounds a fortnight after it was caught (or brought down), and that it taped round the withers over 8 feet.

Only those entirely ignorant of the subject will express doubt concerning the measurement round the withers—whatever they may think of the weight—for old males of this species have a very distinct hump, in proportion quite as pronounced as that of the American bison, for the top of it is at least eighteen inches over the level of a horizontal line drawn between the eyes and the root of the tail. Besides this their great depth of chest is quite out of proportion to their other dimensions, added to which the immensely thick coat of these shaggy monsters adds naturally very considerably to the span of the tapeline, more particularly so in late spring (when Mr. Medhurst shot his ram) before they have shed their tangled and matted winter coat. It is hardly necessary to point out that dogs were used in the capture of the Deerlodge ram and in that of the other goats secured alive by the hunters. By no other means, save perhaps some fantastical and entirely visionary drugging scheme such as Munchhausen speaks of, could goats be approached within lassoing distance. That 400 or 500 pound rams are not so exceedingly rare would appear from a letter in the London *Field* of May 15, 1885, in which a sportsman, apparently an American, for his communication is dated Fort Keogh, describes the shooting of such a beast. His words are, "This ram, we judged, weighed nearly 500 pounds. His girth was fully six feet." He was shot in October, when they bear their summer coat, and this circumstance no doubt explains his smaller girth as compared to my friend's big ram, the difference in the density and hence volume of the summer and winter coats being very great, greater than in any other animal known to me.

Even Captain Bendire's big ram, which he says weighed 250 pounds when dressed, must have come close to 300 pounds live weight.

The easiest way to hunt the goat is with dogs, but it is not the true sportsmanlike manner, and it soon drives the goats away from a locality. The Kootenay Indians in British Columbia hunt them exclusively with dogs, but considering the vastness of their natural preserves, it does not matter so much. I may mention to those interested in the chase of the *Aplocerus* that in the London *Field* of September 16, 1882, May 5, 1883, and June 23, 1883, I give detailed accounts of the chase and habitat of this game.

I notice that in a footnote you state that the American Museum of Natural History at Central Park has one or more individuals of this species. The museum in question may have them now, but certainly in May, 1883, when I stayed a day longer in New York than I had intended specially for the purpose of seeing these specimens of which I had heard, I could not find any trace of them, and the presiding official appeared to know nothing of them when I showed him the photograph of the big ram to assist identification.

On one point I can not join issue with Captain Bendire, namely that Colorado, Wyoming or Central Montana harbor these animals, except in very isolated instances such as are mentioned by Mr. S. Garman and "W. N. B." I and others have looked for them in those districts pretty thoroughly, and we were fooled pretty thoroughly every time.

Concerning the letter of Mr. J. C. Hughes, in your issue of February 5, in which he sees fit to criticise my information and draw my veracity into question, I can only say Mr. Hughes will have to acquire first of all the rudiments of the ordinary amenities governing discussions in public print before he can expect that notice will be taken of his criticisms, even were they more reasonable than those he gives expression to.

WM. A. BAILLIE-GROHMAN.

BOSTON, June 13, 1885.

[A drawing from the photograph will be published.]

THE ROMANCE OF MOTH HUNTING.

THIS old-fashioned garden, with its wealth of rose trees, its closely-trimmed borders of box, flower-beds in squares and triangles, ovals and circles, and the ancient sun dial, erect as a sentinel, standing in the midst of its puzzle of paths, has always yielded a rich harvest to the entomologist.

As the glory of day grows, and the sunbeams warm the fragrance of the blooms into life, the bees begin to arrive, and soon the roses are alive with them, thrusting aside the soft petals with their tiny feet, as they bury themselves bodily in the flowers, to sip the nectar which has slowly accumulated during the cool of night.

Each individual of the little gauzy-winged imps is singing at his work, and the air is filled with that all-pervading hum of insects which accompanies the advent of a summer's day. The orioles are at work among the cherries, and their gaudy plumage, now visible, now hidden, glances among the leaves as they sway in the breeze. The thrushes are struggling with each other in a generous rivalry of song, and such a burst of melody rises from the lilacs that the steady buzz-z of the insect world is hushed almost to a whisper as it listens.

In the full glare of noonday, how changed, how listless all appears; nothing stirs, and not until the shadows begin to lengthen, and the heat waves cease their pulsations over the paths, does the restless spirit of the morning revive. A few more hours of busy work for the bees, a few more cherries for the orioles, and the twilight steals down, shrouding the rose trees and the lilacs, and the many quaint old-fashioned growths that bud and blossom there with its veil of mystery.

"The shadows of the evening hours,
Fall from the darkening sky,
Upon the fragrance of the flowers
The dews of evening lie."

The pungent odor of the box is now mingling with the incense of the flowers, and the long wands of roses, under a gentle movement of the air, are bowing to one another across the walks with that courtly grace, learned long ago from the stately dames and gallants, who used to promenade here, still visible in their bearing. The busy workaday buzz of the sunshine no longer vibrates in our ears, but in its stead the chirrup and call of little piping voices is rising from every nook and corner of the damp coverts on every hand.

Now and again there comes to us the faint rustling of the breeze in the tops of the poplars and between the lulls; ringing whistles and deep bass voices from the meadows beyond tell us that the frogs are holding high carnival. That bed of phlox yonder is a great attraction to the honey seekers; let us examine it. See! There is something moving over its fragrant puffs of bloom. Gone? No, there it is back again. Where is the net? Carefully now. Swish! Missed it? But alas, the phlox has suffered, as those broken stems and that tuft of flowers at your feet will testify. This netting moths does not require such an energetic effort; such tremendous swoops make havoc among the flowers, and even if a capture result the specimen is often so bruised as to be almost worthless. A careful approach to your victim, seen indistinctly at the best, as it hovers on silent wing, a rapid horizontal sweep, a quick turn of the wrist which causes the long net to fall to one side over the edge of the hoop, effectually closing all outlet, and the uninjured prize is yours. The light netting enfolds him, and though not so heavy as to crush, it still prevents those struggles for liberty which often destroy the fragile forms of these twilight beauties.

A Sphinx so dazed with his sudden capture as to have forgotten to curl up his long proboscis, is taken from the net. We will not sacrifice him, as the dried mummies of several of his brethren already adorn our case. Whirr! He is off in an instant. There is a charm in the surroundings of this spot, at this witching hour, that is lacking at other times, the indistinctness with which one sees, and the fantastic shapes, assumed by shrub and plant in the dusk. Whoz-z! A lumbering beetle wheels about your head, seen only for an instant against the sky, as he clears the bushes and blusters on out of sight into the gloom. How keen the enjoyment over the capture of some gorgeous Cecropia, or when the careful unfolding of the net from its fluttering captive reveals the light green swallow tails of a superb Luna. What an exquisite blending of colors on the downy wings before us. All the wondrous glows of sunset, cool grays, orange and jet, and the most brilliant scarlets and yellows, interspersed with rich olives and salmons, varying with the different size and species of the wearer. The lordly Imperial with his yellow coat dashed with purple, the smaller, but equally brilliant Saturnia Io, with its argus-eyed wings, or that most magnificent fellow, the Regal walnut moth, with olive and yellow and orange red, in lines and dots and stripes, the king of all.

These are but a few of the many beautiful guests to be found at nature's *fête champêtre*. Their forms are hovering all about us in silent play, now here, now there, dancing fantastic figures by the light of tiny living torches that float in the air, or glisten from the leaves and flowers; and to complete the enchantment of the lovely scene, the moon is sailing up the heavens and casting the shimmer of her silver light among the crowd of little sparkling stars. WILMOT.

NEW YORK CITY.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Received by Purchase—One American porcupine (*Erethizon dorsatus*), one puma (*Felis concolor*), five Guinea baboons (*Cynocephalus sphinx*), two male and two female American flamingoes (*Phœnicopterus ruber*), one English sky lark (*Alauda arvensis*) and one pine snake (*Pityophis menanoleucus*). Received by Presentation—One Guinea pig, one opossum and four young (*Didelphys virginiana*), four red foxes (*Vulpes fulvus*), one gray fox (*Vulpes cinereo-argentatus*), four doves (*Turtur risorius*), one turkey buzzard (*Cathartes aura*), one flicker (*Melanerpes erythrocephalus*), one red-tailed hawk (*Buteo borealis*), two bluejays (*Cyanurus cristatus*), five alligators (*Alligator mississippiensis*) and one mud turtle (*Cinosternum pennsylvanicum*). Born in the Garden—One male fallow deer (*Cervus dama*) and one male Virginia deer (*Cervus virginianus*).

ON THE ARKANSAS.

DURING the month of November, 188–, it was my good fortune to receive an invitation to accompany an officer of the United States Army, Lieut. F., on a short shooting trip to an army post in Indian Territory. I accepted most gladly, as I had heard great accounts of the abundance of feathered game in that vicinity, among which the prairie chickens and wild turkeys were an especial attraction, as they were new game to me. The only time I had ever seen prairie chickens had been from the windows of a railway train as they started up near the track and sailed away over the prairie, and as for wild turkeys, I never had the pleasure of seeing but one, and that I mistook for a tame bird belonging to some neighboring farmer, and in consequence, though I covered him carefully with my shotgun, as he stood in plain sight upon an old stump not thirty yards distant, I refrained from pulling trigger, for I was unacquainted with the locality, and had no idea there were wild turkeys in the neighborhood. The turkey, apparently, had as little idea that there were any sportsmen in the neighborhood, for when he turned and saw me, he departed with most astonishing rapidity, and I did not see him again until he rose from the ground about eighty yards away, and I then realized for the first time the chance I had had and lost. The weather will be chilly, however, for the next turkey I meet in the woods, be he wild or tame. I shall shoot on sight, and then if necessary pay the bill afterward.

On the evening previously agreed upon, Lieut. F. and myself, rigged out in shooting attire, with guns and necessary traps, met at the depot and rode to Kansas City, where we had to change cars and take a train going south. We might have made ourselves very comfortable, but Lieut. F., who had traveled over the route the year previous, asserted that the Pullman sleeper, which was attached to the train, would leave us about midnight, and another sleeper for the travelers going through Indian Territory would be attached to the train. So we asked no questions but piled into the smoking car, bag and baggage, and varied the monotony of the next four or five hours by watching our fellow passengers, among whom were some typical cowboys, going back to their ranches, and smoking cigars until our throats were dry and parched.

When we arrived at the junction we hustled around to find the promised sleeper and were finally shown into the identical car which we had brought from Kansas City. To say that we were mad and disgusted does not express our feelings at all, and as we thought how uncomfortable we had been for the last four or five hours, we fairly felt like kicking ourselves. We lost no time, however, in turning in, and were soon asleep. When we awoke the general appearance of the country through which we were passing had changed completely, and instead of a succession of neat, tidy farms, with well kept buildings, we could see nothing but prairie stretching away for miles on both sides of the track. It was raining hard, and judging from the amount of water which lay in pools along the track, it must have been raining all night. It was a depressing outlook from the rear platform of the train, but fortune favored us, and when we alighted at the station there were some rifts among the clouds, and the rain had almost ceased. When we came out from breakfast the clouds had broken away, the sun was shining brightly and with everything freshened up by the rain we could not have had a more perfect morning for our ride to the post, which was distant about fifteen miles from the station. The mail stage soon came to the door, and packing our guns and traps under the seats we started across the prairie, with one companion, a native, who, armed with a repeating rifle, was on his way to join a party of friends who were hunting deer on the Verdigris River.

The only game we saw as we drove along was a solitary prairie chicken, which started up just in front of the horses, flew to one side, and lighting about thirty yards from the road on a slight rise in the prairie, stood motionless. How I wished my guns had not been so carefully tucked away in the bottom of the stage. As it was I was almost inclined to ask the driver to stop the stage and let me try to get a gun out; when the native with the rifle suddenly spoke up and said he reckoned he'd try "that there bird;" and as the driver halted the stage he extracted his rifle from its case, and drawing a careful bead, pulled trigger. There was a sudden cloud of feathers where the bird had been but the remains bore slight resemblance to a prairie chicken, for the ball had evidently struck the bird fairly in the side and there was not enough left to pick up. Our companion, anxious to display his skill with his rifle, and at the same time fearful of missing the bird's head, had potted the poor bird and ruined it for eating. It was a lubber's shot, for no rifleman could have asked for a prettier mark at that distance than the chicken's head, as it stood watching us, perfectly motionless.

After crossing the Arkansas on an old-fashioned ferry boat, we soon reached the post, and were heartily welcomed by the officers stationed there. After a most capital lunch we made our arrangements to try an evening shoot at the lake near the post, where mallards and woodducks were said to be very plentiful, and always gave good shooting toward evening. About 3 o'clock we started in an ambulance with a pair of mules and a darkey driver, Col. C., Captain I. and Lieut. F. and myself comprising the party, while Captain J. agreed to come over later on horseback if he could finish his work in time. Crossing the river in a flat-bottomed ferry boat, we drove out to the lake over three miles of the roughest kind of a road, with mud and water frequently up to the hubs of the wheels, and in one place we found a small brook so swollen by the rains of the previous night, it was quite a question whether it would be possible to cross it or not. Col. C. and Captain I. having hip boots, waded across it first, and we managed to get the mules across, though the water came through the bottom of the ambulance, and it looked as though the current would upset us. We saw numbers of mallards and woodducks as we rode along, sitting in the ponds and not even taking the trouble to fly away, unless they happened to be very close to the road, but it was not until we had gotten our positions for shooting that I began to appreciate how numerous ducks could be. Reaching the lake we left the ambulance in charge of the darkey, and walked along the lakeshore to where the boat was hidden, the mallards rising from the other side of the slough by dozens with noisy quacks, showing up beautifully against the dark background of the trees. Leaving Capt. I., Lieut. F. and myself at the boat, Col. C. started up the slough by himself to start the birds toward us, and Capt. I. soon located Lieut. F. and myself in our positions. My position was on a strip of land running out into the lake, covered with tall forest trees, and Capt. I. was directly opposite to me. The birds which we had started in taking our positions were flying over our heads in all directions, but so high that it was useless trying to kill them, and after firing about twenty shots with a nearly clean record of either misses or cripples, I came to the sage conclusion that they were higher than I supposed and beyond my reach. I noticed Capt. I. was wasting a good many shots in the same way, and I began to fear our bag would be very light by the time we started for home.

About this time we saw the result of the Colonel's explorations up the slough, for mallard and woodduck in countless numbers appeared from the direction in which he had disappeared and the sky was fairly dotted with them as they streamed along high up in air, above the treetops, striving to escape the danger which menaced them, and hurrying to reach some quiet place where they could feed and plume themselves undisturbed. It was the grandest sight of the kind I ever had the pleasure of witnessing, but it was very aggravating at the same time, for they were too high to shoot, and every once in a while, when a pair of woodducks would skim by a trifle lower than their companions or a big greenhead mallard, owing to his size, looked as though he was an easy bird to kill, the temptation was too strong to be resisted, and time and time again the old gun spoke out, first one barrel and then the other, and generally the only result, if any was noticeable, was a badly wounded bird or two, which sailed away to drop dead in the woods and make a repast for fox, 'coon, mink, or some such vermin. Once in a while they would come low enough to kill, and my string of ducks was slowly increasing in size, but out of all proportion to the rapid decrease in my cartridges, the number of which was already painfully small. I could see Captain I. cutting the birds down every once in a while, but like myself more often "straining his gun" at sky-scrapers without result. I could hear Lieut. F.'s gun quite frequently, but he was out of sight from my stand and I could not judge of his success. Further down the lake some one else was shooting, as I could see the birds double up and come down as the charges struck them. From the position of the shooters I felt certain it must be Captain J., who had come on after us, as he had agreed, and so it proved, and when we finally assembled at the ambulance, Captain J., though the last one to arrive on the ground, had the "boss" string, with thirteen or fourteen mallards, fine old green-headed fellows, fat as ducks could be and with their crops filled with acorns, their favorite food. Colonel C. had more birds, but not so many mallards. Captain I. and myself had eight or ten apiece, and Lieut. F. about the same number. In all we had about fifty ducks, of which about one-half were mallards and the remainder woodducks, widgeon and gadwall, with one or two bluebills.

The road seemed rough when we came in by daylight, but now after dark, with the light of a single lantern, carried ahead by Captain J., as our only guide, it was an experience not to be easily forgotten. I shall never cease to wonder how that ambulance ever held together. We were all heartily glad when we emerged from the woods, and it was a right tired lot of sportsmen who finally dismounted at the post. After dinner, which was most acceptable, seated around an old-fashioned open wood fire, we killed our ducks over again and explained, so far as we were able to do so, why we did not get more birds for the number of cartridges we shot away. For my part, I found this explanation quite difficult, for I had always had a sort of notion that I could sometimes kill ducks with fair success, and I knew that this, my first experience with shooting ducks among forest trees, had been anything but a brilliant performance; and some of the stories which I remembered having told before I started for the lake, of the sport I had had on the marshes of Lake Erie, seemed sadly fishy as I pondered over the number of misses I had lately made and the poor string of eight or ten birds I had brought in. All I can say is, that duck shooting in the woods, standing in mud and water up to your knees where one can scarce turn around, is much more difficult sport than killing the same varieties, as they come up to decoys, on the marshes of Lake Erie; and practice at shooting over decoys does not prepare one for the proper killing of the "sky-scrapers" as they come along over the treetops with a smart breeze at their backs. The trees appeared to make it particularly difficult to judge the proper distance necessary to hold ahead of the birds in order to kill cleanly and creditably. One was too apt to kill "the last bird first."

The next morning Lieut. F. decided to accompany one of the officers on a turkey hunt, and started away soon after breakfast, while Captain J. and myself determined to try our luck among the chickens and quail. The quail near the post had been pretty well hunted and the chickens had mostly gone into packs; but with two Irish setters belonging to the Captain, we started and had a pleasant day's sport on the edge of the prairie. Bruce, the older dog of the two which accompanied us, was a grand ranger, with great powers of endurance and a fine nose. He was one of the Campbell strain of Tennessee. The other dog was little more than a pup.

We had not gone far before Bruce struck game, and soon located the birds, the pup backing him most admirably. Taking our positions the Captain ordered Bruce to go on, and as eight quail jumped I managed to secure a right and left, while the Captain, who was in a poor position, cut down the only bird which offered him a shot. Not stopping to hunt up the scattered birds, we soon left the underbrush and came out upon the rolling prairie. Bruce here showed his powers as a ranger, and certainly got over more ground in a shorter time than any dog I ever saw, while the pup vainly endeavored to keep up with him. The old dog finally found game, and from the surroundings we felt certain it must be chickens. Hastening forward, we had scarcely gotten up to the dogs when seven prairie chickens jumped, and as they showed up against the sky I thought I had never seen a more perfect picture. Anxious to distinguish myself, I tried to score a pair with my first barrel, but failed most lamentably, for unfortunately nothing dropped; so taking more care with the second barrel, I fairly centered an old cock bird, and dropped him handsomely. As the remaining birds flew off, we saw a wounded one leave his companions and light, while a second, evidently body-hit, sailed away too far for us to follow. Gathering the dead bird, we proceeded and soon found the first cripple who, weakened by the loss of blood, was unable to rise a second time. A short distance further on we missed Bruce, and finally discovered him standing on point on a knoll at some distance. As we approached three chickens arose, and taking careful aim I dropped a right and left, and then, as the third bird sailed away unshot at, found that through carelessness, the Captain and myself had covered the same birds. It was bad work, for by good rights we ought to have scored all three, and would have done so had either of us reserved his fire for a moment. In the corner of the next field we started a fine bevy of quail, and as they scattered nicely, we added eight or nine of them to the bag.

Strolling out, Bruce flushed a chicken way ahead of us, and as I thought, out of shot, but to my surprise, Capt. I., who was using a little 16-bore, took a shot at it without effect, however. Now, I am not one to let a possible chance go by, and so I thought I would see what my No. 12 would do at that distance, as the chicken did not seem to care for the No. 16, and throwing up my gun I gave the bird which was quartering, about six feet allowance and an elevation of about two feet; and as I cut loose he doubled up, to my amazement, and came down as dead as a stone. When we picked him up we could hardly find a shot mark upon him, but a single pellet had probably pierced his brain. He must have been at least seventy yards distant, and it was a true chance shot, for at that distance a bird would be safe nine times out of ten, at least when I am holding the gun. On the way home we started several bevies of quail, all of which paid toll; and a pack of probably seventy-five chickens which arose about one hundred and fifty yards ahead, and with a roar like distant thunder sailed off, with the exception of one deluded bird, who for some reason best known to himself came right at us, and as he flew by a charge of No. 8 struck him fairly, and he let go, bouncing afoot as he struck the ground. When we reached the post we had six prairie chickens and twenty quail. The chickens were full sized birds. I carried four of them tied to my belt, and certainly I think for their size they were the heaviest birds I ever carried; their weight seemed to increase every step. I would not like to say what they weighed. I might, and probably should, exaggerate.

We found Lieut. F. and his companion had returned before us, but had failed to discover any wild turkeys, or tame ones either, so I felt well satisfied that I had tried the chickens.

The next day we again tried the ducks at the lake, and, profiting by my experience of the former trip, I chose my own position further out in the lake and away from the tall forest trees, and by utilizing the birds as decoys as fast as I killed them, I managed to kill eighteen by sundown. Our bag footed up in all about sixty, and among them were a number of gadwalls, which variety, though scarce in some places, was quite plentiful there. The swollen brook had gone back to its usual size, and the road having dried up considerably, the ride to and from the lake was much easier than it had been the first afternoon.

As my companion had to get back to his duties we had to leave the following afternoon, and so our kind hosts arranged to hunt quail with us between the post and the station the next day. The Colonel kindly took me under his care in one ambulance, while Lieut. F., Captain I. and Lieut. M. started in another. The Colonel has a fine pair of pointers, and the country was said to be full of birds. The Colonel and myself were not, however, particulary fortunate, for we only bagged seventeen birds. The others did as well or better, and when we got to the depot, unloaded our game from the ambulances, and regretfully bade farewell to our hospitable hosts, Lieut. F. and myself found ourselves fairly laden down with ducks, quail and chickens, one hundred and twenty-five head in all.

Reaching home the following morning, we enjoyed the pleasure of distributing our game among our friends, and killed it over again with those who wished that they, too, had been guests of Uncle Sam's officers on the Arkansas.

BOWNE.

HITS AND MISSES.

Editor Forest and Stream:

I am really fearful that "Wells" has, in his heart of hearts, set me down in the class of "game and fish liars" simply because, in a moment of exultation, I sent in a score which he says he knows of no man who can equal, and I rejoice also that he seemed satisfied with a score of one-half. That was honest joy. I didn't mean it in a crowing way. I really meant that it did me good to know that such veteran and practiced sportsmen as he were satisfied with one-half and called it good shooting, at the same time hoping that I might attain to such an average without aspiring to excel it. The score of one-half is a good one, and, although many claim more, few attain even that mark when shooting in a country where briers, bushes and other obstacles intervene. It is as good as the most absurdly ridiculous boastful sportsmen do, however much they may claim. I hope I may be able some day to lay claim justly to such an average for the season. The season's score sent in by me should properly have gone in the column for remarkable shots, since it was an unusual occurrence, although it was strictly true, and I did kill the eighteen quail at eighteen shots, all on the wing, but—'twas wrong to brag about it. I know that many of us younger sportsmen do shoot better with our mouths and pens than with shotguns and rifles; but we do some good shooting with the latter implement at times, and we feel so elated we must tell of it. When we grow older and wiser we will probably keep back the accidental good work and only relate the average.

Like "Wells," I am always nauseated when a man tells me he, or some one whom he knows, can "kill a bird on the wing every pop." I have shot on the prairies of Kansas and Dakota with that class of "blowhards," and always found them poor shots who could not kill more than one-fourth of the half-grown prairie chickens shot at.

The "shotgun liar" is another nuisance; he has a shotgun

with which he "killed a deer 90 or 100 yards, and can do it every time," or he can kill a bird 75 yards every time." I have never seen a shotgun sure over 40 yards with small shot, though I have seen birds and other game killed accidentally much further.

I do not claim to be an extraordinary shot, but I do enjoy as much as any one a day's good shooting with a congenial companion and good dogs, and always expect to come out with as many birds as my friend. I never count birds in the bush nor elsewhere than in my game bag. Should our birds continue to increase, and "Wells" ever find himself in Eastern N. C., I should be more than happy to take him over our fields, even though he completely wiped me out. I'd rather be beaten by some men than gain a victory over others.

STILL-HUNTING THE GRIZZLY.

Editor Forest and Stream:

Whenever I come across an article in paper, magazine or book about hunting or fishing, I generally stop and read it, no matter how urgent the call of business or inviting the sound of the dinner bell. While turning the pages of the June *Century* to-day, I saw a contribution entitled: "Still-Hunting the Grizzly," written by Mr. Theodore Roosevelt. Now from the experience which I myself had with the grizzly bear during five years of roughing it in the Far West from June, 1846, to the summer of 1851, I am constrained to believe that what Mr. Roosevelt knows about grizzly bears could, so to speak, be put in a nutshell along with the nut.

It will not do for Mr. R. to tell hunters who have often tracked the grizzly that this shaggy and powerful beast will not "tackle" a man unless "cornered" or "crowded." I doubt whether the jungles of Asia or Africa or any other country shelter a beast that has less fear of man and is more dangerous than the grizzly bear of the Rocky Mountains. My experience in the West during the years I have already mentioned gave me a different idea of the grizzly bear from that which one would gather from Mr. Roosevelt's article in the June *Century*. I have often hunted this animal, and will state that just half of a baker's dozen—no more—have been killed by the author of this communication. Six I killed myself, and the seventh fell from wounds made by two bullets, one from my gun and the other from that of my companion.

Mr. Roosevelt states at one place in his article, that he and his companions on their hunt killed five grizzlies, and before reaching the close of his story we learn that they killed six grizzlies and one black bear. In another place the writer says that only seven shots were required to bring down all the grizzlies, when the reader himself counts up eleven shots made at them, actually mentioned by the writer. I speak of these little incongruities in the article on "Still-Hunting the Grizzly," not to show that the author is a novice in the art of fiction writing, but to give better expression to my doubt as to whether Mr. Roosevelt's article descriptive of grizzly bear hunts, has any real foundation in fact. The old experienced bear hunter would shake his head suspiciously upon reading that article.

JACKSON, Mo., June 23.

A SEVERE TEST.—The following letter, just received by the United States Cartridge Co., at Lowell, Mass., requires no explanation or comment: Office of Wallace & Sons, agents of United States Cartridge Company, New York, June 29, 1885.—U. S. Cartridge Co.: Gentlemen—One of our travelers has lately been in Denver, and writes us as follows: "A man in this town went out gunning a few days since and was drowned. His body lay under the water for over two days. When taken from the water his shell box was found filled with U. S. loaded shells. One of John P. Lower's Sons (gun merchants of this place) took the shells, and found that they were not swollen and slid into the gun easily, and they all exploded." It seems to us this was a pretty good test. Yours truly (signed), Wallace & Sons.

OWLS APLENTY.—Glover, Vt.—A friend living in Westmore, Vt., has caught since the first of last September, in one trap, ten very fine great horned owls, four barred owls, two hawk owls, one sawwhet owl, and, near by, thirty large hawks. Most of these I have mounted.—C. S. PHILLIPS.

NEW YORK QUAIL.—Hoyt's Corners, N. Y., June 27.—Bob Whites are more plentiful now. Don't know why, as the winter was severe, and they were shot off very close last fall. Partridges are also more numerous than usual here in Seneca county.—L. C. W.

NEW JERSEY WOODCOCK.—Hackensack, N. J., July 2.—There were very few woodcock killed on the opening day, and many of them were too small to shoot. When will this foolish slaughter of half-grown birds be stopped?—W. HOLBERTON.

WEIGHT OF RUFFED GROUSE.—I killed a ruffed grouse December 4 that weighed exactly two pounds. I have never weighed many, but thought this a very large one.—S. S. W.

THE MAINE WOLF STORY is doubted by a Pittston correspondent of the Gardiner *Reporter*, who denies that any wolf has been seen in the neighborhood.

Camp Fire Flickerings.

"That reminds me."

155.

LOOKING over your Camp-Fire Flickerings reminds me of the story of a well-known English lord, who some years ago was out in this neighborhood with a vast retinue, shooting and fishing. While here he hired as guide and general head hunter old Jim H., one of the most independent of the very independent race of Rocky Mountain guides. After starting out and having traveled a fair distance, Jim called a halt for the noon meal, and the tents were pitched by a charming sheet of water. Jim, who was lying on his back near Lord ——, stretched himself, yawned and said, "I believe I will take a swim, the Lord willing." Lord —— hearing this, and thinking it addressed to himself, said, "I have no objection, my good man." For a time Jim was too astonished to speak, but when he found his tongue that lord was fairly raised off his seat by the string of expletives hurled at his head, and will remember hereafter that Rocky Mountain hunters do not ask permission when they want a swim.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—V.

I SPEAK for no one but myself when I say I would rather handle one small-mouthed black bass of five pounds weight than to handle two of the other variety that would weigh five pounds each, not that I think the small-mouth fights twice as hard as the other, but I get twice the satisfaction and pure delight out of the contest and feel twice as good over the victory. I stand up squarely for the small-mouth, for I believe him to be the superior of his open-faced cousin in all game qualities and beauty of form, and the peer as a fighter to the last gasp of the bravest fish that roams the water. I have known him and loved him for many years, and none may supplant him in my affections.

The old veteran, Uncle Dan Sloan, has taken more big-mouthed bass than any one perhaps of our party and knows them better. He has probably taken as many of the small-mouthed variety too, as any of us. Ask him where he wants to make a camp and his answer would be, without a doubt, "Wherever we can find small-mouthed black bass within five rods or five miles of camp." "Old Knots" and "Dick"—mellifluous-voiced, grizzled Dick M.—"Jim," and old Ben, all assert the superiority of the small-mouth, and they, three of them at least, are old bass fishers of many years experience whose opinions have been formed after countless battles with both varieties. With us the small-mouthed bass takes his place in the very front rank of the perch family as a bold, cunning, unyielding fighter and the one altogether lovely, and we will stand by our convictions and maintain them by all fair arguments at the risk of being read out of the brotherhood, till otherwise convinced.

I may be allowed a further word or two about the vigor of bass after they have reached and passed a certain weight and age. Some writers maintain that after a bass has reached a weight of 2½ or 3 pounds, he is at his best as a fighter and loses in game qualities from this point as he grows heavier. Now, I don't believe the point has yet been discovered and made clear, at which a bass starts on the down grade of "the decline of life," and with due respect to these brethren, I don't feel like subscribing to the theory as a rule. As far as I have been able to learn, the heavier a bass is the greater strength and power of endurance he is possessed of, and as he gets older, up to any age we are certain about, he gets smarter, more cunning, and wary, and as a certain consequence, the glory of his capture is the greater. I have always had a notion that bass of 4, 5, 5½, 5¾, 6, and up to 6¾ pounds (weighed) fought longer and harder with due allowance for their greater weight than the smaller fry of 1 to 3 pounds, and the old fellow of 6¾ pounds was the gamest and hardest fighter of them all, and it took longer and required more clean, honest work with the rod to land him than any bass I handled and brought to grief. He was a clean built small-mouthed black bass, 27½ inches in length and left the water, high out, no less than five times before he was brought alongside the boat. I weighed a small-mouth taken by Uncle Dan Sloan (recorded in FOREST AND STREAM a couple of years ago) that pulled the scale to exactly 6 pounds, and he seemed to have retained a very large per cent. of the vigor of his youth up to that date, and Frank Lewis, of the Lewis House, Torch Lake, Mich., is on record with a small-mouth of 9 pounds, taken in Grass Lake, that he will aver had not yet struck the "decline" according to his best knowledge and belief. If the powers of a bass begin to wane after he has passed the 3-pound notch, I have failed to find it out, as Ben would say, "after rasselin' with 'em fur risin' of 35 year."

The "holler log" pursued its voyage down the lake, the skipper keeping an eye shoreward along the belt of swampy woods for a "clear, cool stream" at which to slake his thirst, for the sun was hot and a feeling of indolence permeated his whole frame, and it had been a long time between drinks. As we pulled lazily along past a little bay, listening for the tinkle of a stream, a savage yank at the line came near taking my rod from under my leg and into the lake; but dropping the oars and grabbing the rod, all thoughts of streams and springs and intervals between drinks vanished on the instant, and as I rose hastily to my feet, the sun was not nearly so hot, and the lazy, indolent, don't-care-whether-they-bite-or-not feeling gave place to a keen desire to measure strength and cunning with the bold customer at the other end of the line who had so nearly taken my rod from under my very nose.

"Reel up out of the way, girls, and we will soon see what manner of fish it is that has so little fear of the frying-pan before his eyes!" After the first vicious jerk the line ran slowly out eight or ten yards and stopped. Indications: Pickerel or maskalonge. When he started again and the line tightened, a smart stroke fastened the hook and signaled the beginning of the fray, and almost at the same moment a fish that looked to be over three feet long shot straight up in the air fully as high as my head. As pickerel seldom take such freaks into their heads, I said to myself, "Maskalonge," but as he was so far away—150 feet at least—and nearly in line with the glimmering streak of sunlight on the water, I could not be quite sure, and rather than be disappointed too much at the finish, took the safe side and added, "maybe pickerel." Whether pickerel or masky, he was full of fight, for as soon as he struck the water after his leap he started up the lake with a rush that took several more yards of line off the reel before the tough piece of Japanese cane could turn him out into the lake and convince him he had been headed on the wrong course. Once turned, it was not so hard to work him toward the canoe, and he came tacking along from side to side under a pull that nearly doubled the rod, the reel taking up a few feet of line at every tack until within a few yards of us, when he dashed past the stern of the hollow log full tilt for the grass and bulrushes. Just at a time like this is when one wants to have full and perfect faith in his rod. If he don't know just what it will do, and exactly the amount of clean, honest work it can be depended on to perform when called on, he had better leave it in camp and cut the first saplin' he gets his eye on that will weigh over ten pounds, tie a line on—and use it. If that fish got mixed up in the grass and rushes he was a goner. The outcome of the struggle hinged on the old rod, but I had faith in it, for it had conquered for me in tighter places than this. I fixed my thumb firmly on the spool of the reel, advanced the butt a trifle, and—held my breath.

"Look out, papa," cried Kit excitedly, "your rod is going to break, sure," and practical Bob answered over from her corner in the bow, "Well, let it break; if it does, I'll lend him mine." Four or five desperate, sullen surges made the varnish snap as the rod was bent almost to the limit, and I drew a breath of relief when the strain, proving too much for the fish, swung him around away from the bulrushes and "muskrat grass" and away from the danger line. As soon as he recovered from his astonishment at being outgeneraled, and got his bearings, he started for the other side of the lake, swimming deep, and passed under the stern with a dogged pull that made my thumb burn as the line slipped under it, but his heart was broken, and at a distance of fifty or sixty yards he came to the top of the water completely discouraged. I reeled him in under a feeble, jerky resistance to within five or six feet of the side of the dugout, and there he lay with his dorsal showing above water, glaring at us with his evil eyes—as villainous and vicious-looking a pickerel as ever crushed the life out of a heedless sunfish. But he had fought a good and stubborn fight, and in admiring his pluck and courage I forgot he was a pickerel, and forgave him for not being a maskalonge.

I called for the gaff, but smart anglers that we were, we had left the camp without gaff or landing net. It is an easy matter to lift a bass into a boat by the lower jaw with thumb and finger, but it would be almost at the risk of losing a thumb to attempt so dangerous a move with a big pickerel, and we felt that we were in a "category." I had a mind to cut the line and let him go, but cool-headed Bob scaled his doom with "Here's the paddle that belongs to the canoe; hit him on the head with that." Holding the rod in the left hand ready to let the line run if he made a dive, and poising the light paddle carefully in the right, I brought the sharp edge of the blade down on his head just back of the eyes with a whack that killed him so dead that he never found out how it was all done, and pulling him alongside, I reached under and getting a hold on the "throat latch" lifted him into the dugout limp as a wet dish rag, and without a sign of life except a faint quivering of a pectoral fin. The paddle was more deadly than the gaff. He was a fine fish of his tribe, and when hung on the scale in the evening after being out of the water the rest of the day, pulled it down to eight and a half pounds.

We fished along for a half mile further, hoping all the while that Bob's turn would come next for a share of the sport, but not a nibble was there for any of us, and the sun got hot again and the skipper of the holler log began to feel lazy and useless and dried up, and it was a blessed relief when the girls espied a maple bush near the water laden with bright red leaves—even thus early in the season—and demanded that they be put ashore that they might secure a lot of them to take back to camp.

We landed near the lower end of the swamp, and while the twins were robbing the maple bush of its treasures and hunting wild flowers and ferns along the shore, I crossed a small field and took the road leading along the foot of the hills in search of "a clear, cold stream or babbling brook" (Knots), "fur the 'hickory branch' o' the Jones family was a-gittin' powerful dry." I found a little stream coming out of the hills and crossing the road in less than eighty rods, that if not quite so delicious as the fresh, cold buttermilk Brother "Wawayanda" tells us about in his delightful "Camp Flotsam" letters, was still most cooling and soothing to the inner man; and lying prone on the ground the main body of it was deflected from its course and took its way down my parched throat till the volume of the tiny brook was seriously diminished, at least between me and the swamp through which it found its way into the lake.

Then I walked leisurely back to the boat, where the girls had collected an honest bushel of bright maple leaves, ferns and wild flowers, to which I added a score or more of wild pinks—I believe the girls so called them—which I had found growing in the field; and to fill their cup of happiness to the brim, I was required to walk an old, rotten, moss-covered log that extended out into the swamp and cut a couple of dozen "lovely cattails" that grew in the water on each side of it within easy reach. And then they sat in the shade of a tree near the water and built bouquets for mother, Jim and Fanny, and the Mullers that were coming, while the skipper lay sprawled out on the greensward like a demoralized frog, taking solid comfort and watching the gleaming white breast of a loon across the lake as he rose and fell on the gentle waves. It is wonderful how much real, unalloyed enjoyment two girls can get out of an armful of ferns, grasses, flowers and cattails, especially if they are somewhat afflicted with botany—as these two were; and while listening to their pleasant chatter, meanwhile watching the loon, it dawned on me that my attainments were rather more loon-atic than botanical—more fishy than flowery—and that it was certainly easier to tell the difference between a brook trout and a catfish than to analyze a flower or construct a well-harmonized bouquet. When the flowers, ferns, etc., were arranged into proper bunches and pronounced "just lovely," it was time for the hollow log to sail, and covering the big pickerel over in the bow with leaves, grass and cattails to keep the sun from baking him as hard as a ship's biscuit, the voyage was resumed.

We fished faithfully along down shore, the skipper taking mental note of all the fishy-looking places and locating them with a landmark; but the fish had quit biting, and patient Bob was unrewarded with a solitary nibble to quicken her pulse. But she scored a triumph and evened matters up with Miss Kitty long before we broke camp, by taking ten fine bass one morning before Kit had finished her morning nap, greatly to Bob's delight and her Uncle Ben's discomfiture, who had taken her out to show her "how to ketch bass," and whose score, if I remember, was three bass, a pickerel and two goggle eyes.

About a mile above Provemont we landed near a farm house to eat our lunch, which we spread out on a convenient log near the water; and if the table appointments in the way of linen, silverware, etc., were somewhat meager, the fact was not noticed until too late to speak about it. A good healthy woods appetite never worries over the absence of such trifles as a table cloth and silver forks, and our meal was eaten with thankfulness.

After lunch we walked to a small stream meandering through the meadow for a drink of water, and as I stooped to dip a tin cup full a snake about a foot long wriggled out of the grass at my feet and started to swim across the stream which was here not over a yard wide. Crosswise in his mouth he held a little fish about an inch and a half long which we noticed was still alive. As this appeared to be a clear violation of the fish law, punishment was meted out to the offender forthwith, without the formality of a trial. Before he reached the opposite bank I picked up a handy stick and with two motions disabled him and threw him out on the shore, but the villian still held on to the fish and I had

actually to put my foot on him and take the victim from his mouth by force. I ended his fish poaching by grinding his head out of sight in the mud and sand with my heel, but too late to save the life of the little fish, which was now limp and lifeless. It was an odd-looking, pretty little fish too, and I don't remember to have seen anything like it. I put the little fellow in the bucket with the frogs, intending to make a closer examination when we got back to camp, where I could have the aid of the "specs," but some one of the party very thoughtfully washed the bucket out that evening or next morning and turned it bottom side up to drain, and I never saw him again. KINGFISHER.

[TO BE CONTINUED.]

MUSKOKA.

SECOND PAPER.

THE drainage of the Muskoka Lake system leads those waters in a southwesterly direction into Georgian Bay. This fact is sufficient to account for the presence of the noble maskallonge in many of the smaller lakes in the western part of the Muskoka system. These fish have taken advantage of unusual stages of water to urge their way upward, and having found the situation to their liking, have bred and multiplied.

A great many curious, wonderful and amusing things are told about the maskallonge fishing and the experiences of the fishers. They will hardly bear to be repeated here lest they tax too greatly the credulity of the readers. They should be told in the cool of a starlit evening on the shady side of a tent, when the pipes burn bright, and the swish of the water along the shore ripples in the ear. Fish stories told amid such surroundings have a flavor like a fresh bottle of champagne, and no brother angler thinks for a moment of casting a doubt upon them.

One of the guides in dissecting a large fish, found in his stomach a red squirrel in process of digestion. This brought out the tradition that the maskallonge is so fond of squirrels that he is said frequently to climb the trees in pursuit of them. The fact that the squirrels are frequently seen swimming across the little channels between the islands ought not to be allowed to interfere with the theory scientifically considered. It was our own fortune to take from the stomach of one of the maskallonge whose capture was narrated in my previous letter, a black bass measuring twelve inches in length, and whose estimated weight was put down at one and a half pounds. Indeed, the fondness of the maskallonge for a black bass diet is quite noticeable. Fishing one afternoon at the outlet to Crane Lake, we had taken a string of eight fine bass averaging probably two pounds each. Through a bit of carelessness the string slipped from the hands of the guide while attempting to add another fish, and went down in sixteen feet of water. It was useless to attempt to recover them and we resumed our fishing. Shortly afterward we saw a commotion on the water, and found that a maskallonge only a little shorter than a boat oar had discovered the unfortunate bass, and had undertaken to swallow them one by one. The bass in the struggle had floundered to the surface and the maskallonge had followed them, so intent upon his work that he did not notice the proximity of the boat. An active campaign ensued, but the gaff hook proved too short, and pursuer and pursued sank out of sight to be seen no more.

A friend who was fishing in Blackstone claims to have fastened a fine maskallonge with a hand line. The fish fought gamely for a time, but was gradually losing ground, when all on a sudden the line stopped coming in, and no amount of pulling short of the breaking point could bring the fish any nearer. Finally, in looking down through the clear water the fisherman discovered that the fish had simply gone to the bottom of the lake and grasped the limb of a sunken tree in his teeth in such a way as to make his removal well nigh impossible. The stubborn subject was finally pried loose with an oar, and added to the trophies of the day.

My partner tells of a man who sat in the stern of the boat with him the morning he captured his first maskallonge. The fish proved a gallant fighter, and once when he felt himself close to the boat gave a stroke with his powerful tail which sent nearly a gallon of water dashing over the man in the stern. The latter never moved a finger, but smiled a peaceful smile of content, too happy in the situation to mind any wetting that did not shut off his breathing, and quite willing to take such a baptism every fifteen minutes in the day if it only came from a similar source.

Beginning with Lake Simcoe, the first of the lakes reached on the journey northwood from Toronto, good muskallonge fishing is said to be found in Kempenfeldt Bay, near Starvation and Grape islands, and at other points. Maskallonge are also found in Lakes Couchiching and St. John, and in Severn River and Sparrow Lake. The Moon River below Bala (one of the points reached by the steamers of the M. & N. Navigation Co.) is also quited noted for its maskallonge fishing, and some excellent scores have been made there. In a word, any man who is a practical fisherman can hardly go amiss in the Muskoka country if, after having entered it he will make a little careful inquiry and exercise a little judgment in mapping out his trip.

A few words about black blass. This superior game fish is indigenous to most of the lakes of the Muskoka country. For his weight and inches he is the equal of any fresh-water fish that swims in his capacity for yielding genuine sport with the rod and line. The small-mouth seems to prefer live or running water, with rocky or gravelly bottom; while the big-mouth is more of a pond fish, and seems to thrive in small bodies of water subject to less change, and to be comparatively well satisfied with soft or muddy bottoms. There may be circumstances under which the latter is as good and as gamy a fish as the former, but I am simply expressing an individual opinion in stating the belief that, under average conditions, the small-mouth is the gamier fish. But after the first frosts of autumn have begun to paint the leaves and chill the waters, a day with either is about as enjoyable fishing as can well be conceived. We get so many preconceived notions about fishing (especially about trout fishing) from English authors, who do not know the black bass at all, that people who fish for a living with their pens are always overweighted with traditions and conventionalities about trout fishing which inconsciously shape all our ideas and conceptions about angling. But, thanks to Thad. Norris and Hallock, and Dr. Henshall and later writers, we are getting things pretty well straightened out.

The black bass of the Muskoka region are mostly of the small-mouth variety, judging from personal observation. You meet them at various points in lakes Simcoe and Couchiching along the Muskoka Lake and river, in the Moon River below Bala, in the waters adjacent to Port Corling, in Lake Rosseau, and in the waters of both big and little "Joe," or more properly speaking, Joseph. Blackstone and Crane lakes are uncomfortably full of bass, so far as maskallonge fishing goes. It was our experience that the black bass of the latter lake in August were the gamiest we had ever met. What they would be in the last half of September and early part of October, should they grow correspondingly lively, it would be hard to determine. A fish of two pounds weight would drive a novice to desperation, and frequently escape the landing net of the older fisherman after having played havoc with his tackle. The bottoms of some of these smaller lakes, especially about their islands, are strewn with irregular fragments of rock from the size of a cocoanut to a load of hay, and while these make capital hiding places for the fish, they are exceeding destructively on leaders, unless the tackle is carefully handled. But the fish in these waters are so plentiful, such free biters and gallant fighters when hooked, that the presence of such obstacles only increase the pleasure and the skill of the fishing. It is not very difficult to take fish in smooth waters, with a thick pole and a trolling line, and correspondingly not very enjoyable.

As to bait. In all seasons, for bright or cloudy days, clear or dark waters, nothing in my own experience has proved equal to a live minnow for black bass. A fresh, active minnow, hooked through the nose with a No. 1 or 1-0 sproat hook, is a temptation which the average black bass can scarcely resist, whether he is hungry or not, and one which, having accepted, he can scarcely escape if properly handled. Next to the minnow come the frog, the crayfish, and the angle worm in the order named. Frogs and crayfish are easily transported, if there is likely to be serious difficulty in procuring bait on the fishing grounds; but in all the Muskoka waters I have visited minnows are plentiful and easily obtained with either net or fly-hook. Every submerged tree-top forms a hiding place in which they may retreat from their cannibal acquaintances, and where they may be picked out by the hundreds.

A friend informs me that the arrangements of the Northern & Northwestern Railway Company, running northward from Toronto to Muskoka Wharf, Collingwood, Meafford and Penetang, and of the Muskoka & Nipissing Navigation Company, from the first-named place to Bracebridge, Rosseau, Port Cockburn, and all the points on the Muskoka lakes will be more complete and extensive this season than ever before. All the trains, both going and coming, are met by steamers at Muskoka wharf, and tourists destined to any point on the lakes or contemplating a trip around all of them, can arrange their time schedule with entire certainty. I hope to hear of an increasing current of travel from the middle Western States into the Muskoka country this coming season.

JAY BEBE.

TOLEDO, O., June 27, 1885.

THE FIRST TARPOM ON A ROD.

Editor Forest and Stream:

In 1881, on the east coast of Florida, I heard that a very large tarpom had been taken the year before by a Philadelphia angler with rod and reel, and I mentioned the fact in print more than once.

When the claim was made a few months ago for Mr. Wood of New York, that he was the first to kill a tarpom in this way, I wrote to Mr. S. H. Jones of Philadelphia, who had been named as the successful angler, to inquire into the particulars.

Mr. Jones's death had occurred in the interim, and the reply came from his son, Samuel H. Jones, of 315 Walnut street, Philadelphia, stating that he was with his father and witnessed the capture, which occurred March 11, 1880, at Fort Pierce Cut, Indian River Inlet, East Florida; time occupied, two hours; dimensions of fish, 6 feet 4¼ inches long, 41 inches girth, 21 inches length of tail; weight, 171 pounds; tackle used, an 18-thread line on a 9-foot rod with a Buel spinner. The tarpom was taken from a boat, which it towed some distance, and was finally secured with a pair of grains. Thos. L. Paine, of St. Lucie, was the boatman, whose affidavit as to the fact, as well as that of Mr. Jones, can be procured if necessary.

Now the record stands thus:

Samuel H. Jones, of Philadelphia, March 11, 1880, Indian River, one tarpom, weight 171 pounds.

Matthew Quay, of Philadelphia, 1882, one tarpom weighing 38 pounds, taken at Charlotte Harbor, Fla.

W. H. Wood, of New York, March, 1885, took on the west coast of Florida, five tarpom, of average weight 101 pounds.

So that Mr. Jones's fish was taken five years before Mr. Wood's, and outweighed his largest specimen by 54 pounds.

This is the old story which history constantly repeats, of fame withheld or misapplied. Columbus discovers a new world and the name of Amerigo is given to it.

Fitch in 1788 propels a vessel by steam on the Delaware; in 1807 Fulton does the same thing on the Hudson, and reaps the honor and profit of the invention.

Dr. Long, of Georgia, used in 1842 sulphuric ether to prevent pain in surgical operations. In 1846, Drs. Morton and Jackson, of Boston, did the same thing, and got the credit of being the discoverers of that beneficent process.

History has omitted to tell us who killed the first salmon on a rod; but in these days everything is made public, and so let us give credit to whom credit is due, and admit that Mr. S. H. Jones, of Philadelphia, killed the first and largest tarpom that ever was captured with rod and reel, probably also the largest and strongest fish ever taken in that way.

THE FISHERMAN'S SONG.

[*From the Italian, in San Francisco Wasp.*]

WE catcha da salm* a da Sacarament,
We catcha da rock cod too;
Da big wind blow on da Farraleon,
No cara da fisherman crow.

We sella da feesh, we geta da mon,†
An' singa da song so jolly;
Sometima we catcha da leet‡ sea gull
To makea da chicken tamale.

Da sturgeon he swima da net a da reev,§
He kicka da tail, I gass.‖
We catcha da sturg' we sella da sturg—
He makea da fine sea bass.

Italino he geta no show sometime;
He makea da mon no plent;¶
But he havea da fun, you betcher da life,
When he fisha da Sacarament.

*Salmon. †Money. ‡Little. §The net in the river. ‖Guess. ¶Plenty.

GANGING HOOKS.

Editor Forest and Stream:

"J. W. T." asks if the expression "ganging hooks" is "good form," and with your permission I will say that it is, and the result of the operation is a "gang" which is quite a different bird from a snelled or snooded hook. As a gang of elk or brant means more than one, so also a gang of hooks means several, generally from seven to thirteen in a group. In ganging hooks one, to use the more common expression, makes a gang. When made, a gang is not to be trifled with by fish or man. I once made about two dozen and put three together in a wooden box and started on my annual trip for lake trout. The first time I had occasion to open the box was after I had been traveling for several hours one day, and in spite of a seal skin vest, greatcoat and rubber coat was as cold as a brass image. I had caught a trout that had broken the gang and went to the box for another. All anglers have seen a box of angle worms in a solid mass—I say all anglers, for even those who "fish only with the fly" were, at some period, boys—and that is the way those gangs appeared to me. The box was unlike Pandora's, for there was no hope left that I could straighten them out until there was a change in the weather or I found a hat store. I mention this for the benefit of anglers who propose to engage in "ganging hooks."

I can readily understand that "J. W. T." derives much pleasure from snelling hooks in the manner that he describes, but it strikes me that his process is too elaborate. At one time I thought it necessary to heat the shank of a hook in a gas jet before whipping it, and I sometimes took the temper from the steel in so doing. Besides, it was inconvenient to take portable gas works into the woods or in a boat, in both of which places I have tied many hooks. During the winter I snell a quantity of hooks, and as time is no object, I do them as neatly as possible. When I am in a boat on the water I tie a hook in much less time and with scant ceremony, but the whipping is not a whit less strong. I use nothing but tapered-shank hooks, and when on the water I find it necessary to snell a hook or make a gang, I tie the gut in a dry state and often without denting or crimping it, and I will warrant that a hook so tied will give way by the breaking of gut or hook before the whipping will yield. The few turns of silk around the bare shank answers the purpose of the marked hooks; the dry gut swells a little when soaked, making the whipping still more secure, for I use no shellac to finish hooks tied in an emergency.

Mr. Leopold very kindly sent me sample of his wax, and very good wax it is. It is clearer and softer than such as I use, but I do not find it more adhesive. Fly-tyers do not soak gut lengths before tying a fly, and really I do not see the need of it. I soak the gut and loop it and then I twitch it until dry, when I put it in my tackle book for use on the water or into my drawer for use at home. I used a small hand vise for years when I snelled hooks, but now I only use it to hold the hooks while I sharpen the points with a fine file, and when whipping the hook hold it with thumb and finger of one hand. My work may be summed up thus: The hooks I tie at home are tied for grandeur and to catch fish, those I tie while fishing are tied simply to catch fish. While not quite so handsome the last have all the business qualifications of the first. If one does not object to handling fish, "craws," dobson, frogs or other bait, a little wax on the fingers that can easily be removed ought not to be a serious objection to using fly-tyers wax, which is certainly effective.

GLENS FALLS, N. Y.

FISHING FOR STRIPED BASS.

Editor Forest and Stream:

In reply to the inquiry as to the method employed to catch the striped bass or rockfish, in the New Jersey bays: As these fish run in from the sea and take to the deep channels, and never come out on what is known as "the flats" to feed, they are angled for in the evenings when a full tide occurs, which will allow them to come into the holes near to a sedge bank in search of soft crabs, which have come there to shed. A clear, sandy spot is chosen free from weeds, and the fisherman having pushed his boat well into the grass, casts his bait into the hole, and with a stout rod and reel holding fifty yards of line, patiently awaits the bass. If many fish have come into the bay, it will not be long before their approach will be known by a vigorous tug at his line, and then the fun begins. No float is used, but a slight sinker is attached to the line to hold the bait on the bottom in places where the tide runs swift. One drawback to this sort of fishing is the continual biting of eels, and when soft crabs are scarce they become a nuisance. Old Dad Parker, at Barnegat City, is a good hand to secure to pilot one in this sort of fishing, and John Marshall or Sammy Smith, at Beach Haven, will do like work. The writer has taken several ten-pounders with John Marshall at Parker's Sedge at the latter place. Late in August is the best time, although I learn that some have already been taken at Barnegat Bay. HOMO.

PHILADELPHIA, June 28.

Editor Forest and Stream:

If there is any tide in the pond to be fished, let the angler try squids, if he can obtain them. Use hooks from 6-0 to 10-0, according to the size of the fish to be caught. Arrange two hooks on a leader, either gut or common linen line, say 12 or 15 thread; have the hooks about 4 inches apart, both on the same leader. Enter the lower hook an inch back from the tail of the squid and the other hook in whatever place it comes on the squid. If the squid exceeds 6 inches in length the hooks should be spread further apart, or else use three hooks and tie the head of the squid down to the line. For a line and reel he will find a 12 or 15 thread of 600 to 900 feet a good all-round line for bass fishing. I find 15-thread the most serviceable. Use reel by any good maker with capacity for the line, and select a rod of from 8½ to 9½ feet. I would suggest one capable of lifting 6 pounds dead weight. I have used quite a number of rods of different lengths during the past eighteen years, costing from $6 to $80, made of most of the wood used in rod making, and of various lengths and weights, and I have found that for a rod for general bass fishing one made of a bamboo without any joint (for a whole rod) 7 feet 8 inches in length and capable of lifting 8 pounds dead weight suits me the best. Many would call this a club, but I find that when fast to a bass of from 25 to 40 pounds it is none too stiff to handle well. Last season I took 243 bass weighing from 3 to 56 pounds, and I used the rod mentioned. Its cost was $2.63. I make my rods myself.

After paying out twenty-five to thirty feet of line the fisherman should impart a darting motion to his bait, by dropping the point of his rod to within about a foot of the water

and then bringing it back with a side sweep, or toward his shoulder; and if the bass are on hand I think he will meet with success. The above bait is intended for bass of from ten to twenty pounds. I never took one in a pond above twenty pounds. If fishing for smaller bass, say three to five pounds, when there is no tide, try shedder crabs and menhaden pounded up and tied up in a bag with a stone to sink it, lowered from the boat, occasionally giving the bag a shake. If there is a light current the menhaden might be cut in small pieces, say half an inch square, and occasionally thrown in by the handful. If the bass are small, from one to two pounds, try shrimp or clams, using a float.

The fishing season has not fairly opened here, I have only heard of three bass being taken. The West Island Club and Graves Point had, as far as I could learn, taken none up to the 25th. If I have not been explicit enough to furnish the inquirer the information he desires, I will be pleased to answer any inquiries he wishes to make further, that I can. Most of the bassing is done here in rough water and most of my fishing has been in the surf. I have fished for striped bass from New Hampshire to Virginia, in most of the waters fished for bass. W. M.

Newport, R. I., June 27.

[Will "Piscator," who wrote about bass at Robbins Reef, please send us his address?]

BASS IN NEW ENGLAND.

THE black bass season opens in Massachusetts and Maine under favorable circumstances. July 1 the "law is off," and this year the sportsmen were present in full numbers. Still the fish have not responded to the fly quite as freely as the enthusiasts might desire, but some full creels have been made. One party of three Boston merchants return, however, without a fish. The pond, always before a good one, did not yield a rise. The Cobbosseecontee waters, in Gardiner and Winthrop, Me., are giving excellent sport. These ponds—or beautiful lakes they are worthy of being called—are easily reached by either branch of the Maine Central Railroad. The distance is about seventy miles from Portland. The accommodations of boats on the Maranacook, Lower Winthrop, East Winthrop, and Cobbosseecontee lakes are good, and entertainment in plenty can be had at either Winthrop or East Winthrop villages; or at either Augusta or Gardiner, if one prefers a city hotel with a ride of from four to ten miles to the bass water. These waters are well stocked; the work of the Maine Fish Commission.

But some of the Massachusetts ponds are showing a fair record, especially in the western part of the State. Mr. B. F. Nichols, of split bamboo rod fame, carries off the palm thus far. He landed Saturday from Poduncle Pond, in East Brookfield, a 4¼-pound black bass. The fish was caught on a fly and with a split bamboo rod weighing only 3¾ ounces. The rod is of Mr. Nichols's own make. He believes it to be about as light a rod as has yet been produced. The bass was secured after a hard fight, without a landing net. It was shown in the window of Appleton & Litchfield, on Washington street, Monday.

Special.

POTOMAC ANGLING.

THERE has been some excellent fishing with rod and line in and about the city of Washington this season. Early in April the water, which had been roily much of the time for two years, cleared up, and black bass, striped bass (called rockfish here), striped and white perch and channel catfish, were caught in good numbers, and to these may be added an occasional carp weighing from five to twenty pounds. Almost any time these finny exotics, the carp, may be seen in their antics in certain haunts about Analostan Island and Long Bridge, chasing each other in a jolly sort of way, rising frequently from the water with a rolling motion like porpoises, and otherwise exhibiting themselves so as to make one wish for ready means of gathering them in. On account of their tender mouths and way of foraging in the mud for food, they are hard to capture. Several gentlemen have succeeded by tying a piece of kale to a small Limerick hook, with a heavy sinker attached, so as to make the lure lie on or in the mud. By a "peculiar twitch," when *Cyprinus* takes hold, the disturbance begins. If the bait has been swallowed the hook is pretty apt to hold; if not, the first plunge of the big and active fish will tear it from its mouth. It requires much skill and good management to be successful, and carp, though very plenty, are seldom caught.

At Little Falls, three miles up the river, and at Great Falls, eighteen miles, bass fishing has been much better than common. A friend of mine with a companion, at the latter place one morning, caught five black bass weighing from one and a half to three and a half pounds each, and eighty-five striped bass weighing from three-quarters of a pound to a pound each. Creek minnows were the bait used. Very little fly fishing is done here. At Seneca, further up the river, and at Point of Rocks, near Harper's Ferry, the "output" has been even better than at the places named. Anywhere from Point of Rocks to Chesapeake Bay white and striped perch can be caught in satisfactory quantities by those who care to angle for that kind of game. Perch, cat and eel fishing has been a great attraction to the negro population of Washington, who congregate evenings at the fish wharf and yank out enough for breakfast in an hour or two, besides having a picnic. Hand lines from thirty to sixty feet long, with heavy sinkers, and worms or smelt for bait, are used.

Recently there has been much sport catching channel catfish near the Arsenal wharf. Many persons with long hand lines fish from the shore, but others, and the more successful, go out in small boats into the sedge and fish toward the deep water of the channel where the vessels pass. Two or three men in a boat, with worm bait, will catch two or three dozen fish, weighing from three-quarters of a pound to a pound and a quarter each, "and good fish, too, considerin'."

Fishing in the fall is always better in many respects, though in bass fishing it requires more skill and better knowledge of localities, habits and impulses of the big and little mouths, than at any other time. One of the newspapers of Washington, the *Star*, has a daily report of the condition of the water of the river, temperature and clearness at Great Falls and other points this side, and the hour of high tide, which is of great advantage to the gentle fisherman. The editor is one of the craft and has thought for its welfare.

J. C. B.

Washington, July 4.

Scarcity of Gut.—New York, July 7.—*Editor Forest and Stream:* Your readers have no doubt learned through the daily papers of the frightful ravages made by cholera in Spain. It has been and is specially severe in the province of Murcia, where all the first-class silk worm gut is made. All gut factories, including our own, are closed. They can not be opened before the autumn. Owing to continued depression in business throughout the world, the stock of gut has been allowed to run down, so that to-day there is very little gut of any kind in the hands of dealers, and almost no first quality gut anywhere. We, as well as a few other manufacturers, have a fair supply of the various grades; but there is not enough on hand to carry us through till we get new arrivals in the autumn. The bad spring and present demoralization of business in Murcia will make this crop, when we do get it, small in quantity and poor in quality. There will be a permanent advance of at least twenty per cent. in the price of gut, and a temporary advance of about fifty per cent. If business were now active no doubt the present price would be doubled inside of thirty days.—Abbey & Imbrie.

The Coast of New Jersey.—June 28.—Fishing on the entire New Jersey coast, from Barnegat to Turtle Gut, has begun in earnest, and the weakfish are biting well at all the inlets. Many splendid catches were made during the past week. The fish at Townsend's are running larger than usual and take mussel bait well. Sheepshead at Barnegat and Tuckerton bays are being taken in fair numbers, but they still keep well out in the inlets, which makes it very uncomfortable in fishing for them when the boat is riding the incoming tide swells. Later on they will work further into the bays. No bluefish yet inside, but their presence off the coast indicate that they may at any moment come in. Some Taylors (very small bluefish) are reported inside the inlet at Great Egg Harbor. All the bottom fish are biting at Barnegat, and good strings of sea bass are every day caught at the old wreck near the beach at Barnegat Bay. Why do not the boatmen anchor another buoy at this favorite place to indicate the whereabouts of the old hull? Is it because they fear the amateur will locate the spot without their assistance and thus deprive them of a day's wages? The weakfish in this bay will not take mussels as they do below Great Egg Harbor. Nothing short of soft crab, shedder or shrimp will answer.

July 5.—At almost every point on the New Jersey coast weak-fishing is reported very good, and the fish run larger than usual. I have heard of but few amateurs having been successful with the sheepshead, but learn that the baymen who fish for the summer hotels on the beaches are catching them quite freely. Drumfish are very plentiful about Cape May and at Turtle Gut and Hereford, and scarcely a party leaves Philadelphia without returning with glowing accounts of sport. Few fresh-water fishermen have been successful with the bass in the immediate vicinity of Philadelphia this season, but Susquehanna River anglers and those that have extended their journeys somewhat all report the fishing excellent. The trout fishing season of Pennsylvania ended with the general complaint that it was a very poor one, a late spring in the beginning and very low water at the ending being the cause of it.—Homo.

West Virginia Bass Fishing.—Charleston, W. Va., July 1.—Gauley is forty miles from Charleston, the capital of West Virginia, Gauley and New rivers forming the Great Kanawha. Our party was composed of Mr. A. and wife, my husband and myself. We caught over one hundred bass, not counting those of six or eight inches which we put back. Mrs. A. and myself were unusually lucky, she catching the greater number, while I came out ahead of all in size, having taken one weighing three and a half or four pounds. Once we landed three fine ones at the same time. One white salmon was caught which we turned free again. My husband thinks it the first one ever caught in Gauley. We used the phantom minnow. The large-mouthed and the small-mouthed bass are both found in the mountain streams of West Virginia. We went frogging one night with lights, and returned with twenty-one, which were nicely prepared for our breakfast. One day we went five miles, walking past the shoals, and took our dinners, including coffee, lemons and ice, built a fire, borrowed a frying pan and cooked our fish, returning to our boarding house tired, but well pleased with our first experience in camping. During our stay of only a few days we went ten miles and were very successful, catching all the fish we wanted, remaining all night at a farm house. We find the people pleasant and hospitable. I do not blame gentlemen for wanting to take a fishing trip; but I do blame them severely for not once in a while taking their wives with them. I know we were no trouble, and we enjoyed our trip so very much. The scenery is grand, the laurel or rhododendron and the wild honeysuckle grow in abundance, the rocks and the small "Niagara Falls" are beautiful, too beautiful for any one to describe.—Elizabeth.

Doctor J. A. Henshall.—Next week Dr. J. A. Henshall starts for the Upper Peninsula of Michigan to interview the black bass and trout of that region, and also to determine the identity of a fish called mascalonge, which is found in Gogebic Lake and Eagle waters, and learn if it be the *Esox nobilior*, the simon-pure article, or the great lake-pike, *E. lucius*. We will be pleased to publish his promised report on the fish, as it will settle the question. Next winter the Doctor will go to Florida to explore the southwest coast and its fauna.

Fly Versus Bait.—Norristown, Pa., June 29.—Tried the artificial fly for the first time yesterday morning during a rain storm, and in half an hour landed four black bass. Total weight, estimated, three pounds. Three fishermen in sight using minnows and helgramites for bait; caught one small bass weighing about eight ounces. Scene of the contest, Catfish Dam, in the Schuylkill River, below Port Kennedy.—E. A. L.

"Fysshynge with an Angle."—Four hundred years are a long stretch of life for a book. Few of the angling books of to-day will live so long. Dame Juliana Berners wrote her "Treatyse of Fysshynge with an Angle" in 1496. To-day we have it in new-old style, as printed (out of pure love) by Mr. George W. Van Siclen, in 1875. This reprint is itself now rare. A few copies can be furnished from this office. Price, $1.

The Black Prince.—Several inquiries have been made for a description of this fly. We have just received a specimen from Mr. W. Holberton, of Messrs. Abbey & Imbrie, and it is a handsome fly with a killing look. The body is a bright silver tinsel with a red tail; wings and hackle jet black. This should be a good fly for Maine and the Adirondacks, but does not appear to be well known.

Poisoning Drumfish.—That dough and glue story in your last issue, in reference to the drumfish and the effect of the composition on their gills, if investigated I guess will be found to be "bosh." It looks to me that the paste is made up of a well-known fish poison, flour and water, which stupefies or poisons the drum, and thus rids the oysterman of what he supposes kills his bivalves. The question has been asked, is it the drumfish that destroys the oyster? Is it not the starfish or the periwinkle which does the damage? There is a law, I believe, against using the fish poison referred to in fresh water streams. Does not the same statute apply to salt water also?—Homo.

TRANSPLANTING FISHES:

DOES TRANSPLANTING AFFECT THE FOOD OR GAME QUALITIES OF CERTAIN FISHES?

[Read before the American Fisheries Society.]

BY A. N. CHENEY.

THIS rather imposing caption opens a wide field with many ramifications, and I cannot hope to do more than skirmish around the edges of the subject, but hope thereby to induce others to give from their personal knowledge that which will cover more of the field. In one sense it is not a new question to the members of the American Fisheries Society or the writer, for the effect of food upon our game fishes has been discussed, and it is a self-evident proposition that a well-fed fish, transplanted or otherwise, makes the best food fish; therefore, it is safe to say that if fish are taken from lean waters and planted in fat waters their food qualities will be improved.

In another sense, the effect transplanting has upon the game qualities of our game fish I do not remember to have read of being discussed. The question has been asked me a number of times, in one or both forms, by angling friends, and quite recently the matter was again brought to my attention by a letter from a gentleman of long and varied experience as an angler, who asked if I had found the black bass gamer on the hook in waters to which they were alien, than in waters to which they were native? and he answered the question from his own experience, by saying he had so found them. To me it seems a case of cause and effect, for an abundance of food and game qualities are inseparable, and go hand and hand to produce this desired result. I never caught a half-starved fish that exhibited marked game qualities on the hook, and the test of gameness is accepted as the power of a hooked fish to fight or resist capture by the angler. I don't believe a fish can fight on a stomach that is habitually empty any better than a man whose stomach is in the same state, for there is a heap of courage in a good dinner, which is increased by the knowledge that the good dinners are to be a regular thing in the future.

I can, perhaps, do no better than give a few results of fish transplanting that have come under my own observation, and I do so, looking with the eyes of an angler rather than with those of a fishculturist.

Before going further I might answer the question asked by the friend above mentioned, by stating that the gamest black bass that ever I caught were taken from waters to which the fish were native, and I never caught black bass that were in better condition than these same fish. I have taken bass with more fat, but it was abnormal fat that took away the dash and vigor that characterize the bass, and the angler had to overcome but little more than the avoirdupois of the fish; but the loss to the rod was a gain to the gridiron.

Saratoga Lake black bass stocked Effner Lake. Effner Lake bass stocked Schroon Lake, Luzerne Lake and the Hudson, Schroon and Sacandaga rivers. It would not be just to compare lake bass with river bass; but Saratoga Lake and Schroon Lake bass are gamer than Effner Lake bass. There is, apparently, little difference in the temperature and clearness of the water in these lakes, but Effner Lake seems to have the poorest supply of fish food. Lake George black bass stocked Long Pond, and afterward Long Pond stocked Round Pond. Long Pond bass are least gamy of the fish in the three waters, but they are far the largest. Long Pond is just a mass of fish food and the water is warm and thick. On the contrary, Round Pond, forty rods away, is a great spring of clear, cold water, lacking outlet or inlet, with an abundance of fish food, and the bass therein, while not exceeding in size the Lake George bass, fight like fiends when hooked.

Without further multiplying instances I think it prudent to say that when black bass in alien waters are found to possess superior game qualities it is because they have found better pasturage or better water than in the homestead.

Hudson River pike (*E. lucius*) were used to stock Schroon Lake and river, and both furnish pike of greater growth than the parent waters, but one cannot compare their game qualities for they have none.

It is natural perhaps that the quiet lake waters should be more conducive to aldermanic proportions in the pike than is the rapid river water, but a recent local newspaper states that Schroon River has produced a larger pike than the lake.

Oneida Pond was also stocked with pike from the Hudson and it has yielded these fresh-water sharks of greater size than those from any of the other waters I have named. The pond is small and the pike soon cleaned out the food and then commenced a warfare of the survival of the one with the largest mouth. The large fish have been caught and those that remain are all of the same size with the clefts in the mouth yearning to extend back to the dorsal fin.

I have somewhere seen a statement, and I think it was in one of the reports of the New York State Fish Commission, that whenever the New York lakes containing a remnant of lake trout have had a contribution of lake trout fry from the Great Lakes, the addition or deposit has increased the average size of the trout in such waters. This, at least, is the idea that has become fixed in my mind from reading the statement; but I do not remember that it was coupled with, or contingent upon, an additional supply of fish food. I have closely watched this improvement in the trout of Lake George, New York. Before the lake was restocked by the State the trout were very poor and small, and because of the gradual taper from their heads to their tails were called "wedges" by the fishermen. I do not know as they appeared starved so much as they appeared dwarfed. Every spring during the trolling season when the trout were "on top," quantities of small whitefish were seen at the surface of the water, so the lake was not entirely barren of food for the native trout. Five years after the State made the first deposit of trout fry it planted some whitefish for trout food. There was a marked improvement in the trout almost from the first planting of fry, and each year since the average in size of the catch has been larger and the condition of the trout better. I have often wondered if this was entirely owing to the food, for the anglers can discover no increase in the whitefish fry on the surface in the spring.

In other words, does not the fresh blood or out-cross improve the natives and leaven the whole. Among the mammals this fresh blood is sometimes necessary to prevent a "going to seed," and even man in families of high degree deteriorates or "peters out" occasionally from too much blue blood and not enough red. I know it is presumption on my part to

intimate that there is any affinity between the workings of warm blood—particularly the blue kind—in man, and the workings of cold blood in fishes, and I only do it to ask the scientists here gathered together, if it is possible for the infusion of fresh blood to act upon and improve and strengthen fishes that have been in breeding for ages in circumscribed waters. Whatever scientists may say about the infusion of fresh fish blood, which would apply only in certain cases, I am satisfied that fish in alien waters improve in food or game qualities only when they find better feed or better water which carries a more vigorous condition, which is the gameness desired by anglers.

MR. MATHER—The observations of Mr. Cheney correspond with those of others who have given attention to this subject. As a rule a transplanted animal does either better or worse than if left in its native place, especially if carried to a considerable distance. The brown trout, *Salmo fario*, of Europe grow rapidly here, while our eastern trout, *Salvelinus fontinalis*, have made rapid growth in Germany. The German carp is another instance of rapid growth after transplanting, for in America they have far exceeded their growth in their native land. I do not know the history of the black bass in Saratoga and Effner lakes, to which Mr. Cheney refers, and which he claims stocked the Hudson. I have been under the impression that the first black bass in the Hudson River came down the Erie Canal when it was opened, some fifty years ago, but they have never increased much below Troy during this time.

THE MARYLAND COMMISSION.—The Fish Commission operations on the Eastern Shore, under Dr. Humphrey's management, have been very successful this season. Three newly constructed hatching houses, equipped with the latest improved apparatus and located on favorable sites, one at Coward's Point, on Choptank River, one at Sharptown, on Nanticoke River, and one at Salisbury, on Wicomico River, have been in operation and have produced an aggregate of 32,000,000 shad, herring and perch fry, which have been distributed and planted generally in the rivers of this section of the State. This is an increase of about five millions over the production of last year. The shad hatching has, however, decreased on account of the unusually small catch of fish, rendering it possible for the spawn gatherers to procure only a small quantity of ripe eggs. This scarcity of shad, after a good season last year, is hard to account for. All fishermen in the vicinity of Salisbury attribute it to the increasing number of pound nets, fikes, stake seines, etc., which are set across the current on the fishing grounds, and sometimes well out in the channels, not only in the mouths of the rivers and small fresh water streams, but also on the bay shore. Whether this is the cause or not it is certain that for some reason the shad have shunned Maryland waters this season and shown themselves in increased numbers in the Delaware and more northern waters. On the other hand there has been a largely increased catch of herrings and perch. Both these varieties have this spring swarmed in Maryland waters, particularly the Nanticoke. The rock, or striped bass, has also been plentiful during the entire winter and spring. The Commission was unable, however, to procure any ripe rock spawn whatever during the entire season. Last year eight million eggs of this fish were taken and four million hatched, the first and only rock ever hatched in Maryland. With the improved hatching facilities now entirely perfected, and the use of the steam launch Beulah on the Nanticoke, and the possible transportation of shad eggs from the South, the commission expects next year to very nearly double the results of this season's hatching of spring fish. The German carp is now engaging all the Commission's attention, and there will be a distribuation of small carp and one and two year old fish about November 1.

GEO. SHEPARD PAGE, of Stanley, Morris county, N. J., has been made an honorary corresponding member of the National Fishculture Association of Great Britain.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2450.**

THE SALE OF JESTER.

Editor Forest and Stream:

In the letter of Mr. C. H. Mason in your issue of 2d inst., appears the following:

"At New York the following May, 1882, he [Mason] claimed Jester, the English setter, at $100, before the dogs were judged, and after Jester got first prize one of Mr. Mortimer's present employes [note the last word] bought and paid for the dog, doing Mr. Mason out of the purchase," etc.

Now as this assertion reflects upon Mr. Wright as purchaser and myself as seller of Jester, I desire to inform Mr. Mason or any one else that is at all interested in the matter of the truth of this sale. I took Jester into the ring at mentioned time. I saw no notice of his being claimed by any one on his stall at that time. I heard nothing of his being claimed by Mr. Mason until after I had taken him back from the ring and just as I was going to put him on the bench, when I was told Mr. Mason had claimed him. I would say I was several minutes in taking him from ring to bench, as several persons stopped me to look at him, Mr. Mason the first one. He asked some questions, referred to his catalogue, and left me.

Mr. Wright bought Jester in the ring before he was judged, and tendered me his check there upon sight. Mr. Wright was acting steward in the class. Mr. Wright knew nothing of Mr. Mason claiming the dog until after we retired from the ring.

I have understood Mr. Mason tendered Mr. Lincoln his check for Jester. I positively assert I never saw Mr. Mason's check nor had any intimation from Mr. Lincoln at any time during the show or since that he held such check or was intrusted with such commission to purchase, though I admit there was plenty of talk of such from that time on during the show, by exhibitors and visitors. E. W. JESTER.

ST. GEORGE'S, Delaware, July 3.

Editor Forest and Stream:

C. H. Mason has several times taken upon himself, within the last few months, to present to your readers and his few followers, incorrectly and entirely favorable to himself, incidents relative to the English setter dog Jester, which he claimed to have purchased at the New York dog show held in April, 1882. Although some three years have elapsed, and as he continues to shield himself under cover of this pretended purchase, I wish to state clearly the circumstances connected with the case. In 1882 the English setter dog puppies (Class No. 40) were brought into the ring, where I was acting as steward at the time, and while the puppies were being looked over by Mr. Higgins, the judge, I remarked to a friend standing outside of the ring, upon the fine appearance of the puppy No. 455 in question. I at once approached the person leading him and then learned that he was the owner (Mr. E. W. Jester, of St. George's Del.). I asked him particularly whether the puppy had been claimed or purchased by any one, and upon receiving his reply in the negative I then and there purchased the dog. Before the awards were made I had occasion to leave the ring, in order that the following class might be prepared. Upon returning I found that my purchase had been awarded first prize, and on the arrival of the next class in order I went to examine my dog in his kennel, where I again saw Mr. Jester and called his attention to a card bearing the inscription, "C. H. Mason, England, claimed at catalogue price." Mr. Jester again gave me his assurance that he knew of no such person, had not disposed of or promised the dog to any one but myself and that the card was not in the kennel when he left for the judging ring. I then sought our superintendent, Lincoln, and reported to him my purchase, when he, Lincoln, remarked, "Mason came to me not five minutes ago, claimed and paid $100 for that dog." Upon returning to the ring I saw Mason, who inquired my name and asked if I had purchased No. 455, following his question with the remark that he bought the dog before I had, but was not prepared to answer my question as to just when he made his pretended purchase. I left the matter entirely in the hands of disinterested parties, being ready to transfer my right and title to Mason; but they decided the purchase belonged to me, and I have retained the dog to this day, being prepared in the interim, to meet Mr. Mason's "court test." He has seen fit, in his several communications, to pronounce the dog faulty; but the faults failed to reach his brain even when he made his so-called purchase. Mr. E. W. Jester and others, I feel confident, are quite ready to substantiate what I have said. We are all quite weary of Mason's continued representations of his injuries, and many of your readers are no doubt delighted to observe, in your issue of July 2, over his signature, that he has written his final letter in a controversy which has at last become distasteful to him. L. B. WRIGHT.

NEW YORK, July 6, 1885.

CONTRARIETIES OF CANINE FORM.

HOW can these contrarieties agree? To fix on an ideal (whether borne in the mind's eye, with or without the assistance of a standard, or in the tangible form of a model) and to embody the same in a living animal, is generally the height of the breeder's ambition, the goal he rightly aims at. Most frequently the standard of the ideal is already fixed, and the breeder has to strive to produce it as typically as he possibly can; yet, in his endeavors, he constantly attains animals possessing very different points to what he wished and anticipated. But all the contrarieties and difficulties of breeding weigh nothing (or at least should not) with the judge who awards the prizes at a show, for if he acts as a man of honor, he is bound to award the prizes (to the best of his ability) to the specimen approaching nearest all round to the standard, and any consideration as to what dogs are likely to be most useful for improving or preserving the breed, etc., is quite foreign to his commission, and simply opening a way for a judge to please his own fancies, and virtually amounts to morally swindling the public. In dogs, the characteristics that have to be cultivated are often somewhat at variance with the uses they are nominally destined for, and almost universal disregard is paid to the uses or habits they are subjected to and allowed to follow. Breeders are, owing to this, constantly disappointed and disgusted by the results, apparent incongruities and difficulties they encounter. However, the points constituting a good specimen of the canine race may be divided into two parts—first and foremost, the all-essential characteristics constituting each particular breed; and, secondly, the points constituting merely a well-grown, well-developed animal. In a general way dogs fail in this second division through injudicious and faulty rearing, comprising exercise, feeding and kenneling, and the unfavorable treatment their parents have been subjected to; for there is little doubt but that the weakness and defects in many a puppy have arisen through the confined and pampered life the sire has led. This is a subject few breeders sufficiently consider. They select a dog because he possesses some characteristic or characteristics of the breed strongly developed, often condoning defects in his muscular system which have arisen more or less from want of exercise and unfavorable treatment, and are then disappointed because his offspring comes out scraggy, weak-loined, badly-ribbed, leggy animals, with crooked legs, faulty hocks, weak joints, and hindquarters generally defective.

Some judges, especially those whose knowledge of the characteristics of the particular breed is somewhat limited, yet having what is termed "a good eye for a dog," often select for prizes such animals as have been advantageously reared, yet are deficient or even faulty in typical characteristics. And those that generally make this mistake are what are termed all-round judges. Specialty judges, on the other hand, not unfrequently in their zeal for the typical points rush to the other extreme, and select animals that possess these points strongly marked, however deficient in general symmetry. The characteristic points themselves often present contrarieties which both breeder and judge should know, and try to strike the happy medium between the two. To enumerate a few of these inimicalities. In that most favorite of all favorite breeds—the fox-terrier—a long, lean head is admired and sought after, combined with a cobby and somewhat thick-set body. Yet it has been remarked that very long-headed dogs are mostly leggy or stilty, the reason being that there is a natural tendency toward a proportionate length of limb accompanying length of head, and the reverse when the head is characteristically short, and the limbs will be proportionately short in a natural condition; yet the art of breeding is to cultivate length of head without losing sight of correct length of limb. Breeders are too liable to be led away by individual possession of some properties their own animal or animals require improving in, without ascertaining if the strain of the animal they seek correction from is or is not defective in the concordant points. Thus, for example, a fox-terrier breeder wishing to obtain greater length of head selects some dog with this point strongly developed, regardless in most cases of what his immediate ancestors have been like, especially the ancestor from which the point in question was obtained, which if they did but know, would in many instances at once cause them to forego breeding from the animal they had selected to correct one point, for they would then see it would be an animal calculated probably to do a vast amount of injury to their own strain.

Owing to the discordance in these typical points some have argued in favor of condonation of a shorter head, and thus simplifying the difficulties; but the result is then in a general way a more compact body, but accompanied by overfulness of skull and breadth of chest, points rightly objectionable in the breed. Breeders may accept it as a safe rule never to rush to extremes, but stick to animals whose immediate ancestors they have known the characteristics of, and to be careful that the parents are healthy and have been regularly and thoroughly exercised prior to being bred from, and a good deal of the barrenness so frequently complained of might be avoided if this latter was more looked to. Fox-terrier puppies should have plenty of liberty, and neither over or underfed, and a too liberal supply of flesh renders them gaunt and large, and it is of greater importance that the sire should be sufficiently long in head, under rather than full-sized, small in the ear, compact and symmetrical in body. The dam should have a long head, and be by a well-formed sire.

In boarhounds, especially in the now all-fashionable variety, the great Dane, vast size is an essential; still it should not be cultivated at the expense of weak hindquarters and a straddling gait. Great height is often accompanied with lightness of bone, showing plainly that owing to some cause the animal has been extenuated in height beyond its natural proportion, and such dogs are not calculated to beget really large offspring. Where size is an essential it is a safe plan to follow the rule that the Americans have with such excellent results, with regard to breeding the cart horse, viz., to go in for the heaviest animals, this in the long run is the surest means of obtaining vast size; and now there is a probability of an attempt to restore the Irish wolfhound, admirers of that variety would do well to remember this. In the great Dane, Irish wolfhound and boarhounds generally, length of head and general weight, combined with total freedom of any throatiness, wrinkle, or useless lumber of the nature, are safe guides for breeding. Weakness of jaw often accompanies very long heads, and should be guarded against, while the other extreme is generally accompanied by too full a skull; but this latter is one of the contrarieties caused through a false standard, as, providing a Great Dane or deerhound has height and length of body, with a long, wedge-shaped skull—it is a mistake to think the head can be too full in the skull—providing there is no approach to apple-headedness, which is a sure indication of a mastiff or bulldog cross, and most untypical of the true greyhound. The greater the girth of the skull the greater the muscular power of the jaw is a certainty. In deerhounds narrowness of head is considered a characteristic; but length is really more so, and when heads are very light and narrow they not unfrequently suffer in length; and it is possible for the male deerhound to have too effeminate a head. This is one of the difficulties of breeding, to secure length, lightness and narrowness of head combined, without rendering the jaw weak; but a safe rule in selecting a stud dog of any of these breeds is to look for length of head.

Over-large ears, weak loins, and cow hocks are liable to be very hereditary faults. Height, with lean racing shoulders, are essential in the deerhound, but with this there is a tendency to a weak jaw, which is another contrariety that the breeder does not lose sight of, for a dog with either defect can be neither typical nor useful, loaded shoulders in any animal intended for speed being simply ruinous. Length of back in the deerhound is not of such importance as some people seem to think, many short-backed greyhounds being very fast, and they have somewhat the advantage in turning. But this point has been too well argued in "Thacker and Stonehenge on the Greyhound" to enter upon here. At the same time, many of the mere theorists who place so much stress on mere length of body overlook the far more typical characteristic of the breed, viz., well arched loins. In St. Bernards the rage for size has blinded many judges, as well as misled the public. Weight is here, again, the best guide to the breeder, and if at our larger shows the prize winners were weighed officially and their weight given in their catalogue, it would be very useful to breeders of the larger varieties, as well as render the catalogues more valuable. In St. Bernards good loins and well-formed hindquarters should be looked for, as all very tall dogs are liable to run somewhat shelly, flat-sided, weak in loin and defective in ribs. In the mastiff, where shortness of muzzle and shortness in limbs are highly characteristic of the breed (points in which the London breeders have made such decided improvement in the last few years, out-distancing the older luminaries of the present generation), it has been remarked that there is a corresponding shortening of the body—the latter a defect to a certain extent; but instead of condemning or foregoing the short, broad head, breeders should, at the same time, cultivate length of body, which Low (in his "Domestic Animals of Great Britain," upon the hog) states is effected more by liberal feeding than in any other way. He says: "When the supplies of food are increased, the size of the intestinal canal, etc., becomes extended, and this is indicated by a prolongation of the back and enlargement of the capacity of the trunk." And we may learn from what pig-breeders have done that length of body is compatible with excessive shortness of muzzle. Thus for judges ignorantly to select mastiffs possessing mere length of body, is the way to obtain long-legged, weak, narrow-loined, shelly-bodied, weak-jointed, long-headed outsiders. Shortness of back, it should be remembered, being, to a certain extent, a sign of strength either in the mastiff, cart horse, or hunter, how little do many dog breeders and judges know of congruity of type, harmony and unison of parts, consistency of proportion in form, and concordance in points.

In cultivating size in the mastiff (a consideration to a certain extent, but not a typical or characteristic, as some think) it should not be to obtain a little, long-bodied, stilty, boarhound-like animal. Both breeder and judge should cultivate shortness of head and sufficient length of body, however adverse to one another. But for either the breeder or judge to forego the essential shortness of limbs and muzzle is to show sheer ignorance of the characteristics of the breed, yet cobbiness should be avoided. Another opposite in the points of the mastiff is smallness of ear and pendulosity of lips and wrinkle and loose skin about the head generally, all characteristics of the breed that have been remarked from the earliest times, and it is palpable that none of these points should be cultivated at the expense of the other; but whenever the ear is very small and throat free from all dewlap there will be a tendency toward absence of wrinkle, and the pendulosity of the lips will be impaired, for it may be broadly laid down that leather and wrinkle go together. Thus it is evident a medium or even large ear should be admitted by a judge sooner than seeking mere lightness of ear (a boarhound or deerhound characteristic sooner than a mastiff), and breeders should not lose sight of one point in pursuance of others. Points like length and depth of body are more dependent on good rearing, especially exercise, than breed. Another opposite is smallness of ear, combined with freedom from any indication of erection; for when the ear is small, especially in muscular specimens, there is a natural tendency to part or total erection. This can only be combined by patient selection; and fox-terrier breeders have shown what may be done by perseverance. Bull-terriers, perhaps the most artificial of all compound breeds, present the greatest number of contrarieties of any, and are consequently one of the most difficult to produce of high quality. Yet the state of perfection and closeness of approach to the ideal standard these dogs often attain prove that with care, cultivation and skill the breeder may attain nearly anything and everything he desires in canine form. Truly *multum in parvo* in this variety the educated breeder must see. In the domestic hog, through cultivation and good feeding, the head has been shortened, the length of the legs reduced, while the body has been enlongated and the number of the dorsal lumbar and caudal vertebræ actually increased. This shows alteration and improvement may be attained in some points without sacrific-

ing or diminishing any of the really typical characteristics. With cultivation the tendency is toward lighter heads, lighter bone, longer bodies, higher muscular development, and a greater amount of quality generally. Uncultivated breeds, and those more exposed to the weather, will have heavier heads, coarser bone, shorter bodies, and leaner muscle. Where the wrinkle, or loose skin, is fully developed the ears will be inclined to run large either in bulls, mastiffs or pugs, and great muscular development is often accompanied with fulness in eye.—*Zoölus in Land and Water.*

THE KENNEL HOSPITAL.

RHEUMATISM.

THE dog suffers from rheumatism more frequently than any other domestic animal, but seldom exhibits the disease in the acute form known as rheumatic fever. In my experience the general disease only appears in dogs that have previously suffered from the local affection. A severe attack of local rheumatism causes great pain and general disturbance, which may produce some accompanying fever, but this is not to be confounded with rheumatic fever. The fever which accompanies the local affection is only secondary, and dependent chiefly upon the amount of pain. The specific rheumatic fever is a general disease, accompanied by local pains in different parts of the body, and is due to some morbid condition of the blood peculiar to rheumatism. The two forms of disease are distinguished by the proportion between the local and general disturbance—in one the pain is local and the general feverishness in accordance with its intensity; in the other the fever is most prominent and the pain not confined to one part, but diffused. The cause of rheumatism is cold and damp combined. It is prevalent in damp, ill-constructed kennels; it is often seen in pet dogs to follow washing, especially when east winds prevail; it is common in sporting dogs, and, I am told, is especially destructive among those accompanying sportsmen engaged in wildfowl shooting; it is not so much a prolonged low temperature as extreme and sudden variations of temperature, which gives rise to rheumatism. This explains why dogs kept in heated rooms are attacked when exposed merely to ordinary out-door temperatures. It is important to bear in mind also that exhaustion or any other debilitating influence predisposes to rheumatism. Dogs which are allowed to swim for amusement take little harm provided they have a good run afterward, and a dry bed to retire to. When, however, a dog which has had a tiring run is allowed to enter water, and then, without further exercise, to rest, rheumatism is very likely to result. Dogs that follow carriages take no harm in getting wet at the commencement of the journey, but an attack of rheumatism has often resulted from a bathe just before reaching home. When the animal is tired, a good reaction does not follow the cold bath. When he is fresh and active, cold water does no harm, and its evil effects are quite neutralized by a good run which increases the activity of the skin, and facilitates the rapid drying of his coat. Foxhounds returning tired and wet are just in the condition for the exciting cause of rheumatism to act upon. Improper benches, want of straw, and a cold wet floor are the only requisites to produce it, but the addition of a badly chosen site and aspect of kennels, with, perhaps, an east wind, renders the advent of disease most certain. One attack of rheumatism predisposes to another, or rather I may say one attack is always followed by another as the result of very slight exposure to the ordinary causes. Repeated attacks cause disease of the heart—a not uncommon lesion in dogs. The exact nature of rheumatism we do not yet understand. The sudden shifting of the local disease from one part to another, the tendency to recurrence, and the complication of the heart indicate a definite change of some kind in the blood. Whether this change depends upon some deleterious matter passing into it as the result of changes set up in the parts locally affected, or whether it is due to some change in the excretions of the skin which are thrown back into the circulation, and so constitute a poison, or whether, again, the first change takes place in the blood predisposing an animal to rheumatism, as the result of cold and damp acting upon the skin, I know not. We know how it arises, the course it generally runs, the symptoms it produces, and the serious mischief it causes to certain parts. It affects the joints, the tendons and their sheaths, the envelopes of muscle, and the membranes and valves of the heart. All of these structures are formed of one peculiar kind of tissue—white fibrous. Why rheumatism attacks these fibrous tissues we do not know. During health these tissues exhibit very little sensitiveness, but when inflamed or attacked by rheumatism, they are remarkable for the acuteness of the pain set up. There are two common forms of rheumatism met with in dogs—one attacking the loins, and known as lumbago; the other affecting the shoulders, and called kennel-lameness. As these are common and distinct (so far as appearances) diseases I shall consider them separately.

Lumbago.—This is the term applied to rheumatism affecting the muscels of the loins. In very bad cases the pain may be so intense as to render the dog unable to raise his hind legs, which appear almost as if paralyzed. Pain is at once evinced on pressing the loins. In milder cases there is great disinclination to move, stiffness of the hindquarters, pain during turning, shown by a sharp cry, and tenderness over the loins when touched. In the least marked cases there is very little stiffness visible, and not much pain on pressure, the chief symptoms being the sharp cry which follows turning and raising from a prone position. Inability to jump on a chair or to go upstairs may be noticed in house dogs, and in others inability to jump on their bench. The treatment consists in the application of stimulants to the affected part. These are gently rubbed in with the hand, and may be followed by a wrap or bandage of dry flannel. There are many applications equally effective. Equal parts of soap liniment, laudanum, and turpentine may be used, or, what is just as good and safer, equal parts of olive oil, turpentine, strong ammonia and water. These embrocations may be rubbed in daily till the skin becomes sore. Internally we may give five grain doses each of nitrate and carbonate of potash, once or twice daily, or, what I consider better, small doses of turpentine. This is best given in capsules, of which one or two daily are a sufficient dose. No form of rheumatism seems to benefit so decidedly from turpentine internally as lumbago.

Kennel Lameness.—This form of rheumatism is sometimes called "chest founder" from the evident powerlessness affecting the forequarters. The seat of the disease is the muscles connecting the shoulders to the trunk, and those on the outside of the bladebone. It may affect only one shoulder, but usually both. It is made evident by the pain on pressure, the cry when moved, and the dislike or even inability to bear the weight of the body on the forelegs. The distinctive sore movement of the dog is very evident in going down a hill, and the animal refuses to jump from his bench or any other height, and to descend stairs. The treatment is similar to that suggested for lumbago. The external stimulant is to be applied to the muscles outside the bladebone, and to those of the breast connecting the fore limb to the trunk. Nitrate and carbonate of potass may be given, and, if necessary, an aperient. In all cases of rheumatism remove the cause; give warmth, dryness and comfort. When the joints of the limbs are affected, it is sometimes not easy to detect the exact part. Pain on pressure or movement is not always shown to a stranger; it is more readily evinced to the owner. Swelling is seldom noticeable, which fact, with the history of the case, is the best guide in distinguishing the signs of rheumatism from those of direct injury. Chronic rheumatism of a recurrent nature is most successfully treated by arsenic in combination with carbonate of potass. Preparations of iron seem to do positive harm. In bad cases of long standing the dog sometimes becomes doubled up and deformed. The forelegs, as the result of kennel lameness, become powerless, as do the hind ones from lumbago. Such cases are incurable.

Rheumatic Fever.—This most fatal malady is uncommon, and usually accompanied by acute disease of the heart. The dog refuses food, is moved with difficulty, and if forced seems stiff all over. Motion of any kind produces pain. The nose is dry, pulse rapid, and the heart's action sharp, weak, jerky, and intermittent. Prostration is great and rapidly increases. The dog mostly lies stretched out, and on his right side. As the disease proceeds breathing becomes labored, and as death approaches the pain ceases and the breath is drawn in with a marked effort and some gasping. The treatment should consist of stimulants and diuretics, with attention to every detail likely to promote the dog's comfort. Brandy and beef-tea may be given. The nitrate and carbonate of potass, advised for lumbago, is useful. Iodide of potassium in ten grain doses once or twice a day, till free action of the kidneys is induced, may be tried. I do not advise the use of warm baths. They afford no relief to pain which is not more than counterbalanced by the aggravation in trying to dry the dog afterward. Especially is this true of long-haired dogs. To roll them in blankets before the fire avoids the rubbing, but it is most debilitating, and should they escape from their coverings the resulting chill adds much to the danger. Dry hot flannel wraps I have no objection to, and they are most beneficial when there is some well-defined local pain. The administration of opium, digitalis, or aconite I entirely disapprove of in these cases.—*W. Hunting, F. R. C. V. S., in Land and Water.*

THE TROJAN STYLE.—The Troy (N. Y.) *Times*, July 2, gives the follow report of a performance whose perpetrators very properly deserve the attention of the local S. F. P. C. A.: "The American Gentlemen of Albany county opened to the public yesterday afternoon the new fox hunting grounds in West Troy. One hundred acres of woodland, hills and ravines have been fenced in and a kennel stands beneath the trees at one end of the inclosure. The eastern extremity of the tract of land is an unwooded hill, which commands an excellent view of Troy and vicinity. On this hill a platform has been erected, from which a brass band concert was given yesterday for an hour. At 4 o'clock several hundred men and six women had gathered to witness the hunt. A fox had been set free at noon and the dogs, some forty in number, were brought out. Some of the dogs were foxhounds, but a ratterrier and a Newfoundland had joined the pack. The word was given and the attendants 'let slip the dogs of war.' Here was sport fit for a Saratoga baron. A pen, with a fence nine feet high, forty terriers and a poor trembling fox. In spite of his four hours' start the fox wasn't given even 'a show for his money.' With one howl the pack shot down the ravine and shook the life out of reynard in less than two minutes. The spectators saw nothing but the cutting off of the tail and then the boys played ball with the carcass. It was rare sport. A fresh fox was then taken from the small box into which it had been squeezed and set free. The fox was a game one. It required a man with a shingle, spanking it from behind, to make it run. The unloosed hounds took up the trail, but before they sighted the fox one of the American Gentlemen had caught it in his arms. It was a pleasant diversion to see the fox run down by a man. No order was kept, and the spectators and the band had joined in the chase. In fact, that appeared to be all the fun that they got for their money. As the crowd left the grounds they assaulted the gatekeeper with such expressions as 'You got a live fox next time.' Quite an animated discussion arose as to whether the first fox was dead before the dogs started, and one man offered to bet ten shillings to one (and no takers) that it wasn't a fox, but a woodchuck. There were no horses in the chase. They were not needed: the fox could be caught on foot. Altogether it was a foxy show, and 'funny, very, very funny'—for the fox."

A STANDARD FOR CLUMBER SPANIELS.—*Editor Forest and Stream:* In your issue of June 25, in giving the new rules and regulations of the American Kennel Club, I see that you do not mention the names of a committee to decide the points of Clumber spaniels. How is this? Does it not seem very unjust that Clumbers should be neglected in this way? Nothing does more harm to a breed than neglect of this kind, and Clumbers are not a breed of dogs that should be neglected. They are decidedly the handsomest breed of spaniels, if not the handsomest breed of dogs bred for the sportsman; and those who have used them have found them most useful. They are, if properly trained—which is very easy to do—as good in water as on land, and they are also wonderfully sagacious.—A LOVER OF CLUMBERS. [If our correspondent will read the third paragraph from the bottom of the list he will find that the Clumber is provided for under the head of "Other Spaniels."]

A QUEER DOG.—Somerset, Pa., June 30.—*Editor Forest and Stream:* There is in this town a boy named Rollas Fleck, who owns a dog—a female dog—the like of which I presume has never been seen before. This little bitch is a mongrel in pedigree, a grayish, almost like an opossum in color, with long woolly looking hair; in age about two years. She will have puppies in July. Nothing wonderful in all this, certainly; but she was born without forelegs—no trace or sign of forelegs. She is quite savage if you attempt to touch her. Walks? Of course she does, but on her hindfeet, very much in the manner of a kangaroo. Can jump a considerable distance; goes up or down stairs apparently as easily as any other dog. On the whole she seems to enjoy life as much as any other dog. I had not heard anything of this until recently, when my brother mentioned it to me. Will the pups be like the dam? I shall wait and see.—AMATEUR.

MR. R. T. VANDEVORT, of Pittsburgh, Pa., will start for Southern California in a few weeks with his pointer Don and a brace of bitches. Mr. Vandevort will undoubtedly receive a cordial greeting from the sportsmen of the Golden State, who will gladly welcome so valuable an acquisition to their ranks.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
6. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Lady Stewart. By John H. Naylor, Chicago, Ill., for black, white and tan foxhound bitch puppy, by imported Stormer out of Topsy.

Daisy Belle. By C. A. Parker, Worcester, Mass., for orange and white pointer bitch, whelped May 26, 1885 (Robin Adair—Lady Belle).

Don Quixote. By F. W. White, Worcester, Mass., for black and white pointer dog, whelped May 26, 1885 (Robin Adair—Lady Belle).

Fritz. By Wm. H. Smith, Stafford Springs, Conn., for liver and white cocker spaniel dog, whelped March 23, 1885, by Plover (Baron—Haida) out of Gracie (Snip—Zuletta).

BRED.

☞ *See instructions at head of this column.*

Darkie—Obo II. P. Cullen's cocker spaniel bitch Darkie (A.K.R. 250) to J. P. Willey's champion Obo II. (A.K.R. 432), June 26.

Belle—King Bow. Augustus Korner's (Detroit, Mich.) pointer bitch Belle (A.K.R. 161) to champion King Bow (A.K.R. 83).

Devonshire Fan—King Bow. E. S. Shultz's (Attica, Mo.) pointer bitch Devonshire Fan (Sensation—Devonshire Lass) to champion King Bow (A.K.R. 83).

Zell—Turk. T. F. Morris's (New York) Gordon setter bitch Zell to H. Clay Glover's champion Turk, June 7.

Jet—Obo II. W. P. Balce's cocker spaniel bitch Jet to J. P. Willey's champian Obo II. (A.K.R. 432), June 4.

Black Gem—Obo II. G. Haseltine's cocker spaniel bitch Black Gem (Obo—Chloe) to J. P. Willey's champion Obo II. (A.K.R. 432), June 20.

Jule—Donald II. Geo. Piercey's (Jersey City, N. J.) pointer bitch Jule (A.K.R. 1012) to Clifton Kennels' Donald II. (Donald—Devonshire Lass), June 23.

Gayley—Donald II. H. C. Miller's (Hudson, N. Y.) pointer bitch Gayley (A.K.R. 1440) to Clifton Kennels' Donald II. (Donald—Devonshire Lass), July 2.

Bow Queen—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Bow Queen (A.K.R. 558) to their champion King Bow (A.K.R. 83).

Judy—King Bow. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Judy to their champion King Bow (A.K.R. 83).

WHELPS.

☞ *See instructions at head of this column.*

Shelloch. Geo. Shepard Page's (New York) imported deerhound bitch Shelloch (A.K.R. 2214), May 7, eight (four dogs), by his imported Dunrobin (A.K.R. 1236).

Nellie. Jas. O. Jones's (New Haven, Conn.) red Irish setter bitch Nellie (Dash—Flirt), June 20, ten (five dogs), by J. J. Phelps's Rococo (A.K.R. 2182).

Romaine. G. T. Wells's (Franklin, Mass.) red Irish setter bitch Romaine (A.K.R. 633), June 27, seven (one dog), by champion Glencho.

Lady Bird. Riverside Cocker Spaniel Kennels' (Claremont, N. H.) imported cocker spaniel bitch Lady Bird (Zulu—Lass o' Devon), June 21, six (three dogs), by champion Obo II. (A.K.R. 432); all black.

Snow. G. N. Leavens's (Belleville, Ont.) cocker spaniel bitch Snow (Bramble—Nell), July 1, six (one dog), by J. F. Farrow's champion Obo (E.K.C.S.B. 10, 451); all black.

Jolly Nell. Andrew J. Calahan's (New Haven, Conn.) English setter bitch Jolly Nell (Goodsell's Prince—Jolly May), eleven, by Blackstone Kennels' Foreman; all white, with evenly marked black and tan on head.

Dahlia. Kilmarnock Collie Kennels' (Dorchester, Mass.) collie bitch Dahlia (Rutland—Buttercup), June 24, twelve (nine dogs), by G. R. Krehl's (London, Eng.) champion Eclipse (E.K.C.S.B. 12,949).

Lady Bang. Clifton Kennels' (Jersey City, N. J.) pointer bitch Lady Bang (A.K.R. 698), June 29, ten (seven dogs), by their Donald II. (Donald—Devonshire Lass); all liver and white.

Frost. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Frost (Leicester—Victress), four (two dogs), by Dashing Rover (Count Wind'em—Norna).

Leah. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Leah (Gladstone—Frost), seven (four dogs), by Dashing Rover (Count Wind'em—Norna).

Lass. B. F. Seitner's (Dayton, O.) pointer bitch Lass (A.K.R. 1353) June 3, eight (four dogs), by Dandy Bang (Bang Bang—Josie).

Lady Croxteth. B. F. Seitner's (Dayton, O.) pointer bitch Lady Croxteth (A.K.R. 1352), June 27, six (three dogs), by Westminster Kennel Club's Bang Bang (A.K.R. 394).

Wallexie. B. F. Seitner's (Dayton, O.) dachshund bitch Wallexie (Waldmann K.—Fraulein Waldeck), June 28, six (four dogs), by his Prince.

SALES.

Wayne. English setter dog (A.K.R. 1620), owned by Dr. J. R. Housel, Watsontown, Pa., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

CONSTANT READER, Pittsfield, Mass.—A setter pup, nine months old and very thin, with rough coat, no appetite to speak of, and but little energy. Her eyes look all right and her bowels are in good condition, and she passes no worms that I can see. Ans. The trouble with the bitch may depend upon her genital system, which is just commencing to take on functional activity. She needs stimulation and stimulating diet. You had better give her a little raw minced meat in her food each day, and let the food consist of beef soups and broths mixed with potatoes, bread and milk, and so on. Have some small pills made, each to contain one grain of reduced iron, and give one pill in a bit of meat twice daily. Keep her bowels easy, give her regular exercise, and report to us in two weeks.

C. A. H., Jersey City, N. J.—My beagle hound, 9 months old, is troubled with a rash or mange of some kind. His throat and breast are red and pimply, and around his right side the pimples are in groups the size of a dime: general health is good; his kennel companion shows no signs of it. Ans. Sponge the parts carefully daily with warm water and castile soap; dry, and apply either the common blue ointment or else oxide of zinc ointment, by rubbing gently in with the fingers. Give at the same time three drops of Fowler's solution of arsenic in the food night and morning, and increase daily by one drop up to eight drops, then decrease one drop daily to three drops and keep it up for three weeks. The other dog is likely to become affected.

R. M. B., Mayville, Ky.—A very valuable pointer dog, three years old, I fear has canker of the ear; is continually shaking his head and scratching it with his paw, holds his head sideways as if in pain, loss of appetite to some extent. At times he seems to be better, and for several days seems well. Ans. Your dog has canker. Wash the ears carefully with warm water and castile soap, and after drying drop the following into the ears once or twice daily, three or four drops at a time: Of bromo-chloral and of laudanum one drachm each, of water six ounces. Mix and apply as above.

Almost a Fatal Mistake.—In an Arkansaw town several nights ago, a mob led by a desperate man marched to the jail, dragged a murderer from a cell, and hurried with him to the outskirts of the town. Each man wore an expression of determination—features hardened by awful resolve. The prisoner attempted to speak, to beg for his life, but burly hands closed around his throat and the prayer he would have uttered went out in an inarticulate gurgle. When the infuriated men reached a large oak they halted. One of them threw a rope over a limb. "Gentlemen," said the prisoner, "please give me a chance to say a word." "Be quick about it," some one shouted. "Gentlemen, I admit that the evidence is against me, but as truly as we stand here I killed that man in self-defense." "Killed what man?" was asked. "Bill Bottleford." "Say, you ain't the man that killed Bottleford, are you?" "Yes, unfortunately, I am the man." "Men," shouted the leader, "we have come withiu one of making a terrible mistake." Then turning to the prisoner added: "We thought, sir, that you were the man that stole Nat Boyd's fish trap. Hop down offen the box. You are free."—*Arkansaw Traveller.*

TELESCOPIC RIFLE SIGHTS.

Editor Forest and Stream:

I have frequently thought that if all the matter published in your paper relative to rifles, projectiles, sights, rifle shooting, ammunition, etc., were compiled and published in book form, it would be the most interesting volume possible, especially for young riflemen. There can be nothing more interesting, economical, respectable or useful in the way of recreation for a young man than rifle practice, and rifles can now be had at prices which enable most young men to be the owner of one if they choose.

From a boy well down in my 'teens I have been an inveterate rifle shooter. As soon as old enough, I learned to do intricate work upon them, and for some years I did most of the gun repairing for miles around the region where I lived, indeed I built a few guns throughout with satisfactory results. My experiments with rifle sights have embraced nearly every form that I have heard of, from a common notch and pin to the finest telescopic sights. All those who have had ample experience with the latter form of sight will certainly agree that for general efficiency no other form of sight can for one moment compare with it. The only drawback is its cost. During the war I often saw rifles mounted with telescopic sights which must have cost more than the rifles upon which they were mounted, and I do not to-day know where reliable telescopic sights can be had at a cost less than that of a good rifle. Soon after the war I made numerous efforts to bring out a reliable and at the same time cheap telescopic sight, but was compelled to abandon my efforts because of the difficulty and consequent cost of manufacturing reliable, light steel tubes suitable for the purpose. Recent developments in the working of steel render it possible, in my opinion, to get up reliable telescopic rifle sights at about one-half the price which has been charged for them during the past twenty years. I would like to know whether there is as much demand for them as formerly, and will be glad to receive correspondence upon the subject.

MILTON P. PEIRCE.

PHILADELPHIA, Pa.

[There is little or no demand for telescopic rifles of the ordinary type at present. During the rebellion a number were made and distributed at various points in the hands of sharp-shooters, who used them for picking off gunners and mounted officers. Such weapons are now prohibited on all the ranges given up to modern rifle practice, nor have they any value as hunting weapons.]

THE BULLARD TRAJECTORY.

Editor Forest and Stream:

I have been much interested in the recent statements of riflemen in regard to the height of the Bullard trajectory, as I received probably the first rifle of that make that came into this part of the country, a .40-caliber, which I have been using nearly every week since at our club range. I have made experiments with many charges of powder and bullets of various weights in order to determine the best combination for target practice and the general availability of the gun for sporting purposes. I have fired about 200 rounds of the 75-230 cartridge recommended by the Bullard Company, and think I know something about them. Last week I determined to experiment upon the Bullard trajectory with the 75-230 cartridges. I adjusted the sights carefully to 200yds., by rest shooting, and, with my son Herbert, a prospective engineer of some experience, sought a green valley near the club house and measured off the range. I found a good rest for the middle of the rifle upon some timbers of a demolished bridge, which I covered with cloth. A decimal target was placed at 200yds. distance and several shots were fired to learn the ground. There was only a breath of air from 12 o'clock, the sun was shining, and the day was decidedly warm.

Two poles were erected at 50yds. so that the target could be seen between them, and a sheet of white paper was tacked to them at such a height that its lower edge corresponded with the horizontal diameter of the bullseye at 200yds. By this arrangement we avoided the necessity of computations for the irregular surface of the field. Five shots were fired at the bullseye, and the bullets rising, of course, passed through the paper. The paper screen was then moved to 100yds. distance, fixed in the same position, and five more shots were fired at the bullseye, and the bullets went through the screen. The screen was then placed at 150yds. from the firing point, five more shots were fired, and the paper was perforated as before.

The distance from the bottom of the paper screeen to the center of each bullet hole was measured, and the following table of height was made from the measurement:

Round fired at 50yds., heights: 5in., 9½, 11¾, 10¾, 11, total 48. Average rise of trajectory at 50yds., 9 3-5in.

Round fired at 100yds., heights: 14in., 17, 19⅝, 14½, 15½; total, 80½. Average rise of trajectory at 100yds., 16 1-20in.

Round fired at 150yds., heights: 15¾in., 17⅜, 19¾, 17½, 14¾; total, 84¾. Average rise of trajectory at 150yds., 16 19-20in.

The highest point of the trajectory should be, according to these figures, at or just beyond 150yds., and it is not far from seventeen inches from the base line. The rise from 50 to 150yds shows the great initial velocity of the bullet, and I think nothing could illustrate its erratic course (presuming that I held well) better than the startling differences of elevation at the several distances. I present these as preliminary observations, and do not claim perfection in the method or work. At some future time I may improve both. I hope it will be more thoroughly tested by more skillful marksmen than myself, so that we may know the best ammunition to use to develop the full power of the arm. So far in my experience I am inclined to believe the claims in regard to the height of the trajectory extravagant.

W. H. WINSLOW.

PITTSBURGH, Pa.

RANGE AND GALLERY.

ST. LOUIS, June 27.—The Southern rifle team shot their fourth score to-day at 50yds., ½in. bullseye, Stevens rifle, off-hand. The team is getting ready to use the long-range rifle grounds in East St. Louis, and would like to meet any team in a friendly contest. To-day's score was as follows:

Gus Ries	12 12 12 12 12 11 12 12 11 12—118
J F Stone	12 11 12 12 12 12 12 12 12 12—119
Capt Roberts	11 11 12 12 12 12 12 12 11 12—117
F O Lange	12 11 12 12 12 12 11 11 11 11—115
C F Davenport	11 11 12 12 12 11 11 12 11 11—114
R Buckanon	12 12 12 12 12 12 12 12 11 12—119
John Littey	11 12 11 12 12 12 12 12 11 11—116—818

MINNEAPOLIS, Minn.—The Minneapolis companies have commenced target practice preparatory to the competitive shooting at the camp. The shoots are held weekly at the range on the East Side. Company B has selected Monday as its regular day. I shoots on Tuesday and A on Thursday. Company B recently did some good work, and I at its shoot had a large attendance, with some good results. Specimens of the badges to be contested for at the target matches during the encampment have been received by the Adjutant-General. The marksman's badge, for a score of 25 out of a possible 50, at 100, 200, 300 and 500 yards respectively, is of silver. The pendant is round, and upon it is the great seal of the State and the words, "Minnesota National Guard." The word "Marksman" is upon the crossbar. The sharpshooters' badge is gold. The pendant is in the form of a Maltese crose. The badge is for a score of 42 out of a possible 50, at the same distances as are given in the other case. The seal of the State is in the center of the pendant, and upon the arms of the cross are the initials "M. S. N. G." The crossbar bears the word "Sharpshooter."

THE MAYNARD RIFLE CLUB at Chicopee Falls has had an interesting history that a member tells who has belonged to it from the first. It is the oldest rifle club in this section, and was organized at the close of the war, June, 1865, with 20 members, the full number allowed then. John Wells was the first president, holding office till July, 1869, and his successors have been: Judge E. O. Carter, 1869-72; O. S. Goodell, 1872-78; J. C. Gassner, 1878-79; E. O. Carter, (second term), 1879-81; Judge L. E. Hitchcock, 1881-85, and William T. McFarland now in office. The last has been a member since its organization and has been its scorer for many years. It has numbered 120 men on its roll. During the 2 years of its existence the manner of rifle shooting has changed entirely; at first it was always from a rest at 10 to 40 rods distance, each marksman using his own target. Now all shooting is off hand at 200yds., and there are new styles of counting on the targets. The club was the first to use breechloaders for target shooting, and with them the Maynard has been the favorite, although the Stevens is now used to some extent; one good marksman makes fine strings with a sporting rifle. The club is now in a flourishing condition, having 30 or more members, and has a very good 200-yd. range, known as the Riverside, on the north side of the Chicopee River below the bridge. Practice shoots are held each Saturday and steady improvement is shown. Last Saturday's scores were: Gardien 105, Gassner 103, Engles 101, Flint 99, Horr 98, Clark 91, Ellsworth 84.—*Springfield Republican Correspondence.*

BOSTON, July 4.—Members of the Massachusetts Rifle Association held a jolly meet at Walnut Hill to-day, burning powder and pounding the targets from early morn until sunset. The attendance was unusually large for a holiday, the perfect weather conditions, no doubt, contributing toward getting the riflemen to the range. Besides the regular matches, a team match between members of the club was shot, in which some fine records were made. Mr. F. W. Perkins, a member of the State militia, made the fine score of 47 out of 50 points with his Springfield military rifle. Corp. J. F. Parker, Company L, 6th infantry, Malden Rifles, scored two 21's, thus completing his scores for the silver badge. The scores, all at 200yds., stood:

Practice Match A.		Creedmoor Match B.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

SAN FRANCISCO, June 14.—The California Rifle Association's first meeting of the year was held at the Shell Mound range to-day, and was largely attended. The weather was fair and the shooting ditto, the honors and prizes being very evenly divided. The match for the General W. H. Dimond trophy, to become the property of the team winning it three times, was first shot, and resulted in a victory for Company C, First Infantry, with a score of 360, which is five less than the score of the police team, which won it at the November meeting. The terms were strings of seven at the 200 and 500yd. ranges. Company C.'s score was as follows:

	200yds.	500yds.
A Johnson	4455444—30	5545545—33—63
T E Carson	4545545—31	4444555—31—62
J E Klein	5155445—32	4444465—30—62
F Cummings	4445454—30	5545553—30—60
L C Perkins	2443445—29	2554454—29—58
S J Pembroke	3444444 —27	5443453—28—55—360

The competing teams were from the Police Department, and their scores were: Police Team No. 1, 343; Police Team No. 2, 343

The Siebe trophy, for the 70 per cent. class, seven rounds, at 200yds., was shot for by a police team and a team from Company A, Fifth Battalion, and was won by the former with a score of 164. The team from Company A scored 140.

The carbine team trophy, 7 rounds, at 200yds., with Springfield carbines, to be won three times, was shot for by teams from Battery A, Second Artillery, and the San Francisco Hussars, the former winning with 160. The Hussars team scored an aggregate of 145.

The shoot for the Dunphy trophy, 7 rounds per man, at 200 and 500yds., to be won three times, was the best contested match of the day, and the trophy was awarded to the police team for the second time. The rifle club team held the call by nearly a dozen points on leaving the 200-yard range, but the policemen won by two points with a score of 372; Rifle Club, 370; Company C, 361; Police No. 2, 357.

The fifth match was the Hammond Consolation Stake, 5 shots, at 200yds., open to all without a record better than 70 per cent., 60 per cent. of the net receipts to be divided into second, third and fourth prizes, at the rate of 25, 15 and 10 per cent. respectively. The result was as follows: C. M. Wallam 32, A. Johnson 22, L. Radovich 21, G. Wittman 21.

The Rifle Association medal called a large field to the butts, but did not evoke the string of bullseyes that was expected to be requisite to win it. The terms were 10 shots at 200yds., with any military rifle, with cash prizes of $10, $8, $6, $4 and $2. The medal is to be won three times, and Linville cut a notch on his rifle for it, after shooting very indifferently in the team competitions. The scores of those taking prizes were: P. D. Linville 48, F. Kuhnle 47, J. A. Macdonald 47, F. Kuhls 47, A. T. Fields 46, S. I. Kellogg 46.

The Directors' medal, 7 shots, at 200yds., was won by Lieutenant Fred Kuhnle, with a score of 31, and the California Powder Works medal winners list had the name of Lieutenant Kellogg added to it, after a hot and very close contest. George C. Thaxter won it in 1883, with a score of 64. Linville won it in 1884 with 65, and Nash took it at the fall meeting with 68. The lowest of the three winning scores only was equaled, as follows:

	200yds.	500yds.
S I Kellogg	4445445—30	5455555—34—64
J E Klein	4454445—30	5554554—34—64
A Johnson	5445544—31	4555455—33—64
C Nash	4554354—30	5455455—33—63

CREEDMOOR, July 1.—Creedmoor range was alive with excitement to-day, and was thronged with visitors from New Haven and New York city, and Irish and American flags floated from every tent and flagpole. The occasion was the contest for the Coogan trophy, the opposing rifle teams being from the Sixty-ninth Regiment, N. G. S. N. Y., and the New Haven Rifle Club team of New Haven, Conn. The trophy has been won twice previously by the Sixty-ninth team, but on the third contest the New Haven boys carried it off. It must be won three times consecutively before becoming the absolute property of any rifle club, and clubs from any part of the United States are entitled to compete for it.

The Sixty-ninth team was made up of Major Duffy, Captains John Kerr, M. Brennan, James G. Cunningham, D. C. McCarthy, Adjutant James Moran, Lieutenants McMorrow, Farrelly, Sergeants Carroll and Stewart, and Privates Finnegan and O'Donovan. The were in fine practice and made excellent scores, defeating the New Haven team by 70 points. They will, however, have to win the trophy twice more before it becomes their property. The shooting was at two ranges—200 and 500yds.—10 shots at each range. After the match the victors entertained the visitors at a banquet at the Creedmoor Hotel, Judge O'Brien presiding.

July 4.—The Fourth of July matches of the National Rifle Association at Creedmoor were well attended, and the weather was favorable for good scores. The greatest interest centered in the off-hand match at 200yds., when some of the best small-bore riflemen of New York and Brooklyn competed against a number of crack military shots. The military rifles received one point allowance in seven shots. The winners were C. E. Tayntor 34, C. J. Fales 34, J. S. Shepherd 33, James Dean 33, and T. J. Dolan 33.

In the Mid-Range Match at 500 and 600yds., 7 shots each, for Remington 50-cal. State model, the winners were J. F. Klein 64, J. S. Shepherd 59, G. S. Sherman 58, F. Stuart 57, and J. McNiven 54.

The Leech Cup Match of the Amateur Rifle Club was shot and won by Capt. H. W. De Forest. His score was as follows: 800yds., 65; 900yds., 70; 1,000yds., 76. Total, 208.

HAVERHILL, MASS., RIFLE CLUB.—Riverside, July 4, Creedmoor target, off-hand.

Clarence Brown	5434540544—45	Ed Bray	4444444444—40
J Busfield	4444455455—44	W Worthen	4344455344—40
J F Brown	4554454444—43	L W Jackson	4544454443—40
H Hoor	4545454444—42		G.

THOMASTON, Conn., July 4.—In the first part of the match there was a very bright light with a tricky wind, veering from 8 to 12 o'clock. The latter part was shot during a thunder shower, with a strong wind blowing from the 8 and 9 o'clock quarters: G. C. Canfield 99, C. L. Alling 97, Fred A. Perkins 92, A. S. Hubbard 91, G. P. North 90, E. W. Bennett 86, C. F. Williams 84, E. Thomas 80. Thomas's third shot was a miss, which was due to his neglecting to place a bullet in his rifle.

PISTOL RECOIL ATTACHMENT.—A patent has been granted to Dr. Henry G. Piffard, of this city, for an attachment to pistols. It is well known that pistols used with heavy charges throw up at the muzzle so as to cause the missile to strike higher than the point at which the weapon is directed, this action being due to the fact that the line of recoil is higher than the point of resistance, as represented by the point at which the stock is grasped in the hand. Dr. Piffard's invention consists in providing the pistol with an elastic spur of any suitable kind or construction, applied to the frame or stock of the weapon between the barrel and the grip, and near the latter, so as to be in contact with the hand when the pistol is fired.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NATIONAL GUN ASSOCIATION.

ON June 30, 8:30 P. M., the meeting of the members was called to order at the Girard House, Philadelphia, with Fred Tomkins, of Stony Point, N. Y., second vice-president for New York, in the chair, and T. P. Greger, of Philadelphia, acting secretary. Mr. J. E. Bloom announced his resignation as General Manager, etc., and requested the meeting to recommend his successor. Upon motion of J. Von Lengerke of New York city, seconded by T. P. Greger, it was resolved, "That the members present recommend A. W. Du Bray, of Newport, Ky., to the Board of Directors as General Manager, vice J. E. Bloom resigned." Mr. Bloom announced that the Board of Directors would at once elect Mr. Du Bray.

Upon motion of J. E. Bloom, seconded by T. P. Greger, it was resolved that all manufacturers of flying targets be accorded the privilege of having their targets used at the Association tournaments, provided they subscribe $100 toward the Association.

Upon motion of Mr. Bloom, seconded by Mr. Rust, it was resolved that the Executive Committee be instructed to prepare a programme for this week, using such targets whose manufacturers subscribe to-night to $100 of stock of the Association.

Messrs. Belcher and Davis presented a written communication from Mr. Bragg, manager of the Globe Flights, accepting the above offer. There were present at the meeting Mr. F. Kimble, representing the Peoria Target Co., Mr. Miller, representing the American Clay Bird Co., Mr. Hubbard, representing the National Flying Target Co. They were called upon for an expression of their views. Mr. Miller said his Board of Directors were opposed, that he was not prepared to accept, that they ought to have more time to consider, but that he would do what all the other manufacturers did. Mr. Hubbard expressed himself to the same effect. Mr. Kimble declined. It was the general opinion that the latter influenced the two former, who finally joined the latter in declining the offer. Messrs. Von Lengerke, Tomkins, Greger, Gammons *et al* endeavored to represent to these gentlemen that they ought to accept the offer of the Association, but without avail.

Shortly before adjournment about 11:30 P. M., Messrs. Miller and Kimble proposed that if the Ligowsky Company would keep its stock or sell it to whomsoever they could, they would agree to donate each $100 to the Association, provided the Ligowsky Company would donate $100. Mr. Tomkins, Chairman, said the Association did not want any donation, but wanted them and all other manufacturers in the future to take stock. Mr. Bloom stated he thought this was a subterfuge; that the gentlemen had over four weeks previous to this meeting in which to make a proposition through the press or otherwise; that they had not done so; that they understood for four weeks previous the proposition which would be brought before the meeting relating to themselves to-night; that even to-night they had waited until 11:30, and that it was his opinion they were not sincere, etc., the above manufacturers having declined the proposition of the meeting, of which proposition they had been duly apprised several weeks previous.

The Executive Committee, Messrs. Von Lengerke, Rust and Greger, were then instructed to proceed with the programme for this week's shoot, using live pigeons, Ligowsky clay-pigeons and globe flights. The meeting adjourned at 11:45 P. M., to meet again at Macon, Ga., Aug. 9, at 8 P. M.

Signed, T. P. GREGER, Act. Sec.
FRED. TOMKINS, Chairman.
J. E. BLOOM, late Gen. Man.

At a special meeting of the Board of Directors, held this 4th day of July, the resignation of J. E. Bloom as General Manager was duly accepted, and A. W. Du Bray, of Newport, Ky., was duly elected General Manager.

F. C. BISHOP, Sec.

AUGUSTA TOURNAMENT.

A TOURNAMENT of the N. G. A. will be held at Augusta, Ga., Aug. 10-12, under charge of the Ocmulgee Division. A very good programme has been prepared and the meeting should be well attended. The several committees in charge embrace many of the prominent citizens of Augusta. Special railroad rates have been secured, and everything is being done to contribute to the convenience and pleasure of the visiting sportsmen. Judge M. R. Freeman, the chairman of the executive committee, has issued the following letter:

Gentlemen: We desire hereby to invite your attention to our third interstate tournament, to be held at Macon, Ga., Aug. 10, 11 and 12, 1885, under the auspices of the "Ocmulgee" division of the National Gun Association. All Southern men joining the Association will be assigned to this division, named after the river upon which the beautiful city of Macon is situated. With the view of promoting the objects, and of centralizing the friendly rivalry between the most distant members of the Association, it is proposed, in the course of time, to divide the latter geographically into a number of divisions or sections, with the principal cities as the centers, where the principal offices of the gun clubs shall be established, and to at least one of which each member of the Association may be assigned, that is, with which he shall be entitled to shoot and to assist generally in carrying out the main objects of the Association. It is expected that by this means, the day is not far distant, when a representative team from the South will be pitted against one from East, North and West, under the friendly banner of the Association. Our organization, as you are doubtless aware, dates its birth from the city of New Orleans, Feb. 10, 1885. We realize we are but an infant, and need the fostering care of all true sportsmen who are desirous of seeing their sport elevated to the standard it so richly deserves. Hence, we ask your earnest consideration of our constitution, with the assurance that you will join our ranks, if you will but do so. Rome was not built in a day; neither can we hope to bring our body to perfection for a long time to come; but such as we have we invite you to partake thereof. We therefore send you hearty greeting, and trust you will join us at Macon, whose citizens promise you a welcome on your coming, a gala time while you remain, and a "God speed" upon your going. Respectfully, the NATIONAL GUN ASSOCIATION, per M. R. Freeman, 2d Vice President for Georgia.

THE TEXAS STATE SHOOT.

Editor Forest and Stream:

The eighth annual tournament of the Texas State Sportsmen's Association commenced at Denison June 23, lasting five days. The grounds selected for the tournament were admirably adapted for the purpose of the shoot. They are within the city limits and only ten minutes' drive from the business portion of the city. The scores ran:

June 23.—Shoot No. 1.—(Class Shooting)—10 clay birds: G. Hanna 7, W. Garland 8, A. Erickson 8, J. Warren 8, W. W. Holland 7, W. A. Ryan 7, W. P. Poland 5, L. L. Maughs 8, J. W. Barbour 10, Dr. Nagle 4, H. A. Penrose 10, B. B. Brown 8, J. Weiss 8, W. B. Munson 8, M. Miller 9, J. T. Munson 9, T. W. Dollarhide 6, A. H. Wait 6, W. T. Scott 6, H. P. Purnell 5, C. A. Gardner 8, S. J. Sackett 5, J. G. West 9, J. D. Yocom 7, W. W. Lampkin 4, J. L. White 4. First money, Barbour and Penrose; second, Maughs, Miller and West; third, John Warren, Brown and J. T. Munson; fourth, Dollarhide and Yocom.

Shoot No. 2.—(Class Shooting)—5 single birds, 3 birds at 21yds. and 3 at 26yds. rise, use of one barrel, ties, 3 birds at 31yds. miss and out: H. R. Pernell 6, J. B. Spraggins 5, A. H. Waite 2, R. M. Gage 5, J. W. Barbour 3, A. Erichson 6, Ben Brown 4, J. J. Weiss 6, H. A. Penrose 6, C. A. Gardner 3, W. P. Poland 4, M. Miller 2, L. L. Maughs 5, J. Warren 2, T. Dollarhide 5, Dr. Mills 4, S. P. Parkinson 5, C. Chambers 6, J. G. West 4, W. A. Ryan 6, J. D. Yocom 5, W. Garland 4, W. W. Holland 6, J. T. Munson 5, J. Cotreaux 4, W. B. Munson 4, W. T. Scott 2, J. L. White 6, A. Stude 6, S. J. Sackett. First tie; Per-

nell 6, Weiss 2, Chambers 3, Holland 6, Stude 6, Erichson 6, Penrose 3, Ryan 6, White 5. Pernell, Erichson, Ryan, Holland and Stude divided first. Second tie: Spraggins 0, Gage 0, Maughs 3, Dollarhide 0, Parkinson 3, Yocom 3, J. T. Munson 3, Ben Brown 2, Polland 3, Mills 0, West 3, Garland 0, Cortreaux 0, W. B. Munsor 3. Maughs, Parkinson, Yocom and Munson divided second, Poland, West and Munson divided third, Barbour and Gardner divide fourth.

Shoot No. 3.—(Class Shooting)—10 glass balls; entrance, $5; 40, 30, 20 and 10 per cent.: Waite 8, Erichson 10, Thile 9, Johnson 8, Maughs 8, Gage 10, Brown 10, Parkinson 6, Hanna 3, Weiss 8. Purnell 10, Penrose 9, Sackett 7, Miller 3, White 9, Ryan 8. Holland 5, Warren 9, Dollarhide 7, Gardner 7, Flood 8, Poland 8, Cotreaux 8, Chambers 8, Spraggins 7, Nelms 8, Lister 10, Stude 9, Garland 8. Barbour 8, W. B. Munson 6. First tie: Erichson 10, Gage 8, Brown 2, Purnell 10, Lister 6. Second divided between Penrose, White, Warren and Stude. Waite, Johnson, Maughs, Weiss, Garland and Cotreaux divide third. Dollarhide won fourth.

SECOND DAY'S SHOOT.

The attendance at the second day's tournament was fully as large as the first. In the forenoon the sky was overcast with ominous looking clouds, and it rained at intervals. Plunge traps were used, which were an improvement over the ground traps, which made the first day's shooting a farce. The plunge traps hurled the birds into the air, and in almost every instance they took wing for flight, and but few escaped the deadly aim of the shooters. The shooting at live birds was excellent

Penrose, of the San Antonio Club, is the central figure of the tournament. When he goes to the score all eyes are directed toward him. He is a young man of ordinary appearance, brimful of good humor, and has made himself very popular with his fellow sportsmen. There is nothing of the braggadocio about him, although he has won laurels enough to make any man conceited. He is quick, active, with a nerve that never fails him. When he faces the traps he commands a certain attention which no other man does. He is a professional shot, and his victory over Dr. Carver brought him sudden notoriety.

Shoot No. 4.—7 single birds, 30yds. rise, use both barrels: Warren 7, Gage 7, Hoffman 6, Chambers 7, W. B. Munson 4, Gardner 7, Stude 6, Johnson 6, Cotreaux 7, Holland 7, Wait 4, J. T. Munson 7, Yocom 7, Penrose 5, Walters 7. West 5, H. M. Miller 6, Ben Brown 7, Carter 5, Purnell 7, Dollarhide 6, Thile 7, Lister 6, White 6, Maughs 6, Barbour 4, Erichson 6, Parkinson 6, Sackett 5. Poland 6, Weiss 6, Ryan 6, Spraggins 3, Garland 6. Chambers, Gardner, Cotreaux, Holland, Yocom, Walters, Brown, Purnell and Thile divide first. Dollarhide, Erichson, Parkinson, Weiss and Ryan divide second, Penrose, West, Carter and Sackett divide third money. W. B. Munson, Waite and Barbour divide fourth.

Shoot No. 5.—10 Peoria blackbirds: Poland 4, Ben Brown 8, Flood 7, Penrose 8, Howell 5, Thile 9, Folsom 6, Parkinson 8, Cotreaux 8, Purnell 4, Ryan 10, M. Miller 7, Harrison 6, Maughs 9, Johnson 6, Gage 6, Barbour 6, Weiss 8, Warren 5. Carter 3, Sackett 6, Spraggins 8, Scott 8, Ramsey 4, Holland 8, Garland 7, Lister 7, Stude 8. Erichson 7, Yocom 9, Dollarhide 7, W. B. Munson 5. Ryan won first; second divided between Thile, Yocum and Maughs; Browa and Holland divide third; Miller and Dollarhide fourth.

Shoot No. 6.—10 clay pigeons, 18yds. rise: Waite 5, Dye 6, Sackett 5, Thile 9, Penrose 10, M. Miller 3, Holland 7, Ryan 8, Purnell 5, Gardner 4, Parkinson 7, Chambers 5, Spraggins 7, Poland 7, Flood 6, Brown 8, Maughs 6, Warren 9. Weiss 6. Lister 8, Stude 5. Scott 6, Cotreaux 6, Howells 6, Folsom 6, Hanna 3, Ramsey 5. Barbour 7, W. Nelms 5, Garland 5, Erichson 9, Johnson 6, Hill 4, W. White 2, Gordon 8 Sherwood 7, J. T. Munson 5. West 5, Dollarhide 6, Yocom 8, Leaverton 7. Penrose won first. Thile, Warren, Cotreaux and Erichson divided second. Yocom won third. Sherwood won fourth.

The third day was the most discouraging day of the tournament. It commenced raining early in the morning and continued at intervals until about 3 o'clock P. M., when it cleared. The morning attendance was small, and the gun club men had the ground almost to themselves. The shoot for the diamond State medal commenced at 5:30 P. M. The excitement was at fever heat. Blue glass balls were used and easily broken. The Denison team, composed of Messrs. Yocom, Dollarhide, Leister and Ben Brown. The first team that came to the score was the Denison team, and each man broke his five glass balls straight. The spectators arose to their feet and gave the boys an ovation. San Antonio, Houston, Gainesville, Austin and the McKinney teams followed, all failing to make a clean score.

June 25.—Shoot No. 7—5 birds, 30yds. rise: West 3, Walters 2, Weiss 4, Barbour 5, Dollarhide 3, Cottreaux 5, Poland 4, Purnell 4, Hill 3. Holland 5, Folsom 4, J. T. Munson 4. Erichson 5, Ryan 4, Stude 3, Penrose 3, Brown 4, Warren 2, J. L. White 2, Johnson 3, Sherwood 2, Gordon 4, Chambers 4, Garland 2, Parkinson 4, Thile 2, Yocom 4, Sackett 3, Gardner 4, Wm. Nelms 3, Waite 4, Leaverton 5. Maughs 5. First divided between Barbour, Cottreaux, Holland, Erichson, Leaverton and Maughs. Second money divided. Top West won third. Fourth money divided.

Shoot No. 8.—State Diamond Medal.—10 glass balls and ten clay-pigeons. Teams of 4 from each club belonging to the Association.

Gardner	0110110110—6	0001100001—3—42

When the result was declared, the State diamond medal was displayed for the first time. It is a beautiful and elaborate piece of workmanship, was made to order in Houston and cost $150.

The shoot for the individual State medal was the next feature of the tournament. The medal was a much coveted prize, and the number of contestants embraced nearly all the members of the clubs present. A greater portion of the day was consumed in shooting for the medal. Yocom was the only one who made a straight score of fourteen birds and won the medal, scoring another victory for the Denison. The shooting was splendid throughout.

June 26. Shoot 9.—Individual champion medal. Entrance $10, birds extra. The winner of the medal will be entitled to the entrance fee at the next annual shoot; 3 birds 24yds , 3 at 27, 4 at 31, and 2 double birds at 31yds.: Brown 12, Sherwood 8, Spraggins 7, Cotreaux 11, Lister 12, Erickson 13, Warren 12, West 5, Barbour 11, Walters 7, Yocom 14, Maughs 12, Garland 9, Thile 7, Carter 6, Poland 10, Sackett 10, Holland 12, Dollarhide 9, Stude 8, Gardner 10, Leaverton 12, Parkinson 12, Purnell 12, Penrose 10. Chambers 11, Ryan 12, Munson 11. Medal won by Yocom First money won by Erichson. Second divided between Holland, Leaverton, Purnell and Yocom. Third won by Barbour.

Shoot No. 10.—10 Peoria blackbirds. Entrance $7, 18yds. rise; ties 5 at 24yds, 40, 30, 20 and 10 per cent.: W. Nelms 9, Ryan 9, Thile 6, Flood 7, M. Miller 8, West 6, Chambers 9, J. T. Munson 6, H. Nelms 9, Holland 9, Dollarhide 8, Brown 9, Erickson 7, Sherwood 8, Spraggin 8, Penrose 8, Parkinson 9, Yocom 5, Garland 7, Leaverton 8, Cotreaux Socket 7, Poland 5, Lister 5, Barbour 3, Maughs 5. First divided between Holland, Brown and Lister, second divided between Miller, Dollarhide and Leaverton, third won by Garland, and fourth divided between Nelms, Thile and Munson.

In the evening a meeting was held in the rooms of the Board of Trade for the election of officers of the State Association. President Ryan, of Austin, called the meeting to order, and nominations were called for. J D. Yocom, of Denison, was nominated for President; A. C. Schreyver, First Vice-President; T. H. Micklejohn, Second Vice-President; Charles Hunewell, jr., Treasurer, and A. Thiele, Corresponding Secretary. They were all elected by acclamation. W. A. Ryan, A. Erickson, H. B. Penrose, Joe Cottreaux and L. L. Maughs, Committee on Rules and General Laws.

The next tournament will be at San Antonio.

COLLINSVILLE, Conn., July 4.—Club contest for a silver cup between the Colt Hammerless Gun Club and the Collinsville Gun Club, National rules, 20 clay-pigeons, fourth notch: Colt—Treat 18, Watkins 13, Green 8, E. C. Howe 12, Howland 12, Cary 14, Johnson 18, McMullen 18, J. Howe 10, Cook 10, Collins 11, Colt 7, Tolles 10. Peard 9, Seymour 18, total 178. Collins—Bliss 12, Terry 14, Brown 11, Hawley 15, Leiden 13, Randal 11, Alcott 14, Reed 15, Woodford 9, Upson 9, Bernhardt 11, Hart 15, Delaranway 7, Bidwell 8, Williams 5, total 169.

SEATTLE ROD AND GUN CLUB.—Seventh match, May 17, 20 Peoria blackbirds, 10 singles and 5 pairs of doubles, 18yds. rise for singles and 15yds. for doubles. Thrown from 3 screened traps:

McNaught	1 1 1 1 1 0 1 0 1 1	11 11 11 01 10—16
Robertson	1 1 1 1 0 1 1 1 1 1	10 01 01 01 11—15

ALBI.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

BRIGGS vs. WAWASSETT.—Chester, Pa.—The Briggs boys have scored another victory over the Wawassetts of Wilmington. The visiting team, accompanied by a band of music, were met at the depot by the reception committee, consisting of Theodore Roberts, Norman Hyland, William Gibbs, Edward Rose and Harry Johnson, and escorted to the headquarters of the Briggs Club, Third and Penn streets. The room was handsomely decorated for the occasion, a handsome flag hung in graceful folds on the wall, with the legend pendant, "Welcome Wawassett." Elegant pictures of hunting and fishing scenes encased in gilt frames hung on the walls, and stuffed birds and gunning accountrements were in various places. A large case containg a fox, looking natural as life—a splendid specimen of the taxidermist's art—occupied a corner, a painted oyster shell, beautifully colored and lettered and encircled by a golden horseshoe with an American flag above it hung over the door, while the new tapestry Brussels carpet added richness to the finishings. After refreshments at the Delaware House the visitors and guests repaired to the shooting grounds. The contest went rapidly on, and was watched with great interest by the large crowd that had collected. The score follows:

Wawassett Gun Club.	Gl. Ba.	Cl. Pig.	Briggs Gun Club.	Gl. Ba.	Cl. Pig.
P Ambold	11111—5	01000—1	W Gibbs	11111—5	11111—5
G Cloud	00000—0	11010—3	N Hyland	01101—3	11011—4
D Buckmaster	11111—5	00001—1	H Johnson	01011—3	11011—4
N B Hill	00000—0	00001—1	C Bolden	00000—0	11100—3
J Ryan	10010—2	10111—4	J H Ladomus	00000—0	11011—4
A B Mack	01101—3	00001—1	T Roberts	11010—3	00000—0
R Miller	11101—4	11100—3	H Seigers	11110—4	00000—0
D Atkinson	11101—4	10011—3	R E Ross	11001—3	00111—3
C Buckmaster	00101—2	11000—2	T Anderson	11001—3	00011—2
	25	19		24	25

This score was a gain of 5 points for the Briggs Club. The utmost good humor prevailed during the match, and the Wawassetts took their defeat with good grace, showing that they were a party of gentlemen. The visitors were then escorted to the Baldt House, Lamokin. The menu was elaborate. After a good time the Wilmingtonians left for home, delighted with the manner in which they were received and entertained.

POUGHKEEPSIE, N. Y., July 4.—Clay-pigeon match of the Poughkeepsie Gun Club and invited guests. The weather was fine up to the end of the third round, when the proverbial Fourth of July thunder shower came up and for a while it rained in torrents, with now and then a slight let up during which the rest of the match was shot. The poor light accounts for the low scores. 10 clays in 5 directions, 18yds. rise, one barrel only:

H Myers	0111011110—7	L Beigel	1100011001—5
J M Godinez	1111010010—6	J Clear	0101101100—5
E Decker	0111101001—6	O Thorn	0001100111—5
O Enters	1100110101—6	J McDonald	0010100110—4
M Condit	1011100010—5		

M. Jones and J. A. Jameson withdrew. After the match was over, the rain having ceased, a 5-pigeon match was shot and then the participants stood around drying off and discussing the probabilities of a match with the Pine Plains club, which was considered rather doubtful, though all expressed a hope to see it and a desire to take part in case it came off.—A. C. G.

MOUNT KISCO, N. Y.—An organization was recently effected at a meeting held in Mr. T. Ellwood Carpenter's office with 15 members as follows: James Wood, T. Ellwood Carpenter, E. T. Bailey, Fred C. Pelton, A. A. Sarles, S. H. Sarles, J. B. Wood, Aaron Reed, John Reed, Charles Dawson, Arthur C. Pelton, James Finch and Reginald Hart, Esq. James Wood was chosen president, E. T. Baily vice-president, F. C. Pelton secretary, and S. H. Sarles treasurer. The club had its first shoot on Thursday afternoon on a lot at the head of Water street, near the John Hartnett place. The sweepstakes were shot with clay-pigeons, and the occasion proved both successful and pleasant. The club numbers good men, much interest is felt and the organization promises to be a prosperous one.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

ST. LOUIS, June 28.—Match between the Carondelet and Western gun clubs, Carondelet's challengers. The conditions were 20 clay-pigeons, 18yds. rise, each shot from screened traps, each shooting at two consecutive birds: Carondelet Gun Club—L. Scrimp 12, Courvisier 12, Umberhine 10, Beekman 15, C. Weber 13, P. Weber 17, E. Meyer 17, H. Nagel 19, Wohlschlager 13, Labruyere 14, total 142. Western Gun Club—Siemins Rie 14, E. Hasfurther 18, T. Siebern 18, Miltenberger 18, La Faivre 15. G. L. Neff 12, Heithaus 16, Peter Labadie 15, G. Hassfurther 17, Emil Faifer 14, total 157.

MIDDLETOWN, N. Y., has a gun club of thirty-six members for glass ball, pigeon and rifle shooting.

PHILADELPHIA.—The second interstate tournament under the auspices of the National Gun Association, opened at Pastime Park on the 1st inst. and continued through 4 days. The first day the matches were open to all comers and scores were made as follows:

Seven live pigeons, 19 entries, at $5; 25yds. rise from 5 ground traps, single barrel, National Gun Association rules: J. Clarke 7, C. A. Meyers 7, J. Von Lengerke 7, G. Heft 6, F. McQuaide 6, W. Greenwood 6, Miles Johnson 5, W. Warren 5.

Seven clay-pigeons, 19 entries: W. Barron 7, J. Clark 6, J. Von Lengerke 6, Miles Johnson 5.

Seven clay-pigeons, 15 entries: F. Tompkins 7, J. W. Werstner 6, J. Von Lengerke 6, J. Clark 5.

Seven clay-pigeons, 21 entries. A. Rust 7, Dr. Ward 6, J. W. Werstner 5.

Seven globe flights, 30 entries: E. Woodleton 7, J. Brewer 6, A. England 5.

Seven globe flights, 16 entries: Dr. Ward 7, W. Hazlett 7, W. Greenwood 7, E. J. Woodleton 6, E. Tryon 6, J. Brewer 5.

Five globe flights, 18 entries: Miles Johnson 5, W. M. Belcher 4, G. Dames 3.

July 2.—The attendance was light as on the first day but the shooting was excellent. The scores stood:

Clay-pigeon sweepstakes, 18yds. rise, 19 entries: C. Wertsner 7, J. Morton 6, E. Peck 5, F. Tompkins 5, J. Von Lengerke 5. Brewer and Jones also broke 5 out of 7 birds, but were "shot out" by Peck. Tompkins and Von Lengerke on the ties.

Clay-pigeon sweepstakes. 18yds. rise, 18 entries: A. J. Rust 7, J. Von Lengerke 7, C. Longden 6, D. G. Greenwood 6, E. Folsom 5.

Clay-pigeon sweepstakes, 18yds. rise, 17 entries: J. Von Lengerke 7, C. Longden 6, C. Wertsner 5.

Five double clay-pigeons, 15yds. rise, 18 entries: F. Tompkins 9, F. Williams 9, J. Von Lengerke 8, J. Brewer 7, A. J. Rust 7. Messrs. Longdon, Greenwood and Clark also broke 8 out of 10, but were "shot out" by Von Lengerke on the tie.

A live-pigeon match at 25yds. rise, twenty-three entries, at $5 each, was not finished for lack of birds. F. Kleinz, J. Brewer, G. Clark, W. Greenwood, C. P. Shivley, and Dr. Ward each killed five straight and divided first money. A. J. Rust, George Heft and W. Jones each killed four out of five and they divided second money, while J. Burnard, J. Smith, and F. Tompkins with three out of five, divided third money.

The last match of the day was at globe flights, 21yds. rise, sixteen entries: G. Heft 7, J. Von Lengerke 6, Dr. Ward 6, E. Games 5.

July 3. The day was given up to clay-pigeon and globe sweepstakes. The list of winners stood:

Seven clay-pigeons, 16 entries: G. Heft 7, A. J. Rust 4, F. Kleinz 5.

Seven clay-pigeons, 9 entries: J. Von Lengerke 7, A. J. Rush 6.

Seven clay-pigeons, 15 entries: J. W. Bull 7, C. C. Miner 6, J. Von Lengerke 5, W. Greenwood 5.

Seven clay-pigeons, 15 entries: J. Von Lengerke 6, J. L. Brewer 5, F. McQuade 5, D. Jones 4, C. Longdon 4.

Seven clay-pigeons, 10 entries: J. Von Lengerke 6, J. L. Brewer 6, J. C. Bradley 5, E. A. Folson 5, A. J. Rust 4, C. Longden 4.

Ten clay pigeons, 18 entries: C. James 9, J. Von Lengerke 8, C. Capron 8, C. Heft 6.

Five clay-pigeons, 7 entries: Dr. Wood 4, C. Capron 3.

Five clay-pigeons, 18 entries: F. Tompkins 5, J. W. Kleinz 4, J. Von Lengerke 4, A. J Rust 3.

Seven globe flights, 18 entries: C. James 7, W. Greenwood 7, J. L. Brewer 3.

Seven globe flights, 14 entries: F. McQuade 5, Brown 5, H. J. Rust 4, J. W. Kleinz 3.

Five globe flights, 10 entries: J. L. Brewer 5, J. Belcher 4.

Five globe flights, 14 entries: G. Heft 5, E. A. Folsom 5, J. W. Bull 5, F. McQuade 4, C. James 4, J. W. Kleinz 8, Brown 3.

Five globe flights, 14 entries: E. A. Folson 5, J. W. Bull 5, G. Heft 5, F. McQuade 4, C. James 4, "Brown" 3, J. W. Kleinz 3.

Five globe flights, 14 entries: C. Longden 5, F. McQuade 5, E. A. Folson 4, "Brown" 3, C. A. Myers 8.

Five globe flights, 10 entries: H. A. Reist 5, J. Von Lengerke 5, C. Longden 4.

July 4.—The attendance on the last day was very small and the matches were thrown open to all. No live pigeons were shot at. The following are the winners in the clay-pigeon sweepstakes: First—Bull 7, Capron 6, Longden 5. Second—Von Lengerke 6, Bradley 6, Brewer 5, Miner 5, Longden 4. Third—Bradley 5, Folsom 4, Miner 4, Von Lengerke 3, Barron 3. Fourth—Ward 4, Brewer 3, Kerns 3. Fifth—Caperon 3, Ward 2. Sixth—Hoffner 4. Seventh—Hoffner 3, Kerns 3, Brewer 2, Caperon 2. Eighth—Brewer 3, Ward 2. Ninth—Hoffner 4, Kerns 3, Brewer 3.

Globe flights sweepstakes—First, Caperon 7, Barren 6, Rust 6; second, Belcher 4, Kerns 4, Caperon 3, Ward 3; third, Brewer 5, Parker 4; fourth, Caperon 5, Brewster 5, Barron 4; fifth, Von Lengerke 5, Kerns 5, Caperon 4, Bradley 4; sixth, J. G. H. 5, Longden 4; seventh, Bradley 3, J. G. H. 3; eighth, Caperon 4, Belcher 3 During the afternoon there was a match shot off between Dr. Ward and C. Caperon. It was won by the former after 3 ties.

LOUISVILLE, Ky., June 24.—The following is a score made by Harvest Home Gun Club at 20 single Peoria blackbirds and 12 double birds, 18yds. rise: D. G. Rowland, single birds 18, double 5; J. A. Boyd, single birds 14, double 0; E. Rowland, single birds 11, double 0; W. B. Rowland, single birds 11, double (did not shoot).

WOODSIDE, July 1.—Score of the seventeenth regular monthly shoot of the North Side Gun Club of Long Island:

Winholz, 29yds	1111011—6	Stocky, 25yds	1101011—5
Dr Franz, 27yds	0111011—5	Eberhardt, 27yds	0000011—2
Krumbeck, 27yds	1111111—7	Barlow, 27yds	1111110—6
Chevallier, 27yds	1011111—6	Lyon, 27yds	1001001—3
Manning, 27yds	1110111—6	Siems, 27yds	0111110—5
Duryea, 24eds	0000 w—0	Evers, 25yds	0110010—3
Wahlen, 27yds	1010111—5	Kroger, 27yds	1111100—5

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

SAGADAHOC ASSOCIATION.—Annual shoot for the badge, at Mouse Island July 4. The day was fine, and all enjoyed the sport. The badge was won by Walter K. Purington of Topsham, with the following score. Singles, 18yds. rise; doubles, 15yds.:

A Hatch	1 1 0 1 1½ 0 1 1 0— 6½	10	11	11	00 00—11½
A Q Goud	1 0½ 0 0 1½ 1 1 1— 6	10	11	11	11 10—14
W K Purington	1 1 1 1 1 1 1 1 1 1—10	11	01	11	01 10—17
C H Greenleaf	1½1½1½ 0 1 1 1 0 1— 6½	10	01	11	00 11—12½
A S Alexander	0½ 1 1 1 0 1 1 0 1— 6½	11	10	10	11 11—14½
S L Farrar	0 0½ 0 1 0 0 0 1 0— 2½	10	10	10	10 11— 8½
M C Hall	0 0 0 0 1 withdrawn.				
J E Fish	1 1 1 1 0 1 1 1½— 7½	00	10	10	10 11—12½
C H Winslow	0 0½ 1½ 1 1 0½ 1— 5½	11	10	00	00 00— 8½

Then followed the shoot at 10 single birds for the prize offered by the E. S. Company. The first was taken by W. K. Purington, of Topsham; the second by A. S. Alexander, of Richmond; third by Charles Goud, of Topsham; third by C. H. Winslow, of Brunswick. Score:

Q Goud	1101010111— 7	S D Farrar	0011000111—5
A E Hall	0110110001— 5	M C Hall	0101110111—7

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (signed) C. M. STARK.

PUBLISHER'S DEPARTMENT.

MR. F. A. ALLEN, of Monmouth, Ill., is the inventor and manufacturer of a number of very useful articles for sportsmen, particularly those interested in wildfowl shooting. They are the improved duck call, which is natural in tone and easily blown; the bow-facing oars, shell swage and decoy duck frame. Write for catalogue. See advertisement in another column.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

RONDOUT C. C., JULY 4.

THE Rondout C. C. began last year the custom, which they propose to keep up, of making the Fourth a club gala day, during which the numerous friends and relatives of the members can get a taste of the pleasures of canoeing and enjoy a jolly picnic. In 1884 the club invited their guests to Esopus Island, six miles below Rondout. This year a lovely spot five miles above Rondout was chosen, on the west shore of the Hudson. The invitation the club issued to friends in Rondout and canoeists from New York to Albany was published in FOREST AND STREAM last week. Coddington's Dock is a rude wharf constructed of a bulkhead on three sides and filled in with stones and earth. It is now little used, and is covered with grass and bushes. A gravel beach extends in both directions from the wharf, and just back of it is an open space of an acre or more, grass covered and partly shaded by a very large tree just above high tide mark. The river bank is quite steep, and is entirely covered with a thick growth of trees for a half mile above and below the wharf. The spot is a quiet one, and has every desirable attribute for a canoe camp ground and a picnic clambake.

Several of the club men went into camp on Friday evening. They were joined late at night by two New York C. C. men who had come to Rondout on the Mary Powell, and from there rowed to camp in a pair oar.

Early Saturday morning preparations began for the afternoon reception. Great awnings were spread, and a fire built which cooked the thirty gallons of chowder and baked the clams. The little steam launch running north from Rondout brought out the great baskets of plates, glasses, forks and spoons and the lemons. Lemonade was made in a large churn, and it was therefore called buttermilk. The steamer S. O. Pierce brought most of the guests at 2 o'clock. These, with the asrivals by land in carriages and a number in small boats, brought the total up to nearly three hundred.

Shortly after the arrival, the frills on the very edge of a thunder shower swept over the camp and drove every one under the awnings for a few minutes, but did no harm and soon passed away.

The club members had arranged a series of events more for the amusement of their guests than as a test of canoeing abilities. The tandem race came first, four crews competing. Jansen Hasbrouck's crew won, though his brother's crew paddled faster, but went the wrong side of the flag at the finish. An upset race was next in order, three canoes entering. They got off well together at the starting signal and kept together till the upset signal. Van Deusen got his canoe over first by a clever movement, but Hasbrouck managed to get in his first, though he did not stay in, the canoe rolling over again just as he took up the paddle. Tomkins was quick about the upset and getting in again, but let go of his paddle and when seated to go ahead he could not reach it. Van Deusen, therefore, won easily. The hurry-scurry race created more amusement than any other event. Eight canoes were drawn up on shore and at the signal a grand rush was made for them. One was not touched, another had two men splashing and fighting to get possession of it, and in the confusion it rolled over and ducked both of them. Crispell got a lead, though Van Deusen nearly cut him off at the turn by a clever dodge. Both came toward shore about even, standing up and paddling on one side of the canoes, Crispell won by a few feet. A tub race followed, in which Hasbrouck's ship sank, Van Deusen's lost her reckoning, and Tomkins won handsomely.

The chowder then sailed on the scene, and the wet canoeists were forgotten for a time till they appeared shortly after in dry clothes. Later in the day every canoe and boat was in great demand by the young ladies, frequently by two of them taking a canoe and going off on their own hook as independent as possible. One of the canoes—a beauty—of peculiar design and finish, upon inquiry proved to be the work of one of the Hasbrouck brothers. It was the first boat he had ever built, and the workmanship had the finish of the professional touch. Mrs. Hasbrouck is an accomplished canoeist also, and is as enthusiastic as any club member.

Just before dark the younger members of the party tramped up the hill to the old Coddington homestead (vacant since '76), and a very jolly set of dances followed.

The return to Rondout was set down for 9 P. M. Five minutes before the S. O. Pierce blew her whistle the party gathered up their wraps and traps and promptly on time left the wharf and the six remaining canoeists, who shortly after the departure of the boat set to work to brew some —— coffee over the fire. They voted the day a success, and mutually agreed that the folks seemed to have had a good time. Camp was not broken till Monday morning.

The officers of the club did not appear in gold lace and frills, nor did they so appear at the Newburgh meet, and at that time they did not see any gold lace or frills on the Mohican officers, nor the New York officers, and therefore did not quite see the point of Mr. Wilkin's letter in FOREST AND STREAM a few weeks ago, unless it referred to the frills of the Alligators—and they were wonderful indeed.

P. D.

A PORTABLE CANVAS CANOE.

THERE are many cases where a portable canvas canoe would be very useful, but where one of the usual kind cannot be transported. A number of patented boats of various makes are to be had, but the boat described below by one of our readers is not only very cheaply made, but is very portable, the canvas cover being rolled up and carried in a trunk or pack, while the saplings may be obtained almost anywhere, or if requiring to be carried, they make only a light bundle of poles. The directions for building are as follows:

For a boat say 11ft. long by 3ft. wide, 15in. deep amidships, and 18 or 19in. at stem and stern, take a piece of duck about 58in. wide and 12ft. 6in. long, and fold its edges accurately together lengthwise, and pin or tack them securely so while you mark on both edges the exact center from end to end. Then measure on the edges the length of the gunwales. To find this, multiply the straight distance from the bow to the center rib at the gunwale by 8; from this subtract straight length from stem to stern, and then divide the result by 3. The quotient will be the right length of the gunwales (11ft. 6in.) to which must be added 1½in. more at each end on both sides. Then mark a line say 6in. long at each end parallel with the central line of the canvas (where it is folded), and crossing the gunwale length mark—1in. more than the intended depth between that and the central fold. Now mark a curve; a hyperbola describes the line I mean as nearly as possible, which starting from the center may pass through the point at which the two previous lines intersect each other.

Curve the cutwaters to suit your fancy, remembering that the edges must lap 3in. at the top, as allowed for by adding 1½in. to the gunwale lengths, and increasing to the forefoot. Lap the gunwale edges of your canvas over an inch, and sew smoothly sailor fashion, lap and sew in the same way the stem and stern, putting two or three thicknesses at the forefoot on account of wearing in running ashore. And put about ten eye holes at equal distances in each gunwale edge. Now give it two or three coats of India rubber dissolved in naptha. To set it up drive four stakes 3ft. apart each way, and about 18in. out of the ground, cut a small sapling 5ft. long, 1½in. diameter, as straight and even as you can find, and split it down the middle, each half should then be about ¾in. thick, shave the round side down to about ½in. thick, commencing 10in. from the ends, to cause it to bend properly at the turn of the bilge. Then cut two similar half round pieces 1in. thick and 2in. wide, the length of the gunwales (11ft. 6in.), and now another piece for a keelson and stem and stern, about 14ft. x 2in. thick, cut this down to about ¾in. x 2in., and to a small ½in. where it bends up to form the stem and stern.

Cut a few light pieces about 1in. x ½in. x 5ft. long and two 3ft. long and about ¾in. round. Now to put it together, lay your canvas cover open side up between the four stakes, so that the fourth eyeholes on each side come opposite the first pair of stakes, measuring from the bow, and the seventh eyeholes opposite the rear stake. Lay your keelson with the cutaway side up, tie a string to one end and draw both ends up and tie just as you would string a bow. Bend the two ribs with the cutaway side up in between the stakes, the canvas coming up between them and the stakes. Cut two pieces the length from stem to stern at the turn of the bilge. Having bound your ribs to the keelson, bind your gunwales to the ribs inside of the stakes and outside of the canvas, through the eyeholes, and then to the stems securely in notches cut on purpose. Now put in the 1in. x ½in. pieces as ribs at every eyehole, lashing them to the gunwales through the eyeholes.

Now lay in the last cut two pieces 1½in. x ¾in., flat side to ribs, and bind all along at the turn of the bilge. Lace with twine or bark some light slabs or shavings about 1 or 2ft. x 2in. to 4in. x 1-16in. between the canvas and the ribs. Now lash the two round pieces, 3ft. long, across the two main ribs, and tie the canvas up at stem and stern.

Now loose the cord, and if all is properly and tightly lashed she will not spring a bit, and be perfectly watertight and safe, easily carrying 500 pounds, herself weighing only, if made as described, from 15 to 20 pounds. When not required for a boat, it is useful as a waterproof blanket; keeps anything dry that can be rolled up in it, and when wanted for a boat it is easily and quickly set up wherever there is any wood or brush with only the tools every hunter or angler carries with him, such as a hatchet or heavy knife.

OWASCO.

SAILING CANOES.

Editor Forest and Stream:

I have been looking for what has happened. John Paul has done it with his "cat" and that yarn about Commodore Morris having a canoe under his arm. Besides, there is that German canoe at Sakron with forty pounds of lead on her keel. Thunder! Who ever heard of a canoe with keel enough to speak about, much less sufficient wet surface to grasp ballast? Why, sir, it is astonishing. Canoeing is ruined. By and by we shall have canoe cats (just as like as not John Paul will own one of them), canoe cutters, and may be more birch barques than ever. Now, what is the matter with the canoe anyhow? Has she, in any of her protean forms, or want of form, a single line which enables her to stand up and hold her course under sail? She sets a pocket handkerchief or two, which, out of courtesy to her owner—whose name is legion—you designate a sail. Good. That implies depth and ireeboard. Where are they? She is a double-ender, like one of Gid. Wells's gunboats, and just about as seaworthy. A little puff of wind requires her to be luffed up sharp, with one alternative, that of turning turtle. Mind you, I say nothing about the patient, easy-going sinner in the next pew, who says his prayers fervently, spits on his hands, and whistles to ha'ard with his white ash breeze. I'll let him alone until he grumbles about the blisters on his—paddles. But when he does that and "rests on his oar"—that is all the rest he gets—to envy the little cutter which spins by him with a bone in her teeth, and then, after she is out of sight, sighs to find the canoe will rest just as long as he does, then, I say, I am interested. That man is ready to learn. He will see points without much ado. I can teach him something and he will be an apt pupil. Oars and the paddle are too slow and too primitive. No sooner does a fellow learn them than he speculates on making the wind do his work, and the moment he succeeds he leans back to grin at the ease with which the breezes do his blowing. Once educated to that, he never afterward contents himself with a boat which floats on a light dew or voyages on rivulets, for those he can wade; and if he is a genuine sportsman, an inch or two of water doesn't deter him from casting a fly into any of the shady coves or "deep, delicious pools" where trout and salmon tempt the trial of a fisherman's skill.

I have expended considerable time and money experimenting with all of the models now before the public, not only in canoes, but row and sailboats also, and I write advisably when I assert that none of them are satisfactory under canvas. For punting, rowing and paddling they are all right, but to sail well, a vessel, however small, must possess some body, and to exhibit any degree of speed, she requires an application of wave lines, not only in her longitudinal body, but athwartships also. Some degree of concavity therefore becomes indispensable, and the moment these are intelligently applied, she ceases to be a canoe in everything except her size. But I shall show you a perfect little ship capable of holding on in a gale and riding the seas with the ease and grace of a petrel. Moreover, fixed ballast, except for racing, does not become a necessity. It is only an additional factor used to combine in the smallest compass two very desirable elements—stability and the least possible amount of wet surface.

The best canoe under sail is acknowledged to be the Shadow, an outcome of the old dugout, which had weight and therefore stability. So the Shadow has been the favorite with good sailors from the first, and they were not slow to see the advantages attaching to flush decks which were added very quickly; but one objection remained. It was unwieldy length. They are too long and too narrow to stand up or steer well. Like many of our ocean steamers if hove to in rough water they roll over like a bicycle. A fellow does not always like to set sail in a bathing suit, especially when his wife wants to go with him for a week's recreation, and to sum up the whole matter we must draw the line here—sails or oars—"that's the question." I declare for sails, and the man who don't may "paddle his own canoe" and welcome. I have thousands on my side who know not fear but "wanton with the breakers" for their stomach's sake, and enliven the longest reaches of deep water with the silver gleam of their double-bighted sails. The dip and drip of passing paddles is a slow, monotonous music, very poetic, perhaps, and a romantic reminder of the red men who have gone west or vanished from their reservations, scalps and all, leaving us the whoops and the pursuits of peace, a buried "tomahawk," two or three broken arrowheads, etc., and the beautiful Indian names so indelibly written upon our lovely waters, that the pale face, seated in his government lavatory at Washington cannot erase or obliterate them. Peace to their pipes! Are their deeds not written out at length in Cooper's novels, where many an Uncas, under various names, has attained the immortality which finite fame accords. Don't dig up the hatchet but bury the paddle with it, and give us a sail in the cutter canoe.

DEJA.

RUBBER BEDS FOR CANOES.—One of the easiest beds for sleeping that can be used in camp is a rubber bag of proper size, only partially inflated, on which the body floats. As it adjusts itself perfectly to the shape it is very comfortable, and is specially good for use on damp ground or in a wet boat, as several thicknesses of rubber besides the air itself, are interposed between the ground and the sleeper. A new bed of this style, specially designed for canoeists and yachtsmen, has been lately put on the market by the Goodyear Rubber Co., of 503 & 505 Broadway, New York. It is composed of a number of cells of rubber laid side by side, a large one at one end forming a pillow. Over these two layers of rubber are laid, and the whole is covered with striped ticking, making a very strong and durable bed. It is inflated by a valve at one corner, and may be blown up in a short time. The size is 20in. wide and 4ft. long, thus sustaining all the body but the feet and lower limbs, the thickness when fully inflated being 4in. When empty it may be rolled into a compact bundle for storage. The weight is 5½lbs.

MOHICAN C. C.—Race in cruising rig for challenge badges, 3 miles, sail limited to 75ft. Thursday, June 25—Race started and sailed one round when wind died out, Snake leading. Friday, June 26—Start 5.30, six started, wind west and light, Snake won at 6.26, Thetis, second, 6.27½. After the race seven Mohicans paddled down the river to the Abbey Hotel to supper, a magnificent moonlight evening. Thursday, July 2, Oliver Cup, 60ft. sail limit—Snake, Thetis, Lasca, Marion B. and Mohican (the last is club canoe and was manned by G. Hilton), start, 5.27½, Thetis led first round but Snake won at 6.28½, wind west and light; Thetis, second, 6.30; Marion B. third. Mohican was well sailed and would have had third place but fouled buoy and was disqualified.

"CANOE HANDLING."—We translate the following notice of Mr. Vaux's book from *Le Yacht*, the French yachting journal: "We have spoken lately of a very complete work on the construction of canoes, edited by the FOREST AND STREAM, our confrere of New York. This work is very happily completed by a manual of the management of the canoe, of which M. C. Bowyer Vaux (of French origin, without doubt, to judge by his name) is the author. We urge actively those of our readers who desire to try this truly interesting sport, and who could practice it on many of the picturesque rivers of Central France, to procure these two volumes, which to them will indicate how an amateur should take upon himself to be at once the crew, the captain, the pilot, and even the constructor of his canoe."

PHILADELPHIA C. C.—Five members of this club, Messrs. Sharpe, Small, Fisher, Francis and Frederic Thibault, arrived at Coopers-town on June 23, and after a short cruise around Otsego Lake, left on 25th for a cruise down the Susquehanna to Chesapeake Bay.

OAKLAND C. C.—Oshkosh, Wis., June 25.—The first race of the Oshkosh C. C. for 1885 was started at 2:23 this P. M. The course was a three mile triangle, wind southwest, rather heavy. There were nine entries, finishing in the order named: Meta, 42m. 10s.; Bon Ami, 43m. 20s.; Alice, 43m. 30s.; Genevieve, 45m. 15s.; Rene, 46m. 26s.; Ada G., 50m.; Dollie R., 56m. 55s.; Dontno, 57m. 45s.; Sis, 58m. 10s. The prize was the challenge cup of the club held by the Bon Ami. Our annual regatta for the championship will be held in July, probably about the 15th.—OSHKOSH.

ANOTHER SUNBEAM.—One of the latest canoes of this model that Mr. Everson has completed is the Falcon, for Vice-Commodore Arthur Brentano, of the Washington C. C. Mr. Brentano is known as a cruiser who always has the best of canoes, and his selection of Mr. Newman's now celebrated model is a compliment to her originator.

Aug. 25—Michigan Y. C., Open Inter-Lake Regatta.
Aug. 25—Pentucket Y. C., Club Race.
Aug. 29—Quincy Y. C., Third Club Race.
Aug. 29—Beverly Y. C., Swampscott, Third Championship Regatta
Sept. 5—Hull Y. C., Champion Race.
Sept. 5—Larchmont Y. C., Fall Pennant Regatta.
Sept. 9—Beverly Y. C., Nahant, Fall Regatta.
Sept. 12—Quincy Y. C., Third Championship Race.
Sept. 12—Boston Y. C., Fourth Club Race.
Sept. 19—Beverly Y. C., Nahant.
Sept. 19—Hull Y. C., Champion Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 28—Pentucket Y. C., Championship Regatta.

PRISCILLA.

AFTER bending sails up the Sound, Priscilla made a few trials under canvas last week, and then towed down to the East River, where she was hauled out on the screw dock on Thursday and Friday, and her bottom was cleaned and painted with three coats of Ratjen's paint, the topsides being painted black from waterline to rail without the customary gold stripe, which was lined out, but not put on. The rail and decks were also cleaned up bright. On Friday afternoon she was lowered and towed up to Larchmont, anchoring for the night. On Saturday morning the Aida came alongside, and Vice-Com. Douglass boarded the sloop. Waiting until the Larchmont fleet was well away toward Execution, Priscilla, with Messrs. Douglass, A. Cary Smith, Tams and Busk on board, made sail and started down the Sound. It was decided that no newspaper men were to be allowed on board, and that the details of the trip were to be kept private, but a representative of the *Herald* appeared, armed with a cable despatch from Com. Bennett, the principal owner of the yacht, which secured his admission. Mischief got under way and stood down in company, and Arrow soon joined the pair. They sailed in company, being near Matinicock Point when the fleet of racers appeared, but as the latter approached, the three bore away and were soon well out of sight. Through the day Priscilla ran away from the others when free, but did not gain so much on the wind, and is reported to be slow in stays. That night she ran into Bridgeport, arriving at 10 P.M. She will remain in the Sound this week, sailing as much as possible to get her sails in shape. No date for the trial races has yet been announced.

EASTERN Y. C. ANNUAL REGATTA, JUNE 30.

THE most important event of the season in Eastern waters, the annual regatta of the Eastern Y. C., held every year at the end of June, was this year watched with special interest, not only by local yachtsmen, but by many others, as the advent of the new sloop Puritan, her first real trial trip, made it of national importance. It is generally known that Boston, not to be behindhand in the defense of the America Cup, had provided a yacht to contest in the trial races with the sloop Priscilla, of the New York Y. C., the yacht being designed by Mr. Edward Burgess and built by Lawley & Son, and her owners being Messrs. J. M. Forbes, C. J. Paine and other members of the Eastern Y. C. The first appearance of this yacht has been anxiously awaited by all American yachtsmen. After several trial spins last week she was ready by Tuesday night, and anchored in Marblehead Harbor.

Another circumstance lent additional interest to the race; the entry of the famous old America, and her performance with the newer boats, while the rivalry between Fortuna, Gitana and Mohican, promised a lively race in the largest class.

America has not raced in many years, but the coming international races have brought her again into prominence, and her friends have insisted rather loudly on her right to compete in the races, and on the propriety of allowing schooners to race for the Cup won by a schooner. Her owner and captain have also been in no way backward in asserting what she would do, and have promised to have her in full trim for any race open to her, while demanding a chance to retake the Cup, should it be won by Genesta or Galatea. Under these circumstances the interest of all yachtsmen in her performance has been very great, and her reappearance at the line has been eagerly looked for. After her race of Tuesday we hope that those who have urged her as a fit opponent to Genesta will be convinced that a schooner has little chance against a cutter or sloop, and also that good as she was and perhaps still is, the world has moved since 1851, and that the old yacht cannot compete with the newer and more powerful craft of to day. To say nothing of Puritan leading her by an hour, the little Ileen, a cutter of the extreme type, beat her by nearly half an hour in a 30 mile race, the schooner being last in a fleet of 13.

This year the Eastern Y. C. introduce two new features. In the first place, the old measurement, based on the sum of length and beam, has been abandoned in favor of the sail area and length rule; and in the second place, a new triangular course has been laid out from Marblehead Rock. As far as tried the new allowance has worked well, and we can congratulate the club on their recognition and acceptance of a better rule than their old one. The new course has been objected to by many on account of the amount of work involved, the three legs being each but 5 miles long, making six different courses in a 30-mile race, with consequent changes of canvas; but all the yachts are well manned with racing crews, the occasion is only once in a season, and in none of them where the various maneuvers conducted with such accuracy and promptness as to suggest that the practice entailed by the race was unnecessary; in fact a good deal more would not hurt some of them. In this, as in most clubs, the annual regatta is largely a spectacle for members and friends, and for them the new course answered admirably, as the steamer Twilight followed the leaders over the entire course, while the distances were so short that all the competing yachts were easily within reach of a good glass, and the entire race could be seen also from the shore.

Starting from a line between Marblehead Rock and a stakeboat about ½ mile S. S. E. from it, the course ran directly over Halfway Rock, E. ½ S., 5 miles, to a stakeboat, thence to a second mark boat, S. W. ¾ S., 5 miles, and home N. E. ¾ N., 5 miles, or 15 miles in all,

he course to be sailed over twice. With the wind from W. N. W., where it held all day, blowing pretty steadily, with less than club topsail force, the first leg allowed a spinnaker to port, the second brought the blocks together for a reach on starboard tack, and the third was to windward. Marblehead Harbor was crowded with yachts of all kinds in the early morning, but by 10 o'clock nearly all were under way, Puritan towering among them in all the glory of new white paint, bright spars and new canvas. The tug Elsie carried the regatta committee, Messrs. Daniel Appleton, H. B. Jackson, Frank E. Peabody, E. B. Haven, and George Goddard; the steamer Twilight came from Boston, stopping at Salem, and was well loaded with members and guests, a photographer occupied a tug, from which he was shooting at the yachts. The curious dome steamer, Meteor, built to confound the present practice of naval architects and marine engineers, which end she has not yet attained, was also present, being now fitted with new engines and double stacks, and in use as a tug boat. Sailing yachts of all kinds were grouped about the start, from the huge and heavy Astea to the spry little Witch, flying around everywhere with topmast struck and staysail stowed, one of her crew of three being a four year old tar in a red cap.

The race was open to the schooners of 50ft. or over, and sloops of 40ft. or over, belonging to any yacht club, and the following were entered:

	Waterline length.	Corrected length.	Allowance.
FIRST CLASS SCHOONERS, 75FT. W.L. OR OVER.			
Mohican, H. D. Burnham	107.0	104.1	.....
America, B. F. Butler	96.0	96.0	2 46
Fortuna, H. S. Hovey	95.0	94.5	3 20
Gitana, W. F. Weld	93.0	94.7	3 09
Phantom, E. V. R. Thayer	86.1	87.0	6 26
SECOND CLASS SCHOONERS, 50FT. AND OVER.			
Rebecca, G. P. Upham, Jr.	73.3	75.0	.....
Meta, A. A. Lawrence	62.2	64.2	0 34
Adrienne, J. Pfaff	62.0	65.72	5 33
Fearless, Phillips Bros.	54 3	58.4	11 02
FIRST CLASS SLOOPS, CUTTERS AND YAWLS.			
Puritan, Edward Burgess, agt.	80.0	83.3	.....
Ileen, Arthur Padelford	65.5	66 1	13 19
Thetis, Henry Bryant	64.0	66.7	12 27
Huron, Wm. Gray, Jr.	63.0	66.2	12 53

The prizes were $200 and $100 for first class schooners, $125 and $75 for second class schooners and $150 and $75 for sloops. Besides the above, two yachts, Winsome and Imperia, were entered in the second class, but as the former did not appear, Imperia did not start.

The first whistle blew at 11:45, and at 11:50 the start for the first class was sounded, Fortuna getting away at 11:53:50, Gitana 11:53:00, America 11:53:24, Mohican 11:54:21, and Phantom 11:55:00. All were on the port tack with light sails set. At 11:55 the whistles sounded for the sloops. Huron was first off, with balloon jibtopsail set, then Puritan went over, sending up a jibtopsail in addition to her clubtopsail, Thetis was third and Ileen last, carrying only a thimbleheader. At noon the smaller schooners were sent away, Adrienne at 12:02:15, Meta at 12:03:01, Rebecca 12:03:30, and Fearless 12:08:00. The latter came down to the line close to the others, showing an immense maintopmaststaysail, set from foremast head to topmast head; but just before crossing, the heel of her mainmast gave way, and the mast nearly went by the board. Luffing quickly, the big kite that had caused the trouble was taken in, two men clapped a lashing on the heel, and she went off, badly handicapped, on a stern chase, for which she was finally well repaid by first prize. The times of the sloops were not correctly taken by the judges, and all were counted from gun fire, 11:55.

Boston has not yet progressed to the point of numbering the sails, so it was hard for a time to make out the fleet ahead as the steamer chased them; but as she overran they were spread out to windward of her off Halfway Rock, Fortuna, Gitana, America, Mohican and Phantom in a string ahead. Puritan was ahead of her class, Huron, with a big spinnaker, slowly dropping astern and overhauled by Ileen, with Thetis last. Soon the big white sloop drew well away from the pack and in among the two-stickers, while Thetis took next place to Huron, holding it a short time and then going finely through the latter's weather, followed closely by Ileen until Huron was left well astern. Here Adrienne was ahead of her class, with Meta near her weather quarter and Rebecca close to her, Fearless being still far astern. Near the end of the run the order was: Fortuna, Gitana, Puritan, America, Phantom, Mohican, Thetis, Ileen, Huron, Adrienne, Meta, Rebecca, Fearless, all strung out over a couple of miles. Shortly after Gitana pushed up to first and Phantom led America, while Ileen and Thetis were both close aboard the latter. The boats were timed at the first turn: Gitana, 12:36:45; Fortuna, 12:38:20; Puritan, 12:39:25; Phantom, 12:41:40; Ileen, 12:44:08; Thetis, 12:44:30; America, 12:44:40; Monicon, 12:44:50; Huron, 12:47:05; Adrienne, 12:48:20; Rebecca, Meta and Fearless not timed.

Booms came in and all laid for the second mark, Gitana with large jibtopsail, Fortuna with club and jibtopsail, and Puritan with balloon jibtopsail, and clubtopsail set over her thimbleheader. While the latter was overhauling the two schooners there was a very pretty tangle at the mark where Ileen rounded with Thetis's bowsprit almost in her mainsail, while America was in the same position in relation to Thetis, with Mohican under her stern. For a moment a general smash seemed inevitable, but with a bold luff the skipper of Ileen took his boat clear of the other, and also out to windward and ahead. Thetis and America cleared and followed, and no protests were made.

At 12:44 Gitana dropped her balloon jib and set a maintopmast staysail, and a minute later Puritan also lowered her balloon jib. Now began a pretty bit of play between the two leaders, Fortuna making a dash for Gitana's weather beam, which the other luffed out to meet, and for a quarter of an hour a very pretty duel lasted, being finally ended by Fortuna going to windward of Gitana. Meanwhile both had been working to windward of the course, while Puritan, tending strictly to business, had kept her course and was now, by the mark, the second boat, luffing under Gitana's lee and taking a good second place. Astern was Phantom, fourth boat, then Thetis, with Ileen on her lee, next Mohican, Huron and America. The order at second mark was: Fortuna 1:00:50, Puritan 1:01:05, Gitana 1:01:10, Phantom 1:05:10, Ileen, 1:10:25. Thetis 1:11:20, Mohican 1:11:40, America 1:12:07, Huron 1:12:45. The order of the others was: Meta, Rebecca, Adrienne, Fearless. Here at the end of 10 miles Puritan had overcome her class handicap of 5 minutes and was even with the two larger boats.

Off to windward she went on port tack, carrying club and jibtopsails, and soon had both the others under her lee, beating them worse than she had yet done. Every tack she left them, pointing well up and keeping her speed, until she rounded at 3:44:10, nearly 3 minutes ahead of Fortuna in a beat of 5 miles. All were scattered on this leg, the two Boston sloops holding to the north on port tack, while Ileen broke tacks and lay over to the south, coming up to the mark across the bows of the other two and near to Phantom, rounding with the latter. The times were: Puritan 1:44:10, Fortuna 1:51:49, Gitana 1:55, Phantom 1:58, Ileen 1:58:56, Thetis 2:01:45, Huron 2:04:03, Mohican 2:07:25, America 2:09:02, Adrienne 2:09:42, Meta 2:13:18. Rebecca 2:13:40, Fearless not timed. The sight at the time was a beautiful one; the rugged shores of Marblehead, with handsome villas scattered along; the fleet of vessels of all sizes waiting at the turn, and the competing yachts as they came up one by one until thirteen had passed.

The race by this time had degenerated into a mere procession, and barring accidents the order promised to change little in the second round. The wind was very light as the yachts ran out to the first mark, turning as follows: Puritan 2:24:00, Fortuna 2:32:20, Gitana 2:35:40, Ileen 2:41:30, Thetis 2:42:25, Phantom 2:42:30, no others being timed. The same order held out to second mark, there being little to note in the light wind. Once around, Puritan still led the way to windward, the others keeping nearly the same order. The wind was light and the finish was by no means exciting. At 3:20:15 Puritan crossed the line an easy winner, her elapsed time for the 30 miles being 3:25:15. The full times are as follows:

	Start.	1st Round.	Finish.	Elapsed.	Corrected.
Puritan	11 55 00	1 44 10	3 20 15	3 25 15	3 25 15
Fortuna	11 52 50	1 51 39	3 31 11	3 38 21	3 35 01
Gitana	11 53 00	1 55 00	3 39 43	3 46 34	3 43 25
Phantom	11 55 00	1 58 00	3 47 45	3 52 45	3 46 19
Ileen	11 55 00	1 58 56	3 49 01	3 54 01	3 40 42
Thetis	11 55 00	2 01 45	3 52 57	3 57 57	3 45 30
Huron	11 55 00	2 04 03	3 55 48	4 00 48	3 47 55
Mohican	11 54 21	2 07 25	4 01 58	4 07 37	4 07 37
Adrienne	12 02 15	2 09 42	4 11 37	4 09 22	4 03 49
Rebecca	12 03 30	2 13 40	4 14 43	4 11 13	4 11 13
Meta	12 03 01	2 13 17	4 15 47	4 12 46	4 06 12
Fearless	12 05 00	.....	4 18 17	4 13 17	4 02 15
America	11 53 24	2 02 02	4 13 42	4 20 08	4 17 22

Fortuna and Gitana win first and second prizes in their classes, Fearless and Adrienne in the small schooner class, and Puritan and Ileen in the sloop class.

It is difficult, from a comparison of Puritan's time with the others, to form an idea of her probable performance alongside of the old cracks in her class, Bedouin, Mischief and Gracie. Except Fortuna none of the boats entered have of late years made a first-class record as racers, and little can be learned from her defeat of Ileen, Thetis and Huron. Last year on the same water, but over a 30-mile course, Bedouin, 10ft. shorter, beat Fortuna by 15min. 18sec.; Adrienne 36:54, Rebecca 1:02:07, Ileen 31:18, the weather being very light; while Puritan, over a course 1½ times as long, beats Fortuna 13:06, Adrienne 44:07, Rebecca 45:58, and Ileen 28:46. In both races the water was smooth and wind light, in 1884 there being almost a calm on the windward leg from Egg Rock to Halfway Rock. In a week or two we may expect to see the white yacht among a fleet of black ones of her own caliber in New York waters, and to know more about her. Certainly she is a very fast boat in smooth water, as well as a very handsome and shapely craft, but she will have to meet other fast boats here and it will be a matter of minutes and seconds which wins. Whatever the results of the trial and Cup races may be, Puritan will remain a credit to the spirit which has built her to defend the Cup, as well as to the skill of those who have designed and constructed her.

The race of last week may be taken as evidence that in ordinary weather both Fortuna and Gitana are too much for the big Mohican. America evidently was not in proper racing shape or she would have been better placed, but after all that has been said about her in connection with this season's racing, with no lack of money, and in the hands of an experienced captain who has commanded her for years, there is no excuse for her bad performance last week. Fearless, we believe, has been out of racing for several seasons, and on her return she is to be complimented on the plucky race she made when most would have given up. Though Thetis has lost the club off her jib she traveled no better than in New York, and was by no means equal to Ileen on the wind. The narrow cutter was in for the first time this season, and in new hands bids fair to redeem her reputation and take a place among the first half dozen of our fast single-stickers. Huron also makes a new start this year, having been entirely rebuilt last winter, but on Tuesday she made but a poor showing over all the course, though it is too soon yet to judge fully of the result of the alterations in her. In another month both she and Thetis will meet the New York boats at Newport, and have an opportunity to measure their powers with the best of the fleet. Thus far neither of these two compromises, the one a centerboard and the other a keel, have proved equal either to the old open centerboards or the narrow cutters, and while they are easy and roomy cruising boats, they have not shown the speed expected from them. Both were designed and are sailed by their owners, active and progressive yachtsmen, whose efforts deserve a better reward than has yet attended their attempts to combine the differing attributes of sloop and cutter into one harmonious whole.

After the races the fleet anchored over night in Marblehead Harbor, Puritan, Thetis, America and Huron leaving in the morning for Boston, while Ileen sailed later for New York. The regatta had been in every way a success, and even those who were defeated forgot their own loss in rejoicing over the display that Puritan had made. Boston was delighted, and all are looking forward confidently to the trial races at New York.

COLUMBIA Y. C. REGATTA.

ON June 30 the Columbia Y. C., of New York sailed their 18th annual regatta, the course being from their club house, foot of 86th street, to a stakeboat anchored off 125th street, thence over to another off Bulls' Head Ferry, across to the club house on a direct line, back to Bulls' Head Ferry, to and around a stakeboat at 67th street, and thence home to the starting line, and over the same again; distance 14 miles. The smaller boats sailed but once around. The wind was fresh from N.W. with a flood tide when the start was made at 11:31. Seventeen boats started as follows, the open boats being held for 5min. after the cabin boats:

Julian	11 31 14	Ruth	11 38 14
Flirt	11 33 09	Eldiva	11 38 24
Clarita	11 36 33	Minnie Kine	11 38 32
Mystic	11 36 55	Spray	11 38 35
Henry Gray	11 37 12	Gypsy	11 39 04
Anna Belle	11 37 19	Henry Fisher	11 39 16
Yolande	11 37 36	Martha M	11 40 13
Laura	11 38 49	Hallie	11 42 02
Daisy W	11 37 52		

The first round was completed as follows:

Henry Gray	12 45 25	Yolande	1 00 04
Julian	12 46 28	Daisy	1 01 02
Clarita	12 50 34	Ruth	1 02 46
Martha M	12 51 36	Eldiva	1 03 56
Mystic	12 54 50	Anna Bell	1 04 17

The times of the race were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS A—CABIN YACHTS.				
Clarita	11 39 23	2 34 48	2 55 25	2 48 25
Ruth	11 38 14	3 06 28	3 28 14	3 25 14
Eldiva	11 38 24	3 20 07	3 41 45	3 32 43
CLASS B—CABIN YACHTS.				
Julian	11 31 14	2 35 42	3 04 28	3 04 23
Flirt	11 33 09	Did not finish.		
CLASS C—OPEN YACHTS.				
Henry Gray	11 37 13	2 07 00	2 29 48	2 29 48
Martha M	11 40 13	2 16 34	2 36 30	2 34 21
Mystic	11 36 55	2 37 35	3 00 40	2 54 28
Yolande	11 37 36	2 50 14	3 12 38	3 03 38
Daisy	11 37 52	2 52 45	3 14 53	3 08 53
CLASS D—OPEN YACHTS.				
Henry Fisher	11 39 16	3 50 30	4 11 14	4 10 29
Anna Belle	11 37 19	Did not finish.		
Minnie Kine	11 38 32	Did not finish.		
Laura	11 37 04	Did not finish.		
CLASS E—OPEN YACHTS.				
Gypsy	11 39 04	1 18 41	1 39 37	1 39 29½
Spray	11 38 35	1 26 22	1 47 47	1 47 47
Hallie	11 52 02	Did not finish.		

The winners are Clarita, Julian, Henry Gray, Henry Fisher and Gypsy. The pennant for best elapsed time was won by Clarita. The time allowance was 1½m. per foot. The judges were: Capt. R. C. Coffin, Commodore A. J. Pyne and A. Lichtenstein. The Regatta Committee were: W. J. Greacen, Charles Dietz, George W. Pinchbeck and A. Herbert Varley.

AMERICAN Y. C. REGATTA AND CRUISE.

THE American Y. C. will start on their second annual cruise on July 16, all the yachts assembling at Larchmont on July 15, and starting on a race the next day, the course being from off Larchmont, around the light house off Stratford, to abreast the Pequot House Pier, New London. The following is the classification:

First class. All exceeding 150ft. on waterline.
Second class. All between 85ft. and 150ft. length on waterline.
Third class. All 85ft. or under length on waterline.

Only yachts fitted with boilers, allowed by Government Inspection to carry a working pressure not to exceed one hundred and twenty-five pounds per square inch, will be eligible for competition in the three above classes.

Fourth class. All yachts fitted with boilers allowed by Government Inspection to carry a working pressure exceeding one hundred and twenty-five pounds per square inch.

Two or more yachts starting in a class will be necessary to make a race. Should there not be a sufficient number of entries in any one class to make a race, the Committee reserves the right to unite any two classes.

The time allowance for the first, second and third classes, is that proposed and submitted to the club by Chas. E. Emery, Ph. D., based on the rule that the speed of a yacht in knots per hour should equal two and seven-tenths times the cube root of the length of the yacht, in feet, on the waterline.

The fourth class will be decided by the rule for time allowance, submitted by Chief Engineer B. F. Isherwood, U. S. N. "The speeds in knots per hour divided by the cube root of the length (on the waterline) of the yachts respectively, the quotients will represent relatively the merits of the different yachts."

A fifth prize is offered for competition to all yachts irrespective of size—fitted with tubular boilers—under a time allowance tabulated and arranged according to speeds actually attained by steam yachts 50ft. and upwards in length on waterline, and is suggested by Mr. F. S. Kinney, of this city.

A sixth prize is offered to all yachts, irrespective of size or type of boiler, under the Lundborg formula for time allowance. Owners of yachts to compete under this formula will furnish the chairman of the regatta committee, on or before Monday, the 13th of July next, at 1 P. M., with the name of yacht, number with diameter and stroke of steam cylinders, point of cutting off, mean pressure (by card if possible) in each cylinder when developing greatest power, (if mean pressure in cylinders cannot be given by card, state highest boiler pressure, number of revolutions and length of cut-off). Mean pitch of propeller wheel, length of vessel on waterline, greatest beam on waterline, and mean draft in racing trim.

A seventh prize will be awarded to the yacht making the shortest time over the course, without reference to allowance of time.

Two cups will be given to the winning steam yachts or launches of 50ft. length on waterline or less, in the run from New London to Shelter Island, to take place on Friday, 17th of July, open to all yachts or launches not exceeding the length named; one cup to winning yacht or launch with tubular boiler and one to winning yacht or launch with other type of boiler.

On the 17th there will also be a rowing regatta for boats of the yachts of the club.

All owners of steam yachts are invited to enter and compete for the prizes.

Owners of yachts desiring to enter for competition in the above races, are required to notify the chairman of the regatta committee (Geo. W. Hall, 115 Broadway) on or before Monday, the 13th July next, at 1 P. M., at which time the entries will close, with the name of yacht, length on waterline, type of boiler, pressure allowed by certificate, and also with a copy of private signal, provided it is not already furnished. A steamer will be provided for the accommodation of members and guests.

The regatta committee are Messrs. George W. Hall, Thomas Manning, Richard G. Murphy, Charles H. T. Collis and J. P. Lockwood.

JERSEY CITY Y. C. ANNUAL REGATTA.

THE Jersey City Y. C. sailed their twenty-seventh annual regatta on June 25, over a course from Bedloe's Island down the bay and return. The fleet was divided into six classes: Class A, schooners, 40ft. and over in sailing length. Class B, cabin sloops between 30 and 40ft. Class C, cabin sloops between 20 and 30ft. Class D, open sloops between 20 and 35 ft. Class E, catboats between 20 and 30ft. Class F, catboats between 15 and 20ft. The courses for the various classes were as follows: Classes A, B and C, from off Bedloe's Island down to and around Buoy No. 8½, on Southwest Spit, and return. Class D, down to buoy No. 14 and return, and classes E and F, to Robbins' Reef, turning buoy No. 17 on the port hand and back between Ellis and Bedloe's Island, turning the stakeboat on the port hand—the course to be sailed twice. A prize was also offered for canoes, but as none were present the race for the class was postponed.

Eleven boats started at 11 A. M. with an ebb tide and light southerly wind, light sails being set on all the larger boats. The wind fell by noon to a calm, and left all drifting down. The yachts beat slowly out, Elsie May leading, turning buoy 8½ at 2:00:21, with Myra at 2:13:30 and Wabasso at 2:13:45, no others being timed. The wind was light on the run home, but the tide was running up and helped the yachts on. In class D the A. Forsyth sailed over, turning buoy 14 at 12:55.31. In the smaller classes the Bessie led over the course. The full times were:

	Start.	Finish.	Actual.	Corrected.
CLASS A.				
Beatrice	11 00 25	6 50 00	7 49 35	7 49 36
CLASS B.				
Myra	11 01 20	5 42 45	6 41 25	6 41 25
Modesty	10 59 00	6 20 30	7 21 30	7 19 15
Elsie May	10 59 30	5 09 55	6 10 25	6 03 51
CLASS C.				
Lidee	10 59 05	6 34 00	7 34 55	7 34 55
Wabasso	10 58 45	5 25 45	6 26 00	6 25 15
Eleanor	11 00 00	Not timed.		
CLASS D.				
Alex. Forsyth	10 58 30	3 15 00	4 16 30	4 16 30
CLASS E.				
Bessie	11 05 15	1 32 00	2 26 45	2 26 45
Jessie G	11 03 35	1 52 30	2 48 55	2 41 41
CLASS F.				
Annie Forsyth	10 59 45	2 09 00	3 09 15	3 09 15

Beatrice, Elsie May, Wabasso, Alex. Forsyth, Bessie and Annie Forsyth win in their classes. A protest was entered by Jessie G. against Bessie for fouling a mark, but was not decided. The judges were J. A. Hilton, A. P. Ball and J. T. Roberts.

LARCHMONT Y. C. ANNUAL REGATTA, JULY 4.

OF late years the regatta of the Larchmont Y. C. on the Fourth of July has come to be as much a fixture in the yachtsman's calendar as regatta week in June or Newport week in August, and each year the turnout is more brilliant and the entries fuller in all classes. This year the presence of the Seawanhaka fleet added still further to the entries as well as to the display. A number of yachts came in on Friday night, and others towed up on Saturday morning. Foremost among the craft at anchor was the new iron sloop Priscilla, just off the dry dock, fairly dwarfing by her proportions Mischief, anchored alongside. Columbia was at anchor gaily decked, and Madeline sailed over with the fleet, Bedouin being under way also. Of steamers there were a number present—Aida, Lurline, Orienta, Vedette, Midget, Radha, Edith, Mab, Sinbad, Ollie, Venture, Adelante and Viola, with a sprinkling of shellboats, catamarans and other craft.

The entries were divided into 9 classes, as follows: A, schooners of 75ft. sailing length (waterline plus ½ overhang); I., sloops, cutters and yawls of 42 and under 55ft.; II., ditto, 30 and under 42ft.; III., ditto, 25 and under 30ft.; IV., ditto, under 25ft.; V., jib and mainsail open boats, 23ft. and over; VI., do. under 23ft.; VII., catboats of 23ft. or over; VIII., ditto, under 23ft. Classes A. I. and II. sailed over a 22-mile course, from the club house around a red buoy off Execution Light, thence around a buoy off Matinicock Point, thence around a boat off Captain's Island and home past the red buoy off Execution. The smaller boats sailed over the same course, except that on turning Matinicock buoy they made for a buoy off Constable's Point, and thence home by way of Execution, a distance of 17 miles.

The prizes were $100 each for classes A and B, $75 for classes C, I. and II., $60 for Class III., $50 for classes IV. and V., and $35 for each of the others. In Class C the Connor Cup was offered, but no one started, Ileen not arriving in time from Boston. In classes I. and II. the Gould Cup was offered for club yachts only, and in classes C, I. and II., Mr. W. W. Russell offered a prize for best elapsed time. The limit of time was 8 hours for all classes, yachts to be steered by amateurs, and professionals only allowed in crews of cabin yachts. One man was allowed for every 5ft. of length on deck, and ballast could only be shifted in the open boats. The following yachts were entered:

Class A.—Speranza, H. W. Collender; Clio, E. E. Chase.

Class I.—Isis, A. C. Canfield; Athlon, J. C. Barron; Thistle, Wm. Zeigler; Eclipse, E. H. Wales; Annie, J. M. Wilson; Daphne, J. R. Maxwell; Vixen, F. C. Lawrance; Maggie, W. A. W. Stewart; Fanita, Geo. J. Gould.

Class II.—Crocodile, J. G. Prague; Hope, J. K. Benedict; Schemer, A. Monroe; Happy Thought, Geo. M. Graves.

Class III.—Adelina; Wake; Nymph, F. W. Flint; Stranger, J. N. Macauley; Vixen, Allan Seaman.

Class IV.—Nora, G. M. Barretto; Brenda, F. M. Scott; Ancto, H. W. Eaton; Gannet, Oliver Adams; Mist; Dart, A. H. Buck; Kathie.

Class V.—Mariota, W. I. Van Wart; Ananda, Thos. Mott; Clara, S. H. Furman.

Class VI.—Lively, W. F. Brown; Zoe, O. Sanderson.

Class VII.—Jennie.

Class VIII.—Cruiser, A. B. Alley; Zelda; Skibbereen, A. E. Rendle.

The new sloop Polly was also entered, but she had hauled on the beach to scrub and could not be floated off.

The Sylvan Glen carried the guests and members, and the tug Wm. Goodwin that carried the judges was provided with four steam whistles. Last year, owing to a confusion of signals, the entire fleet was handicapped, but this year a new system of starting has been devised, a large white ball being hoisted as a signal. All through the early morning there was no wind, but at about 11 a light southerly breeze sprang up, and at 11:53 the fleet was sent away with a good start, all going over on the port tack within the 10min. limit. One boat, the Skibbereen, turned the stakeboat the wrong way and fouled several yachts in going back, but no protests were made.

The wind was light, and the first leg to Execution was a beat, in which Crocodile led, dropping her jibtopsail for the reach to Matinicock Buoy. Daphne continued to carry hers, while Vixen, third boat, broke out hers as she turned. Maggie came next with jibtopsail set and staysail lowered, followed by Stranger, from New Haven; then Thistle, Fanita and Hope, all sending up balloon jibtopsails, as did Eclipse and Isis, the former taking in her jib. Clio showed a big maintopmast staysail, and Speranza, after turning, sent up a balloon jibtopsail. The times at Execution were:

Crocodile	12 47 00	Cruiser	12 47 30
Vixen	12 37 23	Schemer	12 47 54
Maggie	12 39 09	Clio	12 48 24
Stranger	12 39 35	Athlon	12 49 18
Thistle	12 40 00	Annie	12 49 40
Fanita	12 40 55	Ananda	12 50 29
Hope	12 42 10	Zelda	12 51 13
Eclipse	12 43 37	Happy Thought	12 52 00
Isis	12 44 16	Jennie	12 54 59
Mariota	12 44 50	Speranza	12 56 21
Vixen	12 45 05	Nymph	12 57 25
Clara	12 46 15		

Maggie dropped her spinnaker boom to starboard at 12:45, as the wind came more from the west, and others soon followed. At 1:30 Eclipse parted her jibtopsail halliards and her balloon jib went into the water under her lee bow. It was soon gathered on board and the damage repaired, but she lost some ground by the accident. The order was changed somewhat by the time Matinicock Buoy was reached, as shown by the following table:

Crocodile	1 37 20	Speranza	1 42 20
Daphne	1 37 57	Stranger	1 42 41
Fanita	1 38 25	Annie	1 43 20
Vixen	1 38 53	Mariota	1 43 36
Isis	1 39 22	Ananda	1 47 30
Thistle	1 39 38	Happy Thought	1 48 00
Eclipse	1 39 54	Schemer	1 48 00
Clio	1 40 57	Zoe	1 49 30
Maggie	1 41 45	Vixen	1 50 30
Athlon	1 41 56	Clara	1 51 30
Hope	1 42 05	Cruiser	1 52 35

Isis and Thistle came together at the turn and a foul was

barely avoided. All jibed and ran off with booms to starboard, soon setting spinnakers to port while the wind freshened. Here the open boats hauled up for Constable Point. Zoe jibed almost on top of the buoy, but did not round. Happy Thought and Schemer turned together, the former being very slow in getting her topmast backstay aft, nearly losing the stick, while she was steered very wildly for some time, losing her place beside Schemer.

The three sloops Priscilla, Mischief and Arrow, were under sail near Matinicock as the fleet came down, but the reserved and maidenly Priscilla evidently did not court observation, as she started sheet and ran off as the fleet approached. A thunder storm had been threatening for some time, and now the lightning was seen over the land and a mass of black clouds in the west, ending in a little rain, but nothing serious came of it. Against the black background the fleet was spread out, mainsails and spinnakers standing out in vivid relief, making a beautiful sight from the rear as the Goodwin followed. On the run over the fleet was shaken into a new order, turning as follows:

Vixen	2 9 35	Athlon	2 10 47
Daphne	2 9 40	Isis	2 10 51
Fanita	2 10 30	Sperauza	2 11 22
Eclipse	2 10 35	Clio	2 13 42
Thistle	2 10 41	Schemer	2 14 45
Crocodile	2 10 43	Happy Thought	2 14 45

Topsails were doused as they came on the wind, Vixen and Fanita holding their port tacks, while Daphne broke with them and laid off shore, Vixen soon following. The wind came fresher and made the beat an interesting one, the main point being the fight of the three leaders. Part of the fleet stood off shore, but the two black sloops worked short tacks close in, each doing her best. Fanita finally made a reach in and struck a breeze that sent her well off to windward of Vixen on the next tack, and put her ahead of the fleet. No time was taken at Execution, and from that point the race lost all interest. One by one the yachts straggled in before a very light breeze, their times being as follows:

CLASS A—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Speranza	11 21	4 42 32	4 58 11	4 58 11
Clio	11 38 55	4 54 42	5 15 47	5 10 13½

CLASS I.—CABIN SLOOPS.

Isis	11 42 24	4 56 20	5 13 56	5 13 56
Athlon	11 44 17	4 45 55	5 01 38	5 01 38
Thistle	11 40 19	Did not go the course.		
Eclipse	11 41 49	4 40 05	4 58 16	4 55 36
Anule	11 43 13	5 01 00	5 17 47	5 13 10
Daphne	11 41 16	4 22 20	4 41 04	4 36 29
Vixen	11 44 25	4 25 36	4 41 11	4 35 15
Maggie	11 40 12	5 15 59	5 35 45	5 29 49
Fanita	11 43 48	3 59 11	4 15 23	4 09 10

CLASS II.—CABIN SLOOPS.

Crocodile	11 39 16	4 35 18	4 56 02	4 54 54
Hope	11 42 32	4 59 14	5 16 42	5 14 07
Schemer	11 45 00	4 54 10	5 09 10	5 06 07
Happy Thought	11 43 48	5 01 55	5 18 07	5 11 14

CLASS III.—CABIN SLOOPS.

Skibbereen	11 44 17			

Speranza wins $100, Fanita $75 and the Gould Cup, besides the Russell prize for best elapsed time, Crocodile wins $75, Stranger $60, Brenda $50, Mariota $50, Jennie and Cruiser each $35. The regatta committee, Messrs. Greacen, Fisher and Bartow, managed everything successfully, and the tug followed closely over the course, giving a good view of the race. Those on the club steamer were less fortunate, as at Execution Light it was found that the supply of ice-cream was exhausted, and as all wanted ice cream while few, of course, cared to see the race, the committee in charge heroically sacrificed the interests of the latter and put back to port for a fresh supply, after which no attempt was made to follow the race. As the wind was the Sylvan Glen could have run through the lee of the fleet over all the course, treating the spectators to a really fine race down to the last stretch, but then they could not have had any ice cream. Saturday night was given up to fire works and a general jollification of the many yachtsmen assembled, and at its end the Larchmont Y. C. were able to add another to their list of successful regattas.

CITY OF LYNN REGATTA, JULY 4.

THE city regatta at Lynn was under the management of the Lynn and West Lynn yacht clubs, from which the judges—N. T. Davidson, B. W. Rowell and J. W. Haines—were chosen, the start being off the Lynn Y. C. house. The classes were: 1, 20ft. and not over 27; 2, 17ft. and under 20; 3, 12ft. and under 17; 4, under 12ft. The prizes were $35, $20, $10 and $5. The first and second classes sailed over the following course: From judges' boat, off club house, to flagboat off Point of Pines, leaving it on port; thence to Western Lobster Rocks buoy, leaving it on port; thence to start and repeat, ten miles. The third and fourth classes sailed over a course of three miles. From judges' boat to flagboat off Point of Pines, leaving it on port; thence to flagboat off Sand Point, leaving it on port; thence to start. The wind was light when the race started, continuing so to the finish. The classes were started ten minutes apart. The times are;

FIRST CLASS.

	Actual.	Corrected.
David Crockett, H. Pitman, Winthrop	1 57 15	1 21 09
Thrasher, G. G. Garroway, Hull	1 53 15	1 15 44
Jessie, O. Pecker, Lynn	1 58 00	1 20 26
Jennie L., C. H. Lockhart	1 54 30	1 20 55
Pearl, J. F. Lee, Lynn	1 56 03	1 21 10
Nora, J. McGloughlin, Lynn	1 58 45	1 21 04
Witch, Crowninshield, Beverly	1 53 10	1 17 31
Awilda, Farrel & Rich, South Boston	1 45 00	1 12 30
Expert, L. Whitcomb, Beverly	1 55 00	1 20 12
Greta, W. L. Hill, Dorchester	1 49 00	1 14 06
Planchette, J. Crossin, Haverhill	2 00 10	1 23 11
Nellie J. L. E. Bates, Lynn	2 02 00	1 23 25
Bessie Ethel, Gillet, Newburyport	1 47 30	1 15 42

Second Class—Ethel, O. Healy, W. Lynn; Inez, Goodridge Brothers, W. L.; Twilight, B. W. Rowell, W. L.; Mattie, E. S. Breed, W. L.; Water Lily, W. Burrill, W. L.; Maud, W. Warren, W. L.; Alice, L. P. Lynch, W. L.; Crest, C. H. Gordon, L.; Daisy D., W. Marden, L.; Georgie, W. B. and F. E. Newhall, E.; Nymph, W. A. Estes, L.; Sadie, F. Taylor, L.; Vesper, R. Benner, L.; Actress, V. Russel, L.; Rattlesnake, W. H. Alley, W. L.; Hester, W. H. Dennen, Gloucester; Fancy L. H. Spaulding, Haverhill; Eleanor, Commodore Glines, Haverhill; Spider, W. Abbott, Nahant; Crusader, A. Wilson, Hull; Pet, J. W. McFarlane, Quincy. Crusader wins first prize, $30, Pet second, $15, Hestia third, $10, Alice fourth, $5.

THIRD CLASS.

Idler, W. B. Floyd, Winthrop	2 04 45	1 33 10	
Rattlesnake, W. H. Alley, W. Lynn	2 02 05	1 23 09	
Inez, Goodridge Bros., W. Lynn	2 11 00	1 30 15

Fancy, L. H. Spaulding, Haverhill	2 02 30	1 23 15	

Mischief of Winthrop, first prize, $20; Flirt of Winthrop, $15; Crescent of West Lynn, $10; Elsie, Quincy, $5.

FOURTH CLASS.

Brunette, So. Boston	2 00 00	0 42 33	
Glide, Winthrop	Not taken.		
Wizard, South Boston	1 51 00	0 35 22	
Swampscott, Lynn	1 58 00	0 41 04	
A. B. C., West Lynn	1 38 05	0 23 33	
Spray, West Lynn	1 39 00	0 24 13	
Tot, South Boston	1 53 30	0 27 03	
Grace, South Boston	1 57 00	0 40 33	
Dot, Winthrop	1 55 45	0 40 16	
Zenith, West Lynn	1 54 30	0 39 26	
Nellie, West Lynn	1 52 00	0 37 00	
Ella L., West Lynn	1 55 00	0 40 21	

Spray took first prize, $15; Clyde second prize, $10; Wizard third prize, $7; Dot fourth prize, $3. Protests were put in against the Bessie, Ethel and the A. B. C. Emma, Towling, capsized, and Expert lost her topmast.

BOSTON CITY REGATTA, JULY 4.

THE great event of the season among the many small craft about Boston is the City Regatta on July 4 off City Point, and this year there was a large turnout, as usual. Seventy yachts from 40ft. to 16ft. in length started, many of the entries not coming to the line.

The classes were: First class sloops and schooners, measuring 40ft. and upward; second class, centerboard and keel yachts, measuring 27ft. and less than 40ft.; third class, centerboard and keel yachts, measuring 20ft. and less than 27ft.; fourth class, centerboard yachts, measuring 18ft. and less than 20, and all keel yachts under 20ft.; fifth class, all centerboard yachts less than 18ft.

The courses were: Second class, distance fourteen miles—From judges' boat down west way, leaving Thompson's and Rainsford's islands on the starboard, Long and George's islands and Point Alderton buoy, No. 3, on port, and back through the Narrows, leaving Fort Warren, Gallop's Island and Nix's Mate buoys on the port, buoy No. 9, Upper Middle, on the port, to the judges' boat, passing between it and the flagboat.

Third class, distance ten miles—From judges' boat to Cow Pasture buoy No. 6, off the pumping station, leaving it on the port, to buoy No. 7, off Fort Independence, leaving it on the starboard, to Sculpin Ledge buoy, leaving it on the port, to buoy No. 6, Lower Middle, leaving it on the port, to buoy No. 9, Upper Middle, leaving it on the port, passing between judges' boat and flagboat.

Fourth and fifth classes, distance 8 miles.—From judges' boat to Cow Pasture buoy No. 6 (off pumping station), leaving it on the port, to flagboat, southeast, leaving it on the port, leaving buoy No. 7, off Fort Independence, on starboard, buoy No. 6, lower middle, on port, buoy No. 9, upper middle, on port, passing between judges' boat and flagboat.

The officers in charge were: Committee—Patrick Donovan, Chairman; Charles V. Whitten, James H. Nugent, Charles W. Whitcomb, Frank E. Brigham, John H. Lee, J. H. Gallagher, Samuel Kelly. Judges—M. J. Kiley, Chairman, William Morris, Charles F. Loring, Chester Guild, Jr., Francis W. Pray, John A. McLaughlin. The latter were on the tug W. H. Clark. Starting at 1 P. M. with a light east wind, Nimbus led, with Shadow second, Magic, Siren, Violet, Fiona, Ino, Ægir. Shadow at last passed Nimbus and came in ahead. Banneret won as she pleased in her class, and Niobe won in hers after a close fight with Joker. Queen Mab and Erin entered a protest against the other. Maggie lost a man overboard, but picked him up, losing some time in doing so.

Fifth class centerboards, first, $25, Flora Lee; second, $15, Wildfire; third, $10, Spider; fourth, $5, Imogen.

YACHTING NOTES ON THE PACIFIC.—The Chispa is on the ways. Her owner, I. Gutte, has been confined to the house for several days, and the yacht is trying another fouling paint, the last venture being a failure. The Halcyon has been up the Sacramento River for several days. Doubtless she will go to Monterey with the rest of the Pacific Y. C. fleet. The Nellie, Aggie and Fleur de Lis will leave for Monterey in a day or two, and will not return until after the 4th. There will, however, be three big keel boats—the Casca, Lurline and Halcyon—which will race on pretty even terms. The San Francisco Y. C. has finally decided to go to Robinson's Ranch on the Fourth of July cruise. The yachts will leave here on the afternoon of the 3d and proceed to Martinez, where they will remain over night. They will leave there at 6 A. M. of the 4th for New York Slough, where they will remain until Sunday morning. When the tide serves them they will beat their way back to San Francisco. The 18ft. sloop Alice arrived in Mission Bay last Saturday, having on board Prof. Eckman, wife and two sons. She left here over a week ago on a cruise up the Sacramento River. The trip was a most pleasant one to all on board, notwithstanding the smallness of the craft. On her return trip a gale was encountered in San Pueblo Bay, but the little "flyer" proved a good sea boat, and weathered it gallantly.—STARBOARD WATCH.

BEVERLY Y. C.

NINETY-SEVENTH REGATTA, MONUMENT BEACH, JULY 3.

THE open catboat sweepstakes was sailed to-day in a very strong S.W. wind, most of the boats carrying two reefs. Although the entry was not large, it included all the cracks on the bay, and was very close and interesting. In the first class there were the old champion Mattie; Myrtle, the fastest of the Monument Beach boats; Surprise, last year's wonder; Alice, built this year by same builder as Surprise expressly to beat her; Juno, a large, new boat, built by Washburn; Hard Luck, another new one from Mattapoisett; Violet and Myth. The latter is a new boat built by Jenney for Mr. Parsons purposely to beat Surprise, and is in fact a copy of Surprise, even to her crooked mast, but with a little more beam. In the second class only the Nellie W. and the old favorite Good Luck appeared. In the third class the old champion Dolly met Scud and Mertie, two new ones built to beat her.

Good Luck and Dolly had it all their own way, but in the large class the race was very close and exciting. Jumbo, Violet and Hard Luck soon found they had all they wanted and withdrew, and the fight soon resolved itself into a triangular duel between Surprise and her two copies, in which Myth finally won by 25sec., and Alice, though second on actual time, lost second place to Surprise on allowance. Surprise lost some time over a broken sheet, but Myth lost fully as much by mistaking her course for a few minutes.

FIRST CLASS.

	Sailing Length.	Actual.	Corrected.
Myth, Thos. Parsons, B. Y. C.	27.4	1 57 01	1 46 34
Alice, Sam'l Allyn, Galveston, Texas	28.2½	1 57 10	1 47 40
Surprise, J. M. Codman, B. Y. C.	27.3	1 57 32	1 46 59
Mattie, Vice-Com. Stockton, B. Y. C.	28.10	1 59 20	1 50 21
Myrtle, G. E. Phinney, Mon. Beach	27.4	2 03 20	1 52 53
Violet, G. H. Richards, et al, B. Y. C	27.6	Withdrawn.	
Jumbo, G. H. Lyman, Jr., B. Y. C.	29.10 1-6	Withdrawn.	
Hard Luck, R. B. Heller, Mattapois't	29.5¾	Withdrawn.	

SECOND CLASS.

Good Luck, A. M. Phillips, Dighton	29 8¼	2 08 47	1 55 23
Nellie W., J. F. Monahan, Wareham	24.11½	2 10 03	1 56 58

THIRD CLASS.

Dolly, A. S. Hardy, B. Y. C.	22.9	1 31 48	1 20 54
Mertie, A. F. Crowell, Woods Holl	26.6½	1 35 27	1 25 24
Scud, N. H. Emmons, B. Y. C.	22.6½	1 40 01	1 28 53

Course for first and second classes—From judges' yacht off Tobey Island buoy No. 2, leaving B buoy No. 3 on starboard, Bird Island buoy No. 13, Scraggy Neck buoy No. 10 and B buoy No. 3 on port and return, 11 miles.

Course for third class—Leaving B buoy No. 3 on starboard, Dry Ledge buoy No. 12, Abral's Ledge buoy No. 1 and B buoy No. 3 on port, and return, 7½ miles. Judges, J. Arthur Beebe, A. H. Hardy, W. Lloyd Jeffries; judges' yacht, Valhalla, B. Y. C.

NINETY-EIGHTH REGATTA, MONUMENT BEACH, JULY 4.

The first race for Buzzard's Bay pennants was sailed July 4 in a good wholesail breeze. Sloops are somewhat scarce on the bay, and Atalanta had a walk-over. Dolly and Lestris had an easy time of it in their classes; but in the big cat class the race was very interesting, as Myth again met Surprise, who was more than anxious to retrieve her defeat of the 3d. In the lighter wind Surprise proved a better boat than Mr. Parsons's new one; the extra beam which helped her in a two-reef breeze was a detriment under wholesail, and Surprise handled her easily. The vice-commodore also, sailing very well, showed her a clean pair of heels, and even Violet rubbed her hard till her gaff gave way, and she had to give up.

FIRST CLASS.

Surprise, J. M. Codman	2 02 23	1 51 49
Mattie, Vice-Com. Stockton	2 06 26	1 59 27
Myth, Thos. Parsons	2 11 23	2 00 56
Violet, G. H. Richards	Disabled.	

SLOOP.

Atalanta, I. R. Thomas	2 02 34	1 54 33

THIRD CLASS.

Lestris, Joshua Crane	2 20 15	2 06 13
Flirt, G. H. Lyman, Jr	2 23 16	2 10 28

FOURTH CLASS.

Dolly, A. S. Hardy	1 38 24	1 27 30
Wink, Moses Williams, Jr	1 47 50	1 35 28

Courses reverse of those of 3d. Atalanta, Surprise, Dolly and Lestris take pennants and first prizes, Mattie second prize. Judges, W. L. Jeffries, A. H. Hardy. Judges' yacht, Maude, B. Y. C.

CRUISE OF THE LUCILLE.

THE steam yacht Lucille, Mr. Chas. Kellogg's new Herreshoff No. 122, left Seventy-second street, North River, eastward bound, for a cruise of two weeks on June 14.

A beautiful morning of bright sunshine which tempered a rather cool breeze from the southwest, made sitting on deck and watching the other craft passing very pleasant. Vessels of all kinds covered the water, the excursion steamers and barges, with flags and streamers flying, were lying at the various piers, while pleasure seekers were crowding on board. The Battery Park was filling up with Sunday morning loungers as we passed, and on the seats the regular park tulips looked as comfortable and permanent as usual.

On past the Barge Office and up East River we steamed, and under the great bridge—which looked like some mighty cobweb stretched across the sky—dodging ferryboats and craft of all sizes crossing and recrossing our course, until Blackwell's Island was passed; then turning into the eastern channel of Hell Gate, we threaded the eddies and currents of that dangerous locality, and out upon the broad, placid bosom of the Sound.

We passed Middle Ground light at 1:22 P. M., and when nearing Falkner's Island a school of porpoises was sighted just off the starboard bow, and as we were running very rapidly and quietly, we were close upon them before they noticed us. They were having a fine time, rolling and plunging through the water, their curved backs and sides glistening in the sun, but our approach was soon noticed and they sank beneath the surface. Cornfield Point was abeam at 4:07 P. M., and at 5:20 we entered the beautiful harbor of New London. Off the Pequot House lay the schooner yacht Æolus, and near by her the steam yacht Electra, but we kept on up the harbor and came to anchor off Ft. Trumbull. While waiting for supper the Master's Mate took the dingy and rowed up along the rocks in front of the fort, where a number of people were fishing, with the intention of following their example the next morning should their catch prove inviting. When he found all they had to show was about the size he generally uses for bass bait he soon came back to the yacht. The salt air had given us keen appetites for supper, and when the call came there was a scramble for the cabin, and the rations disappeared in a way that would not have answered at all in the presence of our much respected landlady at home.

When we had lighted our cigars on deck the Commodore announced that he was going ashore to take a walk and invited the rest to accompany him and see the city. We wandered up the broad winding streets and joined the groups of people strolling under the big elms which lined the walks on all sides. It was the hour for evening worship, and high above the beautiful arching elms and blossom-laden horsechestnuts the solemn toned bells chimed in their spires. Vividly came to mind the beautiful lines in "Lucille" we had been reading:

"Through the calm crystal air, faint and far as she spoke,
A clear chilly chime from a church turret broke.
And the sound of her voice with the sound of the bell
On his ear where he kneel'd, softly, soothingly fell,"

Out from palatial mansions with sloping green lawns and grounds dotted with rare and beautiful foliage, as well as from pretty home-like cottages of more modest mien, came the worshipers, filling the broad sidewalks beneath the grand old trees as each household group wended its way toward the house of God, whether it was to the simple worship in the meeting house of some humble sect of meagre numbers, or to the vast pile of imposing stone with vaulted roof and crowded aisles, through whose arching doorways we heard the great organ's solemn peal—the one object on which all seemed bent was to bow the head and bend the knee to the Great Being who knoweth all hearts well.

Back again through the dim twilight over the silent water, and once more on the deck of the Lucille, we sat enjoying the scene. The lights of the various craft dotted the harbor, while down below Fort Trumbull the rigging of the yacht Electra hung with myriads of electric lights ablaze with incandescent fire, seemed like some new constellation of stars vieing in brilliancy with the countless thousands above and around them, while the silver thread of the young moon sank in the west over the now silent city. A night long to be remembered, and long we sat enjoying our cigars, while the "perfumed smoke arose like incense on the air," until regretfully the time came to seek our berths below.

We left New London Harbor at 7:30 A. M., with wind still from the S. W., and were soon cutting merrily along through the blue waters of the Sound, and at 11:30 the villas of Newport scattered over the rocky shore at the entrance to Narragansett Bay came into view. As we passed up into the harbor near Goat Island, a Government torpedo boat was maneuvering and exercising the crew in exploding torpedoes. They passed quite near us in a small steam launch with a long spar run out over the bow and down into the water in front, evidently steering for a large cask anchored a short distance abeam of us. When the bow of the launch came within a few yards of the cask, a dull, muffled explosion was heard, and instantly a mountain

of water and white spray shot up high in air and sank back again, sending the heavy swells rolling out in every direction.

We did not land at Newport, but kept on up the bay, and at 12:30 P. M. reached Bristol Harbor, and made fast to the Herreshoffs Company's pier.

Some slight changes in the fittings on board being deemed desirable, while the workmen were engaged upon it we passed the time pleasantly in inspecting the new steam yacht Ladoga, which had been launched a few hours before our arrival, and in looking over again the famous yacht Stiletto, which lay at her moorings near by. The Ladoga is a fine yacht—the same model as the Lucile, but a few feet longer than the latter—and will, no doubt, prove a most comforable vessel, though not particularly speedy. A novel feature of her interior is a tunnel from the galley passing through the engine and boiler rooms to the cabin. Through the tunnel a small track is laid, on which runs a car to convey the food, dishes, etc., back and forth, which must prove a very handy arrangement.

After supper the Commodore and the Master's Mate started up town to look up some luxuries for the table and at same time interview that very necessary personage, the local barber, as their chins demanded immediate attention. After tacking back and forth across the street to inspect the surroundings and background of several calico poles of red, white and blue stripes, we entered what seemed to be the neatest-looking shop in the town. A tall, suave and solemn-looking personage was just putting the finishing touches upon a customer as we entered. He glanced out of the window, whisked off the gingham, bib or apron, and without looking at us, said "shave" interrogatively. The Commodore sank modestly in the chair, and the solemn person tucked the apron under his chin apparently indifferent whether it was to be as Adonis puts it, "with or without," "up or down."

When he had finished he looked out the window again, whipped off the bib and said, "Next," and the Master's Mate settled himself for a scrape, when with an open razor between his fingers and the soap brush in the same hand he fluttered away, and while the brush flew around, down and up, the razor blade danced and glistened in all directions in dangerous proximity to the Mester's Mate's nose, who was thankful enough to get out of that chair without being sliced.

After escaping from that solemn barber whose visage would make his fortune in the undertaking business, we visited the fish market and bought some nice fresh fish, then wandered back to the pier and aboard the Lucille, where, after a cigar on deck, we turned in below.

THE MASTER'S MATE.

GREAT HEAD Y. C., JULY 4.—The Great Head Y. C., of Winthrop sailed their second regatta on July 4, over the following courses: First class, from judges' boat near club house to buoy No. 6, Lower Middle, leaving it on starboard, thence to black buoy No. 5, off Jeffries' Point, East Boston, leaving it on starboard, thence to judges' boat, passing between judges' boat and flag boat, 7 miles. Second class, from judges' boat to buoy No. 6, Lower Middle, leaving it on starboard, thence around Apple Island, leaving it on starboard, thence to judges' boat, passing between judges' boat and flag boat, 5 miles. The 11 yachts were divided into two classes, 16ft. and under 22ft., and under 16ft. Herreshoff's tables were used, the measurement being waterline plus ½ overhang aft. There was little wind at the start at 3:40 P. M. when Wachusett went over, followed by Elf, Spray Bird, Clytie, Uno, Gypsy, Edith, Clio and Cadet. Elf took the lead, while a number of the yachts were becalmed under Thompson's Island, some giving up entirely.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Cadet, H. M. Belcher	17.07	1 46 15	1 16 48
Clio, C. B. Belcher	20.00	1 46 15	1 19 22
Clytie, E. A. Cook	19.11	1 47 30	1 20 32
Gypsy, W. P. Hammet	20.05	1 47 53	1 21 26
Wachusett, G. C. Abbott	18.07	1 51 55	1 23 30

SECOND CLASS.

Elf, H. A. Joslyn	15.09½	1 15 44	0 52 50
Spray Bird, C. H. Harris	14.06	1 16 51	0 52 38

The judges were: Albert E. Prince, H. T. Crocker, W. D. Lombard. Regatta committee—Fred H. Seavey, W. P. Hammatt, H. T. Crocker, W. D. Lombard, Theodore Washburn.

SANDY BAY Y. C., JULY 4.—A number of the yachts entered for this race were unable to reach the start, owing to light winds, and only eight crossed at gun fire, 11:30 A. M. The course was triangular, 8 miles, on Sandy Bay. By noon the wind blew steadily from the south, making a good race. The entries and times were:

		Actual.	Corrected.
Louette	Com. Haskins	1 56 28	1 22 00
Petrel	H. Paul	1 57 42	1 22 06
Kittiwake	Mr. Cunningham	1 56 10	1 22 16
Raldon	Mr. Perkins	1 55 28	1 24 35
Sassacus	Mr. Griffin	2 05 01	1 25 01
Fatinitza	Mr. Norwood	2 05 19	1 28 36
Albion	Mr. Gott	2 32 30	1 52 12

Petrel protests against Louette, on the ground of incorrect measurement.

A CRUISE ON LAKE MICHIGAN.—Chicago, July 4.—The yacht Argo, under the colors of the Cnicago Y. C., cleared from Chicago on Saturday night, June 27. Her course will be through the lakes to Toronto. Mr. A. P. Seymour, editor of the *Living Church* and Secretary of the Chicago Y. C., and the Rev. Thos. Edward Green, pastor of the Eighth Presbyterian Church of Chicago, are the cruisers. As far as Makinaw, Mrs. Green, Dr. Clarke and Miss Fannie Boyd are aboard, returning to the city thence by rail. The Argo is a new boat on these waters, having been built and cruised for four years on the Atlantic coast. She is schooner-rigged, and carries a crew of three with a steward. She has the international code, and may shake her signals to yachtsmen all along shore. She is due again in this harbor about Sept. 1.

HULL Y. C.—The annual review and cruise of the Hull Y. C. will take place on July 11, starting at 9 A. M. The fleet will get under way and pass the flagship, leaving it on starboard hand, and at the second gun at 9:45 all will start for Marblehead Harbor. If the wind serves the fleet will start at once from Marblehead for Gloucester. All signals will be given by the International Code. Hops are announced at the club house for July 9 and 23, Aug. 6 and 20, and Sept. 3 and 17. On the alternate Saturdays other entertainments will be given. A club tender with a man to row has been provided for service between the float and yachts at anchor.

ENGLISH NOTES.—Marguerite, Mr. Foster Connor's 60-tonner, has had her spars reduced....Neptune, Silver Star and Millie, all Class B yawls, have discarded their mizzens and gone into Class C as cutters ....In the Royal Thames channel match of Nore to Dover, on June 12, the Queen's Cup was won by Ulerin, 10 tons, from Wendur, Marguerite, Irex, Galatea, Marjorie, Lorna, Neptune, Queen Mab and Tara. The course was 60 miles, and Ulerin's allowance for Wendur, 125 tons, was 1h. 12m. 1s. Marguerite took second prize and Tara third. Queen Mab, 10 tons, lost third prize only by not crossing properly.

GENESTA, GALATEA AND IREX.—A correspondent in England who is familiar with the leading racers, makes the following comment on the two challengers in a late letter: "You will have two very smart vessels to deal with in Genesta and Galatea; but I would rather have seen Marjorie starting than either of them. She is a perfect wonder to windward in a light breeze, and I suppose your race will be a certain distance to windward and return. Irex was lately out for cleaning here. She is a splendid ship, fair from end to end, all easy lines. She impresses one with a feeling of power, which is all there, as she carries a steadier of over 70 tons on her keel. I would sooner have seen her carry the British flag in New York than Genesta or Galatea, as I believe she is able to give them both a beating."

UTOWANA.—Ill luck seems to attend Com. Connor's yacht, as it is only a few days since she collided with Pier 4, North River, and now she is reported as aground on a rock in New Haven harbor. She was bound up the Connecticut River with her owner and a party on board, and on the night of June 28 anchored off New Haven, running in next morning early. When near the lighthouse she ran on a rock, going at a good speed, sustaining some damage. She was got off and came to New York for docking and repairs.

BRUNHILDE.—On June 29 the Brunhilde, schooner, Mr. J. J. Phelps, sailed from New London for Cowes, on a voyage around the world, having on board besides her owner Messrs. Charles Halsey, Kier Mitchell, Henry Strong, Tuthill Hilliard and Albert Lymington. She will cruise in European waters until winter, then in the Mediterranean, and on by Suez, taking two years to make the circuit of the globe.

GREENWICH Y. C., JUNE 27.—The Greenwich Y. C. sailed its first regatta on June 27, the course being on Long Island Sound, twice around Captain's Island, 14 miles. The wind was light during the entire race. The starters were: Skibbereen, Com. Rendle, G. Y. C.; Jennie, P. S. Chutt; Zelda, H. Asten; Telephone, H. Tyson; Nymph, Mr. Burgen; Adelina, F. A. Hart. Zelda won in 4h. 1m.

AMY.—On July 1 the steam yacht Amy, Mr. E. D. Morgan, arrived in New York Harbor after a voyage of fourteen days, and is now lying off Twenty-fourth street, East River. Amy is commanded by Captain Craven, an American, but has an English crew. Her cruise of last winter from Southampton to the China Seas and return has been already noticed in the FOREST AND STREAM.

YACHTS CHANGING HANDS.—Daisy, sloop, has been sold to Mr. Hugh Boyd, of New York. Ray, schooner, Mr. W. W. Tompkins, has been chartered for the season by Mr. C. A. Cheever, owner of the open boat W. T. Lee. Madcap, sloop, has been bought by Mr. J. D. Barrett, former owner of the Myra; and Listless, sloop, has been bought by Mr. J. C. Mooney.

YACHT RACE AT FALL RIVER.—On June 27 a match was sailed on Mount Hope Bay, over a course of 8 miles to windward and return, in a fresh S.W. wind. The starters were the catboats Annie, G. Hindle, and Una, A. Hibbert, the stakes being $50 a side. Una won, her times being: Elapsed, 2:37:55; corrected, 2:37:55. Annie: Elapsed, 2:50:44; corrected, 2:45:16.

A SCHOONER SWEEPSTAKES.—Boston is experiencing a decided revival in schooner racing, and the rivalry between the various large schooners is at racing heat. To-day a sweepstakes race for $100 a side is to be sailed between Mobican, Gitana, America and Fortuna. The course of 20 miles to windward and return will be laid off Marblehead or Cape Ann.

PHOTOGRAPHS OF PURITAN.—Those who desire photographs of the new Boston yacht can obtain them of Mr. N. L. Stebbins, 521 Washington street, Boston, who secured a number of fine views of her and the other yachts in the E. Y. C. regatta. Mr. Stebbins has also some excellent pictures taken at the New York and New Haven regattas.

YACHT RACES AT CLAYTON.—On July 4 a race for second class yachts was sailed at Clayton, N. Y. Minnie D., of Gananoque, winning first prize, with Laura, of Oswego, second, and Laura, of Kingston, third. A race for steam yachts was won by Jessie W., of Alexandria Bay, making 12 miles in 1h. 6m., beating Jessie Bain, of Clayton.

SEAWANHAKA C. Y. C. CRUISE.—On July 3 the fleet of the S. C. Y. C. assembled, pursuant to order, in Larchmont Harbor for their easterly cruise, several yachts joining the fleet on Saturday. The yachts remained at Larchmont over Sunday (some taking part in Saturday's races) and set sail on Monday morning on the cruise.

CRUISE OF THE CASCO.—Dr. Merritt's schooner Casco, Pacific Y. C., has lately returned from a cruise to Santa Barbara, making the run down, 347 miles, in 48 hours. The Casco has been improved this year by a larger mainsail and new spinnaker. She will be the flagship of the P. Y. C. on their cruise to Santa Cruz on July 4.

ROYAL CANADIAN Y. C.—The club house has been painted and much improved this season. On June 30 the yachts were out for a sail with the ladies of the club on board. On July 1 the annual race for the Lorne and Anderson cups was to be sailed, but owing to the light wind it was not made in time, and was postponed.

THE PURITAN.—A new significance will soon be attached to the word "Puritan" if it is associated with triumphs in worldly diversions which the prim precisians who originally bore the name would have frowned upon. Fashionable clubs and fast yachts certainly were not in their line.—*Boston Advertiser.*

CRUISES.—The Chesapeake Y. C. arrived at Annapolis on June 30 on a cruise to Cape May, N. J....The East River Y. C. fleet is cruising on the Sound this week....The Harlem Y. C. also started on July 3 for a cruise to Thimble Islands....The Knickerbocker Y. C. will sail on July 11 on their annual cruise.

TRIAL TRIP OF WANDA.—The new steel steamer Wanda, built for Mr. Wm. Woodward from Mr. Harvey's designs, made her first trip June 30, running from New York to New London. Her time from Execution Light to Bartlett's Reef Lightship, was 5h. 35m., the distance being 70½ knots.

QUEBEC Y. C.—A race was sailed on July 1 for the Governor General's Prize, over a 20 mile course in a strong east wind. The starters were: Guinevere, Curlew, Iris, Foam, Saracelle, Osprey and Montagnais. The race was close, and was won by Curlew in 2:15:35. Guinevere being second.

CLARA.—Mr. Charles Sweet, the new owner of Clara, is not an American, but an Englishman who has resided here for some years. Clara is now fitting out for the trip across. She will cruise mostly in Eastern waters, with Boston as her home port.

RUTH.—This schooner was on the screw dock in New York last week, having her bottom re-coppered. Her planking aft, as well as her timbers, has suffered from dry rot, and she has required new wood generally from midships aft.

ARROW—Sloop, Vice-Com. Douglas, N. Y. Y. C., is once more in commission, and was out with Priscilla and Mischief.

NOMAD—Sloop, Mr. H. C. Wintringham, has been on a cruise through the Sound as far as Block Island.

BAYADERE.—Mr. J. M. Forbes's new cutter is now completely rigged and ready for sea. Lawley & Son cast and fitted her lead keel of 20 tons.

CORA.—Steam yacht, was at Provincetown, Mass., on July 3, on her way to Bar Harbor.

VESTA.—Mr. Ayer's schooner is once more in commission, lying in the East River.

VEDETTE.—This steamer has been purchased by Mr. F. W. Vanderbilt.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

W. W. P.—Blue belton is a color and not a strain of setters. A dog of this color is white, with small black spots thickly splashed over him

J. B., New York.—The St. Bernard dog Watch was shown at the Non-sporting show last October, but did not win a card. He is by Marco out of Bella.

H. B. Topeka, Kan.—Can you tell me of any trout streams near Canon City, Colo? Also will you please give me the names of best flies and sizes of hooks for Rocky Mountain trout in your opinion. Ans. You may find some trout in Oil Creek, near Mount Pisgah, or in Current or Cottonwood creeks further west. Our correspondent "Cyrtonyx" recommends the following flies: Coachman, black hackle, black prince and June spinner. Use larger hooks than in some Eastern waters, say a No. 4 sprout.

C. C. K.—1. What is the proper size of a braided linen line for mascalonge trolling? 2. What size hook would be best for bait-fishing for same fish, the fishing to be done in Rice Lake, Canada? 3. Is there any fishing in the Hudson River opposite West Point, or in any water in that neighborhood? Ans. 1. If you troll with rod and reel use a linen bass line of 12 to 18 threads, not braided; if you use a hand line to troll get a heavy cotton bluefish line. 2. Use a No. 1 sprout. 3. Very little; you may take small striped bass there at times.

POT LUCK FROM EXCHANGES.

Her Majesty has just lost her favorite dog, Noble, who had been her constant companion in her walks for more than twelve years. Noble had been ailing for some time, and he was left at Windsor under veterinary care when the Queen went abroad. He was an affectionate and intelligent beast and was a universal favorite.—*London Truth.*

Mr. Jonathan Gay, of Preston, has a setter dog that appreciates home. He has been given away several times, but has always returned. This spring he was given to a man residing in Albany, N.Y., and was taken there. A month after he had been taken to New York one of his drivers was surprised by the appearance of the dog in front of the horses in this city. He followed the team home, and has since staid there. Letters of inquiry were received from Albany, and there is no doubt that the dog traveled the whole distance and found his way unaided. Mr. Gay will not part with him again.—*Norwich (Conn.) Bulletin.*

A trip in a boat 15ft. long by 31in. broad from Lake George to the western coast of Florida, by the way of our inland waters, was a feat requiring no little courage, skill and endurance. Dr. C. A. Neidé and one companion started on their adventurous voyage in August, 1883, and, after considerable danger from rapids in the Ohio, the sudden and violent storms of the Mississippi, and the fogs and tremendous surf of the Gulf of Mexico, safely reached Pensacola in the following February. The story is told simply in the "Canoe Aurora," (Forest and Stream Publishing Company), and gives us glimpses of river life hidden from the eyes of the ordinary traveller.—*New York Evening Post.*

The eels of the ponds in the woods of Vincennes, France, leave them every spring in large numbers, making their way to the Seine or the Marne, several kilometres distant. They take advantage of rainy weather, when the herbage is wet, and their instinct guides them directly to their destination. New species have been repeatedly introduced into the lakes, but in vain; all seem to have this disposition to leave. Some have thought that the water of these ponds, having been collected by hydraulic engines, has undergone some change which drives the eels away. But the phenomenon of such migrations by eels and some other fishes is not uncommon. Thus in the marshes of Picardy eels are often found on the grass, going from one pond to another.

Who is this who stealeth along the brookside with stealthy steps? In his right hand is a fishing rod, in his mouth a pipe and on his shoulder a basket. He cautiously putteth aside the bushes, and stealthily casteth his bait in the pool. My son, 'tis a fish hog. Mark how he gathereth up the fingerlings and throweth them in his basket. Does he pause when he has taken three or four or five fish from the pool? Not he. It is his vocation to clean out that stream. After him all will be barrenness. Nothing is too small for his basket, no device too mean to capture the unsuspecting trout. As a fish-hog he lives up to the tenets of his creed. Maliciously doth he leave gates open for the cattle to devastate the corn. Is the rod his sole weapon? No, my innocent, he carries a giant powder cartridge in his pocket. By and by, when there is nobody looking, he will explode that cartridge in the pool, and rake in everything it containeth. Let us pray that he may blow his fingers off, and hold his fork with a crook during the remaining days of his worthless life. Is he a liar? Of the premier class, my child. Every fish hog lies. Just let us steal behind him and pin his turkey-red handkerchief to his coat tail. In the next field there is a bull we wot of—a ferocious bull—and we shall have our revenge. Meanwhile let us kneel and pray that our sturdy Toro may toss the trout swine into the middle of next week.—*San Francisco News-Letter.*

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THOS. H. CHUBB'S

New Style 80-Yard Nickel Plated Click Reel.

Better Style, better Work, better Finish than ever before. This Reel has Raised Disc, covered by Letters Patent No. 13,921, granted May 22, 1883, which makes a stronger reel and allows room for a better click than the old style. We warrant this to be not only as good, **BUT FAR SUPERIOR** to any reel in the market at the same price. Warranted to give satisfaction or money refunded. Sent by mail on receipt of price, $1.50.

OUR HEXAGONAL SPLIT BAMBOO

"Standard Henshall" Black Bass Rod

Which has the endorsement of Dr. Henshall, and from the large number of orders received this season, proves it to be the black bass anglers' favorite. Length 8ft. 3 3-10in.; weight 8oz.

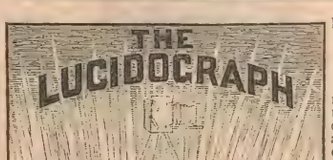
F. A. ALLEN'S SPECIALTIES.



MONMOUTH, ILL.

ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S LOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL SWAGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.30.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. **SEND FOR CATALOGUE FREE.**

Is positively without a rival for a CAMERA for the Amateur's use.

It is not only the most compact, but the handsomest in design and finish, adapted for the use of cyclists, and instantaneous work. The 5×8 measures, when folded, 9½×6½×4¼ inches. The purchaser of a Lucidograph is entitled to a Camera with all latest adjustments—Tripod, Plate Holder and Lens fitted with instantaneous Shutter, with full and complete instruction for use, all warranted A1. WITH BICYCLE ATTACHMENTS: Sizes Nos. 1 & 2, $27; No. 3, for 5×8 pictures, $29.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

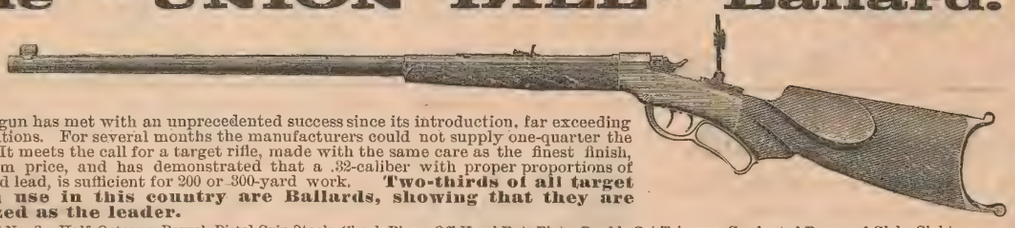
HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

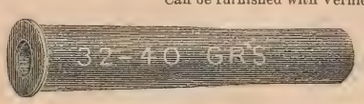
BY GEORGE DAWSON.



AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.



A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

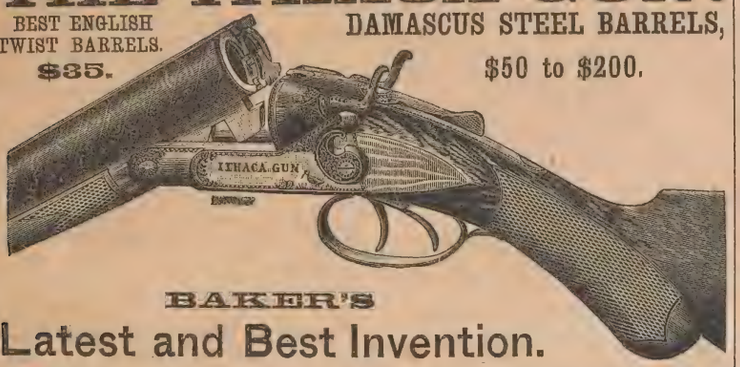
GLOBE FLIGHTS PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber ballon 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.



Samples sent free. Send 4 cents for postage.

A NEW MAINE MAP.

The headwaters of the

Aroostook, Penobscot and St. John Rivers

Compiled by THOMAS SEDGWICK STEELE.

The chart is 20x30 inches, printed on Government survey paper and **mounted on cloth.** Sent postpaid on receipt of price, $1.

FOREST AND STREAM PUBLISHING CO.
39 Park Row, New York.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

HINDS' BLACK-FLY CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

Harlow's Angler's Comfort.

The long approved, surest safeguard against mosquitoes, black flies, etc. Recommended by Commissioner of Fisheries and Game for State of Maine. New style. Larger boxes. Sent by mail on receipt of 25 cents, Usual discount to the trade.

N. S. HARLOW, Druggist,
BANGOR, ME.

"Repellene,"

An infallible preventive of the attacks of Mosquitoes, Black Flies, Gnats and all other insects. Neat, clean and easily applied. Contains NO TAR, will not *stain* nor *injure* the skin, easily washed off, may be carried without danger of leaking or spilling. Price 25 cents per box. Agents—T. J. Conroy, 63 Fulton st., N.Y. Abbey & Imbrie, 18 Vesey st., N. Y.

Double Blade Hunters' Hatchets. Best material and workmanship; polished.
Price, $1.50.

ANSWERS TO CORRESPONDENTS.

THE ADIRONDACK DEER.

IT would be some satisfaction to cherish the belief that the editor of the Boonville (N. Y.) *Herald* was, though densely benighted, nevertheless a well-intentioned friend of game protection. That would excuse his grotesque vagary of arguing that deer ought to be driven into the water and clubbed to death, that they may thereby be saved from being killed at salt-licks or taken in traps. When a person—even an editor—is only ignorant there is yet hope for him. He may be shown the error of his ways, and being enlightened he may be converted. If our erring Boonville brother were misinformed and nothing more, we might be encouraged to attempt the pleasant task of instructing him. After he had sat for a brief season in becoming humility at the feet of the FOREST AND STREAM, he would rise up in the possession of more knowledge about deer and deer hunting than he can ever hope to gain from the sore hotel keepers, who have been bamboozling him into the fancy that clubbing deer in the water is the only proper way to secure venison. But however pleasing it might be to take such a view of his case, his own utterances preclude any other conclusion than that he is both ignorant of the merits of the new Adirondack deer law and unblushingly defiant in his attitude toward that statute. We admit the perfect right of any individual to disapprove of a law, but no man who pretends to be an order-loving citizen will openly advocate violations of the law or covertly instigate them by saying "if you do offend they cannot catch you at it." That is substantially what the Boonville editor says when he puts it in this way:

> The law is an absurd one on the face of it. Who is to know by whom a dog is harbored in the wild wilderness, and who can bring evidence that will say that the dog came of his own accord or is owned or harbored by this man? To enforce the law it will take a game constable on every acre of land that lies between Lake George and the St. Lawrence River. Supposing a dog was pursuing a deer and drives him into the water and the deer is killed by parties who know nothing about the dog, are these men to be tried and convicted for hunting with dogs?

That is the sort of reasoning adopted by criminals to bolster up the commission of every crime in the calendar. Every burglar in the crowded city, who enters a house at midnight, is nerved by the hope that he will not be caught at it. Every horse thief on the frontier is sustained by confidence in his ability to escape Judge Lynch. It is such doctrine as any editor professing to represent the side of order and morality ought to be ashamed of. What the deer-clubbing dudes from the city and such guides as their money can corrupt may think of this Boonville casuistry, it is not hard to say, but let us be thankful that there are a large class of Adirondack visitors and a larger class of Adirondack guides who have respect for the law of the land and will obey it.

More than this, the number of Adirondack guides who welcome the non-hounding law, and are anxious to see it strictly enforced, is large enough to carry the day, if each man will do his share. The Adirondack guide owes it to himself and to his fellows to exert all his influence in favor of the law's observance, to discountenance its violations, to report offenses to the protector of the district, and to do his part in securing and giving evidence to convict the offender.

We will supply to any applicant a printed copy of the deer-hounding law suitable for posting.

TRY ALL METHODS.

THE constantly increasing scarcity of our game birds, and especially of our quail, makes it imperative that we should do everything in our power to protect them. At all seasons of the year, and at all ages they are exposed to the constant attacks of unrelenting enemies. Among all these, man is incontestably the most destructive. The gunner and the netter do their work after the birds are grown, and so in a certain sense able to take care of themselves, and it is supposed that man protects rather than destroys the helpless young. And yet the farmer, who has in his heart nothing but friendship for the beautiful birds which whistle on his fences in summer and come up in winter to the barnyard to pick up among the straws a few kernels of grain, is at harvest time unwittingly one of the quail's worst enemies. For in the mowing and reaping of his fields at the very season when the eggs are about to hatch, or when the tiny young are first trying their feeble legs and are yet unable to fly, he destroys great multitudes of the little fellows. Often the mowing machine passes over a nest, decapitating the mother bird, and leaving the eggs to spoil, or even if the hen is not killed, she deserts her treasures, as soon as the cover, which protected them and her from intrusive eyes, is cut down. The hoofs of the horses and the heavy wheels of the machines destroy the young of many a brood without the fact being known to any one. In this way each year large numbers of quail are killed.

A gentleman who had often seen the nests and broods destroyed in this way recently asked us if we could not suggest some method by which this havoc could be prevented, at least in his own fields. We suggested to him that if he would have his dogs run through his fields he would at least be able to find the young broods, and perhaps some nests, notwithstanding the popular idea that a sitting bird gives forth no scent. The dogs would trample down a little grass, we suggested, but they might enable him to save a good many quails. What he thought of our suggestion is told in the following note:

> Thanks for the kind information that you gave me last Thursday morning in regard to the finding of quail in the grass lots, to give them protection before the mowing machine entered the field. The mowing machine commenced on one of my grass lots early this morning. After it had been at work some little time the merry notes of little Bob White brought to mind your suggestion, to take the dogs into the field, and if the hen bird was sitting the dogs would point, and then I could leave the grass around the nest, and so not disturb the bird.
>
> So I unhooked Quail and Sport, and they hardly entered the field where the machine was making its busy rattle, before Quail froze stiff, and right in front of him on the ground was the hen. She looked as if she had been badly shipwrecked, and lay on one side, with one wing extended as if it was broken. As I approached she fluttered off a little way to attract my attention from the little ones, which were about an inch long and which scattered in all directions.
>
> I called the dogs off and had not proceeded over one hundred feet in the same field before the dogs again came to a stand. The female bird jumped but the dogs still continued to point, and on stooping down and parting the grass there sat a little fellow just the size of the ones in the other bunch. I picked him up and took him to the house for the folks to see him, and when their curiosity was satisfied I carried him back to the old bird who had returned to her brood.
>
> I ordered the machine to the other side of the lot, and I shall watch to-day, and keep the birds out until the grass is all cut. There may have been forty young birds in that lot, and what would have been their fate if I or the dogs had not found them? The machine would have made hash of them. Now they are safe until next fall, when I should be happy to have you tramp with me after the little beauties.
>
> A. A. F.

This is certainly one method by which the farmer, who is also a sportsman, may save for himself or his neighbors a good many birds at a small expense of time and trouble.

NO CORRESPONDENTS' CARDS.—We give no correspondents' credentials. No one is authorized to ask any favors from transportation companies on account of the FOREST AND STREAM.

THE ARRANGEMENTS FOR THE CUP RACES.

WE give on another page the full report of the committee of arrangements of the New York Yacht Club, containing the correspondence with Mr. J. Beavor-Webb, representative of Sir Richard Sutton and Lieut. Henn, relative to the coming international races. While some of the letters have been published before, the report gives the negotiations in full, and will be read with interest by the many who are watching daily for Genesta's arrival. Our yachtsmen need feel in no way ashamed of the manner in which the negotiations have been conducted by their representatives, as the entire correspondence shows a sportsmanlike spirit and a desire only for a fair race on both sides. The suggestions of the challenging parties have been courteously considered, and in all points but one they have been complied with. The only point on which any discussion has arisen is that of time allowance, the challengers requesting that a mean between the New York Y. C. rule and the Y. R. A. rule be adopted. After some correspondence the committee have decided that the race must be sailed under the New York Y. C. rule, and the other side consented to do so. No previous race can compare with the coming ones in point of interest, the boats are probably more evenly matched than in any of the schooner races, and the difference at the finish is likely to be very little. The questions at stake are not only more important than the issues in 1870 and '71, but they are more generally understood by yachtsmen, and the results will be studied as never before. Apart from national feeling, there is a still deeper interest in the practical points involved, which it is expected that the races of the two cutters will settle decisively. Under these circumstances it cannot but be gratifying to all to know that on both sides all has been done to secure a fair and equitable test of the merits of the two types of yachts.

INDIAN TROUBLES.—Immediately or remotely seventy-five out of every one hundred Indian outbreaks may be traced to the stuff sold by the sneaking, devilish fiend of a whisky trader; the other twenty-five are due to the outrages perpetrated by thieving agents and lying, cheating land-sharks. Confine the Indian on reservations; starve him; craze him with fire-water; gouge him out of his land; if he turns shoot him down. The United States has been doing this for a hundred years, and before the end of another century of this extermination, the Indian question will probably be settled.

THE CONFESSION OF A BUFFALO BUTCHER, published elsewhere, is a plain recital of a business proceeding. It is not very delightful reading. The value of the narrative is in its manifest candor. It is one chapter in the history of the destruction of an animal from the face of the earth, and as such it will be useful material for the book which is some time to be written on the extinct animals of the North American continent.

OUR TROUT STREAMS.—In our fishcultural columns Mr. J. S. Van Cleef has an article on restoring trout streams. Mr. Van Cleef is a close and careful observer, and his article abounds in practical suggestions which we indorse and commend. We believe with the writer that restocking is not enough to do to restore our streams; the original conditions must also be restored or the brooks will never again swarm with trout as of old.

SPRING DEER.—Florida hunters have been busily and successfully engaged in deer shooting, and the local editor has just stupidity enough to pat the hunters on the back with sugared words of praise for their prowess. Florida editors ought to be a shade above that sort of thing. By the way, how long will it be before that State will be civilized enough to have a game law?

IT WAS HARDLY FISHING.—The papers report that President Cleveland went fishing the other day at the Woodmont Rod and Gun Club's ground on the Potomac; but they add that a special telegraph wire was run to the club-house, and a telegraph operator went along with the party. That is a very poor way to go a-fishing, even for the President of the United States.

EPHRAIM AND CAHOOT.—What is the origin of the sobriquet "Old Ephraim" applied to the grizzly bear? And are not those writers in error who apply the name to the black bear? Also, what is the meaning of the expressions "in cahoot" and "cahoots" which are used in the South and Southwest, and perhaps elsewhere?

IN CAROLINA WILDS.—II.

THE mountains around Boylston contained turkeys, grouse and squirrels, the latter not hard to find; but the turkeys, though frequently seen by the log cabin residents among the hills as they came into the clearings, were never there when I visited the fields, though I hastened ever so swiftly after getting the word. One evening a mountaineer, going to his cabin from work down the valley, sent word that as he was walking along the foot of the ridge, in plain sight across the valley from "our house," he flushed quite a large "gang" of turkeys, which flew only a short distance up into the woods. I was over there in short order, but not a turkey could I find, though I used the short time before dark diligently. I marked a spot where I could conceal myself in the morning, and determined to be there before the turkeys started. Long before dawn the following morning I was afoot. So was a very heavy fog some time before me. I crossed the valley through fields of rag weed waist high and reeking with moisture, and, as a consequence, I was soaked to the skin when I reached the timber and sought my blind, which was a fallen treetop and not easy to find in the dense fog and darkness. I found it, however, and in the chill morning and wet garments I waited for game. My pipe kept me company, but it was slow waiting. I had almost lost hope of seeing the turkeys, when, without warning, with a rush of wings one sailed from the mountain above and alighted on a limb close to the body of a large chestnut about forty feet up and not more than seventy-five feet distant. It was very foggy, to be sure, and quite dark, as I said; but I could dimly see the black bunch on the tree, and he was assuredly my bird. I covered him with three and a quarter drams powder and an ounce and a quarter No. 2 shot and let go. Right here permit me to make the first record of some of my remarkable shots. The turkey did not fly, for it stands to reason that I would have heard him, don't it? No. He didn't fly, neither did he drop, else would I have heard the thud. I went to the foot of the tree and there was nothing but the foot there. I waited, silently turning over things in my mind, until it became light enough to search for my turkey. I thought he must have lodged up yonder, but there was no lodgment. There was not even a feather. It was a most remarkable shot. I saw no more turkeys and returned to breakfast.

The cuisine was not very varied at our table, fried chicken appearing quite frequently, and the capture of the chicken was an amusing operation to me. Bill never stole a march on his chicken the night previous, but waited until morning, I suppose that he might enjoy the chase, though how a person of his general deliberation could enjoy a neck and neck race with a chicken was beyond my ken. When the capture was decided on Bill would make a survey of the flock from some vantage ground while he picked his chicken, for so accustomed had they become to the chase, that when he made his appearance there was an indiscriminate run for cover. Then the fun began. Bill generally had a couple of rocks in his left hand and a stick in his right, with which he attempted shots on the wing when he could get near enough, but most always scoring misses. His aim could not be expected to be very accurate under the circumstances. Through the barnyard they'd go sailing, Bill on the gain; when the chicken would dodge under the corn house and Bill would naturally go around. Over the fence, across the potato patch and around the barn they flew, both getting short of wind, chicken losing ground, when it flew over the garden picket fence and Bill hunted the gate, while the chicken ran into a brush heap in the corner and got its wind. After a while Bill found it just in time to be too late, and away they went with a cackle and other language, the chicken going through a hole in the fence and Bill seeking the gate again. Occasionally he would slip or make a misstep and almost tear himself apart in the endeavor to recover. This was intensely funny for me, and I encouraged him with sundry remarks as I deemed appropriate. He rarely appreciated them, however, but with desperation in his "liniments" and courage in his eye, bent himself to the pursuit, that never failed to be successful. One day, as I came in with my gun across my shoulder, it occurred to me that powder and lead would catch a chicken quicker than he could, and thereafter I was generally made use of.

Boylston Creek ran through the valley, but there were no trout in it as far as I could discover with worm, fly, bug and grasshopper; but the small streams which flowed down the mountain side contained a few, which I gathered in now and then with the ignominious worm. Neither trout nor catch was large, but sufficient to perfume the pan. The sport was large, however. Mills River, separated from Boylston by a considerable range of mountains and flowing into French Broad, contains trout in fair numbers, and is a most beautiful stream.

One evening after a rainy week—and oh! how it rained—the windows of heaven were not only opened, but the sash was entirely out, and rain fell day after day in torrents until everything below was as wet as could be, and the rye sprouted in the stack—one evening after all this rain fell, and we were sure there was no more to fall, Bill said to me as we were smoking a pipe apiece, "Wouldn't you like to go over into the 'Pink Beds' for a few days?"

"Yes, sir!" said I, emphatically, for I had heard of the Pink Beds a number of times as a place in the mountains beyond Mills River, where deer and turkey abounded and where trout could be had for the taking. Is it Pope who said, "Man never is but always to be blest"?

"Well," said Bill, "three or four fellers round here said they'd like to go over now harvest is over, and camp out a few days, and I'll see 'em to-day and fix it up."

John did, and in a day or two, "airly in the morning," Fred came sauntering into the yard followed by his "pups." George soon followed, we picked Riley up just up the road, and the tramp began. We took a frying pan and coffee pot, a tin cup apiece, rations and no blankets, and so traveled light, for it was hard climbing the most of the way. We kept the valley for a mile and then turned to the right up an old logging road, by the side of which branched a pretty trout-stream. For an hour the climb was steep. Then we came out on a clearing where had been a farm. Some distance beyond we struck a down grade, so steep that the full power of the breeching was called into use, and soon we reached the bank of the lovely Mill River, here about sixty feet wide and knee deep. We forded it, and then the temptation being too strong to resist, poles were cut, a worm or two unearthed, and trout looked for; but as they did not respond freely, we wishing to make a drive, soon shod up again and set our faces to the mountain.

This was steeper than anything we had found, and along the trail we found a good brush hold was a big help. We reached the top well blown, and after a short rest Riley took the dogs for the drive, Ford going to one stand and George and I finding others. The day was delightful, the scenery lovely, the huge forest of oaks and maples magnificent, and I sat me down on a log and took in all I could of it. Birds flitted about, a gray squirrel near by made considerable ado for a while, and then the opening notes of the overture floated "faint and far" through the leafy arches of "God's first temples." A tingling ran through my nerves and all my ears were alert. The sounds died away, then rose faintly again, and silence covered them up. The dogs had all the sport, Riley all the work, and in the course of an hour we were on our way to Squirrel Gap, where we were to camp for the night. A covey of grouse was flushed and none bagged, and as mine was the only shotgun in the outfit, I shouldered the blame and gun and trudged on. A few squirrels were gathered in, and at nightfall we approached the cabin at the Gap, built of logs unchinked, for the occasional use of cattle men on their way to and from the Pink Beds. A fire was built in the fireplace, squirrels dressed and cooked, coffee made, and by the flickering fire-light we supped. The wind had risen during the afternoon and now blew a young gale, and up here in the mountains it was very cold. We lay in a row with feet to the fireplace, and with sleep very much broken passed the night uncomfortably. There was no incentive to sleep the next morning, and we were early afoot. There was no very hard climbing early in the day, though the trail was decidedly undulating. The dogs started a flock of young turkeys, and Riley and his long rifle started up a mountain on the right after them. We waited a while, and as he did not come back went forward. During the forenoon we reached the rim of the basin called Pink Beds, and here Riley overtook us with a young turkey. This basin is very irregular, surrounded on all sides by mountains, and I was told that no wagon trail had been found into it. Of course I inquired, why Pink Beds? but no reason was given, and the boys said they had never heard one. Perhaps it had never occurred to them to ask. Whether so named from color of flowers which grew there, or from pink root or pink anything else no one could tell, though I asked several persons in Boylston. The basin contains apparently several square miles, affords considerable grazing for cattle, is sparsely timbered, but contains considerable undergrowth, and is quite level. Cattle from neighboring valleys are driven in here and left to summer, becoming very fat. There is more or less grazing all over these mountains, they being wooded to the tops, though not always densely, and the grass is very nutritious. The trail down into the beds was very precipitous, and the "hold backs" were called on for all they were worth. Away across the basin and beyond the nearer mountains rose sharply defined and attenuated Mt. Pisgah, and it was suggested that we see what was on the top. No dissenting voice. So we cached our turkey, haversacks and coats at a convenient place half way across, and with only our guns as impedimenta, moved forward. The foot of "Old Bald" was soon reached, and then the tug began. From the valley the head of Old Bald resembled in shape the forehead of a man, and as it was devoid of trees, it was indeed a bald headed old giant. From the foot to the top it was one straight pull of about a thousand feet at an angle of as near forty five degrees as may be, and we didn't need any hold backs. Near the top we came out of the timber and sat down by the side of a spring, slaked our thirst with delicious water, the temperature of which was something above zero, and enjoyed the magnificent view before us. Miles away a bare spot on the side of a mountain flashed in the sunlight like a mirror from among the trees, and I was told it was "The Looking Glass," on account of the mica which largely predominates.

After resting a few minutes we reached the top of Old Bald, and off to the right across a slight ascent, albeit very rough, rose Little Pisgah, an irregular peak something like a thousand feet above the spot where we stood. There was quite a forest between Bald and Little Pisgah and among the trees near a very fine spring was a well built cabin of logs, nicely chinked, the door fastened with a padlock. This cabin was used by cattle men and hunters. Reaching the rocky plateau on the summit of Little Pisgah we rested and lunched near the edge of a precipice that dropped almost sheer away hundreds of feet and then in unbroken forest descended with scarcely less abruptness far away into the depths of solitude and silence. Before us, something like a mile distance, rose Pisgah's sharply defined peak, running up into the clouds more than a thousand feet above where we sat and to such a point that it seemed there was scarcely standing room on its summit. It seemed a perfect pyramid with apex long drawn out. I thought it the most impressive sight I had ever witnessed, though I have seen peaks in the Rockies almost three times its altitude. A short time sufficed to put us at its base, where, in a bunch of timber, another flock of turkeys was started and one shot, the others sailing away down into the wilderness and safety. Climbing out of this rocky woods we stood above timber line and slowly mounted to the summit, where, with shortness of wind, we soon stood, taking in a wide and magnificent view. The top is only a few yards in extent, it and the sides covered with grass and huckleberry bushes from which we gathered an abundance of the largest and sweetest berries I thought I had ever seen. We were fortunate in finding the summit free from clouds, the country beneath also being unobscured in all directions save one. We had enjoyed the situation for about fifteen minutes, when we noticed a bank of clouds advancing from the east far below us and slowly apparently covering up the mountains. It was a weird and beautiful sight. The bank grew rapidly, calling unto itself reinforcements as it mounted, gaining in speed every second until it struck the mountain, when rolling upward with noiseless onslaught it threatened to sweep us bodily off the peak. As we stood fascinated George said, "Come! If we stay here much longer this cloud'll grow so thick we can't find the trail," so we staid not on the order of our going, but went with little short of breakneck haste.

Toward sunset we reached our cache, and at dark came to a cabin near the bank of Mills River, here a narrow stream, which heads in the Beds, which cabin was to be our camping place; but so dilapidated was it and so much minus a roof and floor that we preferred the open air under the trees, and after supper stretched ourselves, feet to a good fire, well tired out. The wind did not blow as it did at the Gap, but the night was cold, and toward morning we were all shivering around a growing fire. In council assembled we decided that two should fish down the river and three should drive for deer, meeting down the river at a trail that led to the Gap. I elected to be of the fishing twain, but on going down to the river to ablute, while yet the stars twinkled, my heart and legs failed me as I dashed that icy water on my face, and I thought that the music of the hounds would be far preferable, as those who fished must perforce wade much of the way. After breakfast, Riley, Bill and the testator crossed the stream and the dogs were put out, while Fred and George took to the cold, cold water, with hook, line and worm. They said afterward that they were compelled to get out often and thaw out and limber up their legs by rubbing, which I doubted not.

The hounds started a deer soon after we left, and several times I was sure I was to get a shot, but each time just when the crescendo seemed about to disclose the deer the diminuendo began, and hope waned. So it went until silence brooded and Riley appeared with the dogs, well tired, saying that he had started a doe and fawn, the former passing near Bill, but not being shot at for some reason best known to Bill. Slowly we wandered in the direction of the rendezvous, reaching it in advance of the fishers; and curling ourselves up in soft spots, napped until awakened by the boys, who showed as fruits of their endurance one hundred and thirty odd nice trout, perhaps not all over six inches in length. Along in the shank of the afternoon we reached the cabin at the Gap again, bagging a squirrel or two on the way. This night was milder than the preceding two, and we enjoyed good sleep.

After breakfast next morning there were naught but bones left of the hundred and thirty odd, and we "poled our" in the direction of Boylston, making a drive on the way. Going to our stands at crossings on Mill River, George's dog, a cross between a bullfoundland and a "yaller" dog, treed a ground hog, whereupon we smoked him out and the cross aforesaid used him up speedily. Riley started a fine buck, and the cow horn and dog orchestra was wildly tumultuous for a space, while we lay patiently in wait for the quarry, which persistently turned his nose in other directions and galloped over the hills and far away, ignoring completely well known crossings. Ere long we were once more united, Riley having come across a little excitement not down in the schedule. He was passing along the site of a mountain listening to the cry of the dogs, when he was tolerably suddenly arrested by a sharp rattle near by in the low bushes. While he was endeavoring to locate the beast, another rattle sounded the other side, and without much of an interval still another. He said he wanted very badly to jump somewhere, but was puzzled as to just where. However, he hadn't any time to spare, and putting all the powers he had into immediate action he jumped high, and kept at it for a brief period. Then like a true mountaineer he cut a sapling and returned to the scene, and succeeded in killing two rattlers and two pilot snakes, which latter these people aver are always to be found in company with rattlesnakes. In corroboration of his story he produced two rattles. We examined them, saw that they were fresh, and told him his narrative, like those of the snakes, would pass muster, resumed our tramp, and when the trees were casting long shadows in the peaceful valley of Boylston, came to rest each in his own domicile.

S.

THE BUCKTAIL IN FLORIDA.

VIII.

MONDAY, May 18, was a good day for canoes. It was barely sunrise, and I was monkeying around the fire with a condensed milk can by way of coffee pot, when Jake, the darkey carter, passed within ten rods of camp with an oblong box on his cart, heading straight for Kendall's ranch. He hailed me with, "I'se got a little boat here fer de cap'n, come ober an' see her."

"All right Jake, you've got a little boat there for me, too, I reckon?"

No sah. Box ain' big enough for two boats," and he drove on.

Now, the Captain's ranch is just about seventy rods from my camp, and before the leaves grew so dense on the blackjacks the camps were in sight of each other. Even now I catch glimpses of light from his windows at night, while he can always see my blazing camp-fires of a dark evening. And as I leisurely drank a cup of black coffee (which is the proper thing to do of a morning in this climate) I heard a hammering and rending clatter over at the Captain's house, as of one who opens a dry goods box with a store hatchet, and there came a clear ringing hail, which I answered, and then walked over to the ranch. I found the Captain contemplating the contents of the open box with a smile of grim satisfaction, while Mrs. K. was actually dancing with delight like an excited school girl. Her little canoe, the long looked for, clinker-built cedar, had come at last, and was nestling snugly and safely in its packing without scratch or crack. Well, she was a beauty, and light as a cork, turning the scales at sixteen and a half pounds barely. Finished in oil and varnish, and of a different model from any of the light open canoes I have seen, though the difference is slight. On the whole I prefer her model to that of the Bucktail, though the latter was built strictly on dimensions given by myself. Her length is 10½ feet, beam 26 inches, with 9 inches rise at center, 12 inches at stems.

But what interested me most was another and lighter canoe nested neatly and safely inside the first. This was the little Rushton ordered nearly a year ago, with no directions save as to name and weight. She must in any case weigh less than ten pounds. And the name to be painted neatly on each side of one stem in gold and scarlet letters. This was meant as a slight compliment to the man who has done more and better canoe work for me than any man living. Other makers might have done just as well, but they all, I believe, use white lead or some other waterproof material to make close joints. Other things being equal, I prefer naked wood to wood; close joints by close work. When I have rattled my canoes until they leak, I can do the daubing myself. The Rushton Fairbanks at just 9 pounds 15 ounces, is 8½ feet long, and has 23 inches beam, with 8 inches rise at center, and 10½ inches rise at stems. I thought she had rather a tubby look when first placed on the water. Her very flat bearings, with the way she carried her width out toward the stems, made her look like the model of a Dutch galliot; but, turning her keel up she showed lines and curves that looked like gliding over water very fairly. Balancing her on the end of a finger she really did seem too frail—too trifling for real work. But I remembered the handsome behavior of the Sairy Gamp (only nine ounces heavier) and decided to test her fairly.

We formed a procession of three down to the landing, Mrs. K. leading, and jubilant at the thought that she could make her own carries without help from the male element, whereat the M. E. gave me a side wink and grinned sardonically.

I do not like Kendall's landing—not for an open canoe. The water is too deep and the bank too steep. I prefer a gentle slope of soft sand where the canoe can glide up to a stop easily, and I may walk out or in on the keelson. It was agreed that Mrs. K. should launch out first; and with some trepidation and a little help from the Captain, she got safely off and began to ply the double blade. Gingerly at the start, but finding the canoe steady and easy under paddle she grew confident and put on muscle, paddling up and down the river, in and out of bayous, and handling the light craft skillfully as a squaw. Finally she landed and lifted the canoe out of water, saying, "Oh, she is just lovely; worth half a dozen spring bonnets." Then the Captain hinted he would like to see the Rushton "go," and I dropped her into the water with a spat, dropped a folded blanket into her for a seat, and crept in, rather carefully it must be owned.

But once in and fairly seated I found her, to my surprise, steadier than the Bucktail of more than twice her size, *i. e.*, she did not tip or rock so easily, and she required less propelling to the mile than any boat or canoe I had ever handled. I saw that she would trim with fifteen or twenty pounds in addition to my own weight, and I had not paddled her half an hour before deciding that, if she would stay in a lumpy sea, I would adopt her as my cruising canoe.

We went down to the Springs, the Captain, Mrs. K. and I. It is only a mile as the crow flies. By the tortuous channel of river and bayou it is nearly three, and a pleasant trip we made of it. Of course, the light canoes attracted a crowd; they always do that, even in towns where canoes are common, but the crowd was not a large one. The Northern tourists had flitted, and the permanent population of the Springs is less than 100. We paddled back in the cool of the evening and agreed that it was good to be there.

"It's the first time three double-bladers ever hauled in at one landing on this coast," said the Captain. And I think he was right.

This was more than a month ago, and I have kept the Rushton pretty well in use since.

Every well built canoe, yacht or ship, has some individuality, some peculiar trait of its own. The peculiar trait of the Rushton is to take in spray heavily when going to windward, say four points off. This is owing to her sharp, short curved lines. We went outside, Tarpon and I, to test her against a brisk sea breeze. He to lie off, watch her closely, and give his opinion as canoeist, builder and sailor. For he is all these. I put her straight in the wind's eye with a choppy lump of sea against her, and she rode it like a duck. I turned and ran before it, and she got away from the seas like a whale boat. Then I laid her beam on, and—well it took some balancing, but she kept dry. Lastly I tried her with the wind about four points abaft the stem, and she plashed the spray in, a few spoonsful at a time, until I was obliged to creep under Tarpon's lee and sponge out.

Then he gave his opinion, "Let me deck her and you can stay out as long as the seas don't break under you. That will swamp any canoe." So she is to have a light cloth decking, and a cockpit withal, like the able-bodied canoes of the A. C. A. And she is to nestle inside the faithful, stanch Bucktail, and both are to go under the deck of the four-ton Nonpareil sharpie, now lying below the bridge at Kendall's landing, and having her new white sails bent this blessed day. And before the week is out Tarpon, captain, sailing master and owner, with "Nessmuk" first officer, cook and for'ard hands, will be plowing the waters of the Gulf, with no cargo save the duffle pertaining to campers and cruisers, no objective port or point, only to keep along the coast (in a southerly direction for the most part of the cruise). And with no especial object in view, save, possibly, a turn at exploring the Ten Thousand Islands.

We simply propose to enter for a sixty days go-as-you-please free and easy outing by land and water. To anchor or moor when and where we please, or go ashore and camp on any of the numberless keys. To stop for objects of sport or interest. To shoot, fish or sail, as the notion takes us. And to get away from the monotone of hot white sand, and feel the fresh salt spray in our faces once more. One point we do not mean to neglect, *i. e.*, using the two cedar canoes for exploring waters where even a rowboat can hardly be handled effectively.

The Bucktail just trims with the Captain's 6 feet 2 inches. And, with decking, the ten-pound Rushton can follow where he can lead. They will slip into the cabin easily, and can be hauled out and dropped overboard in a minute. The cabin of the sharpie, by the way, includes all space below, from overhang to fore peak. But, although she lacks the costly cabin and fittings of a fashionable yacht, she is not going to sea like a coal barge. Order, discipline and courtesy are to be observed. The quarter deck is to be respected and orders obeyed. Though Captain Tarpon is not to get mad and allude to the visual organs of the for'ard hands in objurgatory terms, nor shall the latter engage in back talk or make insulting allusions to ancestry.

In case it becomes necessary to wade ashore over the 'coon oyster beds for supplies, as often happens on this shoal coast, (he tallest man on the vessel shall do the wading. (That gets him. He is 6 feet 2 inches. The for'ard hands 5 feet 3½ inches).

It is doubtless true that "all men are liars." Wherefore we put little trust in the stories that are from time to time told us concerning the Ten Thousand Islands. If we are to believe the wreckers, spongers and fishermen, there are large islands in that mystical group where the palm grows to a gigantic size and plenty of fresh water may be found, where tropical fruit abounds and tigers are so numerous that it is unsafe to land. Islands where the foot of a white man never trod, and only known to a few of the older Indians; where immense alligators guard the intricate channels, having no fear of man, and ready to attack a canoe on sight; where, during the hot months, poisonous insects are so plenty that even the Indians of the everglades are fain to flee before dense clouds of them. I say we hear such stories daily, and we take little heed of them. We know, of course, that the insects must be bad there, as they are almost everywhere in Florida. And it would naturally be the very place for large alligators. No doubt, also, some of the largest islands may be the favorite stamping grounds of a few tigers (panthers, *Felix concolor*). But, on the whole, we hardly expect to shoot more panthers than will reasonably suffice for camp use. As for the 'gator, we will make the Scotch boy's terms with him: "If ye'll gang awa' and let us alone, we'll let ye alone." We have no use for him. He is absolutely no good. I have shot two this summer, and am content. Probably I shall never shoot another, unless it be a small specimen for a friend who wishes to "set him up."

It is different with the birds. They are a revelation to me, and a hopeless puzzle, which the books do not clear up. Is the roseate spoonbill a real curlew? He is a "pink curlew" on this coast. The sickle-billed curlew develops into four varieties of sickle-bills to my ignorant eyes, while the straight-bill curlew runs down, down, until he gets tangled up with the numerous plovers, and they again slide down to snipe, all ending in the clouds of fat little "peeps," of which as many as forty are sometimes killed at a single shot. And in season or out the shore birds are here, young birds, too; showing that the season is, or ought to be, on. I am going to begin. For months I have held my hand out of respect for the breeding season, often going hungry for the bird I could easily have killed. But the close season is closed with me from the 1st of July. And I never so bitterly regretted my ignorance of ornithology as at the present time. And I may add, that I can get little help from others of greater pretensions. I can still shoot some. Perhaps we may pick up something among the keys that will interest the readers of FOREST AND STREAM. Tarpon and I have the whole business of outing pretty well in hand. Mrs. Tarpon has gone to her Northern home for the summer, leaving her canoe hanging up in the sitting room. This, with my two cedar canoes and the Captain's two "rag" canoes, gives us control of five canoes, all differing in shape and size. With my two camps, his comfortable ranch, and the sharpie for the Gulf, we ought to scuffle through the dog days without serious suffering. NESSMUK.

Natural History.

THE COCK GROUSE AND YOUNG.

Editor Forest and Stream:

It has come under my observation in no work on game, game birds or natural history that the cock or male of the ruffed grouse defends the young or in any way cares for them. A case in point, however, was observed the other day which argues well for this beautiful game bird. In the vicinity of Richardson Lake, one of the noted trout lakes of the Androscoggin chain, it is well known that the grouse, although not very plenty, are remarkably large. I have the tail of a male in my possession, killed in the fall of 1882, which measures nearly eight inches at the longest feathers. He was shot from his drumming log the 28th day of September, clearly proving the statement of several writers that the cock remains in the vicinity of the scene of his courtship long after his mate with her brood have departed. It should be stated also that the grouse in this vicinity still remain in primitive tameness, even the males allowing the approach of man to within fifty feet, or even less, without taking to wing.

Tramping through those woods the other day to one of the distant and seldom-visited trout ponds, the peculiar cry of the old partridge with young was heard. As quickly as possible I made the rush into the thicket one must always make in order to catch sight of the callow young. The hen bird was down on the ground with extended wings and feigned appearance of a hurt bird, ready to decoy me from the vicinity, as she would a fox, her worst enemy at breeding time. But I had seen her before, or many of her kind under like circumstances, and paid no attention to her cries and gyrations, but continued my search for the young. After two or three attempts to draw me away by the curious strategy of dropping almost at my feet as though with a hurt wing, she began skurrying along the ground, in order to attract my attention from the young, which were by this time securely hidden. Failing in this, she apparently gave up the job and flew quickly away through the thicket. I imagined that she had departed, since her young were safely hidden, but in a moment after the whir of stronger wings were heard and a magnificent male bird swept almost into my face. With spread tail and wings drooped, he showed all the fight a partridge could be imagined to do, coming close up to my feet with erect crest, hissing open beak and the blade tufts on the sides of his neck extended to the length of my finger. It was a pretty sight in bird life. The fellow reminded me of an enraged turkey cock in miniature. He showed this kind of fight till I decided that it was wicked to trouble him longer. I departed in the direction from which he came a few rods, and I found what I believe to be his drumming log. Did that hen partridge call her mate from the scene of his drumming to defend their young?

SPECIAL.

[How did our correspondent know the bird to be a male? We think it quite as likely that it was the same old female come back again to try another device for protecting her young. The change of tactics might account for the changed appearance. We have seen hen birds act in both ways.]

SOME GROUSE QUERIES.

Editor Forest and Stream:

Noticing the word "chicken" so often mentioned in your columns, I would like to inquire are they truly "chickens" or are they sharptails, or does the term "chicken" comprise both? Why should the sharptails retrograde as the area of cultivated land increases, and their place be taken by the pinnated grouse? At Hallock, on the northern frontier of this State, the ratio the latter bears to the sharptail grouse is as one is to from 500 to 600; at Fargo, D. T., their numbers are about equal, while here, about forty miles northwest of St. Paul, the chickens greatly predominate. What law of nature is it that causes this interchange? Is it the coming of man with his civilization and cultivation? I think not, as at the Indian farm and village on the Sarcee reservation, near Calgarry, N. W. T., Canada, the sharptails were there in hundreds, oftentimes perching on the log huts in which the Indians lived, and toward evening the large cotton woods, which fringe and partially surround the reservation, were actually crowded. At Calgarry itself I have seen them perched on the buildings which make up the town.

Is it the change of food? No, since no game bird fares on a more varied diet. On the Upper Missouri I have seen even dried sage leaves taken from their crops. At Calgarry they exist in winter principally on the buds of the cottonwood, poplar and alder, in the fall on seeds of two species of erica, and at all times and all places on hips of the wild rose. At Hallock I have seen them feeding around the wheat stacks. Their summer fare, I fancy, consists of the tender shoots of the native and artificial herbage and perhaps of insects. Query the last.

It is the game bird of the West, a brave bird, penetrating well up toward the north, mixing with the game bird of the mountains (the blue grouse) on the west, standing the rigor of an Arctic winter, hiding under the snow in some sheltered spot during the severest blizzard, and during the whole winter its roosting place a mere hole, scooped out under the snow. A more faithful mother comes not within ken of man. A few weeks ago (a few miles from here) a team was driven over a nest containing thirteen eggs. The hen barely escaped with her life. All were broken except five. On this remnant the mother was, to my personal knowledge, a few days after sitting just as steadily as though nothing had happened, though within twenty yards a building is being put up.

Why should some birds be so much more strongly attached to nest and eggs than others? I have noticed that this trait is much more strongly developed in birds that incubate on the ground than in those that bring up their families elsewhere, with a very few exceptions. I give a partial list of birds that show this mother love for house (be it ever so homely) and eggs, and will, if it be at all interesting to your readers, send a few notes on the treatment of birds to their young from the time of hatching till they can fly. This list is that of those that have come under my personal observation, and may, no doubt, be greatly enlarged: Pinnated grouse, sharp-tailed grouse, English partridge, English crake, horned lark, some species of English emberizæ, common crossbill (especially so according to Brewer, Coues, Birds of Northwest).

The plovers no doubt act in a like manner, but my observations have been confined to the English lapwing (appropriate name), and then principally to the mother's artifices to withdraw attention from their young.

PSEUDO ORNITHO.

ELK RIVER, Minn., July 3.

RARE FLORIDA BIRDS.—I have been very much interested in the replies to my inquiries about the ivory billed woodpecker, and the writers will please accept my thanks for the same. S. C. Clark, of Maricetta, Ga., the well-known naturalist, contributed one link to the chain; he also made a suggestion which we all ought to heed, viz., that it would be a good plan for all correspondents to give the name of their county as well as town, so that the reader can the more readily tell what part of the State the writers live in. Mr. Geo. A. Boardman, of Calais, Me., states the true reason, probably, why the ivory-bill is so rare. Bird collectors from all parts of the North, as well as sportsmen, have made annual visits to this State for years, and have, no doubt, nearly exterminated this rare bird, at least within many miles of the settlements. Now, one would think they would be seen occasionally in this section in the great Turnbull hamak (or swamp, as it is called by the natives), which extends for twenty-six miles south, and is from one to three miles in width; but I have only found one person who has seen a single bird, and he lives six miles south of here, in the hamak itself. He says he has seen one only. He has lived there for nine years, but probably paid no attention to the birds during the first year's residence. This Maine correspondent has also noticed the scarcity of the parakeet. Ten years ago they visited this section in large flocks every winter; for several years past they have not made their appearance. One Sunday about five years ago a rich New York sportsman (?), with his team, guide and dogs, came out from the hotel at New Smyrna and banged away for an hour or more at a large flock of parakeets, which were feeding in a field near the writer's place. He must have killed at least twenty, probably more. Several years ago I saw some of these little parakeets in the Big Piasa Bottom, Jerseyville county. I learn that they are seldom or never seen there now.—RED WING (Glencoe, Volusia county, Fla.).

QUAIL IN CONFINEMENT.—Last fall during a severe rain storm a young female quail fell exhausted and chilled in front of the Deal House, which was picked up and taken care of by Mr. Kerr, the landlord. During the fall and winter it roamed at will through the sitting room and office of the hotel, its companions being a fox-squirrel and rat-terrier, and became so tame that it was liable to be trod upon by getting under the feet of the guests of the house. Some time that spring it was put into a cage and a male bird secured, but with it it refused to mate. Another was then procured with which it immediately mated, and in a few days built a nest in one corner of the cage and commenced laying. It has now five eggs to its credit with every prospect of raising a brood. The female will take food from the hands of Mr. Kerr, and does not seem to fear any person in the least; but it is not so with the mate, who still retains to a certain degree the characteristics of the bird in its wild state.—*Bucyrus (O.) Forum.*

HOW A BUSINESS MAN LOOKS AT IT.

Editor Forest and Stream:

As you say, the FOREST AND STREAM is good reading anywhere. The wonder to me is, not that the paper is well sustained, but that there are still a number of persons in the United States who seem never to see it. It is good if you are taking an outing, better if you are not. I wonder how many professional or business men there are who, wearied with their ceaseless round of toil, feel something like a breezy freshness stealing through the vitiated air of the office, as they see among the letters and papers just laid upon the desk, the well-known buff wrapper of their favorite weekly. The proprietor looks lovingly thereat, then goes through the rest of his mail, thinking that he would not open the FOREST AND STREAM until he is at home for the night. But the correspondence at last disposed of, he tears off the wrapper and glances over the index, just for a moment, as it were, and to see if there is anything this week from A. or B., or C. Insensibly he reads on, skimming from one to another article, and the memories of his first trout, or his first woodcock hunt come across his mind, or straightway he is translated to Florida, and the fragrance of the orange blossoms is wafted to his nostrils. He turns a page, and as of old, his knees press the sides of his plunging horse in the far-off prairie land.

Perhaps he is of that class of which it has been said that they are "square plugs put into round holes." In that case, the reading is apt to be prolonged until the ring of the telephone recalls him to himself, and he shoves the paper hastily aside and attends to business all the more closely for the rest of the day.

But at eve, when he has perused the greater portion of the paper, and is ready to lay his head upon his pillow, he seems once more to inhale the invigorating odor of hemlock twigs, and so he passes into the land of dreams, with the slumberous wail of the wind in the tops of the far-distant Norway pines, and the dash of the surges on the shores of Memory still sounding in his ears.

Next morning he finds himself properly wound up for another week's run, and blesses the FOREST AND STREAM.

BEAR DOGS.

Editor Forest and Stream:

In your issue of June 25 is an article on bear dogs by "Bruin," asking for the opinion of old bear hunters on the breeding of bear dogs. As I am always willing to give sportsmen the benefit of my experience, I will give "Bruin" a few dots on the subject. A bear dog *nascitur non fit.* There are no breeds peculiarly adapted to bear hunting. When I kept a bear pack I never refused to add to it any kind of dog that chanced to fall in my way, and often the most "ornary" looking curs turned out the best of bear dogs, while the finest specimens of canine elegance proved most worthless. I remember once I succeeded with much difficulty in procuring the handsomest cur I ever saw, which, when placed in my pack looked a "Hyperion among Satyrs." He was so belligerent I feared he was doomed to fall in the first encounter with a bear, but judge of my surprise when I saw this canine warrior tuck his tail between his legs and strike out for camp without having received a scratch, or having been within thirty yards of the bear, but the sight of him was enough for the valorous dude; and such was his demoralization that at night, while we were all in camp, he chanced to run against a saddle setting on a black stump, which frightened him so when it fell on him he jumped into the lake by which we were encamped and swam off to the opposite shore and never returned. So you see it is as hard to judge dogs as men by appearances. Therefore I tried every dog I got hold of to keep up my pack. Bear dogs are generally short-lived, for in addition to the casualties of battle, the climate of the swamp is not healthful for dogs. They are subject there to mange, which in that climate assumes a most malignant type. Besides the great exertion of bear fighting seems to break them down early.

My pack was composed of quite an assortment of dogs. I mean by assortment every variety of dog I could buy, beg, borrow, and, if it wasn't an ugly word, I would say steal In addition to those I could pick up, I made many experiments in breeding; but I can't say breeding experiments ever proved a success, for I sometimes got one good bear dog out of a litter of puppies from which I had anticipated better results, for some were almost sure to be worthless. I kept a pet bear to train them with, which did very well, but was by no means infallible; for some who fought a pet bear with a good deal of courage did not show up so well with a wild bear. They seemed to know the difference between a sham fight and a real battle.

Tracking bear in the snow is something I know little about. They generally den up in bad weather in this State, as the snow seldom lasts very long, and when they do start out to travel in the snow, they are apt to be going somewhere and don't stop until they get there. I never attempted to follow but one, and I may say, by way of apology, I was quite young then. It might be different up in the mountains of Maine, but to follow a bear through one of the impenetrable canebrakes of a Mississippi swamp, och!—even on this July day the thought of the ice bath I took in trying to get through a snow-covered cane brake makes the cold chills creep up my spinal column, where the snow ran down in spite of my thick clothing in that winter thirty years ago. I was soon whipped out, and generally I hold on pretty well. Ever since I have selected better weather for hunting bear, and trusted to canine instinct for following trails.

And while on the subject of canine instinct let me say in the language of an old homespun friend of mine, now passed away to the happy hunting grounds, "There are hoof doogs and claw dogs." The hoof dogs are those which prefer trailing an animal with hoofs, such as deer, antelope, wild hogs, etc. The claw dogs, on the other hand, are more zealous in trailing animals that wear claws, such as bears, wildcats, foxes, 'coons, hares, etc. Most dogs will chase deer, and I have had hounds that would go wild after a deer, but would scarcely notice a fox trail. I have also had foxhounds which refused to notice deer at all, even to follow a bloodied trail. Such dogs naturally take to bear hunting, and become so infatuated with the sport they cease to notice any other kind of game and become specialists on b'ar. Such dogs soon become valuable as strikes and test dogs, which a hoof dog never attains to. Dogs that are fond of chasing deer are very difficult to break to bear hunting, and nothing is more provoking than to have a pack quit a bear trail and run off after a deer, which are numerous in localities where we look for bear. For this reason but few hounds make good bear dogs, yet I once saw a pack of hounds that would fight a bear as close as one would wish and never notice a deer track. These hounds would chase a man with little training, and such packs are now kept in our State penitentiaries for recapturing escaped convicts. Such things are shocking to humanity, but it is an evil which grows out of the system of leasing out convicts to work on farms; but wherever you find a hound which loves to run a man's track you find a claw dog, and one that will take to bear.

In selecting a bear pack no one variety is suitable, because dogs of different sizes and different temperaments are requisite. I want a half hound or a full hound for trailing, yet do not want a dog with a very cold nose for a start, as it is better to hunt a fresh trail than follow one that has passsed along twenty-four hours before you struck it. I want hang-on but not hold-fast dogs, I want my pack to cling to a bear fighting close, and nipping his hams at every chance, until he is forced to tree; then to bay until I find them, no matter how long it may be. I want dogs that snap, not dogs that hold. Some of the most successful experiments I ever made in breeding for bear dogs were with dogs crossed with greyhounds. I have crossed the greyhound with the bulldog, also the bull-terrier and the mastiff; these made fine large, active fighting dogs. I also crossed these with the foxhound, which made some excellent bear dogs. The finest bear dog I ever saw was a cross of a greyhound and a bulldog on a foxhound bitch. He was far the best of the litter. There were three others that were very good; but this one that I named Lawyer, and whose memory is still fondly cherished, was uncommonly sagacious, docile and affectionate. He never was seriously hurt in a fight, and was ever on the watch for a dash, and if a bear ever attempted to cross an open space, Lawyer was almost sure to pick up one of his hind feet, and by an adroit jerk throw him on his back, and these trips always demoralized a bear and caused him to take a tree. If a bear attempts to jump over a log, a large, active dog, with strength and courage to snatch him back without being dragged over himself, as sometimes happens to a small dog, adds greatly to bringing bruin to bay. As I said dogs of different sizes are necessary. Large dogs to fight behind and little rough-coated terriers to swarm about his nose, so active as to keep beyond his claws, but game enough to keep up a din about his ears, and when caught little dogs are more likely to slip through bruin's arms without serious injury than large dogs. The rough-coated terriers are best because they are better protected against the green briers that grow thick in the bottoms, besides their rough coats and loose hides will often slip on their bodies under the pressure of bruin's teeth, leaving them to close down on a bunch of hair and roll of skin instead of flesh, and the moment they are loose they are active enough to get out of the way.

I like a test dog that is too timid for a fighting dog, as it is very inconvenient to have a test dog crippled unless you have a very reliable pack; and a reliable test dog for bear, one that will not start nor open on any other trail, is invaluable to a bear hunter, and such dogs are always rare; and while a hunter may have a number of good start dogs, I never saw a pack that did not have one more reliable than all the rest. It is well to have a very slow hound, dachshund or beagle, with a good mouth, to follow on after the pack to guide the hunters to them. I once trained a little beagle to ride behind on a horse, and when the pack would get almost out of hearing I would turn her loose and she would take me to them. I have more than once been thrown out and lost my pack, and been compelled to camp in a canebrake and hunt them up next day. A well-trained pack will stay by a tree until hunger forces them to leave or their master finds them. I never left a pack in the woods; the consequence was that my dogs always had faith in my perseverance, and would almost perish by a bear before they would leave.

The reason given by "Bruin" for preferring a white dog is why I object to the color. A bear is afraid of a white dog, and is always trying to get hold of him; consequently a white dog is almost sure to get killed, especially if he is plucky. I also like a dog with a long tail, as his tail assists him to turn quickly, besides I have more than once dragged a dog out of a bear's arms by getting hold of his tail. If "Bruin" will get a pack of terriers and half-terriers, with a few medium-sized curs to bark around, and about three large active fellows with a cross of bull, greyhound and foxhound, selecting the most active, and train them to fight behind, he can force any bear on this continent to come to bay. I have never hunted grizzlies, but I am sure I could get up a pack in a little while that would trap any animal that walks the earth, even to a rhinoceros. Why the Western hunters do not use dogs in hunting grizzlies I cannot imagine.

I always hunt bear on horseback, although I have found places inaccessible to horses, where I would have to leave my horse and cut my way through the cane with my knife. The country in which "Bruin" hunts may be different, we have no mountains here, but we have densely matted cane brakes, and boggy bayous. Yes, a bear never went before my pack where I did not follow. I've seen some rough adventures, and some glorious sport, and must say that bear hunting is the most facinating sport I ever engaged in.

> "A life of languid years of list'e ss ease
> Is well resigned for cares—for j oys like these."

And as I look through the kaleidoscope of memory I see again many a happy picture, in scenes so variegated and beautiful, I can scarcely realize that life is not a dream. For pleasures past are but as happy dreams, and over all these comes a darkening shadow, that makes the picture sad. For of the many gay companions who camped with me in the Mississippi in days "lang syne," I alone am left. Ah! where are those loved ones gone? One word—the grave—covers them all. All have fallen victims to their love of sport. The exposures of the chase together with the miasma of the swamps have carried them all away. And why am I left? Because I saw my companions falling one by one, and I wisely retired from the sport. The strain on the system from exposure to wet and cold, intense excitement, over heating and cooling suddenly, plunging into bayous, straining every muscle and fibre of the body, until exhausted, in fact undergoing every hardship and exposure, until the constitution is shattered, then fall a victim to the first little illness that strikes you, this is why bear hunters and bear dogs die young. I once thought I had muscles of steel and an iron constitution, so I had, but the damp atmosphere of the swamps will rust such metals, and use and age will wear away the elasticity of Damascus steel. I found that bear hunting was killing my friends and undermining my own constitution. I felt the warning in nervous twinges and sciatic pains, and sought for sport in less arduous fields, only at rare intervals visiting the swamps and indulging my taste in a sport as fascinating to me as the dice to the gambler, or the cup to the inebriate. To follow a pack of bear dogs in a bear fight would even now be as irresistible as the eye of the serpent is to the bird it charms to destruction. I write this to warn young sportsmen of its dangers, knowing at the same time I had as well tell the young lover to turn his ear from the beautiful maiden, whose head rests confidingly on his bosom, as she whispers the refrain of the old, old song, which though rung for ages is ever new. Give me back my youth again, and I would be off to the swamps for a bear hunt though I knew the way had been sown with dragons' teeth from which armed men would rise up to oppose me. Farewell, "Bruin." I have led a happy life and have no regrets, save the loss of loved ones fallen by the wayside. Would I were a boy again, to spend another life in the enjoyment of woodland sports. Such is my experience, and I give it now for what it is worth. May we meet in the happy hunting grounds!

PICUS JEEMS.

LOCHINVAR, Mississippi.

Editor Forest and Stream:

"Bruin's" estimate of the hound is an injustice to our stock of foxhounds, for when properly trained on bear, with a judicious leader, they make as brave dogs as ever made Ephraim take a tree. The bear dog must be educated to it, or bred to it first, then educated. The progeny of dogs that have been accustomed to hunting bear take to it more readily than the progeny of those unaccustomed to the smell and sight of bruin. The four best bear dogs I ever owned or saw were of varied blood, but accustomed to the scent of bear from puppyhood, having been reared on a farm bordering on the great Dismal Swamp of Virginia, in which bears, deer, wildcats, coons, etc., were plenty. They early learned to chase each and all of the varmints named, and seemed to fear none. One of these dogs was a full blood shepherd, two of them were half hound and half bull, while the other was a full blood foxhound. Beaver, Despot, Sam and Brutus, ah what would I not give for four such now? Never did I know them to chase a bear but that he either took a tree or a knoll in a very few minutes after they got within reach of him. They were educated to it. A neighbor of ours had three full blood black and tan foxhounds that were almost the equals of our own; they were trained to it. Since the days of my early youth I have taken much notice of such things, and have arrived at the conclusion that it depends much upon the kind of bear dog wanted as to the breed. If you have drives and stands for shooting bear, then the full-blood hound is as good as any, but if it is to be a rough-and-tumble fight in the dense swamp, where the bear will come to bay, and you must crawl in on hands and knees and shoot him, then you want half hound half bull, from hunting stock, and you have a dog that can endure heat and a long run, and which will, when his blood is up, fight anything from a chipmunk to a circular saw. The too rash, headstrong dog is not the best; he is liable to run in on Ephraim; in other words to be a little "too previous," and get a hug and kiss that will make him wilt. Here lies the good of having the discretion and good sense of the hound blood; while when the fight comes, if it comes, the bull in the dog will not let the bear get away without a worry. Many a night have I lain awake listening to the baying of my dogs, while they held a bear seated on some knoll with his back to a tree, and held him all night without a word of encouragement from any human being, for it was "war times" (and no men around, they having gone to fight other battles), and I, but a small boy, could not think of venturing alone in that labyrinth of reeds and briers a mile from the shore and unarmed, save with a single barrel shotgun. Yet those faithful dogs would frequently stay on for twenty-four hours, while the tooting horn failed to bring them from their post, the bear afraid to move, except in self-defense. One instance I remember, my brother and I set a gun for an immense bear which was in the habit of coming out in the border of one of our fields and eating green corn. So with the assistance of some of the darkies and an old white man (too old to go into the army), we rigged up an old flint and steel gun (the others being hidden from prying soldiers), loaded it with an ample supply of powder and ball taken from an old musket cartridge, and after properly setting forks and trigger posts and grapevine, we placed the gun in line, properly sighted (we had seen the thing done before), fastened it down and departed. This was about noon. That evening, between sunset and dark, while we were out on the piazza talking, the old gun with its army ammunition went off with a horrible roar. We sprang to our feet, and with a dozen or more darky boys and dogs, started for the gun to see what execution had been made. On arriving at the place the dogs immediately opened, and off they went straight in the direction of Lake Drummond. We ran up breathless to where the old flintlock was and found blood, and plenty of it. The bear had fallen, but evidently had strength enough left to lead the dogs a lively chase. The barking grew fast and furious, and they soon "treed" the bear. Night having fallen, we went home to wait until morning, feeling mean at not being able to help the dogs; but they are too far off, and any one who has ever set foot in the Dismal Swamp will sympathize with me. The next morning we were up betimes, and taking with us a colored man, we started for the dogs, with our old flint and steel well charged, for the bear might show fight. Reaching the swamp, in we plunged and headed for the noise of the dogs, while we gave an occasional allohoop to encourage them and let them know we were coming. We struck an old road and followed for half a mile or more, and then struck off through reeds and briers so high and thick as to obscure the sun. But we are nearing the dogs, and they, hearing us, are perfectly furious, making a terrible uproar. Now we are near them, and all at once one of the darkies screamed out, "Look a-dere." We behold a monster bear seated on the limb of a cypress about fifty feet from the ground. Up goes the flintlock, but alas, the heavy dew has been too much for it, and the powder is damp, and a click is all the response to the pull of the trigger. The bear seeing so many around the tree hesitates about coming down, though he is uneasy and the blood is dripping from him. However, while we are wiping the pan and flint and priming anew, he turns loose and comes down in a heap. The dogs cover him immediately, and the next moment the yells and roars of bear and dogs are enough to make the hairs rise on older heads than mine. The fight is soon over, and Sam, my fighter, comes to us and lies down moaning pitifully. Meanwhile the others have gone on fighting their way through the tangled swamp. We examine Sam and find him badly used up, with several ribs broken. Again we come up with dogs and bear, and again the gun misses fire, and thus we follow on until dogs and boys are worn out, and we find ourselves near Lake Drummond, five miles from the shore, and sadly and wearily we call off the badly used up dogs and retrace our steps as best we may, homeward. The next week the bear was found, but the buzzards had ruined the hide, and nothing remained as a trophy but the teeth.

In this section of North Carolina we use the same pack for hounding bear, deer and fox. Only last Saturday, the 20th inst., a very large black bear was killed while being chased by a portion of the pack, while the others were baying another in a different part of the swamp. My advice to all who want good bear dogs is to get the descendants of old bear hunting stock if possible, let the breed be what it may. There is no special breed for the purpose; but if you can't get such, cross large hounds with bull, in proportion of three of hound to one of bull, and hunt them or have them hunted with old bear dogs for a while. There are individuals of all large breeds that will make courageous bear dogs, and there are others of the same breed that are too cowardly and will never hunt bear, however much they are taken; their place seems to be at their master's heels. Let the hound of hunting stock predominate in the pack. Three or four good dogs are better than a dozen, as you are not so liable to shoot a dog when only a few are employed as when so many are running around.

Bill Basnight, the noted bear hunter of East Lake, only uses two or three dogs, and kills quantities of bears. He uses hounds and prefers them white in color. Could you get him to give you points on dogs for bear hunting, I think they would be of service. A. F. R.

Editor Forest and Stream:

"Bruin" has opened a much neglected subject. Bears are scarce and their capture hard, more for want of good dogs than for lack of game. Good hunters claim that well-trained curs are the best. If they are, I want one, and can promise game for him to work on any time with one day's notice. Let us hear from "Bruin" often. MICHIGAN.

DETROIT, Mich.

CONFESSIONS OF A BUFFALO BUTCHER.

IN reply to Mr. J. A. Allen's inquiry in regard to the present distribution of the American bison and their extermination in certain localities, I will say that I am thoroughly acquainted with the country of which I shall speak, and know personally a great many men who have followed the buffalo for from five to fifteen years, and done nothing but hunt for a large part of that time, and have now gone to work for a living like other decent people. I hope that I will be able to give the readers of the FOREST AND STREAM a tolerably good idea of the manner in which the noblest and best American game was destroyed. The hundreds of true sportsmen who yet hope to visit the great plains and bad lands and see a buffalo in his native wilds are just two years too late. The buffalo is gone, and there's nothing half so grand now in North America as a herd of buffalo.

During the month of October, 1882, two companions and myself fitted up a hunting rig for the purpose of making an all-winter camp somewhere on the buffalo range. Contrary to all previous experience it was impossible at that time to locate any large bands of buffalo anywhere in the Northwest, but they had been most frequently met with on the high divides on the south side of the Yellowstone River, with their western limit defined in a general way by Powder River, and extending eastward well toward the Missouri, and south to within sixty or seventy miles of the Black Hills. Reference to a map of Montana and Dakota will give the reader a fair idea of the country south of the Yellowstone, which was at that time occupied as a winter range by the buffalo. It embraces the valleys of all tributaries to Powder River from the east, all of the valleys of Beaver Creek, O'Fallon Creek and the Little Missouri and Moreau rivers, and both forks of the Cannon Ball for almost half their length. This immense territory, lying almost equally in Montana and Dakota, had been occupied during the winters by many thousands of buffaloes from time immemorial, and many of the cows remained during the summer and brought forth their young undisturbed.

Having left Miles City, Mont., on the 23d of October we crossed Powder River on the 25th about twenty-five miles from its mouth, and plunged at once into the Bad Lands to find a favorable location for a temporary camp, until such time as we could locate the main herd and find out something about the movements of various bands of Indians and half breeds with which the country was infested.

We camped about six miles east of Powder River, on a little creek coming down through a narrow valley between impassible bad lands, and having its source away up on the high plateau which forms the divide between O'Fallon Creek and Powder River. We found excellent pasture in this little valley and abundant indications that it was frequented by small bands of buffalo.

On the morning of the 26th we all left camp in different directions to look the country over and see what we could find in the way of game. Taking the north side of the valley, I traveled for two hours or more diagonally away from the creek, finding signs plenty, but without seeing any game until I ascended a very high butte, about five miles from camp, which, from its dark and forbidding looks, we had named the evening before Black Mountain.

The country north and east of where I stood is high, dry and hilly, and about one-third of it is covered with low, scrubby pine. From the top of Black Mountain I could see a small band of buffalo about three-quarters of a mile away. They were lying down and evidently unsuspicious of any danger. Hastily descending, I took the lowest ground in a direction that would give me the advantage of the wind, being from them to me, and occasionally looked over a knoll to see if they were still quiet. Having placed myself to leeward of them, and the ground being favorable, I had no difficulty in walking up to within about seventy yards of them.

Peeping over the top of a little ridge I found that they had got up and were quickly feeding along against the wind and occasionally holding their noses up for a long snuff as though their keen sence of smell had already given them a suspicion that all was not right.

Lying close on the ground I waited until one turned his side to me, and then taking a quick aim fired a shot which was instantly fatal. That was the very thing I did not intend to do. The one struck fell at the report of my gun, kicked his legs in the air, and as his lungs collapsed he let out a short roar like groan and was dead. The others, five in number, bounded into the air, took one quick look around, saw their fallen fellow and the white cloud slowly lifting above where I lay and then before I could slip in another cartridge they tossed their tails and proceeded to "fill the air with alkali dust and accumulate intervening space" with a celerity that would have done justice to Mark Twain's jack rabbit.

My rifle was a Sharps .45-cal. hammerless and loaded with 120 grains of Dupont FG powder, and the U. S. Government 405-grain grooved bullet, hardened with about eight per cent. of block tin. Every rifleman will know that that ought to be a wonderfully powerful cartridge, as indeed it is, yet from experience in many similar cases I knew it would be worse than useless to shoot at a buffalo from behind, so I lay perfectly still and kept raising my sight as they got further away hoping that they would change their course enough to present a quartering shot, but was disappointed, and for all I know to the contrary they may be going yet.

On examination I found that I had a splendid three-year-old bull. My bullet had struck him in the shoulder quite low, smashed the big bones, passed directly through the heart and made a hole over an inch in diameter where it came out. I also found a sliver of bone sticking through the hide two or three inches from where the bullet came out, which proved to be a piece of the shoulder blade from the side away from me. Struck in the same spot with a common lead bullet he would probably have run off on three legs to die several days later. Our bullets were calculated to upset a little when striking the largest bones, but would usually hold their form and go straight through. Every buffalo shooter tries to avoid giving a shot that will kill on the spot, well knowing that if such a one is given it will probably be his last at that band. The following account of our work at another band will give the reader an idea of the methods employed by hunters who can keep cool enough to hold themselves down to business. Considering the perfection of the guns used and the peculiar characteristics of the game, the wonder is not that the buffalo is gone, but that they were not all killed years ago.

The first few days of our hunt around Black Mountain proving quite successful, we decided to make our location permanent, and built us three camps endurable in all kinds of weather, the two extremes being about twenty-five miles apart.

By the middle of January we had stacked at our various camps 236 cow and calf robes and about 200 buffalo hams. Many of those killed were so far away or in such inaccessible country that the only part saved was the robe and tongue.

The weather now became so severe that it was impossible to do anything in the way of hunting, and we laid by for three weeks doing nothing but to look after our ponies and cut wood.

On the 8th of February the wind came from the west and the weather rapidly moderated, and on the morning of the 10th, it being evident that a thaw was coming on, we once more sallied forth to see if we could see anything to shoot at. I hunted without success until along in the afternoon, when I heard a shot about half a mile away and I immediately started for the place from which the sound came. I counted two, three, four, five, and that sharp, wicked crack I knew came from Price's .40-90. No other gun talks like a .40-caliber Sharps with 90 grains of Dupont.

About three shots to the minute! "That means buff, sure!" and I found myself scrambling over logs, dodging pine limbs, and wallowing through snow at a break-neck rate, until completely winded, I took a more moderate gait and soon saw Price lying on top of a ridge among some broken rocks and pumping away at something in the valley beyond. Creeping up alongside of him I saw a little herd of twenty-five or thirty cows and young bulls standing huddled together at the foot of the hill and some eight or ten lying stretched out on the snow.

Buffalo in herds will not run as a general thing except to follow their leader, or from danger in plain view. Their senses of sight and hearing are not very acute, and by taking advantage of the wind it is no trouble to get quite close to them. If a band is standing and one of them is struck by a bullet, the one struck will bound into the air and run, all the rest following, and if he stops from weakness they all stop. If shot fairly through the lungs a buffalo will run from fifty to one hundred yards, stop, turn once or twice around like a dog that is making a good place in which to lie. He then quietly lies down, his head sinks to the ground, and he dies without a struggle.

When I crawled up to Price he turned and whispered to me, "Now you keep your fingers out of this pie. I've got them to stand and I'll get the whole band."

Presently one stepped out at a brisk walk for a leader, but before he threw himself forward for a run Price had sent a bullet through his ribs. He made a few frantic lunges, stopped, turned around and laid down as quietly as though nothing was wrong. In less than a minute he was far enough gone to require no more attention. The same thing was done over and over. As soon as one stepped out for a leader he was shot, and the herd always stopped with him. Presently Price asked me to hand up my gun and take his and wipe it out. I willingly passed it up, along with half a hatful of cartridges, and taking out my field cleaner started to clean his gun, when I was surprised to hear two shots in quick succession followed by a blast of execrations that fairly turned the air blue. It seems that an old cow had started, and Price had miscalculated the distance and shot clean over her. Quick as he was about getting in another cartridge she got under way and caught the bullet through the abdomen. Of course she did not stop, and the remnant of the herd followed her out of sight. Price didn't swear (?). Oh, no! he wasn't mad enough. He just waltzed around the whole top of the ridge, kicked the stones, tramped my ammunition into the snow, and condemned that condemned pot-bellied pea slinger to blankety, blankety, blank, blank, blank, and ended by sticking her up to the lock in a snowbank and marching off down the hill caressing his own gun, and growling like a bear with a sore head.

We counted up the kill and had twenty-seven dead, all fine robes; a little bleached on the hump, but salable for all that.

On the way home that night, and just before dusk, I killed a black-tailed deer at the second shot at a good 500 yards. When he fell I turned to Price and remarked, that the pot-bellied pea slinger always comes up smiling for the last round.

The next day we finished skinning, and got the last of the hams home a week later. We turned in in the spring 286 robes at an average price of $2.20, and a large quantity of meat at three cents a pound, besides 400 pounds of deer and antelope hides. We also sold during the winter at the Government sawmill on the Miles City road about ninety saddles of venison.

I was only one of probably a thousand men who spent that winter, as they had spent many preceding ones, at just the kind of work I have tried to describe; and that since that time the only buffalo anywhere in the Northwest have been a few stragglers over the old ranges, and occasionally one or two seen in the Big Horn Mountains and in remote corners on the eastern slope of the Rockies.

I know that the readers of FOREST AND STREAM will say "slaughter, slaughter," and "pot-hunter." Gentlemen, I plead guilty. That's exactly what it was. However, if you are ever in Montana, with a long, cold winter coming on and only a few dollars in your pockets, and you know there's a clean thousand dollars for a winter's work at "pot-hunting"—well, I don't ask you to say what you would do, but you know what I did. L.

MINNESOTA, July, 1885.

STILL-HUNTING THE GRIZZLY.

Editor Forest and Stream:

Permit me to raise my voice in defense of the veracity of Mr. Theodore Roosevelt, as assailed by your correspondent "F. A. M." in your last number. He is accused of writing fiction under false pretenses, on the mere ground of a little want of clearness in one or two passages in the article in question, and justice requires that your readers may judge for themselves on this point.

To give expression to his doubt as to whether Mr. Roosevelt's article descriptive of grizzly bear hunts has any real foundation in fact, he mentions two instances wherein he claims that the author has contradicted himself on important points. He also somewhat misconstrues and takes issue with him on a question of the ferocity of the animal, but his cry of fraud is based entirely on what he is pleased to term "little incongruities," which I have just mentioned.

First he accuses Mr. Roosevelt of stating in one place that he and his companion on their hunt killed five bears, and in another place of giving the number as six. This idea he must have gathered solely from the following sentence: "As Merrifield had not yet killed a grizzly purely to his own gun, and I had killed three, I told him to take the shot." From a strict interpretation of this sentence, one would infer that the writer had killed three bears purely to his own gun; but it is evident that the three are meant to include one that he had killed after it had been slightly wounded by his companion, and not an extra bear, making the whole number six.

Again he quotes the author as saying that "only seven shots were required to bring down all the grizzlies," while the reader may count up eleven shots mentioned as being made at them. What the author actually says is this; "We killed our five grizzlies with seven bullets." Not counting the shot which "F. A. M." invents for his imaginary sixth bear, there were ten shots fired in all, three of which were misses; but could we expect Mr. Roosevelt without a heavy conscience to declare that the bears were killed with bullets which never touched them? If your wild Western correspondent should incautiously charge his next door neighbor with what he has presumed to charge such a prominent man as Mr. Roosevelt, and the neighbor should naturally shy an old boot over the fence at his head, and, missing the mark, should try a bootjack with better success, would the coroner's jury find that he came to his end from the effects of a bootjack and a boot, or simply of the bootjack? W. E. B.

LONG BRANCH, July 11.

THE GAME PROSPECTS.

Editor Forest and Stream:

Grouse are abundant this year, and the prospects for fall shooting are good. H. H. LEWIS.

SEATTLE, Washington Territory, June 29.

Editor Forest and Stream:

Quail and chickens wintered splendidly, and bid fair to be very plenty this fall. Chickens are nearly all hatched now. In traveling over the prairie one will see all sizes from one day to four weeks. H. B. A.

SOLOMON CITY, Kansas, June 29.

Editor Forest and Stream:

In regard to prairie chickens the outlook is very encouraging. I know of four broods that are one-third grown. Quail are plenty. I fed a flock of eight during last winter, and they became quite tame, and now one old hen quail brings her brood into the farmyard every evening.

NIMROD, JR.

LEAVENWORTH, Kansas, July 7.

Editor Forest and Stream:

Comparatively few Philadelphia sportsmen were out for woodcock on the 4th of the month, the majority of located broods having been killed a week ago. On Tinicum Island and the cripples in the same neighborhood a few birds were shot by Lazaretto gunners, and Black's Swamp, on Raccoon Creek, furnished a half dozen to Bridgeport shooting men. The rain which has fallen within the past twenty-four hours and the wet weather which now threatens may have the effect of scattering what few woodcock that are left around Philadelphia and save some for the fall shooting. Upland plover have hatched in good numbers in interior Pennsylvania, many birds having bred in Lehigh and Carbon counties. Almost every small mountain meadow valley has had three or four nests. The young plover are already fairly strong and will soon be on the wing; the older ones, however, have not yet ceased their mating note, which they will continue to utter until the young are entirely grown. A large crop of reed is reported as growing this year on the river shores, the early sprouts being unusually thick and strong. If the growth of seed is good we may look for many rail birds. A large crop, however, means hard pushing.

PHILADELPHIA, Pa.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

A party of miners were out on a prospecting trip in Eastern Utah, near the line of the State of Colorado. They were out of meat, and in making camp about dusk one evening, after a hard day's tramp, the best shot in the party took his rifle and said he would go out and bring in a deer while the others were looking after the horses, preparing supper, etc. He had not gone over a quarter of a mile from camp, when, after crossing a low ridge, he saw a fine buck lying behind a large, flat rock. The head and horns were all that were to be seen, and it was evident that the deer had not seen our hunter. Taking sight for a center shot in the forehead, he whanged away and was sure he had hit the mark. He thought there was a slight tremor, but otherwise there was no movement made by the deer, and the head and horns were still erect and visible. Throwing another cartridge into the barrel, he ran down to where the deer lay, feeling very confident that it was his meat; but imagine his surprise when he found he had shot at an old dry sage brush having a remarkable resemblance to the head and horns of a deer—the gathering darkness had lent its aid to the deception. Upon examination he found he had made a center shot, which was some balm to his wounded feeling. It was a long time before the boys stopped joking him about his shot at a sage brush to furnish a hungry party with food.

BARCHLAND.

SILVER CITY, Utah.

KILLED OUT OF SEASON BY A BUCK.—An Olean, N. Y., letter, July 11, to the *Sun*, says: Orrin Walcott, aged 70, was one of the oldest hunters and trappers in McKean county, Pa. For over fifty years he lived near Port Allegheny, and had many thrilling adventures during his life in the woods. Near the headwaters of one of the branches of the Allegheny River there is a deer lick, one that has been visited by hunters ever since the first settlers came into the region. A few days ago Walcott and his son-in-law went to the deer lick to watch for deer. They remained in ambush all night, but did not get a shot at a deer. In the morning the old man told his son-in-law to fish down the stream two miles, while he struck through the woods with his gun. He said he would meet his son-in-law at an old salt spring two miles down the creek. The son-in law waited until night but the old man did not appear, and it was thought that he had struck the trail of a deer and was following it. Three days passed, and Walcott not having returned, a search was made for him. His dead body was found yesterday in a dense forest, four miles from the salt lick. His gun was lying twenty feet away, empty. His clothing was badly torn, and there were bruises on his head and breast. From the surroundings it was apparent that there had been a severe struggle. The opinion is that the old hunter had wounded a buck, which had turned on him and trampled him to death.

DOUBLE-BITTED AND SINGLE-BITTED AXES.—I first used the double-bitted axe in 1858, and have a fair practical knowledge thereof. It is no tool for boys, and it is more dangerous than the single-bit even in the hands of one practiced in its use. Witness Mr. Humeston, living near Bellaire in this county, who severed the nasal artery in his face two weeks ago, the implement having glanced. This is not the first accident of a similar nature which has come to my knowledge. They are useful in trapping particularly. In clearing land they give a special advantage, and in heavy chopping they are thought to "swing easier" than the single-bitt. A pocket edition, such as used by "Nessmuk," is a good and useful tool, and I do not wonder that long usage has convinced many old woodsmen that it is the best form for their use. But I left mine with Gus Hilton, of Kingsbery, Maine, in 1858, and have since used preferably the single-bitt.—KELPIE (Central Lake, Mich., July 7).

PASSAIC COUNTY.—The June record of the Passaic County Fish and Game Protective Association is likely to strike terror to the hearts of the poachers and law-breakers. One person was sent to jail for robbing birds' nests, two persons fined $25 and costs for taking black bass with nets, and one sent to jail for thirty days for a similar offense. This was in addition to the investigation of a number of other cases in which it was not deemed advisable to make complaints on account of a lack of evidence.—*Newark (N. J.) Call.*

"FLIRTATION CAMP" is a poor name for a good book. It is "a sporting romance," but there is more sporting than romance between its covers. The romance is slight, but there is very good reading for any one who likes well-written descriptions of shooting and fishing incidents. Mr. T. J. Van Dyke, the author, is well-known as a graphic delineator of field experiences. The chapters of "Flirtation Camp" cover the out-door sports of Southern California. Price, $1.50.

"CAHOOTS."—*Editor Forest and Stream:* I am much pleased to learn that Messrs. "Nessmuk" and "Gause," with their nail-driving muzzleloaders, are going to hunt cahoots. I have always thought that they (the cahoots) were legitimate "food fer powder." As old 'Squire C. said to my father and Sid. Harris when, in 1840, they started off in the stage coach as delegates to the celebrated Baltimore convention: "Bring me two or three skelps o' the —— scoundrels."—KELPIE.

BLACK DUCKS IN NEW JERSEY.—A few black ducks bred in the big swamp on Long Beach south of Harvey Cedars this spring.—HOMO.

OIL FOR FISH LINES.

SOME time since I asked the readers of FOREST AND STREAM for a good yet simple preparation that would preserve a fish line, thinking I might hear of something better than that I was using. Not having seen an answer, it may be useful to some of your readers if I tell them what I have used for several years past with a good degree of satisfaction.

Having used the Miners' Oil Company's finishing oil on wood, and finding it to have great penetrating and preservative qualities, it occurred to me that it might be a good thing for a fish line, and I accordingly tried it on a twisted linen line with satisfactory results, one of them being the nearly total disappearance of kinks. I have since used it on all my lines, except, of course, enameled ones.

The oil is inexpensive and easily applied. You have only to dip the line in the oil for a few seconds, let it drain, and then stretch it between two trees or other objects, and pass a woollen rag over it a few times to remove the surplus oil. That is all. Lines treated in this way I never take from the reel to dry, though it would doubtless be better to do so. It would be well to repeat the oiling annually.

I inclose for examination a piece of my black bass line, oiled in this way, which I have used for three years, and which has never been taken from the reel to be dried after a day's fishing. It has only been oiled once, but I shall soon oil it again. It has been over the rocks in the Susquehanna, the Delaware, the Otter, Lake Champlain, etc., and, on the whole, has had a fair share of rough usage. The editor can say what condition it is in after having been used so long. It is braided silk, and though quite small, with a good sproat hook at the end it is equal to any bass that swims, only one has to be just a little careful. I shall change the ends this year for the first time, though I have not yet done it, the end sent being the one that has always been used. PETRA.

MAMARONECK, N. Y.

[The line is a very fine silk one and is strong and equal to any fair strain that a black bass can bring on it.—ED.]

THE "STRIPED BASS" LAW.

Editor Forest and Stream:

My attention has been called to your article on the new striped bass law. It has been criticised so severely by interested parties who do not seem to understand its meaning and intent, that I deem it my duty to make an attempt at an explanation.

I drafted the law, as counsel to the Anglers' Association of the St. Lawrence River, as an amendment to the Game Law of 1879, solely in the interests of black bass and muscalonge, without any intention or desire to interfere with "striped bass." The bill as prepared was submitted to a member of Assembly, a keen sportsman and an intelligent man, who said our fresh-water bass need protection, and he then inserted the words "striped bass" where they are now complained of, and the bill was introduced as the member amended it.

All the objections mentioned in your editorial were discussed before the Senate Committee on Game Laws. It was stated that the bill was intended for the protection solely of the "striped bass," indigenous to the fresh waters of this State, and that it did not affect "sea bass."

It was argued that the State had no jurisdiction over the sea, and it did not attempt to protect sea fishes, and that in construing a sentence in which only fresh-water fishes were named, taken in connection with the evident policy and intent of the game laws, that the term striped bass, on proof of the existence of a fresh-water fish of that name, would *ipso facto* exclude a sea fish. It was further stated that the statute would be read according to the natural and most obvious import of the language used, and that in the absence of scientific or technical words, the words used would be taken in their natural and ordinary signification as appears from the context or other parts of the law, and that the "*R. lineatus*, the bass *par excellence* of salt water," although a striped bass, is commonly designated a "sea bass" to distinguish it from a striped bass (Vide Vol. 3, Bulletin U. S. Fish Com., 426), and they could not be confounded in a law designed to protect fresh-water fishes.

The Angler's Association had no special interest in protecting striped bass, and I made no objection to the committee striking out the words "striped bass," leaving the bill as I originally drafted it, but the Senate, after a full discussion without any outside interference, ordered them to be reinserted. Still, the bill does not interfere with sea bass.

Early in January the Angler's Association caused two thousand copies of the bill as introduced to be printed and circulated throughout the State, and each Fish Commissioner was mailed a copy.

I am not a naturalist and know very little about fishes from a scientific point of view, but I do know this much, that if the law is properly construed, traffic in sea bass is not interfered with by any game legislation in 1885.

F. M. DANAHER,
Counsel to the Angler's Asssociation, St. Lawrence River.

ALBANY, N. Y., July 7.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—VI.

WHEN we got back into the canoe the wind was blowing a brisk breeze down the lake and it was easy work for the skipper from there down to the village, but the fish seemed to be out of humor with us and paid no attention to the three nice speckled frogs trailing away astern.

As we passed under the bridge I noticed the water looked fishy near a small raft of logs moored to the bank on the right, and as I had reeled up and quit fishing since passing the point above, I suggested to Kit that she drop her frog in just below the logs to see if mayhap there might be a bass lurking in the vicinity, not that I really expected a fish to be there, but it is a good habit for a young angler to cultivate (and an old one, too), of always trying to cast in a likely looking place for a fish. She did not feel quite sure a woodchopper's cast would place the bait in the spot pointed out, so I took the rod and made the cast for her, and was a trifle surprised to see a swirl and the line pay rapidly out almost at the moment the frog struck the water. I passed the rod quickly back to Kit with instructions to "strike now!" as the line was running under the raft and there was probability of a hitch in the proceedings should the fish reach the waterlilies on the further side. Then began a spirited trial of main streagth on both sides, but our side proved the stronger, and after a short, sharp tussle of not more than two or three minutes a big-mouth of two and a half pounds lay gasping in the bottom of the canoe, six bass for the "Chip," while Bob and the skipper had only one villainous, sunbaked longface as our share of the day's honors. But I don't believe Bob and I were set back any nor envious of Miss Kitty's good luck, for in the course of the fish talk coming down the lake I had sought to impress on the amateurs, as one of the "rudiments," that no honest angler, no true sportsman, can be selfish; nor does he or she ever feel a pang of disappointment or a twinge of envy at the better luck of a comrade, and to exult over another because we may happen to take more and larger fish or bag more birds, is clear and conclusive evidence that we are not fit to be of the brotherhood.

Others there are too beside these guileless girls, who claim place in the ranks of the craft that may find a hint to their profit in the above, for I have a notion that the first principle of all true sportsmanship is unselfishness. A pig is better in a sty than running loose in a camp.

We pulled down to the little platform landing, tied the "holler log" to a stake and walked up to the store to pay our respects to neighbor Couturier, eat maple sugar and wait for the mail and the Mullers. The big roomy store, with counter on both sides, was a model of neatness and well stocked with about everything one could call for, from a fish hook or a paper of pins to a side o' bacon, a grindstone, grubbing hoe or cross-cut saw. The old man's arrangement of the post-office department of his store was, however, a marvel of economy and simplicity, consisting solely of a drawer under one of the counters into which letters, circulars, papers and packages were dumped indiscriminately, with a charming disregard to alphabetical order or any known manner of distribution, and hunted over and handed out as called for. But a country post-office draws custom as certainly as a barrel of molasses draws "yaller jackets" and flies, and this had probably more to do with brother Couturier's hankering after office than the princely remuneration derived from the administration of the postal affairs of Provemont, which was for the fiscal year ending July, 1884, exactly $60.31 as recorded in the "bluebook." But if the pay was light the mail was lighter, for a No. 5 pouch would no doubt hold all the matter received at the office in a week, and the old man had little cause for complaint on the score of being an underpaid drudge for Uncle Sam. However, he is a kindly, square-dealing gentleman, and a worthy one withal, and the "Kingfishers" to a man and woman, trust that he may continue to lick stamps at the old stand for the mossbacks of that neck o' woods till his tongue refuses to furnish the necessary moisture to make 'em stick, and his head becomes polished in the (civil) service, albeit the outlook is rather foggy for postmasters of the fourth class—and all other classes—even though they may have diligently shunned the rock of "offensive partisanship."

We spent the time pleasantly at the store till time for the Mullers to arrive, but when they were overdue an hour or more the boat was headed up lake with the intention of fishing along up the east side and across to camp by the time the sun was down. It had clouded up during the afternoon, and when we got above the point we encountered a stiff breeze blowing down the lake dead against us. A hundred rods made the case plain that fishing and pulling a "holler log" against a hard wind at the same time was not just the kind of recreation I had come to the woods after, and the rod was laid inside and the fishing left to the girls. And then the oars I had to manage that craft with were enough to turn one permanently gray—six feet outside and something more than a foot inside—an arrangement of leverage that would have taken first prize as a contrivance to develop the bluest of profanity in the operator, unless he happened to be too utterly good for everyday use. While we were going with the wind it was plain sailing, but now it was a labor that "caused ye honest angler to sweat full sore." Every few rods a fiercer gust than usual would strike us, and the old dugout would gather sternway or barely hold her own for a minute; and at such times Kit would put the rod aside and take the paddle with the laudable intention of "helping Papa out," but who ever saw a green girl who hardly knew the bow from the stern of a boat but who would average one stroke in the right direction to three in the wrong one? Kit's help was rather in the nature of a hindrance, and she was gently informed that her services were no longer required. Two miles of this kind of amusement wore the skipper out, and we went ashore to rest and hunt up a spring or stream.

Back in the canoe again greatly refreshed, a pull of a quarter of a mile brought us to a trend in the shore that protected us from the wind till within less than half a mile below camp, where we struck diagonally across, and just as it was getting dark pulled up at the landing, and were soon discussing a good supper that Al had kept hot and waiting for us. Not a fish was taken coming up, but it had been a day full of pleasures to the two girls, and that was ample compensation to the skipper for the warps and kinks in his spinal column and the generally disjointed condition of his frame, brought on by an overdose of recreation.

The Mullers had not yet arrived, but an hour after they drove quietly up on us in the dark.

After supper the girls were hustled off to bed, and we five, with Al for an interested listener, sat and talked the fire out, a small blaze Ben had kindled as he said "to give the skeeters a show to git their work in on us."

Since it had come on dark frequent glimpses of lightning were noticed in the west and northwest, and the sky was overcast with dark clouds that rolled and tumbled over each other, and grew blacker as the evening advanced, and now as we sat silent and thoughtful around the flameless fire, oppressed with an uncomfortable feeling of heaviness in the sultry air, a growl of distant thunder away off over Lake Michigan warned us that the old Mossback's change o' weather was at hand, and this change in the weather conditions had probably something to do with the fish not biting as we came up from the village. As a "change o' weather" is one of the foundation stones in the beliefs of anglers concerning the whims of fish in not taking toothsome bait or deceitful lures just before a storm, we availed ourselves of this time-honored screen behind which we are all glad to hide in a case of "no luck," and laid our failure to get a nibble along the east shore as we came up to the approaching war of the elements now manifested in an almost continuous glimmer of light, and ominous mutterings from a bank of inky-looking clouds slowly rising in the west. Take away the good old-fashioned signs and omens and traditions beloved of the craft for generations, and the angler is left groping in the dark for a reason why the fish won't bite at certain times, and half the pleasure of the pastime is lost in trying to get at the bottom of the mystery that is past finding out.

With the lantern Ben and I made a tour of the camp to see that nothing was left exposed that would suffer by a wetting, and after a peep at the "hennery" containing our treasures (Ben had so named the girls' tent on account of the "cacklin'" issuing from it ever morning) which assured us they had talked themselves to sleep, we sought the protection of our mosquito bars, and soon the camp was in silence and in dreams. A light sleeper in camp, I was aroused about midnight by a peal of thunder that seemed to shake the very earth, and directly great drops of rain began to fall on the tent—a pattering prelude to the grand symphony of the coming storm. A sullen roar in the swamp up shore fore told the fury of the blow, and amid the crash and boom of a hundred batteries of the heaven's artillery and an incessant glare of lightning that lit up the heavens with zigzag streaks of vivid electric light, the first movement of this sublimest of unwritten oratorios, a heavy thunderstorm at night, was opened. I lay there scarcely daring to breathe lest I should miss a stirring chord in the storm music, waiting for the next movement to begin. It came a minute after in a fierce blast of wind sweeping down across the open field from the hills back of us with an *accelerando* hiss that threatened to blow us all into the lake. With this came a pouring, driving rain, but the dry, sandy soil drank it up almost as fast as it fell, and our well-stretched tent seemed as impervious to the deluge as the back of a loon, although I looked every instant for it to take its flight across the lake and leave us at the mercy of the drenching storm. Jim and Muller were now awake, but up to the time the rain began to pour down, tired and worn out, Muller had snorted and snored a discordant accompaniment to the pealing thunder in blissful indifference to the terrific war of the clouds overhead.

I began to feel solicitous about the girls, and lighting the lantern, always at hand in the night, I slipped into a long rubber coat, pulled an old waterproof wool hat tightly on my head, and got out to take a look around camp, and see how much of it was left. As I stepped out I heard Muller say, "Jim, hadn't we better get out and see how everything is going?" And Jim's sleepy growl, "Oh, lie still. Hickory's out, and if anything's wrong he'll look after it." (This is one of Jim's most charming traits of character—in a storm—a childlike faith that somebody else will "look after it.")

The first thing that caught my eye on emerging from the tent into the glare of the lightning was a confused heap of drenched canvas a rod from the kitchen fly that seemed to have right smart of life in it. This proved to be the little dog tent in which Al had preferably made a nest for himself, and a minute or two before it had blown down, and he was floundering around under it, half smothered, trying to find his way out. When I had found the opening he crawled out, and in spite of the seriousness of the situation I could not repress an audible smile at the sorry figure he cut as he straightened up, hatless and coatless, in the pouring rain. Dodging into our tent, a poncho and hat put him in shape to face the storm, and going back we fished out his raiment and bed clothing, and wrapping them in a rubber blanket carried them to the big store tent, where a temporary bed was arranged for the remainder of the night.

Then I went over to see the girls and found them all awake and talking in subdued tones about the terrible storm howling outside, and better pleased, no doubt, to see "Old Hickory" than ever in their lives before, as they were nervous and frightened, and afraid the tent would blow down on them. But Ben and I had done our work well, and the tent stood firm as a rock, and as the mouth of it fortunately faced east everything was snug and dry inside. It was the first night in camp for Miss Annie and little Cora Muller, and I venture it was an experience they will not soon forget. With a few words assuring them that they might all go to sleep again in

perfect security if the wind did not increase in violence, and a caution to not reach up and touch the canvas, as every touch would start a leak as long as the rain continued, I made a starboard tack and beat back over to the dining-room and kitchen. More perhaps by good luck than management this had been put up so the wind struck the slant of the canvas, tending to hold it down, rather than lifting it, and this was the salvation of the culinary department, for had either of the open ends been facing the gale it would have long before been sailing in the direction of Grand Traverse Bay. I found everything in good shape, and hunted a seat on the lee side of the table where I could be out of the rain and sit and enjoy the grand battle chorus going on in the clouds. The storm still raged with unabated fury, and the rain came down in increasing torrents. Peal on peal of thunder rent the black-domed sky with crash and boom and crack as clear as Parrott gun, and off in the north the lightning flashed with ceaseless play in zigzag threads of electric fire so vivid that at times I was forced to close my eyes. So intense were some of the flashes that they left their imprint on the aching eyeballs in broken lines that had a greenish tint, and it was with an effort that I unclosed the benumbed lids. The gale howled and shrieked through the branches of the little fringe of trees along the bank like the wail of a troop of lost spirits, and so furious was the blast that it swayed and bent the slender birches down until their tops nigh kissed the water. Out on the lake when a brilliant flash would come, as far as I could see up and down, was a mass of seething, flying foam and driving rain, hurled along by the roaring tempest in fitful clouds of blinding spray that hid the further shore from view as in a thick white mist. The storm was now at its height, and nothing could exceed the grandeur and sublimity of this midnight strife of the elements, this grandest of nature's anthems. It was a scene never to be forgotten, and I sat there so lost in the enjoyment of it that I forgot all about the camp, the old comrades in the tents back of me—comrades in many a storm in years gone by—and the timid, frightened girls under the staunch walls of their canvas house, huddled close together to keep their courage up. Listening to the roar of the gale, the deafening thunder, the swish of the driving rain on the foam-covered lake, and watching the play of the gleaming lightning, a feeling of awe crept over me, and I was impressed with a sense of utter nothingness. I felt that I was a cipher on the face of the earth, sitting there alone with these mighty and mysterious forces of nature at work around me and in the storm-riven clouds rolling overhead.

But now the fury of the storm was over; the strained canvas under which I was sheltered eased up a trifle, and taking advantage of the lull in the wind I made the rounds of the camp again to see if anything had given way, but as far as I could learn by a hasty inspection, everything held; and it was a lucky circumstance that none of our tents were pitched to face the west, else the "Kingfishers" would have been left without a nest. I visited the extreme outpost—Dan's tent—and found him and Ben awake and in a cheerful frame of mind, although there was a miniature brook running under the tent at one corner, however not likely to reach their bed or do any damage.

"Hello, Hickory!" hailed Ben as I crawled inside, "how's this fur high blow? This must be one o' them Lake Michigan zeffers that old Knots tells about. Wish he was here now. Kinder strikes me he'd begin to think o' mendin' his ways." And as he sat up in bed, "Look much like rain outside? Great hoss chesnuts, how it blows. Wonder ef any o' the gals is skeered to death yit, an' is the heunery blowed down?" Nothing short of an earthquake will ever knock the levity out of old Ben, or keep him from "hevin' his fun."

Assuring him that everything was in good shape, and the girls doing bravely, I went back to our tent and turned in, to watch the storm as it passed off to the east with lessening roar and fainter flash, till it spent itself in low rumblings and flickering gleams that lit up the heavens with a feeble glow away off up in the direction of the straits. The blow had gone down to an easy breeze, but the rain continued to fall steadily with soothing patter on the tightly-swelled canvas, till the drowsy melody and Muller's sonorous, sub-cellar snore closed my eyes in sleep. KINGFISHER.

THE DAN RIVER OBSTRUCTIONS.

Editor Forest and Stream:

Your commendable efforts in behalf of the bill to stop hounding in the Adirondacks is, I am sure, receiving the thanks of sportsmen from all sections of the country. Every successful effort of this kind bears twofold results. It strengthens the determination of the many game protective associations throughout the country to continue their good work, and admonishes the game sharks that a day of judgment is not far distant for those who, regardless of all right feeling in the matter, and of the interests of the many, continue to slaughter game and fish in and out of season. There is another result that your efforts will accomplish in the near future. A signal gun has already been fired. The inclosed clipping, written by a friend of mine in Virginia to the *Henry News*, who echoes the voice of many sportsmen in his section, will explain itself if you will kindly print it with this. It would be well for all those who aspire to office within the people's gift, to take this warning note well to heart, and ponder upon it deeply. The day is not far distant when public servants will recognize sportsmen as a power. It is unnecessary to say how this result will be accomplished. ZIG-ZAG.

WILMINGTON, Del., July 8.

The letter in the *News* is as follows: "In selecting men to represent Patrick and Henry in the next Legislature, their attention should be called to the obstructions in Dan River at Danville, with a view to their removal, or requiring owners of the water power to afford easy and safe ascent to the fish in the annual migrations to their spawning grounds. A bill for that purpose was drafted by a citizen of Danville, and introduced in the last Legislature by the member of the lower House for Hanover, which body passed it, and I am informed was defeated in the Senate by Senator Hurt in accordance with the wishes of certain citizens of Danville who were interested in the fisheries there established by reason of said obstructions. Your readers are doubtless familiar with the story of the infinite slaughter of the helpless innocents last spring at that point, which process will be repeated, even to their final extermination, unless measures are taken to arrest it. Perhaps the Senator from Pittsylvania wishes to retire from politics, or his ambition extends no further than the limits of his own county. In no other way can his reported unwarranted hindrance of a great national and State enterprise be accounted for. Our efficient Commissioner, in conjunction with the United States Fish Commissioners, is doing noble work in restocking the depleted streams of Virginia with the most wholesome of food, and he should have the support and encouragement of every citizen to that end. Millions of young fry, representing the best varieties of fish, have been loosed in the various streams of the State, which, so far as Dan River is concerned, only get as high up as Danville to fall a prey to the fish hogs there lying in wait for them. Upper Dan, Smith, Mayo and their tributaries ought to vigorously protest against such narrow legislation, and insist upon a free passage and suitable protection for fish at all seasons. The writer has been tendered the assistance of some Northern gentlemen in procuring a supply of fish most suitable for the waters of Smith River, but declined their generous offer for reasons set forth above. The fish hogs must go. J. T. S."

TROUT IN TUFT'S POND.

Editor Forest and Stream:

My attention has recently been called to an article in your issue of May 7, in which a correspondent willfully or unknowingly misrepresents the state of affairs at the fishing grounds about Kingfield. I know the FOREST AND STREAM, by reputation, to be essentially a sportsman's paper, and as such it aims of course to truthfully represent or describe those points where the most sport can be had. Consequently as much for the cause as for the good of my own region, I take the liberty to make the following statement, for the truth of which I can vouch.

It is true that Tuft's Pond was sadly depleted of fish prior to 1882, and it is equally true that the people of Kingfield petitioned the Legislature, not of that year but of 1883, for a special law as follows:

SECTION 1. All persons are forbidden to take trout, in any manner, from Tuft's Pond and Grindstone Pond, in the town of Kingfield, in the County of Franklin, for the term of three years from the passage of this act. [Passed Feb. 14, 1883.]

From this it will be seen that the close time is not up until the 14th day of February, 1886. And now for the foundation of the story relating to the immense slaughter of fish through the ice this spring. Tuft's Pond is in charge of a man by the name of Alphonso Blanchard, and Mr. Blanchard unfortunately did not study the laws passed by the Legislature of 1885, one of which was as follows:

SECTION 1. It shall be the duty of all persons that are or may be benefited by legislation, other than the general statutes, for the protection of fish in any waters of this State, to publish such protection by posting and maintaining notices, as hereinafter provided. Said notices shall be placed on the banks or shores of such protected waters, not more than ten feet and not less than six feet above the ground, in a conspicuous position; and if on running water, such notices shall be not more than one-half mile apart on the banks of such waters; and if on a pond or lake, not more than one mile apart on the shores of such pond or lake.

SEC. 2. Said notices shall be painted on wood in black roman letters not less than two inches in length and not less than one-half inch in breadth, so that such letters shall be plainly legible, and such notices shall state the number of the act and the date of the same giving the said protection to such waters.

SEC. 3. Any one mutilating or destroying such notices shall be subject to such penalties as set forth in section twenty, chapter one hundred and twenty-seven of the revised statutes.

SEC. 4. In case no notices as herein provided are posted and maintained on waters that are protected by special laws, then no one violating such laws shall be liable thereunder to any penalties set forth in such laws. [Approved Feb. 16, 1885.]

Mr. Blanchard's ignorance of this law led several young men to visit the pond, where they took several hundred trout. The visit was not repeated, for Mr. Blanchard was told of the law, when he threatened prosecution, and now the pond is protected as the law directs and will be so protected until next spring. Yours very truly,

HENRY P. WHITE.

FARMINGTON, Me., July 8.

MAINE ANGLING.—Boston, July 10.—I would like to comment on the article on "Maine Angling," by "Boston," in FOREST AND STREAM, July 2. In regard to the "poor fishing at Rangeley Lakes this season," the "Swiss cottages," fine "comforts and conveniences" at that too accessible and popular resort, "Boston" gives us a truthful and interesting letter. But when he goes further with his pen than he has been with his feet and eyes, and, based on rumor, adds the statement that "fishing has also been poor at Tim and Seven ponds during June," he has stumbled into a mistake. I was at that locality during the time he specifies and am prepared to state there was no day so hot nor so cold that a fisherman could not take from ten to fifteen pounds of trout during three hours' time on any morning or evening, with the fly, too. And I saw scores of trout averaging a pound each returned, uninjured, to their native home, the captors having no further use for them. Was that "poor fishing?" The forest fire that was raging in June in the Dead River Valley has at last been extinguished by a heavy rainstorm. This fire has burned over a greater area than any other in Maine for many years past, almost the entire valley of the Dead River is left a smouldering and blackened ruin. The section embracing the Seven Ponds, however, escaped without injury.—M.

HIBERNATING BASS.—Boston, July 10.—I am no scientist, quite the opposite; but as I have had specimens of black bass in an aquarium constantly before me for three years past, I certainly have had good opportunities to form an opinion as to their habit of hibernating, and I quite agree with A. N. Cheney in FOREST AND STREAM July 2. I have often noticed that during the fall or winter they may be quite active and feeding readily, and immediately on the approach of a cold snap they settle together in a quiet corner at the bottom, even changing their color to a darker and mottled appearance, and remaining almost as torpid as a frog, seldom changing their position unless disturbed; and at such times they will take no notice of food of any kind. But on the advent of higher temperature they wake up and are themselves again, ready for any unlucky shiner or even a morsel of beef liver that may be dropped in their domain. —M.

SNYDER PLEADS GUILTY.—Gould Snyder, the notorious pound net fish outlaw was brought before Justice Gilliland last Tuesday for his adjourned examination when he pleaded guilty of violation of the law and was sentenced to fourteen days in jail, and to pay a fine of $25. The extreme lightness of the sentence was a matter of no little surprise to citizens who desire to see a stop put to the nefarious business in which this man has been engaged for several years on Lake Champlain. It is understood that other more serious charges involving much heavier penalties will be pushed against Snyder later.—*Plattsburgh (N. Y.) Republican.*

ADIRONDACK PROPERTY FOR SALE.—By reference to our advertising columns it will be seen that the well-known and beautiful estate of Childwold is for sale.

ST. JOHNS, Newfoundland.—We have just had a visit from the Albatross. She has done her work admirably, and is an excellent sea boat. Capt. Tanner, Prof. Smith, and her officers enjoyed their visit. There was not sufficient time for long excursions, but some of the staff, who are expert with the rod, caught quite a number of trout. I am rejoiced to be able to tell my readers that at last the grand new hotel, the Atlantic, is completed, and is now in full operation. It is far superior in size, accommodation, convenience and style to any hotel in the maritime provinces, and it supplies the one great defect in St. Johns as an attractive resort for sportsmen and tourists. The grand caribou forests, grouse moors and salmon and sea trout fishing, the splendid summer climate and the scenery are and always have been the great inducements to visit Newfoundland. The want of hotel accommodation was a fatal defect, a great drawback in the eyes of all American travelers; and all pleasure seekers will rejoice with me that at last an excellent hotel, replete with every comfort, will open its hospitable doors to every stranger who can pay its very moderate charges. Any of my sporting friends who like to read a genuine sportsman's account of his experiences by flood and field should procure "Sport and Travel in Newfoundland and the West Indies," by Capt. W. R. Kennedy, R. W., published by the celebrated house of W. Blackwood & Sons, Edinburgh. "The Battle of the Stags" is one of the finest sporting narratives I have ever read. Many may differ from the gallant mariner in his views about politics, law and commercial questions, but on the splendid caribou shooting in Newfoundland Capt. Kennedy is the highest living authority, and the best all-round sportsman I have ever met.—TERRA NOVA (St. Johns, Newfoundland, June 30).

SALMON FISHING ON THE CASCAPEDIA.—Agency of Department of Marine, Quebec, July 8.—*Editor Forest and Stream:* Last evening I had the pleasure of a few moments' conversation with His Excellency the Marquise of Lansdowne, on his way to Ottawa from the Cascapedia River, to which he intends returning in a few days. He describes the fishing as excellent and says that the river is now just getting into even better condition. The fish this season are more numerous, but not quite so large as last season. Up to date three rods have killed 232 salmon, and if I can judge of the others by the size a beauty of the one his Lordship sent me, they must have had glorious sport indeed. Their respective catches have been: The Marquise of Lansdowne, 62; Hon. H. Anson, A. D. C., 55; Mr. Streetsfield, A. D. C., 43; guests, 62; total 232. Owing to heavy freshets there was no fishing for some days in the river, but outside nets were doing well, as elsewhere the water rose so high. The nets had to be taken up three or four days and the salmon rushed up the river in consequence in great numbers and the anglers got the benefit.—J. U. GREGORY.

SNELLED HOOKS.—*Editor Forest and Stream:* Lest "J. W. T." may think I am deficient in courtesy, I will say that it is not my fault the snooded hooks did not reach him. I mailed them to FOREST AND STREAM. A snood is a snood in this locality, not a snell. A helgramite is a helgramite, or possibly a man-eater, certainly not a dobson, etc. The hooks I tied, using the wax for which I gave a recipe, were tapered hooks. As three recipes for making a better wax have since appeared in FOREST AND STREAM, it is unnecessary to discuss mine further. I believe "J. W. T.'s" snelled hooks are far superior in appearance to mine. I probably lose as many in an hour's fishing as he can tie in the same length of time. The fish don't run away with many of them, but they become entangled in the debris on the bottom. A clearing ring is sometimes effectual, but oftener not. Since writing the above I have read Mr. Cheney's article in issue of July 9. He covers the ground so thoroughly that I have nothing to add.—E. A. LEOPOLD (Norristown, Pa., July 10).

A CARP TAKES A SPOON HOOK.—Mr. D. G. Mohler and myself were fishing from a boat on Lake Roland, Baltimore county, Md., yesterday morning about six o'clock, he using an Abbey & Imbrie No. 4½ fluted spoon. Our boat had nearly lost all headway, and Mr. Mohler, who had been trolling his spoon about 40 feet astern, had just commenced reeling in preparatory to making a cast, when he got a "strike" and hooked a fish which at once made for the bottom. The fish, though not rapid in its movements, made an obstinate fight, and it was some time before he brought it sufficiently near the surface to allow our noting what it was. Upon landing all the hooks of the gang were found imbedded in the mouth of the fish, which, when afterward placed on the scales, showed its weight to be 3 pounds 13 ounces. I am not posted on the varieties of carp, and can merely say that it had large scales, was of a golden color, and that the circumference of its mouth was scarcely larger than the gang of hooks on which it was captured.—A. F. DRESEL.

"OSWEGO" BASS.—Paterson, N. J., July 11.—The Passaic County Fish and Game Protective Society recently brought an action against two men in Paterson for taking black bass with a seine in a pond near Passaic. The defense was that the fish was not black bass but "Oswego" bass. They were fined twenty-five dollars each and costs, but will appeal the case on the grounds above stated. It is time that the obsolete name of "Oswego" bass, for the big-mouth, was dropped from the laws of New York and New Jersey, for it is not in use to any great extent at present. The whole case was summed up in FOREST AND STREAM by Mr. Mather some months ago, when he wrote a "Monograph on the Oswego Bass," which consisted merely of the words: "There is no such fish." If these men can escape on such a quibble, it is certainly time to drop this old fogy name, and let the law say merely "black bass," which term includes both species.—INDEX.

THE ENGLISH TOURNAMENT.—The fifth annual *Fishing Gazette* angling tournament in aid of the Anglers' Benevolent Society has been arranged to come off on Saturday, August 22. The *Fishing Gazette* says: "On account of the difficulty in keeping the public out of the ground at the Welsh Harp, and because of the desirability of having the fly-casting on a running stream, it has been decided to hold the tournament this year in the private grounds of the Pike and Anchor Fishery, at Ponder's End, on the River Lea, within a few minutes walk of Ponder's End Station, on the Great Eastern Railway. Mr. Ghurney and Mr. Field report that there is ample accommodation both for the fly-casting and bait-casting. A pegged-down match will be fished in the preserved water attached to the Pike and Anchor, for which several valuable prizes will be given. Ponder's End is only a short run from Liverpool Street Station."

A PERSONAL EXPLANATION.—*Editor Forest and Stream:* As you might feel a little hesitancy in explaining how it came about that in my communication in last FOREST AND STREAM, entitled, "Ganging Hooks," the printer makes me say "put three together," "I had been traveling," "I found a hat store," and "I twitch it," when to the best of my knowledge and belief I made the marks which with me pass as writing among the initiated, that stand respectively for "put them together," "I had been trolling," "I found a hot stove," and "I stretch it;" a personal explanation may be in order. A few years ago I received from my friend Col. P., a leaf from the *Century* magazine, devoted to the advertisement of Prof. Haskell's Compendium of Instructions in one of the "R's" The "greatest improvement in writing during the month" was made by A. N. C , and his portrait and "old style" and "new style" of signature was given, besides several testimonials as to the efficacy of the "Compendium." The "old style" signature looked like "Piseco's" signature in Arabic as published in FOREST AND STREAM, while the "new style" seemed to be a fragment torn from a war map of the Soudan. One of the testimonials was from a New York editor, certifying that I had used but four bottles of the "Compendium" when there was a decrease of fifty per cent. in the mortality of printers who set up my copy. That strikes from the same cause averaged only one in two weeks, and my manuscript had made but one proofreader insane during the month. He closed by ordering twelve bottles of "Compendium." at proof, to be sent to my address. There were several other very flattering testimonials in regard to my chirography, but I have given enough to explain why I was looking for a "hat store."—A. N. C. (Glens Falls, N. Y.).

PHILADELPHIA NOTES.—July 11.—At the risk of becoming tiresome your correspondent will again state this week that fishing was never better than it is at present at Barnegat Bay, N. J., and a letter just received from that point indicates that new schools of weakfish have, since last writing, entered the inlet. The Long Island and New Jersey fish oil companies are now complaining of the scarcity of the menhaden on our near coasts and are considering the feasibility of withdrawing a large portion of their steam outfits. This is but a natural consequence resulting from the continued warfare that has been waged on this fish by the companies in question, and can account for the scarcity of the bluefish, especially at Barnegat and Tuckerton, and it is hoped a portion of the nets will be withdrawn and the mossbunker be allowed to increase, in which case a notable improvement in the number of the species which feed upon the former variety will be apparent.—HOMO.

ROCK BASS FOR THE SCHUYLKILL.—Philadelphia, July 10. —*Editor Forest and Stream:* The late Thaddeus Norris used to lament the fishless state of the Schuylkil River and sigh as he remembered his catches there in an early day. The dams and improvements of civilization destroyed the fish some years ago. Two days ago the Anglers' Association, of Eastern Pennsylvania, placed six hundred rock bass, *Ambloplites rupestris*, in the river at three different points. They were placed as follows: 200 above Flat Rock dam, 200 below the dam at Conshohocken, and 200 near Pawling's bridge by Perkiomen Junction. The fish were adults and weighed half a pound each, they came from Lake Erie. As the spawning season for this fish is over they will not breed till next year. Had this planting been done in April we would have had a crop this season. As it is let us hope that all fish captured will be returned to the waters.—POKE-O'-MOONSHINE.

THE "BLACK PRINCE."—In our last we acknowledged a specimen of this fly from Messrs. Abbey & Imbrie. We now have another from Mr. O. A. Richardson. The flies differ radically and illustrate the confusion which we have so often alluded to. The only points of similarity is in the black wings and red tail. The fly of Abbey & Imbrie has a body of bright silver tinsel and a black hackle. That of Mr. Richardson has a red hackle and a black silk body wound with red twist. The flies are as different in appearance as any two well known ones are and plainly show the necessity of a standard which will be adopted by all makers.

PATTERNS OF FLIES.—We have received from Messrs. Abbey & Imbrie a plate containing sixty-one trout and bass flies, being a few selections from the many forms tied by them. A printed list explains that the flies shown are types to which a great majority of flies can be referred, that is, six figures of palmer hackles show the various styles which can be varied in color at pleasure, and so of the winged flies. The plate is in black and white, but is also furnished in colors, done by Mr. W. Holberton, at $1.25 extra. Our copy is neatly colored and will be useful for reference.

FLY-FISHING FOR SHAD.—The season for shad fishing with the fly on the Connecticut, at Holyoke, has been poor so far. The water has been low and the river is full of chubs. On Friday last Mr. Thomas Chalmers and Mr. S. T. Hammond went out and each had a strike from a shad, but made no captures. A rise in the river this week will make fishing better, and they will try it again. Mr. Hammond reports the black bass as being very scarce there now, although they were plenty and of good size last year.

CASTING THE MINNOW FOR LAKE TROUT.—About July 1 Mr. R. Kraft took a lake trout, *S. namaycush*, of four pounds while casting a minnow on Paradox Lake, Essex county, N. Y., an unusual occurrence in those waters, where the trout are seldom found in shallow water at that time of year. The black bass have been plenty there this year, and have risen freely to the fly.

A SALT-WATER SUNFISH.—Capt. Thomas Harris, of Whitestone, Long Island, while out in his boat on Saturday, when nearing Sands Point, in Long Island Sound, discovered an immense sunfish basking in the water. With the help of the crew of the tugboat the monster was harpooned and captured. It weighed 300 pounds.

BLUEFISH ON MASSACHUSETTS COAST.—Mr. C. H. Andariese writes from Cape Cod that both bluefish and mackerel are very scarce at present on the coast of Massachusetts. The fishermen there ascribe their absence to the scarcity of menhaden.

EX-PRESIDENT ARTHUR has been salmon fishing in Canada. President Cleveland will go fishing in the Adirondacks.

THAT FISHING PROBLEM.—See in canoe columns of last week (July 9) description of portable canvas canoe.

Fisheulture.

HOW TO RESTORE OUR TROUT STREAMS.

[Read before the American Fisheries Society.]

BY J. S. VAN CLEEF.

IN 1877 and the two following years, the supervisors of one of the counties of the State of New York lying east of the Hudson River, made appropriations for restocking the waters of the county with fish, and a committee of which the writer was the chairman was intrusted with the work.

The supply of fish from the State was liberal, and in each of the springs of 1878, 1879 and 1880, many thousand small fry of trout were distributed, those streams which had been noted trout streams in the past, being especially favored.

In one of these years thirty-five streams were restocked. The fish were deposited under careful instructions, and considerable effort was made to protect the streams, and yet after the most careful inquiry, the committee has failed to hear of any practical benefit resulting from its efforts.

Many of these streams already abounded to some extent in trout, and it was hoped that the protection afforded after restocking would result in a marked increase of the fish; but that hope was not in any single instance realized, and the committee has been irresistibly forced to the conclusion that some force other than excessive fishing had led to the universal depletion of these streams, and that the same cause still existed to prevent their restoration.

After the fullest investigation and examination of these and other streams, I have become satisfied that the destruction of the trees bordering on these streams and the changed condition of the banks produced thereby has resulted in the destruction of the natural harbors or hiding places of the trout, that this is the main cause of the depletion, and that until these harbors are restored, it will be useless to hope for any practical benefit from restocking them.

By giving a few of the facts which have led me to this conclusion, its correctness will, I think, be made apparent:

1. In the heart of the Catskills there is a natural trout lake of about twenty-five acres. Being too remote for successful protection, which has only been attempted within the last ten or twelve years, it has been for many years the resort of anglers the year round. Trout have been taken in enormous numbers through the ice, which usually lasts until May, and it has been the very paradise of poachers by day and by night. And yet the fish in this lake are substantially as abundant today as they have been for the past twenty years, and during all this time there has been no marked diminution of the trout.

This lake is fed by a stream which runs through a quarter of a mile or more of wet, marshy land, which is so completely covered by large alders that its is almost impossible to penetrate them. In this stream the small fry and fish of one or two years' growth abound in myriads. In other words the natural harbors and hiding places for the trout in and about this lake have been left undisturbed, and this is the secret of its continued wealth of trout.

2. Thirty or forty years ago a brook in Dutchess county, about five miles long, was noted for the abundance and size of its fish. The angler in the early spring was usually rewarded with a well filled creel, and from this little stream, which a child could jump across, trout were often taken of from one to two pounds in weight. Early in each summer the trout disappeared, only to appear again the next spring in equal numbers. Near the center of this stream, it ran through a marsh, which so abounded in black alders that they protected it from approach. Through this marsh the stream was much broader and the water deeper than elsewhere, and the bed was composed of thin, deep mud, making wading impossible. Some twenty or more years ago the owner of this meadow cut down every alder, at the only point where the fish had found a safe refuge, and in a few years the trout, large and small, practically disappeared, and though recent efforts have been made to restore and restock this stream, under full protection, they have substantially failed.

3. In one of the principal streams running through Ulster and Sullivan counties, it has been my privilege to fish many times during the last twenty-five years. Here were two pools which always furnished rare sport, and the adjacent pools were always full of fish. On one of the banks of each of these pools the trees had been left standing, their roots had preserved the upper portion of the bank, but below these roots the ground had been washed away, so that deep hiding places were thus formed for the trout. It was very seldom that one or more large fish failed to rise to the fly at these points.

Some twelve or fifteen years ago these trees were removed, the stumps decayed, the bank fell in, the fish no longer had a refuge, and since that time the angler has been fortunate if he has raised a fingerling at or near either of these pools.

The conditions as to the waterflow are still relatively the same in all three of these waters, the spawning grounds are unchanged, the only difference is in the harbors for the trout, which are unchanged in the first, totally destroyed in the second, and partially so in the third. And the depletion of the fish has been in precise proportion to such destruction.

Lest these may be regarded as somewhat isolated cases, I will cite two more.

Near the center of Dutchess county a brook rises in the side of a small mountain, at the base of which it enters a swamp, through which it runs, with occasional openings for two or three miles, where it is completely protected by the trees and bushes which have never been disturbed. In these open places and below this swamp, where for a distance of several miles there are but few places where the stream cannot be reached, it has been and still is freely fished, and yet there has been no serious diminution in the number or size of the fish. While other streams have failed, this one has always yielded good sport, trout of from one to two pounds being frequently taken.

In the eastern part of the same county there is a long, sluggish stream running for miles through a marsh. Its very name, "Swamp River," indicates its character. Its bottom is one long stretch of ooze; its banks are almost everywhere covered with a dense growth of bushes. It has always been noted for the size of its trout, but on account of the difficulty of access they are seldom taken. It is fed by several tributaries of three or four miles or more in length, as well as numerous little streams, all of which are open and freely fished, and they are all good trout brooks.

As soon as the water in these brooks becomes low the trout disappear, but where? The water flow is increased by the generous rain, they appear again in large numbers, and at such times large fish are often taken even in the smallest tributaries.

This last instance is especially interesting, as it shows that when the streams are full of water the trout will travel a long distance from their haunts, and that when warned of danger by the receding of the waters the instinct of self-preservation leads them to hasten back to them.

Unfortunately very many of our most noted streams are not favored with lowlands and swamps, where the fish can find safe refuge, and in these and our mountain streams especially we must unquestionably look to the larger pools in time of drouth as the principal places of refuge for the trout, and when these are accessible from every point, the trees are cut and the banks fall in, so that every pool assumes about the shape of a huge wash basin. No system of protection will prevent their being dragged with nets in the night, or the commission of other depredations almost equally destructive of the fish.

I have the most abundant proof that fishing with nets has been constantly done in our finest Catskill streams, such as the Beaverkill, Neversink and Roudout, and where the trout cannot take refuge under the banks, they must necessarily be taken by the net.

I have not referred to the foregoing facts as in any wise new, nor in the belief that they may have escaped the observation of anglers; but rather, that their significance has not been generally understood or appreciated.

When the trout become scarce the reason most commonly given and accepted is that "the stream is fished out."

It is not the rod, however, but the axe and the net that have ruined and are ruining our streams.

The natural homes of the trout are the sluggish waters of the swamp, cold and pure, with their bed of ooze and sheltered bank, or in our upland streams the deep cavities under banks or roots.

We have destroyed his home and he has perished. Let us restore it to him again, and he will thrive.

I believe it possible to restore most of our streams, where the waterflow has not decreased too greatly, especially when they are under the control of clubs or associations, who can and will make the effort.

The remedy which I suggest is briefly as follows:

First—Prohibit the further destruction of either tree or bush upon or near the bank of the stream.

Second—Where the soil is wet and suitable protect the pools by an abundant growth of alders or other bushes.

Third—Plant trees on the banks wherever feasible, especially where their roots will protect the surface of the ground, and at the same time permit the washing away of the soil underneath, so that large hollows may be formed as hiding places for the fish.

Fourth—In each year, after the spring freshets are over, protect every pool as far as practicable by placing stumps, or trees or bushes in them, so that fishing with nets will be impossible. And also that the trout may be provided with artificial harbors until the natural ones are again restored.

Fifth—As far as possible prohibit fishing with bait so that the haunts of the trout may be safe against invasion by the hook.

Let the home of the trout be regarded as his castle. Entice him from it if you can, but do not invade it.

SHAD FISHERIES OF THE DELAWARE.—The statistics of the shad catch in the Delaware for 1885, as gathered by the U. S. Fish Commission, shows the largest catch for years. The total aggregates over one million shad. The fish are not prevented from entering the river by pound nets, or caught by the same agencies in salt water before they reach the river. This latter fact is significant in comparison with the small catch in the Potomac, to which the shad have to run the gauntlet of pound nets all the way from the Capes, the larger part of the catch being in salt water, few getting into the Potomac.

TO FISHCULTURISTS.—All fishculturists who furnish eggs or fish for sale are requested to send circulars or other information to the office of the Division of Distribution, U. S. Fish Commission, Washington, D. C. Such information would be valuable in answering numerous inquiries which are made by parties desiring to procure either fish or eggs.

FIXTURES.

BENCH SHOWS.

Sept. 23, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2519.**

THE STANDARD COMMITTEES.

WITH reference to our statement, FOREST AND STREAM, June 25, "The formation of any new standard does not come within the province of these committees. They were simply to receive the views of others and present them to the club," the following communication appears in the *Sporting Life*, of July 15:

"Birmingham, Conn., July 1.—Editor *Sporting Life*: In your issue of this date your kennel editor, "Porcupine," says that the secretary of the A. K. C. now informs him that the standard committees were not appointed to do anything but get the views of the breeders, etc., and report, and wants to know who got up that "yarn." While I do not care to take notice of every scribbler that chooses to pitch into the A. K. C. or their officers, I think I ought, in justice to all concerned, ask you to publish the inclosed blank form, which contains the only instructions to the standard committees as given by myself. If "Porcupine" can make anything out of them to signify that the committees are not to report a standard he can do more than I can. My instructions at the Philadelphia meeting were to request the committees to confer with the breeders and exhibitors in the matter and get their views, and I have done so. Respectfully, G. EDW. OSBORN, Secretary A. K. C.

"COPY OF CIRCULAR.

"American Kennel Club, Secretary's office, Birmingham, Conn., May 27, 1885.

"*Dear Sir:* At a meeting of the A. K. C., held in Philadelphia May 19 and 20, you were appointed one of a committee of three on a standard, for judging ————. The other members of your committee are ————. Please confer with them on the subject. The instructions are to inform yourself as to the ideas of the different breeders and exhibitors, and agree, if possible, on a standard, and report to me on or before Oct. 1, 1885. Respectfully, G. EDWARD OSBORN, Sec. A. K. C."

Commenting on this, "Porcupine" says: "I am obliged to Mr. Osborn, Secretary of the American Kennel Club, for correcting me as to the duties of the several standard committees. I was misled by the introductory remarks of FOREST AND STREAM, to which I would call Mr. Osborn's attention. From the way in which the remarks were placed it looked as if the whole business—constitution, by-laws and remarks preceding the names of the committees—was official. Doubtless others were misled as well as myself, and I am glad my comments have produced the explanation from Mr. Osborn.

Would the secretary have any objection to state how many of the seventeen clubs named on his official notepaper have paid their dues, and are, therefore, bona fide members of the kennel club? This is essential for the guidance of exhibitors. I can see a great snag ahead, Mr. Osborn, on this championship rule of yours, combined with the question of membership."

[In the absence of any official explanation of the duties pertaining to the committees, and as the members of the club do not appear to agree as to the exact province of these standard committees, it is perhaps a futile undertaking to endeavor to find out just how far that province does extend. If by agreeing on standards, Secretary Osborn means that they are to harmonize and formulate the views expressed by fanciers, and to present these for the consideration of the club, that is essentially the course of action we have said to be theirs; but if by agreeing on a standard it is meant that the club must accept what they determine, that is a horse of a very different color, and it is full time to call a halt. Is it not unfortunate that in a matter of so much concern as this, the A. K. C. should not have given out to the public an official statement of just what they are doing or intending to do? The composition of some of the committees is not such as to warrant in the public a very high degree of confidence, if the members are to serve in any other capacity than a clerical one. The public would welcome from Secretary Osborn a transcript of the minutes of the Philadelphia meeting, giving in exact wording the duties of the standard committees. There should be in those minutes such a clear definition.]

Editor Forest and Stream:

Mr. J. H. Naylor has been appointed a member of the standard committee on Newfoundlands, bull-terriers, Skyes and poodles, in place of James Mortimer, resigned. Mr. W. D. Peck of New Haven, Conn., on pugs, in place of M. H. Cryer, resigned, and Mr. J. A. Nickerson of Boston, Mass., in place of Elliott Smith, on St. Elmo protest committee.

G. E. OSBORN, Secretary A. K. C.

BIRMINGHAM, Conn., July 13.

THE AMERICAN MASTIFF TYPE.

Editor Forest and Stream:

At the present time in America there seems considerable agitation in the minds of some as to what is to be, an should be, the true standard to award to and breed for in the mastiff; and it seems very much like a question as to what is to be the acknowledged type of the American mastiff of the future. Will your countrymen aim at the true old English standard, or will they accept mere gigantic size and fortuitously reared specimens, such in this country having rightly been discarded as mere outsiders and only fit for yard dogs? Or will they endeavor to attain the true type, combined with fair size and symmetry? In fact, well-reared, straight-limbed, but at the same time thoroughly typical specimens, not mere long-headed mongrels, showing unmistakable trace of their boarhound, Alpine sheepdog, or bloodhound ancestry.

I have almost given the breed up, having only one little puppy at the present time; and having given up exhibiting myself, it matters really very little to me whatever type any set of ignoramuses or empirics, either in this country or America, may agree upon to set up as the standard. At the same time, I am inclined to smile (there was a time I should have felt vexed) when I see and read incorrect types set up and advocated by men who know next to nothing about the breed. However, the American breeders that I have corresponded with have always struck me as being acute men enough, clear-headed and desirous of information, without being too self-opinionated.

"Mastiff," in your issue of June 4, shows at once that while he can appreciate size and power, he knows very little of the true type of the English mastiff, or the style of animal your English cousins have striven to reproduce and keep up. I have no sympathy with our London fanciers, many of whom, fearing their mastiffs in a most artificial way with far too little exercise, realize a flabby, weak-limbed, short-backed animal, with often little beside their typically short, massive heads to recommend them. Your countrymen protest against the imperfections of such specimens, and their protests are calculated to produce good results. Yet they have the good sense to breed from the very dogs they write against, in order to secure their good points and altering their bad ones as far as possible. Your correspondent quotes Lieut.-Col. Garnier as an acknowledged authority, and while I have no wish to underate the ability of that most theoretical and somewhat imaginative writer and enthusiastic advocate for size, I fail to see why his dictum should, and cannot allow that it does, carry the weight with it, your correspondent "Mastiff" seems to think. It is very well to qubte any writer as an authority, however paltry in reality, because his opinions seem to lend weight to one's own at first sight. Looking through the Stud Book I do not find Lieut.-Col. Garnier's name as either the breeder or exhibitor of a single mastiff of note. Still as a writer he has always contended for a good head, and is perfectly justified in pointing out the defects in specimens that may come before him, but that cannot and does not alter the true type. The whole of "Mastiff's" argument is centered on the statement "that short heads mean short bodies, and generally a want of size, power and activity." Statements that (with all courtesy) are altogether incorrect, and show a thorough ignorance of the specimens we have bred in England during the last twenty years.

I have for the last fifteen years been the warmest advocate for shortness of muzzle and have lived long enough to see my views almost universally accepted in England, and those that differed with me on the point some fourteen years ago are nowhere, and others have veritably gone to the dogs. Such I fully expect to see the position of those grumblers with you, when in a few years the American talent has had sufficient time to produce specimens of well-grown, fair-sized mastiffs, with the true, broad, short muzzle. Although at one time I was the breeder and owner of the shortest-muzzled mastiffs in England and cultivated shortness of muzzle until my strain became noted for their good heads, yet I defy any one living to point to any dog of my breeding that was markedly too short in body or deficient in power or activity. I never aimed at vast size (as it is really no characteristic of the breed, however much some may appreciate it), and it is probable that being content with symmetrical and muscular bodies with really good heads, I won the prizes and made the mark I did as a breeder. Mr. Lukey's Governor had far too long a head, a defect he inherited from his sire, whose breeding was doubtful, the strain showing every indication of a boarhound cross. Too long a back is also a defect, being very much against jumping power with safety, either in man, horse or dog. Mr. Lukey's Governor eventually lost his life through his long weak back and want of spring, as endeavoring to follow his master over some palings, he hung up by the hindlegs and broke his back, never being able to stand afterward, and I fail to see any particular advantage in a particularly long body. We like to see a short back in the cart horse, and not a long one in the hunter. Length of body may denote speed (not necessarily a characteristic of the mastiff) but it is no sign of strength.

The general shortness of head in the mastiff should be obtained, not from any shortness of the lower maxillary, which, allowing for the convexity in the best specimens, is little shorter in reality than in the apparently larger and more pointed muzzled animals. It is the shortness of the nasal bones and the upper maxillary which is the chief characteristic that mark the distinctive opposite between the greyhound and molossian group, the former formed for speed. The latter I look upon as chiefly a sort of powerful and discriminating living man trap. General width between the eyes is a sure sign of good temper, a characteristic of the old English mastiff. The strength and prominence of the zygomatic arches indicate the volume and leverage of the muscles acting upon the lower jaw. The points I have always taken into consideration for my personal guidance are (1) width between the points of tushes (my Monarch 2317 being 2¼ inches, old Druid being only 2 inches bare), (2) massiveness and convexity of lower jaw, (3) width or arch of zygomatic or check bones, (4) shortness of muzzle. Why breeders should be content with long, pointed-muzzled, ugly mongrel boarhound-headed mastiffs when short, typical-headed ones (as good in all other respects) can possibly be bred, I have yet to learn, and for my own part would sooner reduce the size of the head down to 29 or 30 inches. In fact, a dog standing only 27 or 28 inches (which was the height of my Dreadnaught) is a far truer representative of the old English mastiff than some long, pointed-nosed brute deriving the type of his head from some Alpine sheepdog or Danish boarhound ancestor.

Because the London breeders may neither know how or have the requisite space to rear the English mastiff properly, and be glad to dispose of their cripples to foreigners, that is no reason why American breeders should substitute a long-beaked, pointed-muzzled, doubtful-pedigreed animal of a wrong type for the real thing. Such dogs may be called, in time to come, American mastiffs, but I for one would not own such outsiders. For the last twenty years the English fanciers have reckoned in a rough way that as a rule the muzzle should only be one-third of the total length of the head, and if we take the measurements of some of the largest mastiffs we shall see that the muzzle is not necessarily shortened to the detriment of other points, or that any great diminution in length of body has been arrived at. Below are the measurements of a few of the largest specimens I can call to mind. Mr. Lukey's Governor, Rev. O'Yearsley's Anlaf, Capt. Lindoe's Druid, my Giant King and Col. Tempest's Saxon, a dog bred by Miss Aglionby by a son of Old Kings. He was a larger dog than Green's Monarch, and both Mr. Cautley and Mr. Thompson preferred him to that dog.

	Governor.	Druid.	Anlaf.	Saxon.	Giant King.
Length of head	15½+10½=15	14	13¾+8½=13¼	14½+8½=13	13½+7½=11
Girth of skull..	28	24	24½	27	23½
Girth of chest.	40	42	38	41	42
Total length...	86	87	72	80	87
Heig't at shoulder...	33	33	32	34	32¼

Druid and Governor both had very long sterns, those of Saxon and Anlof were short. That a certain fashionable strain often runs rather short in the back, I shall not offer to deny, but whether due to want of exercise and proper feeding when growing I am not prepared to determine, so much depends on feeding and exercise. The lion itself when confined in the den of a menagerie becomes cramped in its limbs and their muscular system undeveloped, and even their bones are liable to become distorted.

It was certainly difficult to obtain great size with a good short head, some years since, from the simple fact that the English mastiff without foreign crosses never stood much above thirty inches at shoulder. Mr. Kingdon in "Webb's Book on the Dog," rightly says: "We do not believe in the purity of mastiffs over thirty inches." If breeders have introduced foreign blood to obtain the greater size, that is no reason judges should not insist on all specimens brought before them having typical heads and possessing the true conformation of the mastiff, without which they really should be sent straight out of the ring as showing the unmistakable signs of impurity and departure from the true type. Some people might admire and like to keep an elephant or hyena, but that is no reason why the type of the English mastiff should or can be altered. I leave these facts for the consideration of American breeders, for with them it remains to determine what the type of the American mastiff of the future is to be.

M. B. WYNN.

LEICESTERSHIRE, England, June 30, 1885.

MY EXPERIENCE WITH LANCE.

A FEW days ago I had a letter from my friend, Jack Hodson, stating that he would be absent in the West for some weeks, and inquiring if I would be good enough in the meantime to take charge of his setter, Lance. The animal was a valuable one recently purchased, and my friend was anxious to know that he was in good hands.

Now, I am not very fond of dogs—don't know much about them anyway—but I had always understood that setters were an exceedingly docile sort of animal. At any rate, such was the character of the only animal of that kind whose personal acquaintance I had ever enjoyed. It was in boyhood days, when old Bill Blue with his dog and gun used to haunt the tavern. He was a veritable Rip Van Winkle to the extent of possessing all the failings with none of the virtues of his romantic prototype. The dog's name was Brag; but what a nuisance. Not a feature, not a wrinkle, not a hair expressed the slightest intimation that he had the remotest idea of ever bragging about anything, as he slunk along in the wake of Old Bill's heel. He seemed to be in a perpetual state of apology. If perchance a strange dog came sidling and bristling about, or hostile moves intent, then did Bragg roll over on his back and dangle his legs in the air. Or should he casually wink at a canine acquaintance on the opposite side and Bill detected it, out came that cruel pocket lash and then there was lamenting. I thought our friend Lance would prove some such sort of a dog.

When I came home the other afternoon my wife told me the dog had arrived, and as she had determined to have nothing to do with him, had directed the man to turn him into the large inclosure in the garden, where we used to keep the fowl. They were all gone now except one old hen and her family of chickens. I immediately went out to interview him.

Now, the same rule should hold with dogs as men, that much depends upon a first impression, and I had decided, for the sake of future harmony, to make a good one. To this end I was provided with a patent lash and had familiarized myself with some of the expressions current among the canine nobility.

For instance, it is well enough to order a common, vulgar cur to "lie down," but in addressing a high bred dog you should request him to "charge."

I found my protege in the middle of the inclosure, occupied with the aforementioned hen, the defunct effigy of which he was holding down with his forepaws, while viciously tearing and shaking it. It struck me this was very singular on the part of a setter, very. He was several sizes larger. But the sight of the motherless chickens aroused me, and I determined to go in and administer to him just such a thrashing as I had frequently seen Brag receive at the hands of Bill Blue.

I thought it well to let him know beforehand that I was not to be trifled with, so I halted within about twenty feet of him, and in a sonorous tone commanded him to "charge." He paused, with his teeth half buried in the carcass, and, without raising his head, rolled the whites of his eyes toward me, and stood motionless.

It struck me then it would perhaps be in better taste not to insist upon too much on such slight acquaintance, and I decided to forego the castigation and be satisfied with the "charge;" but upon this latter I must insist, so again I stamped upon the ground and shouted "Charge!"

He did. He charged with the impetuosity of the Light Brigade. He interpreted my command according to the letter and not the spirit. I need not enter into any petty details, but it was evident to me there could be no common ground of intercourse between us so long as such misunderstandings were likely to arise, and any further attempt at arbitration could only lead to further complications.

"Uncle Kellup" declares "He aint no setter at all, or 'tany rate he's crossed with somethin' else."

Yes, I should say he was. I have made several observations of him since, and I should say there was a good deal of the Siberian bloodhound crossed with the South American jaguar and a strain of Bengal tiger. The remainder, for aught I know, may be red Irish setter.

It should further be stated that these observations were made through a field glass.

JEFFERSON SCRIBB.

PROVIDENCE, R. I.

STUD FEES.

Editor Forest and Stream:

I have had it on my mind for some time past to write you on the subject of stud fees. I am now glad that I waited, for the advertisement of Graphic in your last issue gives me the best possible text on which to preach my brief sermon. According to my understanding, good dogs are imported, bred here and placed in the stud for one of two purposes. First, from the sportsman's point of view, *i. e.*, to encourage dog breeding and to raise the quality standard. Second, from the dog dealer's which is simply to use the dog as a means of coining money for his own pocket. Now, unquestionably, from the first point of view, the sportsman has a right to charge a stud fee, and to limit the services of his dog in any way he may see proper. But the stud fee should be reasonable, and not in any way graduated upon the merits of the dog. There the limitation can and properly should come in. With the dog dealer I have nothing to do beyond simply expressing my opinion that he should not be encouraged. Now, as I said, let us start with Graphic as an example. In England, where he is alone well known, his fee was seven guineas; here where he has his spurs to win, both individually and as a sire, his fee is $100. This puts his owner on the horns of the dilemma I have cited at once. But there are others: Tammany, a fine young dog and of unquestionably good breeding, but comparatively unknown, is in the stud at $50. This is exactly double what it should be. Gladstone Koff, at $50, a parallel case to that of Graphic; Strephon, a mere puppy, at $35 and choice of litter, which is still worse. I could cite many others if needful. I frankly say I consider $25 should be the top figures for a gentleman's and a true sportsman breeder's stud fee. Let him use the limitation as to services as much as he feels inclined. No one can quarrel with that privilege. But until stud fees are brought within reasonable limits, and the breeding of well-bred dogs increased thereby, we shall have the usual trouble of drawing the line between the professional dog dealer and the gentleman breeder; a line that I would like to see as clear and well defined as any division can be drawn.

SURREY.

THE PET PUG.

PET dogs that have been contaminated by their contact with human beings, and especially those little latter day saints that have managed to win a ribbon or so for their little lady owners at a bench show, put old Buffon's analogous conclusions as regards the dog's mental pleability and docility to flight.

Of course there are exceptions, at least it is fondly to be hoped there are, but to the average stalwart there is no greater pest on earth than a spoiled, dyspeptic, cantankerous, inbred pug.

"It makes the veins in my forehead swell, and my hat suddenly grows too small for me," said a well-known club man the other day, "to think of one little pet brute in particular. He resides where I am stopping at present, in fact, he belongs to my wife. I little thought when the dog hawker, who has beefsteaks tied to his legs to allure dogs, stopped me on Broadway and suggested I should buy the fawn-colored pest, that he had designs on my peace of mind. Otherwise, I should have strangled him. In a weak moment I went home and told my wife I had seen such a pretty pug—I thought the dog pretty then. From that moment I had no rest; she wanted him at once. I tried to dodge the issue, but to no good. Every day I came up town my wife would throw her arms around my neck—I have been married three years and know what that means—and whisper, 'Darling, has the man sold that pretty pug yet? No; then Charley, dear, won't you buy him for me. The Griggs have a pug, and it makes me sick to think I haven't got one, too.' I bought that pug, and we have had fleas ever since.

"For two weeks my wife kept me awake at night asking me how I liked this name and that name for her pet. She went through every book in the library in search of an inspiration. It was no use. Then she teased me for names. I suggested 'Kapitanes Antistratikos,' and she laughed at me; I mentioned 'Stuffeymeguzzen,' and she got mad. I then retired from the christening racket, and she settled on Googles. There were other Googles in the dog world, so our pug is now known as Lanjan's Googles, and greatness has thus been thrust upon me. Such is fame.

"From the first Googles was all there. He had as many points as Wall street in a month. His color was the thing until my wife gave him a bath, and then the paint washed off. This nearly broke her heart, and I have had to engage the man who swindled me to come twice a week and touch Googles up. The man says, 'Yer can bet yer sweet life I am the boss faker in America.' Then Googles lay too much by the fire, and the glue softened and his tail uncurled and stuck straight out like a pointer's. The hairdresser has to come and crimp it every morning. My wife would sigh and say, 'Oh, Charley, do look at him now, the little darling; look at his beautiful eyes, see how they glitter, see how they express his love for me.' I agreed with her; I rather thought they glittered, especially the left one. I was right. Googles fell off the stoop one night, and when he was rescued, empty was one socket. A little boy who was passing handed me something that he had picked up in the street; he said it was 'a diamond breastpin.' It turned out to be Googles's glass eye. The love my wife had seen was in reality a pinch of phosphorus.

Googles then knew that he had been discovered as a fraud and no longer dissembled. His good manners at once took wing. He deserted the parlor and his good mistress for Trenton sausages and the cook. His tastes were low and he sought the festivities of the realms of the basement. When he had stuffed himself out with good cheer until he could hardly waddle, he would go and look at himself in the burnished convex boiler to elongate his figure. He is up to all sorts of games, and for a small dog can purloin more meat from the butcher's and hide it on his person than a melancholy Dane. His thirst is of the best order too; he is a terror on the heeltaps in the decanters.

"One night Googles was decidedly groggy and in a beastly frame of mind. He had been lushing it for several days and was 'off his feed.' He had been offered saddle of mutton and roasted Currituck widgeon for dinner, all to no good. He began to see things, and as I passed him on my way out he bit at my leg and went whooping off. When I reached the club some one said, 'Charley Lanjan's got 'em bad, he's going around with a pearl necklace on his leg, he is working the Duke racket.' I heard the remark, and on looking down found a full set of false teeth sticking in my trousers. They were Googles's.

"My wife came home one day and said that there was to be a dog show and that she had entered Googles, and wanted me to fix up a pedigree right straight off. I did it. I copied most

of it out of Burke's Peerage, adopting only the Christian names. It took better than any pedigree I ever heard of, and Googles won the prize. But my wife made enemies of seventeen of her most intimate lady friends, all of whom have been trying to buy or steal Googles ever since.

"Now that Googles has become a winner, he has put on more frills than a dozen virgin queens. He smashes things, chews things, bites things, destroys things and steals things. He gets sick, and the family physician has to be called in. He has the canker, and when he gets well of it he starts in on the mange. He gets better and has to ride in the park. He recovers and he gobbles everything he sees. Just run your eye over this paper," concluded Mr. Lanjan, "and see what Googles has cost during the month:

GOOGLES'S EXPENSE ACCOUNT.

To 3 sofa cushions at $15 each	$45.00
1½ doz. table napkins at $24 per doz.	36 00
4 day shirts	20.00
2 night shirts	5.00
1 umbrella stand, smashed	18.00
1 new glass eye	2.35
1 bearskin hearth rug	70.00
4 neighbors' cats at 50 cents each	2.00
For perpetuating color (Bill, the faker)	20.00
5¼ pounds Trenton sausage at 18 cents	.99
11¾ pounds prime steak at 25 cents	2.94
2 tooth brushes	.80
1 doll's house furniture	7.50
Sundry bric a brac	32.50
New bonnet for Mrs. L	45.00
New muff for Mrs. L	35.00
New shoes for Mrs L	10.00
1 kitchen poker, bent on Googles	.60
Life insurance for Googles	9.00
	$362.68

"Yes, $362.68, now don't ask me to buy any more dogs, because I am going out of the business."

A FOX HUNT WITH BEAGLES.

Editor Forest and Stream:

It is very annoying to our lovers of the beagle to have men come around and say, "Of what use are those little fice?" and when informed that they are hounds. "Hounds! why they couldn't catch a fox in a lifetime, they couldn't run a rabbit around to you in a day. They would break down on one good race anyhow," and all such talk, and by men who have had no experience with the beagle, and perhaps have never seen one before, know nothing of their staying power or of their indomitable determination to follow the track until the finish.

I remember once last winter when out on a hunt I met with a gentleman bent on the same errand. We joined issues, he with his two foxhounds (and I think they were the largest I ever saw), I with my six beagles. Well, I must acknowledge that my little thirteen and fourteen inch fellows looked rather insignificant by them, they could run clear under them and never touch a hair.

We soon started a rabbit, away dashed the yearlings of dogs, they went away from my little fellows so fast that I was afraid it would discourage them. But at the bugle call of old Blue Cap the other five packed to him and went off in fine style. As they were going out of hearing over the ridge the two large dogs were bringing the rabbit back across the ridge about two hundred yards above where she crossed.

I stole a glance at the owner and saw a smile lurking in the corners of his mouth.

The game ran below us and took to a brier swamp in the valley below, we went down to get a shot at her as they drove her out. Well, here was a failure, they would bow around but wouldn't enter, their bodies were too large and their hair too short and thin to take the briers. Hark! what fierce ceaseless cry is that descending the mountain? See! six little hounds burst into sight and make for the swamp, running so closely packed that a table cloth would cover the lot.

Did they pause when they struck the swamp? No, sir; that scent was too intoxicating to that delicate nose, with one fierce cry they disappeared in the briers.

The game ran the swamp back and forth, but it was useless to try to shake those eager little pursuers off. Finally she broke cover to fall to my hammerless. It is useless for me to mention the number of times this same performance was re-enacted that day, but will say that at dark those big hounds were content to pack with my little ones. Now, my foxhound men, we don't put our little pets against your big ones on their legitimate game. They have their game, ours have theirs; but we do say that ours are better on their legitimate game.

But to my story. Every few days last spring some one would come into my place of business and tell me about packs of foxhounds running a fox on the old Eskridge tract, but couldn't kill him. Each informant would state that he would run in the open country until pressed, then take to an old field of about twenty acres that had been partly cleared, but the brush was never burned. Bushes of about two years' growth and briers had entwined around the brush so as to make an almost impenetrable cover, and when Mr. Reynard got in there he could laugh his pursuers to scorn.

The thought took possession of my mind that the Edgewood beagle pack could kill that fox. The more I thought of it the stronger the conviction became. But how to get him started; for I knew if I went in there with my beagles they would start a rabbit. Suddenly the thought flashed through my mind, why not get some good old foxhound, let him start the game, then put mine in. One hour after this thought occurred to me I was on the way to a neighbor's house who had an old foxhound that had been the best of the best, but had now taken a back seat under the weight of ten summers, but was as good a starter as ever. Next morning the first streak of dawn in the east found me nearing the old field with six beagles in the wagon, the old dog trotting along in the advance.

What! the old fellow scents game already of some kind, for it was just light enough to see him stop in the middle of the road, turn back and forth in quick succession, up the road he bounds for fifty yards; he sniffs at that rock. Ah! listen to that deep-toned bay. A fox, as I live, and not more than half an hour ahead, either.

His deep cry echoed and re-echoed through the still morning air several times, and he moved off toward the brush field at quite a lively gait. Be still, little men, your time will come after awhile, for with the strike of the old dog my wagonload had set up an eager whine. The old dog is nearing the field.

Now, why hadn't I thought of it before, for the fox will break cover on the other side of the field, and if I was around there I could put mine in with the old dog. Go, horses, and away we go at a spinning rate. The half mile is made in a few minutes, but as quick as we came the old hound is past the middle of the field (the brush not being very thick in the center) and is laboriously pushing his way toward my stand. I unchain the beagles but bid them remain in the wagon. Nearer and nearer comes the old dog. Surely the sly rascal hasn't left the brush and taken to the open woods to seek his hiding place. I hear a scratching on the fence, and looking up the fence thirty steps I see his foxship cross the road at a leap and disappear in the woods with his brush straight out behind him.

Just as he is crossing the road, the eager bay of the old hound told that he had gotten to his bed. Come here, little men, and at a motion of my hand the beagles came tumbling out. Now is the time for you to show that my confidence in you is not misplaced. But wait for the old dog to come up. By the time we reach the crossing the hound is jumping the fence. Here old Blue Cap, you, too, Blue Bell, as you have snuffed the scent of a fox before, lead off next the old hound and let the younger ones follow.

At the command in old Blue Cap goes, sniffs the tainted ground, bristles raised erect, and with a fierce cry bounds away in the wake of the old dog. Old Blue Bell goes next, giving tongue, followed by the young ones. Before I can hardly write it, they were nearly out of hearing, heading toward the open country.

I have stood on the passway and saw the noble buck wilt at the crack of my rifle, have hunted bear in the canebrakes of Eastern Texas, but I must acknowledge that I was never more excited in my life; although no one knew of this determined kill but myself. I was so eager for success that I was completely carried away; it took me fifteen minutes to recover my composure.

The dogs were clear out of hearing, but knowing the fox would return when pressed, I didn't follow them. I turn my team around, fix them in a good place, and walk leisurely to the top of the hill at the other end of the fence. I listen intently for the dogs, but can hear nothing of them. I take a seat on the fence and fall into a reverie. I think of the many hunts I have had over this same ground and of the many pleasant friends I have had with me.

I was aroused by the baying of a hound in nearly an opposite direction from the one taken by the fox. It is so distant I can't tell whether it is the old hound or not. I jump off the fence and place my ear near a large pine tree. Yes, that is him, and there is old Blue Cap, too. They are crossing a cliff off on Rock Creek. Then I hear no more of them for forty minutes, when they burst into hearing about half way back on the double and headed straight for the field. Five minutes more and they come into plain hearing, and I was gratified to hear the young dogs in full concert with the old ones. Ten minutes more and the fox crossed about one hundred yards below me and takes to the brush, with the pack about three hundred yards behind him. Young Blue Cap and Countess, two thirteen months' pups, a little to the front, other four right at them, with the old hound about twenty-five yards behind. Poor old fellow, you strive nobly to keep up, but your sceptre has departed.

Do they leap the fence? No, but slip through and have plunged into the brush and are making nearly as good time as when in the open woods. Why, old fellow, why that dismal howl; can't you go where the little fellows do? for after jumping the fence he attempted to follow the pack, but those piercing thorns and thick brush were too much for him. He lifted his head high in the air and shouted with very anger because he couldn't go too. But listen! the pack are in the very middle of the field and are quartering and making short doubles, surely you havn't left the fox for a rabbit. After running in there about thirty minutes they moved to the other end of the field. Surely that is not a rabbit. No, it can't be, for they give tongue too fierce. Ah! they have turned and are coming this way; nearer they come, until hardly a hundred yards from me, when suddenly at my very feet the fox slipped out of the brush (for I was again on the fence) and made for the woods. Oh yes, old fellow, I guess you think those big boys are not after you now; those little fellows press you as hard in there as in the open.

The old hound was a short distance off, saw him cross the road, and made right for his track. One call to my pack, and they were to me and the whole business went off at a lively gate, it not more than two hundred yards off. They went out of hearing again, but were soon coming back again.

About this time Mr. Taylor came up; "Why, Will, I never saw a rabbit run as that one does." "Well, you see," says I, "it is a regular old woods fellow." In this time the pack were only about two hundred yards from the fence further down, when the fox ran out into the road, jumping the fence, went into the brush again. "Why! it is a fox," exclaimed Mr. Taylor, in great astonishment, "and they would kill him in fifteen minutes if they could get a run on him in the open woods; but he is safe now." "Wait and see," says I. All this time they were running in the brush just as if after a rabbit and with little difficulty. After running the length of the field several times, Mr. Taylor and myself went to the other end of the field, and as the pack turned and started back, I took one side, Mr. Taylor the other, and made all the noise we could; and made our way as fast as possible through the brush, and forced him out into the woods again. Don't know how far the pack was behind him, but don't think they were any further than when entering the brush.

"He is going to Rock Creek Cliff," exclaimed Mr. Taylor, "but if he starts there he will never get there." They went nearly out of hearing, when with a short double, right back—nearer, nearer they came, fiercer and more determined becomes the cry of the pack. Mr. Taylor jumps on the fence, and lifting his hat, cries, "I will bet fifty dollars they will catch him before reaching the fence." Nearer, nearer—will the fox never cross the road? The pack are not one hundred yards from the fence. Still they come; young dogs are not giving tongue. Yonder he comes! Yonder he comes, with the pups catching at him. One of them has caught him. And such was the case; for, running about two yards in advance of the others, young Blue Cap caught him within fifty yards of the fence, with Countess next, young Blue Bell next, followed by the rest of the pack. The fox turned on them when in a few yards of catching him. Suppose he thought he could whip such little fellows, but the old dogs were only a few yards behind the young ones. Mr. Taylor says he never saw a fox killed quicker. The old hound was clean out of the race; never came back from the second dash.

You may know with what pride I stripped his brush off, caressed my panting little pack, took them all in the wagon and reached home at 12 o'clock. Now, I won't say that they ran the whole chase without making any breaks or checks, for they were many, but of very short duration.

You will say, did you try to catch another? I will tell you no, sir, and I don't expect to. If I do it will be with a pack of foxhounds. I only wanted to catch one with the Edgewood beagle pack, because I believed they could do it. Now I am satisfied foxes are not their game, so they ought not to be used for them. When men not knowing see my pack, say they can't catch a fox, can they? I only say foxes are not their game.

But every rose has its thorns. I am sorry to write that that was young Blue Cap's last race. Being tired and hungry, I suppose he went down to the tanyard that evening and ate a big lot of fleshings which had been limed, and he died in three days with inflammation of the bowels. He would sway his head from side to side in an agony of pain, yet never a whimper of complaint escaped him. Lived game; died game. His last moments were passed in my arms. I have another five-months old, a brother to him, but not litter brother, very much like him. Have named him Blue Cap, and he gives promise of filling his place. My hand is tired—will close.

HOUNDRY.

PINE VIEW, Va.

THE MILWAUKEE DOG SHOW.—The premium list of the dog show to be held in Milwaukee, Wis., next September, is ready for delivery. There are extra champion classes for English setters, Irish setters, pointers, and Irish water spaniels. The prize in all champion classes is $10 or medal, as may be preferred. Prizes in the open classes are $10 and $5, and $7 and $3 in puppy classes. The show will be held under rules of the A. K. C. Entries close Sept. 22. John D. Olcott, manager.

A PACING DOG.—I have a pointer bitch which paces like a horse, that is, moves both feet on one side at once. Is it a common gait with dogs?—REDWING (Glencoe, Volusia Co., Fla.) [Very common.]

"GONE TO THE DOGS."—That was the exclamation of Mr. John M. Tracy, the painter of dogs, when, after years of study, privation, and striving, he was compelled to abandon historical and landscape painting, rub out his canvas, and draw upon it what he felt as a degrading surrender to necessity, to the claims of bread and butter. And now, after having won fame and an income as a painter of animals, he still describes himself, but with a cheerful resignation, as having "gone to the dogs." His picture of "Close Work," in the Prize Fund Exhibition of the American Art Association now open in New York city, places him in the first rank of artists in his kind. Yet he remembers his first ambition much as the poet does who begins in youth with verse, then, yielding to the demands of the present and the popular taste, ends with prose. Thus the great majority of men of youthful, lofty aspirations, admiring the heights, as Goetue said, but impatient of the painful, slow steps to it, give up their visions, and run the race set before them by their fellows, and accept the world and life on an obvious, easy plane, going intellectually and morally to the dogs. But a reminiscence lingers in the heart, or else there would be no recognition of the few who are faithful to the high inward light, nor any perception or appreciation of the models of character, art, literature. For these appeal to the dimmed, but never quite dead, ideas of the human soul. The sportsmen are naturally Mr. Tracy's best customers and chief admirers. However, there is a high point in art, which, when it is reached, the special or technical subjects are lost sight of; it is the feeling or life that is put into them, which triumphs over the humble, limited character of the chosen subject, and which calls forth the enthusiasm of the sympathetic spectator. Then at length the artist appeals, even when he paints dogs, from mere sportsmen to lovers of art; and, in fact, it is at this point, probably, that a great animal painter parts company with animal fanciers and works for the applause of those who can see beauties of another and higher order. This happens when the artist can portray the inward nature, as well as the outward form, of animals; when he loves them, when he has gone down into their very being, as Roos did, and knows what it is that gives to the animal his precise form and particular action. The modern interest in the good treatment of all domestic animals, and also the limited protection of game of all kinds, brings every day the lower animal world nearer to men; and he becomes more and more interested in its life, as not so completely separated from his own as he was wont to think. The dog and the horse have always been dear to man, as having by nature a certain degree of sagacity, memory and fidelity. There are historic dogs and horses. But all other orders of the animal creation are known to us merely in their general classification. As individuals we know them while we possess or capture them, but their memory is seldom perpetuated by their own actions or man's affection, or becomes embalmed in story and poetry. Even when painted or sculptured, they are still not individualized. They are a gallery of unknown portraits. Thus man lords it over what is below him, yet at the same time shows his appreciation by making it the subject of study which leads to a more humane view of his relations to what is usually wholly at his mercy and subject to his will. Then he paints the sheep, the kine, the dog and the horse; and certainly when we have looked upon Roos's or Landseer's sheep, Paul Potter's bulls, or Mr. Tracy's dogs, we have a clearer notion of animal life, and are more kindly disposed toward it. Art can dignify and make poetry of all nature; and that constitutes its moral value. No doubt Phidias made the Athenians more reverential and thoughtful by his statue of Pallas Minerva; but he also made them a little more genial and tender when he exhibited a common house fly in bronze, all as perfect as his greatest works. All who saw it fell in love with flies, and children tore off their wings no more. Man's benevolence is natural toward what he loves; and his humanity will increase by knowledge and admiration of what is under his domain. He will then hunt men with more discretion and mercy; and he will, with Izaak Walton, kill the trout as if he loved him. Whoever paints animals or fish with a genuine love for them, born of patient observation and study, kindles in us, too, a love for them. He teaches us the lesson of humanity, and has not gone to the dogs in vain.—*John Albee in the Christian Union.*

MANGE.—At a late meeting of the New York Dermatological Society, Dr. Henry A. Piffard exhibited two dogs which were subjects of mange. The first shown was a Gordon setter, which had suffered from trichophytosis two years previously. In this case the patch had been attacked with the utmost vigor, resulting in the cure of the disease, but leaving a spot permanently bald. The second dog was a Yorkshire terrier that had been brought to him about a week before. In this case the hair had fallen from the greater part of the dog's body during a period of about two months, and the fall was unaccompanied by any signs of local irritation, the skin not being in the least congested or presenting any abnormal appearance whatever except the loss of the hair. With reference to these cases, Dr. P. remarked that the common word mange was applied to numerous cutaneous affections of the canine family. He said that for many years he had kept dogs, and that several of his dogs had suffered from "mange." Besides this he had examined a good many dogs belonging to friends, and had observed several distinct forms of cutaneous diseases among them. One form, which was by no means common, was clearly an eczema, and was, perhaps, due to overfeeding, lack of exercise, etc. This form was, of course, not contagious. The other forms of "mange" were contagious, and referable to parasites. Dogs suffered from the invasion of itch insects (*Sarcoptes canis*) from lice and from an entozöon folliculorum. Dr. P. had never personally met with any of these, but stated that the follicular parasite sometimes gave rise to exceedingly grave symptoms. Of the phyto-parasitic diseases, ringworm was not infrequently met with, but the most common form of mange that he had met with was not due to any of the causes mentioned. It was characterized by pityriasis, accompanied by pruritus, and in a short time by falling of the hair. The patches were usually circular, which united by extension. The pruritus was quite severe, and led to scratching, with the development of various secondary lesions. This form of disease Dr. P. believed to be due to a phyto-parasite, but he had not given the matter thorough examination. It was a readily curable affection, as almost any of the mange cures in common use would cure it. These were almost without exception composed of the following ingredients: Tar, turpentine and sulphur, with a little oil. Crude petroleum, kerosene, and other substances were sometimes used. In the forms of mange due to animal parasites, the combination above mentioned was very effective. Dr. P. was by no means certain that the last described form of mange was confined to dogs, but suspected that it might be the cause of some of the cases of alopecia furfuracea met with in men. In the human subject the affection was almost always chronic, while in the dog it was an acute affection. There was still another form of mange, exemplified in the Yorkshire terrier shown, the nature of which was not clear.—*Journal of Cutaneous Diseases.*

PEDIGREE WANTED.—*Editor Forest and Stream:* Will some one kindly furnish me with the pedigree of my red Irish setter dog? He is in the neighborhood of two years old, and was purchased about sixteen months since in New York by Hon. S. M. Weed, of Plattsburg, N. Y. His name was Mike, Mico or Mitchell. Mr. Weed purchased two others with him. —L. C. ANDRUS (Box 536, Malone, N. Y.).

A LARGE LITTER.—The mastiff bitch Olie, owned by Mr. James J. Lynn, Port Huron, Mich., whelped on May 24 twenty-two puppies, six dogs and sixteen bitches. The litter previous to this numbered eighteen.

DEATH OF METEOR.—The celebrated pointer dog Meteor, owned by Col. W. E. Hughes, of Dallas, Tex., it is reported in the press dispatches, died on Tuesday, July 14, of abscess of the liver. Meteor was a liver and white dog, about five and a half years old, by Pilkington's Garnet and out of Pilkington's Jilt. He was imported in 1881, and made his first appearance in public at the chicken trials at Fairmount, Minn., in 1882, where he ran a brilliant heat, beating his competitor Pride, but was withdrawn before running in the next series. He ran last December in the All-Aged Stake of the National trials at Canton, Miss., beating Clay in the first series, but was beaten by Gladstone's Boy in the second series. He also ran a week later in the Southern trials at the same place, and was beaten in his first heat by Lady C. His winnings on the bench are first and three specials, including special for best pointer, Cincinnati; first and special for best pointer, also for one of best brace, Toronto; champion, St. Louis; champion and large pointer sweepstake prize, also special for one of best pair, New York, 1884.

WHITE SPANIELS.—The black cocker spaniel bitch Miss Nance, owned by Mr. S. R. Hemingway, New Haven, Conn., gave birth on June 28 to five puppies, three of them black and two (a dog and bitch) pure white. The dog unfortunately died, but the bitch is strong and healthy, and bids fair to reach maturity. As Miss Nance is black and the sire of the litter black also, as well as their ancestors, the question arises how came these puppies by their color?

THE CRYSTAL PALACE DOG SHOW.—At the Crystal Palace dog show, held last week, there were 1,283 entries, three less than last July. Fox-terriers led the list, with 161, St. Bernards coming next with 85. There were 50 pointers, 50 English setters, 28 black and tan setters, and 19 Irish setters. The classes generally were well filled, nearly all of the large breeds being well represented.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Comedy. By W. Henry Colquitt, Richmond, Va., for black, white and tan English setter dog, whelped July 24, 1884, by Dashing Rover (Dash II.—Norna) out of Trinket (Crack—Diana).

Bang Ranger, King Ranger, St. Elmo, Daisy Ranger, May Ranger and Beauty Ranger. By S. B. Dilley, Rosendale, Wis., for pointers, three dogs and three bitches, whelped May 26, 1885, by his Ranger Croxteth (Croxteth—Royal Fan) out of his Fanny Faust (Faust—Minnetonka).

Viola, Mix's Idol and Princess Mix II. By Prof. H. J. Rice, New York, for lemon and white, black and blue and black and white English setter bitches, whelped April 6, 1885, by his Antic (Prince—Pebble) out of his Princess Mix (A.K.R. 47).

Happy Thought and Aloe's Dream. By Prof. H. J. Rice, New York, for liver and white and black and white English setter bitches, whelped May 23, 1885, by Dash III. out of his Aloe (Prince—Pebble).

Bob, Jr. By A. B. Truman, San Francisco, Cal., for red Irish setter dog, whelped July 25, 1883, by his Bob (Sam—Nellie) out of Kate II. (Sandy—Kate).

Mike. By A. B. Truman, San Francisco, Cal., for red Irish setter dog, whelped March 17, 1884, by Nemo (Larry—Quail III.) out of Nida (Larry—Red Bess).

Britton, Jr. By Dr. A. G. Aldrich, Anoka, Minn., for black, white and tan English setter dog, whelped April 15 (Britton—Blue Vic).

Belton Queen. By Dr. A. G. Aldrich, Anoka, Minn., for English setter bitch, whelped April 16, 1885 (American Belton—May).

Young Dutch, Albion, Anthony and The Baron. By Royal Bull-Terrier Kennels, New Haven, Conn., for white bull-terrier dogs, whelped April 28, 1885, by Hink's Dutch (E.K.C.S.B. 13,813) out of White Rose (Victor Chief—Bess).

Cleopatra, White Violet, Sultana and The Duchess. By Royal Bull-Terrier Kennels, New Haven, Conn., for white bull-terrier bitches, whelped April 28, 1885, by Hink's Dutch (E.K.C.S.B. 13,813) out of White Rose (Victor Chief—Bess).

Britton Kennels. By Dr. A. G. Aldrich, Anoka, Minn., for his private kennels.

Royal Bull-Terrier Kennels. By Frank F. Dole, New Haven, Conn., for his kennel of bull-terriers.

Freestone Kennels. By J. W. Trantum and G. H. Parkinson, Middletown, Conn., for their kennels.

BRED.

Gypsie—Ben Nevis. James Connor's collie bitch Gypsie to J. D. Shotwell's champion Ben Nevis (A.K.R. 2391), May 15.

Lady Mac—Ben Nevis. J. G. Gardner's (New York) collie bitch Lady Mac to J. D. Shotwell's champion Ben Nevis (A.K.R. 2391), June 22.

Janet—Ben Nevis. C. C. Nichols's (Dedham, Mass.) collie bitch Janet (Prince—Lady Bess) to J. D. Shotwell's champion Ben Nevis (A.K.R. 2391). July 1.

Bizorah—Nimrod. G. H. Parkinson's (Middletown, Conn.) red Irish setter bitch Bizorah (A.K.R. 1288) to W. D. Ferrin's Nimrod (A.K.R. 631), June 26.

Gayley—Donald II. A. Quick's (New York) pointer bitch Gayley (A.K.R. 1440) to Clifton Kennels' Donald II. (Donald—Devonshire Lass), July 2. Owner wrongly given last week.

Beauty—Turk. C. H. Redfield's (New Haven, Conn.) Gordon setter bitch Beauty (Glen II.—Jet) to H. Clay Glover's champion Turk (A.K.R. 717), July 8.

Pebble—Lava Rock. Prof. H. J. Rice's (New York) English setter bitch Pebble (A.K.R. 43) to Lava Rock (A.K.R. 869), May 26.

Gylpha—Sportsman. S. S. McClure's (New Orleans, La.) English setter bitch Gylpha (Count Noble—Nellie) to J. W. Murnan's Sportsman (Gladstone—Sue), July 8.

Beauty III.—Bobbie. J. McCain's (Mount Hermon, N. J.) collie bitch Beauty III (A.K.R. 2203) to W. Atlee Burpee & Co's Bobbie (A.K.R. 2205), July 1.

Lady Sanborn—Emperor Fred. Dr. S. Fleet Speir's (Brooklyn, N. Y.) English setter bitch Lady Sanborn (Count Noble—Spark) to his Emperor Fred (A.K.R. 33).

WHELPS.

☞ *See instructions at head of this column.*

Cio. Walter E. Tooker's (Mount Vernon, N. Y.) imported cocker spaniel bitch Cio, July 4, five (four dogs), by J. W. Rushforth's Waverly Gyp (Pilot—Beauty).

Newton Abbot Lady. A. Clinton Wilmerding's (New York) field spaniel bitch Newton Abbot Lady (Bend Or—Ladybird) July 11, nine (five dogs), by his Black Prince (A.K.R. 62); seven chestnut and two black; three dogs dead.

Nelly. M. E. King's (East Taunton, Mass.) foxhound bitch Nelly, June 17, five dogs, by A. H. Dore's Pilot; color, blue, black, white and tan.

Flirt II. H. Jackson's (Dover, N. H.) beagle bitch Flirt II., July, five (three dogs), by Drew's Spider.

Nelly. Dr. S. Fleet Speir's (Brooklyn, N. Y.) pointer bitch Nelly (Tam O'Shanter—Nelly II.), July 2, nine (five dogs), by Donald II. (Donald—Devonshire Lass); all liver and white.

The Banshee. C. B. Gilbert's (New Haven, Conn.) deerhound bitch The Banshee (A.K.R. 1238), July 6, eleven (two dogs), by Dr. W. H. Carmait's Roderick Dhu (Lupar—Mona).

Merry Belle. E. W. Jester's (St. George's, Del.) English setter bitch Merry belle (Gladstone—Bessie A.), July 11, four (two dogs), by Rodrigo (Gladstone—Twin Maud).

Miss Nance. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Miss Nance (A.K.R. 1313), June 28, five (three dogs), by J. P. Willey's champion Obo II. (A.K.R. 432); three black and two all white.

Princess Mix. Prof. H. J. Rice's (New York) English setter bitch Princess Mix (A.K.R. 47), April 6, five (two dogs), by his Antic (Prince—Pebble); four black and white and one lemon and white; both dogs dead.

Aloe. Prof. H. J. Rice's's (New York) English setter bitch Aloe (Prince—Pebble), May 23, two bitches, by Dash III.; one black and white and one liver and white;

Passion. Prof. H. J. Rice's (New York) English setter bitch Passion (Prince—Pebble), June 6, six (two dogs), sire not given; all since dead from distemper.

Dalliance. Half-Way Brook Kennels' (Glens Falls, N. Y.) imported foxhound bitch Dalliance (A.K.R. 2400), July 7, fifteen (eight dogs), by their imported Stormer (A.K.R. 2402); all white, black and tan.

Jean. W. Atlee Burpee & Co.'s (Philadelphia, Pa.) collie bitch Jean (Bobbie—Beauty III.), June 23, six (one dog), by Bobbie (A.K.R. 2205); all black, tan and white.

ROMAINE'S LITTER.—Boston, June 30, 1885.—*Editor Forest and Stream:* Please insert in your next issue—Whelped. Romaine. G. T. Wells's (Faulkner, Mass.) red Irish setter bitch Romaine (A.K.R. 638), seven, six bitches, June 27, by champion Glencho, and oblige, yours, etc.—G. T. WELLS.

BOSTON, July 7, 1885.—*Editor Forest and Stream:* It is rather hard to ride a free horse to death, but in this week's issue you have published under the head of Whelps: "Romaine. G. T Wells's (Franklin, Mass.) red Irish setter bitch Romaine (A.K.R. 638), June 27, seven (one dog), by champion Glencho." Now, if you will look at my last letter to you, you will see that you have made a great mistake. In the first place, I did not state *how* many dogs or bitches. Next, I am at Faulkner, Mass., which does not look like Franklin, Mass. If you will rectify it in next week's you will greatly oblige, yours, etc.—GEO. T. WELLS.

SALES.

☞ *See instructions at head of this column.*

Ted. Skye terrier dog, age and pedigree not given, by E. W. Jester, St. George's, Del., to Thos. Blyth, Peale, Pa.

Daisy Belle. Orange and white pointer bitch, whelped May 26, 1885 (Robin Adair—Lady Belle), by Clifton Kennels, Jersey City, N. J., to C. A. Parker, Worcester, Mass.

Don Quixote. Black and white pointer dog, whelped May 26, 1885 (Robin Adair—Lady Belle), by Clifton Kennels, Jersey City, N. J., to F. W. White, Worcester, Mass.

Og. Black cocker spaniel dog, whelped June 29, 1884 (A.K.R. 1878), by S. R. Hemingway, New Haven, Conn., to H. T. Newberry, Detroit, Mich.

Miss Nevison. Mastiff bitch, whelped March 4, 1884 (champion Nevison—Brenda), by Chas. H. Mason, New York, to Miss E. Marbury, Oyster Bay, L. I.

Emperor Fred. Orange and white English setter dog (A.K.R. 33), by E. A. Herzberg, Brooklyn, N. Y., to Dr. S. Fleet Speir, same place.

IMPORTATIONS.

☞ *See instructions at head of this column.*

Gamp. Fawn Skye terrier bitch, 1yr. old (Skye—Vellie), by G. Sanderson, Moncton, N. B., from the kennels of A. Stephen, Turniff, Scotland.

Dombey. Steel gray Skye terrier dog, 6mos. old, bred by Frank Fraser, pedigree not given, by G. Sanderson, Moncton, N. B., from the kennels of A. Stephen, Turniff, Scotland.

Bella. Steel gray Skye terrier, 6mos. old, bred by Mr. Flinn, pedigree not given, by G. Sanderson, Moncton, N. B., from the kennels of A. Stephen, Turniff, Scotland.

DEATHS.

☞ *See instructions at head of this column.*

Bessie T. Black, white and tan English setter bitch, 5yrs. old (Gladstone—Fly), owned by Edward A. Todd, New Haven, Conn., July 6, from poison.

Mertie. Black and white English setter bitch, whelped March 6, 1885 (Dash—Lill), owned by Victor M. Haldeman, General Wayne, Pa., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. S., City.—Can you tell me the cause of the hair falling off of the tail of my setter? She looks all right every other way. The hair seems to stay on every other part of her body. Perhaps it is age that is telling on her. Ans. She has the mange. Rub the following ointment into the bare spots on your setter's tail: Ointment of the yellow oxide of mercury.

A READER, Philadelphia.—Setter dog, ten months old, recovered from distemper about a month ago, and is still troubled with a dry, parched nose, loose hair and sore eyes. Ans. Keep the dog's bowels easy with the syrup of buckthorn in dessertspoonful doses. Give him plenty of exercise, and also give four drops of Fowler's solution of arssnic in his food each day.

H. B., Whitehouse, N. J.—Setter, one year old, will eat scarcely anything; is very thin, has a few fleas, is lacking in energy; appears all right every other way. Ans. You do not give enough facts to warrant even a guess at the trouble. Keep his bowels in order with teaspoonful doses of syrup of buckthorn. Give him regular exercise every day. Satisfy yourself that he is not suffering from worms or other intestinal trouble.

L. D., Sunbury, Pa.—A black setter, a year old, has an attack of the mange at his tail. I have this pretty well under control, but one of his eyes is commencing to matter, the lids are inflamed some and look sore, and the hair is coming off in several small places near the eye. Ans. A solution of the sulpho-carbolate or sulphate of zinc of the strength of two grains to the ounce of water may be dropped into the eyes night and morning. Wash the parts with castile soap and water, dry, and apply the ointment of the oxide of zinc to the parts by rubbing into the skin with the fingers. You may also give four drops of Fowler's solution of arsenic once daily in the food.

G. W. S., Montreal.—Small Skye terrier, subject to fits, apparently from constipation; gets no meat to eat. Can you give the name of some easily administered aperient medicine that would correct this? I have already cured him of a skin disease by using your answer to another correspondent. Ans. There are numberless means of curing constipation. If it is constant, you had better relieve the dog once thoroughly by an injection of olive or linseed oil, and then keep the bowels clear by diet and exercise. Boiled liver mixed with the food will often be efficient. Syrup of buckthorn given in one or two teaspoonful doses until the bowels act is an excellent remedy. Castor oil may be given in dessertspoonful doses. Begin with the buckthorn. It will probably do all you wish for the dog. Give liver with the food.

Rifle and Trap Shooting.

TELESCOPIC RIFLE SIGHTS.

Editor Forest and Stream:

I have just read your editorial note accompanying my communication upon the above subject. I suspect that the reason there is little or no demand for telescopic rifles lies in the fact of their great cost, which practically prohibits their use by the mass of young riflemen. I was during the war an officer of sharpshooters, and within reach of where I now write there stands a rifle made before the war, upon which is a $30 telescopic sight. This rifle was in active use throughout the war and did terrible execution, often at distances of from ¾ to ⅞ of a mile. I am just numbering my three score years, and my eyesight is so dim that I cannot do any practical execution with any other kind of sight, but I do not believe many men live who can with any other style of sight do the execution that I still do with this rifle. The following clipping I take from a Philadelphia paper, whose reporter witnessed the practice, which was with the rifle referred to: "A muskrat while swimming shows about one-half of its head above water. To strike this with a rifle ball at a distance of 100yds. while the animal is moving at right angles with the gunner ought to be considered good marksmanship. A Wenonah (N. J.) man has done it three times in three consecutive shots from the same place, killing each rat within a few feet of the same spot; and he calls himself an old man, too."

For several years I used a telescopic sight almost exclusively for hunting, and have never yet seen any other style of sight which would in the least compare with it for hunting purposes. While I was upon our Western frontiers the most successful deer hunter which I knew there used a telescopic sight almost exclusively. A common sight surmounting it answers all purposes for a "snap shot," while at long distances, with deer standing, he almost invariably dropped them in their tracks or within a few feet distant. Although I owned two good double guns, I killed more pinnated grouse, wild pigeons, etc., with my rifle and had them in better order for the table, as I invariable shot their heads or necks off. With a telescopic sight it is practicable to do this up to, say, 100 yards. Telescopic rifles are prohibited on the range for the simple reason that the few who have them would win every prize. MILTON P. PEIRCE.

PHILADELPHIA, Pa.

RANGE AND GALLERY.

THE CHAMPIONSHIP OF IRELAND.

Editor Forest and Stream:

The competition for the selection of the right to represent Ireland at Wimbledon in the Elcho Shield match against England and Scotland, was held on the North Bull ranges, Dollymount, on the 24th and 25th inst. A large number of old "eight" men competed, many of whose names are familiar to our readers, and the scores made considering the weather were very good. A strong wind and mirage prevailed on the second day and kept the scores low. The conditions of the match are the same as those for the "Palma," except that 20 shots are fired at 1,000yds. in-tead of 15. In connection with the Irish Eight competition the four highest scores become absolutely entitled to the places on the team, as also do the fifth and sixth men, p ovided they have been previously members of the eight, otherwise the first four choose the remaining members and men in waiting The shooting throughout was remarkable for the closeness of the contest between the leading men. The scores made were as follows:

The American Cup and Championship of Ireland. Presented by the American Rifle Team to the riflemen of Ireland for annual competition, as a memorial of the first International rifle contest on Irish soil, June 29, 1875. The competitor being an Irishman by birth or parentage who shall make the highest aggregate score in the several competitions F, G, and H, shall be the winner for the current year and have his name and score engraved upon the Cup:

	Extra	Members'	Irish	Eight.		
	800yds.	1,000yds.	1st day	2d day	Total.

W. R. Joynt wins the Cup and championship badge.

Mr. W. R. Joynt, who formed one of the Irish team in the Centennial match at Creedmoor in 1876, and also represented Ireland against the American team at Dollymount in 1880, accordingly won the championship of Ireland, closely pressed, however, by Mr. Braithwaite 3 points, and by Messrs. Rigly and Ganly 8 points behind. Both the latter well-known shots have held the championship twice each, Captain Fenton three times, and Mr. Murphy once, these being the only riflemen we remember who have obtained the coveted distinction. Mr. Joynt for the present year holds the cup presented by the riflemen of America to the Irish riflemen in 1875, and takes the $20 championship badge. In connection with the Irish Eight competition, he wins the cup (value $80) presented by the Lord Lieutenant of Ireland, Mr. Braithwaite taking second prize ($45) and Lieutenant Montgomery the third prize ($35). Messrs. Joynt, Braithwaite, Montgomery, Ganly and Rigby are entitled to their places on the Irish Eight for this year, and the selection of the remaining members devolves on them. We can only wish the team so constituted every success at Wimbledon in the contest for the shield on the 24th prox.

DUBLIN, June 28.

BOSTON, July 11.—The attendance at Walnut Hill to-day was fair, and the weather conditions were good. The following records were made:

500yds Match.

P Ballard	10	10	9	10	10	9	10	10	9	10–97

Three new matches have been opened for competition by the Massachusetts Rifle Association. The first is to be on the decimal target off-hand, 200yds., with 10 rounds, any rifle allowed and unlimited entries. Prizes are to be won on the aggregate of each competitor's best four scores, to count in order made; rifles with military open sights to be shot without cleaning during each score; military rifles of strictly military character allowed 24 points, and other rifles with open sights 16 points, on the aggregate of four scores. Any winner of a percentage prize may, at option, take the cash prize or receive a gold or silver medal, not to exceed in cost the amount of his prize.

The second match will be on the decimal target, at rest, with these conditions; 200yds., rounds, 10; any position or rest; any rifle under 10 pounds, without telescopic sights; prizes to be won on the aggregate of each competitor's best five scores, counted in order made. Military or open sight rifles to be shot without cleaning during each score. An allowance of 50 points on strictly military, and 25 points on other open sight rifles will be made on the aggregate of five scores.

The third is a handicap, time match. Conditions the same as in the first match, with the exception that a competitor will be required to fire his shot in seven seconds after the word to fire is given, and failing to do so will be scored a miss. The rifle must be held in the same position as is required for holding a shotgun in trap shooting, until the word is given, and then brought to the shoulder and aimed. Prizes the same as in the first match C, and awarded in the same way.

The prizes in the first match range in amount from 10 to 1 per cent. of the entry fees, and in the second from 12 to 4 per cent. of the entry fees.

THOMASTON, Conn., July 11.—The weather conditions at Bridgemoor range to-day were a very bright light, with a light wind veering from three to five o'clock. Walnut Hill decimal target:

G C Gilbert	9	9	5	9	10	10	9	9	6	9–85
E Thomas	7	10	8	8	7	8	10	6	9	8–81
G C Caufield	7	7	9	8	9	6	10	9	9	5–79
E W Bennett	4	9	7	4	3	10	8	4	5	10–64
F Carr	3	6	10	6	3	7	6	8	10	4–63
F A Perkins	4	8	5	7	5	6	9	0	10	4–58
C F Williams	8	4	7	5	2	6	5	9	6	5–57
C L Alling	5	9	7	2	7	8	6	2	2	7–55
A Fox	4	3	4	10	2	10	8	2	3	5–51

CREEDMOOR, July 11.—There was a large attendance this morning, when the gold marksman's badge was competed for. The weather was warm, but in every way favorable for good shooting, the breeze being light. In addition to the marksman's badge contest, the *Army and Navy Journal* and the qualification match took place and induced some good shooting. The gold marksman's badge was won for the second time by John T. Klein, of the 17th Separate Company, by a score of 22-24, total 46. The other prize winners were:

	200yds.	500yds.	Total.
J L Breming, 14th Regt	20	24	44
E W Price, 7th Regt	22	22	44
E T Young, 7th Regt	22	21	43
S A Benn, N H A	23	20	43
L S Frankau, 7th Regt	18	24	42
E C Wallace, 14th Regt	19	23	42
G C Power, 7th Regt	20	22	42

TOPEKA, Kas., July 10.—The weekly shoot of the Capital City Rifle Club occurred this afternoon at their range. The following is the score made:

J M Clark	4	3	5	4	3	4	8	5	6	9–51
Geo E Morrison	3	6	5	1	3	5	4	10	5	1–43
Fred M Carter	6	5	4	6	4	5	10	3	8	2–53
Robert Thompson	6	5	4	3	6	4	4	6	8	4–50
J T Williams	0	2	9	2	8	5	6	6	10	6–54
H T Dillon	4	7	8	3	4	2	2	3	6	0–45
W A L Thompson	2	5	3	7	2	0	1	7	3	2–32

WALTHAM, Mass., July 10.—Hillside Rifle Club held its weekly shoot at the range in Waltham this afternoon. Seven members shot, but four of them withdrew their cards at the close. The sun made it difficult to get a good sight on the bullseye, but in spite of this fact, Mr. Dennison made one of the best scores in an American decimal match on record. The distance was 200yds., and the leading score in detail as follows:

American Decimal—Off-Hand.

L O Dennison	9	10	9	10	10	10	8	9	9	9–93
W H Stone	7	4	10	8	8	9	7	9	9	7–78
John Foster	8	9	4	10	5	3	6	5	9	6–64

THE COOGAN TROPHY.—At the recent competition for this Irish-American emblem, the 69th Regiment or home team defeated the Irish-American team by 76 points. They will, therefore, hold the silver trophy until the next competition, which occurs on Tuesday, August 25, at New Haven.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club was beaten in two matches July 4. The Brattleboro (Vt.) rifle club came down here with ten men and beat the home club in the 50-shot telegraphic match, two men on each side. The home club were the foot of the list, being beaten by the Minneapolis (Minn.), Pittsburgh (Pa.) and by the Brattleboro (Vt.) clubs. The weather during the 50-shot match was miserable, a severe thunderstorm coming up when the match was about half over, but they had to keep on shooting on account of darkness, as they did not start the match till late. The scores on the team match were:

Brattleboro Rifle Club.

Wesley	11	12	12	10	9	11	10	12	9	9—105
Cobb	12	11	8	10	9	11	11	10	11	11—104

Second Class.

T T Cartwright	11	10	9	9	8	8	9	7	10	12 10— 95
Re-entry	8	10	8	11	11	7	10	12	10	10— 97
Re-entry	8	10	11	11	10	7	12	11	9	10— 99

PIN HEAD.

HAVERHILL, Mass.—Rifle club at Riverside Range, July 11, 200yds., off-hand, Creedmoor:

W D Palmer	4444555555—46	Ed Bray	4544444344—40
J Busfield	5444515445—44	L J Jackson	4443454434—39
F S Hardwick	4544444444—41	F Merrill	5444054444—38
C Brown	4454543444—41		

Messrs. Palmer and Hardwick are visitors from the Merrimac Rifle Club.

ILION, N. Y., July 6.—A rocket struck into the loading department of the Remington armory at 11 P. M. to-day, and started a fire which destroyed that structure and $5,000 worth of cartridges. The fire extended to the main building damaging the upper rooms, machinery, and sewing machine stock by fire, smoke and water to the extent of $25,000. The losses are covered by insurance. The whole armory was threatened at one time. Firemen from the surrounding villages assisted in subduing the flames. No department but the cartridge works is interfered with by the fire, and that will be replaced at once.

BRIDGEPORT, July 4.—A rifle match was shot on the Bridgeport range to-day between Messrs. E. A. Leopold and J. P. Wanger, resulting in a victory for the former, as the following record will show: Distance 100yds., any position without artificial rest, string measure, each shot being measured from the center of the bullseye. E. A. Leopold .40, .49, .70, 1.06, 1.67, total 4.32; J. P. Wanger 1.62, 2.50, 2.52, 5.95, 3 91, total 13.67. Mr. Leopold also put 13 consecutive shots in a 4-in. bullseye at same distance.

RIFLE NOTE.—The Greenville (N. J.) Schuetzen Corps and the Jersey City Schuetzen Corps will shoot a match at the former place on the 27th inst. for $500 a side.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BRIGGS VS. NEPTUNE.—Chester, N. J., July 10.—The Thomas L. Briggs Gun Club visited Asbury Park yesterday and shot a match with the Neptune Gun Club of that place at clay-pigeons. The contest took place on the beach.

Neptune.		Briggs.	
M J Boyce	1010100000—3	Wm Gibbs	1110011101— 7
W Kelsey	0010111101—6	Wm Ladomus	1111101111— 9
T L Emens	1001100110—5	E Rose	0111100000— 4

S O Rogers	1110101110—7	H Johnson	0111011100— 6
A L Clayton	0111001001—5	R E Ross	1111111111—10
A H Newman	1010101111—7	J H Ladomus	1111100000— 5
A Johns	0110011110—6—43	N Hyland	1110000111— 6—53

An important feature of the match was the contest for the marksman's gold badge, first won by Constable Gibbs, and worn by him since the last match with the Wawassett Club, of Wilmington. It was won yesterday by R. E. Ross with a score of 10.

SOLOMON CITY, Kan., July 4.—Shooting tournament to-day under the auspices of the Solomon City Gun Club. The principal event of the day was the champion match, 15 blackbirds, 18yds. rise:

Solomon City Gun Club.

Butts	1111111111101011111111111—23

STAUNTON, Va., July 7.—Staunton Gun Club, 10 single and 10 double clay-pigeons, 3 traps, 16yds. rise, for silver medal and leather medal: Ayres 6, 5—11; Barganin 7, 5—12; Cooke 6, 5—11; Cushing 6, —12; Jones 5, 6—11; Nelson 5, 6—11; Heyman 5, 6—11; Schaffer 3, 0—3.—C. B.

BOSTON GUN CLUB.—The tournament of the Boston Gun Club at Wellington on the 11th was well attended. The badge matches were both won by Mr. C. M. Stark, of Winchester, one of the oldest members of the Boston club, and he received a handsome memento from the club for his skill. The winners in the various matches are given below:

1. Five pigeons—J. Spofford first, Stark and Copeland second, Bartlett and Spring third.

2. Five blackbirds—Spring, Stark and Stanton first, Spofford second, Bailey and Bartlett third, J. L. Snow fourth.

3. Seven pigeons—M. D. Gilman and Stark first, Stanton, Tidsbury and Warren second, Snow and C. W. Wilbur third, B. Pond fourth.

4. Five blackbirds—H. W. Eager, M. D. Gilman and Tidsbury first, R. Schaefer and E. W. Tinker second, Snow third, Aldoes fourth.

5. Grand challenge match of the Massachusetts association, open to individual members of the association, 50 blackbirds, 18yds. rise—C. M. Stark first, score 43; Sanger second, score 39; H. W. Eager third, F. F. Schaefer, Spofford and Buffum tieing for fourth, Nicholson fifth.

6. Seven Ligowsky birds—Bartlett first, Eager and Tidsbury second, Copeland, Souther and Snow third, Gilman fourth.

7. Three pairs Ligowsky birds—Stark first, Howard second, Snow, and Tidsbury third, Schaefer fourth.

8. Fifty pigeons open to every individual member of the Massachusetts State Association—First money and gold badge to C. M. Stark, score 43; second money, O. R. Dickey, score 45; third, J. B. Bartlett, score 42; fourth, J. Buffum, score 39.

9. Two pairs pigeons—Tinker and Bartlett first, Howard second, Eager third and Dickey fourth.

10. Two-man team match, 7 single and 3 pairs pigeons—Spring and Dickey first, Snow and Tinker second, Wilbur and Bartlett third.

11. Seven pigeons—Dickey first, Stanton second, Eager third, Wilbur fourth.

A large number of matches were also shot on the side traps. Some 2,500 pigeons and 900 blackbirds were used during the day.

LANCASTER, Pa., July 10.—A certain number of our young men who are fond of hunting, but have nothing to shoot in this county, have formed themselves into an association known as the Maple Grove Gun Club. Yesterday they had their first contest at McGrann's Park. About 300 people were present:

H Anderson	1111110101010—10	J H Cline	1101111111100—11
J Snyder	1011100110111—10	H Kauffman	1001111001110— 9
M Snyder	1110101000110— 8	C. Franciscus	1010101011111—11
S C Miller	1110111101011—11	H Miller	1111010001110— 9
H W Bush	1111111011100—11	B Kiehl	0111111101111—12

JAMESTOWN, N. Y., July 9.—Jamestown Club in match with Winchester (Mass.) at clay-pigeons:

Jamestown.			
Walker	1110011111011111111—17	Moore	1101011100101001000—10

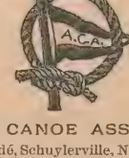
"Very satisfactory comments from different parties."
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (Signed) C. M. STARK.

Canoeing.



Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc, of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

July 18—Shatemuc C. C. Regatta.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 20—Annisquam C. C., Postponed Races.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

CAMP REGULATIONS AT GRINDSTONE ISLAND.

THE arrangements at Grindstone this year are more perfect than ever before, and the officers have done everything possible to insure the comfort of all members and their friends. The following circular will be given, with a copy of the rules, etc., to every member when he reports to Secretary Neidé. The concluding notice will be posted in all hotels and steamers in the Thousand Islands:

CAMP RULES.

I. For the better enforcement of rules and regulations a member of the Executive Committee will be detailed daily to act as Executive Officer of the Day. He will be obeyed and respected accordingly. Club comrades will detail daily one member to act as camp police, the duty of whom shall be to see that the rules are complied with. All camp police will be under the immediate direction of the Officer of the Day and will apply to him for badges, which must be worn conspicuously during the tour of duty.

II. Flags will be raised at 8 A. M. and lowered at sunset. After 10 P. M. a reasonable amount of quiet must be observed in camp.

III. Daily before 10 A. M. tents must be put in order and grounds policed, all refuse, etc., from cooking gathered for removal by the police cart. Clubs and members will provide themselves with the necessary boxes or pails for this purpose.

IV. Visitors (invited guests wearing badges excepted) will not be permitted in camp except on Thursdays, and on special occasions posted on the bulletin board.

V. Invited guests may obtain badges from members or at the dock, and must wear the same conspicuously while in camp.

VI. Visiting boats must land and be moored at the dock, unless otherwise directed by the Officer of the Day.

VII. Camp will be open daily to invited guests, but ladies will not be expected in camp before 9 A. M. or after 5 P. M., except by official invitation for special occasions, which will be posted on the bulletin board.

VIII. Cleanliness and good order are indispensable for the general health and comfort, and the Commodore trusts that all members will cheerfully comply with the few simple rules required. The Officer of the Day, Club Commanders, and the Camp Police, are charged with the responsibility for the observance of the regulations.

GENERAL INSTRUCTIONS.

I. Members may obtain badges for invited guests from the Secretary and Officer of the Day.

II The Secretary will be at his tent for the transaction of business daily from 9 to 10 A. M.

III. Members desiring board at Delaney's will report the fact to the Secretary or Officer of the Day on their arrival. Board, $1 per

day; board and lodging, $1.50 per day. Breakfast, 7 to 8:30; dinner, 12 to 1:30; supper, 6 to 7:30.

IV. There will be no bar at the camp store. Supplies of all kinds may be obtained there; including ice, milk, and meat when ordered. Postage stamps also on sale. Wood for cooking may be had from the cord wood piles. Members are requested not to use this wood except for that purpose.

V. Mail will be received and delivered twice a day at the A. C. A. tent.

VI. Steamer Magic will run between Clayton and camp daily (Sundays excepted), touching at Round Island Park, Thousand Island Park and Cromell Island (by signal) as follows: Leave Clayton 8:30, 10:30 A. M., 1:30 and 7 P. M.; leave camp 9:30, 11:30 A. M., 2:30, 5 and 8 P. M. Canadian members can come from and go to Gananoque by steamer Deseronto, which leaves there for camp daily (Sundays excepted) at 5, 8:15 A. M. and 4 P. M.

VII. All hours and rules heretofore published which may conflict with the foregoing are hereby amended.

PRIVATE GROUNDS.

No steamers allowed to land without special permits. Open to the public on Thursdays only from 9 A. M. to 5 P. M.

Open daily to invited guests.

Ladies not permitted in camp before 9 A. M. or after 5 P. M., except by official invitation on special occasions.

Visitors (invited guests) may obtain badges from A. C. A. members or at the dock. Guests in camp must wear these badges conspicuously.

All visiting boats must land and be moored at the dock, unless otherwise ordered by the Officer of the Day.

ROBERT SHAW OLIVER, Commodore A. C. A.

BAYONNE C. C. REGATTA.

THE Bayonne C. C., founded in 1882 with a fleet of home made canvas canoes, has grown into a flourishing club, with some fourteen canoes, nearly all of cedar and of the best models. This season the membership has increased and the house has been enlarged. Their location is excellent, as Newark Bay offers room for sailing with little danger from passing vessels, while the Passaic, Hackensack, Staten Island Sound and Kills are all near by. The fourth annual regatta was held on July 4, off the club house. The first race was under sail, distance three miles, in a good breeze. The entries were: Sioux, T. F. Garrett; Foam, J. Collins; Miss, F. B. Collins; Lil, R. V. Vienot; Manhatta, S. Peebles; Kelpie, E. R. Smith; Baby, F. Beardsley; May, W. Rumble; Water Witch, G. W. Heard. The race was closely contested throughout, and was won by Sioux, with Lil close in as second.

The single paddling race, 1 mile, was also very close. The entries were: Kelpie, E. R. Smith; Mist, F. B. Collins; Sioux, M. Grace; Ella, A. Fleming; Baby, F. Beardsley. Kelpie won, with Mist second.

The third race was for tandem crews, 1 mile: Ella, Vienot and Fleming; Water Witch, Garret and Heard; Kelpie, Smith and Peebles; Belle, Swift and Grace. Won by the Water Witch, Ella second.

Fourth race, upset: Kelpie, E. R. Smith, and Mist, F. B. Collins, entered. Kelpie won, regaining his place in canoe in about 31 seconds. Prizes were presented to winners of each race.

PITTSBURGH C. C. RECORD CUP RACE.

THE second record cup race of the Pittsburgh C. C. was sailed on Thursday, July 2, on the Allegheny River, the course being about a half-mile to windward and return, to be sailed over twice. The entries were: Freyja, Holdship, Whiffler, Woodwell, Lady Jane, Bakewell, Marguerite, Singer, and Katrina, Bailey. The wind was fresh at the start, and Marguerite and Katrina both had reefs down, while Whiffler sailed without dandy, but the wind grew lighter as the race proceeded, and before long all reefs were shaken out. For several tacks the canoes were well together, and one or two narrow escapes from collision were made, but from the start Freyja was in the lead, and though Katrina got pretty close at one time, the novice was sailing well and drew away again, reaching the first turn well ahead. The buoy was close above the Union Bridge, and when the leader squared away for the run home he was nearly becalmed for a few moments, allowing Katrina to close up the gap. When Whiffler, Marguerite, the Grayling and Lady Jane made the turn, they were all caught in the doldrums and left far in the rear by the two leaders, who were having a tight race of it up stream before the wind. The only incident of the run up was a jibe by Freyja in which the skipper lost his hat overboard, but was lucky enough to snatch it before it got out of reach.

Just before reaching the upper turn Katrina got a strong blast which ran her into first place, and enabled her to round just clear of her competitor. Both made very close turns, having rather underestimated the current, and Freyja's commander lost his hat for the second time, and sailed the second round bareheaded. The two leaders were a long way to windward before they met the other three contestants, who came along with Whiffler in the van and little Lady Jane bringing up the rear. About this time the spectators had their attention distracted from the race by the capsize of a non-member, who was sailing over the course with the racers and undertook to run through the swells of a passing steamboat.

On second round the wind seemed to favor the leading canoe, and Katrina steadily gained. The others did not change positions, with exception of Marguerite, who succeeded in passing the dandyless Whiffler and closed up somewhat on second man. At the lower turn Marguerite was carried upon a bridge pier by the strong current, and the crew were ordered overboard to lift her off. The run home was unexciting, a space of 50 to 70ds. separating the canoes; and they crossed the line in this order: Katrina, Freyja, Marguerite and Whiffler. Lady Jane was at too great a disadvantage with her larger antagonists, and did not complete the course. The record now stands: Katrina 12, Marguerite 9, Freyja 8, Whiffler 5, Lady Jane 5, Tiger 2.

A CRUISE ON THE TAME AND TRENT RIVERS.

ON Saturday, Oct. 18, 1884, two members of the Free Rovers C. C. started from Birmingham for a short cruise down the rivers Tame and Trent. They put their new and beautiful canoe Iolanthe—15ft. 6in. long, 2ft. 6in. beam, 10in. deep, with lug mainsail and sprit mizzen—safely on board the train, jumped in a carriage, and were soon whizzed to Tamworth, twenty miles from Birmingham. Here the sluggish little River Amber runs close by the railway station, and after lifting the Iolanthe down a longish flight of steep steps and over two gates into a field, they launched her into the stream and were specially afloat. A paddle of a mile or so under several picturesque bridges and past river craft of all kind, from a canvas canoe to a steam launch, brought the voyagers to within a few yards of the River Tame, where a short portage saved a long bend with awkward weir at the finish, and now they were fairly on the voyage. The scenery was lovely, the woods in the autumn dress of gold and gorgeous colors, and the numerous wildfowl flitting here and there, with a few water rats and an occasional cottage nestling among the trees found enthusiastic admirers in the captain and mate. A most enjoyable paddle of two miles brought them to Hopwas Mill, where a portage was necessary. This was made short work of and the boat launched below the mill. For the next mile the river, owing to the long drought being very low, presented a succession of shallows and rapids, some of which were rather troublesome but caused great fun and no small amount of wading; but after passing the village and bridge of Hopwas the stream grew deeper and wider, and the paddles were plied with renewed energy while the scenery grew more and more enchanting. Two miles below Hopwas is the Trent Valley Railway bridge and below, Comberford village, with its picturesque mill and weir. A few minutes sufficed for the crew to transfer their craft to the lower water, and a halt for tea was called; but to the wrath and disappointment of the crew it was discovered that the steward had forgotten to put the stores aboard. In a short time Elford Bridge was reached, with a mill and weir. Some minutes were lost here after getting on the lower water by taking a wrong turn, and a little further down the boat was firmly grounded and refused to stir. The skipper quickly turned out and towed the boat a few hundred yards till deeper water was reached, while the mate splashed ashore and joined the ship lower down. Cold work wading in October. Darkness was now coming on apace and much caution was required in navigating, owing to the frequent scours, but in due time the canoe shot under Croscall Bridge, and the welcome lights of a railway station hove in sight. Not knowing the road, however, and it being too dark to land (the boat lamp had been left behind with the stores), the crew pushed on half a mile further down to a farmhouse close by the river. Here the boat was hauled up and stowed away in a shed, and the two hungry crew, after consulting a time table, marched across the fields to Alrewas, laid in a good square tea at the Paul Pry Hotel, and were safely landed home at 10 P. M.

Saturday, Oct. 25, being fine it was decided to continue the voyage, although fears were entertained (no rain having fallen) that a rough passage was in store. However, in due time we were set down at Alrewas, one mile from Lichfield's fair cathedral, walked across the fields to the farmhouse, found the worthy hostess had kindly dried our wet things, cushions, etc., launched the ship and were speedily dropping down the river under sail before a light breeze. In a short time Wichnor railway bridge was reached, and with considerable misgivings the boat was headed for the only practicable arch, the navigation requiring great care owing to the awkward swirl under the arches and the numerous snags. However, the feat was accomplished without accident, and the next minute the ship was once more under sail on a deep strong stream, the Trent, which receives the Tame at this point, being much fuller than was expected. This was a great relief, and made the rest of the cruise seem easy. Sail and paddle were alternately used and the changing scenery which was even finer than before, duly admired. The swift strong stream and the paddle drove the boat along at a fine pace, though careful steering was required at the numerous rapids. Cotton Hall was soon passed and an awkward rapid a mile below successfully negotiated, and soon the tower of Walton church was sighted. We had to wait a few seconds at the ford just below, an old bull crossing the river seemed inclined to be awkward at first, but he waited for us to go past and then resumed his journey. After passing Walton church we landed and tea'd. At Branstone, four miles below Walton, we stuck for a moment in a shallow rapid, but a vigorous shove from the two paddles set us at liberty and we soon turned down the Bend into Draketon water, the beautiful reach in the river below Burton where the Cubs have the regatta. About 6:30 P. M. we arrived at Dickenson's boat house, at Burton, where we left the canoes for some few alterations and having donned our shore-going togs we quickly walked to the station and were taken home in a fast train, well satisfied with the very satisfactory cruise of the concluding season.

E. S. COOKE, W. T. JONES.

AMATEUR BOAT BUILDING.

Editor Forest and Stream:

For the benefit of your readers who may contemplate the construction of a rowboat or canoe, I will relate my own experience. For several years I had desired to own a boat to be used mainly for bass fishing in the Schuylkill River. I wanted to build the boat myself, and to this end I read and thoroughly studied a series of articles appearing in the *Scientific American* supplement several years ago. I finally decided that the boats described were rather heavy to fully meet my requirements; besides I had very serious doubts as to my ability to build a boat of good model from the instructions given. Later on I read, re-read and studied "Canoe and Boat Building for Amateurs." I then decided that I could build a boat; at least I would make the attempt. I had never witnessed the construction of a boat of any kind. I had never seen a canoe. I had never seen a rowboat weighing less than 125 pounds. And now I wish to place it on record that it is my opinion that any man who possesses an average share of mechanical ingenuity, has had a little experience in the handling of wood-working tools, and who has withal the true instinct of the sportsman born in him, can build a fine boat of good model and light weight without any other assistance than "Canoe and Boat Building." I commenced work on the plans for my boat in September, 1884, and at the end of six months the boat was completed. The amount of time spent on it was from one to two hours daily. The plans were finished in two weeks. This may seem a long time to some who have had no experience in such work. It must, however, be remembered that I was working in valuable material, and that one slip of the chisel would be liable to ruin a piece of lumber which could not be duplicated this side of New York.

A description of the boat might prove interesting. It is a rowboat 19ft. long, 34in. beam, 12in. high amidships, with 7in. sheer. Keel, white oak, 1in. deep by ⅞in. thick; stem and stern, hackmatack; gunwales black walnut; inwales, 1×¾in., white cedar. The siding is white cedar, a scant ¼in. in thickness. Floor and stern seat, white pine, 5-16in. thick. The cross ledges under the floor are spaced 5in., and fitted to the bottom so perfectly that a very heavy man can place all of his weight on any part of the floor without straining the boat in the least. The middle seat has a cane bottom, and is formed of a very strong framework of ash, and is hung from the gunwales by means of hackmatack knees and further secured by screws through the siding. This construction strengthens the hull and furnishes a brace to the gunwales, counteracting the effect of the great strain produced by the oars in rowing. There is a lazy-back hinged to the floor just back of the rower's seat. When not in use it lays flat on the floor, entirely out of the way. When raised in position for use its appearance is something like a letter v inverted, thus Λ. The front side is hinged to the floor; the top is hinged; the back part acts as a brace to hold the front part, or lazy-back proper, in position when raised, and the lower ends of these braces (there are two of them, one on each side) fit in shallow grooves cut in the floor. To lower the lazy back, raise the braces out of the grooves in the floor, let them slide toward the stern until the whole apparatus drops flat on the floor, then down by turning a wooden button.

The front side of this apparatus, i. e., the part against which the body leans, consists of two uprights and a crosspiece at the top These uprights are about 7in. apart, and may be made of such a height as to best fit the person using it. The crosspiece is riveted on the front side of the uprights. The rivets extend through and serve to fasten the hinges on the rear side of the uprights. The hinges here referred to are those which attach the uprights to the braces. When the apparatus lies flat on the floor these hinges are under, and a groove may be cut in the floor to receive them. Another pair of hinges are used to fasten the lower ends of the uprights to the floor. These latter hinges are attached as follows: A strip of oak or ash, 1½in. wide, ¼in. thick, and 7, 8 or 9in. long, according to width of your lazy-back, is screwed to the floor just back of the seat. This strip should be immediately over one of the floor ledges, and long screws be used, reaching through the floor into the floor ledge. Lay the lazy-back flat on the floor of the boat, with ends of the uprights butting against the ledge. Lay the hinges on top and mark the places for rivet and screw holes. Take out and rivet hinges to uprights, replace and screw hinges fast, the screws going through the strip and floor and into the floor ledge. This fastening is very secure, and must necessarily be so, as this is the point where a great tension strain is liable to occur.

The uprights, braces and cross piece are made of straight-grained hickory, two inches wide by quarter inch thick. The braces may be tapered to an inch and a half wide at the lower ends. I am thus particular in describing this fitting, as I think it simple, more compact, and stronger than anything else of the kind which I have ever seen or heard of. No boat is complete without some kind of back rest. When starting out in the morning for a five-mile pull to the fishing grounds the back rest will not be wanted, but when returning home, after a successful or an unsuccessful day's fishing, it will be found a great luxury. I have a pair of air tanks fitted into the bilges on either side, under the middle seat. Here they are entirely out of the way. When placed in bow and stern they interfere with packing of traps or duffle, as "Nessmuk" wou'd say, such as boat hook, landing net, fishing rods, etc. The air tanks are made of tin, and have a capacity of about two gallons each. Each tank is made of two frustums of a cone, soldered together at the larger ends, the small ends being closed by soldering in circular pieces two inches in diameter. The diameter of the tanks in the middle is about 4x5in., as they are slightly flattened. These tanks weigh four pounds, and a tinsmith will make them for about seventy-five cents each. They are fastened in place by means of two leather loops, one near each end. The tanks can easily be removed, as one of the tanks is fitted with a buckle.

I use Allen's bow-facing rowing gear, and for absolute comfort in rowing I consider it far ahead of the old style of rowing backward. In the first place by using it I can pick my course the same as the canoeist, and then I do not get the snaky and wobbling motions which attach to the canoe and double paddle, and, secondly, I can plant my oars where they will do the most good, which is generally not on a rock or stump, or in a bunch of grass. The disadvantages of the bow-facing gear are as follows: It is a little heavier than the ordinary gear, and under some circumstances it might require two trips to make a portage, when with the ordinary gear it could be made in one. These oars cannot be used as push poles, and when it is desired to poke around the shores to any great extent it might be well to carry a boat hook or push pole. I have been on several fishing trips with my boat, and although I have sometimes carried a boat hook I never had occasion to use it. I think the advantage of the bow-facing gear far outweigh its disadvantages. I have used it five weeks for pleasure rowing, fishing and racing, and would not for a moment consider a proposition to go back to the old style of rowing backward. As far as speed is concerned I will say that I believe I have the fastest craft in this vicinity. This may not be considered very complimentary to the other boats, but it is nevertheless a fact, that I have not yet fallen in with any boats going my way that could accompany me for any great length of time.

The weight of my boat without the oars is about sixty pounds. I have rowed around Barbadoes Island as follows, distance about three miles: June 6, in 31m. 45s.; June 10, 31m. 45s.; June 12, 31m. 15s.; June 16, 31m. 16s.; July 2, 30m. 30s. On July 4 rowed in two half miles races, beating a single in 5m. 30s., and a double in 5m. My opponents used a clinker-built cedar boat 13ft. long and 46in. beam, and long spoon oars. These races were the result of a challenge issued by myself and published in the daily papers of this borough. The parties who claimed a record of 27m. around the island did not enter the race, and the man who said my boat was too light to keep its motion, now says the other boats are too heavy to show any speed. I am not a skillful oarsman, nor have I any great amount of strength or endurance, but have succeeded in exploding some very curious theories, and establishing the fact that a boat built according to Mr. Stephens's instructions is not slow by any means, nor is it a homely thing to look at.

E. A. LEOPOLD.

NORRISTOWN, Pa., July 7, 1885.

"NESSMUK" describes his new canoe, the Rushton, in "Sportsman Tourist."

A CRUISE ON THE SUSQUEHANNA.—Binghamton, N. J., July 8.—Five Philadelphia gentlemen arrived here from Cooperstown between 9 and 10 A. M., July 4, on their way home via the Susquehanna. Their canoes were of painted canvas, nine or ten feet in length, made by themselves and nicely modeled. A sixth was larger, deeper and stowed with camp equipage. All of the squadron had canvas lap covers, double blades, and complete cruising outfits. Each canoe had about three inches tumble home, which afforded dryer decks than a plain topside or the straight freeboard. These gentlemen are no tyros. Last year they descended the Delaware and found their little cockle shells admirable. Three inches of keel protects the canvas in shoal water, and adds somewhat to the stability of the canoe. They were the only canvas canoes I have ever seen and liked. There was something "nifty" about them, and the only fault was an absence of sails.—G. A. J.

CANOEING ON THE PASSAIC.—From present indications Newark will possess a very fine canoe organization. The Essex Boat Club, at its last meeting, formed itself into the Essex Canoe and Boat Club, and desires canoeists from along the Passaic to enroll themselves as members. A number have responded, and at the next meeting regular canoe officers will be chosen. We shall have about twenty-five members, fifteen of whom will be active canoeists and owners of from fifteen to twenty canoes. The club-house is situated on the left bank of the Passaic River just above the Erie Railroad Bridge. It is a beautiful and commodious house, every way adapted for canoe purposes; and is owned by the members of the club. We expect to have a delegation at the meet.—ESSEX CANOE CLUB, Newark, N. J.

SHATTEMUC C. C.—Sing Sing, July 11.—*Editor Forest and Stream:* The second annual regatta of this club will be held off the club house on Saturday, July 18, at 4 o'clock P. M. The following is the programme: 1. Paddling race, ½ mile, classes 2 and 4. 2. Sailing race, 2 miles, classes A and B. 3. Sailing race, 2 miles, all classes. 4. Tandem paddling, ½ mile, classes 3 and 4. All the races except No. 3 will be open to all.—REGATTA COMMITTEE.

THE ASSOCIATION BADGE.—Messrs. Tiffany & Co., Union square, New York, have now ready a handsome badge made by them for the American Canoe Association. The design is very neat and tasteful, and while not too elaborate to wear with a camp uniform, it is handsome enough for any occasion.

IANTHE C. C. REGATTA.—The Ianthe C. C., of Newark, N. J., will hold a regatta on the Passaic River on Saturday, July 18. The regatta will be open to all canoes. Races will consist of four paddling and one sailing race, and suitable prizes will be given to the winner in each class.

OTTAWA AT THE CANOE MEET.—A party of Ottawa canoeists, among them Judge Wicksteed, will come to Grindstone in a steam launch. The St. George's Society of Ottawa propose to visit the camp during the meet.

Yachting.

Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 28—Pentucket Y. C., Championship Regatta.

THE SCHOONER RACE AT BOSTON.

WHILE Boston cannot boast a fleet of large sloops or cutters, it is at least ahead of New York as far as the small fry are concerned, and it promises soon to be in the matter of large schooners. There are now in Boston waters four large keel schooners, among whom there exists considerable rivalry, and who have met often enough informally to make a more thorough test of their powers, in a regular race, acceptable to all of their owners. Mohican and Gitana had a brush up the coast this spring that was by no means decisive. Fortuna is believed by many to be the fastest keel schooner in American waters, and America has lately been rather loudly heralded as the superior of all, as she was thirty years since. The race of the Eastern Y. C., on June 30, shook them into what many believe to be nearly their proper places; but neither owners nor captains were satisfied, and another match was arranged to come off on Thursday last.

Each of the four entries put in $100 toward the purchase of a cup. The course was 20 miles to windward and back, starting between Milk and Thatcher's islands, Cape Ann, the race to be sailed in a breeze not under 8 knots.

Anchored in Gloucester Harbor were Fortuna, H. S. Hovey, Com. E. Y. C.; Mohican, H. D. Burnham, and America, B. F. Butler, and by 10 A. M. all were under canvas and ready at their moorings. The judges were Messrs. Daniel Appleton and T. Denny Boardman, and the umpire, Mr. F. Gordon Dexter. Puritan was also present for a sail over the course. The weather was clear, with a light south wind, blowing fresher by 10 A. M.

At 10:53 the signal for the race was set, and at 11:03 the preparatory gun was fired, the starting signal being at 11:18. Fortuna crossed first, with large clubtopsail set, at 11:20:04, Gitana next at 11:23:04, Mohican at 11:22:56, and America at 11:25. The latter was badly off at the start, having a handicap of 2min. The first leg was to the eastward on starboard tack, Fortuna leading and holding the best wind, while Gitana was close astern. Mohican could not point with either of them, and America was sailed so close as to hinder her way. Puritan, sailing in the lee of the race, ran up on Fortuna, and as the wind freshened walked through her lee, out ahead of her, and then up to windward. When a quarter of the way out was covered, Puritan was leading, carrying clubtopsail; Fortuna was the first schooner, with Gitana second and to leeward of the fleet, Mohican some distance astern, and America well in the rear. About noon the pilot boat Hesper No. 5 joined the race, but Puritan soon left her, and shortly after Fortuna passed her as well.

At 12:20 Puritan tacked, and at 12:40 Fortuna followed, then the other two, while America was last about. Fortuna had a good lead over Gitana, the latter dropping Mohican, while America was still losing ground. At 1 P. M. Puritan lowered her clubtopsail and went on under reimbleheader and full lower sail, tacking up again several miles ahead and waiting for the others. Hesper made a third trial, this time with Gitana, and with the same result, as the schooner beat her. At 1:30 Mohican had worked up to second place, leaving Gitana third, but she only held it a little while. For a time topsails were taken in, but about 2 P. M. they were set again. Hesper had by this time dropped astern far enough to have a bout with Mohican, her fourth attempt, but it failed like the others, and the yacht passed her. The wind was blowing quite fresh, and the yachts were sailing very fast, America sent down jibtopsail and maintopmast staysail.

The tug Winch was waiting at the turn and timed Puritan at 2:38:45

the latter lying to for Fortuna, who turned at 2:44:23. Gitana's time was 2:53:47, Mohican's 3:00:25, America's 3:18:15. Hesper was timed at 2:53:50. All the schooners set spinnakers at once to starboard and started for home, while Puritan and Alesper sailed for Boston. The order was unchanged on the run, the distances varying at times, Mohican doing better off than on the wind, but still unable to catch Gitana. The boats were strung out, from one to two miles apart, Fortuna leading, then Gitana, Mohican and America, finishing in that order. The times were:

	Length.	Start.	Return.	Actual.	Allow.	Corr'd.
Fortuna.....	94.50	11 20 04	4 24 25	5 04 21	4 26	4 59 55
Gitana.....	94.40	11 22 04	4 36 50	5 14 46	4 26	5 10 20
Mohican.....	104.10	11 22 56	4 48 18	5 25 22	0 00	5 25 22
America	91.57	11 23 00	5 04 20	4 41 20	6 44	5 34 36

Most yachtsmen will agree that this race, with that of June 30, has placed these four yachts pretty fairly in the order they deserve, and the two will put an end to much talk that has been rife since last winter. Fortuna is beyond doubt the fastest keel schooner in America, old or new, and she promises for some time to hold that place. The most doubtful point and the most interesting one at present is the America's proper place among the four. After the announcements that have been made of her readiness for much more ambitious contests, she can make no claim that she was not in the best possible shape, but it is hard to believe that if properly fitted and sailed the old boat is good for no more than a bad fourth in two such races. That she is yet, as many contend, our fastest yacht, has been pretty well exploded, but she certainly is capable of more than she has lately done, or else there is a discrepancy somewhere in the stories of her performances for the past fifteen years. This last race deals rudely with another pet yarn that is often heard, the ability of pilot boats to beat yachts. The Hesper, one of the best of Boston's fleet of pilot boats, was beaten in succession by Puritan, Fortuna, Gitana and Mohican, in a good breeze.

JURY OR CRUISING RIGS.

Editor Forest and Stream:

In view of the expressed intention of the English yachts to "drive" over under "jury spars" and storm sails, I am led with all the humility in the world to ask if this may be considered as sailing in the spirit of the deed of gift of the America Cup? It undoubtedly conforms to the letter of the bond, but is there not a suspicion of unfairness in evading what was the plain intention of the donors of the Cup, to wit, that having been won in a fair contest by a seagoing yacht, it should be competed for only by vessels of that description? One would be tempted to believe since the yachts are coming over somewhat in the guise of wrecks, that the extreme type of English boat was as far from perfect seaworthiness as the much despised "sand bagger," for if the only desire had been to keep the racing sails in good order, that object could have been reached by sending the yachts over under cruising canvas. B.

[As yet nothing is known here of the rigs under which Genesta and Galatea will cross the Atlantic, except the rather meager information by cable that they would sail under "jury rig." Genesta, we know, has had last year's sticks replaced by larger ones, and Galatea is reported to be oversparred, both preparing for light weather here, and the former yacht has shipped a smaller mast for the passage. Whether this is advisable, in view of her increased weight below—her keel weighing 70 tons—is an open question, experience tending to prove the necessity of taunt spars in such heavily ballasted craft as a preventive of excessive pitching; and while her safety may not be imperilled, she will be much harder in her motions and much less comfortable than under longer sticks. In the schooner Sea Belle, a vessel with a moderate lead keel, but heavy leaden floors and keelsons, when she took to cruising rig and shorter spars for winter work, her inside ballast was raised 18in. on cork to compensate for the effect of less weight aloft. In passages about the coast and to the Mediterraneau and back—such a cruise as the lead mine Sleuth Hound made last winter—the customary rig is a gaff trysail, a high, narrow sail without a boom, set temporarily on a separate gaff, the racing mainsail, boom and gaff being stowed. Under this rig the boats are handy and comfortable, and fast as well in heavy weather, and it is in such guise, we suppose, except with a smaller mast, that Genesta will make the passage. Last week the Stranger, 40 tons, cruised under a similar rig, being 29 days out from Plymouth, 2 of which were spent at anchor at St. Michael's Island, a very fair run for a distance of 3,800 miles in a boat of 65ft. length. Several calms and a heavy gale were encountered, and the vessel was not driven, but kept along easily. The less said about seagoing yachts the better, or some captious Briton may take occasion to hang an objection on to Puritan's born or Priscilla's topmast, and ask whether their rigs are those of seagoing yachts, and whether they comply strictly with the spirit of the deed of gift. We are allowed to model our vessels as we please, with little consideration of sea work further than a trip 20 miles off shore, but from the nature of the case both Genesta and Galatea must be in model and build veritable seagoing vessels, and while the varying requirements of a safe and comfortable ocean voyage of over 3,000 miles on the one hand, and the utmost speed in light winds on the other, may dictate such changes as are easily made in a cutter rigged vessel, it is too soon yet to pronounce either of them wrecks.]

THE ARRIVAL OF THE STRANGER.

WHILE the English cutter is now found in all our waters, and several of English build have been known here for some time, it is only within a week that one has sailed over the Atlantic. The small ones, up to this time, have been brought on steamers and the large ones have been built here, but this season we shall see four of the latter come over under sail. Genesta is expected here every day. Clara is now on her way, Galatea will leave soon, and Stranger arrived in Boston on July 10. The latter vessel, as we have already stated in the FOREST AND STREAM, was built last winter by J. G. Fay, of Southampton, for Mr. Geo. H. Warren, owner of Maggie. Stranger was designed by Mr. Alex. Richardson. She is a racing cutter of modern type, one of the boats which it has been loudly proclaimed would not dare to cross the Atlantic, and could not if she tried, and her safe arrival and excellent passage puts a quietus to another of the old-time traditions. Stranger's ballast on keel weighs 40 tons, but she has crossed as quickly and well as any lighter boat would have done.

Her length over all is 78ft., on deck (for tonnage) 67.8ft., waterline 65ft., beam 19ft. 6in., depth of hold 9ft., draft 11ft. She is of composite build, steel frames, wood planking, constructed under the supervision, and in model is pronounced one of Mr. Richardson's best efforts. Her fittings on deck and below are of the finest, and her cabins are very handsomely finished. Her spars are: Mainmast, heel to cap, 65ft. 4in.; deck to cap, 50ft. 10in. Topmast, fid to truck, 40ft.; deck to truck, 92ft. Boom, 60ft.; gaff, 40ft.; bowsprit outboard, 30ft.; topsail yard, 40ft.; jack yard, 27ft.; spinnaker boom, 58ft. Hoist of mainsail, 46ft. Her racing tonnage is 48 tons. Captain Randall, her skipper, is a young man who has sailed all his life on cutters, and has made a name for himself here by the way he raced Maggie. He was assisted by Captain Parker of the Warren line steamers, who came out as navigator. Stranger is manned by an English crew.

Leaving Hythe on June 3, after laying in stores and water, Stranger called at Southampton next day, leaving at once. When out in the Channel bad weather was encountered and for three days she was tumbled about with rough water and high winds, putting into Plymouth, leaving on June 8. Steering S.W. ½ W. for the southerly passage the weather was light, on June 14 she made Ponta Delgada, on St. Michael's Island. After two days' rest she sailed again, with a light wind followed by calms, her progress being about 110 miles per day. About June 26 the wind increased, blowing from N.E., and on the 29th a gale sprang up, in which she reefed down, but made 184 miles. On June 30 the gale had increased, and the distance covered was 209 miles. On July 2 the gale had abated and there was little wind, and from then on until Highland Light, on Cape Cod, was sighted, at 6 P. M. July 9, the weather was light. Stranger passed Boston Light at 3:30 A. M. on July 10. She is now at the Warren Line wharf, shipping her racing spars, which came by steamer. The total distance covered was 3,798 miles, the following being an abstract from her log:

Day.	Wind.	Miles.	Day.	Wind.	Miles.
June 9	N.N.E.	....	June 24	N.E.	109
June 10	N.E.	185	June 25	N.E.	124
June 11	N.E.	168	June 26	N.E.	119
June 12	N.E.	192	June 27	E.S.E.	103
June 13	N.E.	164	June 28	N.E.	184
June 14	N.N.E.	192	June 29	Gale N.E.	209
June 15	N.N.E.	38	June 30	Strong N.E.	194
June 16	At anchor.		July 1	N.E.	148
June 17	At anchor.		July 2	N.E.	193
June 18	N.E.	118	July 3	S.W.	109
June 19	N.E.	106	July 4 and 5	W.	180
June 20	N.E.	54	July 6	W.	146
June 21	Light N. and N.E.	44	July 7	W.	102
June 22			July 8	W.S.W.	108
June 23	N.E.	82	July 9	W.S.W.	90

GENESTA SPOKEN.—On Saturday last the steamship Lessing exchanged signals with Genesta in latitude 40 deg. 45 min., longitude 59 deg. 10min. The yacht was under mainsail, forsail, jib, gaff and jibtopsail. The distance from New York was but 650 miles, so that she may be here at any moment.

BEVERLY Y. C.

NINETY-NINTH REGATTA, FIRST CHAMPIONSHIP, NAHANT, JULY 8, 1885.

THE race opened with the water like glass, and a faint air from S. E. The boats began to arrive by 10:30, although some had come round the day before. It was known that Atalanta had started Sunday night to come round the cape, and she was closely watched for, as she was reported at Marblehead yesterday P. M. However, when the preparatory gun was fired at 12 M. sharp she was not in sight. Five minutes later the gun was fired for the first class to start, being timed from the gun. Gem crossed the leeward end of the line at once, Expert a few seconds later, close to the judges' boat, with Cricket crowding inside her and causing a slight foul, for which no protest was made. Countess crossed on starboard tack with Petrel close behind.

At 12:10 the second class started, Spider getting off at the gun, Witch close astern, and while Playmate and Caprice were caught napping, Witch appeared as a full-rigged cutter, looking remarkably well, and as Playmate, under a mistake of the rules, had come over without her topsail, Witch housed her topmast to be on even terms. Caprice also carried lower sails only.

The third class gun was fired at 12:15, and Bluebell and Psyche crossed at the flash, the former a few feet ahead.

Soon after they started Atalanta appeared and crossed the line, handicapped some fifteen minutes.

The course took all classes around Graves whistling buoy, whence first class rounded Winthrop Bar buoy and returned while others came straight home, 10½ and 7 miles respectively.

But little could be made out of the windward work of first class to the Graves, except that Atalanta was picking up and that Expert was taking a good lead.

In second class Witch sailed very well and dropped Caprice and Playmate like hot coals, but could not catch Spider, who sailed very fast and held her lead well. One third of the way out the wind shifted to S.W., then suddenly went back to S.E. and gave them a dead beat out; Spider was gradually leaving Witch, the others far astern.

In third class Bluebell at first did well with Psyche, outpointing her and gaining a little; when wind came S.W. and sheets were started, this advantage was largely lost; then wind went S.W. by S., and after half an hour's sailing Psyche was a little ahead, Bluebell very well to windward and in the better place, Playmate well astern and to leeward. The wind suddenly went to S.E. and all her lead was lost, Psyche coming out dead ahead. From here it was Psyche's play, she did better on the light air and held a better wind besides, Spider rounded the buoy first in the small classes, then Witch, then after a time Psyche with Bluebell 10 minutes astern, and Playmate well behind her, Caprice having given up.

On the run in Witch gained a little on Spider, and Bluebell gained on her and Psyche, Playmate dropped astern. Spider rounded first, then Witch, then Psyche closely followed by Expert, who had a long lead over her class. About this time Bluebell got a due east air after five minutes of doldrum. Countess crossed next, then Gem and Bluebell, the former carrying balloon jibtopsail and also a club-headed spinnaker set on a spinnaker pole lashed to the bowsprit; Cricket and Atalanta came next, with Playmate and Petrel far astern.

Summary as follows:

FIRST CLASS—SLOOPS

	Length.	Actual.	Corrected.
Expert, L. Whitcomb	27.9	2 55 00	2 43 02
Countess, Geo. B. Chase	31.6	3 24 05	2 56 39
Gem, H. W. Savage	26.9	3 06 10	3 51 47
Cricket, Geo. C. and C. F. Adams, 2d	30.7	3 08 50	3 01 56
Atalanta, I. R. Thomas	29.7½	3 09 00	3 01 15
Petrel, S. A. Goodhue	23.6	3 23 15	3 08 57

SECOND CLASS—CENTERBOARDS.

Spider, cat, Walter Abbott	20.0	2 36 30	1 53 43

SECOND CLASS—KEELS.

Witch, cutter, B. B. Crowninshield	22.6	2 42 40	2 32 21
Playmate, slp., T. H. Cabot		3 17 30	.....
Caprice, slp., J. B. Rhodes	19.11	gave up.	

THIRD CLASS.

Psyche, cat, H. M and P. S. Sears	19.9	2 41 30	2 31 02
Bluebell, cat, W. Lloyd Jeffries	18.7	2 56 30	2 42 03

Judges, Commodore Dexter, John Dane, Geo. B. Inches, W. L. Green. Judges' yacht, Foam, B. Y. C.

OCEAN RACE OF THE NEW HAVEN Y. C.

IT was an ambitious stroke on the part of this young club when an ocean race was decided upon, but the successful result of the undertaking redounds to the credit of the yacht owners who took part in the race, and who with commendable enterprise stand ready at all times to advance the interests of the club.

An ocean race of some kind had been talked about for many months, a race that would be of suitable length, to test the sailing qualities of the fleet, as well as the seamanship of the owners. Matters did not take definite shape until early in June, when the enterprising commodore of the club, Jas. G. Beecher, took hold of the wheel, and within a few days raised $800 to be offered as prizes for an ocean race to Block Island and return, a distance of about 170 miles, at the same time appointing Tuesday, July 7, as the day for the start.

Many doubts were expressed at this time as to the success of such a race, and indeed the outlook for any very large number of entries was far from favorable, but with the hope that enough would be obtained to make one class the entry blanks were prepared and sent out, and within two days six entries were received.

Success was now assured, and on July 2 a meeting of yacht owners was called to make arrangements. The result was the adoption of a few short rules necessary to govern the yachts, practically the race was as near a "go-as-you please race" as possible. All minor arrangements were placed in the hands of the regatta committee, who immediately took hold and perfected the arrangements, which were as near perfect as possible to make them.

Yachts were divided into three classes, according to length over all, yachts 45ft. and upward forming Class B. 35ft. to 45ft. making Class C, 25ft. to 35ft. Class D. No time allowance.

Prize money was divided as follows: Winners in classes B and C each $100, Class D, first $75, second $25. Monday evening, the night before the race, the entry list showed 15 yachts as follows: Class B—Ariadne and Wild Pigeon. Class C—Rajah, Rival, Happy Thought, Flora, Wayward, Seabelle and Starlight. Class D—Vixen, Anita, Acme, Stranger, Endeavor, and Roamer, the latter a little cutter only 21ft. over all, by right belongs in a smaller class, but was for this race by necessity placed in Class D.

Judges were appointed as follows: C. M. Peck at the start and finish, Jas Gallagher, Jr., located at the turn at Block Island and E. F. Mansfield, who accompanied the fleet on the flagship Rajah. Signals were furnished each yacht, which with a system of signal numbers enabled each yacht to report on rounding the island and also to receive a response from shore, giving them their order of turning in their class.

Tuesday, July 7, was a great day for the New Haven Y. C. The club house was a scene of unusual bustle and activity preparatory to the start for the long race around Block Island. As the hour for the start approached attention was centered on the weather, which looked uncertain and to many very bad. A smart breeze from the northeast was blowing, the clouds were thickening, and the air had a damp, heavy feeling. A fog bank was hovering to the southward, and all the indications were for anything but a pleasant night on the Sound.

At 5:15 a puff of smoke from the gun on the club house dock, followed immediately after by a second, announced the start, and within 8 minutes the entire fleet of 13 yachts were over the line and headed down the harbor. All but two of the entries, the Starlight, Class C, and Endeavor, Class D, had started.

Before the strong breeze the yachts made good headway down the harbor until rain began to fall, which partly killed the wind and compelled the yachtsmen to don their oilers with good chances of wearing them all night. Soon after the entire fleet was shut out of sight by the fog, in which they remained all night, slowly feeling their way down the Sound.

With the coming daylight the fog lifted and a strong southwest breeze which sprang up soon after carried the yachts toward Block Island at a rapid rate. The first to reach the island was the Wild Pigeon, which she rounded at 11:05 A. M., followed by the Rival at 11:52, Stranger 12:22 P. M., Ariadne 12:25, Rajah 11:33, Happy Thought 12:49, Wayward 12:54, Acme 1:00, Seabelle 1:03, Vixen 1:04, Flora 1:10, Anita 3:45, and the little Roamer at 5:00. All around the island and headed for home.

Every yacht that started was entitled to the additional prize or souvenir offered by the commodore to every yacht that rounded the island.

The steamer Block Island, on its afternoon trip from the island, passed through the fleet. Eleven of the yachts that had rounded could all be seen beating to the westward under a steadily increasing wind, which caused the lowering of topsails. In the stronger wind the Ariadne began to draw away from the smaller boats, and with the Wild Pigeon and Rival soon had a long lead. The Pigeon took a long hitch over to the south, so as to make the Race before the ebb tide set out, and was followed by the Arindne, while the Rival came about and stood for Watch Hill before taking the long tack over to enter the Race. The steamer passed near enough to the Rival and Ariadne to exchange salutes, and then as she steamed to New London the fleet was lost sight of.

A large sprinkling of yachtsmen who were unable to go on the trip hung around the club house Thursday morning waiting for the boats to return, and soon after 8 o'clock the watchers were rewarded by seeing the yacht Wayward, of Class C, coming into the mouth of the harbor near the lighthouse, moving rapidly and passed the finish line at 9:38 A. M., winning the race to the surprise of every one, even the owner, C. B. Warner, of East Haddam, who did not for an instant think his boat would win, even in Class C, in which class she belongs. The winner had been so little counted on that the march she had stolen on her swifter rivals occasioned much surprise and jealous comments. The secret is now out. Captain Warner had really out-generalled his opponents. His skill as a sailor, with his knowledge of the tides and currents of the Sound accounted for his victory.

The next boat to finish was the Rival, W. W. Converse, which crossed the line nearly two hours after the Wayward at 11:31:19. The Ariadne finished next, close behind the Rival. The Stranger won the first prize in class D, coming in at 2:16, and the other boats followed in slow succession. The positions and times of the yachts at the different points on the course were as follows:

	Start, July 7.	Turn at Block Island, July 8.	Finish at New Haven, July 9.
Ariadne	5 16 40	12 25 00 P. M.	11 37 08 A. M.
Wild Pigeon	5 17 55	11 05 00 A. M.	12 16 07 P. M.
Rival	5 17 40	11 52 00 A. M.	11 34 19 A. M.
Wayward	5 16 15	12 54 00 P. M.	9 57 30 A. M.
Rajah	5 15 30	12 33 00 P. M.	2 46 54 P. M.
Flora	5 18 50	1 10 00 P. M.	Did not finish
Happy Thought	5 16 18	12 49 00 P. M.	3 15 39 P. M.
Seabelle	5 20 20	1 03 00 P. M.	Did not finish
Acme	5 15 48	1 00 00 P. M.	6 56 20 P. M.
Vixen	5 28 20	1 04 00 P. M.	5 43 35 P. M.
Stranger	5 28 23	12 22 00 P. M.	2 16 17 P. M.
Anita	5 16 30	3 45 00 P. M.	Did not finish
Roamer	5 17 55	5 00 00 P. M.	9 00 00 P. M.

The judges held a meeting at 7 o'clock, this evening, and the prizes of $100 each in classes B and C, and $75 to the first and $25 to the second in Class D were awarded to the winning boats in their respective classes. Following is the official document of the award, with timekeepors' record annexed:

NEW HAVEN, July 10, 1885.

To the Regatta Committee, N. H. Y. C.:

The undersigned, by appointment of the regatta committee judges in the ocean race around Block Island, declare the result as follows:

The winners are: Class B—Ariadne, 42h. 20m. 28s. Class C—Wayward, 40h. 41m. 15s. Class D—Stranger, first, 44h. 51m. 54s. Vixen, second, 48h. 20m. 15s.

We find the following named yachts entitled to the commodore's souvenir: Ariadne, Wild Pigeon, Wayward, Rajah, Rival, Happy Thought, Flora, Seabelle, Roamer, Vixen, Stranger, Acme.

JAMES GALLAGHER, JR., }
CHAS. M. PECK, } Judges.
E. F. MANSFIELD. }

The great race at last finished. No accident occurred and a fund of sea knowledge has been acquired which will last for a year. What was done in the fog and rain of the first night; how advantage was taken of the tides, eddies and currents: the course through the Race, Plum Gut, Fisher's Sound, and how Block Island was approached on Wednesday; then the journey home, some by way of Fisher's Island Sound and others through the Race; stories of yachts with extra sails all set and filled, going astern from yachts quietly anchored out of the way; of strong tides which more than offset the propelling power of the wind—these experiences all will furnish most interesting talk for a season for the ever increasing members of this flourishing club.

N. H. Y. C.

QUEBEC YACHT RACES.

THE first regatta of the Quebec Y. C. took place on the 1st of July (Dominion Day). The prizes contested for were a solid silver cup and yacht candlesticks, the gift of the club's patron, the Marquis of Landsdowne, Governor General of Canada. The race was over a course of twenty-five miles. At the starting the yachts were:

1.	Guinevere	28 tons.....Albert Peters.
2.	Curlew	20 tons.....John Ritchie.
3.	Iris	7 tons.....J Piddington.
4.	Osprey	11 tons.....J. Thom.
5.	Foam	3 tons.....G. C. Scott.
6.	Montagnais	7 tons.....J. B. Morin.
7.	Sarcelle	12 tons.....J. U. Gregory.

The start took place at 1:30 P. M. The weather was decidedly rough, with very strong eastwardly wind and heavy sea, which thoroughly tested the seaworthiness of vessels and skill of those who handled them. The race was a very exciting one, and it soon became evident that the contest would be between the two largest crafts, but until the heavy seas below Point Levis were encountered the smaller craft did well. The Sarcelle (a keeled sharpie, entirely new style of craft in these waters and only intended for sporting work above Quebec) showed great speed and safety, but could not compete with the deep draft yachts in heavy sea. Several turned back when they saw the Curlew and Guinevere round the Beaumont buoy, but the little Foam and the Osprey pluckily kept on till they did the same. The great interest was now in the Curlew and the Guinevere. Curlew led when off St. Patrick's Bay, with Guinevere second and Osprey and Sarcelle following, but soon Guinevere passed the leader, making a minute off her at the buoy and setting spinnaker for home. Curlew setting a squaresail. The wind was now blowing very fresh, but Curlew sent up her topsail, which took her to first place, but helped to carry away her gaff, which damage she partly repaired. The wind fell toward the finish, Curlew coming in at 4:17:00 with Guinevere at 4:17:45 and Osprey at 4:43:30.

The steam yacht Dolphin carried the judges—Messrs. Charles Mackenzie, F. A. Falkenburg and Eug. Chinic. The timekeeper, Mr. John Shaw, was on board the Pilgrim with a large number of spectators, among whom were quite a number of ladies. Commodore Gregory and the entire club are to be congratulated upon the success of the club and the exciting amusement this fine race afforded. We understand a race for a cup, the joint gift of Commodore Gregory and Vice-Commodore Ritchie, will be run for by yachts of 12 tons and under, sailed by their owners, and that several other races, including a grand club race, will take place during the season. The handsome naval uniform worn by the officers and members of the club was much admired by the spectators. We hope the coming races may be as successful as the first, and heartily wish every success to the club. QUEBEC.

THE REPORT OF THE N. Y. Y. C. COMMITTEE.

THE following report of the Committee of Arrangements of the New York Y. C., to whom the entire charge of the coming races has been given, has lately been printed in pamphlet form by the club. It gives a full history of the negotiations from the first, with some parts of the correspondence that has not been made public before:

NEW YORK, June 16, 1885.

The committee appointed to take charge of the races for the America's Cup, in reporting progress, take great pleasure in announcing to the club that after a protracted and voluminous correspondence with Mr. J. Beavor-Webb, the representative of the challenging parties, the main conditions governing the match races for the America's Cup have been satisfactorily settled. As this correspondence covers the whole ground, and recites in detail the history of the negotiations, your committee present the same without comment.

The following communication was received on Dec. 20, 1884: 18 Cranley Gardens, S. W. London, Dec. 6, 1884. J. Beavor-Webb, Naval Architect and Surveyor, to Charles Minton, Esq., Secretary New York Y. C. Sir: I am instructed by Sir Richard Sutton, Bart., and Lieut. W. Henn, R. N., as owners of the yachts Genesta and Galatea respectively, to challenge the New York Y. C. for the possession of the America's Cup. Club nomination for both vessels, as well as the other certificates specified in the conditions for said Cup, will be forwarded in due course. This letter is written for the purpose of securing the premier right of challenge to the two vessels as above named. I am, sir, yours faithfully—J. BEAVOR-WEBB. P. S.—The Galatea is a new yacht building for the purpose named above.—J. B. W.

New York, Dec. 22, 1884.—J. Beavor-Webb, Esq., 18 Cranley Gardens, S. W., London. Sir: I beg to acknowledge receipt on 20th inst., of your esteemed favor of Dec. 6, relating to challenges for the possession of the America's Cup. Your communication will be laid before a meeting of the club at the first opportunity. Respectfully yours—CHAS A. MINTON, Secretary.

At a special meeting of the New York Y. C., held Feb. 26, 1885, the following communication was read: 18 Cranley Gardens, S. W. Feb. 17, 1885.—To Charles Minton, Esq., Secretary New York Y. C., New York city, U. S. America. Dear Sir: Referring to my letter of the 6th of December last, I now beg to challenge, on behalf of Sir Richard Sutton, Bart., and Lieut. Henn, R. N., for the America's Cup, in accordance with Mr. Schuyler's letter of the 4th January, 1882, embodied in your letter of the 15th February, 1882. Sir Richard Sutton challenges, on behalf of the Royal Yacht Squadron, of which he is a member, and Lieut. Henn on behalf of the

Royal Northern Y. C., of which he is a member. The regatta courses of both these clubs are on the sea or upon arms of the sea, and are practicable for yachts of 300 tons. I inclose letters from the secretaries of the Royal Yacht Squadron and the Royal Northern Yacht Clubs, authorizing Sir Richard Sutton, Bart., and Lieut. Henn, R. N., to challenge as representing these clubs. Sir Richard Sutton's yacht Genesta is cutter rigged, and her dimensions are: Length on L. W. L., 81.00; beam extreme, 15.00; depth moulded, 11.75. Her tonnage, according to the Yacht Racing Association rules, is 80 tons. It is not possible to comply literally with paragraph 11 of the conditions, as there is no such thing in this country as a custom house certificate of measurement, but I enclose a certified extract from the Ship's Register, in which her dimensions and tonnage are stated. The register itself, being the title to the vessel, obviously cannot be sent. The Genesta's dimensions are also given in Lloyd's Yacht Register for 1884, which register is deemed official. Lieut. Henn's yacht Galatea is to be cut-rigged, and her dimensions are: Length on L. W. L., 86.80; beam extreme, 15.00; depth moulded, 13.50. A certified copy of her dimensions is inclosed. It is intended that Sir Richard Sutton's challenge shall take the priority of Lieut. Henn's challenge; therefore, if Sir Richard Sutton's yacht is fortunate enough to win the Cup, Lieut. Henn's challenge, under the conditions of the contest, paragraph 12, necessarily falls to the ground. But should Sir Richard Sutton's cutter be beaten, it is proposed that the matches with Lieut. Henn's vessel shall take place as soon as practicable after those with Sir Richard Sutton's vessel. It is further proposed that the matches with Genesta shall be sailed between the 20th of August and the 1st of September next, and those with Galatea before the 10th of September, the latter date being within seven months of the date of this letter as required by the 8th paragraph of the conditions.

Match shall consist of three races over the same course, sailed on different days with at least one intervening day. Either yacht winning two out of the three races to be the winner. As it was the intention of the donors of the Cup, as expressed in Mr. Schuyler's letter of the 4th of January, 1882, that the contest for its possession should be sailed over an open sea course, it is the wish of the challengers that an ocean course should be selected free so far as practicable from all complications as to tides and shallow waters. The challengers further suggest that the time allowances between the competing yachts should be the mean of the times ascertained by the New York Y. C. and the Yacht Racing Association rules of measurement and time allowances. It is very important that the details of the races should be settled under the 9th paragraph of the conditions, because, in the following paragraph there is a condition which might give an advantage to the holders of the Cup, namely, the condition which would enable them to name their representative at the time of the start, and thus to select their vessel according to the weather. The challengers do not themselves attach much importance to this condition, but it is obviously desirable to avoid anything in such a contest which might have the appearance of giving an advantage to one side not possessed by the other. The challengers therefore respectfully suggest, for the purpose of settling the details referred to in paragraph 9, that each party should name a representative with a referee mutually chosen. The challengers think that Mr. G. L. Schuyler, the surviving donor of the Cup, would be the most appropriate person, if he would undertake the office, to act as referee, and if this suggestion meets with the concurrence of the members of the New York Y. C., the challengers name J. M. Woodbury, M. D., Fleet Surgeon to the Seawanhaka Y. C. as their representative. In conclusion, I am to add that the challengers desire that these contests should be a test race between the American and English types of yacht, will do everything in their power to insure that result; and they feel satisfied that their views will be fully appreciated and reciprocated by the members of the New York Y. C. I shall be happy to furnish any other information that may be required. I remain, dear sir, for Sir Richard Sutton, Bart., and Lieut. W. Henn, R. N., yours faithfully—J. BEAVOR-WEBB.

At this meeting it was resolved that a committee of five be appointed by the chair to take charge of all preliminaries and make the necessary arrangements for the race, with full power, and that the flag officers of the club shall be members of the committee *ex-officio*. The chair appointed Messrs. Phillip Schuyler, Chairman, J. F. Tams, C. H. Stebbins, Jules A. Montant and Joseph R. Busk as the committee to take charge of the races for the America's Cup, with power to make all arrangements for the same. At a subsequent meeting Mr. Chas. A. Minton, secretary of the New York Y. C., was added to the committee.

The following answer was sent: Cable Message.—March 10, 1885.—J. Beavor-Webb, 18 Cranley Gardens, London, S. W.: Answer to your communication sent by mail. Six months' notice for Galatea waived conditional on result Genesta race.—MINTON, Sec'y.

New York, March 10, 1885.—J. Beavor Webb, Esq., 18 Cranley Gardens, London, S. W.: Dear Sir—The receipt of your favors of 17th and 21st February has already been acknowledged by the secretary of the club. A communication from the New York Y. C. under date of March 4 will have informed you that a special committee had been appointed at a meeting of the club, with full powers to make all arrangements for races for the America's Cup, and to take the whole matter in charge. This committee is composed of Mr. Philip Schuyler, Chairman; Messrs. J. Frederick Tams, Charles H. Stebbins, Jules A. Montant, J. R. Busk, C. A. Minton, and the flag officers *ex-officio*. The committee directs me to acknowledge the receipt from you of the following documents: 1. A letter from the Royal Yacht Squadron authorizing Sir Richard Sutton, Bart., to act as its representative in challenging for the America's Cup. 2. A letter from the Royal Northern Y. C. authorizing Lieutenant Henn, R. N., to act as its representative for the same object. 3. A certificate from J. Beavor-Webb, Esq., furnishing dimensions of the cutter yacht Genesta. 4. A certificate from the Surveyor's Office, Board of Trade, Greenock, giving the gross tonnage of the cutter yacht Galatea. 5. A letter from the Chief Surveyor of the Board of Trade, Glasgow, certifying to the measurements of both the beforementioned yachts. These documents have been accepted by the committee as sufficiently complying with the requirements of the "Deed of Gift." According to the terms of your letter, priority is to be given to the challenge of Sir Richard Sutton for the Genesta, and this challenge is now accepted by the committee on behalf of the New York Y. C. The committee express the hope that arrangements for the match satisfactory to both parties will be made by mutual consent. They are, however, anxious that the contests shall, as far as possible, afford tests of the two types of boat under various conditions; they therefore submit the following proposals, differing somewhat from those suggested by you, and they request your consideration of the same: Date of Race.—As the annual cruise of the New York Y. C. takes place in August, the committee suggest that the races with the Genesta should take place between the 1st and 10th of September, the days to be fixed finally after the arrival of the Genesta. Number of Races.—The committee accept your proposal that the match shall consist of three races, to be sailed with at least one day intervening between each race; best two out of three to decide. Courses.—The committee propose that the first race shall be over the New York Y. C. annual club regatta course; that the second shall be over a triangular course, starting from Sandy Hook Lightship; that the third shall be to windward or to leeward and return from the point of the Hook or from Sandy Hook Lightship, whichever you prefer. These courses are free from shoals, and are practicable for heavy draft vessels. The two last named are entirely in the open sea, and, if sailed from the lightship are free from any complications as to tides or currents, the only objection to them being the distance (some twenty miles) of the starting place. Length of Courses.—To be nearly as can be ascertained, forty statute miles. Time of Making Races.—To prevent the races being won by a drift, the committee suggest a limit of seven hours from starting signal, within which the race must be made. Measurement and Time Allowance.—The committee are not in possession of sufficient data to enable them to estimate the effect of your proposal under this head. But apart from this, in view of the fact that the New York Y. C. has comparatively recently adopted a system of measurement and time allowance specially framed for the purpose of enabling vessels differing materially in type to compete with fairness, the committee do not feel authorized to accept your proposal; and they consider that the contests ought to be carried on under the rules of the New York Y. C. as to measurement and time allowance. Representative of the New York Y. C. —If the above proposals are satisfactory to you and the match be thus arranged by agreement the committee would name the vessel selected to sail against the Genesta a week prior to the day fixed for the first race, with this proviso, however, that should any accident happen to the boat so named previous to the start, they are to have the right to substitute another boat, or to have sufficient time given them to effect repairs; the Genesta of course to have the same privilege regarding repairs should any accident happen to her. The committee consider that these proposals cover all essential points, and trust that they will on consideration be acceptable to you. They suggest that the minor details should be left for settlement till the arrival of the Genesta, it being understood generally speaking that such portions of the By-Laws and Sailing Regulations of the New York Y. C. as apply shall be the basis for the settlement. For your guidance a copy of the Club Book has been forwarded to you. Should you desire to name a representative here "with power," the committee would discuss with him any points that might present themselves, but as principals the committee would much prefer dealing with you direct; and should any question arise between you and them, they would willingly submit the same to Mr. Geo. L. Schuyler, whose decision they would accept as final. With regard to Lieut. Henn's challenge for the Galatea, the committee accept it on behalf of the N. Y. Y. C., subject, of course, to the result of the races with the Genesta; and they request me to say that should the result of the first match be favorable to the New York Y. C., they will then waive the six months' notice, and will sail a match of three races for the Cup with the Galatea, to come off within a reasonable time after the races with the Genesta, the same conditions and regulations to govern both matches. In conclusion, the committee beg me to add that it will give them great pleasure to place their services at your command in supplying you with all desired information, or in making arrangements for, or taking charge of matters requiring attention before or after the arrival of the vessels or their representatives, and in every other way rendering their visit to this country agreeable.—CHARLES A. MINTON, Secretary to Committee of Arrangements.

At a general meeting of the New York Y. C., held March 26, 1885, the following resolution was adopted: That the committee of arrangements for the America's Cup races be authorized to incur the necessary incidental expenses for a series of five races, to take place as soon as practicable after the regular June regatta, said races to be open to all single-masted yachts of 60ft. load water line and over, belonging to duly organized yacht clubs in the United States. The following answer to the communication dated March 10, 1885, was received: 18 Cranley Gardens, London, S. W., April 9, 1885.—To Chas. Minton, Esq., Secretary New York Y. C.: Dear Sir—On behalf of Sir R. Sutton and Lieut. Henn, R. N., I beg to acknowledge the receipt of your letter of the 10th ult. respecting their challenges for the America's Cup. The very courteous and sportsmanlike way in which their proposals have been responded to by the New York Y. C. and their committee, gives them every confidence that the matches will be mutually arranged and carried through in a manner satisfactory and agreeable to all parties. Subject to the reconsideration hereinafter suggested, the challengers cordially accept the proposals of the committee appointed by the New York Y. C. to make arrangements for the races; and they are gratified that the suggestion that Mr. George L. Schuyler should be appointed referee, has been accepted. Sir R. Sutton will be much obliged to the committee if they will arrange that the races with the Genesta shall be sailed as soon after the 1st of September as may be convenient, because, being Master of the Craven Hunt, he must be back in England by the 1st of October. The challengers suggest that, when sailing over the New York Y. C. course, the competing vessels shall pass, both going and returning, on the channel side of all the buoys marking the channel. This is necessary to prevent a shallow draft vessel gaining an undue advantage by sailing over water from which Genesta and Galatea, by their deep draft would be excluded. A chart of racing is inclosed to illustrate this suggestion. The challengers would prefer, if the committee see no objection, that the order of the races over the three courses should be reversed, and that the start in the two first races should be from Sandy Hook Lightship. As the American yachts which will compete in the matches will not be named until a week before the races, the challengers are in a similar position to the New York Y. C. as regards being unable to estimate the effect of the proposal of the committee that the New York Y. C. rules of measurement and time allowance should be adopted. It may be taken for granted that the time allowance resulting from the New York Y. C. rules as compared with those resulting from our own Yacht Racing Association rules will differ; but whether the difference will be in favor of, or adverse to, the challengers' yachts, they are unable to determine. It may, however, be assumed that if the New York Y. C. rules are adopted, and new vessels are built to compete against Genesta and Galatea, they will be designed to secure the largest practicable advantage under those particular rules, in the same way that the Genesta and Galatea were designed to compete under the Yacht Racing Association rules. The challengers, therefore, remain of opinion that the most equitable course is to "split the difference," or, in other words, to adopt the mean of the times obtained by the two rules. They strongly recommend this course to the consideration of the committee, because it is the mode generally adopted of harmonizing differences; and it is believed that it would be considered the fair course by those who are likely to take an interest in the races in both countries; besides which, there is another reason of considerable weight, namely, that it would establish a useful precedent in the event of possible future contests for the Cup in other countries. Lieut. Henn desires me to express his appreciation of the courtesy of the N. Y. Y. C. in waiving the six months' notice in favor of the Galatea, and to explain that he should not have ventured to trespass on that courtesy had he not understood that under the eleventh paragraph of Mr. G. L. Schuyler's letter of the 4th of January, 1882, it was open to him to give the six months' notice at any time on behalf of a different club, and with a different yacht, this paragraph not requiring that an interval of six months should elapse after a match before the Cup could be sailed for again. It was the intention of the challengers to confine themselves, as they felt bound to do, strictly to the terms of the deed of gift. In conclusion, I am requested to thank the N. Y. Y. C. for the liberal and friendly spirit in which they have accepted the challenges, and also the committee for their offers of assistance, of which the challengers will no doubt have occasion and be glad to avail themselves. I am, dear sir, for Sir Richard Sutton and Lieut. W. Henn, yours faithfully, J. BEAVOR-WEBB.

New York, April 27, 1885.—J. Beavor-Webb, Esq., London. Dear Sir: I am requested by the committee to acknowledge receipt of your communication of April 9, and to reply *seriatim* to the suggestions made by you. It will give the committee much pleasure to arrange that the races with the Genesta shall take place as early in September as Sir Richard Sutton may wish, and with this understanding they will leave the final settlement of the days till arrival of Genesta. In reply to your suggestion respecting that race of the series which it is proposed shall be sailed over the N. Y. Y. C. course, the committee would refer you to the club book in your possession, and would add that the course therein named has been raced over for many years without objection by our largest and deepest keel schooners, some of them drawing more than either the Genesta or Galatea. They cannot but think that you have been misinformed, or that the markings on your chart have misled you, as you have indicated in the tracing you sent a number of buoys which have no connection with the channel or with the course proposed, and some of which no longer exist. The committee are, however, desirous of doing what they can to meet the views of the challengers, and they would be willing to arrange, should you desire it after an inspection of the course on your arrival, that black buoys 5, 9, 11, 13, 15 of main channel shall be left on starboard hand going out, and port hand coming home, and that red buoys No. 8½, 10, 10½, 12, 14 and 16 of same channel shall be left on port hand going out and starboard hand returning. The committee, from their knowledge of the course, deem this delimitation hardly necessary, but are willing to adopt it if you desire it; they cannot, however, consent to take cognizance of any other buoys, as it would make unnecessary complications. For your guidance the committee have marked the buoys referred to on a chart which they now send to you, and they wish me to mention that the soundings given are invariably considerably under the actual depths. The committee would be willing to leave to the challengers the choice of the order in which the races shall be sailed, with this proviso, however, that the race over the club course shall be one of the first two sailed. The committee make this stipulation on account of the great interest taken here in this match. It would be difficult, on account of the distance from the city, for the public to see anything of the ocean races, and should they be sailed in the order proposed by you, and the match be decided by two races, there is the possibility of the general public being unable to see any of the contests. With regard to the measurement and time allowance, the committee regret that they cannot recede from the position they have taken, and they regret very much that you consider it a *sine qua non* that the New York Y. C. rules on these points shall govern. To go fully into their reasons for this decision would be to initiate a discussion on the relative merits of various systems of racing allowances, and this they wish to avoid. Briefly stated, their position is as follows: The New York Y. C. has comparatively recently (say about two years ago) adopted a system of measurement and time allowance for the express purpose of bringing together, on equal terms, vessels of types differing as widely as those of the two countries. This mode of measurement taxes both the length of the boat and also its power to carry sail, whether derived from ballast, as in the English form of boat, or from beam, as in the American model. The club having already, by this measurement, equalized the differences between the two types, the committee cannot consent now to split the difference between this system and the measurement of the Y. R. A. to which you refer, which committee would learn, from the book you sent in your letter of 10th April, penalized the power obtained by beam in our boats, while leaving entirely untaxed the power obtained by ballast in your craft. The committee feel sure that this point has escaped you, and are confident that, on consideration, you will see that your proposal is, of its nature, inadmissable. The committee wish, also, to point out that, from the nature of the New York Y. C. rules, it is almost impossible to build a boat which shall in any way evade the measurement, and that hence, any boat coming from your side will be at no disadvantage under this measurement, even if pitted against the most recently constructed craft here. Should these terms meet with your approval, the committee would be obliged if you would kindly telegraph the word "settled," as they can then lay the whole correspondence before the club at its next meeting. I remain, sir, yours faithfully—C. A. MINTON, Secretary.

The committee ordered the following circular to be sent immediately to the secretaries of the various yacht clubs throughout the United States by the America's Cup Committee of the New York Y. C.: "New York, May 13, 1885.—A series of races under the auspices of the New York Y. C. will take place in New York in the latter part of June or early in July. These races will probably be completed within the period of one week. They will be open to all single-masted vessels of not less than 60ft. in length on the waterline, belonging to any duly organized yacht club in the United States, with the condition that any vessel taking part therein shall be subject to selection by the committee in charge as the representative of the New York Y. C. in the coming races for the America's Cup, the committee reserving to themselves the right of forming their own judgment as to fitness for the purpose in view, irrespective of the actual result of the races. The dates of these races will be fixed, as far as possible, to suit the convenience of those taking part in them, and owners who intend to enter their vessels are requested to place themselves in communication with the committee as soon as possible by addressing the secretary of the committee, Mr. Charles A. Minton, New York Yacht Club House, No. 67 Madison avenue, New York city."

On the 19th of May, 1885, the following cable dispatch was received: London, May 19, 1885.—Minton New York propose refer time allowance umpire otherwise accept reply—WEBB.

On the 20th of May the following answer was sent: New York, May 20, 1885.—J. Beavor-Webb, 18 Cranley Gardens, London, S. W. Your proposal unacceptable to committee consider must adhere to terms letter April 29.—MINTON, Secretary.

On the 22d of May the following answer was received: London, May 22, 1885.—Minton New York umpire appointed settle differences under paragraph eight deed regret reference declined will write.—WEBB. On the 22d of May a meeting was called, but owing to the absence from town of most of the members, no quorum was obtained. On the 25th of May a meeting was held, and the following reply by cable was sent: May 25, 1885.—Beavor-Webb, 18 Cranley Gardens, London, S. W. Committee feel their proposal allowance strictly fair would much prefer match arranged without going to referee but if on consideration you wish it will with pleasure at once submit question allowance to Schuyler reply.—MINTON, Secretary. On the same day the following letter was written, explaining more in full the cable messages sent by the committee: New York, May 25, 1885.—J. Beavor-Webb, Esq., 18 Cranley Gardens, London, S. W.—Dear sir: On the 19th of May I received a cable message from you reading, "Propose refer time allowance umpire otherwise accept reply." Which was submitted to a meeting of the committee held the following day. The committee understood this telegram as a suggestion on your part, to which you wished the committee to accede, but that otherwise should they be unwilling to agree to your proposal, you would accept the terms of their letter. While the committee held that the point at issue was not one of the questions which it was intended should be referred to the umpire, they gave your proposal due consideration, and they ultimately decided that your suggestion was unacceptable to them, and that they felt they must adhere, on this point, to the terms of their letter of 29th April. They therefore directed me to send you the following dispatch, which I did the same afternoon, "Your proposal unacceptable to committee consider must adhere to terms letter April 29th." On the 22d inst. a message from you was received, reading as follows: "Umpire appointed settle differences under paragraph eight deed regret reference declined will write." A meeting of the committee was at once called to consider it, but owing to the absence from town of most of the members, a quorum was not obtained before the 25th inst. At the meeting then held I was requested to send you the following reply, which was dispatched the same day: "Committee feel their proposal allowance strictly fair would much prefer match arranged without going to referee but if on consideration you wish it will with pleasure at once submit question allowance to Schuyler reply." The committee are strongly of opinion that, as stated in this telegram, the proposal submitted by them to you as to measurement and time allowance was strictly fair, and they moreover feel that they would much prefer to arrange the match with you by agreement if possible. It is the opinion of the committee that a question such as time allowance, involving as it does the actual terms of the match itself, and not the interpretation of those terms, was not one of those questions which it was intended should be left to the umpire. Were this the case, the settlement of all the terms of the match might virtually have been left at once to him. This the committee feel was not intended to either side, the more so as it would have had the effect of debarring both parties from claiming their right, under the Deed of Gift to sail a single race over the club course. Under the circumstances, the committee feel that they might with propriety ask that the point should first be submitted to the umpire as to whether this question of measurement is of its nature one which ought to be left to him. The committee, however, waive this point, and wish me to state that, sooner than have any question arise, they would be willing, should you on further consideration desire it, to refer the entire question of allowances to Mr. G. L. Schuyler for his decision, and with this intent they now await your reply to this last telegram. Yours respectfully, CHAS. A. MINTON, Secretary of the Committee.

On the 27th of May the following message was received: Regret not agree please submit correspondence regarding allowance Schuyler whose decision final.—WEBB. A meeting of the committee was held on the 29th of May, and the following letter written to Mr. Geo. L. Schuyler: 23 Broad Street, New York, May 29, 1885.—George L. Schuyler, Esq.: Dear Sir—A telegram from Mr. Webb, representative of Sir R. Sutton, owner of the yacht Genesta, was yesterday received, requesting that the correspondence regarding time allowance be submitted to you as the referee. I hereby send a copy of the entire correspondence, telegrams included, to date, with the request of an answer at your earliest convenience. Yours very truly, PH. SCHUYLER, Chairman.

P. S.—I send herewith a copy of the "Yacht Racing Association Rules," revised edition, and a copy of those of the New York Y. C. Any information you may require as to details the committee will be most happy to furnish, either verbally or in writing.

On the 5th of June the following telegram was received: London, 5th June, 1885.—Minton New York received letter unless committee accept our proposal adhere desire refer Schuyler.—WEBB. A meeting of the committee was held on the 10th of June, when the following letter from the referee was read: 19 West Thirty-first Street, New York, June 9, 1885.—Philip Schuyler, Esq., Chairman New York Y. C. Committee: Dear Sir—I have examined with care the correspondence between your committee and the challengers for the America Cup. Having agreed upon all other details, except as to allowance of time, the question is referred to me whether your committee should, at the request of the challenger, make any deviation from the N. Y. Y. C. rule of measurement. This rule is to govern if the parties should fall back upon the single race over the regatta course, to which the challenger is entitled by the deed of gift; and as the relative sizes of the contestants are at this time unknown, it would be difficult to name any change in the nature of a compromise which would be satisfactory. In my opinion the committee is fully justified in the conclusion they have reached—namely, that in a race for the America Cup, whatever terms may be mutually agreed upon in other respects, the time allowance should be made according to the rules of the club in possession. Respectfully yours, GEORGE L. SCHUYLER. The following telegram was immediately sent: New York, June 10, 1885.—To J. Beavor Webb, Esq., 18 Cranley Gardens, London, S. W.: Immediately on receipt previous telegram twenty-seventh May submitted correspondence referee decision received today New York allowance copy decision mailed.—MINTON. And the following letter was written and mailed by the steamer of the 13th: New York, June 10, 1885.—J. Beavor-Webb, Esq., 18 Cranley Gardens, London, S. W. Dear Sir: On the 27th May I received your telegram reading: "To Minton New York regret not agree please submit correspondence regarding allowance Schuyler whose decision final—WEBB." And in compliance with the request therein contained, the entire correspondence was, on the 29th, submitted to the referee. Since which date your telegram of the 5th inst., reading, "To Minton New York received letter unless committee accept our proposal adhere desire refer Schuyler—WEBB," has come to hand; but as the action asked for had already been taken, no reply was sent. The referee's decision was received to day, and the gist of it immediately cabled you as follows: "To J. Beavor-Webb, Esq., 18 Cranley Gardens, London, S. W. Immediately on receipt previous telegram twenty seventh May submitted correspondence referee decision received to-day New York allowance copy decision mailed—MINTON." We now hand you copies of our letter to the referee accompanying the correspondence and of the text of his decision. The committee consider the terms of the match as definitely settled, and shall be glad to hear from you as to when the Genesta and Galatea may be expected in these waters. Again placing the services of the committee at your disposal, I remain, yours respectfully, CHAS. A. MINTON, Secretary of the Committee.

Your committee, in conclusion, desire to state that, although some of the minor details cannot be arranged until the arrival of the challenging yacht or yachts, they apprehend no difficulty in satisfactorily adjusting them. All of which is respectfully submitted. Philip Schuyler, Chairman; J. Frederick Tams, Charles H. Stebbins, Jules Montant, Joseph R. Busk, Charles A. Minton, Secretary.

Since the above report, the following letter has been received: 18 Cranley Gardens, London, S. W., June 9, 1885.—To Charles A. Minton, Esq., Secretary New York Y. C., New York city, U. S. of America. Dear Sir: I beg to thank you for your letter of the 25th of May. On behalf of Sir R. Sutton and Lieut. Henn, R. N., I had much pleasure in accepting all the proposals of the New York Y. C., contained in your letter of the 27th of April, with the exception of that relating to time allowance, and as our telegrams have now determined how that question is to be settled, I need not trouble you with any lengthy observations in reply. I do not for a moment doubt that the New York Y. C. adopted their system of measurement and time allowance as, in their opinion, the best calculated to bring together on equal terms vessels of differing types; but, unfortunately, opinion in this country is not in favor of that system. It was, I believe, first introduced here by our Yacht Racing Association as an alternative optional rule, but so far it has been very little used, because our yachtsmen consider

that the rule of measurement laid down in paragragh 3 of the Yacht Racing Association rules is fairer and in every way preferable. As you justly observe in your letter of the 27th of April, a discussion on the relative merits of the two systems would be out of place. We had only to deal with the difference as it exists. I suggested the usual course followed in this country when two parties cannot agree, namely, to "split the difference;" but as your committee felt themselves unable to accept that course, the only alternative was to call in the aid of the umpire, Mr. Schuyler, and I was glad to receive your telegram of the 26th of May assenting to that course. With regard to your remark that time allowance was not strictly one of the questions referable to the umpire, I may mention that, so far as we were concerned, it was intended that the umpire should settle every difference that might arise. No limitation was placed by any of our letters on his powers, and in the mutual agreement clause, paragraph 8 of the Deed of Gift, time allowance is specifically mentioned as well as "all other conditions" of the race. Moreover, it was the distinct intention in naming Mr. Schuyler, in whose impartiality and ability we all have confidence, as umpire, to prevent any risk of the failure of mutual arrangement, because a single race under paragraph 9 might be no test of the relative speed of the yachts, and therefore unsatisfactory to all concerned. I telegraphed a reply to your letter of the 25th day of May, adhering to our desire to refer the question of time allowance to Mr. Schuyler, in case there should have been any doubt on the point, and shall hope to hear his decision in the course of a few days. As all the arrangements, so far as the committee and challengers are concerned, are now satistactorily completed, Genesta will shortly sail for America. In conclusion, Sir R. Sutton and Lieut. Henn wish me to express their appreciation of the courtesy and consideration with which all their suggestions have been received, I remain, dear sir, yours faithfully, J. BEAVOR-WEBB.

To which the following reply was made: New York, June 29, 1885. —J. Beavor-Webb, Esq., 18 Cranley Gardens, London, S. W.: Dear Sir—I have the honor to acknowledge receipt of your favor under date of June 9. The correspondence between yourself and the committee having reached a satisfactory and agreeable conclusion, it only remains for me to extend, upon the part of my colleagues and the club, a warm welcome to Sir Richard Sutton, Lieut. Henn and yourself, in anticipation of your arrival in this country. Yours truly, C. A. MINTON, Secretary of Committee.

OIL ON WAVES.—*Editor Forest and Stream:* In your issue of June 10 last, there is a letter from R. B. Forbes as to oil on water at sea. I have written him by this same mail and wish to call your attention to these facts below. The late Capt. Jas. Fowler, a former well-known pilot here and at San Francisco, designed and exhibited a surface anchor or drag with perforated canvas bags filled with oil attached. This invention was designed to be thrown over the side of any craft in bad weather when laying to, attached to a light line, and the resulting lane of oil on the waves to windward would protect the craft. This drag resembled a strong canvas umbrella, the oil bags being pendent from the part of the handle nearest the canvas, the line being fast to the further end of the handle. The editors of *Science* appointed a day for the captain to visit their office at Cambridge, Mass., to examine into his invention at my solicitation, shortly after their publication of all the known results of oil on the sea waves to that date, but on that day he died; no patent has been taken for this, and since it may be of some use in the cause of saving life, I forward this brief letter.—SAWBONES.

THE INCREASE OF SLOOPS AND CUTTERS.—An argument against the cutter was advanced some time since in the following shape: "Ileen was built in 1883, no large cutters have been built h re since, consequently large cutters are going out of fashion." While it is true that no large cutters have been built here since Ileen, we note this week the arrival of the Stranger, a first-class racer; the Bayadere is now in commission, and Clara is on her way across. All of these are extreme cutters, and are built, equipped and rigged in a manner almost unknown in our home-built sloops. What additions has the sloop fleet to show beside them? Mischief was built in 1879. Except two vessels built to meet a special emergency, one of which will ultimately be converted into a schooner, no large sloops have been built in the United States for six years. Have we abandoned the centerboard sloop?

LUCILE.—Mr. Chas. Kellogg's steam yacht Lucile left her anchorage July 10 for a cruise in the St. Lawrence and lakes. She will go to Albany, and after lowering masts, etc., proceed, via Erie Canal and Lake Cayuga, to Ithaca, where she will take owner's family on board. Thence to Oswego and the lake to the Thous and Islands for an extended cruise.

A SHOAL DRAFT SCHOONER.—A schooner for use in Florida is now in frame at Poillon's, from designs by Mr. A. Cary Smith. She is 55ft. waterline, 16ft. beam, and will draw but 2ft. 8in. The boat is very high-sided, and has a trunk cabin, giving head room. She will have a jib and staysail.

THE NEW YORK SLOOP WINONA.—Mr. J. Bloodgood, Jr., and two friends returning from a cruise to Put-in-Bay, etc., came into Erie Harbor, July 2, remained until the 7th, when she left for Port Colborne, bound for Lake Ontario, via Welland Canal.

TOLEDO Y. C. REGATTA.—On July 4 the Toledo Y. C. sailed a second race for the champion flag over a triangular course. The starters were: Second class—Scud, Oberon, Osprey, Stella, Kate Graham. Third class—Mazeppa and Petrel. The start was made at 12:58 in a good east wind, making a beat of the first leg. The order of crossing was, Oberon, Stella, Scud, Graham, Osprey. The Kate Graham soon took the lead, with the Scud second, sailing the entire course in that order. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SECOND CLASS.				
Scud	12 58 40	4 00 35	3 36 20	3 36 20
Oberon	12 58 00	5 06 25	4 08 25	4 07 43
Osprey	1 00 30	4 58 40	3 53 10	3 57 28
Kate Graham	1 00 22	4 32 21	3 31 50	3 28 29
Stella	12 59 08	. . ..	. . ..	. . ..
THIRD CLASS.				
Mazeppa	1 00 20	5 20 45	4 20 25	4 20 25
Petrel	12 59 25	5 14 30	4 15 05	4 13 12

The Kate Graham, Osprey, Scud and Oberon were to have sailed for Cleveland on July 12, on their way to Ballast Island. The Toledo Y. C. will hold an open regatta on July 28.

ANNISQUAM RACES.—On July 11 nearly fifty yachts were ready at Gloucester for the race appointed for 11 A. M. over a course from the mouth of Annisquam River, between the buoys around the stakeboat near Essex outer black buoy, thence to stakeboat off Plum Cove, back to Squam Buoy and repeat, 16 miles in all. The time limit was 3½ hours or no race. The following started in a light wind: First Class—Banneret, Atalanta, Black Cloud, J. S. Poyen, Jr., Muriel, Evelyn, Avilla, Expert, Venus, Soutte, Fatiotiza, Frank Leslie, Adelle, Rolan and L. J. Henry; Second Class—Thrasher, Carrie May, Jumbo, Crusader, Kittiwake, Lilian, Flora Lee, Tarquin, Riverside, Hestia, Helen, Spark, Sassacus, Ripple, Petrel, Planchette. Class 2 started at 11:05 and Class 1 at 11:20. Petrel led her class, with Kittiwake second, and Atalanta and Black Cloud were first and second in the larger class. The wind died out entirely during a part of the race, and finally delayed the finish beyond the limit. Atalanta finished the course in 3:30:30, ½m. too late, and Flora Lee's time was 3:52:35. The race will be resailed on July 20. Before the yacht race a dory race was rowed, E. J. McEtmons winning.

VICTORIOUS PRISCILLA.—Mr. Franklyn Bassford, the marine artist, has lately painted a picture in black and white of the new iron sloop Priscila, leading the Boston sloop Puritan around the lightship in one of the trial races. Priscilla is standing across on the port tack, showing her lee side and deck, while Puritan is seen under her stern, on the starboard tack. About the lightship is a group of steam yachts and other vessels, with the judges' tug, and the scene is lifelike in the extreme. To be sure Puritan has not yet come on from Boston and Priscilla has not been outside the point of Sandy Hook, but Mr. Bassford's artistic soul soars above any such petty trammels. The picture will be lithographed and will be ready by the time that Priscilla beats Puritan.

PHOTOGRAPHS OF ENGLISH YACHTS.—The coming of two English racing yachts to our waters this season has awakened a general interest in these boats and their fellows among American yachtsmen, who watch carefully the movements and races of Irex, Wendur and the others of the English racing fleet. Messrs. Norie & Wilson, 156 Minories, London, have issued a full catalogue of photographs of these yachts which they mail to all inquirers. Besides the ordinary photos, they make up several styles of albums and also publish enlarged views, both of which are particularly adapted for club house ornaments or for club prizes.

BOOKS RECEIVED.

THE SPORTSMAN'S HANDBOOK.—By Col. Horace Park. Columbus, O., 1885.

THE HUNTERS' HANDBOOK.—By "An Old Hunter." Boston: Lee & Shepard, 1885.

MUSHROOMS OF AMERICA.—By Julius A. Palmer, Jr. Boston: L. Prang & Co., 1885.

THE READING CLUB.—Edited by Geo. M. Baker, No. 14. Boston: Lee & Shepard. 1885.

FERRETS: The Management, Training and Treatment in Disease, from a practical point of view.—By Wolf Pocklington, *Shooting Times* office. London, 1885.

PUBLISHER'S DEPARTMENT.

TO THOSE of our readers who use guns, we recommend Mr. J. P. Dannefelser, No. 9 Chambers street, N. Y., when repairs of any kind are wanted. He has for some years made a specialty of repairing guns and pistols, and guarantees all work. See advertisement in another column.—*Adv.*

OUR readers should not fail to take with them on their fishing excursions into the woods some sort of ointment to repel the attacks of flies, midges, mosquitoes, etc. Harlow's Anglers' Comfort has been tried by many with great success, adding one-half to the pleasure of a trip. See advertisement of N. S. Harlow, Bangor, Me., in another column.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. H. S., Hartford, Conn.—Paint is better than varnish for a canvas canoe.

SUBSCRIBER, Ontario.—A two-line ad. in the FOREST AND STREAM will sell the pups.

J. H. C., Wilmington, Del.—See advertisement of L. W. Ferdinand in our columns.

W. E. Q., Bridgehampton.—See the FOREST AND STREAM Dec. 13, 1882, for Connecticut River.

A. B. D.—We have no description of the Audubin folding canoe, and cannot ascertain that it is still manufactured.

W. P. B. P., Lynn, Mass.—The construction of catamarans is described in Kemp's "Yacht and Boat Sailing," for sale at this office.

G. H. T., Philadelphia.—Can you inform me where I can find good chicken shooting near Omaha? Ans. Try the vicinity of Central City, Neb.

V. C., Kosse, Texas.—No rubber or paper folding boats are made in this country. A rubber inflatable boat was formerly made in England.

C. S. B., Philadelphia.—There are many good camping places between Philadelphia and Trenton on either bank. We cannot tell about Rancocas Creek.

R. G. B., Quincy, Ill.—Oars are made out of 2in. spruce plank, kept in stock by all lumber dealers about New York and the East. You can probably find them in Chicago.

C. F., Revere, Mass.—We have no record of the weight of three-months-old puppies. Perhaps some of the owners of the breed can give you the information you wish.

J. K., Cincinnati.—For perch and catfish use minnows or angle worms. For the buffalo fish roll wet cotton in flour until a stiff dough is made that will remain on the hook.

G. W. S., Montreal, Canada.—The book on "Small Yachts," by C. P. Kunhardt, is in the printer's hands and will shortly be published; the date will be announced in the FOREST AND STREAM.

SUBSCRIBER, Canada.—1. What makes the best lubricator for bullets? 2. Is lubrication any benefit, if so, what? 3. What benefit is there in putting thin wad between bullet and powder in cartridges for sporting purposes? Ans. 1. A mixture of wax and suet. 3. Yes, in moistening the residuum in barrel. 3. To compress the powder uniformly.

N. L., Paterson, N. J.—1. What do angling authors mean when they say that a rod ought to be properly balanced? 2. I wish to purchase a reel that can be used both for fly and bait fishing. Would a Malleson Perfection Reel answer for the above? Ans. 1. They mean that the rod should not be topheavy nor too heavy anywhere. 2. The reel will answer your purpose.

W. A. N.—We do not know where you can procure dobsons. They do not bear confinement long and will eat each other, therefore we doubt your ability to procure them from a distance and keep them. They are plenty about Greenwood Lake, where they retail for two cents each, and are found along the Mohawk River and other places, but no one makes a business of supplying them, except to local custom.

C. L. H., Eaton, N. Y.—1. I inclose crude drawing of bass head, which is causing discussion among our local anglers. Is it the head of a large-mouth or small-mouth bass? 2. Is there a glue made that will mend broken gun stocks and stand damp any length of time? Ans. 1. Your drawing shows that the maxillary bone extends beyond the orbit, therefore the fish was a big-mouth. 2. Use best quality of cabinetmakers' glue.

G., New York.—Please tell me of some preparation that will enable me to bring home a couple of large trout from Lake Superior in good condition for mounting by taxidermist. They will have to be kept at least two weeks before they reach the taxidermist. Ans. We know of nothing better than 90 per cent. alcohol and water in equal proportions. Make incisions in the abdomen to let the fluid inside, or remove the intestines entirely. A tight five gallon keg will answer. Take two gallons of alcohol in it.

L. T. R., New York.—Will you please advise me how to construct a minnow box and place in lake waters so that the minnows will keep alive? I recently made the experiment with a box having openings on two sides, covered with wire. Sometimes the minnows would keep well and at other times, especially in rough weather, they would die, the rise and fall of the water caused by the waves coming in seemed to dash the minnows against the side of the box and kill them. How would a double box, the outside box having openings on different sides from those of the inside box do? Should the box be submerged, and should the minnows be fed? Ans. The trouble was no doubt caused by rough water. Your plan may work well. We would not submerge the box, but give the fish access to air. If you keep minnows long they should be fed or they will eat each other. Some specimens keep better than others.

SOMETHING NEW FOR ANGLERS!
THE "SPALDING" HAMMERED TROLLING SPOON.
(Patent Applied For.)

Made of the finest materials, with a convex hammered surface, which adds very much to its attractiveness when trolling.

The improvement in this spoon consists in the fact that the burnished hammered surfaces present more points for reflection when revolving in the water than any other spoon. By trailing this spoon from a moving boat it gracefully revolves beneath the surface, the burnished portion of the spoon reflecting innumerable rays of light at every revolution. The hooks used in manufacturing the Spalding Spoon are the direct central-draught out-pointed hooks, made from the best English steel, brazed. The finest hooks in the market. Made in seven sizes. Nos. 2, 3, 4 suitable for Black Bass, with 12 inch gimp leader attached; price, each, 50 cents. Nos. 5 and 6 suitable for Pike and Pickerel, 65 cents each. Nos. 7 and 8, suitable for Mascalonge and other large game fish, each 75 cents. Manufactured only by

Hornbeam Rods
A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

Salmon Fishing in Canada

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

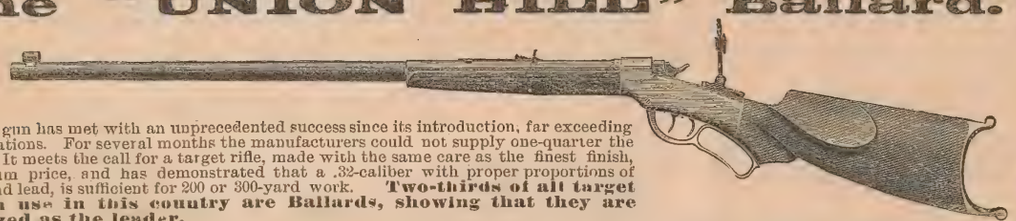
SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

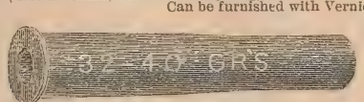
AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.



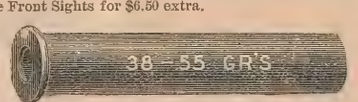
CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.



Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

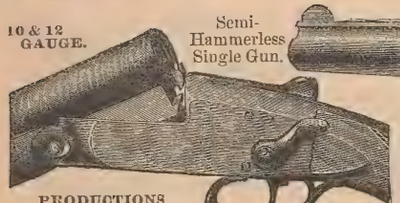


The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

Prices: No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches..... $37 50
No. 9.—Same, but with Single Trigger..... 33 00
Can be furnished with Vernier's Mid-Range and Wind Gauge Front Sights for $6.50 extra.

EVERLASTING SHELLS, 32-40, 6cts. Each.



Grooved Bullets, .32-caliber, 165 grains	per 1000,	$7.25	Grooved Bullets, .38-caliber, 255 grains	per 1000,	$9.50
" " " 185 "	"	7.75	" " " 330 "	"	11.00
Patched " " 185 "	"	9.75	Patched " " 255 "	"	11.00

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of exaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

The finest ornament for a Sportsman's Dining Room ever made.

Natural "Dead Game" under glass, and no more bulky than an ordinary picture.

Will send per express C. O. D. subject to approval, on receipt of express charges.

Send for photograph and prices.

H. E. CHUBB, Taxidermist,
235 VIADUCT, CLEVELAND, O.

BROKAW MF'G CO., NEWBURGH, N. Y. ASK RETAILERS FOR THEM.

HINDS' BLACK-FLY CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these rests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

Harlow's Angler's Comfort.

The long approved, surest safeguard against mosquitoes, black flies, etc. Recommended by Commissioner of Fisheries and Game for State of Maine. New style. Larger boxes. Sent by mail on receipt of 25 cents. Usual discount to the trade.

N. S. HARLOW, Druggist,
BANGOR, ME.

WORK FOR THE MAINE AUTHORITIES.

IT is a very common excuse with persons who do not report game law violations that they fear the vengeance of the parties concerned. We are constantly in receipt of letters from individuals who complain about such offenses in their neighborhood, but decline to lay the facts before the proper authorities because they are afraid that their cows will be killed or their barns burned. If we are to credit such representations, the shiftless fellows who kill game and fish out of season exercise a regular reign of terror over the law-abiding and respectable members of the community. In some instances, doubtless, there may be reason for the fear that a prosecution for poaching would be followed by some such sort of revenge, but more often nothing of the kind would follow.

This deterrent fear of burning barns is not confined to any particular locality. We hear the same story from the West, from the Adirondacks, from persons dwelling within five miles of New York city, and from Canada. A recent case was that of some deer killed in Maine or over the line in Canada. The man who knew the most about it persistently refused to communicate with us freely, for fear that his name might be known and then the deer killers would burn his house and perhaps assassinate his family. It did not appear very plausible that one or two worthless renegades, fugitives from justice, would commit any such a crime; but it was quite useless to attempt to disabuse our informant of his fear.

It is safe to say that, for the most part, this terror of the stock-killing and barn-burning vengeance of game destroyers is without any sensible ground. Once in a great while a case of such revenge does come to public notice, but they are extremely rare. The press dispatches yesterday recorded that a Maine game warden had suffered for his activity in bringing poachers to justice. The report says:

MACHIAS, Me., July 21.—Fred Munson, of Westley, one of the game wardens of Washington county, who recently caused the arrest and prosecution of some residents of Westley for violating the game laws, discovered a few days ago that a potato patch owned by him, from which he expected a yield of forty bushels of potatoes, had been visited and every plant pulled up. His beans had been similarly treated, and about forty young apple trees had been girdled and ruined. While Munson and his wife were visiting a neighbor last night their house was set on fire and entirely consumed.

The facts being as here reported, there is one task for the Maine authorities more important than all other game protective measures put together. The perpetrators of this outrage must be apprehended and punished for their crimes. The lawless classes in Washington county must be taught the lesson that game laws are to be enforced, that their execution is a matter of legal justice, and that the offender must not seek revenge for his lawful punishment by destroying the property of the prosecuting officer. This, we insist, is the most important thing the Maine game officers have to see to. If it is neglected, if these scoundrels who have girdled fruit trees and burned dwellings are permitted to go unpunished, then good-bye to game protection in Maine.

CANNED GOODS IN CAMP.

THAT people have sometimes been poisoned to death by eating canned beef may be a consoling reflection to the woods explorer who, penetrating to some favorite haunt in search of solitude and game, finds only the empty tin cans of the man who has been there before him; and the correspondent who winds up his wail with the wish that all the "fish hogs" may meet violent deaths, might rejoice to hear that some of these gentry have been cut off in their prime, eating canned mackerel in camp. Tens of thousands of cans of food are consumed each month, and every once in a while the newspapers report that the contents of a can have proved fatal. We never heard of such a case among campers, although instances have been brought to our notice of outers who have been made violently ill by canned foods, and that too, in remote localities far from human habitations. The canned vegetables, fish and meats are so compact, portable and convenient to use that they form no inconsiderable part of the ordinary camp food supply; as a rule they are perfectly wholesome, but the exception is not so rare that any one can afford to neglect what have been proved to be wise precautions in the use of canned food.

Sometimes the vegetable or the meat was rotten before it was sealed up in the can. In such a case of course only the canner is to blame. But it is probable that in many other cases the poisonous character of the food is acquired after it has been unsealed and exposed to the air. Then the contents of the can are subject to putrefaction perhaps more rapidly than food products of the same kind that have not been canned. Meat which may be kept sealed up in the can an indefinite length of time spoils rapidly after having been for a short time thus exposed. Canned goods should be eaten soon after they are unsealed. It is a very common notion that because such food has remained wholesome in the air-tight can for a long time, it may be left open with equal security. This is erroneous. There is still much mystery about some of the cases of canned goods poisoning, but it has been pretty thoroughly demonstrated that canned goods opened and left exposed to the atmosphere for a short time are quite likely to prove unwholesome.

In this connection attention is called to a most instructive article, entitled "The Beginnings of Life," printed in our Natural History columns.

INDIAN TROUBLES.—The official report of the investigation into the causes of the present Indian troubles has not yet been made, and comment on the subject would therefore be premature. To one who understands the condition of things in the Indian country, and reads the press dispatches in the light of that knowledge, it appears extremely probable that the real cause of the present difficulty will be found in the aggressions of the cattle men. It is to be hoped that the Government officers charged with the investigation of the affair may go to the bottom of it and put the blame where it belongs.

ADIRONDACK DEER.—The June deer killing in the North Woods appears to have been as extensive this year as formerly. As to hounding, one of the State game protectors writes us: "So far as my district is concerned there will not be much hunting with hounds. Of course, the Boonville *Herald* will do a great deal toward helping the hounders in the course it is pursuing, but deer will not be run with dogs to any very great extent." We shall be glad to have information from our Adirondack readers respecting the observance of the new law.

POINTERS AT THE EASTERN FIELD TRIALS.—The pointer is again coming into favor, and the annual meeting of the Eastern Field Trials Club next November will show a notable gathering of the breed that will be unparalleled in the history of American field trials. Several fanciers of the breed have assured us that the "short hairs" are bound to win, and three or four owners have told us just which competitor was coming in ahead.

NETTING IN JAMAICA BAY.—A correspondent complains that netting is destroying the fishing in the waters of Jamaica Bay and Rockaway Inlet, on the eastern portion of the south shore of Long Island. We have found that this is not only the case but also that there is no law to prevent it. The net fishermen of Carnarsie are cleaning up the fishing grounds so that anglers find no fishing on their old grounds. The sheepshead that formerly abounded there have been taken at one fell swoop. If it be argued that they do not breed here on our northern coast and that they have served their turn in supplying food we will say that they would have served a better turn in being caught by a thousand anglers than by ten fishermen. The fish taken by anglers serve as food as well as those that are netted. They also serve a better purpose in giving recreation and health to overworked men who seek the waters for rest and who cannot spare the time or money necessary to go further away. The salt waters of Long Island, especially the bays and harbors, should be preserved as resorts for anglers, and the few fish they contain will be an inducement for them to visit them. The fish will as surely find their way to the table as if all dragged up at a swoop and will benefit a vast number instead of a few. If the one hundred sheepshead taken at one haul in Jamaica Bay last Friday had been taken by fifty men, their value would have been far greater to the community, to the takers, to the hotels, and to the baymen who let boats and sell bait. Let us have a law preserving these waters.

SHOOTING NESTING BIRDS.—A correspondent raises a question of the propriety of shooting nesting birds for ornithological collections. The bald account of the capture of a mother bird by deliberately shooting her while sitting on her eggs may very reasonably excite the indignation of any one but an ornithologist. But the collector would readily find at least self-justification for his act. He would explain that the whole science of ornithology is very largely based upon the actual capture of the birds themselves and the taking of their nests. He would explain that in ornithology nothing can be taken on hearsay or supposition. If anything is to be accepted as a fact it must be accompanied with unmistakable material evidence. Thus in the case referred to, the nest of a very rare bird was discovered. For absolute certainty of identification a naturalist would demand the nest, the eggs and the skin of the bird shot when actually on the nest. Otherwise there might be a mistake. That is briefly how a naturalist would defend the shooting of nesting birds, and in this particular instance he would add that the killing of the Swainson's warbler was highly important, because by thus securing bird, nest and eggs a long missing link in the life history of the bird was supplied. Here the collector knew and appreciated the importance of what he was doing. It is obvious, however, that such a justification could not properly be extended to every amateur collector of birds and eggs who thinks it necessary to gather for himself specimens which are perfectly well known.

THE NEW YORK ATHLETIC CLUB have lately added to their new club house a large book for suggestions and complaints from members. One page is ruled for suggestions and the opposite one is divided into two colmns, one for the decision of the committe on each suggestion and the other for an entry of the action taken by them. The first suggestion on the opening page is "Subscribe for the FOREST AND STREAM," the comment thereto being "Capital idea," while the entry in the third column is "Ordered."

THE QUAIL AND THE MOWING MACHINE.—Another instance has been brought to our notice where a number of quails' nests were saved from destruction by adopting the precaution noted last week of locating the setting bird before the grass is cut. Such an expedient is practicable in small lots of grass, and the results are so happy that it must find favor with all who would be glad thus to care for the cheery quail.

ONE OF THE LAMENTABLE SHOTGUN ACCIDENTS of the season was that by which, last week, a son of Professor Eaton, of Yale College, lost his life. He was climbing over some rocks when the gun was dropped and the charge entered his body.

THE SALMON FISHING in Canada and New England is very good this year. The Maine rivers are affording an unusual amount of sport, and the papers of that State are quite enthusiastic on the subject.

THE SENSATIONAL REPORT that the New Jersey cranberry bog fires were set by sportsmen in revenge for being ordered off a certain piece of land is doubtless a canard.

The Sportsman Tourist.

SPORT IN THE SIERRAS.

I WAS worn out with bodily illness and professional labors. No boy ever went to bed with more eager anticipations of a promised holiday than I did on the evening of July 25, 1884. The next morning saw us up at 3 o'clock, for an early ride. It is to be no easy trip by train or steamer that lies ahead, but a ride of eighty miles over a rough and mountainous road, on horseback, and part of the way in a buggy. In a short time my team is ready, impedimenta loaded, and the start made. I have taken as a companion a young man, also in need of rest and recreation, and who is subsequently named the "Terror of the Sierras," through waggishness, owing to his mild manners and non-aggressiveness. For thirty miles we plod through the dust and the ever-increasing heat, as the sun mounts the sky. Two immense cañons have to be crossed, which makes it slow traveling, and it is past noon when we pull up for rest and refreshment at an old and still prosperous mining town, where we conclude to lie over until the cool of the ensuing morning.

A good night's rest freshens us up, and after an early breakfast another start is made, and the ascent of the mountains begins. The road we are to take from this point is one which, during the period previous to the completion of the C. P. Railway over the mountains, was one of the main arteries of communication between the States of California and Nevada. The grade is an easy one, the roadbed was thoroughly built, and in those booming times was as busy as an ant trail. Evidences of a prosperous past still exist at nearly every step of the way in the shape of rotting fences and corrals, the denuded frames of buildings and solid rock chimneys, making the site where many a weary traveler rested and refreshed himself in the cheerful warmth cast forth by its yawning mouth, which now stands desolate, black and cold, with the weeds springing from its once hospitable hearth. It made me melancholy to pass so many places where dead and gone thrift and prosperity lay buried, and and to give a sigh of regret that the glorious old days of the eight-horse coaches had passed away, and that the stages would never more be seen dashing down these mountain slopes, with the foam tossing from the horses' sides, and a cloud of dust streaming away into the distance in the rear, and that never again would the merry jingle of the bells of the eight and ten mule teams arouse the echoes in these jagged cliffs. At the present time there are only some five or six houses on fifty miles of the road, where formerly they would average one to the mile. A bi-weekly two horse stage now suffices to carry the mail and travelers, and two horse freight wagons, conveying fruit into Nevada, constitute all the heavy traffic. Cattle and sheep in great numbers pass up the road to pasturage every spring, and back to the valley every autumn. One relic of old times remains in all its perennial freshness, and that is the tolls. About every ten miles there is a toll-house, at which one has to pay a dollar for a horse and buggy, and one dollar and a half for two horses. This tariff is calculated to make one's pocket tired before the journey ends.

Up and up, steadily we climb the grade. A new forest growth has succeeded that of the lower slopes. Sugar pine, spruce and cedar have supplanted the nut pine, the oak and the buckeye; while monzanita and mountain birch form the chapparal, instead of the greasewood and lascara, while patches, acres in extent, are covered with the wild plum and the bitter cherry. The road for miles ascends a long ridge or spur, thickly covered with this forest growth, within which lurks many a shy, wild creature. Every few paces we go we see a spurt of dust in the road ahead, marking the spot where a ground squirrel skurries away to his burrow.

The echoes resound to the call of the mountain quail, and through the shadows on either hand a little observation will reveal the long, graceful leaps of the gray squirrel. Then, just as you pass the large pine, an insulting and mocking cry of "pil-il-loo eet" marks the presence of the Douglass pine squirrel. If you stop and glance upward you will probably see him, fifteen or twenty feet above your head, flattened out against the bark and hanging head downward. If you watch him a short time he will give his tail a flirt of derision, and scramble up to the nearest branch, where he will perch himself and scold you in the choicest billingsgate, jerking his tail to and fro at every sound he utters. Many a half hour have I spent watching the antics of these pert creatures and exciting them to louder scoldings by mocking at them. It is only in the mountains, where the Douglass pine abounds, that this squirrel is found, as it is upon the seeds contained in the cones of this species of pine that it subsists.

What are those little flitting shadows passing over fallen log and blackened stump? Surely they must be chipmunks, those striped pets of our childhood's days in the old home at the East. Yes, that is just what they are and they may be seen in thousands after an elevation of 3,000 feet has been passed, although hardly ever observed any lower. Now, glance at the dust by the roadside, and it will reveal how near must be many a shy denizen of these forests which our eye seldom rests upon. Observe that large track somewhat resembling the impression left by a naked human foot? That is where brain crossed last night in his nocturnal wanderings. And close by is another but smaller track, very similar in shape, but with the toes spreading more! There the sly coon has passed, sniffing along in his quest of some poor quail's nest to furnish him a meal. Then, coming out of that opening in the brushwood and pursuing the middle of the road are some sharp-toed hoof-prints, with similar miniature impressions upon each side, revealing where a doe and her fawns moved leisurely along in the cool of the morning. And all along the way the observant eye will note the light impressions left by hare and cotton-tail, by fox and lynx, and now and then the dog-like track of the cowardly coyote. But hark that sharp cry of agony! Surely some forest tragedy is being enacted. Yes; for right in front of our horse jumps out a gray fox, vigorously shaking the life out of a ground squirrel which he had captured. He is so busy with his prey that our presence is unnoticed until he gains the middle of the road. The "Terror" gives him a shot from a .22-caliber rifle, but overshoots, and he is out of sight at one jump, carrying his dinner with him.

At length we leave the ridge, up which we have been traveling, and descend a deep cañon by an easy grade, until we reach the beautiful stream on the headwaters of which we hope to capture many a trout. Here at a clean and well-kept wayside inn we will rest for another night. After a hearty dinner of chicken and stewed squirrel, I take my rod tenderly out of the case in which it has rested so long, joint it and attach the reel. Then making a careful selection for a cast of flies, I wet my line for the first time in a year. An hour's fishing, with several changes of flies and a single rise, tells me that it is useless labor, so I give it up and put away my tackle. There is too much snow water in the river for fly-fishing. Besides that I am tired with my long ride, and prefer to sit still and drink in this health-laden mountain air and admire the glories of the surrounding hills rather than pursue what promises to be a fruitless toil. And so upon a shady seat on the porch I sit and muse away the time, until the chill of evening drives me to bed and a dreamless slumber.

We are up and away again in the cool of the morning, with our greatcoats closely buttoned, and a heavy lap robe tucked around us for comfort, as the air coming down these cañons from the snowy peaks is always chilly. Our road now follows the windings of the stream, at varying distances, now at its very side, where its rush and roar drowns all other sounds, again, 400 feet above it upon the mountain side, where its voice just reaches us as a grand sub-bass to the singing of the pines. Oh, how glorious is this morning's ride in the heart of the Sierras! All care and weariness is left behind, and our goal is fast coming into view, with its blissful vista of four weeks' unalloyed pleasure spread out before us. Already my chest expands with fuller and deeper inspirations, my heart sends the vital fluid pulsing through my frame with tingling joy, my eye brightens, my nostrils dilate to take in the health-giving air, and I am already a new man. I am hungry—the first time that I have been truly so for months.

Very soon the snow-clad peaks begin to show above the nearer mountains, and at last, about 11 A. M., we reach a wider part of the cañon, where a large arm enters it, and the sublimity of these fine old mountains is borne fully in upon us. Away to the front, to the right, to the left, they raise their granite heads clad with unsullied snow. There are no clouds to veil their dazzling splendor, and the eye fairly aches with their gleaming reflections. We both draw deep breaths and sit in voiceless admiration, drinking in, with greedy eyes, every detail of the view spread out before us. At length our stomachs remind us that we are but mortals, and whipping up our somewhat jaded steed we arrive about noon at our destination. We find it a clean and comfortable little mountain hostelry, nestled in a romantic valley, with the river brawling at its back, a few yards away. Shutting in the valley on the east and distant only a few score yards, rises sheer into the air for 1,700 feet a bare and frowning granite cliff. Tall pines upon its summit seem but shrubs, and everything viewed against its background is dwarfed into insignificance. Its crest stands 7,300 feet above the sea level and commands a wide and magnificent view. Cliffs also close the valley almost completely on the north, and on the west it is backed by a sparsely timbered mountain ridge, of the same elevation as the eastern wall, while on the south it is open to a wider view. The stream at this point is only distant some nine miles from its source in a little glacier lake at the summit, and is not large in ordinary years, but a great depth of snow having fallen the previous winter still kept it at pretty high water, although it was now the end of July, and in consequence we were informed that the fishing was still poor. And now, having reached my destination, I will defer until my next letter giving any of my experiences in this thrice blessed spot, where all the pleasure of sport is doubled and trebled by the novelty, grandeur and beauty of the surroundings.

AREFAR.

CALIFORNIA.

MORELIA.

MORELIA is a town reached by a branch of the Mexican National Railroad. Those gentlemen whose infirmities forbid them to undertake original explorations can go to Morelia in the humble guise of tourists. There, if the visitor has the stock of acrid criticism usual among my countrymen, he will find that the common school system is defective, that the pavements are lumpy, that shoes are ill-made or too often lacking, that an absurd reverence is paid to the hierarchy of a tottering superstition, and that there is no pie. To be sure, there are some native foods, notably tortilla, that could wrestle with pie on its own ground, but then tortilla is allotted to the sturdy stomach of the robust laborer, while pie finds its insidious way into the homes of our entire fifty millions of sovereigns. We will dismiss this superior mood and travel in the temper of philosophers, citizens of the world, creatures whose stomachs are subordinate even if inferior, and whose home-made tastes have lost their early rigidity through a long course of enforced bending. It will surprise you perhaps to find out that there is a lake of salt, or at least brackish, water forty miles or so in length near the city of Morelia. The lake lies so modestly curled up in its mountain nest that it has almost forgotten to have a name. When one asks the natives along the shores what the sheet of water is called, they tell you it is just "the lake," but if pressed they may confess to some more proper name. The proper name will, however, have to be thought up on the spur of the moment, and the evidence varies as to what it should be. The largest mass of testimony favors the Laguna de Cuisco.

As we swept along the bank in the early evening one of the first thunder storms of the season hung its black curtain over the eastern sky. Soon the clouds had spread over the whole heavens except a long thin strip in the western horizon, where the setting sun blazed out behind the raindimmed peaks. It seemed as if a light were streaming through the cracks of heaven's ill-shut door.

The next morning was clear. The bananas in the court yard nodded to the mules tied along the wall to keep their spirits up. At all hours of the day and many times in the night I have had chances to watch the beasts fastened around hotel courts and never have I had the fortune to see those animals fed. Yet they look sleek, sometimes even vicious, and they are groomed and watered as carefully as if their hides were swelling with unstinted barley. Can it be that the air is so bracing? A little way from the mules stood two large dogs, about whose parentage we will not inquire too closely. However base the breeding, mutual needs had brought the dogs into friendly intelligence. Each was trying to rid his neighbor of fleas, and with wrinkling noses and flashing teeth they munched away to their common joy. My companion tried to enter into relations with these animals and get them to perform similar services for him, but they pretended not to understand and the bargain fell through.

The cathedral at Morelia is striking. The two corner towers, though massive below are very tall and, by using open arches for the higher stories, the builder gave his work a look of airy lightness. The low nave stretches out behind like the trailing skirt of a graceful woman. Inside the cathedral, here as in the city of Mexico, the space is so cumbered with subordinate structures that you lose the sense of impressive size. First there is a choir that takes up nearly the whole front of the nave, and at the further end rises a columned dome, a chapel of expiation, I think. Far more effective was the old church of San Francisco.

We were loitering among the market booths on the plaza on Monday morning when the throb of the organ caught our ears. Within, beyond the kneeling crowd, rose gilded pillars. Gold-coated priests stood with their backs to us, facing the altar; the unbroken organ swell swept strongly down the narrow aisle, and above, clear and full, rang the voices of the choir boys.

Division of labor here is brought about by dividing a trade into several branches, and having small, separate shops for each. Saddlery proper is to be bought in "talabarterias," while other leathern articles are for sale at "corambrerias." I was looking for a tiger skin, but found in the latter stores only the hides of wildcats, tigers being devoted to saddles especially.

Four kinds of cat furs are sold. The wildcat and mountain lion we know at home. Then there is the tiger and the winduri. The tiger has irregular, ring-like spots clustered thickly upon the back, and spread out wider on the sides and belly; the background for these spots being, in the best specimens, a very rich yellow. The winduri is much smaller, and, though the spots are similar, the background is much paler, having a washed-out look.

They told me that the tigers came from the hot lands both east and west, and always had the same figuring. I was careful to ask, because I remember that long ago in Sonora I saw a tiger skin that, if my memory serves, was striped. Possibly my recollection is at fault. At the best, it needs confirming.

One other child of nature that we know well, is at home in Mexico; that is the 'possum. The little fellow I saw was alive and kicking hard to get away from his captor.

It is my usual custom to encourage national industries by buying lottery tickets when the coming drawing falls within the time allotted to my stay. Why I should regard the date of the drawing is not clear. I have always been a spoiled Egyptian in these plays of chance and do not grudge the contribution to native wealth, but that inconsistent desire to be, so to speak, drawn out of my money with regular and accustomed ceremonies still stays by me. For this reason I saved some expense in Morelia. The lotteries there were not for benevolent purposes, though such schemes are common enough (the benevolence being perhaps private), nor was there any pretense of piousness, as in the church grab-bag and strawberry festival, but religious feeling was sought to be fostered by employing sacred names.

As you entered the cigar shops, on the one hand hung ample posters offering opportunities in the "Loteria de la Santissima Trinidad." On the other side were the lists of prizes that had fallen to lucky ticket holders in the "Loteria de la Divina Providencia." When Divine Providence and the Most Holy Trinity are invoked to preside over the play of fortune, what better guarantees can we ask?

That feelings of reverence are not blunted, however, by this singular familiarity is clear. We stepped from the tobacco shop and were walking up the plaza when I saw a respectable gentleman on his knees facing me. At first it struck me that this must be a case of penance, but in a moment more nearly all the passers-by and keepers of booths had knelt, with their faces toward the same point. I turned and saw vanishing around the corner the carriage of an episcopal dignitary. I almost doubt whether that republican skepticism which would level the altar and the throne, is, in the world's present age, so equalizing, so humanizing, as a common religion. Certainly there are here few evidences of brotherhood more striking than the crowds kneeling on the church pavement. Half naked, shoeless peons, their backs still raw from their galling loads, miserably gaunt women, and the intelligence and wealth of the town, such as they are, all in the same posture of reverence, cross and dot themselves with nimble, practiced fingers and bow submission to a common God.

It was the rainy season in Morelia when we were there, as I have said, but the rain was very accommodating. In some places it is said that the convenience of the people is consulted, by having rain only nights and Sundays. In Morelia we were even better treated, for Sunday being there a festal day, the rain was restricted to the nights, and we had the chance on Sunday afternoon of enjoying the circus. The performers were Mexicans, and gave a fair enough exhibition. The chief gem of the list was the feat of the circus proprietor who exhibited, in quite a frightful costume, "the vertiginous career of the Comanche Indian making use of the idiom of his native wilds," and carried on unappeasable war with the clown. The paltry tricks were amusing, but you can find their equals in any county town. What was exceptional was the character of the crowd and the building.

The theater was meant for a bull-ring, and is still so used except in the wet season. Around the spacious circle in the center rises a masonary wall about six feet high, then stone seats tiered up till on reaching a lofty terrace a row of Doric columns supports the roof that slopes back to the outer wall. Over the masonry is a coat of stucco that is painted a reddish gray. The whole building is a model of stony graceful simplicity, showing how true a taste has been exercised in ministering to the people's pleasure.

All around were men in hats that dazzled the sight with their loads of bullion, and women in dresses that outshone the glory of Solomon. Pale blue silks, grass green silks, scarlet silks, spotted silks, every rainbow hue in silk or velvet, or what to the untrained male eye resembled those tissues.

These refinements, however, were mostly in the reserved places on the shady side. In the sun thronged the crowds that paid one bit admission; the unspoiled sons of the country, from the boys who hung their legs over the inner wall to the women wrapped in ribozos that packed the upper tiers. And here it was mostly the men who showed the points of color. Scrapes striped and figured shimmered over the whole mass, while the wealth of metal on the wide-brimmed hats vied with that of their shady brethren.

In the evening, as we lay at ease smoking in the breezy windows, memories of olden time were stirred by the antique melodies of Il Bacio, played on a piano across the way. Then the piano rested, and down the street, freshened by rain, came the rhythmic beat of military music from the Plaza de Armas, while ever and again, above the sounding brass, clanged the mellow bells of the great cathedral. For us it was a farewell strain, and in this harmony melted our good-bye to the pearl of Mexico.

THE BEGINNINGS OF LIFE.

WHO would ever suppose there are living things so small that a hundred millions of them can exist in a drop of water? Such a statement, it would seem, can issue only from the imagination, and yet its truth is beyond all doubt. Indeed, it comes very far from expressing the actual minuteness of the organisms of which we speak; for our very best authority* on these "least and lowest of living things" averred in a recent lecture, that of one species fifty millions could lie together in the one-hundredth of an inch square. Certainly, then, one hundred millions could not only exist in a single drop of water, but would have ample room in which to swim about, and by a little crowding together, there might readily be in a single drop as many individual living things as there are human beings in the world. This surely seems a very extraordinary assertion; but it is quite capable of proof. By means of a simple contrivance it is a very easy matter to measure with approximate accurateness the size of an object as it appears in the field of a microscope. Its magnified size being known, it is only a matter of simple calculation, based upon the dimensions of the lenses of the microscope, to ascertain its true size. The observer to whom we have referred, used an instrument capable of magnifying 5,000 diameters, that is to say, having the power to increase the object seen through it twenty-five millions of times in area. It is readily seen that an object, though exceedingly minute in itself, when thus enormously magnified, can be measured with a near approach to exactness.

To these very minute bodies the name *Bacteria* has been given. Many of them belong to the large class of organisms called *Infusoria* from the fact that they always appear in liquids infused with any animal or vegetable matter. A plate of soup left exposed to the air for a day or two becomes a very good infusion of this kind. Quite a number of different species of *Bacteria* will appear in such an infusion, and each species seems to make its appearance at a pretty definite time, indicating that their brief lives are divided into periods of growth, maturity, etc., just as in the case of the higher forms of life. This fact of the appearance of each species in its own time enables us to examine them separately, and in the order in which they attain their maturity. If at the end of about twelve hours from the time the soup infusion was set aside a small drop be taken out and placed under a microscope of sufficiently high power, multitudes of living and moving bodies will be seen. They are oval in shape, and as far as can be made out are possessed of little or no definite structure. One can think of them as being like very, very minute drops of jelly, possessed with the power of motion. They are very active, each one darting hither and thither in its own path, so that the entire field of the microscope seems teeming with life and action. It is now pretty well established that their organs of locomotion are cilia, there being two in number, one placed at each end of the body. By lashing these hair-like organs to and fro in the water they are able to execute their very rapid, arrow-like motions.

If at the end of about sixteen hours from the time of preparation of the soup infusion another small drop be taken out and examined a new organism will appear. The original one is still present, is still as active as before, but no longer holds exclusive possession of the field. The new claimant for space to live and move is very striking in appearance; it is spiral in shape, and as it moves about has very much the appearance a corkscrew shows when turned about on its point. They are certainly very beautiful objects to look at as they glide about in their little sea. It is known that they also move by cilia attached to the ends of the body.

If another drop be taken out at the end of from thirty-six to forty-eight hours from the time the infusion was made probably another form will be found. Like the last, it is spiral in shape, but is much larger and its movements are more varied and intense. Very likely specimens of the other two forms will still be present, and the field of the microscope, from their combined movements, forms a very animated picture indeed.

Probably still other forms of *Bacteria* might be found in a soup infusion, but those we have described are the more common. In various other liquids, as, for example, sour milk, many other varieties may be found; some quite similar to those we have described and others of still different appearance. One form, the very simplest of all, called *Micrococcus*, consists of very minute globules apparently having no power of motion, but capable of very rapid multiplication by the process of fission or division. Another form, the *Bacillus*, is found in the blood of animals affected with a disease called splenic fever, and consists of rod-like bodies, which are often joined together end to end in long rows. Another, the *Vibrio*, is like *Bacillus*, but has bent joints.

Perhaps the question has already occurred to the reader, How do these organisms arise? The infusion may have consisted of nothing more than pure water and a few shreds of animal tissues, in neither of which are any living things discoverable; and yet in a few hours it is teeming with life. How, then, did they arise? To this question two answers have been given. One party has said they spring from germs contained in the animal matter when put in the water. Another party has maintained that they arise spontaneously; that by a rearrangement of the elements of which the animal matter was composed new living beings were formed. Thus, according to their view, life could be produced from inert matter simply by the spontaneous union of its elements into new combinations. This latter opinion constitutes the famous theory of "spontaneous generation" which when first promulgated, about fifteen years ago, aroused a very great deal of interest and discussion in scientific circles. For a long time it seemed as if those who held this view were in the right; for nearly all the facts that could be obtained by experiment seemed in support of the opinion that the organisms arose spontaneously in the infusion. It was found that if an infusion known to contain *Bacteria* were heated to the boiling point and then examined, all traces of the organisms would disappear. However, if some of the same infusion, while still at the boiling point, was poured into a flask and the neck of the same immediately closed with an air-tight plug, in a few days plenty of *Bacteria* would again be found in it. It was therefore argued that since all *Bacteria* contained in the liquid were destroyed by boiling, and all subsequent access had been cut off by the air-tight plug, the organisms must have arisen spontaneously in the liquid. To this the other party made and could make but one reply, viz., that there were germs in the fluid which the boiling did not destroy, and which afterward developed into mature forms. In the face of much contradictory evidence they stoutly held to this opinion, and at last were enabled to show pretty conclusively that they were in the right. Careful examinations with very high powers of the microscope showed that germs or spores were really present in the infusions, and it was further shown by experiment that these spores were capable of resisting a very high degree of temperature —higher than the boiling point. This discovery has generally been regarded as overthrowing the spontaneous generation theory, and biologists, almost without exception, are now agreed that life can be produced only from that which is itself alive.

It might very well seem that creatures so exceedingly, one might almost say infinitely, minute as *Bacteria* can be of very little concern to ordinary people, and may be safely given over to the specialist for his study, and if may be, for his delight. But the part which these organisms play in the affairs of common life is by no means proportionate to their size. In fact, there is probably no class of living things which has a more intimate relation to the physical well-being of man than *Bacteria*. We do not propose, in this article, to go into this aspect of the subject, but will only say that the presence of these organisms in the blood is the cause of many, if not all, infectious diseases, and that many believe that only a full knowledge of their life-history is needed in order to render curable many of those diseases which have hitherto baffled the skill of the wisest students of the ills of human flesh.

But we are made aware of the presence of these organisms in other ways than by disease. Everybody knows that animal or vegetable substances, when left exposed to the air, in a short time undergo a destructive change called putrefaction. Now this putrefactive change is caused by a fermentive action set up by *Bacteria*. No sooner has any animal or vegetable been deprived of life than some of these organisms floating in the atmosphere settle upon it, very rapidly multiply, and set up that action which causes decay. It is thus seen that putrefaction is caused by the presence of living bodies and, as one has said, is "a concomitant not of death but of life." It is probable that *Bacteria* thus perform a very important function in nature by causing the dissolution of dead organic tissues so that their elements may be free to enter into combination with other forms of life.

As is well known, a low temperature prevents putrefaction. This is not due to any preservative quality in cold, but to the fact that *Bacteria* are not able to exist, or, at least, to continue their activity under a low degree of temperature. Our chief weapon, therefore, with which to combat the very destructive power which these creatures are possessed with is cold, and it is interesting to observe in this connection the close dependency which an important industry, the harvesting and manufacture of ice, has upon the existence of these minute organisms.

Bacteria are the most universally diffused organisms in nature. Multitudes of them in the germ stage of growth are present everywhere in the atmosphere. This fact can very readily be proved. Let an infusion capable of supporting *Bacteria* be made. A handful of hay placed in water for a few days makes an excellent one. Let two flasks be filled with such an infusion and then thoroughly boiled; so thoroughly as to destroy all germs as well as adult forms of life. While the water is still above the boiling point let one of the flasks be closed with an air-tight plug of cotton. Allow the liquid in the other flask to cool for half an hour and then close it in the same way. In about twenty-four hours examine the contents of the flasks. The one which was closed while the liquid was above the boiling point will be found to contain no *Bacteria*, the other, which was left exposed to the air for half an hour, will contain them in abundance. In this short time, then, many germs must have settled into the liquid through the neck of the flask. A practical lesson to be learned from this experiment is the importance of keeping flesh wounds protected from the air. Wounds are often made very painful and sometimes fatal by the action of these organisms in them. Ordinarily it is only when they enter the system in this way that they seem capable of doing injury. No harm ensues from their contact with the external surface of the body, the skin being a sufficient protection. Neither does any injury follow from their being taken internally, as with food; but when they gain admission to the tissues of the body through a wound, injurious consequences often follow. Several important improvements in methods of surgery are due to recently acquired knowledge of the effects produced by them in this way.

The question is often asked whether ordinary drinking water contains animal organisms. The answer must depend very much upon the place from which the water is obtained. If obtained from a spring or from a running stream at a point not too near a large town, so far as is known, it will be quite free from living organisms. But water obtained from streams or, worse still, from wells in the immediate neighborhood of large towns, is likely to contain not only much impurity of a mineral nature, but animal and vegetable forms as well. Happily the human system is endowed with the power of resisting, to a considerable degree, the evil effects of taking such impurities into the system. S.

A KEY TO BIRD LORE.

Editor Forest and Stream:

In return for the pleasure and information I have derived from "Nessmuk's" communications I want to give him a hint, which, if he follows it, will, I am sure, increase the enjoyment of his prospective cruise. In his last letter he deplores his lack of ornithological knowledge, in not being able to recognize the numberless varieties of the birds that he sees about him. I was in exactly the same box when a few years ago I made my first trip to the Northern coast. Although I had a fair knowledge of the waders, sanderlings and plover that are, or were, found along the coast of Massachusetts Bay, I found that we were shooting many specimens that I had never seen before. No help could be got from the natives, as to the French habitant they were all larks (*alouette*), distinguished by the adjectives large, small, shore, sea, meadow, etc., while the native of Anglo-Saxon, Gallic or Milesian descent included all of them under the head of snipe, said snipe being big, little, crooked or straight-billed, etc. The difficulty was solved by my friend's bringing down the next season a copy of "The Key to North American Birds," by Elliott Coues, and many a pleasant hour have we passed in analyzing and classifying a new specimen. It requires some, for some individuals probably a good deal of, study before one can identify a specimen easily. But it is just that study and intelligent mental work that makes the many idle hours in camp pass pleasantly, and when once attained, the ability of taking a new specimen in hand and in a short time not only being able to tell what it is, but having an account of its habits, geographical range, difference between the plumage in the nesting season between adults and young and between the sexes, is very gratifying. It must be said that an individual entirely unaccustomed to research of this kind would be rather handicapped at the start, more especially so if unfamiliarity with the terms derived from the dead languages that are used in science to designate and describe the anatomical parts, made it necessary for him to study out the meaning of all of them. But even in that case, the book is indexed so that it is a mere question of more or less time, and I am sure that anybody who had even a moderate aptitude and was interested in the subject would find that time far from wasted. I well remember our satisfaction after trying in vain for three seasons to find some distinguishing mark between the Hudsonian (jack) and Esquimaux curlew (dough bird) besides that of size, which varies in individuals, and the very marked difference between the two when on the end of a fork we learned that it could be told at a glance, by merely looking at the under surface of the primaries (long wing feathers), those of the former being barred, while the latter are even colored.

Besides the Key, the book contains a very interesting historical preface, a most instructive chapter on preparing and preserving skins and specimens, with as practical directions for mounting as are possible to be given without personal instruction, and a very thorough and complete chapter on general ornithology. The Key is elaborated on (as far as I know) an entirely original plan, and is a monument of industry and close personal observation.

There is a fatal objection, however, to using it when on a canoeing trip or a tramp, where the duffle must be packed, and that is its size, as it is a large octavo, containing nearly 900 pages, but it could easily be stowed away in the cabin of a four-ton sharpie, and I doubt if any other thing would so well pay for the quarter of a cubic foot of space that it would occupy. Certainly, in no part of the world could more pleasure and profit be derived from having it with one, than among the keys and islands of the Florida coast.

MIC-MAC.

NEST AND EGG COLLECTING.

Editor Forest and Stream:

How do such things as the account of the finding of the nest and eggs of Swainson's warbler strike you? The taking of upward of fifty specimens, and the killing of nesting birds? Perhaps it is because I am not "enthused" with science that such relations, given in a matter of fact way, and as if deserving of praise, are perfectly horrible and sickening to me. How was "science" served by the butchery of the sitting birds when more than fifty specimens had been previously taken; and how, if we calmly tolerate such heartless slaughter, can we lift up our voices against any murderous pot-hunting or bird-killing for millions? If it is all right to kill no end of harmless little birds to sell their skins to naturalists, or exchange for others, why is it all wrong to kill for the pot and the bonnet? Yet no doubt these pot-naturalists would be indignant enough if some poor devil shot and sold a half dozen robins or meadow larks just to eat. In the instance recorded with so much satisfaction the birds sought were so thinned out by what is admitted as "merciless collection" that it was hard finding any specimens the next season! May the Lord deliver us from pot-hunters and pot-naturalists as well. The two would leave us no wild bird or beast. Imagine Thoreau killing off all the songsters of a neighborhood for the sake of "specimens." For my part I should not feel the slightest regret if Mr. Wayne had taken the malaria or been bitten by a moccasin while shooting birds on the nest; but then I am not a naturalist, and can only look upon such brutal work as worthy only of the most savage. V.

HABITS OF THE PRAIRIE DOG.—Clarendon, Tex., July 13. —In the spring of 1881 Geo. Osborn, of this place, captured a young dog and made a pet of it. It was as tame as a kitten, and had a burrow just outside of the door and within a few feet of the well, which was fourteen feet deep. Some time during the summer he was missed for a day or so, and was soon drawn out of the well drowned. Examination showed that he had burrowed down to water, and had undoubtedly fallen in and failed to get back. Another instance was told me by a man who is now holding a herd of sheep in Hall county, in this State, whom I am personally acquainted with, and whose veracity I will vouch for. While digging a well in the midst of a dog town he struck a hole about thirty-five feet from the surface and within a few inches of a shale rock. He noted the fact that there was a hole about twelve feet from the top of the well and signs of rock having been brought to the surface, and as he had passed through no such strata he concluded to investigate. He carefully noted the fact that the hole passed through the rock and to water some eighteen inches underneath. If the dogs had not gone to water what had dug this hole, and where had the dogs brought these chippings of rock that were around the top of the hole? From this and the fact that you hardly ever find a prairie dog town but which has one or more holes, with evidence of having gone through some rock formation, I draw my conclusions.—PERITO.

DOG-WOLF HYBRID.—The wolf and dog combination is not unusual. I remember when living in Malone about 1868, seeing an old bitch wolf and four half dogs brought in by a party of hunters from No. 9. The dog belonged to a farmer by the name of Hiram Ayers, who saw the wolf and dog together several times in his fields. He could not trap the wolf for fear of catching his dog, but after she had her pups nearly full-grown, they had a grand hunt and killed the whole lot, and exhibited them in the streets of Malone. I cannot learn of any wolf signs in this section for five or six years.—A. R. FULLER.

STRANGE NESTING PLACE.—A sparrow has built its nest on the steamer Wrightsville, plying on the Susquehanna River between the canal inlet at Wrightsville and the coal chutes at Columbia. Several times a day the bird makes a trip with the steamer across the river and back, and the puff of the engines, the tramp of the mule teams, and the splashing of the water wheels do not seem to disturb her in the least. She has chosen her strange home and appears to like it.—*West Chester (Penn.) Record.*

THE IVORY-BILLED WOODPECKER.—*Editor Forest and Stream: Campephilus principalis*, the ivory-billed woodpecker, is known as "cock of the woods" in the counties of Union, Snyder, Huntingdon, Bedford and Fulton, in the State of Pennsylvania, where I have often seen it, the noisiest of noisy birds. His cackle I have heard a half mile off, and I have shot one on the wing while cackling. I had enough curiosity to have him broiled for breakfast, while on one of my annual hunts on Broad Top Mountain, Huntingdon county, Pa., two years ago. The bird was not bad eating, but he was not down an hour until he wanted to come up, and—so did I. Having a good digestion, and with a rather liberal use of *spirits frumenti*, I worried through the nausea. Moral: Do not eat *Campephilus principalis*.—KEOUK. Mr. Chas. D. Barrett writes from Sanford, Fla., that a few of the birds are found in that vicinity every year, and a number have been killed there.

IN A HOLLOW TREE.—A Coralville (Iowa) correspondent writes: Mr. F. K. Rittenmeyer, in felling a tree a few miles above this place, discovered within it two raccoons (which he captured) and four lifeless colonies of bees, supposed to have perished from the severity of the winter.

Game Bag and Gun.

THE MOWER AND THE QUAIL.

Editor Forest and Stream:

The disappearance of quail from some portions of the country has been a matter of mystery, the reason for which has been sought without a conclusive answer. Take Long Island for instance. Twenty years ago there was good quail shooting within a few miles of the city, and as to the neighborhood of Islip, for a party of two fair shots a day's bag of thirty was common. A dozen bevies could be moved by luck and hard walking, for the cover often being impassable, scattered shots were not always easy to get. That, too, when preserving or notices not to trespass were rarities, little used and less observed. There has been no change of cover, and as for food, if anything, it is more abundant. The swamps are as impenetrable and full of bull briers as ever, but the quail are as scarce as the posted notices are plenty. The whole land is preserved, and yet there is nothing to shoot. Why? The pretty birds, gamest of their kind in the world, have not diminished in "philoprogenitiveness," they whistle round our country places almost as plentifully as before. Every summer we expect to make great bags in the fall, but when the season opens, it is the old cry, there are no quail. Some people say this is due to poachers, who kill them off before the law is up, but are poachers an invention of modern life? or are associations for the protection of game less numerous than in olden times? Far otherwise, we not only have societies and enthusiasts by the dozens where there was one in the days when shooting was rather looked down upon as a black art, but we have legal officials and game protectors. Have the seasons changed? Are they too wet or too cold? To the contrary, they have become dryer and milder, if anything. Then whence this diminution? I have contended that the loss came from one of our greatest gains. The farmer could not gather his crops in the era of high wages and disinclination for hard work without the mower and the reaper, but the mower and the reaper have cut off the quail supply and their heads together. This has been my view, and I have proclaimed it loudly, but I could see no way of stopping the agricultural instrument till the method was suggested to a friend of mine by one of your editors. He advised that before the mower was taken into the field the sportsman should explore it with his dogs and locate the position of every setting quail. No more ardent sportsman exists than my friend, and no sooner was the idea mentioned than he proceeded to put it to the test. His letter published in your last issue shows with what success and I think solves the proposition. Instead of spending money in importing birds, all we have to do is to see that those we have are not disturbed when laying and hatching. In confirmation, if it needed it, of what he says, I may mention that I have a large number of Guinea fowls around my place, and that these have the bad habit of stealing their nests. They especially hanker after a hay field close to the house, and when this has been mowed over I have found many deserted nests and hundreds of addled eggs, although being domestic birds they are not as shy as quail; indeed, I did not see that they ever returned to their nests after these had once been exposed by the action of the mowing machine. ROBERT B. ROOSEVELT.

A TRIP TO NOVA SCOTIA.

ON Thursday, Sept. 4, I took the 8 A. M. train from Worcester, Mass., over the Nashua road for Portland, thence via Maine Central & New Brunswick roads to St. John, N. B., to visit the home of a friend in South Farmington, a quiet little village nestling between the hills on the line of the Windsor & Annapolis Railway, about thirty miles from Annapolis Royal, N. B. Had I preferred a more extended sea voyage I could have taken the steamer Secret that leaves Boston on Friday, at 8 A. M., following the eastern shore of Maine, to Grand Manan, thence across the bay to Annapolis, or on Tuesday by same steamer to Yarmouth, or on Thursday by steamer Dominion to Yarmouth where connection is made with the Western Counties Railway.

Should any of my friends ask me where they could go next season for a week or two of rest and recreation where good sport with rod and gun could be had at a moderate expense, I should say to the land of Evangeline. The cool and bracing air with absence of fog (it climbs to the top of Mount Blomedon, looks over, and then goes back to the sea) makes it a most desirable resort for summer tourists, while the abundance of game and good fishing commend it to the sportsman in autumn.

Reaching St. John on Friday morning in time to take the steamer Empress at 8 o'clock, we steam across the Bay of Fundy. A short trip of about three and a half hours brings us to the pretty little town of Digby, and thence a run of fifteen miles takes us to Annapolis Royal, the entrance to the valley of Acadia. Here in this old town are the ancient fortifications, reminding us of the many sieges that took place here when occupied by the French. Boarding the train, we dash through the lovely Annapolis Valley. The scenery all along here is grand. On either side we are walled in by the north and south range of mountains, while the fertile farms, with fruit trees bending beneath their load of choice fruit, are washed by the cool waters of the Annapolis River. So absorbed have we been in the panorama, that ere we are aware the whistle blows, and we draw alongside of the little depot at our journey's end.

I say I would recommend this trip to those seeking recreation and rest. There are many places where to obtain sport necessitated a great deal of real hard work, tramping over fallen trees and tangled underbrush, but not so here. It has peculiar advantages in this respect.

Within easy walking distance of the depot are three fine trout streams, access to which calls for no such fatigue. From two of these streams I took (with fly) ten dozen trout in three outings, one day not leaving the house until after dinner. Partridges are plentiful, but the season is closed until Oct. 1. Salmon are to be had (in season) from the river that runs through my friend's farm within a stone's throw of the door; while I found a good woodcock cover within ten minutes' walk, where I could go and bag five or six of the brown beauties in a few hours. I shot fifteen in this cover. Going out a little while on the morning that I came away I killed two. Some of the largest and handsomest birds I have had set up, and as I look at them to-night among other mementoes of my outings, it recalls many happy hours. That big beauty there; how well I remember the evening about dusk when she got up in front of me and darted along in the shadow of those tall pines, but not quick enough to get away from the ounce and a quarter of No. 9 that stopped her in her rapid flight. As I think of it I turn my eyes in admiration on old Rumpus lying stretched out on the floor, and I recollect how grandly she did her part of the work.

Some may ask, "How is it that the birds are not all shot off so near the village?" No one seems to trouble them here. In fact, few appear to know what a woodcock is. Strange as it may seem, I believe I did not fall in with a single hunter during my two weeks' rambles. Certainly this enchanting valley, immortalized by Longfellow, has only to become better known to be appreciated by pleasure seekers. There are so many pretty drives and places of interest. What better panacea can one have than mountain air and a good sea breeze? Were suffering humanity to spend a small proportion of what now goes for poisonous patent drugs in a good gun and fishing-rod, and in nature's materia medica, there would be many deserters from the great army of sickly dyspeptics.

I have heard sportsmen complain very bitterly of the way they had been treated on some lines of travel in regard to their dogs. If corporations cater for the patronage of sportsmen, we think a little wholesome advice to their employes would not be misplaced, as one might as well leave his gun at home as his dog. It is a pleasure for me to speak in highest praise of the courteous manner I was treated in this by the officers of the U. S. Steamship Co., the Nashua & Rochester, the Maine Central, the New Brunswick, and the Windsor & Annapolis railways.

It is often a serious drawback and loss of time to parties going to a strange place, not knowing to whom to apply for information. Occasionally a man of business, for instance, having to remain over a day in St. John might spend a very pleasant time, as there is good trout fishing within few miles of the city if he knew just where to go. This is only for the benefit of those not having been over the ground. Inquire when you reach the wharf or depot for McGowan's hack and have him drive you to the Clarendon Hotel on Princess street, kept by J. N. Wilson, Esq. Mr. McGowan runs a hack and livery stable, and will furnish parties with a good team, and can be relied upon for square dealing. Mr. Wilson is a practical sportsman and a gentleman of much information. If you have not your own fishing tackle apply to Dingy Scribner, fishing rod maker and fly-tyer. Dingy is an old fisherman and will tell you just where the best sport is to be had and what is the killing fly. Mr. James Carnall, taxidermist on Dock street, will post you up in regard to hunting. He has hunted a great deal and knows all the ground like a book. If you are there at the night time he will probably send you to Maces Bay for ducks, Garnet's Creek for woodcock and the marshes near the city for Wilson snipe. B.

WORCESTER, Mass.

THE SPOKANE BEAR CLUB.

Editor Forest and Stream:

Speaking of remarkable shots reminds me that a few years ago while hunting on the Milk River in Montana, I came suddenly in sight of a deer standing in a small opening in some willow brush with a portion of his broadside exposed to view. We had found game rather scarce, there was a large party in camp and we needed fresh meat, therefore when I brought the rifle to my shoulder and looked along the barrel the aim was taken with unusual care. At the report of the gun the deer bounded into the brush and was instantly out of sight, but a moment later a splendid buck in full run emerged from the thicket on the other side, another cartridge was slipped into my Ballard, a hasty aim, a quick, sharp report, and the deer came down with a broken neck. A careful examination failed to reveal more than one bullet mark and I dressed and loaded the venison on my horse in utter disgust for having missed one of the plainest and easiest shots of my hunting experience. Just as I was in the act of starting for camp a sudden inspiration determined me to measure the ground where the first shot was fired, which I accordingly did and found it to be only fifteen rods, and while looking over the situation and peering into the brush, I discovered a deer lying dead, shot through the heart, and only a few feet, the length of his one last bound, away; but what was more remarkable still, thirty feet further on, and in a direct line with my shot, was another with his back broken just over the kidneys. My first shot instead of being a miss had killed two splendid deer. This is a plain unvarnished, fact but I have never given it for publication before because the few friends to whom I related it smiled very much as I did upon reading Mr. Theodore Roosevelt's bear story in the June *Century*—they didn't accuse me of anything but they smiled and smiled, and each smile seemed to carry a covert insinuation.

By the way, speaking of that bear story reminds me that we have a Bear Club in this city, which is auxiliary to the Rod and Gun Club. It is a kind of charmed circle, as it were, which admits to membership only those who have distinguished themselves by remarkable hunting feats. Many of them have ugly scars to show—dumb yet eloquent witnesses of daring exploits with bruin. It numbers among its members some of the most variegated and original liars in Washington Territory, men who not only tell you of desperate fights with bruin, where the cunning and skill of the experienced hunter was backed against the brute strength of the bear, but they show you the ugly marks made by his teeth and claws. This club holds regular meetings, and as we probably have right here in the northeast corner of Washington Territory more bears than any other hunting ground on the American continent, the members have many adventures to relate without drawing entirely on the imagination, but when a good bear story is necessary, it can always be produced in short order, and with harrowing details tempered to suit the nerves of the listeners. Many bright and sparkling stories are told, many incidents of long and weary tramps over rugged mountains and through deep, dark cañons; of thrilling adventures and hairbreadth escapes in the lonely and secluded haunts of wild beasts. Honest, large-hearted men are these members of the Bear Club, men who have lived most of their lives with nature, and to whom the restless pulsation of the deep and lonely forest is sweeter music than a circus band.

The report was circulated around town that some man had written a bear story for the *Century*, and a meeting of the club was called to hear the story read. Each member spent the entire day in rubbing up the old rusty bear stories he had ever told or heard, and as they dropped into the den in the evening each one wore a satisfied smile. They all came loaded for bear, and not one of them but who believed he could tell a tale that would make the *Century* man turn green with envy. A reader was selected and perched on a stuffed cinnamon bear, while the members formed a semi-circle in front of him and craned their necks forward to listen. The smile deepened and intensified into an expression of the most complacent confidence, but as the story progressed the smile faded and sickened until it resembled the last fitful flickerings of a tallow dip; the weaker ones quietly stole away utterly discouraged and dejected, and when the tale was all told only five or six of the most reckless remained. No man raised his voice. They were veterans in bear hunting, veterans in story telling, but they felt themselves unequal to the situation, and one by one they stole out of the den and into the shadows of night with weary steps and sad hearts.

G. H. MORGAN.

SPOKANE FALLS, W. T., July 10, 1885.

"STILL-HUNTING THE GRIZZLY."

Editor Forest and Stream:

In your issue of July 9, I notice an article by "F. A. M." in regard to a late paper in the *Century*, in which the former takes the latter to task for some statements in regard to the fighting propensities of the grizzly. I have not the pleasure of an acquaintance with either of the gentlemen, but in regard to the matter in dispute, I should be inclined to side strongly with Mr. Roosevelt, and to say, judging from my own experience, that nine times out of ten the grizzly will not fight unless closely crowded.

I have had the pleasure of assisting, more or less, in the death of fifteen of these beasts, and have chased twelve more, and with the exception of "The Big Bear of the Hermosa," an account of whose end has already appeared in FOREST AND STREAM, not one of them showed a particle of fight until wounded. Moreover, my old hunting friend Jim Kendall, who was a "pardner" of "Grizzly Adams" for seven years in the Sierras, and who counts the scalps of 143 grizzlies and cinnamons among his trophies, says that, with the exception of a she bear with cubs, the grizzly is not as apt to attack unprovoked as is the common black bear of Southern Canada. How it may have been with the bears of '56 and '61, of whom "F. A. M." writes, I know not, but the *Ursus* of '80 and '81 is not the fierce animal that he is generally believed to be. Perhaps he has found, by dire experience, that a .45 or .50-caliber Sharp or Remington is a more deadly thing to buck against than the "pea rifle," in use thirty years ago.

That the grizzly is a ferocious brute when maddened with pain no one will care to deny, but, I say it deliberately, I would rather take my chances of not being attacked by one of them, when met unexpectedly, than the same chances with any of the other carnivora of North America, of which I have any knowledge. Always, excepting a she bear with cubs, I think it is the general verdict of bear hunters, that the grizzly will let you alone, if you'll let him alone. Of course, there are exceptions to this as to every rule, but they are so rare, at least in my own personal range of inquiry, as not to invalidate the above conclusion. It would be interesting if "F. A. M.," in support of his abrupt contradiction of Mr. Roosevelt's opinion, would state just how many of the six and a half bears he killed, showed fight before being wounded. As I am not fighting Mr. Roosevelt's battles, I shall not advert to the courteous tone of "F. A. M.'s" letter, though all true sportsmen will regret the unwarranted fling at the veracity of a gentleman so widely and favorably known as is Mr. R. To "give expression to my doubt as to whether Mr. Roosevelt's articles descriptive of bear hunting has any real foundation in fact," comes startlingly close to asserting that that gentleman deliberately penned a willful lie, and palmed it off on 500,000 readers through the columns of the *Century*. H. P. UFFORD.

CASSELTON, Dak.

Editor Forest and Stream:

I noticed in your issue of July 9 an article entitled "Still-Hunting the Grizzly," from the pen of "F. A. M.," commenting rather severely, I thought, on a contribution by Mr. Roosevelt published in the June *Century*, from which he quotes that the grizzly bear will not "tackle" a man, and is not dangerous unless "cornered" or "crowded."

I did not have the pleasure of reading the article referred to in the *Century*, but not wishing to see our shaggy neighbor traduced without a little defense, will draw slightly from my experience of twenty-five years in this place, hunting more or less in the Rocky Mountains, where has been my home for that length of time. Now understand that the grizzly has figured somewhat largely in such adventures.

The quotation referred to from the *Century* conveys much more truth than "F. A. M." seems disposed to concede. In my wanderings among the mountains I have had considerable opportunity for observing the habits of this frequenter of these regions; however, will state some facts which I have gathered from my own observations as well as those of others.

In the first place, the bear is dangerous to those hunters, prospectors, or tourists who accidentally, in the thick timber or brushwood tramp on him in his lair, such being a complete surprise to bruin, and not a little to the other parties, who are liable to get handled very roughly indeed, as was the case a year or two ago with a young man within a few miles of this place. The hug was here necessarily adopted and the knife resorted to, with rather favorable results considering the circumstances, as the bear was killed and the

man nearly so, being terribly lacerated and disfigured for life. Here remember the bear was not the aggressor, and then again, if on a hunt you run on a bear or more than one, surprising them, and one or more are wounded when close upon them, you are likely to be attacked, especially if cubs are along, but if at a distance and there is a show, they will get out of the way as rapidly as possible. Remember in this case, also, the hunter is the attacking party.

Still again, suppose these wounded, retreating bears are followed hastily and carelessly, and come up with while lying down exhausted and bleeding, then it is reasonable to expect a fight, and woe to the hunter who does such. Other than these cases that I have pointed out, there is little or no danger from the grizzly to the careful hunter. In fact, there is not so much danger in hunting the bear as there was in hunting the buffalo of the plain twenty-five or thirty years ago.

I really remember no instance of disaster to man, woman, or child in all these years, the bear being the aggressor. He has a kindly countenance and withal is quite cowardly and harmless if let alone, and will flee from man as rapidly as his shambling gait will admit—quite rapidly especially if up hill; so much so is this the fact that the hunter's greatest concern is that he will go from, instead of toward him and get away at last. Illustrating the kindly nature of our "pet" I will state that a few years ago a party was made up for a grand hunt, myself counting one. In due time we departed back into the mountains in high glee. After getting well established in camp we started out by twos to capture deer. One of the relays on a certain day was pushing on at a quiet pace when the two dogs along began to growl and bark furiously, and on looking around they saw an enormous grizzly approaching at an easy shuffling gait; when within twenty-five or thirty yards he stopped, took a quiet survey of men and dogs and tried to go about his business, but the fatal bullet finished his career in a moment. Fortunately indeed for those hunters that this bear was well disposed toward them. It appeared that a hundred yards away he was laying away a winter supply of provisions in the way of a part of the carcass of a mountain buffalo. He weighed eight or ten hundred pounds and had as mild a face as I ever saw on an animal.

It seems that your correspondent is disposed to compare our shaggy friend rather unfavorably with the carnivorous man-eaters, etc., inhabiting the jungles of Asia and Africa, such as subsist on flesh and lie in wait for their prey, attacking both man and beast without provocation. In this also, I think "F. A. M." is quite mistaken.

It seems droll, at least at this era, to bring forward what the old hunter may say about the dangers of hunting the grizzly, this old hunter of the muzzleloader and knife. Really it is not strange they should tremble and become a little shaky at the mention of that inhabitant of the Rockies, when their recollections takes them back to that fearful encounter, when they had only one shot and then to the grand hug and the knife.

Thus much for our mountain neighbor. I have made this longer than intended in his behalf, so will stop by calling next! L. C. T.

CENTRAL CITY, Colo., July 17.

PHILADELPHIA NOTES.

NOTWITHSTANDING the excessively hot weather of this week, three enthusiastic sportsmen systematically worked the cripples on the New Jersey side of the Delaware River for some distance below the city for woodcock, and after two days of toil returned to Philadelphia with a dozen birds, all on ice to keep them from spoiling. Is this sport? Does it pay, even if woodcock are bringing $1.25 a pair?

The disastrous New Jersey fires which lately occurred in Camden and Burlington counties, now fortunately smothered by the last severe rain, was started, it is said, by a party of Philadelphians who were on a turtle hunting trip, and who, on being ordered away from the ground by the owner started the conflagration through spite. Much game has been destroyed by it, and from late accounts fully 100,000 acres have been devastated.

Many of the overflowed meadows which last September furnished good rail bird grounds, owing to the large growth of reeds which sprung up, have this summer been banked in and reclaimed. This will force pushers to seek other localities. Year by year it is noticed that our rail shooters are compelled to extend their trips to points further down the river, and the Lazarette and Chester marshes are becoming less frequented by sportsmen. Maurice River and Port Penn of late years seem to be selected for a day's sport more than any other grounds, and with good reason, for birds are always plentiful, there is an abundanae of feed and the marshes are extensive enough to furnish shooting for as many as go there; besides pushers do not charge such outrageous fees as the up-river men do. HOMO.

JULY 18.

A SHOT AT GEESE.—*Editor Forest and Stream*: About the middle of last November I and Mr. Edward Cook, of Pitt Meadows, were out goose shooting, not far from Port Hammond, early one morning, in a cranberry marsh. I was posted under a small pine tree, he near another, about 150 yards to the west of me, when a flock of geese passed, but too far from me for a shot; but on seeing me they swerved toward him, and he fired the right barrel, and as he covered them he noticed two of the flock flying side by side. The left barrel brought down two more in the same way, though he only saw one fall, but on going to pick them up he found his dog just retrieving the fourth. We had some good shooting that morning, having killed eleven geese in about an hour and having to pick up three more shot the night before; so we had quite a load to pack home—fourteen geese and our guns, ammunition, etc.—through grass over our head, and on weighing some of them found them to weigh from nine to fourteen pounds each; and I can tell you by the time we did get home they seemed to weigh twice that weight, and if two men did not do justice to a good breakfast no men ever did.—JNO. HAMMOND (Port Hammond, British Columbia).

MR. H. H. WARNER, of signboard and reading notice fame, owns a big game preserve on an island in Saginaw Bay. It is said that Senators Conger, Palmer and Miller helped to get passed in the Senate a bill authorizing the sale of these marshes to Mr. Warner for $3 an acre.

SEATTLE, W. T., July 8.—Our fishing is very fine now, and the prospects for fall shooting are very good.—ALKIE.

NORTHERN MINNESOTA.—Janesville, Wis., July 17.—I was much interested in the letter of Mr. W. H. Winslow, of Pittsburgh, in your issue of June 11, entitled "Roughing It for Hay Fever." I have been a hay fever victim for several years, and I fully agree with him that there is nothing like a change of climate and outdoor life for relief. But the seacoast is not the only sanitarium for hay fever sufferers. For three seasons past I have spent the hay fever period, from Aug. 15 to Oct. 1 in Minnesota, making my headquarters at Alexandria and Osakis, Douglas county, about 160 miles northwest of St. Paul, and I was not only free from hay fever, but was in a land where I had the best shooting and fishing I have ever seen. The shooting consists of both pinnated and ruffed grouse, ducks of all kinds and geese. Black bass and wall-eyed pike are the principal game fish, and when I state that I have known two rods to take over 128 of them in one day, none of which weighed less than three pounds and some going seven and eight pounds, you will admit that the fishing is good. Douglas county is said to contain over one hundred lakes, and all of them fairly teem with game fish. There are nine of them, ranging from five to ten miles in length, within four miles of Alexandria, and the whole chain is connected so that one can pass from one to the other in a boat. At Osakis there is a lake sixteen miles in length by from two to three in width upon which there are two steam yachts for the accommodation of tourists. The hotels at both places are good and the rates low. If you have any more hay fever readers who wish to obtain relief and at the same time enjoy good sport, let them go to either of the above resorts, and I know they will thank me for the information. Last season I was in different places from St. Paul to the Manitoba line, and during the whole time I did not have a symptom of hay fever. So free was I from it that although I returned home three weeks before we had a frost here, I remained free from it the balance of the fall.—V.

A VALUABLE BOOK OF REFERENCE.—The Philadelphia Library attaches great value to a complete set of FOREST AND STREAM in its possession, which was presented to the institution by Mr. Franklin C. Jones, of this city. There is not a single number missing, and the whole are handsomely bound, with index, in several volumes. Your correspondent can bear witness to these volumes being continuously used as reference books, as scarcely a day passes—so I am told by the librarian—that they are not called for. One scientific gentleman remarked to me that the experiences of the many sportsmen who have contributed their views to the columns of FOREST AND STREAM, and which are contained in these bound volumes, have been of great assistance to him in his studies. The Philadelphia Library will continue to bind FOREST AND STREAM, which is presented to them from time to time by Mr. Jones.—HOMO.

WHISTLING UP QUAIL.—Augusta, Ga., July 18.—In one of your late issues you copy an abstract from a South Carolina paper, in regard to shooting partridges (quail) by whistling them up. I saw the item and have made numerous inquiries about it and find it a very common custom both in South Carolina and in Georgia. The parties who do this are not confined to the poorer class, who might do it for meat, but include many city folk and gentlemen (?) who pretend to back the game laws. They claim to kill "only the male" birds, but in a bunch of seven there were five "hens" as one of the sportsmen confessed. The "no fence law" has done wonders for the birds in this section, and they will be very plenty this fall.—OLD H.

IOWA PRAIRIE CHICKENS.—Latimer, Franklin County, July 17.—Prairie chickens are moderately plenty, and where the grass was not burned off in the spring, are large for the time of year. The most of the coveys have from eight to fifteen. For more than a week past the farmers' boys have been shooting them. The writer has a cat that goes out hunting with him, and capers around with the dogs, seeming to have just as much sport as any of them. Will follow for a mile or two, and then go back home.—RAND.

GLUE FOR GUNSTOCKS.—A correspondent writes: Having obtained many valuable hints through your columns, I take great pleasure in recommending the strongest adhesive known, Le Paige's liquid glue. It is all the manufacturers claim for it. We use it in our workshop, and have quite a trade in it. I am not drumming up trade, and you need not give my address, but if Le Paige's glue will not mend a broken gunstock, nothing on earth will.—E. H. FOX (933 Eighth avenue, New York).

MEACHAM LAKE, N. Y., July 14.—The non-hounding bill is having the effect I expected. All hands in Franklin county are mad. The still-hunters are making their plans for a big hunt in the fall, and I hear rumors from all sides of deer having been killed in June. None have been killed about the lake. The guides accept the situation, and say they will respect the law and will have to make up their losses in the fall by still-hunting.—A. R. FULLER.

ONTARIO GAME AND FISH.—Harwood, Rice Lake, July 18.—I have not seen so many ducks breeding here in the marshes for many years as there are this year. The indications are good for a first-class shoot the 15th of August, when the season opens. The black bass are biting splendidly; large catches every day. Maskinonge fishing very good, but not so good as it was a month ago.—CHAS. GILCHRIST.

SHORE BIRD FLIGHTS.—Salem, Mass., July 20.—Shore bird fall flight has begun. I got a good bunch of them last week. Among the varieties already along are jack curlew, winters, summers, robin snipe, ringnecks, both kinds of "peeps," and uplands. These latter are not plenty yet; in fact even the "peeps" are thin in flesh, which shows them to be just arrived.—X. Y. Z.

MAINE.—A moose was seen in Orland recently, said to be the first seen in that vicinity for a generation. His hoof prints were found to measure 5x7 inches, and his strides reached fourteen feet, although trotting an easy gait.

A SATURDAY AFTERNOON.—Sedalia, Mo., June 27.—*Editor Forest and Stream:* We often have preached to us, in a journal like FOREST AND STREAM, the gospal of rest—a let up from business and business cares. O! what a delight to some of us the woods and trees afford, and the assurance that now we are completely beyond the sound of the front-door bell. Yet we often say, "have no time to day, but will go next week." I had promised my little boys that they might go fishing next Saturday. This was good news to them. How the little fellows did work and gather up their tackle. It was papa this and papa that; how do you put on the sinker, and how much line would you use, etc., until I was nearly crazy to go fishing myself. Saturday came, and by daylight the little fellows were ready with worms, lunch, lines, etc., for a three mile tramp. After dinner I suggested to my wife that I thought we had better drive out and see what had become of the boys. I put my hunting outfit into the buggy, called the dog, and together with my wife we started for the fields and streams. I knew where a good snipe draw was, provided there were any snipe in the country. Upon our arrival I left my wife with an excellent friend, a widow lady, on whose farm I expected to hunt, while I investigated the snipe question. I did not have far to go, about four hundred yards, to strike the edge of the boggy lands, where a number of years ago I had hunted snipe with Senator Vest who, by the way, is an excellent shot. I hardly had time to adjust my shells before a snipe got up and fell to my right barrel. The report of the gun flushed another that fell to left barrel. Proceeding down the bog about a hundred yards, the dog flushed six or eight together, when I failed to bag. On approaching a small stream some three or four teal ducks arose, and I secured one at long range. Further on I shot another snipe, then a brace, then another teal duck. This I thought was enough for our friend and ourselves. The snipe appeared to be on the increase when I quit shooting. This I consider a pretty good showing for an evening's sport within four miles of a city of 20,000 inhabitants. I found the boys all right and highly pleased with the day's fishing, each having a string of small fish. This was my first spring shooting.—OCCIDENT.

DEER HOUNDING LOGIC.—The Boonville *Herald* has the following: "Deer hunting commences Aug. 1 and continues until Dec. 1. No hounding allowed. Observe the law even though it gives the pot-hunters full sweep to drive the venison back into the woods, and the sportsmen have to live on beef and pork. Boxes for carrying fresh meat from Boonville to the Fulton Chain are already being made in anticipation of a scarcity of venison under the new law." The last sentence about the anticipated scarcity of venison, reads rather strange, coming, as it does, from the pen of the editor, who is devoting columns of his paper to the attempt to prove that the law against deer hounding, referred to in the article, is a bad one, and will prove far more injurious to the preservation of deer than if floating was prohibited and hunting with dogs permitted. Some of the guides say that it would be better to have the deer season "open" for all kinds of hunting from Aug. 1 to Oct. 15, the latter date being the limit of the stay of the majority of sportsmen. After that the guides devote the greater portion of their time to killing and shipping deer meat to market.—*Utica Observer.*

THAT CARTRIDGE TEST.—Memphis, Tenn., July 15.—It is gratifying to learn that the cartridges manufactured by the U. S. Cartridge Co. stood the test of submergence in water for over two days without being spoiled. But in reading the item I was struck with the exceeding clumsiness, not to say bad taste, of the method used in making the test—to send a traveling man out West to Denver and have him seize the opportunity of a sportsman being drowned and being under the water for over two days with his shell box, when it would seem to have been so much easier and more appropriate to have dropped a handful of cartridges in the chicken trough in the backyard in New York and allow them to stay there a week or so. But I have been fighting mosquitoes for a week past in Coahoma swamps and perhaps have grown cynical in consequence.—COAHOMA.

FISH AND GAME AND CHEAP BOARD.—We are enjoying a fine season of boating and fishing in the beautiful lakes fifteen miles north of Kingston, Ont. Sydenham Lake abounds in pike and bass. Knowlton Lake has both bass and salmon. Last week two of us were out trolling in Eel and Little Long lakes and caught twenty-two pike and bass. One of the pike measured twenty-eight inches. Sydenham is a pleasant little village, sixteen miles from Kingston, and good board can be had at $3.50 to $4 per week. Partridges and ducks are very plenty in the fall and good shooting is to be had.—J. L. S.

Camp Fire Flickerings.

"That reminds me."

156.

READING of many "remarkable shots" in your valuable paper reminds me of one I saw made many years ago, when I was a boy. For several nights our pigeon coops had been devastated by a small brown owl. This so enraged one of my father's hired men, Jake, that he borrowed an old flint lock about six feet long and carefully loaded it, using hornets nest for wadding, it being confidently believed that this material possessed special virtues for this purpose. Night came, and Jake took his station by the garden fence in ambush for the marauder. An hour passed, when suddenly we saw Jake peering cautiously toward a dead apple tree. In a moment he carefully brought the firelock to his shoulder and took deliberate aim, but just as we expected to hear the old piece roar, we observed him carefully lower it and cautiously face to the right behind a small bush, then bringing the gun to his thigh he pulled trigger. A tremendous flash and bang followed. Father and I ran up to see what it all meant, and I heard old Jake say, "The darn old thing went off after all." To father's question what he was about he answered that he had tried the gun after loading in the morning and could not get her off, and just as he was going to pull on the owl it struck him that he had better try her again and not fool the bird. BASS, PIKE AND MASCALONGE.

Editor Forest and Stream:

Going through the market this morning I espied a black bass on one of the tables that suited my fancy. "Three and a half pounds," I remarked as I passed it to the huckster. "Yes, more than that," was his reply, as he put the fish on the scales, "four and a quarter pounds and good weight," as he returned the fish to the table. "I'll take him, but I think, however, your scales need overhauling." "No, sir; those scales are correct every time; they were inspected this week." The fish was soon scaled, finned and cleaned, market fashion. "But good gracious! what is this which I've found in his stomach?" remarked the boy as he held up to view a bit of ship's bolt. "What does it weigh?" I inquired. "Weigh! oh! it's just thirteen ounces, it's a good foot long and most an inch thick, genuine iron at that." "The question is how did it get there? He could not have taken it in the way of food," I replied. "Dr. H., our authority on black bass, says, 'Its weak and brush-like teeth are not well adapted for such diet.'" The market boy came to the rescue and explained all by remarking, "Guess some feller poked it down there and won a bet on its weight. I've seen it done afore." Guess that's so. I send this unusual specimen of bass food to be placed in the museum of the FOREST AND STREAM.

The same market had received that morning from Detroit, Mich., 2,700 pounds of fish, mostly whitefish, together with a goodly number of pike-perch and black bass, but what is unusual in these days of fish depletion was eight well grown muscalonge, ranging from 20 to 35 pounds each. One of 25 pounds had in his stomach a 3¼-pound whitefish, another of 35 pounds had for a square meal three whitefish weighing together 6¼ pounds. I did not see the others opened, but from their distended appearance there was evidence that they all feasted off the same feeding ground. I once saw a 60 pound muscalonge from Fort Clinton, Ohio, whose stomach was loaded with two well-grown whitefish and a small catfish (*Pimelodus*). The latter weighed 1¾ pounds. The cat portion of the story may be considered a hard one to swallow on account of the formidable horns he carries, but remember these "fresh water sharks" care not for trifles when hungry, and this little cat, horns and all, was the first fish swallowed. My impression is that these muscalonge came from the Canadian shore of Lake Huron, where fish laws are made to be observed, as I know of no waters in our vicinity in Uncle Sam's domains that can produce such a number of well-grown fish. Muscalonge are not rare in our market, but a 5 or 8-pound one is the rule for large size; more often you see them ranging from 1 to 1¼ pounds. On one occasion I counted twenty-three, the largest of which did not exceed 2½ pounds. Such small fish are not fit for the table; they do not have the peculiar flavor and firm white flesh of the well-grown of 15 or more pounds, and should never be taken of much less weight.

By FOREST AND STREAM I learn that Dr. Henshall is soon to visit the Upper Peninsula of Michigan to interview the black bass and trout, also to identify a fish called the muscalonge, found in the lakelets there. Undoubtedly this is the great northern pickerel (*Esox lucius*) which in all undisturbed northern waters attains even the weight of *E. nobilior*. When the Grand Haven and Marquette Railroad was opened through the Lower Peninsula of Michigan, a great many unfished lakes were brought near to our markets. It was not unusual then to meet with this pike (*E. lucius*) weighing from twenty to thirty five pounds in early time here. This same fish would average fifteen to eighteen pounds, with occasionally one of greater weight. As late as 1876 one was taken in a pound net at Dover Bay, Lake Erie, twelve miles west of this city, that brought the scales down at forty-one pounds. I know this to be a fact, as I saw it weighed. It was no muscalonge, but a genuine white spotted *Esox lucius*.

In the upper tributaries of the Ohio River, and especially in Chautauqua Lake, New York, the federation pike (*E. tredecim*, Dr. Mitchell; *E. ohioensis*, Dr. Kirtland) was once found in great plenty. In size it approached either the above species. I saw the preserved head of one at Jamestown, N. Y., said to have weighed 70 pounds. Be that as it may, it certainly was the head of a very large fish, and could not have weighed less than 50 pounds. The late Dr. Garlick often entertained me with accounts of captures of this fish in the Mahoning and other rivers of the State and Western Virginia, all tributaries of the Ohio. Many a one did he take, "20 and 35 pound monsters," as he used to express himself. Sometimes the most of an entire drizzly day late in the fall would be spent before the long-expected "thud" would come and take the live, full-grown sucker (*Catostomus*). A short time is given for the "monster" to gorge the bait, then came the tussle and fun, followed by the landing of a "whopper." When laid on the upper end of a barrel the head and tail would touch the ground on either side and tip the scales at 36 pounds. "Results like these," the Doctor would remark, "more than paid for the time spent in trolling with rod and line along the banks. Why, just think!" as the Doctor would stretch out his hands in illustration of one of his captures, "think of comparing thirty-six one-pound pickerel or any other mess of small fish with such a walloping monster as that. Hump, few people know what real sport in fishing is."

To finish up with the *Esocida* of this region, we will take in the last and least, the little pickerel (*Esox salmoneus*), the smallest of all the family, seldom over a foot in length and of weight in proportion. They are very numerous in the streams they frequent, mostly in the western, central and southern portions of the State. It has the faculty of crawling up the smallest streams and ditches that drain prairies and other wet lands in such numbers and out of the way places, that you are often informed by those who know that "this fish rains down."

Of the *Esox reticulatus* we know nothing here, and, as far as we are informed, is not found west of the Alleghany Mountains. In all our fishing experience we never captured but one muscalonge of size with hook and line, that while fishing for pike-perch off the "pier." This weighed fourteen pounds, and 'twas a great prize and something for a boy to do, especially with ordinary tackle. But when it came to shooting and spearing them or grass pike on their spawning beds or otherwise, we ranked, as the vessel men say, A No. 1. In fact, to be an expert fisher for muscalonge (not spoon trolling) one must know his ways and habits well. We never met with but one who was a success in this line; he was a French Canadian, who lived, when I was a boy, on the north bank of the "old river bed," a large bayou of the Cuyahoga River. He gained his living by hunting, fishing and trapping, and if you wanted anything in his line, Old Froushier was the man to supply you, be it fish, fowl, muskrat or moss-back mud turtle. Froushier was the only one in these parts that made a specialty of fishing for muscalonge. So well did he understand the ways of this lonely fish that he could fill an order for one on short notice and without fail. He fished with a rig entirely of his own construction. The hook was large and strong enough to hold a shark, two feet of the line was "served" with fine wire which answered as the snood, a spindle-shaped float of wood a foot long was attached at each end to the line from six to ten feet above the hook, according to the depth of water to be fished. A pound and a half mullet, two or three frogs well strung on, or a good sized water-snake, as best he could get them, always alive and kicking, was the bait. Then Froushier was ready for work. Quietly he would row his skiff along the outer edge of the lilypads with a hundred or more feet of line astern, always patient and slow; he would remark on starting out: "I get a bite by en by, may be one hour, may be five or six hours, all the same when I get a bite I have a big maskanonge, sure."

The bait was too large for the average pickerel, so when he got a bite it was generally the fish he was after. When the fish struck he would stop his skiff, pay out line as needed and let it gorge, in time it had its meaning and without much ceremony or nonsense playing, a twenty or forty pound muscalonge was hauled alongside, gaffed and tumbled aboard.

This old Frenchman was acquainted with all the bayous, swamps, open waters, and tangled underwood, with their inhabitants, in his entire surroundings, he called it his farm, and well he might, for no farmer knew his lands better than Froushier did his water and mud domain. With his single barrel, of caliber sufficient to let a chipmunk in, he could beat us all among the ducks, and it had to be a large and compact flock on the wing to draw out a flying shot from his fusee, as two or three ducks at a time, according to his idea of gunning, would not pay the ammunition. Sitting was his best hold, and when you heard that gun roar it was after a tedious time of crawling, wading and waiting. Then six to a dozen, or more birds would tumble to meet the expense of time, ammunition and something over. Six to eight discharges a day was about the extent of his canonading. He deplored the waste of powder and shot by "those fellows that fired away at the ducks a-flying."

All this was over forty years ago. Old Froushier was then far on the down hill of life. He must be now a long time in the happy hunting ground. DR. E. STERLING.

CLEVELAND, O.

MUSKOKA.

THIRD PAPER.

THE waters haunted by the speckled trout—the salmon of the spring—run through the virgin wilderness. The black bass is more of a cosmopolitan. I have often taken four-pound bass in the mouth of the government canal, at the foot of St. Clair flats, where the water is seldom at rest from the swell of the passing craft. But the four-pound trout—he is the reward of such adventurous journeyings as we all sigh for but few achieve, and he flies before the advancing settlements like a shadow.

The village of Bracebridge, on the Muskoka River, a short distance from the lake of the same name, is the easterly limit of steamboat travel. Here the north branch of the Muskoka River, feeding down through Vernon, Fairy and Morey lakes, unites with the south branch that leads westward the waters of the Lake of Bays or Trading Lake, and the system beyond. The falls of the north branch, very rocky and picturesque, are in plain sight from the steamer landing, while those of the south branch, 150 feet in height and much larger and finer, are accessible by a ride of some two miles, either by water or land.

The north branch of the river above Bracebridge is devoid of interest to the fishing tourist, owing to the entire absence of trout, while the south branch is especial y attractive for the opposite reason. None of the natives are able to offer any satisfactory reason for this diverse condition of things in two apparently similar streams, but the facts being submitted, the reader is at liberty to construct a theory to suit them. I am not sure that no attempts have been made to stock the north branch, but think such steps are in contemplation. But be that as it may, Bracebridge is the starting point for the numerous streams and lakes to the north which are abundantly supplied with trout, and which give promise of most excellent sport for many years to come. Of course if you are going to the noble Magnetawan, where four-pounders flourish (and heaven grant you that delight), you will retain the steamer as far as Rosseau, and there take one of Her Majesty's stages for a thirty-mile ride across the country.

The trout fishing in the territory designated is of two kinds, that found in the rivers and other rapid waters and that of the waters of the small lakes. Making allowance for the season of the year, the first is principally fly-fishing, and the last-named after the middle of June is mostly bait-fishing. For the former there is probably not a finer piece of water available to the modern angler than the south branch of the Muskoka River from the lower end of the Lake of Bays to the great falls near Bracebridge. The total length of this portion of the river, from Baysville (at the foot of Lake of Bays) to Bracebridge, is about thirty miles; but the river in this distance is diversified by thirteen falls and rapids of greater or less extent, making capital feeding and lurking places for trout, and it ranges every where from forty to sixty feet in width. This gives ample room for casting, and the water is nowhere too deep to prevent ready and appreciative responses from the trout beneath. The river can be fished either ascending or descending, since nearly all the rapids must be portaged in either case. But our own experience has proved so satisfactory that I venture to give it for the benefit of those who may choose to try the stream hereafter. The time of our visit was the last half of August, and our party, as intimated in a previous letter, was the perfect number—two. Providence, who has a special care for children, idiots and fishermen, was especially kind to us in spite of our desserts. For never did two voyagers drift into a country knowing less of it in advance than did we of the Muskoka country, and never were a like number more fortunate in the outcome of their journeyings.

From Bracebridge to Baysville overland is a matter of eighteen miles, and a Canadian stage makes the trip on alternate days. This brought us to the latter place in time for a good dinner one pleasant day in the middle of the week, and after testing the fishing above and below the dam at the village, we set out with the help of the landlord to arrange for a trip down the river. It was a very essential part of our good fortune that on this very afternoon we discovered Tom Salmon and "Jeff" Avery, and as each man had a first class birch-bark canoe at hand, nothing absolutely indispensable was lacking. As our subsequent experience proved, the combination was a happy one. Both were exceptionally good canoe men, and while Avery was a superior cook and camp man, Tom Salmon was a very magician with a fly-rod, and his lessons at intervals during the trip will not be readily forgotten. It isn't every man that becomes a successful fly-fisher, cast he ever so finely. There is an easy yet adroit placing of the flies just where they should be, a mysterious and indescribable handling of the cast in the water, and a peculiar, untaught instinct that knows without seeing just to the fraction of an instant when to make the stroke and fasten the hook. All these Tom had in their perfection, and not unfrequently where we had troubled the water in vain, they proved potent in bringing the wily trout from his lurking place and landing him in the creel. It was a striking illustration of the old saw "set a thief to catch a thief," it was putting a member of the Salmon family to the capture of the *Salmo fontinalis**.

Perhaps this is a good point to mention that venerable and hard-ridden joke about the fisherman with the latest improved tackle and the boy with tow string and pin hook. It is always amusing, and I never fail to greet it with a smile, partly for old acquaintance sake, and partly out of politeness to the man who introduces it. But like a great many other things, it is funny, but it isn't true. It certainly is not true in fly-fishing that the man with the poorest tackle gets the most fish—other things being equal; and if the man with fine tackle fails to hold his own in any contest, the fault is his own ignorance, or inexperience, or lack of adeptness, and not in his outfit. Success in fishing isn't the result of luck; it comes from a combination of knowledge, experience and mental and physical adroitness exercised through the best available forms of angling appliances. Your boy and your bungler may at some time stumble upon a good catch, for which they deserve no more credit than for being born. But take the scores day after day and season after season of any two representative fishermen of the opposite classes, and the average will show conclusively where the joke lies. Go to! we will have no more of it!

We went over from Bracebridge to Baysville, flying light. No tent, beloved reader, no provisions, no canned goods, no bottled supplies. We carried each a summer overcoat and our fishing tackle, and when we were ready to start in the morning for a three days' trip down the river, we had added a frying pan and a flat basket containing some bread, butter, salt pork and tea. There are about three houses on the river between Baysville and the little settlement above the great falls, and none of these (thank heaven) is either a hotel or a summer boarding house. But we did stop at one of these houses on the evening of the second day, and got a dozen fresh eggs and a bucket of milk. Do you happen to know the flavor of a trout just caught and cooked in new milk? If not, we will pass on to the next rapids. No amount of diagrams and foot notes and wordy explanations will do the subject any sort of justice. But in dismissing the bill of fare, I may be pardoned for saying that from the first dinner out of Baysville to the last meal on the river, we were never lacking a smoking birch-bark platter of trout. They flavored the tea, they permeated the bread and butter, and glorified the salt pork, and their delicate aroma mingled with the smoke of our corncob pipes like the odor of the clover blooms with the mists of a June morning.

As already stated the distance by river from Baysville to Bracebridge was thirty miles and we had undertaken to cover it in three days. This was hunting through space at the rate of ten miles a day, or one mile per hour, including the stops. We did not find the pace a killing one, but we had previously determined to take three times three days if it were necessary in compassing the distance to preserve the average rate of travel. As it was we found this method of procedure altogether delightful. When we chose we fished, when we were tired we rested, when hungry, we ate and we either traveled or clung carnestly to the shadows on the shore at our own ungoverned and ungovernable caprice. We did not have to hurry to get to any certain place at any specified time, and if we had made any such arbitrary and absurd engagement we would not have kept it. Ultimately we reached again the country of clocks and railroad schedules, but had there been no current to the river we might be still upon its waters.

The Muskoka River is not a continuously rapid stream. There are long stretches of smooth deep water, followed by falls or rapids, and these two varieties of water alternate during the whole trip. All the fishing is found in the livelier water, but the placid reaches between afford some delightful canoeing, and make an agreeable spice to the day's adventures. It was generally at the most picturesque of the rapids that we beached our canoes for dinner, or turned them bottom up for the evening camp. In this way we secured the cream of the morning and evening fishing, and never had more than a short half square's walk to get it. (The "square" is the unit of measurement for distances in the wilderness.) We did not reap exceptionally good results from the very early or the very late fishing. Our experience was that as a rule an hour after sunrise and an hour before sunset marked about the best time for the day's fishing, which was, however, never poor except for two or three hours in the middle of the day. But trout seem to be governed more by moods than by regard for any particular time.

If I were limited to a single fly, in fishing for trout that fly would be the brown hackle. (Hasn't somebody said that before?) And in the same way, if I were limited to a single fly-rod and only one tip, that rod would be made of Bethabara from end to end. A Bethabara fly-rod (three joints) which I bought five years ago, has been my constant companion in all my various expeditions on the grayling streams of Northern Michigan and the trout waters of Canada. It has endured no end of grief and hard usage, and done no end of good, honest work. The action has a great deal of life, the rod is "springy" but quick, very tough and not easily affected by the weather, and it takes less "set" than any material I have ever used. (This last trouble is one cause of complaint with split-bamboo rods). It may be that my rod is better than the average, but I am still surprised to find that Mr. Wells, in his book on "Fly-Rods and Fly-Tackle," now on my table, has so poor an opinion of Bethabara. Perhaps a better acquaintance may modify his opinion, since he says he has never tried an all-Bethabara rod.

*Copyright applied for.

But not to wander too far from the text, we found our trip down the south branch of the Muskoka the very ideal of an outing. How many fish? Really, I do not know. But we caught enough for all our wants while on the stream, and we brought away with us to the "States" a box of specimens that sent an aggravating thrill, half recollection, half anticipation, through the brother trout fishers among whom they were distributed. Some further experiences will have to be withheld for another time, this letter already having grown too long.

With the latest number of FOREST AND STREAM I have just laid down the latest letter of that modern Fenimore Cooper, "Kingfisher." His accounts of his fishing experiences are always enjoyable; he has the true angler's appreciation of the subtle influences of wind and wave and sun—influences that fill up the measure of delight, whether the catch be few or many. But what most interests me is the query: Where in all the humdrum routine of office, shop and store, in the smoky, plodding city of Cincinnati, does "Kingfisher" gather up his collection of quaint characters that dot the scenery of his letters? The answer to the query is: He doesn't "gather them up" at all; he merely sits down and constructs them out of his inner consciousness. It certainly is not in the least to the discredit of "Kingfisher" (who is a capital representative of the best class of the gregarious angler) that one reads his letters with a faint suspicion that "Knots" and "Ben" and "Old Hickory" would prove very plain, matter-of-fact people, talking quite as good English as the rest of us when once reduced to the flesh.

In looking over my second letter it appears that a carelessly written sentence makes me say that the steamers of the M. & N. Navigation Company start from Toronto. They don't. The trains of the N. & N. W. Railway run from Toronto northward to Muskoka Wharf, Collingwood, Penetang, etc., and the steamers of the M. & N. Company from Muskoka Wharf to Bracebridge, Rosseau, Port Cockburn and Bala. The connections, however, are continuous. JAY BEBE.

TOLEDO, O., July 18.

THE ANNUAL WORM SCARE.

Editor Forest and Stream:

The following article clipped from the Boston Sunday *Herald* will fall with a splash into the dish of the black bass enthusiast. Since it appeared one or two of the Maine papers have republished an item from the Winthrop *Budget* also announcing worms in the black bass of the Cobbosseecontee waters. In that section also the fishermen are greatly disgusted and wish the bass were out of the ponds and the pickerel and white perch back again. A gentleman, familiar with those waters, I happened to meet yesterday. He believes that the black bass are fast running out the pickerel and that the white perch are disappearing. I regret being obliged to chronicle much unwelcome news; the hopes of sportsmen have been buoyant in the direction of black bass. Fish Commissioners in the various States have taken a great deal of pains and spent thousands of dollars in introducing them. The *Herald* communication comes from a thorough sportsman and scientist—one who only withholds his name for further investigations. I want to see the subject thoroughly handled in the FOREST AND STREAM, and if our game fishes are to be further reduced in number, if we have put a miserable deadhead into our waters, wormy and logy, but one that cannot be got rid of, then let us know the worst! We can have some revenge on the black bass, if he is as black as he is painted below. We can at least take away the protection the law gives him and let the poachers loose upon him. SPECIAL.

The *Herald* item referred to says:

"Black bass created quite a flame here at first, and no doubt they will last a good while. Norway Lake, Thompson's and Crotched ponds were stocked with them at first by the Fish Commission; and now all the surrounding waters, including Long and Sebago lakes, in particular, have been stocked gratuitously. Thousands of dollars worth of tackle have been bought, and boats without number have been built, all because the bass fishing was to be such a great thing. Well, men of weak constitutions gave it up after the first trial. Those men who were tougher, and boys who could digest green apples, have survived the first attack, and in some instances have tried it again, over and over, but each time with lessened interest. Not that there are not bass enough. There is no lack of the fish, but they will not rise to a fly any better than a chub, or brindled perch, and only the small ones will bite at worms. When hooked they make one promising leap, and you think you are in for some fun; but 'the weather does not follow the indications,' and after his first 'flop,' a black bass is about as interesting at the other end of a fish line as an eel or bull frog. Barring the one 'first spring,' a chub will make a longer and stronger fight for life, and give more sport than a black bass of equal weight. Bass are also voracious feeders and have the detestable habit of starving out their own species. At least they seem to decrease in size in the waters that have been stocked longest.

"As to the rank of black bass as a table fish, he is nowhere. Dry, soft and insipid in flavor, spoiling easily when exposed to the sun, bony and full of worms, are all qualities that this fish brought here with him.

"Worms? Yes, lots of them. The morning of the 1st of July (open season) brought out on Long Lake many who had not tried bass fishing, and some who had. The fish bit well for bass, and quite large catches, though averaging small in size, were brought in. That evening, as the writer was at work, a hand holding a fish partly skinned came suddenly close under his eyes.

"'What are those?' said the owner of the hand, at the same time pointing with a knife to dark objects, about the size of a pinhead, imbedded in the flesh of the fish, but not deep enough to hide them from sight.

Several of these dark objects were carefully dissected out and a microscope brought into use. Under a power of fifty diameters, these objects proved to be a tough sort of sack, with a rudimentary worm in it. The one who had skinned the fish said there were more or less of these worms in every bass he caught, although they were more numerous in the specimen he had brought to me. The fish had about seventy-five of these worms visible, and it would not weigh half a pound. As the season advances these worms are said to grow to the length of fully half an inch and the sack disappears. The worm is then surrounded with putrid matter. We don't care for black bass down here.

"In his business habits Mr. Bass is a veritable tyrant among other fish, driving them anywhere and everywhere, even out of existence. There was formerly good pickerel fishing in all these ponds and lakes. Since the advent of bass the pickerel are decreasing rapidly in numbers, and hard stories are told of the havoc the bass are making among salmon and other fish. When these fish were put into the waters that were first stocked here, the people were willing to go to any expense and protect the fishing for five years, in order to give them time to increase. Now many would be glad to go to all the same trouble over again in order to get rid of the bass if it could be done. On the whole, we don't want them; but they are stayers, no doubt, and when the last fisherman is beneath the sod, Mr. Bass will still be here to flutter his fins, cock his goggle eyes, and make faces at whom he will."

[The subject of worms in fish has often been discussed in our columns during the past four years. All fish, as well as other animal life, have parasites. These we hold to be harmless, and we have eaten perch containing grubs and trout that had intestinal worms. Perhaps the Ichthyophagous Club would eat the worms and discard the fish. There are people who prefer to have their cheese "lively," and if a fastidious person looks over all fish carefully before eating them he will find minute parasites on and under the scales in many cases. A boy in a cherry tree never opens a cherry for fear that it may contain a worm, whose flavor is the same as the fruit; it would be a loss of time to him. If black bass, perch and pickerel are in good order we eat them and do not fear a harmless worm].

BASS IN THE UPPER HUDSON.

Editor Forest and Stream:

I am indebted to Mr. Mather for his comments upon the paper ("Transplanting Fishes") that I wrote for the Fisheries Society, for therein he calls my attention to the loose language I used in writing of the black bass in the Hudson River. I did not see the article after writing it until it was printed, with Mr. Mather's comments, in last issue of FOREST AND STREAM, consequently this is the first opportunity I have had to correct my misleading statement.

I should have said that the black bass from Effner's Lake stocked the Upper Hudson River. It is quite true, as Mr. Mather states, that the completion of the Erie Canal in 1825 brought the black bass from the Great Lakes to the Hudson; but the bass cannot, or will not, go up over a fall of water that is mere play for a trout to surmount—I am inclined to believe they cannot, as they gather at the foot of a fall in the spring as though they would like to make the ascent, if it were possible—and consequently the progress of the bass up the Hudson was barred at Baker's Falls at Sandy Hill, if not at Fort Miller. I do not know when the dam at the latter place was built, but Baker's Falls is a natural obstruction and was formerly the limit of the upward movement of the shad. Later the Fort Miller dam and still later the Troy dam proved impediments that the shad could not overcome. Effner Lake has an outlet into the Sacandaga River, which joins the Hudson at Luzerne, only a few rods below the Little Falls of the latter. Bass fishing was excellent for years at the foot of Little or Luzerne Falls, but not a bass was to be found above, although the fall is not a difficult one for a fish to ascend, until they had been taken to Schroon Lake and had worked their way down the Schroon River into the Hudson and thence to the waters above Luzerne Falls. From the Sacandaga River the bass drifted down over Big or Palmer's Falls, Glens Falls, Baker's Falls and Fort Edward dam, and afforded excellent fishing, but they have now gone from south of Big Falls to join the dodo where the woodbine twineth; "all on account of"—the sawdust. A. N. CHENEY.

GLENS FALLS, N. Y.

KILLING BASS FLIES.

Editor Forest and Stream:

The following observations on bass flies were inspired by a recent communication to the *N. Y. World* from the pen of Mr. Seth Green, in which the writer, together with sound advice on the art of fly-casting for bass, takes his readers into his confidence, and reveals the secret of his success by naming his "killing flies."

He says: "I have sifted down the hundreds of flies until I have but four kinds left; they are the 'killers.' My upper fly has a red body, white wings, and white hackle with a gold tinsel stripe; my second is a fly called the Grizzly King; my third is the Governor Alvord; the other fly is the Seth Green."

With the above mentioned flies in his book our author considers himself satisfactorily equipped for all bass-fishing emergencies. We should be pleased to learn on what waters Seth Green's flies are so taking—so uniformly successful as to be denominated "killers." Doubtless there are unsophisticated bass living in streams seldom fished with anything more tempting than the unpretentious earth-worm, whose mouths would water at sight of the gorgeous fly; but in the rivers and lakes of Central New York the bass is something of an epicure. His appetite is capricious. The fly which lured him to the surface so successfully on one occasion is neglected at another, no matter with what degree of skill it be cast on the water. The "killers" to which we pinned our faith in early June are displaced by others in July. The fly which was seized so savagely in the morning is neglected later in the day. Flies with which we have made numerous captures one season have failed us or are little thought of in the next. These facts have been impressed on us year after year, and we are at a loss to understand how a fisherman of Seth Green's reputation can find all his requirements in so limited an assortment of flies.

No fly-caster of experience in these waters would venture after the black bass with so meagre an artificial diet as that prescribed above. It not infrequently happens that the day's successful fly is found, not among the so-called killers, but in those little used. On one occasion, when our old friend "Rob Roy" was out with us we cast the "killers" faithfully over a long stretch of good bass ground without a rise. As a sort of forlorn hope our friend substituted a fly without any record, remarking that he had little confidence in it; but since all the others had failed, it was worth a trial. After a few casts a bass was taken. This was followed by a succession of strikes, and with each successful cast we heard a sort of suppressed chuckle which was not a little irritating to us, who did not at all relish the situation. As the "killing" fly was the only one of its kind in our books, we were forced to submit to the inevitable, consoling ourself with the reflection that if we had possessed that particular fly the order of things would have been reversed.

The Seth Green, Governor Alvord and Grizzly King are taking flies, and are always given a prominent place in our collection, not, however, to the exclusion of others, among which we would name the Silver Doctor, John Mann, Reuben Wood, and the magpie, which in these waters, at least, are equally good, if not better. None of the flies here mentioned should be absent from a good assortment of bass flies. Each is at times a killer.

In view of the experiences here related, we desire to impress on those who are acquiring the art the importance of having a well-stocked fly-book, lest by an overweening faith in authority, they have more failures to record than successes. J. G. J.

SYRACUSE, N. Y.

LIME IN TROUT STREAMS.—Westfield, Mass.—*Editor Forest and Stream:* Some six or seven years ago the supply of trout in the streams here was found to be rapidly decreasing until it scarcely paid one to join his rod for a day's trouting. In 1881 the state of affairs was much improved. In 1882 still better were the reports and baskets brought in by anglers. In 1883 the brooks were literally alive with trout and catches of four to six pounds, and averaging three ounces per fish, were not uncommon, in fact an every day occurrence. In the years gone by when our streams were being so rapidly depleted it was an open secret that certain parties were netting and also that one man in particular had used lime on all the best brooks, thereby destroying all the small fry in order to fill his paunch for once. At the time nothing was done. We had not then the powerful influence of the Rod and Gun Club. Then our streams began to show the effects of being fairly dealt with, and the heart of the angler was made glad. But alas now it is the old story, our trout have been going, going, and in the last few weeks the work has been on a wholesale scale. Within the month of June, Powder Mill, Sandy Hill and other famous brooks have been completely cleaned out by the aid of drugs. What do you think of sixteen and a half pounds of catches of dressed trout, and another of fourteen pounds in a few hours', angling (claimed) in brooks run to low water mark by recent drouths, and then when the rains come and the brooks rise our best anglers seek in vain for a single rise? The instigator and perpetrator of this infamous work is well known, although no convicting proof is yet to hand, and of what account would it be if obtainable? A fine of $10 for poisoning a stream, that's all, while for netting a fine of five to twenty dollars is the penalty for each trout so taken.—TROUT.

NEW ORLEANS FLY-CASTING TOURNAMENT.—Dr. W. C. Ayres, the gentleman who has of late published in these columns a proposition to inaugurate a fly-casting tournament, has prepared a list for entries to the different kinds of casting, which is at Rhodes's, 55 St. Charles street, ready for signatures. Dr. Ayres has arranged for ten entries for each class. The different entries are as follows: 1. Rod and reel casting; light sinker, one ounce. 2. Rod and reel casting; heavy sinker, 2½ ounces. 3. Hand-line casting. 4. Catching pounds of silver fish. Catching pounds of redfish; trout, green and speckled; sheepshead, Spanish mackerel, pompano, etc., until the end of the fishing season (average of times fishing and fish caught). 6. Combination of simple casting as one point (for any fish) and actual capture of same fish also one point of 1.00. In endeavoring to organize a tournament of this kind the Doctor is solely influenced by a love of the sport; he does not believe that he is a better angler than anybody else, but as some one has to make a start in a matter of this kind he determined to make the effort. The Doctor deserves the support of the followers of this delightful sport, who should lose no time in entering one or more of the different classes. By bringing the fishermen together many pleasant and interesting contests could be arranged similar to those that have made the competitions between hunters, for instance, so popular. Dr. Ayres is an Orleanian, but during the last fifteen years has lived in Europe and New York. In the North he belonged to clubs which participated in these casting tournaments, which are beneficial and highly enjoyable.—*N. O. Times-Democrat.*

THE FAILING CONNECTICUT.—The Connecticut River, given over to the timber-drivers, has become a canal. Reefs are blasted out. Bulkheads are built to turn the current into the central channels. The melting snows, no longer held back in the spongy mosses of the forests, and the spring rains, are hurried swiftly down in the freshets which destroy property in the lower country. The freshets are utilized to bring down every spring the timber from thousands of acres, where no pine wood will ever grow again. The summer comes, hot and dry, with low water in the rivers, which were formerly full all the summer from the slow drain out of the dark shades in the upper country. The natural reservoirs, which thus gave out slowly their reservoirs of water, are gone, and all the water comes down with a rush after every rain. Manufacturing companies everywhere have found it necessary to make artificial reservoirs to take the place of the lost natural reservoirs. Hills that were once forest-covered are bleak masses of rock, growing drier year by year. If there was ever an instance of killing the goose that lays the golden eggs, it is in this method of treating our Northern forests. In hundreds of valleys where water was abundant in former years, the waterline in the ground is below the reach of ordinary wells. The tendency is toward that condition which in a century or two will compel a resort to irrigation for ordinary agricultural purposes.—*Dr. W. C. Prime, in the Journal of Commerce.*

ANOTHER BLACK PRINCE.—*Editor Forest and Stream:* In your issue of July 2, C. E. Hart asks for a description of the Black Prince trout fly, and refers to a letter of "Sport's" about that fly. Mr. Hart states that he cannot find the fly in Orvis's or Conroy's selection of flies. He certainly cannot have read carefully the articles on the "Most Killing Fly" that have been published in the FOREST AND STREAM for the last three months. In "Sport's" first article in answer to mine about the best fly for the Colorado trout, he described the fly, but did not name it. I did so in my next communication on trout flies. The Black Prince is a fly with black wings, black hackle, black body with gold twist, and a small red tail. It is a good fly for the trout in question, but not nearly as good as the coachman. I could give in this letter the address of the tackle dealer from whom I buy the Black Prince, but prudence tells me not to do so; for a somewhat lengthy and bitter experience has taught me that it is dangerous to mention in a paper the names of dealers in fishing tackle, as you are at once accused of favoritism and of giving the dealer free advertising for "value received." However, if Mr. Hart will drop me a line, care of FOREST AND STREAM, I shall be pleased to give him the address of the man from whom I buy the fly referred to.—CYRTONYX (Fort Stanton, New Mexico). [This is the third different description of this fly. Next.]

BLACK BASS IN TROUT WATERS.—The following letter was written by our correspondent, Mr. A. N. Cheney, to Mr. C. F. Orvis, of Manchester, Vt., and printed in the Montpelier *Argus and Patriot*. It contains such a vigorous protest against putting bass in trout waters that it cannot be too widely read: "Glens Falls, N. Y., June 13, 1885.—Mr. Chas. F. Orvis: I was somewhat surprised to learn from your letter that an effort was being made to introduce the black bass into the waters of that portion of Vermont in which you reside. It strikes me that those who contemplate this action have not looked into the future 'far as human eye can see,' for the introduction of black bass is the death knell of the trout. As you know, I am a strong advocate of this dusky fish, and have sung its praises in print for at least a decade, but I advise you to protest strongly against its being put into waters that contain trout, or waters that are near trout streams or ponds. With all my love for the bass, I should not like to hear that he had made his advent in the 'beautiful Ondawa,' Bowden Pond, or other waters near you, for they are natural trout waters, and not such as the bass would select if he could make his choice. I have the pleasant recollection of the trout that, with you, I caught in Bowen Pond and the Ondawa, but the bass would prove far more deadly than did the flies that we cast with our rods. The trouble is that when black bass are once introduced into a portion of country no one can tell how far they will spread. If you place half a dozen mature black bass in a pond they will stock it, be it a pond with an area of five acres or five hundred, and they will clean out all the other fish it may contain, for no other fish can stand against them. I have seen a two pound bass whip a five pound pike (not your Champlain pike, but *Esox lucius*, the 'fresh-water shark'). The trout are disappearing from off the face of this portion of our continent fast enough from natural causes, without the aid of the fighting bass. Hold on to your trout as long as you can, but when they are gone put in the bass, if you like. Say that bass are put into a pond that seems suitable for them, and where you would be glad to have them. Some day an enthusiastic angler will put a few live four or five inch bass into his bait pail, and on his way home from a day's fishing drop them into another pond or stream, and they always locate to stay. Near here is a pond of spring water, with no outlet or inlet, and with a depth of sixty feet. A few local anglers thought lake trout would thrive in the pond and 16,000 were deposited. About the same time, unknown to us, a man put into the same pond three black bass. The trout did well for a year, and then the bass ate them up to the last fish, and they are in possession to this day. These, remember, were lake trout that inhabit deep waters, but the pond was three-quarters of a mile long, instead of twenty miles, and there was not room for both species. Raquette Lake, in the Adirondacks, was a fine lake for lake and brook trout when I fished it twenty years ago, and for years after; black bass were introduced, and spread out into Blue Mountain, Utowana, Eagle, Forked, Little Forked, Long and other lakes, driving the trout before them as they advanced, and no one can tell where the limit of their distribution is to be. Last winter our Legislature passed a law making it a misdemeanor to deposit black bass in waters inhabited by trout; this became necessary because of the facts I have stated above. If you wish 'horrible examples' of the black bass destroying trout I can furnish them. In great bodies of water like Lake George, in this State, the bass and lake trout live together, because one lives in shallow and the other in the deepest water in the lakes; but the habits of the brook trout would cause them to try and live in the same circles with the bass, and make a miserable failure of it. You have probably read Mr. Mather's description in FOREST AND STREAM of the Wilmurt Lake speckled trout. From his description of these fish in a personal letter, and Mr. Flanagan's account in the Utica *Observer*, I was at once reminded of the trout we had caught in Bowen Pond. The two waters are situated each on the top of a mountain, and in appearance the trout are similar; both feed on insects or their larvæ, which Mr. Blackford says make the Wilmurt trout superior to any trout he has ever eaten, and as he has eaten trout from all over the globe, he ought to be a judge. Mr. Mather says the same. I hope Bowen Pond will not make the acquaintance of my friend the gamy black bass; there is room enough for him without invading the haunts of the trout. Yours very truly, A. N. Cheney."

THE NEW JERSEY BASS NETTERS.—Paterson, N. J., July 20.—*Editor Forest and Stream:* In your last week's issue "Index" expresses a fear that James Gilbert and Frederick Goldby, two men fined twenty-five dollars for netting bass, will escape on the plea that an Oswego bass is not a black bass. I do not think that there is any danger of that. Neither filed any notice of appeal, and when the time fixed by law for filing notice and bond had expired, the justice before whom the case was tried issued a commitment. Gilbert paid his fine, but Golby allowed his wife to run the saloon and went to jail, declaring he would stay thirty years if necessary before he paid his fine. He served out three days and then paid up. Half the fine in cases of this kind goes to the prosecution, and twenty-five dollars of cash, formerly belonging to Gilbert and Goldby, is now in my hands as secretary of the Passaic County Fish and Game Protective Association, ready to prosecute the next man who violates the law The accused have lost their right of appeal. The previous owner of this net paid the Association twelve dollars and fifty cents and the county a similar sum for the fun he had with this net; and the Association is contemplating the purchase of a few more nets to be judiciously distributed for the purpose of raising more funds by convicting the users of them.—CHAS. A. SHRINER.

DEVIL FISH IN TEXAS.—Galveston, July 14.—*Editor Forest and Stream:* The people of this place were astonished the other day to see six enormous ray or devil fishes in the Gulf of Mexico at the foot of Tremont street near the beach. They were between the second and third bars, and how they got there nobody seemed to know nor care, as they were evidently waiting for high tide to leave for deeper regions. The whole beach was lined with horsemen and others on foot, firing at them with revolvers, shotguns, repeating rifles, etc. A detachment of the Sealy Rifles were also practicing on them. The fish were about twenty-five or thirty feet long and about six feet in width Col. Sinclair, one of our popular citizens, is laying plans for their capture, and if caught I will write further about them. The fish were evidently washed down from the Atlantic Ocean into the Gulf of Mexico. It beats anything I ever saw. A large sawfish was caught here the other day by some fisherman.—REDBREAST. [The devil fish spoken of is the *Manta birostris* of Jordan and Gilbert, or *Cephaloptera vampyrus* of Mitchell.]

EAGLE AND GOGEBIC WATERS.—*Editor Forest and Stream:* By your issue of July 9 I see Dr. J. A. Henshall intends visiting the famous Eagle Waters of Wisconsin this week. While July is not the best month in which to catch the mascalonge, no one wishes the Doctor better success than I, and I trust he will not leave until he settles forever the discussion which has been carried on so warmly in one of our Western papers quite recently by those who think they know and yet who differ so widly in their opinion as to the fish caught there. I hardly dare breathe my opinion, but if the Doctor does not find it a different fish than the St. Lawrence mascalonge, strongly resembling the English jack, then my knowledge gathered from different articles read is of no value even to myself. I saw a 28-pounder caught, and thirteen others that had been taken from a neighboring lake the same day, and I am willing to testify that all were shaded a most beautiful green. Some authorities claim there is no green on a mascalonge, or will they admit that mascalonge, like trout, vary in color according to the water and its surroundings in which they live? I trust the Doctor will look after the bass in Gogebic also, and enlighten those of us who have fished its waters, to which species they belong, the small mouth or razor backs. If to the latter, I must say they razor around in fine shape with the fly, and the Simon-pure fisherman asks for no better sport than the landing of a couple of 3-pounders with a light tackle. The Gogebic Forest and Stream Club start on their annual tour the first week in August. Last season they were the first large party of white campers at the lake, and of course, had the cream of the fishing, but a large percentage of those who have since visited the lake belong to that class called pot-hunters, skinners, etc., who, not satisfied to enjoy the sport of catching the fish, they must let their bones bleach on the shore. How long will the people put up with robbers of our outdoor sports?—NIMROD.

PHILADELPHIA NOTES.—July 18.—Beasley's Point and Summers Point fishermen had two days of good sport during the past week squidding for small bluefish or taylors, just inside the inlet on the flood tide. The fish, however, did not weigh over a pound, but the breeze was a good one, and the many sailboats out made it exciting. Weakfishing has been good at this point lately, many big fish having been taken at the turn of the main channel of the bay. The fish oil factory at Great Egg Harbor is doing a very meager business this year, owing to the scarcity of menhaden. It really looks as if many of these works would have to shut down. The porpoise fishing company at Cape May has sold out its net or patent trap for some reason. I learn, however, this movement was necessary owing to some trouble among the stockholders, and that a reorganization with improved nets is about to take place. For a great wonder, good weakfishing has been had at Atlantic City this week. One would suppose that the continual seine-hauling in the thoroughfares about this watering place which seems necessary to supply the large population of this city by the sea during the summer months would have ruined line fishing this season, but I hear, on the contrary, of some immense catches with bait. One cannot go astray anywhere on the New Jersey coast this month, if good fishing is desired. Excellent reports come from all the inlets. All varieties are plentiful save the bluefish. Perhaps they will show themselves later on.—HOMO.

SNAGGING BUFFALO AND CATFISH.—The river and streams are muddy and swollen, but there never has been such fishing, or rather so many fish, here as there is at present. The high water having enabled them to pass over the dam below here, they have found their progress checked by the higher dam at this place, and for two weeks past there have been incalculable numbers taken. The fishing is kept up day and night, and it is estimated that there are from 1,000 to 1,500 pounds taken daily. The place is becoming notorious, and is thronged with anglers from far and near, though the mode of catching them cannot be called angling, at least in an artistic sense. The fish are mostly catfish and buffalo, and from five to fifty pounds in weight. The most successful method of taking them is by snagging. Several immense hooks are tied together, forming a sort of a grappling hook; this is fastened to a line which would answer for a clothes line, tied to a very stout rod or pole, and dragged around (no bait is used) until it fastens upon a fish. The angler then braces himself, and if the fish is large, calls on a friend to assist him, when after a great deal of lusty tugging the fish is drawn out amid the cheers of the crowd.—VIOLET S. WILLIAMS (Coralville, Iowa, June 20).

COLORADO TROUT STREAMS.—Salida, Col., July 15.—*Editor Forest and Stream:* I notice in your issue of the 9th inst "H. B.," Topeka, Kan., inquires for trout streams in the vicinity of Cañon City. To those you mention allow me to add the South Arkansas and branches, which at present is affording fine sport, also Chalk Creek, which I have tried lately, with good success, both nearer Cañon than Cottonwood. Also allow me to correct you as to the size of hooks to be used. At present coachman, governor, brown hen, brown hackle (peacock body) and gray hackle (peacock body) will be found the best, and don't under any circumstances use larger than a No. 10 hook. I speak from a five years' experience in these waters and use 10 and 12 altogether. "H. B." will find it no easy matter to catch our trout unless acquainted with their ways, but can catch them with bait in the main Arkansas anywhere above Cañon City. Should he come to Salida I can assist him to some good sport, if he is an angler. Novices usually fail in their first endeavors with the fly, but can have better success with bait, although I can't recommend it as sport.—KOKOMO.

NETTING IN JAMAICA BAY.—New York, July 18.—*Editor Forest and Stream:* I beg to call your attention to the use of nets at Rockaway Inlet, etc., which accounts for the excessively poor fishing there has been there this season. As an advocate of anglers, will you enter the field and protest loudly against this outrage? There must be a law preventing this, and if so, let us see the constable enforce it; and if he is not strong enough, many of the frequenters of Jamaica Bay would volunteer their aid. If, on the other hand, there is not such a law, then wide publicity may perhaps open the eyes of our Albany Solons and have them make one. Sound the cry. To you, and only you, do we owe the stopping of hounding; so follow your success with the stoppage of indiscriminate netting in the only waters left accessible to New York and Brooklyn anglers.—BROOKLYNITE.

"KINGFISHER'S" papers will be continued in an early issue.

MEACHAM LAKE, N. Y., July 14.—Our fishing continues good, and all hands are happy. The water is very high and cool for this season of the year, and the trout have not been obliged to go to the spring brooks for cold water. Many large trout were taken in the rapids of the outlet in the first ten days of July by Professors Newbury and Tuttle, of Cornell, and through June many were taken in the lake trolling with flies. This is a very nice way to fish, as it requires very little exertion; and, you know, a good fisherman is a very lazy man. This may raise the dander of some who have worked a week for one trout. At the request of the boys I have kept the score of the fish caught in the lake and inlet and outlet, which were brought to the house. The number caught by parties fishing the outlet for a day we know nothing of. The score for May was 4,941 brook trout, 76 salmon trout; June, 2,113 brook trout, 15 salmon trout; July (twelve days), 978 brook trout. There has not been so little trolling for salmon trout in any season since I lived here (thirteen years); all hands like brook trout fishing the best. Very few small trout have been brought in.—A. R. FULLER.

CENTRAL LAKE, Mich., July 10.—The fishing for bass and trout in the Intermediate Lakes and their neighboring streams, seems better this season than for some time past. Several good catches of bass are reported, though few hereabout have done much fishing as yet. I forward a copy of the Bellaire *Breeze*, of July 9, with an item stating that Messrs. Briant, of Stanton, and Cheney, of Saginaw, took home from an excursion on the Cedar River some 200 trout of good size. Another "local" relates to an accident with a double-bitted axe, and may serve as a corollary to the note I lately sent you on that subject.—KELPIE.

HOW TO CATCH CRAYFISH.—If "W. L. A." will take an ordinary minnow net, tie a piece of fresh beef in the bottom, and drop it into the water where there are crayfish he will soon have more than he has any use for. They will fasten greedily to the meat, and will not let go until taken off.—G. H. MORGAN.

FLY-FISHING FOR SHAD.—Last week Mr. Thomas Chalmers took a shad with the fly in the Connecticut River at Holyoke, and one was taken by another gentleman. The season is not fairly open. The water may fall some this week and bring it right for sport. It continues high, but unless heavy rains set in it must fall.

TINKLEWATER PROTECTED.

TINKLEWATER is really but an apology for a stream. On an ordinary map you might search in vain for it and never find it. It only assumes some proportions on the township map, where the ambitious surveyor has made a Himalaya out of a range of little hills and a drain assumes the proportions of the Amazon. Tinklewater, it is believed, rises from the overflow of Farmer Brown's dairy, where a spring actually exists; but when that excellent woman Mrs. Brown has a heavy wash a drought sets in for Tinklewater. Little boys, intent on floating chip boats, sometimes dam up Tinklewater, and have been known to come home with wet feet. At certain seasons of the year Tinklewater quite disappears, and is only remembered by the dry gutter it has left behind it. Still Tinklewater has an outlet. With no body to speak of it has a mouth, and when it does occasionally flow it is then supposed to empty itself into Bogwash Pond. Bogwash is important, for an enterprising miller has imprisoned its water, and he runs a small grist mill. It is possible that had there been no Tinklewater there never would have been a Bogwash.

No one would ever have heard, then, of Tinklewater if not for the Tinklewater Anglers' Association. The Tinklewater Anglers' Association may be said to have made Tinklewater famous. The members of that organization did not deepen the channel of the little stream, or embank it, or stock it with fish. All they did was to hold a series of meetings, enlist the services of the local newspaper, and advertise Tinklewater. "At last," wrote the newspaper, "our beautiful Tinklewater is about to receive the attention due to it. No longer will the true lovers of sport be prevented from enjoying a day's amusement. No longer will the speckled beauties be hauled out of our ombrageous (*sic*) Tinklewater, and exhibited on the slabs of the New York fish dealers. By reference to our advertising columns it will be seen that our enterprising fellow-citizen, Peter Black, has in stock a thoroughly assorted line of angling implements. Give him a call."

Now, if the facts are sifted down to the bottom, it is doubtful whether there ever had been a trout in Tinklewater. Twenty-five years before the present date some ambitious man had conceived the idea of building a summer hotel not far from Tinklewater. Having only broken the ground for his edifice, he had a flaming prospectus printed, into which "Splendid Trout Fishing" had been introduced, but the hotel never was finished. How was it possible that a mere rivulet that ran as warm in summer as newly-drawn milk could have trout? Still the Tinklewater Anglers' Association voted unanimously that if there were no trout in their dribble of water, there ought to be, and it was moved and carried that the absence of trout in Tinklewater was entirely due to the New York fish dealers.

Now had Tinklewater any fish in it? When after a heavy rain the miller at Bogwash had more water than he wanted and closed his sluices, some few fish did run into Tinklewater. There was the catfish, the eel, an occasional sucker, the prettily banded sunfish, minnows in abundance, and the rarer perch. To catch a perch was an event. It was wonderful how many names were given that perch. Everybody called it by a different name. Some insisted that it was a trout, others that it was a bass, while a traveled person, who had once seen the ocean at a distance, called it a "sweet water codfish."

All the trouble about Tinklewater arose in this way: The daughter of the President of the Tinklewater Anglers' Association, an exceedingly pleasant and pretty young lady, invited several friends to spend a week with her, and at once a fishing party was proposed. The Tinklewater Angling Association had been quite a dead concern before this young lady, having finished her studies, came to live in her father's house at Tinklewater Cross Roads. Armed with their fishing poles, the young ladies fished Tinklewater and caught nothing. Had there even been an occasional catfish, the pretty anglers were too unskilled to catch it. Perhaps there were other sources of disappointment, as certain young gentlemen who had promised to be present were ungallant enough not to present themselves. Anyhow, the daughter of the President of the Tinklewater Anglers' Association came home without a fish, flushed and angry.

At once she went to her father. "What," she wanted to know, "is the use of your being the President of an anglers' association when here was the Tinklewater without a fish in it? Why don't you do something? That was the way with men. They fussed over things, and talked over things, and never did anything. There was that anglers' association, of which you have been President for years? What's the use of such an old fogy concern? I wish you had some women among your officers, then we would wake you up."

"Why, my dear," answered the President, "to my certain knowledge I haven't fished for twenty years, and I don't

know one kind of a fish from another. Sometimes, just for the name of the thing, a member of the association drops a line in Tinklewater, but I never heard of his catching more than three fish in three hours, though the newspaper always writes about it as if it were one of the most remarkable events. It's a pleasant old association however, and we meet two or three times a year and smoke in our rooms and play poker and read the sporting prints. To tell the honest truth, I take but a very passing interest in it, but we have lately got a new member, that's Podgers, the lawyer. I don't know how much of a fisherman he is. I don't think he owns a rod himself, but he is a very energetic kind of a fellow. I think he's fishing more for political capital than for suckers. He is an agitator, so he is. You might talk to him. He runs things in the association, and he is always having a law amended or is tinkering at our constitution. We don't take much interest in it, so he does pretty much as he pleases. I will have him up here, girls, and then state your grievances. What's the use, anyhow, of trying to fish in Tinklewater and getting yourselves hot and freckled?"

But the daughter of the most important man at Tinklewater Cross Roads was not to be put down in that way. "It's the greed of the great cities that destroys our rural rights! What do they care in New York whether we can have a day's fishing here or not? Our interests are no longer to be sacrificed. We have been trampled on long enough. I am not selfish. It is not alone Tinglewater I look at—yet there must be thousands of other streams like it in the State which have no fish in them. We must, we shall, we will have fish in them. By all means bring us your Mr. Podgers."

Podgers was invited to tea. At once the young lady told her griefs, and laid the case of the Tinklewater fishing excursion before Podgers.

Podgers, who was a good listener, at once seized the main points of the young lady's arguments. It was her disinterestedness, so he told her, which was so noble. "You are not speaking for Tinklewater, but for every river and lake in the State. Yours is a noble work. I am with you heart and soul. Is not the father of one of your friends a member of the Legislature?" he inquired.

"Yes," replied the young lady.

"That's the lever we will work upon. To think of the indignity of the thing! The daughter of an Assemblyman comes to Tinklewater and can't catch a siugle fish, and why?"

As the young lady did not know exactly the reason she could not answer. "I will tell you why. Because the shad that once swam in its pellucid waters have been taken away; likewise the bluefish. Salmon may have sported there, and why not the Spanish mackerel?"

"Why not?" chimed in the young lady.

"Lobsters, too, may have swarmed there; even porpoises. It is not improbable that the lordly bass cut through the wave of our Tinklewater."

"Exactly, and to-day all the possibilities of our beautiful Tinklewater have been destroyed," added the young lady.

"Now, what is to be done?" asked Podgers.

"What's to be done?" echoed the young lady.

"We will agitate the question. Tinklewater is ours, and the absence of the fish in it arises solely from the fact that our interests are sacrificed. Tinklewater shall be preserved. The preservation of Tinklewater includes the preservation of the State. No longer shall that huge maw of New York prevent a charming young lady and her invited guests from having a day's innocent pleasure. Here is my plan of campaign. Get your friend to write to her father. I will dictate the letter. Then your father, as the president of the Anglers' Assocition, will indorse my action. It is only a question of some labor, of a little persistence, and then the name of the Tinklewater Anglers' Association will ring through the land." At once over the strawberries and cream the plan for the protection of Tinklewater was perfected.

After that there seems to have been no difficulty in having the law passed at Albany. Although it might have been conclusively shown that Tinklewater never sent an ounce of fish to New York markets, notwithstanding the positive assurance that the most important of all the fish, a striped bass, never had been caught in Tinklewater, that they were as foreign to the streams of that portion of New York as were seals or walrus, nevertheless the law was passed and sanctioned by the Governor.

"It's a darned shame," said the legislator, "that my daughter Julia Jane can't have her day's fun out of Tinklewater—and the poor child went there and fished all day and didn't catch a thing. See the letter she wrote me about it? Podgers worked it up. He's a smart one. Guess he's looking after votes around that Tinklewater country. I don't eat much fish myself, save dried cod on a Friday, but I go in for my gal's sake for preventing them New York people from getting the better of us."

So the gush of Julia Jane, somewhat modified by Podgers, went the rounds of the Assembly, and though not one of the legislators had the faintest conception of what kind of fish he was protecting, where it came from, or its importance as food, striped bass was ruled out of New York for almost five months in the year.

The law injured the business of the fish dealers in the State to the amount of thousands of dollars, drove the trade to other cities, but the waters of Tinklewater were protected.

The daughter of the president of the Tinklewater Anglers' Association, it must be said, is perfectly unconscious of the mischief she has done. She will probably fish in Tinklewater, at the least, once a year for some time to come, and whether the stream is protected or not, neither she nor anybody else will ever catch anything but an occasional catfish there.—*New York Times.*

Fishculture.

Address all communications to the Forest and Stream Publishing Co.

SOME OBJECTIVE POINTS IN FISHCULTURE.

[Read before the American Fisheries Society.]

BY M. MCDONALD.

I DO not propose in this paper, here presented to the consideration of the members of the American Fisheries Society, either to describe the apparatus, discuss the methods, or estimate the results accomplished by the work of artificial propagation and planting of fish in the inland, river, and coast waters of the United States.

These topics have been and will be discussed during the progress of our meetings, by gentlemen much better qualified to instruct and interest you than I profess to be.

Your attention is invited not to what fishculture has already accomplished, but rather to what remains to be done, before we can consider its mission ended.

It is proposed, as briefly as may be, to indicate the objective points yet unattained, toward which our efforts, energies and investigations should be directed, and to suggest some of the agencies which must be invoked and which must co-operate in dealing with the important question, how shall we restore our inland, coast and ocean fisheries to their former abundance and maintain them at a maximum of production?

Less than a generation ago fishculture was an art, rude in appliances, crude in its methods, sentimental rather than practical in its aims, and insignificant in its results. To-day it confronts us as an industrial and economical question of the first rank—too grave in its issues, too vital in its relations to be ignored or disregarded.

In its inception, the artificial propagation of certain species of *Salmonidæ*, with the view of planting them in depleted streams in which the species was native or indigenous, was the aim and limit of fishculture as then understood and practiced.

The fishculture of to-day, broader in its aims, grander in its achievements, more rational in its methods and infinite in its possibilities, finds in the artificial propagation and planting of fish but one of the means to an end. This resource places at our command, in measure without stint, the seed of the harvest; we may scatter it broadcast in rivulet and river, in pond and lake and tidal waters, but whether the seed thus sown will grow and ripen to a full fruition depends upon conditions which must be studied, interpreted and defined, and where unfavorable, modified or eliminated.

We should be prepared, therefore, to appreciate and provide for the wide range of inquiry and investigation we, as a society, are called upon to suggest, to foster, or to inaugurate.

PHYSICAL AND BIOLOGICAL INVESTIGATIONS.

Each species with which we have to deal has a life history of its own. In its manner or mode of reproduction and development, in its habits, food and habitat, it is in essential relations to its environment. Our success in repopulating our rivers with species indigenous to them and in acclimating in new waters species which are valuable for food or sport, will be measured by the fidelity and precision with which we study, interpret, and apply the lessons taught us by the naturalist, the biologist, the physicist and the chemist.

It should be the business of this Society to enlist in its service or to invite to co-operation in its work all those whose intellectual activities find occupation and engrossment in studies and investigations, which may seem to the casual observer to have no practical application, but which are just as essential to the accomplishment of the work we have set before us, as is the artificial propagation and planting of fish; for upon the right interpretation of such investigations depends success or failure in the practical work of fishculture.

The biologist with his microscope is needed to reveal to eye and comprehension the marvellous story of embryonic development, and interpret and define the conditions which are favorable or unfavorable. With the thermometer in hand, the physicist marks out the paths traversed by the wandering schools of fish in the pathless ocean, and circumscribes the limits beyond which they may not pass.

With balance and reagents, the chemist appreciates those infinitesimal differences of salinity or composition, which may and do determine the presence or absence of certain species in certain areas of water. Nearly all departments of science may be, indeed must be, laid under contribution to furnish us the data upon which to build our conclusions.

REGULATION AND PROTECTION OF THE FISHERIES BY LAW.

Another important subject which should enlist the attention and engage the efforts of this society is the securing, through State or Federal legislation, of the enactment and enforcement of such laws as will regulate the seasons of fishing, the methods and apparatus of capture, and conserve, as far as may be, favorable natural conditions of reproduction.

It is true there are upon our statute books now laws without number seeking to regulate the fisheries. Usually these laws are dead letters, mere forceless verbiage. In some cases framed in ignorance, or dictated by the private interest which, for the time, dominates in the legislative assembly, they invite the very evils they seek to remedy.

Public sentiment everywhere has awakened to the necessity of rational legislation in reference to our fisheries. The fish-cultural and fish-protective associations, and the numerous fishing or angling clubs, in organized and active existence in all the States, are composed of men who are intelligent, educated and interested. They largely mould, direct and voice the public sentiment which suggests and controls legislation. It is the function—I may say it is the business—of this Society, both as a body and through individual members and co-workers, to stimulate inquiry and investigation in every direction, to collect, digest, and interpret the data thus obtained, and be prepared to suggest and recommend necessary legislation in the interest of the fisheries.

To secure the enactment of such legislation, all these associations, societies, and clubs should be brought into sympathy with our aims, and into co-operation with our efforts. As organized bodies or as individual members, they should become integral factors in the organization and work of this Society.

STATISTICS OF THE FISHERIES.

A third important objective point to be aimed at by this Society is to secure the institution by the National Government of measures to collect each season complete statistical returns of the fisheries. Such data are of the greatest importance in giving us a measure of the improvement or depreciation of our fisheries year by year and in appreciating and interpreting local fluctuations in the fisheries. I may add that the want of authentic statistical data of the sea fisheries has already cost the general Government not less than $5,000,000 under the provisions of the reciprocity treaty now in force between the United States and Canada.

Like questions of reciprocity and compensation may arise at any time between our own Government and the Canadian or other foreign governments. An accurate statistical presentation of the extent and value of our own sea fisheries, which we should always be prepared to furnish, will be our best protection against the extravagant demands and unwarranted concessions which have been asked and yielded in the name of reciprocity.

A consideration of the objective points in fishculture, a few of which are here briefly brought to your attention, will give some idea of the extent of the field which is to be exploited before this Society, and the agencies which it may enlist in organized and concerted action, shall have accomplished the mission committed to it.

Of the importance of this mission I need hardly speak. The necessity of utilizing every food resource of land and water grows more urgent as populations increase. It is an economical necessity that sea and lake, pond and river, should be brought up to and maintained at a maximum production, and to this Society is largely committed the satisfactory solution of this important question of political economy. When the methods of artificial propagation have been so perfected and cheapened as to be justified even from the standpoint of the utilitarian; when the conditions of success in breeding and rearing fish have been so well established and secured that we may be sure that the seed sown shall ripen to a productive harvest; when insurmountable obstructions no longer bar our migratory fishes from access to their spawning grounds or hinder the free circulation of the resident species in our rivers; when factories no longer discharge their poisonous waste into our rivers, so that they may flow from their mountain sources unpolluted to the sea; when the modes and apparatus of fishing are so regulated and restrained by law as not to tax too severely natural resources for recuperation and the permanent productiveness of the fisheries is thus established, then the aggressive mission of this Society will have, in a measure, ended.

It will still remain for us, by incessant watchfulness, vigilance and supervision, to conserve the important results which our efforts will have accomplished.

BLACK BASS IN GERMANY.—The following is an extract from a letter to Prof. Baird: "Berneuchen, June 22, 1885. Dear Sir: You will be interested to know that my thirteen black bass have spawned, and that I have caught 11,800 of the fry and placed them into ponds that have no other fish. I am now almost certain that this fish will be plentiful in a few years in my neighborhood.—M. v. d. BORNE.

SALMON IN THE HUDSON.—The Glens Falls, N. Y. *Republican* says: A few of the salmon from the fry placed in the Clendon brook by the U. S. Fish Commissioners a year ago last May have been caught lately, and, as required by law, placed in the water again. The specimens taken measured from four to six inches. They are silvery white, with bright red spots the size of a large pin-head an eighth of an inch apart running along the lateral line. These salmon will disappear next summer and find their way through the Hudson to salt water, when, after the lapse of a year or two, they will return as near to the waters where their babyhood was spent as possible to spawn. Whether they will succeed in coming through the foul waters of New York Bay remains to be seen. The bright red speckles will also disappear, and in place of the speckles black spots more generally distributed will appear. One hundred thousand of these fish have been placed in the Clendon Brook, the last invoice of which arrived two months ago. If this experiment proves successful, salmon fry will undoubtedly be placed in larger quantities in all the tributaries of the Hudson hereabouts.

PROTECT THE LOBSTER.—Maine lobster-canning establishments have closed earlier than usual this season, on account of the scarcity of the crustaceans. The fact carries another warning, if any were needed, of the danger that this valuable shellfish will become extinct unless strict measures for its preservation are enforced. Possibly the close-time and ten-inch laws were enacted too late or are insufficient to repair the ravages caused by the demand to which the progress of the canning business has given rise within a year. Even a complete cessation, by common consent, of lobster catching, except for the home market, for a few seasons would be preferable to the extinction which is threatened.—*Belfast (Me.) Republican Journal.*

CARP CULTURE.—We have a profusely illustrated pamphlet of 100 pages entitled "The A B C of Carp Culture," by Milton P. Peirce, published by A. I. Root, Medina, O., price fifty cents. The work is largely a collection of the author's scattered writings, and contains much that will be of value to those interested. The publisher is widely known as an enthusiastic bee man.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent. Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2519.**

STUD FEES.

Editor Forest and Stream:

The communication in your paper of July 16, signed "Surrey" (I should much prefer the real name of the writer) has been read by me.

As the owner of champion Graphic I chose to place his stud fee at $100, and I do not recognize the right of "Surrey" or any one else to find fault with the sum named, except that he or they are at liberty not to make application for the dog's services.

I imported Graphic solely for the use of my own bitches without any intention of placing him in the stud. He had no sooner arrived here than I was besieged with begging letters (I use the word "begging" advisedly) for his services at a nominal fee from owners of bitches I would not allow him to serve at any price, because they were not what I consider pointers. On the other hand, I was urged by many gentlemen (sportsmen) to place him in the stud even if I named a fee which would be prohibitory to owners of bitches of doubtful pedigrees and reputation. Not wishing to withdraw him entirely, as Mr. Lorillard has done some of his dogs, I thought I would allow him to serve a limited number of bitches. I believed the best guarantee I could have that the bitches were good would be the payment of the fee named, and that owners of nondescript animals would not be likely to pay it.

Furthermore, as I am not in the dog business, I do not propose keeping a secretary to look up and unravel the doubtful pedigrees of bitches that might be sent to him. When "Surrey" or any one else in this country can produce a dog four years old, or of any other age, that can show such a record himself or the get that Graphic can, both as winners at Birmingham, the Crystal Palace, at field trials and elsewhere, perhaps it will be time to compare stud fees with some other dogs I have in mind who are dear as stock getters at $10.

I will further add that when such breeders as Mr. Sam Price, Mr. Statter, Mr. J. E. Mason, Mr. Salter and others send their best field trial bitches to a dog in the stud, that dog needs no advocacy from any one on this side of the ocean. As I have before said, I did not import Graphic to make money out of him. I had intended dividing any money he might earn as future prizes at field trials and on the bench among puppies of his get. "Surrey" and others who are desirous of seeing what kind of spurs Graphic can win in this country, will have an opportunity, both in the field and on the bench, unless some accident befalls the dog, and will also have a chance to compare some of his get with others, both in next year's Derby and at the various shows. "Surrey" ought to know that champion Graphic's reputation is not alone confined to England, but that his get have been eagerly sought for in all quarters, Climax of Braunfels having won the puppy stakes at Berlin this year.

A winner of first in field trial classes and a championship in England mean something, and before a dog can even enter the latter class for competition, he must win at least seven first prizes at shows registered in or for the Kennel Club Stud Book—three of which must be in the challenge class, special and other prizes not counting.

How many of our so-called champions here would reach, do you think, even the challenge class in such company as Graphic

has uniformly had? He has won in every champion class in which he was ever entered, and he has been in that class in every important show since he was two years old, and besides defeated the then champion setter of England in the class for the best sporting dog of all classes. Compared to some pointers advertised here in the stud at $50, his services are cheap at $500. None of his progeny are throaty. None weedy. None gun shy. All have courage and most of them pace, and all, with scarcely an exception, are up to show form, having muscle, bone and quality combined.

When I purchased Graphic I had the choice (at much less figures) of many of the best dogs in England. I made diligent inquiry and found none combining so many good qualities in so great a degree as Graphic. Mated with proper bitches, the result of such breeding is not a matter of doubt, but as near certain as anything in the future can be.

In conclusion I desire to say that I am convinced that the pointer at no distant day will assume the position in this country to which he is justly entitled and which he to-day holds in England. The breeding of pointers is constantly progressing in the right direction, while setters have certainly not advanced in the same proportion of late years.

JAS. L. ANTHONY.

NEW YORK, July 17.

THE IRISH WOLFHOUND.

A WELL-KNOWN gentleman, who is a native of the ever Green Isle, remarked to a New York friend a short time since, "We have a breed of dogs in Ireland that is extinct." The Irish Wolfhound Club of Great Britain has taken the matter in hand, and with commendable zeal is endeavoring to return this famous breed to its former state. Below we give our readers a well written account of the breed from the pen of Captain G. A. Graham, Hon. Secretary and Treasurer of the club, to which we add a list of the officers of the club, together with the standard of points:

It is with a certain amount of diffidence that this essay is entered upon, as there is a widely-spread impression that the breed to be treated of is extinct. That we are in possession of the breed in its original integrity is not pretended; at the same time it is confidently believed that there are strains now existing tracing back, more or less clearly, to the original breed; and it also appears to be tolerably certain that our modern deerhound is descended from that noble animal, and gives us a very fair idea of what he was, though undoubtedly considerably his inferior in size and power. Had it not been for these facts, the courage to write this article might have been wanting; but they appear to be so clear to the writer that he can proceed, with the feeling that most of his readers will perceive that he is amply justified in undertaking a history and description of this very magnificent example of the canine race—that, indeed, may be said to have been its king.

There have been several very interesting and clever essays written on this subject. Two of the ablest and most valuable were written by Mr. A. McNeill, of Colonsay, in 1838, and Mr. H. D. Richardson, in 1841. These treat exclusively of the Irish wolfhound, though in Mr. McNeill's case it is more to show the identity of the breed with the modern deerhound that he writes. Richardson, on the other hand, proceeds to show us that, though undeniably of the same stamp, the Irish dog was far superior in size and power, and that from him is descended, in these later days, the modern deerhound. Both these authors have shown considerable ability and ingenuity in their arguments, and no one can deny that they are worthy of every consideration. Richardson would appear to be in error on some points, but in the main his ideas would certainly appear to be reasonable and correct. That Richardson was highly qualified to offer a sound and most valuable opinion on the subject is proved by the very admirable manner in which he has treated of and described almost every known breed of dog, whether British or foreign. As yet his book is by far the best published on the dog—none excepted—though it is a modest and unpretending production. That we have in the deerhound the modern representative of the Irish wolfdog is patent, of less stature, less robust, and of slimmer form; the main characteristics of the breed remain, and in very exceptional instances specimens occur which throw back to and resemble in a marked manner the old stock from which they have sprung. It is not probable that our remote ancestors arrived at any very high standard as to quality or looks. Strength, stature and fleetness were the points most carefully cultivated—at any rate, as regards those breeds used in the capture of large and fierce game. It is somewhat remarkable that while we have accounts of all the noticeable breeds from a remote period, including the Irish wolfdog, we do not find any allusion to the deerhound, save in writings of a comparatively recent date, which would in a measure justify us in supposing that the deerhound is the modern representative of that superb animal.

It is a matter of history that this dog was well known to and highly prized by the Romans, who, we are led to understand, frequently used him in their combats in the arena, for which his great size, strength, and activity eminently fitted him.

It has always been a mooted point whether the Irish wolfdog was, strictly speaking, a greyhound, or was of a more robust form, approaching the mastiff. Let us, then, proceed to investigate the question.

Richardson tells us that "Pliny relates a combat in which the dogs of Epirus have a part. He describes them as much bigger than mastiffs, and of greyhound form, detailing an account of their contests with a lion and an elephant." This, he thinks, suffices to establish the identity of the Irish wolfdog with the far-famed dogs of Epirus! Strabo describes a large and powerful greyhound as having been in use among the Celtic and Pictish nations, and as being held in such high estimation by them as to have been imported into Gaul for the purposes of the chase. Silius describes a large and powerful greyhound as having been imported into Ireland by the Belgæ, thus identifying the Irish wolfdog with the celebrated Belgic dog of antiquity, which we read of in so many places as having been brought to Rome for the combats of the amphitheater.

Sir James Warr, in his "Antiquities of Ireland," thus writes regarding the Irish wolfdog about 1630 (?): "I must here take notice of those hounds which, from their hunting of wolves, are commonly called wolfdogs—being creature of great size and strength, and of a fine shape. I cannot but think that these are the dogs which Symmachus mentions in an epistle to his brother Flavonius. 'I thank you,' says he, 'for the present you have made me of some *Canes scotici*, which were shown at the Cirensian Games, to the great astonishment of the people, who could not judge it possible to bring them to Rome otherwise than in iron cages.' I am sensible that Mr. Burton (Itinery of Anton, 220), treading the footsteps of Justus Lipsius (epist. ad. Belg. Cant. i., p. 44), makes no scruple to say that dogs intended by Symmachus were British mastives. But with submission to great names, how could the British mastive get the appellation of Scoticus in the age Symmachus lived? For he was Consul of Rome in the latter end of the fourth century, at which time—and for some time before and for many centuries after—Ireland was well known by the name of Scotia, as I have shown before (chap. i.). Besides, the English mastive was no way comparable to the Irish wolfdog in size or elegant shape, nor would it make an astonishing figure in the spectacle exhibited in the Circus. On the other hand, the Irish wolfdog has been thought a valuable present to the greatest monarch, and is sought after and is sent abroad to all the quarters of the world; and this has been one cause why that noble creature has grown so scarce among us, as another is the neglect of the species since the extinction of wolves in Ireland, and even of what remain, the size seems to have dwindled from its ancient stateliness."

Warr also gives as a frontispiece to his book an allegorical representation of a passage from the Venerable Bede, in which two dogs are introduced, bearing a very strong resemblance to the Irish wolfdog or Scottish deerdog, in those days doubtless the same animal. The Venerable Bede was born 672, died 735.

It may be as well here to quote the following interesting extract from Richardson, culled by him from the *Irish Penny Journal:* "The Scoti, who were in possession of the island (Ireland) at the time of the introduction of Christianity, appear to have been to a great extent the successor of a people whose name and monuments indicate a close affinity with the Belgæ (a Teutonic tribe) of Southern Britain. A people also called Cruithore by the Irish annalists, who are identifiable with the Picts of Northern Britain, continued to inhabit a portion of the island distinct from the Scoti until after the Christian Mission; and it is observable that the names of mountains and remarkable places in that district still strikingly resemble the topographical nomenclature of those parts of North Britain which have not been affected by the Scotic conquest.

"The monuments and relics which attest the presence of the people considerably advanced in civilization at some period in Ireland, such as Cyclopean buildings, sepulchral mounds, containing stone chambers, mines, bronze instruments, and weapons of classic form and elegant workmanship, would appear to be referable to some of the predecessors of the Scoti, and indicate a close affinity between the earliest inhabitants of Ireland and that ancient people." Richardson then goes on to say we may infer then that, as Ireland was peopled by the Belgæ, the Belgic dog of antiquity was the source whence we derived our Irish greyhound.

We are informed by two very eminent authorities, the Venerable Bede and the Scottish historian Major, that Scotland was peopled from Ireland. We know that by the early writers Scotland was styled Scotia Minor, and Ireland Scotia Major, and it is scarcely necessary to make any remark as to the native languages of the primitive inhabitants of the two countries. The colonization therefore of Scotland from Ireland under the conduct of Renda being admitted, can we suppose that the colonists would omit taking with them specimens of such a noble and gallant dog, and one that must prove so serviceable to their emigrant masters, and that, too, at a period when men depended upon the chase for their subsistence? True, this is but an inference, but is it not to be received as a fact when we find that powerful and noble dog, the highland deerhound, a tall rough greyhound, to have been known in Scotland since its colinization? Formerly it was called the wolfdog, but with change of occupation came change of name. In Ireland wolves were certainly in existence longer than in Scotland, but when these animals ceased to exist in the former country, the wolf dogs became gradually lost. Not so in Scotland, where abundant employment remained for them even after the days of wolf hunting were over. The red deer still remained, and useful as had these superb dogs proved as wolfdogs, they became perhaps even more valuable as deerhounds."

Richardson then goes on to show us, from Ossian's poems, that such dogs appertained to the chieftains regarding whose prowess, etc., he sings; but the writer does not apprehend that any real value can be placed on Ossian's accounts prior to the date at which they professed to be issued in a collective form by MacPherson, viz., about 1770, as in the judgment of many persons competent to form a just opinion those poems almost entirely owe their origin to the prolific brains of the supposititious translator. Ossian is supposed to have flourished in the third century.

In the ninth century the Welch laws contained clauses entailing heavy penalties on any one found maiming or injuring the Irish greyhound, or, as it was styled in the code alluded to, "Canis Graius Hibernicus," and a value was set upon them equal to more than double that set on the ordinary greyhound.

Campden, about 1568, says, "The Irish wolfhound is similar in shape to a greyhound, bigger than a mastiff, and tractable as a spaniel."

Holinshed's, or rather Stainhurst's, description of Ireland, about 1560, contains this short account of the noble wolfdog: "Ireland is stored of cows, excellent horses, of hawks, fish, and fowl. They are not without wolves, and greyhounds to hunt them, bigger of bone and limb than a colt."

Gough, in his edition of "Camden," published 1789, has this passage on a wolfhound: "Bishop affirmed that wolves still infested the wild and solitary mountains. Under the article of "Greyhounds," Mr. Camden (writing probably about 1530-60) seems to place the wolfhounds, which are remarkably large, and peculiar to this country."

In November, 1562, the Irish chieftain, Shane O'Neill (possibly an ancestor of the Lords O'Neill, to be alluded to as owning Irish wolfhounds later on) forwarded to Queen Elizabeth, through Robert Dudley, Earl of Leicester, a present of two horses, two hawks and two Irish wolfdogs; and in 1585, Sir John Perrott, who was Deputy of Ireland from January, 1584, to July, 1588, sent to Sir Francis Walsingham, then Secretary of State in London, "a brace of good wolfdogs, one black, one white."

Later still, in 1608, we find that Irish wolfhounds were sent from Ireland by Captain Desmond, of Duncannon, to Gilbert, Earl of Shrewsbury. When Sir Thomas Rowe was ambassador at the court of the great Mogul, in the year 1615, that Emperor desired him to send for some Irish greyhounds as the most welcome present he could make him. The foregoing are from an article on the Irish wolfhound, by Mr. Harting, that appeared in "Bailey's Magazine" for September, 1879.

Ware is one of the few old writers (1654) who has said anything on the Irish wolfdog, and his words are scanty. "Although we have no wolves in England, yet it is certain we have had heretofore routs of them as they have at present in Ireland. In that country I bred a race of greyhounds, which is fleet and strong, and bears a natural enmity to the wolf."

Evelyn, about 1660-70, says: "The Irish wolfhound was a tall greyhound, a stately creature indeed, and did beat a cruel mastiff. The bulldogs did exceedingly well, but the Irish wolfdog exceeded." He was then describing the savage sports of the Bear Garden.

Ray, about 1697, describing the Irish greyhound, says: "The greatest dog I have yet seen, surpassing in size even the Molossus (Mastiff?) as regards shape of body and general character, similar in all respects to the common greyhound, their use is to catch wolves."

The writer would remark in passing that there is but little doubt that the ordinary greyhound of that date was a rough-coated dog.

Buffon, about 1750-60, speaks of these dogs as follows: "They are far larger than our largest Matins, and they are very rare in France. I have never seen but one, which seemed to me, when sitting quite upright, to be nearly five feet high, and to resemble in form the dog we call the Great Dane, but it differed from it greatly in the largeness of its size. It was quite white, and of a gentle and peaceable disposition."

From Goldsmith, about 1770, the following is extracted: "The last variety, and the most wonderful of all that I shall mention, is the great Irish wolfdog, that may be considered as the first of the canine species. This animal, which is very rare even in the only country in the world where it is found, is rather kept for show than use, there being neither wolves nor any other formidable beast of prey in Ireland to require so powerful an antagonist. The wolfdog is therefore bred up in the houses of the great, or such gentlemen as choose to keep him as a curiosity, being neither good for hunting the hare, the fox, nor the stag, and especially unserviceable as a house dog. Nevertheless he is extremely beautiful and majestic in appearance, being the greatest of the dog kind to be seen in the world. The largest of those I have seen—and I have seen about a dozen—was about four feet high, or as tall as a calf of a year old. He was made extremely like a greyhound, but more robust, and inclining to the figure of the French Mâtin or the Great Dane. His eye was mild, his color white, and his nature seemed heavy and phlegmatic; this I ascribed to his having being bred up to a size beyond his nature. The greatest pains have been taken with these to enlarge the breed, both by food and matching. This end was effectually obtained indeed, for the size was enormous, but, as it seemed to me, at the expense of the animal's fierceness, vigilance, and sagacity. However, I was informed otherwise; the gentleman who bred them assuring me that a mastiff would be nothing when opposed to one of them, who generally seized their antagonist by the back; he added that they would worry the strongest bulldog in a few minutes to death. But this did not appear either in their figure or their inclinations; they seemed rather more timid than the ordinary race of dogs, and their skin much thinner, and consequently less fitted for combat.

"Whether with these disadvantages they were capable, as I was told, of singly coping with bears, others may determine; however, they have but few opportunities in their own country of exerting their strength, as all wild, carnivorous animals there are of the vermin kind. Mons. Buffon seems to be of the opinion that these are the true Molossian dogs of the ancients; he gives us reason for his opinion, and I am apt to think it ill grounded. Nemesianus, in giving directions for the choice of a bitch, advises to have one of Spartan or Molossian breed, and among several other perfections he says that the ears should be dependant and fluctuate as she runs."

This is, however, by no means the case with the Irish wolfdog, whose ears resemble those of the greyhound, and are far from fluctuating with the animal's motions. But of whatever kind these dogs may be, whether known among the ancients or produced by a later mixture, they are now almost worn quite away, and are very rarely met with even in Ireland. If carried to other countries they soon degenerate, and even at home, unless great care be taken, they quickly alter. "They were once employed in clearing the island of wolves, which infested it in great plenty; but these being destroyed, the dogs also are wearing away, as if nature meant to blot out the species when they no longer had any services to perform." Brooke, in his "Natural History" of 1772, states: "The Irish wolfdog is as 'Ray' affirms, the highest dog he had ever seen; he being much larger than a mastiff dog, but more like a greyhound in shape." Smith, in his "History of Waterford" (1774), uses very similar words; "The Irish greyhound though formerly abounding in this country, is likewise become nearly extinct. This dog is much taller than the mastiff, but made more like a greyhound." Pennant (1776-81) informs us that the Irish greyhound—a variety once very frequent in Ireland, and used in the chase of the wolf, now very scarce—is a dog of great size and strength.

From Bewick (1792) we gather that "the Irish greyhound is the largest of the dog kind, and its appearance most beautiful. It is only to be found in Ireland, where it was formerly of great use in clearing that country from wolves. It is now extremely rare, and kept rather for show than use, being equally for hunting the stag, the fox, or the hare. These dogs are about three feet high, generally of a white or cinnamon color, and made somewhat like a greyhound, but more robust. Their aspect is mild; their disposition peaceful; their strength is so great that in combat the mastiff or bulldog is far from being equal to them. They mostly seize their antagonists by the back and shake them to death, which their great strength generally enables them to do." Mons. Buffon supposes the Great Danish dog to be only a variety of the Irish greyhound. About this time (1794) certain dogs, in the possession of the then Lord Altamont, were put forward as being Irish wolfdogs; but there appears to be no doubt whatever that these dogs were degenerate specimens of the Great Dane. Mr. Lambert, describing them to the Linnæan Society, stated that "they were the only ones in the kingdom; their hair was short and smooth, the color brown and white and black and white." An engraving of one of these dogs is given in the "Encyclopædia Britannica," published in 1810, and it represents an underbred Great Dane, of dull and mild appearance. Richardson at one time was in error regarding these dogs, for he accepted them as being true specimens of the Irish wolfhound; but he was afterward, from careful inquiry and research, quite disabused of any such idea, and concluded that the Irish wolfhound was a rough greyhound of gigantic stature and immense power.

To suppose that these dogs were Irish wolfhounds was absurd to a degree, as that breed was known to be very scarce, whereas the Great Dane was (and is) to be met with in great numbers on the Continent.

The present Marquis of Sligo informed the writer about twelve years ago that he had often made inquiries from persons who had seen his father's dogs, and as far as their descriptions would enable one to judge, they rather resembled some of the German boarhounds, being rather like powerful shaggy greyhounds, but a good deal larger. It is probable that the shagginess was a mistake, as Mr. Lambert distinctly states them to have been smooth.

It is noticeable that Snyders has represented rough dogs of greyhound character in his pictures of boar hunts, as well as the smooth, spotted Great Danes. At the same time, though many inquiries have been made, such a thing as a genuine boarhound with a rough coat cannot be heard of.

E. Jesse tells us that the late Lord Derby purchased the portrait—in Mr. Lambert's possession—of one of Lord Altamont's dogs. Now, it is a well-ascertained fact that, in the face of this model (!), Lord Derby bred, as Irish wolfdogs, a very powerful and robust dog of deerhound character (!!), showing that he set small value on the picture as representing the true breed of Irish wolfdog.

In the "Encyclopædia Britannica" of 1797 we are shown a drawing of the Irish gre-hound, which represents a very thick-set, tall greyhound, with a rough coat and massive head; color apparently brindle or black and white.

The "Sportsman's Cabinet," a very valuable old book on dogs, of which there were but a limited number of copies published in 1803, and which is illustrated by very good engravings after drawings from life by Reinagle, R.A., says: "The dogs of Greece, Denmark, Tartary and Ireland are the largest and strongest of their species. The Irish greyhound is of very ancient race, and still to be found in some far remote parts of that kingdom, though they are said to be reduced even in their original climate. They are much larger than the mastiff; exceedingly ferocious when engaged." A remarkably spirited drawing is given of this dog, which, though faulty in some minor parts, gives us an admirable idea of what this grand dog was.

Notwithstanding the undoubted resemblance of this sketch to a gigantic rough greyhound of great power, the letterpress is continued to the effect that the dog is identical with the Great Dane—a totally different dog in appearance—which is manifestly absurd; and on the letterpress we can accordingly put no great stress, though the portrait undoubtedly has a real value. E. Jesse coincides in this opinion, as when speaking of the "Sportsman's Cabinet," he says: "It is a work more remarkable for the truth and fineness of its engravings than for the matter contained in it." It is a noticable and remarkable fact that whilst this book professes to treat of every known variety of British dog, it does not make any mention whatever of the Scottish deerhound or any breed of dog used for hunting or taking deer, save the stag, blood and old Southern hounds.

A few extracts from this book are given that bear on the subject under consideration, though not taken from the chapter descriptive of the Irish wolfhound or greyhound.

"The Danish dog, Irish greyhound and common greyhound of this country, though they appeared different, are said by 'Buffon' to be but one and the same dog. The Danish dog, says he, is but a more corpulent Irish greyhound; the common

greyhound is the Irish greyhound rendered thinner and more delicate by culture; for these three dogs, though perfectly distinguishable at first sight, differ no more from each other than three human masculine natives of Holland, Italy and France. And by the same reasoning he proceeds to justify the supposition that had the Irish greyhound been a native of France, he would have produced the Danish dog in a cooler climate and the common greyhound in a warmer one. This conjecture, he observes, is absolutely verified by experience, for the Danish dogs are brought to us from the North, and the greyhounds from Constantinople and the Levant."

The greyhound, large Danish dog, and Irish greyhound have according to Buffon, exclusive of their likeness of figures and length of muzzle, a similitude of disposition. The peculiar irritability of the olifactory sensation seems by natural observation to depend more upon the largeness than the length of the nose, for the greyhound, Danish dog, and Irish greyhound have evidently less power of scent than the hound, terrier, etc. The bulldog and Irish greyhound have their ears partly erect. The Great Danish dog, taken from thence to Ireland, the Ukraine, Tartary, Epirus and Albania has been changed into the Irish greyhound, which is the largest of all dogs. The greyhound and Irish greyhound, Buffon goes on to say, have produced the mongrel greyhound, also called the greyhound with the wolf's hair—in all probability the present Scotch deerhound (?). At any rate, this would tend to prove that the Irish dog was rough as to coat.

There is mention of the Irish wolfhound in Bingley's "British Quadrupeds" (1809). The illustration is simply a deformed greyhound, and he indorses Pennant's and Goldsmith's views as to the appearance, etc., of the dog. Captain Brown (1829) also in his book on dogs, alludes to the Irish wolfdog or greyhound, giving an absurd drawing; his remarks are few and of little worth. Dr. Scouler, reading a paper before the Dublin Geological Society in 1837 says: "The Irish wolfdog was a very distinct race from the Scotch hound or wolfdog, which resembled the Irish breed in size and courage, but differed from it by having a sharper muzzle and pendant ears." Curious that "a sharper muzzle and pendant ears" should constitute "a very distinct breed!"

McNeill, in his article on the Irish wolfhound, written 1838, says: "Whatever may have been the origin of the name, there is little doubt as to the antiquity of a species of dog in this country (Ireland), bearing a great resemblance in many points to the greyhound of the present day, and passing under that name, though evidently a larger, nobler, and more courageous animal." He goes on to argue that "from the rough and uncultivated state of the country, and the nature of the game that was then the object of the chase, viz., deer of all sorts, wolves and foxes, that the dogs would be of a larger, fiercer and more shaggy description than the greyhounds of the present day."

From the "Museum of Animated Nature," published in 1842 to '45 the following account of the Irish wolfdog is taken: "In Scotland and Ireland there existed in very ancient times a noble breed of greyhound used for the chase of the wolf and deer, which appears to us to be the pure source of our present breed. It is quite as possible that the Mâtin is a modification of the ancient greyhound of Europe—represented by the Irish greyhound or wolfdog—as that is the source of that fine breed as Buffon supposes. Few, we believe, of the old Irish greyhound exist."

From a very interesting book entitled "Anecdotes of Dogs," by E. Jesse, published 1846, the following is gleaned: "A certain degree of romance attaches to the Irish wolfdog, but so contradictory are the accounts handed down that it is difficult to do justice to him. The dog flourished at the time of early kings of Ireland, and with harp and shamrock is regarded as one of the national emblems of the country. A gentleman of ancient family (whose name it is unnecessary to mention, from his having been engaged in the troubles which agitated Ireland about forty years ago) went into a coffee room at Dublin during that period, accompanied by a noble wolfdog, supposed to be one of the last of the breed.

"There was only one gentleman in the room, whom seeing, the dog went up to him, and he began to notice him. His owner, in considerable alarm, begged him to desist, as the dog was fierce and never would let a stranger touch him. The gentleman resumed his seat, when the dog came to him and showed signs of the greatest pleasure at being noticed, and allowed himself to be fondled. His owner could not disguise his astonishment. 'You are the only person,' he said, 'whom that dog would ever allow to touch him without showing resentment. May I beg the favor of your name?'—mentioning his own at the same time. The stranger announced it: he was the last of his race—one of the most noble and ancient in Ireland, and descended from one of its kings. 'I do not wonder,' said the owner of the dog, 'at the homage the animal has paid you. He recognizes in you the descendant of one of our most ancient races of gentlemen, to whom this breed of dog almost exclusively belonged, and the peculiar instinct he possesses has now been shown in a manner which cannot be mistaken by me, who am so well acquainted with the ferocity this dog has hitherto shown to all strangers.'"

"In a poem written by Miss Catherine Phillips, about 1660, the character of the Irish wolfhound is well portrayed, and proves the estimation in which he was held:

" 'Behold this creature's form and state;
Him nature surely did create
That to the world might be exprest
What mien there can be in a beast.
More nobleness of form and mind
Than in the lion we can find;
Yea, this heroic beast doth seem
In majesty to rival him.
Yet he vouchsafes to men to show
His service and submission too.
And here we a distinction have:
That brute is fierce—the dog is brave;
He hath himself so well subdued
That hunger cannot make him rude;
And all his manners do confess
That courage dwells with gentleness.
War with the wolf he loves to wage,
And never quits if he engage;
But praise him much, and you may chance
To put him out of countenance;
And having done a deed so brave,
He looks not sullen, yet looks grave.
No fondling playfellow is he;
His master's guard he wills to be,
Willing for him his blood he spent,
His look is never insolent.
Few men to do such noble deeds have learned
Nor having done could look so unconcerned.' "

"The strength of these dogs must have been very great; a nobleman informed me that when he was staying with the Knight of Kerry, two Irish wolfdogs made their escape from the place where they were confined, and pulled down and killed a horse which was in an adjoing paddock."

"The Irish wolfdogs were formerly placed as the supporters of the arms of the ancient monarchs of Ireland. They were collared "or," with the motto, 'Gentle when stroked, fierce when provoked.'"

The well-known Mrs. C. Hall wrote to Jesse the following interesting account of an Irish wolfdog: "When I was a child (probably 1812-15), I had a very close friendship with a genuine old wolfdog, 'Bruno' by name. He was the property of an old friend of my grandmother's, who claimed descent from the Irish kings. His name was O'Toole; his manners were the most courtly you can imagine. His visits were my jubilees. There was the kind, dignified old gentleman, who told me tales, and there was his tall, gaunt dog, gray with age, and yet with me full of play. There were two terriers rough, etc., etc. O'Toole and his dogs always occupied the same room, the terriers on the same bed as their master. No entreaty, however, would induce Bruno to sleep on anything softer than stone. He would remove the hearth-rug and lie on the marble. His master used to instance the dog's disdain of luxury as a mark of his noble nature.

"The O'Toole had three of these dogs. I can recall nothing more picturesque than that majestic old gentleman and his dog, both remnants of a bygone age. Bruno was rough—but not long-coated—very grave, observant, enduring every one, very fond of children, playing with them gently, but only crouching and fawning on his master; and that, O'Toole would say, 'is proof of my royal blood.'"

Jesse offers his thanks to Mrs. Hall and to Lady Morgan for their assistance on this matter; the latter introduces the late Hamilton Rowan and his Irish wolfdog Bran into one of her novels.

Richardson tells us that the late Sir W. Betham, Ulster King-at-Arms, an authority of very high importance on any subject connected with Irish antiquities, in communicating with Mr. Haffield, who read a paper on the Irish wolfhound before the Dublin Natural History Society, 1841, states as follows: "From the mention of the wolfdogs in the old Irish stories and poems, and also from what I have heard from a very old person, long since dead, of his having seen them at The Neale, in the County of Mayo, the seat of Sir John Browne, ancestor to Lord Kilmaine, I have no doubt they were a gigantic greyhound. My departed friend described them as being very gentle, and that Sir J. Browne allowed them to come into his dining-room, where they put their heads over the shoulders of those who sat at table; they were not smooth-skinned like our greyhounds, but rough and curly-haired."

"The Irish poets call the wolfdog 'cu,' and the common greyhound 'gayer,' a marked distinction, the word 'cu' signifying a champion."

The two following anecdotes are given as showing the great courage and power of the Irish greyhound as compared with wild and ferocious animals with which he was opposed in combat:

From the "Sportsman's Cabinet."—It begins by treating on the possibility of breeding between dog and wolf, and goes on to say.—"That every chance might be afforded for the success of this experiment, so industriously made, a she-wolf, taken from its wild state of nature in the woods when only three months old, was shut up in a large court surrounded by a high wall, with an Irish greyhound of the same age. To this court no other beast whatever could have access, and within it was proper shelter for their individual or joint retirement. They were equally strangers to their own species, and knew no person but the man by whom they were fed. In this state they were kept together for three years, that the result of the experiment might be more fully known and confirmed. During the first twelve months they perpetually played together, and had every appearance of being exceedingly fond of each other; the second year disputes constantly arose, but more particularly about their provisions, though supplied in great plenty: it was remarked that such always originated with the wolf. When meat and bones were given to them on a large wooden platter, the wolf, instead of seizing either, instantly drove off the dog, then laid hold of the edge of the plate so dexterously as to allow nothing to fall, and carried off the whole. She has been seen to run in this manner with the dish in her teeth five or six times round the court, and never set it down unless to take breath, devour the meat, or to attack the dog when he approached. The dog was at all times evidently stronger than the wolf, but as he was less ferocious a collar for his neck was found necessary for the preservation of his life. By the expiration of the second year these combats became more frequent, and the result of each more serious, in which state a collar was found equally necessary for the wolf, who in every successive dispute was worse used than before.

"During the whole of the two years not the least tendency to venery could be observed in either the one or the other; at the end of the third year these sensations became perceptible in each, but produced no marks of affection in either. The state they were in, instead of rendering them more peaceful and accommodating to each other, only seemed to promote new cause of contest, and excite more frequent opportunities to renew their quarrels. Discontented howlings and roarings of disappointment were incessant, they never approached each other but to fight, and at the end of three weeks were both completely emaciated. In this eternal warfare and struggle for superiority they fought with such determined desperation that the wolf was killed in the contest. Upon the death of his companion the dog was set at liberty, but was obliged to be shot, owing to its ferocity."

The second story is taken from "Two Years in Canada," by Major Strickland, written in 1825: "I loaded my gun with ball, and in company with Dennis and his father started off for the place where Master Bruin had been seen. I took Neptune with me, a remarkably fine Irish greyhound, one of the most powfully-built dogs of that breed I had ever seen, and well he proved his strength and courage this day. After proceeding nearly two miles, Neptune raised his head and looked around; in the next instant he was dashing along in full chase of Mr. Bruin, who was making the best of his way up the hill. We joined the chase with alacrity, but not in time to witness the set-to between these savage opponents; for while we were gaining the brow of the hill a desperate fight was going on only a few yards from us, Neptune sometimes having the best of it, sometimes Bruin. I found it impossible to fire for fear of killing the dog. We then tried to pull him off, so as to enable me to shoot the bear; this we found equally difficult, the dog had such fast hold of his throat: he was, indeed, perfectly furious. With the aid of the dog, etc., etc., the bear was slung to a pole alive, and the homeward march began. I had great difficulty in keeping the dog off; he would rush in avery moment, in spite of all I could do, and seize poor Bruin by the side and shake him most unmercifully. I had enough to do, with the help of a stout stick, to keep him and the bear in order; the latter was equally violent, and tried to claw the men carrying him. I wished to keep the bast alive, but was destined to be disappointed, for what with the savage attack of the dog, and the beating I was obliged to give him to keep him quiet, he died before we reached the clearing. He weighed 157 pounds only."

Some dogs were owned by the late Hamilton Rowan, of Merrion Square, Dublin, which were erroneously asserted to be Irish wolfhounds. Regarding these dogs the following communication was kindly made to the writer by Mr. Betham, a son of Sir W. Betham, before alluded to: "My father was very intimate with the late Hamilton Rowan, who was the only man possessed of the breed (Irish wolfhound), and who was so chary of it that he would never give away a dog pup without first castrating him. I have repeatedly seen the dogs with him when I was a boy, and heard him tell my father how he became possessed of them. He was in Paris about the time of the first French revolution, and was given a dog and a bitch, and was told that they were Danish. He then went to Denmark, thinking he would see more of the breed. When he got there he was told they were not Danish, but Irish, and were brought over by some one from Ireland—I forget whom. The dogs were of a very peculiar color—a kind of brindled blue and white, sometimes all brindled, and sometimes a great deal of white, with large, irregular brindle patches, and were much given to weak eyes. They stood about 2 feet 4 or 6 inches at the shoulder, were smooth haired, and were a most powerful dog. Hamilton Rowan was very proud of being the only possessor of the breed, and seldom went out without one or more accompanying him. I have not seen any one specimen of the breed since his death, when one came into the possession of a poor man in my neighborhood.

"It was a pup then, and had all the characteristics of the breed, was very large, and a fine specimen. I wrote to the Zoological Gardens in Dublin describing the dog, urging them to secure him; but they refused, and he was afterward sold to a gentleman."

In a second letter he goes on to say: "I can speak from personal knowledge, and from having often seen the dogs, that the true breed of Irish wolfdogs are smooth-haired, not shaggy like the Scotch deerhound. I am not acquainted with the German boarhound (*i. e.*, Great Dane); very possibly they might have been somewhat similar to the Irish breed. Hamilton Rowan's dogs were very powerful, and at the same time active dogs, with rather a sharp nose and shrill bark. My father used to say that when he dined at Hamilton Rowan's the dogs used to be in the parlor, and were so tall they could put their heads over the guests' shoulders when sitting at the table, though the dogs were standing on the floor."

Beyond a shadow of a doubt these dogs were simply Great Danes, as H. Rowan had evidently been told in Paris; the description leaves no doubt on that head. Richardson tells us the fact was that Mr. Rowan owned some of the breed known as Great Danes, and he never by chance called them by a wrong name. He also owned a true wolfdog, and knew him to be such, calling him "the last of his race." This dog was a large rough greyhound of iron-gray color. Mr. Rowan subsequently presented this dog to Lord Nugent. In corroboration of this fact the writer was informed by the late Sir John Power, who recollected H. Rowan and his dogs, and who would have reached man's estate at the time, and been well able to judge of them, being a thorough lover of the canine race, that Richardson's description of the true wolfdog belonging to H. Rowan was right. Mr. Betham remembers the dogs only as a boy, and the distinction between the Danish dogs and the true old rough dog would hardly have struck him; hence the misconception on the matter. Mr. Betham's account is only inserted and confuted to remove any impression that certain of Hamilton Rowan's dogs were aught but Great Danes, which has been erroneously otherwise concluded. Mr. Betham confesses, it will be seen, that he is not acquainted with the Great Dane or boarhound, which are common and plentiful in all contintal countries; he cannot, consequently, be considered a fair judge on the subject.

Youatt has this regarding the Irish wolfdog: "This animal is nearly extinct, or only to be met with at the mansions of one or two persons, by whom he is kept more for show than use, the wild animals which he seemed powerful enough to conquer having long disappeared from the kingdom. The beauty of his appearance and antiquity of his race are his only claims, as he distains the chase of stag, fox, or hare, though he is ever ready to protect the person and property of his master. His size is various, some having attained the height of four feet, and Dr. Goldsmith states he saw one as large as a yearling calf. He is shaped like the greyhound but stouter; and the only dog the writer from whom this account is taken ever saw approaching his graceful figure, combining beauty with strength, is the large Spanish wolfdog. The same writer says that his grandfather had an Irish wolfdog that saved his mother's life from a wolf. She was paying a visit, attended by this faithful follower. He rushed on his foe just when he was about to make his spring, and after a fierce struggle laid him dead at his mistress' feet. His name was Bran." (*Sporting Magazine*, 1837).

The assertion, made by several authors, that the Irish wolfhound disdains the chase of stag, fox, and hare is utterly absurd, and it is a well-known fact that all dogs of the greyhound breed will readily chase and attack any animal which flees from them, and to pursue which they are encouraged.

[TO BE CONTINUED].

The Irish Wolfhound Club of Great Britain has been organized to give special attention to this breed.

The officers are: President, Right Hon. Lord Arthur Cecil; Vice-President, Right Hon. the Earl of Cadogan. Committee, J. Davin, Esq., E. Olive, Esq., Lieut.-Colonel Garnier, A. F. Laloe, Esq., G. W. S. Lennox, Esq., R. Clifton, Esq., A. Russell, Esq., M. Le B. Kennedy, Esq. Hon. Secretary and Treasurer, pro tem., Captain Graham, Rednock, Dursley. Hon. Secretary for Ireland, R. Clifton, Esq., Anchor Brewery, Usher street, Dublin. The annual subscription for each member is two guineas, payable on the first day of January in each year. Honorary members are admitted at a subscription of one guinea. The standard of points is as follows:

1. *General appearance.*—The Irish wolfhound should not be quite so heavy or massive as the Great Dane, but more so than the deerhound, which in general type he should otherwise resemble; of great size and commanding appearance; very muscular; strongly though gracefully built; movements easy and active; head and neck carried high; the tail carried with an upward sweep, with a slight curve toward the extremity.

The medium height and weight of dogs should be 31 inches and 120 pounds; of bitches, 28 inches and 90 pounds. Anything below this should be debarred from competition. Great size, including height at shoulder and proportionate length of body, is the desideratum to be aimed at, and it is desired to firmly establish a race that shall average from 32 to 34 inches in dogs, showing the requisite power, activity, courage and symmetry.

2. *Head.*—Long, the frontal bones of the forehead very slightly raised and very little indentation between the eyes. Skull not too broad. Muzzle long and moderately pointed. Ears small and greyhound-like in carriage.

3. *Neck.*—Rather long, very strong and muscular, well arched without dewlap or loose skin about the throat.

4. *Chest.*—Very deep. Breast wide.

5. *Back.*—Rather long than short. Loins arched.

6. *Tail.*—Long and slightly curved, of moderate thickness, and well covered with hair.

7. *Belly.*—Well drawn up.

8. *Forequarters.*—Shoulders muscular, giving breadth of chest, set sloping. Elbows well under, neither turned inward nor outward. Leg, forearm muscular, and the whole leg strong and quite straight.

9. *Hindquarters.*—Muscular thighs, and second thigh long and strong as in the greyhound, and hocks well let down and turning neither in nor out.

10. *Feet.*—Moderately large and round, neither turned inward nor outward. Toes well arched and closed. Nails very strong and curved.

11. *Hair.*—Rough and hard on body, legs and head; especially wiry and long over eyes and under jaw.

12. *Color and markings.*—The recognized colors are gray, brindle, red, black, pure white, fawn or any color that appears in the deerhound.

13. *Faults.*—Too light or heavy a head, too highly-arched frontal bone, large ears and hanging flat to the face, short neck, full dewlap, too narrow or too broad a chest, sunken or hollow or quite straight back, bent forelegs, overbent fetlocks, twisted feet, spreading toes, too curly a tail, weak hindquarters and a general want of muscle, too short in body.

A SPITZ'S LONG JOURNEY.—A family named Hill, residing near this place, on removing to Kansas, took with them a small spitz dog that had been raised here. Shortly after their arrival there the little fellow disappeared and was not heard from until four months afterward, when he appeared at his old home, happy and in good condition, though having traveled some 600 miles alone.—V. S. W. (Coralville, Iowa).

THE WESTERN FIELD TRIALS ASSOCIATION.

Editor Forest and Stream:

A meeting for the perfecting of the organization of the Western Field Trials Association was held at Kansas City, July 14, 1885. A large membership has been received, the organization has been well received by the sportsmen of the West, and we look forward to an extensive meeting the week beginning Nov. 9, 1885, at Abilene, Kan., a city of about 3,000 inhabitants, located on the main line of the Union Pacific Railroad about 100 miles west of Kansas City. The hotel and livery accommodations at this place are first-class, and there is abundance of quail there. The prospects are good for the trials.

It was decided to offer two purses; one of $500 for the All-Aged Stake, $250 to first, $150 to second and $100 to third, $10 to enter and $15 additional to start; and in lieu of the Derby Stake (the time having passed for closing entries in it) it was decided to have a Puppy Stake, purse $300, $150 to first, $100 to second and $50 to third, $5 to enter and $10 additional to start. The entries in both stakes to close Oct. 15, 1885.

The names of the committees and judges will be sent you as soon as they have been nominated.

A. A. WHIPPLE, Sec. and Treas.

KANSAS CITY, Mo., July 17.

THE "WILDFOWLER" SWINDLES.—London, July 3.—*Editor Forest and Stream:* I am astonished at Mr. Muss's letter in your paper of June 18. He wrote me a most friendly letter a fortnight ago, asking me if I could send him a bitch; never said a word about having refused the dog. A most extraordinary proceeding, but one which I can readily account for. The fact is, Mr. Muss and his friend Mason are mad at being foiled. Mr. Muss is not correct in his narrative, but it would take up too much of my valuable time to discuss the matter. I simply say: (1) I hold scores of letters in which Mr. Muss tells me that he is in no hurry; (2) I have fulfilled my bargain to the letter; (3) I have delivered the dog to Mr. Muss, carriage paid, since I gave £5 to Mr. Muss's friend to that effect, as I generally pay £4 15s. or so per dog. (4) I have also paid the importation duty. Whatever delay about the duty occurred took place at the consulate, and I have nothing to do with it. (5) Mason, it has been conclusively proved to me, is at the bottom of all the trouble; but if Mr. Muss chooses to be made a catspaw of by Mason, he may please himself. Why I should be made the sufferer is another pair of shoes, because I am not likely to submit to it. You have your dog, Mr. Muss, according to description, and fulfilling our bargain to the letter. If at the instigation of Mason you choose to cry a "go," I don't, you see, and I have checkmated you both. Now you may please yourself about your dog. If you are overcharged for carriage, what have I to do with it? I am not the forwarding agent. One point I would draw your readers' attention to is, that it is strange that both Kent and Muss act in the same way at the dictate of Mason. It is really laughable, but if these people choose to lose their dog to please Mason, why that is their look out and no one else's. In conclusion, as I find that you, the kennel editor of FOREST AND STREAM, are merely a tool of Mason, through ignorance or what I do not care to inquire, I for the future shall not notice anything in your columns.—L. CLEMENT. [The above proves that L. Clement, *alias* "Wildfowler," is still impenitent. Having swindled Messrs. Kent and Muss out of hundreds of dollars, he now puts his thumb to his nose and asks them, "What are you going to do about it?" He has been so thoroughly exposed in the FOREST AND STREAM that he will find no more victims among our readers. Hereafter any one foolish enough to send money to "Wildfowler" will deserve to lose it. The silly "Mason" business of course comes from "Wildfowler's" Chicago friends, and is only an impudent dodge to cover up thievery.]

PODGERS ON BULL-TERRIERS.—*Editor Forest and Stream:* Several moons ago I incurred the ire of sundry owners of those "ornary," bow-legged, low-minded canines called bull-terriers, in an article I wrote for the FOREST AND STREAM, which led to a terrible howl and barking from the owners of this breed of animals. I was assured that the dogs were the most amiable creatures extant, that they never tore the seat of anybody's trousers out, never held their own masters by the calf when coming home late after a lodge meeting, never did anything in fact, except smile (a chronic habit they have) and watch the baby's cradle. And to convince me how fearfully mistaken I was, several of these correspondents hinted that they would be happy to impart a pup to me from the first litter, just to have me ascertain by possession how amiable and nice these much belied (by which side?) dogs were. Not being above ordinary temptation (every man having his price and mine being a dog) I ceased the war on them and waited patiently for the convincing arguments in the shape of numerous promised bull pups to arrive. But alas! for human frailty. Not a pup have I ever received. I did expect better things of my old friend Col. Stuart M. Taylor, who took up the cudgels for the bulls (no doubt he has to do it often) and I expected a pup, too, but as I say, up to this blessed moment none has arrived, and I hung up my stocking last Christmas, too. I am going into the country. I was to have the company of a friend but he can't go; there is a boom in stocks and he owns three shares in Pacific Mail and dare not leave; and now I want my pup to take his place as a substitute for company; and feeling aggrieved and indignant at this attempt to bribe me into silence and then not doing it, I wish to announce that I shall again let loose the (bull) dogs of war, and I proclaim that I don't believe in either bulldogs or their owners, and that owning bulldogs is evidently demoralizing, as proved by my being so on the bare promise of one. I have lost faith in the dog, his owners, and all who advocate him; in other words, I have my opinion of the lot collectively and individually, and I am not particular where the dog or the owners come in. I have said it. Sick 'em, dog or man; I am ready to open hostilities again.—PODGERS (New York, July 15).

THE PUG STANDARD COMMITTEE.—New Haven, Conn., July 17.—*Editor Forest and Stream:* Please inform your readers that my name was used as a member of the standard committee without my consent or knowledge; that is to say, I received the appointment through Mr. Osborn, the secretary of the A. K. C., on the 4th inst., and before I was able to reply to the same, declining the appointment, a notice of the same seems to have been sent your valuable paper for publication. By giving the above your attention you will greatly oblige, as I very much dislike to have my name mixed up in this matter.—WALTER D. PECK.

SETTER STOLEN.—A six-months old English setter bitch was stolen from Lexington, Mass., last week. She is white, with one black and one blue ticked ear, is ticked on body, and has round white spot on back. Information of her whereabouts will be thankfully received by her owner, G. A. Colman, 64 Sullivan street, Charlestown, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. B. M., Flatbush.—My Newfoundland dog has just recovered from a very bad case of distemper. It has left him blind and with a constant discharge from his eyes. Ans. It is doubtful whether your dog will ever recover his sight, but having come on suddenly the sight may be improved. A good ophthalmologist could tell you after examining the eyes The discharges should be kept from collecting and this is best done by sponging the lids as often as practicable with a solution of borax, glycerine and water of the strength of ten grains of borax and a half teaspoonful of glycerine to the ounce of water. Also drop into the eye twice daily a solution of the sulphocarbolate of zinc of the strength of two grains to the ounce of water.

J. W. K., Philadelphia.—A fox-terrier bitch seven months old is in very good condition except she has such a bad breath. I keep her bowels in good order, but her breath I cannot understand, as it must come from the stomach. Ans. Your dog suffers from indigestion. The treatment must be principally dietetic. The food should be simple and easily digested, such as scraped raw meat in small quantities, with perhaps the whites of eggs incorporated in it. Also milk with lime water, broths mixed with corn or oatmeal or flour. With the solid food always mix one teaspoonful of powdered charcoal. This makes a nasty looking mess, but the charcoal is an admirable corrective.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
6. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Joker Sleaford, Sleaford's Boy, Dick Sleaford, Hamlet Sleaford, Snap Sleaford, Fanny Sleaford and Spinny Sleaford. By Joseph Lewis, Cannonsburg, Pa., for pointers, three liver and white and two lemon and white dogs and two liver and white bitches, whelped June 15, 1885, by Young Sleaford (A.K.R. 467) out of his Lilly (A.K.R. 354).

Queen of the South. By J. W. Murnan, Keeling, Tenn.; for lemon belton English setter bitch, whelped March 18, 1885, by his Sportsman (Gladstone—Sue) out of his Gem (Gladstone—Gazelle).

Bulwer. By N. Wallace, Waterbury, Conn., for orange and white English setter dog, whelped Oct. 30, 1883, by champion Foreman out of Tallman's Jennie (Lathrop's Dick—Harrington's Gyp).

Robin Noble, Dan Noble and Bella Noble. By Jos. Lewis, Cannonsburg, Pa., for English setters, a black, white and tan dog, a lemon belton dog and a black, white and tan bitch, whelped June 15, 1885, by Count Noble (Count Wind'em—Nora) out of his Nellie (Count Dan—Floss).

Bugle. By John Kaschenbach, Wilkesbarre, Pa., for black, tan and white beagle dog, whelped Feb. 7, 1885, by imported Keno out of Bessie (Racket—Fly, A.K.R. 1012).

Flirt. By John Kaschenbach, Wilkesbarre, Pa., for black, tan and white beagle bitch, whelped March 24, 1885, by imported Keno out of Fly (A.K.R. 1012).

BRED.

☞ *See instructions at head of this column.*

Jessie Turner—Sportsman. Geo. W. Ballantine's (Washingtonville, O.) English setter bitch Jessie Turner (Druid—Ruby) to J. W. Murnan's Sportsman (Gladstone—Sue), July 14.

Zoza—Obo, Jr. Wm. H. Mosely's (New Haven, Conn.) cocker spaniel bitch Zozo (A.K.R. 2380) to A. Laidlaw's Obo, Jr. (A.K.R. 1481), July 10.

Cornelia—Gladstone. L. Shuster, Jr.'s (Philadelphia, Pa.) English setter bitch Cornelia (A.K.R. 950) to P. H. Bryson's champion Gladstone, June 15.

Calypso—Hero II. City View Kennels' (New Haven, Conn.) mastiff bitch Calypso (A.K.R. 1498) to Ashmont Kennels' Hero II. (A.K.R. 545), June 12.

Musette—Bradford Ruby. Jesse Welch's pug bitch Musette (A.K.R. 1593) to City View Kennels' Bradford Ruby (E.K.C.S.B. 13,834), June 29.

Bess—Bradford Ruby. Fred E. Parker's (New Haven, Conn.) pug bitch Bess (A.K.R. 1935) to City View Kennels' Bradford Ruby (E.K.C.S.B. 13,834), June 19.

Daisy II.—Bradford Ruby. City View Kennels' (New Haven, Conn.) pug bitch Daisy II. (A.K.R. 1361) to their Bradford Ruby (E.K.C.S.B. 13,834), July 1.

Rita Croxteth—Bang. Geo. S. Tucker's (Peterboro, N. H.) pointer bitch Rita Croxteth (A.K.R. 168) to his imported Bang, April 14.

Olivette—Bang. Geo. S. Tucker's (Peterboro, N. H.) pointer bitch Olivette (King Bow—Gracie) to his imported Bang, April 15.

Relic—Doncaster. F. W. Seiler's (Harrisburg, Pa.) English setter bitch Relic (Gladstone—Leila) to A. Borgess's Doncaster, June 28.

Flirt II.—Meteor. Amory R. Starr's (Marshall, Tex.) pointer bitch Flirt II. (A.K.R. 2229) to Col. W. E. Hughes's Meteor, June 1.

Meg Merrilies—Ben Nevis J. C. Harrison's (Philadelphia, Pa.) collie bitch Meg Merrilies (A.K.R. 148) to champion Ben Nevis (A.K.R. 2391), July 14.

Beauty—Ben Nevis. W. S. Powers's (St. Louis, Mo.) collie bitch Beauty (Tweed—Nettie) to champion Ben Nevis (A.K.R. 2391), July 11.

Vaynol—Bang. Geo. S. Tucker's (Peterboro, N. H.) pointer bitch Vaynol (Meteor—Rita Croxteth) to his imported Bang, June 14.

Water Lily—Donald II. C. Moller's (New York) pointer bitch Water Lily (Don—Dolly) to Clifton Kennels' Donald II. (Donald—Devonshire Lass), July 18.

WHELPS.

☞ *See instructions at head of this column.*

Lilly. Jos. Lewis's (Cannonsburg, Pa.) pointer bitch Lilly (A.K.R. 354), June 15, seven (five dogs), by Young Sleaford (A.K.R. 467).

Edith. C. E. Taylor's (Bath, Me.) cocker spaniel bitch Edith (Brush II.—Olivia), May 23, nine (five dogs), by Rex (Quand—Diamond).

Nellie. Jas. L. Anthony's (New York) pointer bitch Nellie (Sensation—), July 11, twelve (five dogs), by his Planter (Sensation—Black Rose).

Flossy. City View Kennels' (New Haven, Conn.) pug bitch Flossy (A.K.R. 2250), July 18, seven (three dogs), by their Bradford Ruby (E.K.C.S.B. 13,834).

Rita Croxteth. Geo. S. Tucker's (Peterboro, N. H.) pointer bitch Rita Croxteth (A.K.R. 168), June 20, seven (three dogs), by his imported Bang; all white, with liver markings.

Olivette. Geo. S. Tucker's (Peterboro, N. H.) pointer bitch Olivette (King Bow—Gracie), June 13, nine (three dogs), by his imported Bang; all liver and white.

Lady P. Lehigh Kennels' (Lebighton, Pa.) English setter bitch Lady P., July 4, seven (two dogs), by Romeo (Roxey's Boy—Gypsy Maid); five black and white, two blue belton.

Brimstone. Field Trial Kennels' (Flatbush, L. I.) English setter bitch Brimstone (A.K.R. 29), June 28, eight (four dogs), by their Buckellew (A.K.R. 30; all orange and white.

Jolly Daisy. Field Trial Kennels' (Flatbush, L. I.) English setter bitch Jolly Daisy (A.K.R. 955), July 4, eight (four dogs), by their Buckellew (A.K.R. 30); four black, white and tan and four orange and white.

Killarney II. E. W. Taylor's (Baltimore, Md.) red Irish setter bitch Killarney II. (A.K.R. 1850), May 16, eight (two dogs), by W. H. Pierce's champion Glencho.

Bessy. Haven Doe's (Salmon Falls, N. H.) beagle bitch Bessy (A.K.R. 1117), June 21, four (two dogs), by his Bunny (A.K.R. 1118); all dead.

Tempe. Amory R. Starr's (Marshall, Tex.) pointer bitch Tempe (A.K.R. 2240), May 21, eight (seven dogs), by Glick (A.K.R. 2231); four liver, two black and white and one black dog and one black bitch.

Peep o' Day. Glencho Collie Kennels' (East Bethlehem, Pa.) collie bitch Peep o' Day, July 2, six (three dogs), by Rokeby (A.K.R. 1022).

SALES.

☞ *See instructions at head of this column.*

Minnie Lee. Black pointer bitch, 2yrs. old (Robert E. Lee—Darkness), by J. C. Schuyler, Lehighton, Pa., to C. H. Keppel, Allentown, Pa.

Gyp. White, black and tan beagle dog, age not given (Racket—Fly), by N. Elmore, Granby, Conn., to H. F. Schellhass, Brooklyn, N. Y.

Ben Nevis. Collie dog (A.K.R. 2391), by J. D. Shotwell, Rahway, N. J., to W. H. Perry, Philadelphia, Pa.

Tottie. Fawn and white Italian greyhound bitch, whelped Sept. 6, 1884, pedigree not given, by H. C. Bendick, Springfield, Mass., to H. Van Deusen, Saratoga, N. Y.

[COPY.]

HARROLD, Texas, June 30, 1885.

Messrs. Wallace & Sons, New York, Agents of U. S. Cartridge Co.:

DEAR SIRS—Your sample of Climax waterproof 12-gauge shells just came in as I was loading for a practice shoot at blackbirds. I gave them a trial, taking my loading implements with me. I used each shell *twelve times.* I was using Curtis & Harvey No. 4 powder, very heavy wadded. I consider this a very severe test, which speaks well and places your shells with their other well-known advantages above all others, especially for the far West. (Signed) ALMO.

—*Adv.*

RANGE AND GALLERY.

BOSTON, July 18.—The hot weather kept most of the shooters at home yesterday. Those present did not feel very active, and the list of finished scores was not large. The weather conditions were not good. The wind was a "fish-tail" of the worst kind after 12 o'clock. A team match with the Empire Club, of Thomaston, Me., was shot on the decimal target and the total of scores telegraphed to them. The result of the match was in favor of the M. R. A. The telegram from the Empire Club gives their total 800, and the M. R. A. team scored 866, giving the latter a lead of 66 points. Details of the scores will be published later.

Practice Match—A.

A Law	4	4	5	5	5	5	5	5	5	5—48
F W Perkins (mil)	4	4	4	5	4	4	4	5	5	5—44
J Porter	3	5	5	4	4	4	4	4	5	4—42
E S Gilmore	4	5	4	4	4	4	4	4	4	4—41
J F Angell (mil)	3	4	4	3	3	4	4	3	4	3—35

Decimal Match.

O M Jewell, C	8	8	9	9	7	10	9	8	6	9—83
R Reed, C	6	10	8	8	6	9	8	5	8	10—79
J Lemons, A	10	7	7	9	5	10	6	4	7	5—70
A Law, A	5	6	6	10	5	5	10	9	7	4—67

Victory Match.

W Charles	7	7	10	10	10	10	9	7	8	4—82
J N Frye	7	7	9	9	8	9	6	10	8	9—82
M Handy	6	10	7	8	8	6	8	8	10	7—78

WALTHAM, July 18.—The Hillside Club of Waltham shot a telegraphic Creedmoor match this afternoon with the Jamestown (N. Y.) team. The score in detail was as follows:

Creedmoor Target, 200 Yards.

Stone	3145144544—41	Monroe	3353444353—37
Green	5335444344—39	Dennison	5454445444—43
Emerson	4554545445—45	Foster	4545445354—43—232
Whiting	4455444455—44		

The result of the Jamestowns' shoot, though expected by telegraph, had not been received up to 10 o'clock. After the telegraphic shoot came a decimal match with the Arlington Heights Rifle Club, the score of which in full is as follows:

Arlington Heights Club.

Lloyd	7	7	10	9	10	6	4	7	10	4—74
Pierce	4	6	4	4	5	4	5	8	7	8—55
Franklin	5	3	9	5	9	6	7	9	8	6—62
Thomas	9	2	4	9	7	7	5	8	8	2—58
Davis	5	7	6	5	9	6	5	9	7	8—67—316

Hillside Rifle Club.

Dennison	9	6	4	5	10	7	6	8	7	8—70
Emerson	4	4	3	6	7	4	9	10	6	3—56
Foster	4	7	9	2	2	2	8	4	4	8—50
Stone	7	9	9	6	8	8	6	4	8	7—70
Whiting	4	8	4	4	5	8	5	8	9	9—61—307

Following the above and as the finishing match of the afternoon, came a Creedmoor shoot with the Arlington team—200yds. The score:

Creedmoor Match, 200 Yards.

Hillsides.		Arlingtons.	
Dennison	4444444—28	Lloyd	4454544—30
Emerson	4445444—29	Pierce	4444543—28
Edes (mil)	3445343—27	Franklin	4445544—30
Whiting	4444344—27	Thomas	4444444—28
Green	4444433—25—137	Davis	4445445—30—146

A fine supper was given in the evening by the home team to the visiting club at Fields's.

The Jamestown (N. Y.) Club having received the acceptance of the Waltham Club at too late a date to permit preparations for a match, did not shoot on their own range.

THOMASTON, Conn., July 18.—A telegraphic match with the Massachusetts Rifle Association was shot to-day under the following conditions. Teams of eight men each, 15 shots per man, 200yds., off-hand, Walnut Hill decimal target; weather conditions, a very bright light, no wind:

E Thomas	5	5	5	8	8	6	0	7	8	5—106
W H Dunbar	8	10	10	5	9	6	4	7	9	5—104
G C Gilbert	10	9	10	9	4	4	4	8	8	7—103
G A Lemmon	10	9	9	5	7	10	6	7	5	4—103
G C Canfield	10	4	4	10	3	4	6	5	9	6—100
G P North	8	3	6	9	10	10	7	7	4	5—96
C F Williams	5	9	4	4	6	5	4	5	6	8—94
C L Alling	6	4	8	3	6	6	4	7	6	4—94

Subjoined are scores for the badge:										800
E Thomas	6	6	7	7	8	5	9	9	10	8—75
W H Dunbar	8	10	10	5	9	7	6	5	8	6—74
G A Lemmon	10	9	9	5	7	10	6	7	5	4—72
G C Gilbert	10	6	10	9	4	8	7	6	8	4—72
G C Canfield	10	4	4	10	3	8	9	9	7	6—70
E W Bennett	5	9	4	5	6	8	5	10	10	7—69
G P North	8	3	6	9	10	10	7	7	4	8—69
C L Alling	6	4	7	6	4	7	10	5	10	8—67

LAWRENCE, Mass., July 11.—At the grounds of the Lawrence Rifle Club this afternoon, the best record for off-hand marksmanship at 200yds. in the world was beaten by Mr. E. F. Richardson, who used a Maynard .34-cal. rifle, with which thirty-one consecutive bullseyes were scored, beating the best previous score, that of H. G. Bixby of Nashua, N. H., at Walnut Hill in 1882. The shooting by all the contestants was quite creditable. Distance 200yds.; ten shots with a possible 50. The highest scores by the others were: O. M. Jewell 49, William Fisher 46, W. O. Webber 44, A. W. Howland 44. Capt. Moses Harris of the First U. S. Cavalry with a military rifle scored 21 out of a possible 25.

LONDON, Ontario, July 15.—The council of the Western Rifle Association held its annual meeting to-day, and chose Col. Lewis President; Major Wilson Vice-President, Col. Denison Treasurer, and Lieut. Hoyles Secretary. A council of fifteen officers was chosen from the various western battalions. It was decided to affiliate with the Ontario and Dominion Associations in future.

GARDNER, Mass., July 25.—At the last regular meeting at Hackmatack Range, the members of the Gardner Rifle Club used the American decimal target, distance 200yds., shooting off-hand, with a possible 100. The result, two strings, were as follows:

G F Ellsworth	88	88—176	A Mathews 79 71—150
W C Loveland	74	81—155	Geo Warfield 74 47—121
I N Dodge	79	74—153	

TELESCOPIC SIGHTS.—Hollidaysburg, Pa., July 14.—*Editor Forest and Stream:* Your last number contained a letter from Mr. Peirce concerning the manufacture and use of telescopic rifle sights. It recalls to my mind the mannerin which a famous local rifle shot duped his rivals and gathered in the shekels galore. It was shortly after the civil war, and B. had a lot of extra fine riflemen to oppose, and found himself losing more matches than were either agreeable or profitable. So he forwarded his rifle, a 10-pound muzzleloader, to a Pittsburgh firm, with instructions to affix thereto a first-class telescope sight. It returned in due time, and after considerable experimenting he so arranged the large sheet-iron shade on his rifle, as to entirely conceal the sight to all but the shooter, while it could be removed and replaced with great ease. When not in use it was carried in a long pocket in his coat breast. The sight cost him in all about $30, but he won several times that amount ahead before the trick was discovered by the remarkable improvement in B.'s shooting having aroused the suspicions of the other riflemen. By its use he claims to have made numbers of 3 shot strings of ½ and ¾ inches, at from 75 to 100yds., and I have no reason for disbelief. He still has the sight, but has not used it for ten years back.—D. [A celebrated Albany rifle maker had a concealed telescopic sight on his muzzleloading rifle, and it was not discovered until after his death.]

HAVERHILL, MASS., RIFLE CLUB.—At Riverside range, July 18, Creedmoor target, 200yds, off-hand:

J Busfield	4454444544—43	F Merrill	5345544444—42
W Worthen	4545453344—43	L W Jackson	2454444444—39
E Brown	4454445544—42		

LAKE LOOK-OUT, Springfield, Mass., July 18.—The Springfield Rod and Gun Club had a pleasant and well attended shoot at this range this afternoon. The shoots were for club prizes, Massachusetts target, with the following score: E. T. Stevens 105, H. Thomas 102, L. H. Mayott 99, E. S. Field 93, J. Newton 81. At rest, S. Bower 113, L. H. Mayott 113, S. K. Hindley 113.

THE WIMBLEDON MEETING.—The gathering of the National Rifle Association on the Wimbledon Common during the usual July fortnight has drawn a great camp full of militiamen and volunteers, 2,500 entries having been made for the Queen's prize. The Canadian team has made a very favorable impression. In the shooting match on the 18th, between the teams from the House of Lords and the House of Commons, the peers defeated the commoners by a score of 277 to 270. Earl Spencer, ex-Lord Lieutenant of Ireland, made the best score among the Lords—94 out of a possible 100.

BROOKLYN, July 17.—On Friday evening, July 17, five men representing Company I, Fourteenth Regiment, visited the Twenty-third Regiment Armory, and shot a friendly match with five men of Company A, of that regiment. Conditions were ten shots per man, reversed 200 and 500yds. target; position, standing at 200yds., lying with head toward target at 500yds. Remington State model rifle, N. R. A. rules governing. The following is the score:

Company I, Fourteenth Regiment.

	200yds.	500yds.

MERIDIAN GUN CLUB TOURNAMENT.

THE tournament of the Meridian (Miss.) Gun Club took place July 6, 7, 8 and 9, and gave opportunity for some very close contests on all manner of targets. All ties were shot off on three birds, miss and out. The full scores ran:

JULY 6.

First match, 8 singles, live pigeons, 24yds. rise:

B F Cameron	10111111—7	F A Cousin	11111111—8
Shackleford	01111111—7	Boltz	11110111—7
W F Dabney	01111011—6	Sotori	11111000—5
Chaudet	11111111—8	Reinike	11110111—7
Irion	11111010—6	Stumpf	11101110—6
B H Gallup	11111111—8	Hamilton	11110111—6
De Fuentes	11111110—7	Sargent	01111010—5
Stroup	11111111—8	B A Cragin	11111100—6
Kane	01111011—6	Rich	11110110—6

Gallup and Cousin full, Boltz second, Kane and Stumpf divided third.

Second match, 10 single leather-winged bats, 21yds. rise:

Dabney	1110110111—8	Dupue	0111101111—8
Rich	1010101011—6	Gallup	1000111111—7
Stroup	1100110101—6	Sargent	1101011111—8
Cragin	1101101110—7	Irion	1001000111—5
Cousin	1011111011—8	Kane	1100011001—5
Cameron	1011001111—7	Sotori	1100110100—5
Chaudet	1111111110—9	DeFuentes	1101100101—6
Reinike	1110011111—8	Pourseine	1011010101—6
Boltz	1101110011—7		

Chaudet first, Reinike, second, Boltz third.

Third match, 10 Peoria blackbirds 18yds. rise:

Cousin	1111111111—10	Dabney	1111111111—10
Chaudet	1110111111— 9	Reinike	1010110001— 5
Nance	1110110010— 6	Kane	1111111100— 8
Gallup	1011111110— 8	Hamilton	1011001111— 7
Stumpf	1100111000— 5	Boltz	1011110111— 8
Cragin	0101111100— 6	Sotori	0111011111— 8
Rich	1111011111— 9	Shackelford	1111101111— 9
Stroup	1101011101— 7		

Cousin and Dabney divided first, Shackleford second, Boltz and Sotori divided third.

Fourth match, 5 single live pigeons, 31yds. rise:

Dabney	01111—4	Cragin	00001—1
Boltz	01111—4	Rich	01111—4
Stumpf	11001—3	Stroup	10011—3
Chaudet	11011—4	De Fuentes	01011—2
Cousin	11111—5	Kane	01010—2
Dupue	01001—2	Hamilton	01011—3
Sotori	10001—2	Reinike	01111—4
Gallup	11101—4	Irion	00101—2

Cousin first, Rich second, Hamilton third.

JULY 7.

First match, 3 pair double live pigeons, 18yds. rise:

Chaudet	11 11 10—5	Sargent	00 11 01—3
DeFuentes	10 10 10—3	Cousin	10 11 11—5
Boltz	10 10 11—4	Bookout	00 10 10—2
Gallup	01 11 01—4	Rich	10 11 11—5
Foote	10 10 11—4	Peterson	01 11 10—4
Stroup	00 11 10—3	Stumpf	01 01 10—3
Sotori	01 11 11—5	Reinike	11 11 11—6
Dabney	00 11 11—4		

Reinike first, Chaudet and Cousin divided second, Gallup and Peterson divided third.

Second match, 8 single live pigeons, 26yds. rise:

Boltz	11101111—7	Hamilton	11011010—5
Dabney	11001111—6	Buchanan	11111100—6
Stroup	11111111—8	Cragin	01001100—2
Stumpf	10101111—6	Freutt	10011111—6
Sargent	11111011—7	Gallup	11111111—8
Cousin	10111111—7	Randolph	10001111—5
Rich	10111101—6	DeFuentes	01111101—6
Reinike	11111111—8	Chaudet	11111110—7
Peterson	11011111—7	Bookout	11111100—6
Foote	11111110—7	Hart	11101111—7
Kane	11101111—7	Richardson	00101011—4

B. H. Gallup and Reinike divided first, Sargent second, Bookout third (killing 21 straight in shooting off tie).

Third match, 5 double leather-winged bats, 18yds. rise:

Dabney	11 00 10 11 11— 7	Poursene	11 11 01 11 11— 9
Boltz	11 10 10 11 11— 8	Gallup	00 11 11 11 10— 7
Cousin	11 11 11 11 11—10	Chaudet	00 11 01 11 00— 5
Foote	11 11 01 10 10— 7	Dupue	10 11 11 11 11— 9
DeFuentes	11 11 01 10 11— 8	Reinike	11 10 01 11 11— 8
Bookout	00 10 01 10 11— 5	Stumpf	11 01 10 11 00— 6
Rich	11 00 11 01 10— 6	Stroup	01 10 11 11 11— 8
Sotori	11 11 11 00 01— 7	Peterson	10 11 01 11 11— 8

Cousin first, Remike and Dupue divided second, and Peterson third.

Fourth match, 5 live pigeons, 24yds. rise:

Foote	00011—2	Bookout	11111—5
Reinike	11111—5	Cousin	11111—5
Chaudet	11111—5	DeFuentes	11111—5
Peterson	01110—3	Dabney	10111—4
Stumpf	00111—3	Rich	11110—4
Sargent	11001—3	Gallup	11100—3
Kane	11101—4		

Chaudet first, Kane second, Gallup third.

JULY 8.

First match, team shoot, 5 pigeons 24yds., 5 Peoria blackbirds 21yds.:

Cousin	11111 11111—10	Cannon	11110 11111— 9
Reinike	11010 11111— 8—18	Stroup	11111 10011— 8—17
Chaudet	10111 11111— 9	Hart	11111 11011— 9
De Fuentes	01111 11111— 9—18	Hamilton	00000 10011— 4—13
Gallup	11011 00111— 7	Peterson	10100 11111— 7
Dabney	01110 01111— 7—14	Bookout	01110 10111— 7—14
Rich	00111 10010— 5	Stumpf	10001 11101— 6
Boltz	10011 11111— 8—13	Foote	01011 10111— 7—13

First and second money divided.

Second match, 15 single bats, 18yds. rise:

Cousin	011111101111100—11	Boltz	111111011100111—12
Dabney	111011110010111—11	DuPree	111101101110011—11
Reinike	111111011111111—14	Chaudet	101101110101111—11
Stumpf	110110110111001—10	Cameron	011111111110101—12
Gallup	000011111000101— 8	Sargent	110010111110111—10
Poursene	000110011100000— 6	Irion	110001100001001— 7
Rich	100100111000100— 5	Foote	000101110000001— 5
Hart	110001001100101— 7	Hammock	011110000011000— 6

Reinike first, Boltz and Cameron divided second, Chaudet third.

Third match, 6 live pigeons, 26yds. rise:

Chaudet	111111—6	Stroup	111111—6
DeFuentes	010000—1	Boltz	111101—5
Irion	101011—4	Cousin	011111—5
Bookout	111001—4	Kane	101101—4
Peterson	111111—6	Rich	101111—5
Foote	100011—3	Gallup	111111—6
Stumpf	110011—4	Sargent	111011—5
Dabney	111111—6	Cameron	111111—6
Reinike	101101—4		

Gallup and Peterson divided first, Cousin and Sargent second, Stumpf third.

Fourth match, five single live pigeons, 31yds. rise:

Reinike	11111—5	Dabney	11001—3
Chaudet	01111—4	Peterson	10110—3
Cousin	10101—3	Stroup	11101—4
Stumpf	11011—4	Bookout	00111—3
De Fuentes	11000—2	Foote	11011—4
Sargent	01100—2	Irion	00111—3
Rich	01101—3	Boltz	01111—4
Gallup	11111—5	Kane	11111—5

Gallup first, Stumpf second, Cousin and Bookout divided third.

JULY 9.

First match, 6 single pigeons, 26yds. rise:

Cousin	111111—6	Dabney	111100—4
Sargent	111110—5	Rich	111011—5
Peterson	110111—5	Kane	001110—3
Stumpf	111011—5	Stroup	111111—6
Reinike	110111—5	Gallup	110110—4
Chaudet	101111—5	Boltz	111111—6
Bookout	111101—5	Irion	110101—4
DeFuentes	101101—4	Aucoin	111110—5
Cameron	011110—4	Foote	110110—4

Cousin and Stroup divided first, Peterson second, Cameron and Foote divided third.

Second match, 5 double bats, 18yds. rise:

Chaudet	10 11 00 10 11— 6	Cameron	01 10 11 01 10—6
Cousin	10 11 11 11 11— 9	Peterson	10 01 11 01 10—6
Reinike	11 11 11 11 11—10	Dabney	00 11 10 11 00—5
Foote	11 10 11 11 11— 9	Stumpf	00 00 11 01 10—4
Stroup	10 11 10 01 01— 6	Boltz	11 00 00 11 11—6
Rich	11 01 10 11 01— 7	Hamilton	11 00 11 11 10—7
Sargent	10 01 10 10 10— 5	Buchanan	01 00 00 00 11—3

Reinike first, Cousin second, Rich third.

Third match, 5 live pigeons, 31yds. rise:

Foot	10001—2	Dabney	10111—4
Reinike	11010—3	L Mand	11110—4
Peterson	10011—3	Cameron	10111—4
Stumpf	11110—4	Rich	01110—3
Stroup	11011—4	Gallup	01111—4
Bookout	11111—5	Sargent	11011—4
Chaudet	11111—5	Boltz	10010—3
De Fuentes	11000—2	Irion	11001—3

Bookout and Chaudet divided first, Dabney second, Reinike third.

Fourth match, 10 Peoria blackbirds, 21yds. rise:

Bookout	1101111101—8	Kane	0101100000—3
Foote	1101101111—8	Rich	0010011000—3
Reinike	1111111110—9	Stroup	0010010101—4
Stumpf	1011111001—7	Cragin	0001100001—4
Cameron	1110011111—8	Gallup	0000011010—3
Peterson	0111110000 –5	Dabney	0110001101—5

Reinike first, Cameron second, Stumpf third.

FALL RIVER, Mass., June 16.—Third match of the Fall River Gun Club, 25 glass balls:

Hall	1101111101111111111010111—21
Buffinton	1111110011111010101010101—18
Wood	1111001010111011110101101—17
Mangam	1010001110011111100111101—15
Morris	0111111010101111110000011—15
Burrell	0010000110000100110100000— 7

Hall won for the third time in succession. Second match, 25 clay-pigeons:

Hall	1110111110111111110111111—22
Mangam	1111101111011101110111011—21
Buffinton	1111111101110011010011119
Wood	0001110000010100110011111—12
Morris	0001101000101010001110011—11
Burrell	0011010000001001010010001— 9

Hall won for the third time in succession.

July 4—Fourth prize match, 25 Peoria blackbirds:

Hall	1111111110110111010011111—20
Mangam	1111101110110101111111110—20
Burrell	0101001001101000001110111—12
Chase	1110101110010101011w.
Buffinton	1110010111111101101011w.
Wood	0100011000100111011w.

Tie on 20:

Hall	1111011111101111101—17
Mangam	1110111111011111w.

Hall won for the fourth successive time. Second, 25 clay-pigeons:

Hall	1110011101111111101101101—19
Mangam	0110111001110101101111111—18
Chase	0011101111101000010101101—15
Burrell	1011001601100011000110010—11
Wood	1110011010100101100010010—13
Buffinton	1001101100010010 w.

Hall won for the fourth successive time.

July 14—Fifth prize match, 25 clay-pigeons:

Mangam	1111011011001111101111101—20
Buffinton	1110111101111111001010113—19
Hall	1110100111011100011101110—16
Wood	0100001010001010101111100—11
Burrell	1010100001011101w.

Mangam won for first time. Second, 25 clay-pigeons:

Buffinton	0111010010111111101000—16
Mangam	0100111000101111111111001—16
Hall	0101110000111001010001111—13
Burrell	0100011100000100011001101—10

Tie on 16:

Mangam	0101011100	Buffinton	0100111000

Mangam won for first time.—F. S. H.

KNOXVILLE, Tenn., July 17.—Knoxville Gun Club silver medal match, 1 trap, 18yds. rise, 3 angles, Ligowsky pigeons:

Armstrong	0011101010111111—11	Jenkins	1111111010000—10
Deaderick	1111111111101—14	Kelly	0001101110111101— 8
Dow	1111101101010—11	Post	0011101010101101— 8
Duncan	1111111011111—14	J M Ross	0111110111101111—12
Eldridge	0110101001101101— 8	J E Ross	1111111000101111—11
French	1100001110100— 8	Jacques	1111110101101101—10
Hebbard	1111111000101111—10	Woodbury	1110101101011— 8
Hodge	1111111010110—12	Woods	1100111111111111—13

Duncan won shoot-off.

Gold medal match, 3 traps, 15yds. rise (Armstrong and Deaderick 18yds.) 3 angles, Knoxville F. T. Co. blackbirds:

F W Armstrong	1101111111101111111110—21
C Deaderick	1110111010010110001001110—14
S B Dow	0111110111111111101011—21

H Worsham	0100110001101110100010001101—13

J. M. Ross won shoot-off.

LITTLETON, N. H., July 20.—The White Mountain Sportsman's Club of this place was organized April 12, 1885, and had its first public shoot on the 4th, with scores as below. The main purpose of our society is to enforce the game laws of New Hampshire, and as we are in the part of the State where the most of the deer pot-hunting is done, think we shall have plenty of business to attend to:

20 Yards Rise.

Barrett	0101001111011001110001010010—15
Flint	0000001101101000001000100101—10

Ide	1111101111011111000110010110—21—8

WELLINGTON, July 18.—The Malden Gun Club held its regular shoot this afternoon, when these sweepstakes were shot with the following result: First event, five clay-pigeons—Pond first. Second event, five blackbirds—Schaffer first. Third event, five blackbirds—Parker first. Fourth event, five clay-pigeons—Shumway and Loring divided first. Fifth event, five Peoria blackbirds—Parker and Pond divided first. Sixth event, ten clay-pigeons—Loring first. Seventh event, five blackbirds—Sanborn first. Eighth event, three pairs clay-pigeons—Brink first. Ninth event, five blackbirds—Loring first. Tenth event, five clay-pigeons—Loring first. Eleventh event, five clay-pigeons—Shumway, Brink and Spencer divided first. Twelfth event, five clay-pigeons—Shumway and Brink first. Thirteenth event, five clay-pigeons—Brink first. Fourteenth event, five blackbirds—Loring and Schaffer divided first. In the medal match Loring won first with nine, Snow second with eight, and Schaffer third with six.

SEATTLE, Wash. Ter.—Tournament of the Rod and Gun Club of Seattle, W. T., July 4. Teams of five from organized gun clubs in Washington Territory, Peoria blackbirds, 10 singles and 5 pairs of doubles. Singles 18yds. and doubles 15yds. rise. Owing to the fact that the club contemplates holding an inter-state tournament about Aug. 1, only the home club participated.

Team No. 1		
Collins	0011100010	10 10 10 01 10— 9

Stackpool	10	10	10	10	00	10	00	10	00	00— 7
Booth	10	10	00	10	11	w				

Edwards won championship gold medal. Tie for second prize shot off at three pair doubles, and won by Clarke.—ALKI.

BOSTON GUN CLUB, July 17.—To-day being the closing shoot for prizes donated by the club brought out quite a sprinkling of sportsmen to put in their final scores, notwithstanding the extreme heat throughout the afternoon, the gentle breeze from the southwest was just sufficient to give the pigeon on the left quarter a long range, and which in many cases prevented complete sevens being made, the final summing put L S. Sanger first. G. F. Cutting second, C. Stark third, I. Philbrick fourth, B. A. Ward fifth. The visitors' prizes were taken respectively by T. G. Stanton and H. Souther. Next Friday begins a new series of prizes.

First event, 7 singles, 18yds.—J. Philbrick and G. F. Cutting divided first, B. A. Ward second, W. A. Spencer third.

Second event, 7 singles, 1 trap.—Cutting first, Ward second, Philbrick third.

Third event, 7 singles.—Cutting first, Philbrick second, Ward and Spencer divided third.

Fourth event, 7 birds.—Philbrick first, Ward second, Spencer third.

Fifth event, same conditions as above.—Philbrick first, Snow second, Spencer, Stanton and Ward divided third.

Sixth event, 7 birds.—Snow and Ward divided first, Spencer second, Southard and Blanchard divided third.

Seventh event, same as above.—Stanton first, Ward and Philbrick divided second, Snow third.

Eighth event, 7 singles, 18yds.—Blanchard first, Ward and Snow divided second, Stanton and Holden divided third.

Ninth event, 7 birds.—Philbrick and Stanton divided first, Snow second, Spencer third.

Tenth event, 7 birds.—Snow and Stanton divided first, Holden second, Souther third.

Eleventh event, 7 singles.—Holden first, Snow and Souther divided second, Stanton third.

Twelfth event, 7 singles.—Stanton first, Snow second, Spencer third.

WINCHENDGN, Mass, July 15.—At the regular meet to-day of the Winchendon Gun Club the game shot was clay-pigeons, which they broke as follows:

James Sutherland	0111010111—7	L P Ball	1001011011—6
F F Hopgood	1010111111—7	A M Felsh	1010101100—5
P S Davis	0101111100—6	L F Martin	0010001011—4

July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

HARTFORD C. C. CRUISE.

ON THE deck of the steamer Capitol City, when she left Hartford July 3, at four o'clock P. M., were safely stowed six canoes, while their owners and crews in groups of two or three were scattered in shady nooks about the steamer. Wreaths of smoke curled about these groups, while the talk was of the briny waters of Long Island Sound, toward which the steamer swiftly bore them, down the beautiful Connecticut River, and on which they hoped next morning, Independence Day, to

"—hoist the anchor, mates, and let the sails
Give their broad bosom to the buxom winds,
Like a lass that woos a lover."

The canoes *en route* were: Venture, Commodore Jones; Vision, Dodd and Davidson; Phyllis, Girard; Oahu, Parmele; Leilah, Abbot; Edelweiss, Francis. The Kestrel and the Kundry were already at Saybrook. Mrs. Oahu, honorary member of the A. C. A. and H. C. C. and a member of the C. C. C., were with the party. At 8 o'clock the Oahu and Leilah with their respective crews left the steamer at Rock Landing, about thirty miles distant from Hartford, while the remainder continued on to Saybrook, sixty miles from Hartford and at the mouth of the river.

During the next two days the Oahu and Leilah cruised leisurely to Essex, twenty-five miles, and returned to Rock Landing, beating down and returning with fair wind and tide. The Oahu spent an additional day cruising in the vicinity of Rock Landing, one of the many picturesque points on the Connecticut. The party which continued to Saybrook, the Venture, Phyllis, Edelweiss and Vision, arrived there about 11 P. M., and put up with hospitable Mr. Pease for the night.

Early next morning sail was set, the last of the ebb aiding a beat to windward out of the river. The end of the breakwater reached, a fair course was laid for Thimble Islands with a good south wind and

tide favorable, but here it was that the Vision went back on the crowd.

A very handsome sloop yacht was seen making straight for the fleet, the "treasurer" getting more and more excited as he recognized various lady friends on board, and very soon she crossed our bows and hove to. Of course there were a great many compliments passed on the "pretty little boats," and an invitation to come aboard. The latter was too much for the Vision, and when she passed the fleet again—they had sailed on—she was towing behind the G—— with the masts taken out and her crew—well, if you have ever been yachting with a crowd of pretty girls you can account for them as well as I.

It was once asked, "Why is D. (one of the Vision's crew) like a sailor?" and the answer was, "Because he has a girl in every port," and it seemed to come in quite handy this trip

The rest of the fleet kept to their first plan, and made a beautiful run to the Thimble Islands and back again to Madison that night, which is about half way between the Thimbles and Saybrook.

There they stayed over night, sleeping on the piazza of a cottage, as they could not get rooms at the hotel; and the next morning started out in a dense fog and picked their way along the coast to Westbrook, beating to windward the whole distance. Here the fog lifted and they stopped on Cornfield Point for a swim.

Amid the shouts of laughter and general rumpus some one has the sense to look to seaward, and there, a half mile off the Point, is the missing Vision, bowling along before a fine breeze, evidently looking for the fleet.

T-o-o-t, t-o-o-t, toot, toot, goes the Hartford signal on the Commodore's whistle, and the Vision changes her course and beats down on the fleet closehauled, bounding over the waves like a race horse and throwing a cloud of spray over her crew.

The day was spent in a very pleasant manner cruising about Westbrook, Pea Isle and Saybrook, and at night the boats are once more placed on the dock to go aboard the steamer and we go over to the hotel to think that the dream is over and we come down to the sad realities of life again in the morning.

KNICKERBOCKER C. C.

THE second race for the club sailing trophy took place on Saturday afternoon, July 18. The course was from 152d street dock around stakeboat off Deaf and Dumb Institution dock, around stakeboat off Fort Lee landing and return. The wind was fresh but moderately steady from the north and a strong ebb tide running down the river. The start was as follows: Guenn, Wm. Whitlock, 5:12:50; Lorelei, E. C. Griffin, 5:14:15; Inertia, E. W. Brown, 5:14:55. The beat up against wind and tide was the only sailing done during the race. Guenn carried single-reefed mainsail and full dandy; Inertia carried her full mainsail and small dandy, and Lorelei had her full sail. The three canoes had just about as much sail as they could carry, and the race to the first stakeboat was very interesting. It was turned as follows:

	1st Stakeboat.	Elapsed.
Inertia	5 37 25	22 30
Guenn	5 37 55	25 05
Lorelei	5 38 25	24 20

By the time this turn was made the wind began to fall. Guenn soon let go her reef, and before the boats had reached the middle of the river the wind had completely died out, with the exception of an occasional puff from the northwest.

Lorelei picked up a little on Inertia, and Guenn had worked up the river more than the others, but was some distance in the rear. When three quarters of the way across the river, Inertia, afraid of being entirely becalmed, came about and stood up the river on port tack, while Guenn and Lorelei kept on. The currents of air coming down the Palisades seemed to favor the two boats close in shore more than the Inertia, which was well out in the river. Soon, however, the strong ebb tide had carried the two boats in shore below the stakeboat, and that Inertia, while some distance above the stake, could not get in shore to turn in. It looked like a hopeless task for any of the three to get around. Inertia gave up first, and started for home with a spruce breeze. Some time later a little breeze came up and enabled the Guenn to get around the stake. Lorelei then gave up and paddled home. The Guenn arrived some time during the evening, but as the judges had knocked off at sunset the time was not taken. As there was no time in it the race was awarded to Mr. Whitlock by the janitor, who was the only one who remained to see the finish.

The third race for the trophy will probable take place Saturday, Aug. 22.

ROYAL C. C. REGATTA.

THE annual regatta of this club took place in Teddington Reach on Saturday, June 27, and, with fine weather and keen racing, was a complete success. The entries, too, were better than have been received for some time past. The programme commenced with a sailing race for second class canoes, and was won by E. B. Tredwen somewhat easily in the Pearl, Nautilus (Mr. Baden-Powell) being second.

Half Mile Paddling Race, for Novices.—G. J. B. Porter, 1; S. Robarts, 0. Won easily.

Half Mile Paddling Race, any canoes.—G. J. B. Porter, 1; C. Scott, 2; S. Futcher, 0; P. Nisbet, 0. Won after a good race by two lengths.

Paddling and Sailing Race.—Nautilus, W. Baden-Powell, 1; Pearl, E. B. Tredwen, 0. Pearl led until coming up the course for the last time, when her skipper ran into a tree and got overboard, leaving Nautilus to win easily.

Mile Paddling Race.—S. Futcher, 1; W. Baden-Powell, 2; C. Scott 0; G. Porter, 0. Won easily, Powell paddling in his sailing canoe and scoring two points for the record, Scott and Porter giving up soon after the start.

Double Canoe Race, lady and gentleman in each canoe.—G. J. B. Porter and lady, 1; P. Nisbet and lady, 0; E. L. P. Nisbet and lady, 0. A good race, won by a length and a half.

Sailing Race, four times round.—Pearl, E. B. Tredwen, 1; Nautilus, W. Baden-Powell 2; Gladys, T. F. Knowles, 3; Diamond, H. Church, 4; Pearl No. 6, A. H. Tredwen, 5. This was the best race of the day, barely two lengths separating the first three boats at the finish. Pearl 7 was first to get away, followed by Diamond, Gladys, Pearl No. 6 and Nautilus in the order named, the latter having a very bad start through not being ready at gun fire. Pearl and Diamond continued to lead the fleet during the first two rounds, when Gladys and Nautilus passed Diamond. In the last round Nautilus passed Gladys and closed up with Pearl, only a length separating them as they crossed the line.

Challenge Cup Paddling Race. One Mile (for the £50 challenge cup).—C. Scott (holder), 1; G. J. B. Porter, 0; P. Nisbet, 0. This was also a good race, and Porter was considered a likely winner after his performance in the half mile. Scott, however, made the pace very hot at the commencement, and obtained a lead which he maintained to the finish, winning by about two lengths.

Sailing Race, running only.—Pearl, E. B. Tredwen, 1; Diamond, H. Church, 2. Three others started. Pearl slipped away from the others, who ran down the course all in a cluster. Just at the finish Diamond came on with a rush and secured second place.

Four-Paddle Race.—G. J. B. Porter, S. Robarts, P. Nisbet and F. W. Farrar. Won, after a desperate struggle, by Scott's crew, by a bare foot.

Chase over Land and Water.—P. Nisbet, 1; C. Scott, 0. Scott was first across the river, but capsized his canoe in deep water and could not haul it out, leaving Nisbet to take things easily and the prize.

Scratch Fours.—Won easily by G. J. Porter, C. L. O'Malley, W. R. Richardson and Gerald Pabham.

The paddling races were umpired by Mr. Herbert Evans from the bows of the Jeannette launch, whose owner had kindly placed her at the disposal of the club for the day; while G. Herbert, A. Ingram and the secretary divided the duties of starter and judge of the various races.—*London Field.*

OTTAWA C. C.

THE following are the officers of the Ottawa Canoe Club for the present year: Patron, His Excellency the Governor-General; Captain, R. W. Baldwin; Mate, E. King; Purser, F. H. Gisborne. with Messrs. Stansfield and Brough members of the Committee of Management. The club flag is blue, and the letters O. C. C. and a beaver in white. Communications may be addressed to the Purser, Francis H. Gisborne.

The Ottawa C. C. has been in existence three years, and now numbers some 42 members. Ottawa possesses two attractions to the canoeist, the Rideau Canal and the Ottawa River, and the members spend their time on both. The club has obtained a lease from the Crown of a site on the Ottawa River, at the foot of the locks that lie at the entrance of the Rideau Canal. A most picturesque position, upon which a boat house is being erected for the accommodation of those of the members who love what the older inhabitants fitly call the Grand River. The boat house is designed to hold about 40 canoes, with a small room for committee meetings. The Ottawa C. C. has been a most successful institution. When it was first organized in 1883 with 15 members canoes were rarely seen, now every evening the canal is covered with canoes, and many may be seen on the river.

The Ottawa canoeist is very patriotic, and is a great admirer of the more beautiful of the human race, and consequently the open Canadian-built canoes are the favorite kind, a choice which enables the canoeist to patronize home manufactures and please his lady acquaintance at the same time.

One of the members of the club has just started upon a most delightful trip. He goes up the Rideau Canal to Kingston, from Kingston he descends the St. Lawrence through the Thousand Islands, and he hopes to stop at Grindstone Island and attend the meet of the A. C. A., then taking the cars at Brockville or Prescott, a short journey brings him back to Ottawa. Provisions are easy to get all along the canal, and the scenery is singularly beautiful, those who have seen both admiring it much more than the Thousand Islands. For a large part of the 120 miles of its length the canal has been made by utilizing a chain of lakes and the Rideau River, so that there is nothing of the ditch about it. Where there are excavations, the long time that has elapsed since the building of the canal some fifty years, has covered the banks with a luxuriant growth of beautiful trees and shrubs. The stone locks even have become mellowed in color and softened in outline. The writer hopes that before long the log of the Daphne may be presented to your readers, so that they may be able faintly to realize the pleasures of canoeing in this part of the world. I cannot trespass upon your space to tell of the delights open to the canoeist upon the Grand River or its tributaries, the Lelièvre and the Gatineau, but I hope that we may soon be visited by some of our brother canoeists from the south side of the line. A.

A. C. A.

Editor Forest and Stream:

Please insert the following transportation rates:

Lake Shore & Michigan Southern Railway. Regular excursion tickets to Clayton, N. Y., and return from Chicago $31.25, Toledo, $22, Cleveland, $19.65. Special canoeists' tickets from Dunkirk—Erie, Youngstown, Cleveland—to Buffalo and return at 1½ fares; canoes and kits free.

N. B.—The rates from Buffalo to camp and return has been given before.

To the Members of the A. C. A.:

GENTLEMEN: There will be two mails daily between Gananoque and the A. C. A. camp. All mail matter should be addressed:

"American Canoe Association Camp, Gananoque, Ont."

This is for the benefit of the Canadian members of the Association and is in addition to the regular mail service via Clayton.

F. S. RATHBUN, Vice-Commodore.

"CANOE HANDLING," by C. Bowyer Vaux ("Dot"). Forest and Stream Publishing Co., New York. Price $1, post free. Another useful and interesting canoeing book from America is before us, and we wish there was sufficient life in canoeing in England to warrant us in predicting for it an extensive sale. The book is full of reading that is sure to meet the approval of canoeists; with experience, instruction or incident contained in it they can institute a comparison with what they would do or what has befallen them in similar situations, and there will be few with so much knowledge that they cannot acquire something useful from "Canoe Handling." It is not, however, to the experienced canoeist that the author specially addresses himself, but more to those who are but entering or are about to enter the ranks. To those who have just entered on their apprenticeship the book will be of immense service, as here is the experience of a master hand all laid before them in terms that no novice can misunderstand, and if this book should fall into the hands of those who have he slightest inclination for boating, we think they will not be satisfied until each one finds himself the owner of a canoe, and capable of singing with the author:

> "For I am the captain of my craft,
> My word is law from fore to aft,
> I am the cook and steward too,
> I am the passengers and crew;
> And though 'tis said I'm hard to please,
> I'm not afraid of mutinies.
> In fact my complement at sea
> Is as perfect as can be."
>
> —*Canoeing Gazette.*

HARTFORD C. C. CHALLENGE CUP.—Commodore Jones has presented to the Club a handsome cup made by the Hartford Silver Plate Co., to be raced for during the season. Any one winning once is barred out of the subsequent races, but his name is engraved on the cup. At the end of the season a race will be sailed by all who have once taken the cup in the summer races, the winner to retain it finally. The trophy is of silver, 10in. high, the base being surrounded by a lateen sail on one side, a lug on the other, with paddles, double and single the new Hartford tiller and yoke, rudder, etc. Around the bowl of the cup is engraved a view of canoes under sail, from a photograph taken at Grindstone last year, every detail, down to the flags on each canoe, being perfectly accurate. Opposite to this is a group of four flags, club and A. C. A. On July 13, the first race was sailed, the entries being: Leilah, Mr. Abbott; Connecticut, Mr. Forrest; Vision, Messrs. Dodd and Davidson, and Colonel Greene's canoe. Leilah carried away her steering gear in rounding and gave up. Vision won in 17.28¾ with Colonel Greene's boat second.

THE SAFETY OF A CANOE.—The American girl, says Robert Grant White in *Outing*, has a wonderful faculty of forcasting circumstances and understanding how far she can act independently without hazard. I remember being struck at Bar Harbor by the response of a girl of eighteen who was questioned as to the prudence of having spent most of the day and evening on the water with a young man who was almost a stranger. "Oh," she answered, "the canoe itself is a great protection."

HARTFORD CRUISERS.—Dr. and Mrs. Parmele started on the morning of July 15 for a two months' trip in the Oahu. They will cruise down the Connecticut to Saybrook, and from there cross over to Long Island by steamer and explore the inland bays along the south shore. The Vision, Messrs. Davidson and Dodd, will make a week's cruise on Long Island Sound, starting about July 23.

FULTON, N. Y.—The second race of the Pathfinder C. C. occurred Friday, July 17. Length of course, four miles. There were five entries, finishing in the order named: Idler, W. S. Rozer; Otho, J. J. Morrill; ——, M. M. Williams; ——, J. D. Foster; ——, H. C. Markham, did not finish. Next race occurs in about two weeks.—PENNY.

"THE BOOK IS A CHARMING ONE, not only to canoeists, but to all who are interested in nature and out-door life," says the Albany *Argus* of Dr. Neidé's "Cruise of the Aurora."

SCHEMER AND POLLY.—Polly, Mr. Towle's new sloop, was cheated out of her race on July 4 by being neaped when grounded for cleaning at Mamaroneck, but she soon sought a chance for a race, and a match for $250 a side was made with Hope and Schemer, to be sailed on July 19. In the morning Hope withdrew, as there was no wind, but at 1 P. M. a breeze from northwest caused Schemer and Polly to start over a shorter course than the one first proposed. Starting at Constable's Point, they ran around Execution Light, then back to the Point, and home to a finish off Pagoda Point. The start was made at 3:15 P. M., Polly crossing at 3:16:48 and Schemer at 3:17:20. Both carried working topsails and balloon jibtopsails without jibs, Schemer getting into trouble through a turn in her kite as it went up in stops. At Execution the times were: Schemer 3:51:10, Polly 3:52:20. On the wind Polly did much better, going to windward of Schemer, but as the wind freed she ceased to gain any, and they turned Constable's buoy, Schemer 4:31:10, Polly 4:32:00. Schemer held the same lead to the line, with a beam wind. The times were:

	Start.	Finish.	Elapsed.
Schemer	3 17 20	4 41 10	1 23 50
Polly	3 16 48	4 42 05	1 25 17

SEAWANHAKA C. Y. C.—As the New York Y. C. has no anchorage and no club house near the water, the Seawanhaka Corinthian Y. C. have offered the use of their house and grounds to Genesta, and her cruising rig will be stored there.

WELCOME! GENESTA.

PEACE and war, commerce and pleasure, bring many odd craft past the Hook and into the harbor of New York each year, but it is a long time since any vessel has been expected as eagerly or whose coming has awakened such a general and widespread interest on all hands as the little 80ft. yacht that on Thursday last dropped her anchor off the Seawanhaka C. Y. C. house, after a passage of twenty-two days from Queenstown. Over her taffrail, as she lowed up astern of the tug Indian which had met her outside, floated the English flag, while at the head of the short topmast was the well-known black and red signal that she made so famous last year at home. Leaving Greenock on June 16 Genesta put into Queenstown and sailed again on June 23, thus making the passage in twenty-two days, or less than the time of the Cambria-Dauntless race, though only under reduced rig. Little of note occurred on the passage. Her best day's run was 224 knots. She passed a whistling buoy adrift some 2,000 miles from its proper place, and for eighteen hours she was hove to in a heavy gale, the weather mostly being light. She brought with her that 70 tons of lead which, according to the wiseacres last winter, was to land her at Davy Jones instead of in New York, should she be so daring as to tempt the wide Atlantic.

Cutters, of late, have been no novelty in New York Bay, cutters of all kinds, wide, narrow, full-fledged Britishers and wild American imitations. Harvey cutters we have seen, Watson cutters, and old Dan Hatcher's famous 15-tonner has lately found a home here, but in Genesta we have a cutter of another type. A ship, every inch of her, even more freeboard than most of her kin, but unlike them with a bold sweep of sheer that lifts bow and stern and gives life to every line and curve about her. Her counter is light and graceful in the extreme, while her bows show much fuller on deck than in the boats of this class that we have been accustomed to, the breadth on deck running well forward. The deck itself has a good crown, the bulwarks are low, and aft they flare off gracefully into the contour of the outside of the counter. Looking at her worst, partly dismantled and with no bowsprit, she is certainly a handsome boat, but what is still more noticeable is the power shown in every line of her hull that is visible. Of composite build, steel frame and teak and elm planking, her channels of plate iron, rails of elm and bulwarks and deck fittings of teak, and the various fittings about the deck have that true beauty which comes from a perfect adaptation to the purposes they are to serve.

Unlike most cutters, her bowsprit runs over the stem head, the starboard side of the iron bitts being hinged to permit of its housing. The free scuttle is oval, a section of steel tube forming the coaming, while an oval hatch leads to the galley, with another hatch for sails further aft. On deck is a neat capstan. Her tiller is an immense iron bar, capped with brass at the handle. Two large boats are carried at the davits, besides a 12-foot dingey of very peculiar model, the stern being round, which is carried on deck in racing. Below is a large saloon, out of which on the starboard side aft is the owner's room, abreast of it being the passage leading to the ladies' cabin, a good-sized room aft. Forward to starboard the main cabin opens into another stateroom, while to port is a passage to the galley. The captain's room is forward of the latter stateroom. The forecastle is very large, high and comfortable.

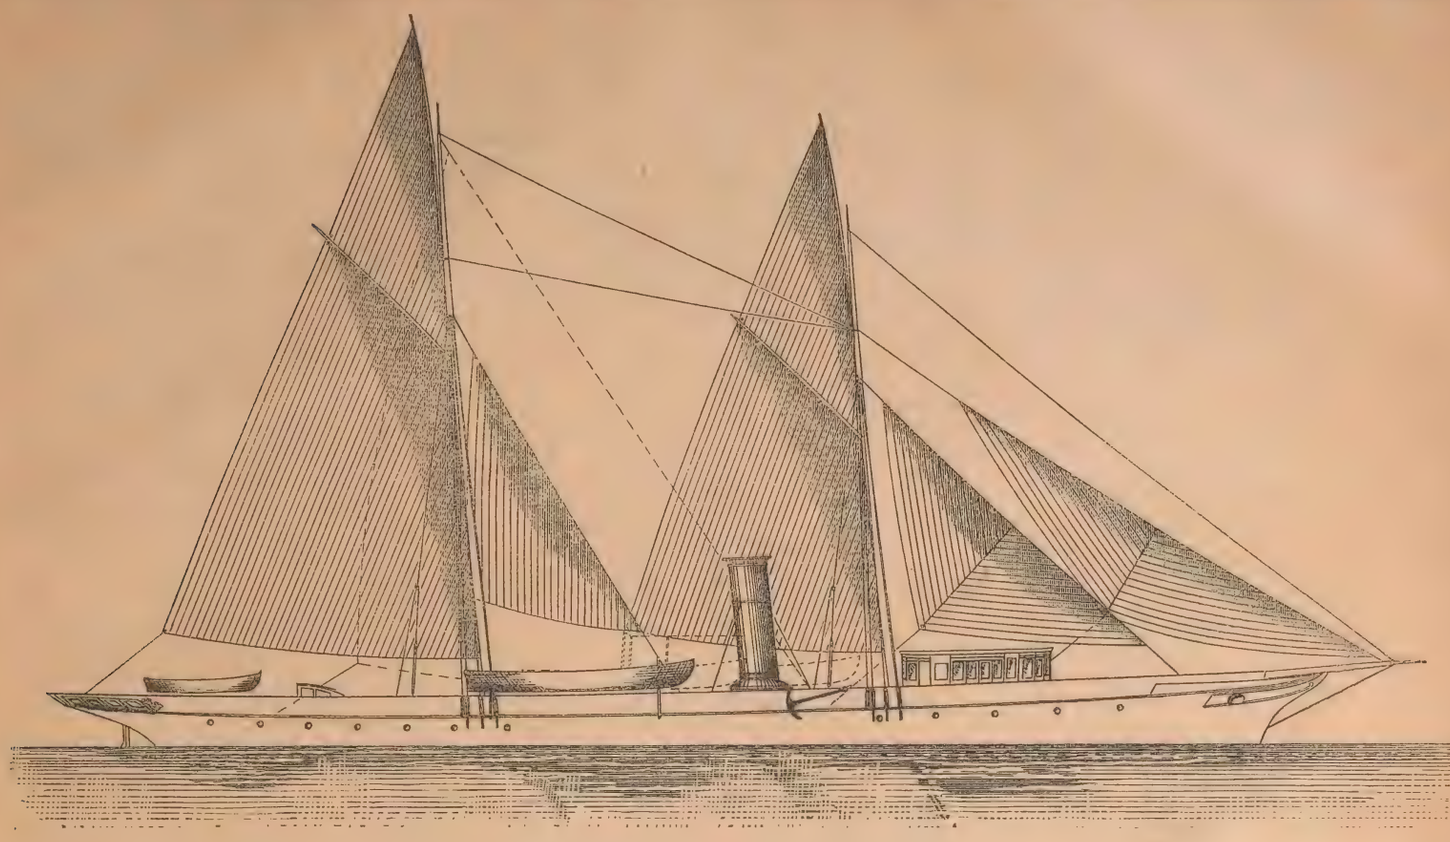
The really wonderful part to a sloop man is not seen at first, but by lifting a hatch in the floor a lower hold is disclosed, a passage amidships running fore and aft, on each side of which are stowed provisions, water and stores of all kinds. Underneath the forecastle floor the eighteen beds of the crew are stowed away during the day. Genesta's rig on her long passage, though much smaller than her racing suit, can hardly be called a jury rig, as it was most efficient, and under it she made good time. Her racing mast of last year has been cut down five feet, a very short topmast and small bowsprit were shipped, a trysail gaff of 25ft. and a light boom for occasional use only. Jolly, black bearded Captain Carter, who handled her so well last year, will sail her in her races here. He has with him a crew of eighteen, a fine looking set, as most of the English yacht sailors are, well built, hearty, and evidently with plenty of "beef" for a new hand in a long race. One and all they praise their ship, and the chief inquiry of visitors is as to what races she can enter. As soon as her spars arrive she will ship them and dock for cleaning, and will join the New York Y. C. on their cruise.

AMERICAN Y. C., JULY 16, 17, 18.

STEAM yachting already owes much to the American Y. C., the only organization here or abroad devoted to the development of steam pleasure craft, and which in the short time it has been in existence, has done much for their development. Besides the work done by its members in the way of investigation and improvement, it has added a new feature to the yachting year, a cruise and race under steam. Last year the club held its first regatta, laboring under the many difficulties incident to a new organization working in an untried field. This season a great improvement was visible over the arrangements of last, as the club have profited by the experience gained then. The programme for this season included a race from Larchmont to New London for all yachts, a cruise to Shelter Island and back to New York, and races for launches and also for yachts' row-boats. In getting rid of the uncertainties of wind and weather that vex the sailing craft, the steam yachts encounter an extra difficulty in the question of time allowance, which far from simple when sailing only is concerned, becomes still more complicated when applied to steam.

Last year the allowance was not satisfactory and this season a new departure was made, several systems of allowance being tried with separate prizes for each. For the principal race, that from Larchmont to New London, open to all yachts, a prize was offered by the Commodore for the best time over the course without any restrictions, a cup offered by Mr. E. S. Kinney for the winning boat under a system of allowance proposed by him, and cups offered by the club, three under Emery's formula, one under Isherwood's, and one under Captain Lundborg's formula.

Mr. Kinney's table of time allowance is based on the actual speed of yachts, which he has tabulated carefully, and from which he has deduced a table of speeds for all lengths from 50 to 300ft. Yachts entering must be veritable cruising craft with masts and sails, with usual boats, and must use only tubular boilers. The system of allowance proposed by C. E. Emery, Ph.D., is based on the assumption that the speed in knots per hour should be equal to 2 7-10 times the square root of the length in feet on waterline. Yachts competing for this cup were divided into three classes of over 150ft waterline, 85 to 150ft. and under 85ft., a cup being offered for each class. All were limited to tubular boilers, with a pressure not exceeding 125lbs.



The allowance proposed by Chief Engineer B. F. Isherwood, U. S. N., is based on the assumption that the relative merits of the yachts are proportional to the speed in knots per hour divided by the cube root of the waterline in feet. No limits of boilers or pressure are imposed, and all yachts race in one class for a cup offered by the club. Captain Lundborg, inventor of the new model for steam and sailing vessels known by his name, has also computed a series of constants as a basis for a system of allowance, and a cup was offered under his tables. This is the only one in which size of cylinders, pressure, pitch of wheel and boiler power are considered. Such a comparative trial of the various systems not only offers to all a chance for a prize, but will add much to the knowledge on the subject, and aid greatly in the ultimate evolution of a system of time allowance that shall be approximately correct, at least as nearly so as is possible in steam yachting.

Two cups were also given by Mr. Thos Manning for launches of fifty feet and under, to be raced for on July 17, from New London to Shelter Island, one class for tubular boilers and one for coil and other types, both under the Isherwood formula. The course for the main race was from off Lachmont to the lighthouse off Stratford, keeping it to port, thence to the south of Bartlett's Reef Lightship and buoy on Sarah's Ledge, and finishing off the Pequot House dock at New London, a distance of 80 knots or 92 miles.

Twenty yachts were entered beforehand, but some did not start the full number of starters being:

	Waterline.	Owner.	Boiler.	Port.
Lucille	63.09	J. B. Herreshoff.	Coil	Bristol.
Marion	51.09	C. T. Parker	Tubular	Boston.
Viola	52.09	J. P. Kennedy	Tubular	New York.
Lagonda	118.00	J. C. Hoagland	Tubular	New York.
Radha	135.00	J. M. Seymour	Tubular	New York.
Promise	90.00	A. De Cordova	Tubular	New York.
Stiletto	91.00	J. B. Herreshoff	Coil	Bristol.
Norma	131.00	N. L. Munro	Tubular	New York.
Sophia	100.01	C. H. Osgood	Tubular	New Haven.
Utowana	122.00	W. E. Connor	Tubular	New York.
Lurline	88.03	J. M. Waterbury	Tubular	New York.
Rival	87.08	J. A. Baker	Tubular	New York.
Skylark	74.03	E. A. Bateman	Tubular	New York.
Aida	90.00	Wm. P. Douglas	Coil	New York.
Atalanta	228.09	Jay Gould	Tubular	New York.
No. 246	152.00	Wm. Cramp's Sons	Tubular	Philadelphia.

Of these Lagonda, Radha, Promise, Norma, Utowana, Lurline, Rival and Atalanta were entered for the Kinney, Emery, Isherwood, Lundborg and Commodore's cups; Sophia and Skylark entered for Kinney, Emery, Isherwood and Commodore's; the Stiletto, Lucille and Aida entered for the Isherwood, Lundborg and Commodore's; No. 246 entered for the Kinney, Isherwood, Lundborg and Commodore's; Viola and Marion entered for the Isherwood and Commodore's cups. The launch Surprise, 34ft. long, with coil boiler, was entered by Jay Gould for Friday's race for the Manning prize. No sails were allowed, and no prizes were given for walkovers. The Larchmont

SAIL PLAN OF STEAM YACHT "WANDA."

Y. C., with its usual hospitality, had invited the American Y. C. to rendezvous at their anchorage, and on Wednesday evening most of the steam yachts were anchored off Larchmont. Early on Thursday morning the iron steamer Cygnus came up from New York with the guests of the club and also a band of music on board, and took up a position just ahead of Flagler's Point.

The small class, Lucille, Viola and Marion, had been started at 8:35 A. M. by Mr. Manning, their times being: Lucille, 8:34; Viola, 8:41; and Marion, 8:45, though the latter did not really start until 10 A. M., owing to trouble with her machinery. The morning was clear and bright with little wind, just the day for a pleasure trip over the Sound. At 10:30 the Cygnus sounded her whistle, and again at 10:40 went the signal for a start. First over came Skylark at 10:41:11, then Radha 10:42:33, Rival and Norma 10:43:04, Lagonda 10:43:21, Utowana 10:44, Sophia 10:45:05, Promise 10:46:46.

Off Pagoda Point lay two yachts of peculiar appearance, one high-sided and black, with three masts and a yellow smokestack, and one a low black and white stripe on the water, also having three masts. They lay together for a time, Aida and Stiletto, then the white and black one started, making a turn in and out and leaving a white wake that looked like a sea serpent, of which she was the head. Over the line she went at 10:47:12, and a minute latter had passed the nearest one of her rivals, the Promise. A minute and a half brought her beside Lurline, a minute more by Sophia, one more and Utowana was astern, and so until after 10½ minutes from the start she passed the leader, Radha, and took the head of the fleet, and shortly after she was hull down ahead. Aida was last to start, crossing at 10:51:40. All the yachts carried large numbers on each side, so that they were easily picked out by all. A strong flood tide was running in the Sound until after 2 P. M., which was greatly to the disadvantage of the smaller yachts, as they made most of the run against it, while Atalanta and No. 246, starting later, had more of the ebb.

The latter boat, not yet named, is the latest production of the builders of Atalanta, and is intended to be very fast. She is 106ft. over all, 152ft. waterline, 22ft. beam, 13ft. depth of hold, with a high side, curved stern and no bowsprit. Her sides are painted a dead black, without gloss. Several new features are embodied in her design. She has triple expansion engines, her keel is cut away aft for a third of its length, and she has a balanced rudder. She and Atalanta were started by Com. Monroe at 11:30 A. M., crossing at 11:35:09 and 11:33:59 respectively. Just as Aida was timed, 10:51:40, the Cygnus turned her wheels for a chase, in which she promised to rival Stiletto. Orienta started with the fleet, but was not entered and towed a steam launch

By the time that Stratford Light was reached, 1 P. M., the Stiletto was far out of sight, Radha was second boat and Cygnus was next to her. The Orienta was passed here, then the order of the others was Lagonda, Rival, Sophia, Utowana, Skylark, Norma, Promise, Lurline, Aida. For nearly an hour the big steamer ran almost alone, with Radha in sight ahead, but about 2 P. M. Atalanta was sighted astern. It was not until 3:52, however, that the yacht really passed her and soon left Radha as well. At 2:30 Marion had been made out from the Cygnus. At one time the Edith and Falcon came out to meet the racers, and off New Haven the lost stakeboat that brought trouble to the New Haven Y. C., the Smith Bros., was seen cruising about with a party on board. At 3:3C the Cygnus had passed Cornfield Light, and at 4:15 she passed Bartlett's Reef Lightship, which point Radha had left at 4:05 and Atalanta at 4:12. Soon after Atalanta passed Radha, while the latter made an awkward blunder. After rounding Sarah's Ledge buoy properly she was in doubt as to the course and went off to turn another buoy at a distance, losing some 10 minutes or more. After she arrived the others came in one by one for over an hour. Little Lucille was first boat in at 3:26:10, Stiletto, 3:37:06; Atalanta, 4:27:29; Radha, 4:29:06; 246, 4:41:01; Lagonda, 4:55:52; Aida, 5:15:11; Rival, 5:20:02; Sophia, 5:27:10; Utowana, 5:29:40; Viola, 5:30:37; Skylark, 5:58:53. Norma lost a cylinder head and put into Bridgeport, Promise blew out her packing and brought up in the same port, Lurline did not finish and Marion arrived late and was not timed. The complete times of those that finished were:

	Start.	Finish.	Elapsed.
Stiletto	10 47 12	3 37 06	4 49 54
Atalanta	11 33 39	4 27 21	4 53 50
No. 246	11 35 09	4 41 01	5 05 52
Lagonda	10 43 21	4 55 52	6 12 31
Utowana	10 44 00	5 29 40	6 45 40
Radha	10 42 35	4 29 06	5 46 31
Lucille	8 37 00	3 26 10	6 49 10
Sophia	10 45 05	5 27 10	6 42 05
Rival	10 43 04	5 20 02	6 36 58
Skylark	10 41 11	5 58 53	7 17 42
Aida	10 50 00	5 15 11	6 25 11
Viola	8 41 00	5 30 37	8 49 37

Stiletto won the Isherwood and Commodore's Cup, and would have taken more except for the restrictions on coil boilers and pressure. The head tide made it impossible to make a high record, and she was run easily with two stops during the race. The Kinney Cup goes to No. 246, subject to remeasurement; the entries for first and third class Emery Cups did not fill, and second class goes to Rival. The Lundborg Cup goes to Utowana.

In the Kinney, Emery and Lundborg systems certain theoretical speeds are laid down for each length of waterline, the boat showing the greatest gain over her tabulated speed being the winner. Thus Rival's time allowed by the Emery table was 6.40.12, while her real time was 6.36.58, or 3.14 under the tabular time.

Lucille entered a protest against Viola, on the ground that her boiler is virtually a coil. The times at the finish were taken by Mr. J. P. Lockwood and Captain Lundborg, from the Pequot House dock.

None of the 18 knot boats that we hear of every spring when trial trips are made happened to be present on this occasion. Stiletto's time for the entire distance averaged 10.5 knots, while the rate runs from that down to 11 knots, with an average nearer the latter figure for the whole fleet. In every way the race was a success, and gave satisfaction to contestants and spectators. The Cygnus showed a speed second only to Stiletto, Atalanta and No. 246.

In the evening the yachtsmen and the guests from the Cygnus were at the Pequot House, where a hop was given, with fire-works from the fleet in the harbor.

The second day of the cruise opened with a dense fog, which only cleared away at noon. Only one boat was entered in the launch race to Shelter Island for the Manning prizes, the Surprise, a Herreshoff launch 34ft. long, belonging to the Atalanta. She ran across, followed by the fleet, making the twenty-six miles in two hours. Stiletto started in the morning for Bristol. On the arrival of the fleet, races between the yacht's boats were rowed, the first being for cutters, Rival's boat manned by Phillips and Anderson winning, with Utowana, Promise and Lagonda in order. The dingy race was won by John Engstrom of the Sentinel, with Promise and Utowana following. In the gig race Utowana's crew, Peterson, Matheson, Johnson and Damm, with engineer Van Schack as coxswain, won. The other boats were from the Tillie, Atalanta and revenue cutter Grant. In the evening a display of fire-works took place, and also a hop at the Prospect House.

On Saturday the Cygnus brought her passengers back to New York, while the fleet disbanded, the yachts going various ways. Great credit is due the regatta committee, Messrs. G. W. Hall, Thomas Manning and J. P. Lockwood for the manner in which all the arrangements connected with the yachts and the steamer were carried out.

WANDA.

THE Wanda, whose sail plan is given above, marks a new departure in American steam yachting, as she is of a type as yet little known here, the auxiliary steam yacht, not merely fast under steam, but with sailing powers of a higher class than usual in American yachts. Wanda is intended for general cruising off shore as well as on the Sound, and to that end it was desirable that she should handle well under sail alone in case fuel fell short, or on a long run the wind proved strong enough to dispense with steam. In model she differs radically from American practice, as much so as the cutter does from the centerboard and in a somewhat similar manner. Her mid ship section, on a beam of 18ft., shows a depth of hold of 11ft. 6in., with a draft of 10ft., and in shape resembles that of a modern cutter simply spread apart to give the requisite beam. From keel to plank-sheer on each side the outline is almost an arc circle, making a V with the sides convex instead of straight. The waterline fore and aft is very fine and the ends lean, and while there is ample displacement, the great depth and the careful manner in which it is distributed have led many to predict that she would not carry her load. Everywhere throughout the boat easy flowing lines are noticeable, a keel rockered fairly and running with an easy sweep into forefoot to stem, clean buttock lines leading into a light and graceful counter, long, but handsome; and a fair sheer coupled with good freeboard While she has not the extreme sheer of some American boats and her sides are higher than we are accustomed to, the handsome ends remove any appearance of heaviness or any boxy look.

Mr. John Harvey, her designer, came here a few years since with a reputation earned abroad as a builder and designer of fast yachts, since which he has given us a fleet that has made an American reputation for him—Bedouin, Oriva, Wenonah and Ileen—and now in his efforts in a different field he promises to be no less successful, and to establish a standard in style that some of our steam yachtsmen can study to their advantage.

Not only is Wanda of a new type, but she is no less noticeable as being the first steel yacht built in New York, as well as the first metal boat turned out from the new yard of Messrs. Piepgrass & Pine, at Greenpoint. This firm, who built Yolande, Oriva, Wenonah, Bedouin and Ileen, all wooden boats of superior construction, have lately put in an entire new plant for working steel and iron, which branches of the business they will add to wooden yacht building. Mr. Pine's experience in New York is well known, and Mr. Piepgrass brings into the concern a thorough knowledge of iron shipbuilding, acquired in European yards. This, their first work, is in every way creditable to them. Wanda's dimensions are:

Length over all	143ft.
Length on waterline	127ft.
Beam, extreme	17ft.
Depth of hold	11ft. 6in.
Draft	10ft. 2in.
Displacement	190 tons.

The entire vessel is of steel, the keel and stem being 5⅛x1⅛in., with sternpost 5⅛x3½in. Angle iron frames 2¼x2¼x¼ are spaced 18in. centers amidships and 22in. at ends, with reverse frames 2x2 abreast of and for 10ft. fore and aft of the engines and boilers. The plating is of ¼ and 5-16in. steel. Five bulkheads of 3-16in. steel divide the hull into six watertight compartments. The engines, furnished by Mr. J. W. Sullivan, of New York, are of the usual type of two cylinder fore and aft compound, 20 and 38 by 24, with a steel shaft 8in. in diameter, and a four-bladed wheel 8ft. 6in. in diameter and 14ft. pitch. Mr. David M. Nichols designed and built her two boilers of steel, horizontal tubular, 9ft. 6in. long, 6ft. 6in. wide, and 9ft. 6in. high. Each has 187 steel tubes 2¼in. in diameter, and 35ft. of grate surface. Below the crew's quarters are placed forward, with the officers' rooms abaft them. Aft of the engines is the main cabin, owner's stateroom and ladies' cabin. The galley is on deck, in the after part of the pilot house. The sail plan includes a foresail of 690ft., mainsail of 1,072ft., staysail 312ft., jib 337ft. and mainstaysail 281ft., or 2,682 sq. ft. in lower sails. In sailing the stack can be turned down as shown and a stay set up for a big maintopmast staysail. The rail is provided with several pairs of sockets for davits so that the positions of the boats may be shifted, as the coal is used from various points, to trim the ship properly. The peculiar rig of Wanda with her big yellow stack, long stern and generally English appearance make her a noticeable object among our yachts. Her trial trip lately was very successful, but she has not yet raced, being used by her owner for cruising and as a summer home.

THE GOELET CUP RACES.

THE following circular, issued by the New York Y. C. gives the particulars of race for the Goelet Cups, open to schooners and sloops of the New York Y. C., that have not hauled out to clean bottom after the cruise has begun. A schooner prize of a $1,000 cup and a sloop prize of a $500 cup are offered as usual by Mr. Ogden Goelet.

The race to take place in the early part of the cruise, as before, on the day after the arrival of the squadron at Newport; the day to be named by the flag officers, probably Monday, Aug. 3. And it is hoped that, as heretofore, every yacht present will be entered. To be sailed under the rules, and with the time allowance of the club. The course for this race will be triangular and about 45 miles long, starting from Brenton's Reef Lightship or its vicinity, and will be announced by signal from the judges' boat on the morning of the race, and if possible from the flagship also, as follows: The letters K. V. of the International Code will signify a course from the Brenton's Reef Lightship to and around the buoy on the north end of Block Island, leaving it on the port hand; thence to and around a mark displaying a red flag anchored about 2⅝ miles W.S.W. from the Lighthouse at West Island, leaving it on the port hand; thence to the starting line, passing to the southward of the Lightship. At the start and finish the yachts will pass between the Lightship and the judges' boat stationed to the westward of it. The letters S. M. will signify a course from a line drawn from the Red buoy off Beaver Tail and the judges' boat anchored to the south of it, to and around the Sow and Pigs Lightship, leaving it on the port hand; thence to and around the Hen and Chickens Lightship, leaving it on the port hand; thence to the Brenton's Reef Lightship, passing to the southward of it and between the Lightship and the judges' boat. The measurement of yachts not already measured should accompany entries. Entries will be received by the secretary at the club house, 67 Madison avenue, up to Tuesday, July 28, and on the flagship, addressed to the commanding officer, up to 8 o'clock A. M. on the morning of the race. Owners are requested to send in their entries as early as possible to facilitate the labors of the regatta committee.

The sailing directors are as below: The preparatory signal will be from the judges' boat at the starting point at 9:45 and the starting signal at 10 o'clock precisely if possible. The signal for starting will be as follows, viz: Preparatory signal.—One long blast of the steam whistle and at the same time the United States ensign will be lowered from the bow staff and a blue Peter set in its place. The start.—Ten minutes later there will be a second blast of the whistle, the Blue Peter will be lowered and the yacht club signal set in its place, when the time of each yacht will be taken as it crosses the line. Ten minutes later there will be a third blast of the whistle, and this time will be recorded as the time of any yacht starting in the race thereafter Note.—That before any signal is given the United States ensign will be flying at the bow staff; during the preparatory period a blue Peter and after the starting whistle the yacht club signal. If possible a short blast of the steamer's whistle will be given when each yacht crosses the starting line. There will be no limit as to the time of performance. Yachts sailing the race must carry private signals at the main peak. In case the judges' boat from any cause is not at the finish line yachts will pass close aboard the Brenton's Reef Lightship, each yacht owner or representative taking the time when the foremast of his vessel, on a line drawn at right angles to the straight course from the last mark, passes the bow of the lightship.

J. F. TAMS, C. H. STEBBINS, J. A. MONTANT, Regatta Committee.

ACCIDENTS ON THE WATER.

BESIDES the many fatal mishaps to bathers which have already been reported in the papers this season, three accidents of a fatal character have happened to yachting parties, two of which, at least, should serve as warnings both to the inexperienced and to those in whose care the safety of others is intrusted. The last week in June Prof. Bruton, a gentleman from Buffalo, purchased a yacht (?) in Dunkirk and started with a young man, Mr. Frank White, to sail her 40 miles to Buffalo in order to enter the regatta of July 4. This yacht (?), the Phantom, was 19ft. long, 7½ft. beam, with a 26ft. mast, and 21ft. boom, jib and mainsail rig, and carried 1,053lbs of iron ore as ballast. She had no life preservers or even an oar or piece of board that would serve to float any one in case of need. The price paid for her was but $60. Leaving Dunkirk in a heavy sea against the advice of the local watermen, while the former owner of the boat came by rail, the little boat made her way almost to Buffalo, and about 5 P.M. of the same day, when off Sandy Point she swamped or capsized and at once sunk, drowning both her crew. From all we can learn of the boat she was a smooth water trap, utterly unfit for seawork, unsafe in competent hands, while neither of her crew were expert sailors. The trip they undertook would have been dangerous in any case with such a boat, and the Phantom disaster must go down with those of the Sophia and Mystery, as due to reckless or ignorant dependence on a type of boat radically bad for any but a very limited purpose.

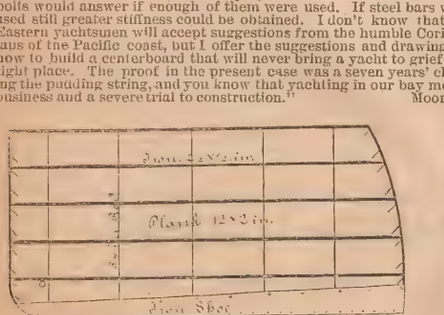
An accident of a less common kind occurred on Lake Minnetonka, Minn., on July 12, in which a steam yacht, the Minnie Cook, having

on board a party of ladies, gentlemen and children, ten in number, was struck by a very violent storm and instantly sunk in 60ft. of water, drowning all on board. According to the local papers the yacht was ten years old, top heavy and rotten, while the divers report that her engine had shifted, probably when she first capsized, which facts bear their own moral. The storm was of unusual severity, one of the violent bursts of wind that sweep through portions of the West, and to its force, in connection as well as the condition of the boat, the disaster is partly due.

Still another sad occurrence remains to be recorded nearer home, in Great South Bay, off Patchogue, L. I. A party of six, three young men and three girls, started in the evening for a sail in a catboat in charge of a bay boatman, father of one of the girls. The young people were in different parts of the boat enjoying the beautiful evening and quiet sail, when suddenly the boom jibed, throwing four of the party into the water. One young lady caught the coaming of the boat, and was assisted in the boat, but another, with two of the gentlemen, was drowned in spite of the efforts of her brother to save her. The bodies of all were subsequently recovered. The inquest elicited the fact that the young lady and one of the gentlemen were sitting on the boom near the mast, about as dangerous a position as they could have chosen.

Persons not accustomed to boats naturally neglect, through ignorance, those precautions which are instinctive to experienced boatmen, and move about as freely as if on shore, and from this cause most of the summer accidents arise, as in the present case. Ladies and children should never venture in a boat unless it is in charge of a competent person who can and will exert the necessary authority on which safety depends.

THE CONSTRUCTION OF CENTERBOARDS.



Editor Forest and Stream:

An old friend, an enthusiastic yachtsman, writes me from San Francisco in a worrisome state of mind concerning the centerboard of the new sloop Priscilla, that is to sustain the right to the America's Cup. He is afraid we are not up on the proper strength a board should have when down. Here is what he says about it:

"I write to you to refresh your memory about the history of the centerboard of the Lotus, which she carried for seven years, you remember, until we put a keel on her for her voyage to the South Seas.

"I first saw in the FOREST AND STREAM that the Priscilla's centerboard was to be of steel and now I am upset at seeing in a late number of the FOREST AND STREAM that it is to be of wood. Hence this screed. You know how often in racing small things count. You know, also, how often centerboards come to grief. A broken board of ordinary construction is among the possibilities and might occur to the detriment of the cause. You may safely aver that a board built on the plan of that of the Lotus will not break. I don't say it because it is my plan, but from experience. When taken out after seven years' use it did not show a deflection of the fraction of an inch.

"I inclose the plan, which is so simple as to be easily comprehended. It is perfectly perceptible that the lee pressure diagonally across the wood fibre in the line of the keel being distributed among the iron bars in the edgewise direction, spans the breaking strain at the ordinary line of puncture in the most efficient way in which material can be combined. The board requires no weighting at top edge, the buoyancy having been counteracted by the proper weight of iron in construction, as will readily be seen by calculation. The application of the boiler iron to sharpen the edge in dividing the water also lowers the weight, while the line of fastening is carried diagonally across the fibre of the plank to prevent splitting. The board of the Lotus was through-bolted from edge to edge, but as the common mechanic shies at such a job, the common method of dowel bolts would answer if enough of them were used. If steel bars were used still greater stiffness could be obtained. I don't know that the Eastern yachtsmen will accept suggestions from the humble Corinthians of the Pacific coast, but I offer the suggestions and drawings of how to build a centerboard that will never bring a yacht to grief in a tight place. The proof in the present case was a seven years' chewing the pudding string, and you know that yachting in our bay means business and a severe trial to construction." MOODY.

The heavy lines represent iron bars as wide as the plank is thick, laid between the planks. In the board shown the bars are 2x¼in. Both planks and bars are fastened with ¾in. through-bolts, and a band of ½in. iron runs round the three sides. PODGERS.

MORE ABOUT BENT TIMBERS.

IT has been urged against the use of bent timbers that they will not keep their bend, but are liable to straighten after the boat is finished, and thus cause much mischief. This is perfectly true of timbers bent by the old process, whereby the grain lying along the outside or convex side of the bend is stretched endwise. When the grain of a timber is stretched it acts as any other elastic substance would, and contracts again as soon as the strain that stretched it is removed. This contraction of the grain lying along the outside of the bend of course straightens the timber, and will continue to do so as long as they are bent on that principle. But this way of bending timbers is obsolete, and is now used only by those who do not know the meaning of end pressure as applied to wood bending. The comparatively new method of bending by end pressure prevents the grain from stretching on the outside, and forces it to contract or upset on the concave side of the bend. Wood bent in this manner has no unnatural strain put upon the outside of the bend to pull it straight; the grain there lies easy and natural, as it did when nature determined its position on the tree from whence it came. But on the concave side a great change takes place; the grain there is shortened, compressed and knit firmly together, and the timber is thus rendered stronger and more compact, as the open cells of the wood are filled with the compressed or upset grain. Right here comes in the greatest difficulty with which the wood bender has to contend. The problem how to upset the grain without injuring it is one on which much thought has been expended and much experimenting has been done. When the powerful end pressure is applied to a timber the grain, if left to itself, will be crushed under the pressure and the firmness destroyed. Timbers have been bent in this way (by the Government and private individuals) and the result has proven very unsatisfactory; they came from the press much weaker than when they went in, the natural vitality of the timber destroyed, and they have consequently fallen an easy prey to decay.

To overcome this difficulty help has to be extended to the grain during the shortening process so that instead of being crushed under the end pressure it will be condensed and shortened but its individuality preserved, each grain may twine itself around its neighbor, the whole mass may become a confused snare of tangled grain, but as long as the grains are not separated or crushed they may join hands each with its neighbor, and the timber will be stronger and tougher for the closed union of its constituent grains.

The extent to which a wood bender can upset a timber without injuring its grain marks the extent of his ability to bend heavy timber, and the only natural limit to the process of wood bending.

Nothing of this change in the grain appears on the surface of the timber if it be properly bent, but take a chisel and drive it into the end of an upset timber and it is at once apparent. Instead of splitting easily and smoothly as it would have done before, it now exhibits a most astonishing dislike to split at all, and cannot be made to split smoothly but will shred and tear as the chisel forces it apart, showing plainly the tangled condition of the grain. This condition renders the timber more impervious to the entrance of water; as the cells are filled with the compressed wood, and the grain confused and tangled no longer offers straight, open water courses to the decay-causing moisture. Among the recent innovations in bent wood are the bent stem piece, and bent breast hook, for yawls and yacht's boats. The former is now being used quite extensively by first-class builders. Of the bent breast hook many good things could be said. The sharp angle of the hook, especially those for small boats, makes it very difficult to get natural crooks, the grain of which will follow the shape of the hook. Hence it frequently happens that they are made cross-grained, and being small, at the first hard strain they are liable to break and leave the boat free to open at the bow. These are now bent, and as the grain follows all the way around the bend they are very strong and obviate all danger of a broken breast hook. Small knees and floor timbers are also bent and perform an important part in making the yacht or boat strong and staunch. W. G. SHEPARD.

HULL Y. C., JULY 18.

THE forty-ninth regatta of the Hull Y. C. on Saturday was a complete disappointment, as there was hardly any wind at all. The courses were for first and second classes, across the line between the judges' yacht and flag-boat, leaving judges' yacht on starboard, through Hull gut, leaving Hunt's Ledge and Point Allerton buoys on starboard to Harding's bell boat, leaving it on port, to Martin's Ledge buoy, leaving it on port, Hunt's Ledge buoy on port, to and across line between judges' yacht and flag-boat, distance 11 miles.

Third class, across line between judges' yacht and flag boat, leaving judge's yacht on port, around Black Brush buoy No. 1 (half a mile south of starting line), through the West gut, around Wreck buoy (off west end of Pettick's Island), leaving it on the starboard, around Wilson's Rocks buoy, leaving it on starboard, through Hull gut, to and across line between judge's yacht and a flag-boat, distance 6 miles.

Fourth, fifth and sixth classes, across line between judges' yacht and flag-boat, leaving judges' yacht on port, around Hull Y. C. barrel (off northwest end of Bunkin Island), leaving it on starboard, Hull Y. C. barrel (off Harry's Rocks, near Prince's Head), leaving it on starboard, around flag-boat at starting line, leaving it on starboard, around Hull Y. C. barrel (off northwest end of Bunkin Island), leaving it on starboard, around Hull Y. C. barrel (off Harry's Rocks, near Prince's Head), leaving it on starboard, to and across line between judges' yacht and flag-boat, distance 6 miles.

The classes were started at 3:15, 3:20, 3:25, 3:30, 3:35 and 3:40 in a dead calm. The first and second classes could not make the race within the time, four hours. The times of the others were:

THIRD CLASS—KEELS.

	Length.	Actual.	Corrected.
Kitty, E. H. Tarbell	23.00	1 44 47	1 41 26
Thelga, A. P. Thayer	22.07	1 55 03	1 51 33
Saracen, W. P. Fowle	23.08	Not taken.	

THIRD CLASS—CENTERBOARDS.

Queen Mab, Burwell and Litchfield	22.00	1 52 37	1 49 04
Sea Bird, C. L. Joy	23.01	2 01 17	1 57 51
Alda, W. H. Wilkinson	24.01	Not taken.	

FOURTH CLASS.

Niobe, Sayles and Chadwick	20 06	1 42 52	1 39 06
Amy, E. W. Baxter	21.03	1 47 32	1 43 52
Thrasher, G. G. Garroway	20.02	2 00 05	1 56 16
Tartar, F. L. Dunne	20.01	2 07 27	2 03 37

FIFTH CLASS.

Em Ell Eye, P. M. Bond	19.04	1 47 10	1 43 13
Wildfire, H. A. Keith	18.01	1 53 06	1 48 57
Spider, J. Abbott	18.10	1 54 39	1 50 38
Imogen, B. T. Wendell	18.09	1 54 24	1 53 32
Crusader, A. Wilson	19.01	1 59 59	1 56 00
Myrtle, R. C. Poor	19 06	1 59 44	1 56 09
Spray, H. H. Faxon	19.10	Did not return.	

SIXTH CLASS.

Mirage, L. M. Clark	17.09	1 59 42	1 55 30
Elsie, C. F. Hardwick	16.09	Not taken.	

The following prizes were awarded: Third class centerboards—First, $15, Queen Mab. Third class keels—First, $15, Kitty. Fourth class—First, $10, Em Ell Eye; second, $5, Wildfire.

BOSTON Y. C. REGATTA, JULY 16.—Another race for the second class championship and the Pfaff Cup was sailed on July 16 over a course from off the club house, through the Narrows, leaving Spectacle Island, Nix's Mate bell buoy, Galloupe's Island, George's Island and Point Allerton Buoy on the starboard. Sound Point Beacon on the port, Harding bell buoy on the port, Point Allerton Buoy on the port, through the Narrows, leaving George's Island, Galloupe's Island and Nix's Mate bell buoy on the port, Sound Point Beacon on the starboard, to the judges' boat, passing between it and the flag-boat. Besides the Pfaff Cup, another cup was offered for second boat and $15 for third. The starters were Edna, holder of two legs for the cup, Kitty, Eva, Alda and the catboat Alert. With a light east wind all went off at 10:30, Kitty leading, but off Spectacle Island Eva passed her. Again Kitty pulled up, and off Long Island Head was again first, but ran into a calm, where Eva and Alda soon joined her. All lay becalmed for a time, when finally Kitty set jibtopsail and stole away, while the others had anchored. After a time Edna found a breeze and started off. Kitty and Alda both held a good lead, but a shift of wind left them badly off and helped the others. They were timed at Harding's Ledge—Kitty, 2:38:18; Eva, 2:43:55; Edna, 2:45:10; Alda, 2:52:44. Alert had dropped out. Kitty essayed a spinnaker, but took it in, while Eva's was pulling her along. She was pushing Kitty hard when she went aground and lost some time getting off. The times were:

	Length.	Actual.	Corrected.
Kitty, E. H. Tarbell	24 4	5 52 05	4 59 35
Eva, Daniel Sargent	26.6	5 49 54	5 01 06
Edna, A. L. Smith	20.2	5 53 10	5 58 27
Alda, W. P. Wilkinson	24.2	5 59 08	5 06 20

Judges—Messrs. Thomas Dean, Eben Denton and Coolidge Barnard. Regatta Committee—Messrs. J. P. Phinney, John A. Stetson, L. S. Jordan, George R. Howe and William L. Wellman. Kitty takes a leg for the Pfaff Cup, Eva wins a silver cup and Alda takes $15.

BEVERLY Y. C.—The second race for the Buzzard's Bay championship was sailed yesterday, and on Saturday the second championship matches at Marblehead will be sailed, open to the following classes: Yachts over 23ft. 6in., sailing length, and not over 30ft. water line, to form first class; over 19ft. 6in., sailing length, and not over 23ft. 6in., the second class; 19ft. 6in., and under, the third class. Second class centerboard cats to form one class; second class centerboard sloops to form another class; second class keels will form another class, provided at least two keels start, if only one starts she will sail with the centerboard cats. The courses are: First class—Leaving red buoy No. 6 on starboard, Bowditch's Ledge beacon on starboard, red buoy No. 2 on Gale's Ledge on starboard, stakeboat anchored off S. E. breakers on starboard, Half-way Rock on starboard, black buoys Nos. 3 and 5 on port, to judges' yacht, 10½ miles, or leaving black buoys 5 and 3 on starboard, Half-way rock, stakeboat anchored off S. E. breakers, red buoy No. 2 on Gale's Ledge, Bowditch's Ledge beacon and red buoy No. 6 on port, to judges' yacht, 10½ miles. For second and third classes—Leaving red buoy No. 6 on starboard, Bowditch's Ledge beacon on port, stakeboat off Curtis's Point on port, black buoys 7, 5 and 3 on starboard, black buoy on Selman's Berth on starboard, to judges' yacht, 7½ miles, or leaving black buoys on Selman's Berth on port, black buoys Nos. 3, 5 and 7 on port, stakeboat off Curtis's Point on starboard, Bowditch's Ledge beacon on starboard, red buoy No. 6 on port, to judges' yacht, 7½ miles.

EDGEWATER Y. C. REGATTA.—The 4th of July celebration at Dunedin, Fla., was held under the auspices of the Edgewater Y. C., whose first regatta came off that day. The day was all that could be desired, and like the majority of our days in Florida, perhaps a little stronger breeze would have pleased the larger boats better. Soon after daybreak our lovely bay, encircled by islands of which Florida can well afford to boast, was a perfect galaxy of sails. The boat races consisting of three classes of boats, cutters, dingy and skiffs, were keenly contested. Previous to the boat races, the members of the E. Y. C. entertained the large and appreciative crowd with a few aquatic sports, such as walking the greasy pole, water polo, swimming and diving competition, etc. This being the first regatta of the Edgewater Y. C., it is gratifying to the members of this young club to find such unbounded success attend their first efforts. The club, although at present having a small membership roll, has no lack of energy, a large and substantial club-house being in course of erection, which will not only be used for a meeting hall and reading room, etc., but will have what might be called a novelty, in an attendant museum containing as many curiosities of the Floridean waters as our enterprising "camp-out" members can lay their fingers on. The club flag is yellow with black trident. I cannot close without expressing satisfaction at the manner in which our neighbors the Gulf Coast Y. C., from Tarpon Springs, Fla., turned out and assisted in the sports of the day.—C.

TORONTO SAILING CLUB.—The postponed special class races of the Toronto Sailing Skiff Club took place on the bay on Saturday afternoon, the following skiffs starting: Com. Riordon's Shamrock, Macrae Bros.' Eva, A. Hime's skiff, and P. A. Bath's Psyche. The Eva got away first, with a good start, followed by Mr. Hime's skiff, and the Shamrock and Psyche a little behind. The Eva passed the buoy off Hanlan's a few yards ahead of the Shamrock, then Hime, the Psyche being a long way in the rear. The Eva made a beautiful run to the buoy in the eastern gap, increasing her lead greatly, Shamrock second, Hime third, Psyche fourth. However, on the beat up the bay to the club house, the Psyche made up all she had lost, passing the club buoy a second or two ahead of Hime, Eva third, Shamrock fourth. From this buoy over to Hanlan's again the race was a closely contested one, the Psyche making a little more to windward passed the buoy first a little way ahead of the Shamrock, Hime third, Eva fourth. From this point back to the club buoy, the finish, was very slow work, the wind having gone down almost entirely. The Psyche passed the home buoy a few yards in advance of Shamrock, Hime third, Eva fourth. All the skiffs were sailed by the owners, and with the light wind it was very fortunate they were able to finish the course in the time allowed them. The first prize was a challenge cup presented by Mr. Percy A. Bath. There were also second and third prizes.—*Toronto Globe, July 13.*

NOOYA.—This steam yacht, formerly the Follet, lately from Antigua, is now completely refitting at Poillon's.

LYNN Y. C. REGATTA, JULY 18.—The annual championship race of the West Lynn Y. C. for pennants to be won best two in three races was sailed on Saturday. The starters in the second class were Ethel, Healy & Richardson; Inez, Goodrich Brothers; Twilight, B. W. Rowell, and Margaret, Sawyer & Rich. Course six miles. In the third class were Imp, John Renton, and A. B. C., S. Mansfield. Course five miles. A good breeze was blowing from the southwest. The Ethel of the second class carried away her topmast before reaching Sand Point, but sailed over the course with the wreck hanging. The Twilight carried away her jib halliards on the run from Sand Point to Western Lobster rocks, and the Margaret carried away her jib stay off Pines Point, and was obliged to pull out. On the return the Inez crossed the line first, leading the second boat, Twilight, 7 minutes, with the Ethel third. The Imp beat the A. B. C. by 1 minute. The judges were M. Pratt and William Burrill. The next race will take place August 1.

PACIFIC Y. C. CRUISE, JULY 4.—The cruise this year was to Santa Cruz, and seven yachts, Whitewing, Nellie, Aggie, Casco, Fleur de Lis and Halcyon started at 10 A. M. in a light wind. At noon came a breeze that carried them around the stakeboat at Monterey, Halcyon first, then Lurline, Casco, Aggie, Nellie, Fleur de Lis and Whitewing, the latter soon after giving up. With more wind and sea the fleet kept on for a time, until the breeze dropped for several hours. The full times were:

	Start.	Finish.	Actual.	Corrected.
Halcyon	10 26 30	5 06 20	6 40 00	6 40 00
Lurline	10 26 09	6 28 20	8 02 20	7 59 05
Fleur de Lis	10 32 15	7 55 30	9 23 15	9 09 13
Nellie	10 31 50	7 58 20	9 26 38	9 09 19
Aggie	10 27 00	*7 53 30	9 26 30	9 23 37

Casco did not cross the starting line properly so was ruled out.

ATLANTIC Y. C. CRUISE.—On July 18 the Atlantic Y. C. started from Whitestone on their annual cruise, the fleet numbering 11 yachts. They ran across to Norwalk Islands, Agnes, Fanita and Haze being the first boats in, and anchored on Saturday night. On Sunday the fleet lay at anchor and service was held on board the Agnes, Rev. W. A. Thomas officiating. Other yachts joined the fleet on Sunday and the fleet now included the following yachts: Agnes, Commodore Hogins; Haze, C. W. and J. Hogan; Decoy, C. N. Hoagland, M.D.; Leona, E. C. Sterling; Wivern, Benjamin Atha; Fanita, George J. Gould; Roamer, John Cartledge; Athlon, Vice Commodore Barron; Thistle, Rear Commodore Ziegler; Stella, J. L. Marcellus; Concord, H. C. Roome; Rover, F. C. Swain; Daphne, J. Rogers Maxwell; Aria, C. W. Opdyke; Santapogue, James C. Bergen.

YONKERS Y. C.—This club sailed a race on July 11 over a course from the club house to Glenwood, thence to the New Jersey shore, thence to Mount St. Vincent, and thence home, to be sailed over twice, a distance of 15 miles. The starters were: Class 1, Inez; class 2, Rocket, Spray, Ella C.; class 3, Kittie N., Carrie, Comfort, Spray, Jr.; class 4, Mabel, Daisy, Uncle Jake. Owing to the light wind only the small boats finished, Spray, Jr., winning in class 3 and Uncle Jake in class 4. The postponed race was sailed on July 18 over the regular triangular course, with nine yachts starting, Spray, Racket, Fanny, Spray, Jr., Kitty N., Comfort, Carrie A., Mabel and Daisy. The winners were Fannie, Kitty N. and Mabel. A match race has been agreed upon to take place on July 31, between the Racket and the Fannie, for $25 a side.

NEW YORK Y. C.—A regular meeting was held on July 16 at 25 Broad street, ex-Com. J. D. Smith presiding. The date of the rendezvous for the cruise is July 29. The Larchmont Y. C. have offered the use of their house and anchorage to the club on that occasion. The Cup Committee announced that the trial races would be postponed until after the cruise. Secretary Winter read a letter from Mr. Fairchild, Assistant Secretary of the Treasury, authorizing the admission of Genesta's spars free of duty, on condition that they be returned to England. The billiard room of the club is being enlarged.

CORINTHIAN Y. C.—This new organization, whose headquarters are at Oyster Bay, sailed its first annual regatta on July 4, over the Oyster Bay course. The starters were: First class, over 26 and under 40ft.—Mirth, Gerard Beekman; Jeunesse, John A. Weeks, Jr.; Indolent, Col. S. V. R. Cruger; Tahoe, Com. F. T. Underhill. Second over 22 and under 26ft.—Meta, William Trotter; Eleanor, William J Youngs; Naiad, Mr. Hoyt; Alcyone, Robert Townsend; Dodo, Edward M. Townsend; Sinbad, Thomas Young; Orion, Com. F. T. Underhill. Mirth won in the first class and Eleanor in the second class.

NEW CHART OF THE ATLANTIC COAST.—A preliminary chart of the Atlantic coast, from Cape Hatteras to Cape Camavol, is now on exhibition in the Hydrographic Office in the old Produce Exchange, on Whitehall street, New York. The chart is different from preceding ones, the shore lines being very plainly marked, and only the most important details noted. The compass is also arranged in a novel manner. Captains of vessels and others interested are invited to examine the chart and give their opinion on it.

BUFFALO Y. C.—In a race over a ten mile course on July 4, the following yachts entered: First class, 30ft. and over: Ripple, sloop; Lillie R., sloop; Alarm, schooner. Second class, under 30ft.—Curlew, Turk, Arrow, Twilight, Dude. The course was ten miles. Lillie R. fouled a mark and withdrew. Arrow won in second class in 1:47:40, and Alarm in first class, 1:53:40.

HARLEM Y. C.—This club sailed a postponed race on July 19 over a triangular course off 120th street, Harlem River, 10 rounds of the course. The starters were Cornet, Lila, Jay U. Gee, Little Dean, Jean and Irene. The latter two soon left the fleet far astern, so that the others withdrew. Little Dean finished in 4:01:45 and Jean in 5:10:10, both winning pennants.

NEW KEEL SLOOP.—A new sloop of the Boston type is now building by Smith, of City Point. She is 30ft. deck, 25ft. waterline, 9ft. 9in. beam, 5ft. 6in. draft. She will carry 3½ tons of lead on a keel sided 16in. and moulded 11in. Her frames will be sided 2in., moulded 1½in. at heads and 2¾in. at heels; planking, yellow pine, 1¼in. thick.

PRISCILLA AND MISCHIEF.—On July 15 these two yachts were timed over the New York course in a light S.W. wind. Priscilla led by 10.24 at the Hook and 15.43 at the Lightship. At Huey 5, with a lighter breeze in, she was 17.15 ahead. From here in it was a drift. Priscilla finishing in 6.59, about 25min. ahead of Mischief.

TORONTO Y. C. LADIES' DAY.—On July 14 this club turned out in cloudy weather to give a sail to their lady friends. Oriole, Verve and Aileen started out, joined by Alarm, and the fleet executed a number of squadron maneuvers. Wenona joined them as they returned.

CRUISER AND LA PERICHOLE.—These two yachts will race at Larchmont on July 25 for $250 a side, cat rig and fixed ballast, under Larchmont rules. La Perichole hails from Newport.

RUTH.—Huntington Harbor, July 19.—Yacht Ruth, Columbia and Seawanhaka Y. C., cruising eastward. Left New York on 16th; delayed by calms. All well, crew of nine all told.

BAY OF QUINTE Y. C.—This club will sail their annual regatta on Aug. 12 over the club course, nine prizes, aggregating $450, will be offered.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. O. W., Steubenville, O.—We advise you to read Mr. Stephens's "Canoe and Boat Building," where you will find full instructions for the boat. The details cannot be given here.

M. H. R., Mohawk.—Get Stoddard's Map of the Adirondacks and you will be able to trace out the route. We can supply the map, price $1. For directions about fitting out, read "Nessmuk's" "Woodcraft."

TINKER, Decatur, Ala.—The chilled shot are said not to preserve their form better than the other, and so to fly truer and make slightly better pattern, but possibly inferior penetration. The shot will not injure the gun in the least. For ducks use Nos. 4 to 6.

H. R. S., Pultney, N. Y.—The judges must announce to the scorer whether a bird is hit or missed, and the scorer scores accordingly. The shooter or his opponent has the right to challenge the decision of the judge and appeal to the referee, whose duty it is to finally decide the matter. But the referee has no power unless such an appeal is made.

F. R. H., Collinsville, Conn.—B shot at a pigeon, one judge was not paying attention, no satisfactory evidence could be had from spectators. As referee I required the man to shoot over again. Was this right? 2. C shot at clay-pigeon, one judge paid no attention. I did not see any piece broken from pigeon, and, as referee, I scored bird lost. Was this right? Ans. If in each case you were appealed to your decision was final.

W. F. H., Bridgeport, Conn.—Is the land good and what game is found near Stanton, Colfax county, Neb.? Have a farm sixteen miles north of Stanton and think of going on it, though I have never seen it. Will you answer or ask for information in your paper? Have taken your paper in eight States, but have never contributed nor asked for information before. Ans. Write to the postmaster of the town or to the man you bought the land of.

DEAFNESS its CAUSES and CURE, by one who was deaf twenty eight years. Treated by most of the noted specialists of the day with no benefit. *Cured himself* in three months, and since then hundreds of others by same process. A plain, simple and successful home treatment. Address T. S. PAGE, 128 East 26th St., New York City.

LAKES OF MUSKOKA FOR HEALTH AND recreation. Quiet private board on the lake shore at low rates. Write for terms to T. M. ROBINSON, Box 186, Gravenhurst, Ontario Can.

SELECTED PATTERNS FROM ABBEY & IMBRIE'S

Standard American Trout and Bass Flies.

Named and Numbered, with full description of material, color, etc.

Extract from FOREST AND STREAM.—"Useful for reference."

The two points that have been kept constantly in view in making this selection are: First, the presentation of flies which are well known and highly approved by our most experienced anglers. Second, the selection of flies that are typical, that is, such as represent classes to which the great majority of really good flies can be referred.

PRICES:

In Black and White	25 cents per copy.
With Flies Colored by Hand, by W. Holberton	$1.25 "
Same as above, on extra wide paper, suitable for framing	2.00 "

THOS. H. CHUBB'S

New Style 80-Yard Nickel Plated Click Reel.

Better Style, better Work, better Finish than ever before. This Reel has Raised Disc, covered by Letters Patent No. 13,921, granted May 22, 1883, which makes a stronger reel and allows room for a better click than the old style. We warrant this to be not only as good, **BUT FAR SUPERIOR** to any reel in the market at the same price. Warranted to give satisfaction or money refunded. Sent by mail on receipt of price, $1.50.

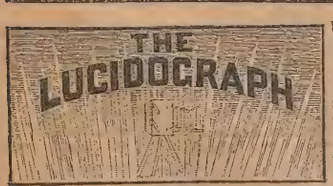
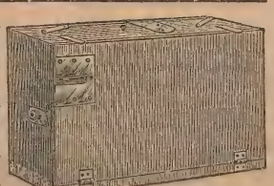
F. A. ALLEN'S SPECIALTIES.



MONMOUTH, ILL.



ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S BOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL SWAGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.20.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. **SEND FOR CATALOGUE FREE.**

Is positively without a rival for a CAMERA for the Amateur's use.

It is not only the most compact, but the handsomest in design and finish, adapted for the use of cyclists, and instantaneous work. The 5×8 measures, when folded, 9½×6½×4½ inches. The purchaser of a Lucidograph is entitled to a Camera with all latest adjustments—Tripod, Plate Holder and Lens fitted with instantaneous Shutter, with full and complete instruction for use, all warranted A1. WITH BICYCLE ATTACHMENTS: Sizes Nos. 1 & 2, $27; No. 3, for 5×8 pictures, $29.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

LONDON: { DAVIES & CO., 1 Finch Lane, Cornhill. / NORRIE & WILSON, 156 Minories, E. C.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

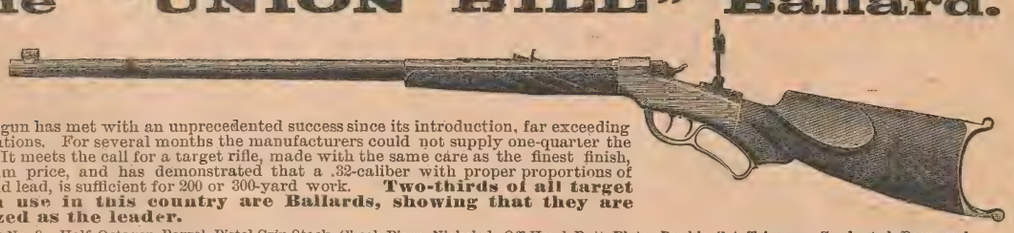
SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

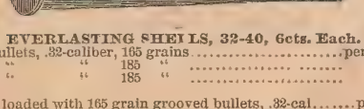
AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.



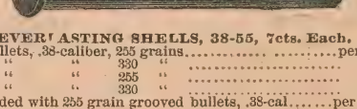
CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.



Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.



The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

Prices: No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches..... $37 50
No. 9.—Same, but with Single Trigger..... 33 00
Can be furnished with Vernier's Mid-Range and Wind Gauge Front Sights for $6.50 extra.

EVERLASTING SHELLS, 32-40, 6cts. Each.

Grooved Bullets, .32-caliber, 165 grains	per 1000,	$7.25	Grooved Bullets, .38-caliber, 255 grains	per 1000,	$9.50
" " " 185 "	"	7.75	" " " 330 "	"	11.00

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

AIR GUNS

PRICES: $6, $9, $10, $12, $15, $18 and $20.

FOR PROFIT AND PLEASURE.

The gun shown above is our **NEW COMBINATION AIR GUN.** This is the most complete arrangement ever offered. It combines two pieces in one (a perfect Rifle to shoot a regular .22-100 cartridge, and a superior Air Gun to shoot darts, slugs and shot). It can be instantly changed from one to the other, and has a steel barrel rifled. All the parts extra heavy, and so constructed of best material to stand continuous service, making the most durable gun manufactured, and by far the most practical long-range Air Gun ever made for gallery or field. WE MANUFACTURE A FULL ASSORTMENT OF AIR GUNS SUITED TO MEET THE TASTES AND WANTS OF EVERY ONE. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the United States Navy to place them, with success, on their school ships. ☞ Illustrated price lists sent upon application. CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of exaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Office—12 and 13, Fetter-lane London.

HINDS'

BLACK-FLY CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

Harlow's Angler's Comfort.

The long approved, surest safeguard against mosquitoes, black flies, etc. Recommended by Commissioner of Fisheries and Game for State of Maine. New style. Larger boxes. Sent by mail on receipt of 25 cents, Usual discount to the trade.
